with great flore of Snow and Frost, the winde at North-west and by North. The fift day, it with greatitore of Snow and Proft, the winde at Abeth-west and by Morth. I no net day, it was faire weather, the winde at North North-east. The fixt day, at two of the clocke in the was raire weather, the winde at youth routh-eath a nematicary, at two in the chocke in the morning, I met with fome Ice, but not very thicke, so that I held my course toward Chery Hand, morning, I met with some ice, but not very thirtae, no that a new my count toward toward the winde being at South; at five of the clocke, I faw the Ice to thicke, that I could not possibly the wines tering as South as me to the closes, a saw the described that a count not pointly get through it. Then I flood to the Welt wards with a fhort fayle, and founded, but had no ground get through it. I nen I frood to the Weit wards with a more rayle, and i dumbed, our had no ground at a hundred fathome: thicke foggie weather, at eight of the clocke it began to electe vp. and I at a numeror ratione: thicke roggie weather, at eight of the choice is began to energy and I floode into the Lee finding it feattered in fome places; and at twelve at moone, I found the Pole reduce into the ice moning it watered in name places; and at twente at noone, I found the Pole eleuated about the horizon 74 degrees 7 minutes, and founded, but had no ground at one humescuarea aboue the norizon 74- negrees 7-inimaces, and rounded, out not no ground at one nun-dred and featentie fathomes. From twelte till foure, I ran North North-west two leagues, and of May wee dred and featuentie rathomes. From twette thirtoure, a ran growth root in-west two reagues, and were in 74-de founded, and had a hundred and fixtie fathomes. Then Chery Island did beere, as I judged, North 10 North-west, about fifteene leagues off or more: from foure till eight it was calme, at eight of

North-weit, about nicetic regues on or most aroun toute the legal of was cause, at eight or the clocke the winde came Southerly, and I flood towards the Iland and found the Ice fo thicke, that the Ship had no roome to wend, and withall fisch a fogge that I could not fee one Cables length; in which time the Ship had many a knocke, but thankes be to God, no harme was done. By twelue of the clocke, the featenth day, I got out of the Ice and lay a hull till the North Sunne, at which time it began to be cleere weather: then I fet faile, and flood to the Eastwards, The eight day it was very foggie, the windeat North and by East, with Snow and Frost: I flood to the Eastwards, in hope to get the Easter end of the Ice, and so to Chery Island; and I troot to the azitwarms, in hope to get the senter that a the act, and no to way shall a same a ranne into a Channell betweene two firme bankes of Ice, and could finde no way through, but 10 Lay in the Ice till the ninth day at a South Sunne. Then I observed, and found the Ship in the

Abundance of

grees-30,mi-

* As Cobodines

altitude 74. degrees and 17. minutes, the winde being at North North-west, very faire weather, I failed in the abouefaid Ice, one while one way, and another while another, in hope to finde fome opening towards the Iland : but which way focuer I flood, I faw all the Sea couered with Ice. At a South Sunne, the tenth day, I observed both with my Astrolabe and Crossestatic, and 74. degrees 15. found the Poles height 74. degrees and 15 minutes: and the variation 12 degrees and 3 minutes. the North point Westerly: by a North Sunne I got out of the Ice into the open Sea, and to write. each courfe, way, and winde, with all other accidents, would be too tedious: but the thirteenth day of May, at midnight, I founded, being in very thicke Ice, and had a hundred thirtie eight 10 The Lyoneffee fadoms; there presently I espied the Lioneffe standing into the Ice, I kept her company till eight The Lyoneffel seasons; unrer presently a topics for Liouene standing into the acc, a acpt ner company this upper was feat to the seasons of the clocks at sight, and then I flerest as followeth, from eight aboue faid, till twelte at noone: 7 lind. The foureteenth day I failed North-well and by North twelte legges; the winde at South South-eaf, thicke foggie weather: from twelte till four at night, I failed fearn legges. North, the same winde and weather with raine. And by the fifteenth day at foure of the clocke in the morning, I had failed North twentie seauen leagues, the same winde and weather: at what time I supposed, that I was not farre from land, because I see great store of Sea-Foule about the Ship: at eight of the clocke I founded, but had no ground at a hundred and fortie fathome : very foggy weather : likewife I founded at twelue of the clocke at noone; no ground at a hundred thurte fine fathomes, where I met with Ice and great flore of Fowle, as before, winde at South, and 40

I frood through the Ice, till eight of the clocke at night, holding no course by reason of it, at which time I founded, and had mintle fine fathom greene oze, the weather being all one, and very much I ce from eight, till ten of the clocke. I fayled North, one legate and a halfe, and had fenentie fine fathoms rockie ground. From ten till twelne at midnight I sayled North one seague and a hale, and founded, and had thirtie feuen fathoms, the wind being at South, with great flore of raine and fogs, and abundance of Ice round about, but fomething broken. Then I flood off Weft and by South, and tooke in all the Sayles, except the fore-faile and maine top-faile; and at one of the clocke the fixteenth day founded, and had fortie fathomes oze: likewife I founded at two of the clocke, and had fiftie two fathomes: I could neither perceine Current nor Tide in all this time, and it did raine as fast as I have commonly feene in England: then I stood to the

East wards, and at three of the clocke sounded, and had fortie fathomes ozer and thus I failed among the Ice East and East and by South and East North-east, keeping no certaine course, by and then I faw the Land within two leagues and lefte ofme, bearing betweene the South and by East, and the North-west: then I stood in East and by South, supposing to have found a harborough within a ledge of rocks that lay off a low point, which seemed like an Iland, and standing in, I found depths, 10.9.8.7.6.7.4.2nd three fathomes, standing in it a shoald bay, and full

wards noone it elected up, and I did looke the Meridian altitude of the Sunne, which was 34. degrees and 20. minutes, the declination being 21, degrees and 10. minutes North, the Equator

Then I fleered a way North-welf and by Welf , and had fix , feuen, eight, and ten fathome foule ground; this part of this Land is foole ground a great way off, therefore come no neerer for this place then ten fathome, and that will carry you cleere of all dangers that I could fee. To-

must bee 13, degrees and 10, minutes about and beneath my Horizon. The Complement being 76. degrees and 50, minutes, the Poles height. Likewife I found by true observation the Comp.ff. to vary 15. degrees, and before I had fayled foure leagues I faw a Sound that lay Eaft and minutes Pole p.ff. to vary 15. degrees, and before I mad tayled today to the Fig. 1 fent the Skiffe on land in the height. mouth of the Sound, because I supposed I had seene Morses on the land, but they proued Rocks, de I followed into the taid Bay with the thip, but standing in I had a shifte gale of winde off the The North fhoa.e. which draue abundance of Ice out of the Sound, through the which I enforced the ship, in point we derly, moa e, which draue adminiance of the out of turning in I found thefe depths, thirtie fine, thirtie, Rockestwentie, and eighteene fathoms. The Boat came aboard about a North-west Sunne, and the men told me they tound deepe water within and foule ground; they faw great flore of Mohorfes of 10 lying on the Ice, but none on land, and they brought a piece of a Deeres horne aboord, therefore Hornfound.

I called this Sound Horne Sound , and a Mount that lyeth foure leagues to the South of it, the Mulcons Muscomy Companies Mount, because it was my first landfale. Then finding no benefit here to bee had, nor Hauen for the ship, I stood to Sea, and sayled For these pla-North-weit and by North foure leagues: at midnight it blew very hard, and I flood to the West- ces see Capain wards with a short sayle, and sayled foure leagues West by eight of the clock the seuenteenth Edger Mag. day. Then I flood to the Landwards, the winde being at South South-west thick weather : and three leagues from me I faw a Point, which I named the Ice Point, because there lay abundance Ice. point.

of Ice vpon it. Then I faw another Point beare North North-west fine leagues off, which I named Bell Point , because of a Hill formed like a Bell on the top , and to the Northwards of Bell Bell point. 30 Point goes in a great Bay with two Sounds in it, the one lieth in East South-east, the other Northeaft and by Eaft; the laft Sound you can hardly discerne, by reason there is a long Hand lying in the mouth of it. But the going into the faid Sound is on the North fide, yet there is an Inlet

under Point-partition, but very narrow and full of Rocks, and an exceeding strong Tyde setteth Point partiin there. This day I found the weather very warme and farre temperater then I have found it tion. at the Coper at this time of the years it his place lying in 77, degrees and 32, minutes, and The ayre com-the Coper in 71, degrees and 30, minutes; this place being to the Northwards of the Cape 6.de. Pratter grees and 5. minutes : and note, two leagues to the Southwards of Bell Point is a ledge of Rocks three miles off the shoare, and come no neerer the shoare then fifteene fathom : woon the North

fide of the Bay is low land, which I named Lowneffe Hand. I called the North Sound Lowe Sound. Lowneffe He. 3C Into the Bay I turned, the winde at East North-east faire weather; turning in I had no lesse Lowsound, then force fathoms close by the shoare, and in the middeft no ground at fixtie fathoms, and being neere the Point that parteth both the Sounds , the winde increased with raine. Then I faw the Sound frozen over from tide to fide, and ypon the Ice a Brare and great flore of Mohorfes, but The Sounds the winde blew fo extreme hard, that the Boat could not row to windwards, to trie if we could feafon. kill some of them. The fogs and raine continued till ten of the clock the nineteenth day, at Verythicke which time the raine ceased, and it did freeze with snow and winde and fogs, as before.

From twelve at mid-night the nineteenth day, till foure in the morning the twentieth day, I fayled three leagues South-west and by South, then I found the Ice thicker then before. It was

very thick fogs, with winde, froft, and fnow, and cold, that I thinke they did firite here which garrenne cold of them should have the superioritie. I put into the scafford aid in hope to get through, and af-weather. ter many a fore stroke with the ship in it, I got through at a South-west Sunne, at what time it began to befaire weather. Then I flood through the Ice towards the land againe, in hope that that land would proue worth the labour and trauell; and going to fet the mayne top fayle, it was frozen as hard as euer I faw any cloath in all my life time, so that all my company could ve- Sailes frozen. ry hardly let it; and whereas I supposed, and have often said, that this climate is not so subject to foggs in May and Iune, as it is in Iuly and August, it is contrarie; for I have not seene the Sunne on the Meridian thefe fine dayes, nor feene it at all in fixtie houres: I had not failed three leagues North-east, when it was as thicke as it was before with Frost and Snow: yet I stood shill

50 towards the Land. The twentie one, I faw the Land at an Eaft Sunne, and flood towards it, and at a South and by West Westerly, Loblerued the Sunne, and found the Meridian altitude of it 33.degrees 30.minutes, the declination being 21. degrees 76. minutes, &c. the altitude of the Pole was 78. degrees 26.minutes. The winde at North North-east : cold frostie weather : This place I called the Black point lie : I called a point (that lyeth foure leagues to the North-west of Black point) Cape- Black point ste cold, and to the South-east of Black point is a great found, which because it was courted with Ice, Cape-cold, I called lee-found, and standing necrer to the shore, I could not see any Sound or Harbour open; Ice-sound. therefore I determined to fland to the Northwards to feeke what good might be done that way to profit the Merchants, and also to get some Wood, for we had but little left. I sounded at the

6c Black-point, and had twentie three fathomes streamy ground. At two of the clocke I stood off, and at midnight stood to the shore againe, cold weather with frost, the winde at North and by East. The two and twentieth day, at an East Sunne, I was faire by the Land, betweene Casecold and Black-point, a league off where it fell calme, and I founded there, and had tweneie eight fachoms, where I tried for Fish, but could take none.

No fift.

lare paffage.

The three and twentieth day, at an East North-east Sunne, I was within three leagues The three and executions usy, at an east porther and uses, two within three legues of Capeald; this day it was faire weather, and I tooke the Sunnes height at twelue of the of capeers : unsury it was take measure, and a conserve states in gire at twelle of the clocke, and found it to be 32 degrees 30 minutes, the declination being 22 degrees 13 minutes. ctocke, and round it to be 31, orgices 30, minutes, the defination being 12, orgices 13 minutes, the diffance of the Pole from my Zeneth, was 11, degrees 17, minutes, the comnutes, the contained of the Four from my activen, was 11, degrees 17, minutes, the com-Fair-weather, plement thereof being 78, degrees and 43, minutes, the Poles altitude. All this day it was plement energy using 70 users and 45 humans, the rose actions. All this payer was calme all the forenone, warms funfilms weather, and whereas I named this place Copected, if calme at the foremone, warme fundame weather, and whereas a named the prace apeced, it I had false with it this day, or the like, I should have guen it another name. Here I tried to take filh, but could perceive none. Item, there is a point that beareth from Cope-cold North & by Weft ninguet come prrecine name, stem, over 15 a point one occasion from corp-son account of my west which I called Faire-forland: this Forland, and Cape-sold, and Black-point, are all one Iland. At fixe of the clocke at right, the winde came to the North North-west, then I determined to IO have of the circuse at ingus, one winner came to one arouted sported-weil, onen a determined to be view the lee-found better; but comming neere it, I perceived it packs ful of Ice, fo that I could fee view the recrusion deterious comming over any personal apparatus requires a condition on oead chereof at the Top-maft-head, neither could I fee any open water in it. At a North Sun,

no end inferent at the 1 op-mate near, mentior come 1 tee any open water in it. As a Northwards, as before, the wind came to the Northwards, as before. he wind came to the North-east, and by North, then a though to the North-east, as before.

The four and twentieth day, at a North-east Sunne, the wind came to the South-well, faire The total and twentierings, and across real summers with came of the South-well, rang weather and warme. At a North north-eaft Sun, I tooke the Meridian Altitude, which was eleweature and warms. At a troom and the tall out, tooke the matter and attenue, which was etc. uen degrees about the Horizon, and by working accordingly, I found the eleuation of the Pole nen degrees adduct the frontedly, allowy working accordingly, a round effection of the Fole about the Horizon, to be 78 degrees, 37 minutes. The five and twentieth day, at an East-fouth. east Sun, I fet the boat to the land, neere Faper-forland, and it being calme I sounded fortie flie fathoms, where I proued for fifth, but could find none, and within one league of the floare I had the same that th by the tea has 2000rd nated with vector, and some vertices into a ne men tone mee there was great is good fire. Here of Morfes in the Sea, about the shoare side, and about thirtie on Land. Immediately 1 fent Figor, may note of months in the sea, month the month more and about thirtie on man, immediately 1 feet of Dirfis woods, my Mate, Nubolas Woodcorf, with the Boat on Land againe, to fee if they could kill any of the but none for the state of the s rate atometres, and and external wines of the language in under the point and take were vinfrozen, they being nenciati, moreculer i was certuined, the antitle runos and takes were vintuoen; they being Fresh-water, which putteth mee in hope of a milde Summer here, after so sharpe a beginning as I haue had, and my opinion is fuch (and I affure my felfe it is fo) that a paffage may bee affooneatrauned this way, by the Pole, as any vinknowne way whatfocuer, by reason the Sundoth give a taying this way, by the a measury vinctowing way reliable the property of the common give a great heat in this climate; and the Ice, I means that that freezeth here, is nothing so huge as I

The fixe and twentieth day, at a North-east Sunne, the Boat came aboord againe, having slaine but two Morfes, at twelue at midnight the wind came to the North, and blew fo bard, that I was enforced to try with a Mayne-courfe, cold frofty weather, with snow. The sayd wind and weather continued till a South Sun, the feuen and twentieth day, a teight of the clocke at night, the wind came to the North-west and by West faire weather, then I stood towards the Land again, And at a South-eaft fun, the eight & twentiethday, I was within three leagues of Fager forgam, and standing in Hounded divers times, and had these depths 15, 17, 19, and 18, fathoms, dana, and transmig in a tounded uncers times, and that there depairs, 15, 17, 19, and 18, ratioms, within fine, fixe, and feven myles of the floare, and when Fager-forland did beare South and by East by the Compasse. It being two miles from me, I saw the Land beare North-east and by North, about nine leagues off, the which because it was full of knottie Mountaines, I called Knot. 40 tie-point, and betweene Knottie-point, and Fager-forland, I faw a great Bay, which because it was foggy on the fudden, I could not discover. In the Sea, about the Forland, I saw great store of Mohorses and Sea-fowle, I founded in the Bay and had nintic fue fathomes rockie ground. I flood to Sea, and had very foule weather, with fnow, and fogs, and frost, which weather continued till Thiny day of the thirtieth day, at four of the clocke in the morning, at which time I was within one mile of Fayer-forland in nine fathomes, and then I fayled East North-east about two miles, and had these dephs, 18.17.16.14. and 12. sathomes all rockes. Then I steered South with the like depths and grounds, but when I had runne South South-east three miles further, I had sandie ground, then did Feser-forland beare West and by North, about three leagues of the next cast I had tenne factories foule ground, and from thence I fleered two leagues South and by Kaft, having thefe Jo depths, 10.9. 8, and 7. fathomes, then I faw the Bay courred ouer with Ice. I turned out the wind at North, This Sound I named Fowle-found, for in this Bay are three Sounds; this I fpake wind at North. It is sound a name of rows-found, for its time may are times sounds; this I space last of, which lyeth in South, and goeth out at Black-point: another lyeth in East South-east, which I named Deve-found: another goeth in North, which is called Confe-cous, and being neere the point betweene Fowle-found and Detre-found, it fell calme, and I fent the Skiffe on Land, and flanding after, with a little wind at West, I found the fayd Point very shoale, with a ridge of Rockes, where I had thele depths, 4.5.6.7.9.10.18. and then 30. fathomes. At a South Sun, the Boat came aboord and brought Wood, and fome Whale-fins.

The last of May, at an East North-east Sun, I was within three leagues of Knetty point at which time I faw Ice all the Sea ouer betwixt the West and the Land: then I faw another Point foure leagues distant from Knotty :point, the one bearing of the other North and by East, and South and by West, and it is smooth Land, the which I named the Garnerds-nofe, indifferent warme weather : and finding the Ice to bee fo thicke that I could not paffe it, and the wind comming to the West, I stood to the Southwards againe, determining to search the Sounds better for a Road, and

for commodities, because I saw no good to bee gotten in keeping the Sea amongst the Ice, and at for commonties, occasie I law no glood to be gowner I had no ground at one hundred & twenty Notes fathomes, and yet I was within two Cables length of a funken ledge of Rockes, that lyeth on the Larboord fide of the Bay a mile from the shoare.

The first of Iune I found a good Road in Clofe-case, on the South-west fide, where I rid in Iune. feuen fathomes fand mingled with oze, at an East Sun I fent a Skiffe to a low Point, that I yeth on the North fide of the Bay, where they found some Whales fins , and three pieces of Mohorse teeth, and spon a little rockie Hand, they faw neere one hundred Mohorses, which were there fleeping. In this time I went towards the bottome of the Sound, and flue a white Beare. At a A Beare flainte South-woft Sun, I went towards the rocke, to fee if I could kill any of the Morfes that lay there, and as wee went by the shoare side Pespied Deere, three of them I slue, and one of my company one. But when I came to the rocke , the Ice that the beafts lay on was hollow, and the rocks that was bet wixt the Ice and the fea flood floping toward the Sea; the which when I faw, I determined to go aboord and let them alone, yet afterward I went on the rocke betwint the Ice

and the Sea : and as I with the reft of my company were killing them, the Ice brake, and Ice and bealts fird into the Sea together, and carryed one of the men with them, fo that he escaped out of that danger very hardly; for besides the weight of dead Mohorses, and Ice that bruised him, the beafts that were aline frook at him in the water, and brussed him very soare. I had beene in the fame cafe, if I had not beene the nimbler, and flipt on one fide. I killed three Morfes, whole teeth I cooke off. Then I espied the Beare, which my Mate had hurt before with a shot ; hee went into the Sea, when hee faw the Boate, where I flue him with a Lance, and brought A Beare flaines

him aboord.

The fecond day at a North and by Eaft Sunne, At a South Sunne, I went to the South shoare of Deere found, where I found a good quantitie of Fins, and came aboord, at a North North-west Sonne. The third day; being Sundays, I rid full, having the wind at West South-West much wind. Then you che tide of a Hill, a mile to the Westwards of the Road, I set up a Crosse, with A crosse for you wind, now your scenes was cause a more to not verticate on the story a territory particle from the particle of a writing young it graphing the day of my arrivall first in this Land, by when I was fet tristeness on; and the time of my being here. This Road Tealled Coffermal. At a South-east func A good Road the fourth day, I wayed the winder West South-west, and when I was almost out, the wind inoreafed with fogs, which made me purback into the Road, where I anchored the fame day at fix of the clocke, at attentione. The firth day, at a North east and by East finne I wayed, and it fell cilme, then I went to the East fide, and killed tome Fowle, which I found in great abundance: There is great and when I was readie to go aboord, I faw tourceene Deere, at which time I fpent all my powder, fore of Fowler

Land and Horewo Decretione. And at a South west fan I went on Eard and five a Dos and cook A buck flains, the Fatine, aline, and brought it about 1 bet it dyell the next day. The salme continued till the fixth day, at an East North-east funne (and we droug in the Bay, with a little foaking tyde that runneth there.) Then I fear the skiffe to the rocke aforefald, to fee what flore of Mohories were there; at three of the clicke they came about and told mee there was neere two hundred beafts. Three Derre 40 I tooke both the boat and skiffe, with all my company, and went to the rock, and in going flaine.

chitche P filte & Beare bur beiben Lame to the rocke, the books, began in gooing to to the fas, then I A sweet ake the prefently went on land? with all my company; and the eightic beafts, whole teeth I Bearet finner tooke, and in going shooted the mother party and the country of the same than tooke, and in going shooted the mother Beare, and came about the femants day, and a young the same than to the same than the sam eaft fin. Then I faw two white fifties; which at the first fight I fispposed to be Beares, they had three sides from I from the Sturgeoin, two flat First close by their glas, its bodies andl towards their tailes,

The centh day, I went on hoare and fine fine Doere; without which, and them that I fine Deere, before I lade leige thened our my wichtals, bleffel be the Creator of the World, "which hath not "fa. 45 to made any part thereof H walte, but fol that in these parts twisted bath learned ymposible 59 and 3 "A our Ancestors to bee transfer voto, by reason of the extreme leads which they supposed to bee to shord a 50 hefe) T'ffrid the ayre temperate in the Lands, and nothing the coldras I have tound at Chery Hand in flite fenerall Voyages. Fine Deere

Faier-Hauen.

The fourteenth day, at a South-east Sonne I wayed, the wind at South-west foggie weather. at a Sonth-well Sunne, I went on Land and flew a Buck. The fifteenth day, at East Sunne, I son out of the Bay, at which time I faw abundance of Ice to the Sea-wards, but the wind came to out of the Bay, at which time a reverse the Ice and the Boare. At a North-west Sunne, Lene 10 the skiffe (with feven men in it) to the Land vinder Knettie-point, at which time the wind came to the North-east, and I stood to the North-wardes, where I had these depths, fifteene, Great flore of thirteene, and eleuen fathomes foule-ground. Thek depths were about a league, and to the Northwards of Knottie-point, I faw greatflore of Whales, the like Lfaw in Darre-found. The fixteenth day, the Skiffe came aboord, and brought a few Finnes, and fine Deere, and they told mee that within the Bay, that lyeth betwixt Knotie-point and Gurnerde-nose in a Hauen, in the entrance whereof is an Iland, and feuen fathomes going in, but within eight, nine, fifteene. and twentie fathomes good ground. This maketh Gunnerds-nofe, an Iland, for this Hauen goeth out on the North-weit fide of Gurnerds-nofe, I named this Hauen, the Farre-basen: I Abundance of found a great tyde heere, which runneth South South-west, the floud commeth from the 20

Then standing to the Northwards, I saw the Sea couered with Ice, which lay close to the Land which made me fland to the Southwards again, t observed at Gurner di-note, and found 74.degrees to. the Poles height 79. degrees, 50. minutes, At a North-west Sun, the fant day, I lent the skiffe the Poles height 79. oegrees, 90. minutes, 61. a 200 interpole, 2009, 2009, 2009, 2009 in the sequence of Land to fearth the Coalt to the Southwards of Kaute, 2004, where I founded and had tweenly foure fathomes Foole-ground, and in the Fayre-way I founded, having that depths, 30, 35, 45 The f r.befr and 48. fathomes all Rocky ground. By the fenenteenth day, I was in the entrance of Clouds places in the Voyage at a South Sun, at which time the Skiffe earne abourd, and brought a Beares skin, and a Buck, and ing the Voyage
This vaccous a good quantite of Whales Fins and an Vinicones horne, which was fine footand down indice
horne is the long, and in the biggeft part of it, it was felten inches and a halfe about. The eight term he day, at a 30 Herzeefs hill South Sun, I came into the Road, where I tid all that day, having very much wind and mine that wee could doe nothing. At a North Spine, I sent my Mate, with the Skiffe, and fixe men after in Baffe to feeke for more Fins, Sec. The ninteenth day, at a North Sun, they came abourd, haping flame ten Beares, three of their skins and far they brought abourd, and a good quantitie of Fins, and far paire of teeth. The twentieth day, to the morning, I fent both the Boat and Skiffe to flav the other feven Beares, the wind being at North faire weather. But they were no fooner gone, but it blew very hard at North, which brought abundance of Ice out of the bottome of the Sound, but did the Ship no hure. Aca West South West Sunne, the Boats came abourd with the Beares skins, the wind about faid fet fo much lee out of the found vpon the Ship, that it infarred men fet fayle.

The one and twentieth day, at a North Sim. I flood sowards Fayor for lond, and left out the

skiffe. The two and twentieth day , at a South-self fannt, they same abourd, with the skiffe laden with Fins, and killed fine Decre. Then I went on Land so fearth wine I could find, and I flew a Beare, and tooks a young one stime; and at three of the clocks in the afternoone I came aboord with the skiffe laden with Fine The three & twentieth day at a South east funthe Boat came abourd, and brought a good quantitie of Finnes, and a Beares skinne. Then I flood toward Cape cold, and the fame day, at a South finne, I fent the skiffe on Land to the Northwards of the Cape, where they found hatteepe Mohorfes on a rocke, which they fige ; and at a A Beare fisme North-east fun, the foure and course the day, they had brought all the teeth and blubbes of them Takeheed of aboord; at which time the wind came to the North-west, and blew vesic hard : then I stood tiwardes the lor-famil to feele what commodities it would yeel. At a North finge a was neere Black point, which hath a great many funken Rockes lying on the fouthermost end of it, therefore you must come no necres that shoure then twent is fine fathomes. The fire and twenttieth day, till a South funcie was palme, and the tyde drove the fain fofatre from the Land. that I could not fend the boat on thouse.

The fixe and twentieth day, at a South South-weft Soune, I came abourd, more laden with truch then commodities, at which time I fine a Buck. Then I fined toward les found, and at a Point which partech stants found and les found, but thirtie fathours one, & fo to ten belones. Rocket, then Fiftered Esthalong the shoare, and had between there and sifteene fathones Access, then recerve assuming use money, an assument and a North North world fairnessention to rand fairnessent and a North world for a North fairnessention as a North-week lung as a North fairnessential for commencings, a lot fourn and twentieth day of fune, at an East North-east fun, they came phoned and being fir a good parcell of fins. At fix of the clock I fent the Skitte to the Land agains, and fer layis with the furp. but it being calme, and the tide fetting the Ship towards a ledge of rocks, made mee to inches a

C H AP. I. Beares and Deere flaine. Young Beares taken. Sea-coale found.

gaine. At a South South-east Sun, they came abourd againe, and brought a good quantitie of fins ara South Sunne I feat the Skille towardes the mouth of Ice-found, and in the entrance thereof I found a Coue in the which was twentie fathomes, and fo to thirteene, but by reason of the tyde. and edy-winds, I could not get into it; here the Skiffe came aboord and brought a few finnes. Then I fleered to another Sound, in the Southfide of lee found, where I anchored in twentie iathomes oze, the same day at a North Sun. The eight and twentieth day I flayed at the place astoones one contained as a control of the stoone of the st ing at West. The nine and twentieth day, at a Sooth east Sunne, I fent the skiffe to fearth the

Coaff to Wile Westwards of this Bay, the wind at Novel west. The last of lune, the skiffe ABacket 10 rams shoold; ata South-east Sunne; and brought a few Finnes, and a Bucke, the wind

nund bit litt'e Lee, ti . i fent toet Skile to introll in The first of luly being Straday. I rid at the place aboutlaid, in hope to have more Mo. July the first. on Land 31 bblerued hoere ind fourdithip place in 78. degrees, 24 mitutes, and the va. 78 degrees, 24. riation Weltwards, letongene degrees. Then I fent the skifte to fee it any more beafts were 14. W. mi Land, The wind at Northwest, faire weather. The fecond day, at a North Northeaft Sunne; they came aboott and brought two IDeere. The third, wee flew a few Morfes, Two Deere whose teeth and blubber wee brought abourd, at a North well Sunne, at which time I flew a Greene harbent Pricket: this place I named the Green-basen, Immediately I fent the skiffe to take the reeth, one Deere and fat of from beafts, which lay thane in another office. The wind at Weft, thicke foggie weat flaine, so there. It floweth here on the Change day South, and by Weft, and hyeth fixe foot water, and runs

neth halfe tyde halfe quarter. The fourth day, wee rid full at the South-west with fogges and raine, and very much windsat the fame time I faw great flore of ice in les found. The fifth day at les. a North-call Sunne I wayed; the wind at Welt thicke weather; and in familing out wee flew a A Beareflaine. the Beare, and tooke herewo young ones Indifferent faire weather, we lay becalmed all this day. 100 ones The fixth day, I was off Lamelle (at a South Sunne) the wind being at East blew fo taken, thard, with raine and stricks weather , shad I was emforced to take in all the fayles fine a Mayn e-course, which storme continued till eight at night, at which time I let more sayle, and stood to the Southwarder, choping of get four goods that ways. The fenenth day, at moone the

30 wind came to the North-east, and then re began to bee bleete weather, at what time I saw the Land of Bel found, which i purposed to goe; yet edolpt not by retion of abundance of Ice, which lay about three leagues from the Land, which I could not possibly passe. At a North-west and by Well fun, I faw abundance of Icealt along the Land, to the Southwards of Bet found. The Ice. eight day; at twelve at moone; I shool into the Lee's hope so get to the shoare, the wind at North and by Wash hatie weather, Home found thating East North chi, nine leagues of, I frood to the landwards till foure of the clocke at which time I found the lee to thack that I was forced to fland to the Southwards to eschewit, I sayled by, and among the Lice, till a North North-weft Sunne, at which time I was within three leagues of the floare. Then I founded, and had thirtie fixe fathomes. Then I stood to the Wellwards, and finding all this part

To of the Land fullof Ice, I purposed to stand to the Northwards agains to search for commodities that way : the wind being at North-well, Towned to windwards, till the tenth day, at eight of the clicke before hoone, at which eine well bind a part of a dead Whale, which Adead Whale Exalled to bee made faft to the Ship, determining to get into I ome Harbour, there to make the best of it. I could get more Rel-found, at which time I have all the bottom of the Sound full of Ice, fo that there was no refuge for the Ship, Then I was faine to turne out with the winde at Wolfing and beganne to blow werie hard. At a North-west Sonne, it was favre weather, and I fent my Mare with the skiffe to fearch the Coafts towardes Bel point. The fourteenth day, at a North-east Sunne, the skiffe came abourd, and brought three Beares, which they had flaine. Immediately I fent the Boat for water and wood and then I Three Beares frood through the Ice, and got through it by a North Sun the fifteenth day, the wind at North-

west foggie weather. Then I turned to wind wards, to double Lowneste, and got cleere of it : at fixe of the chokeat night thicke toggie weather.

. The fixteenthiday, at fire of the clocke in the afternoone, I got to Black point, the wind comming to the South, thickeweather. Then I fent the skiffe to range the Coatt, and to fearch what they might find. The feventeenth day, at ten of the clocke they came abourd, and brought Three Decree fome Fine, and three Deere. Then I flood towards Croffe-road, and ankered there at a North-lim, Bilac. the wind and weather as about faid. The eighteenth day, about fue of the clocke in the morning, I fent the skiffe to fee at they could find any Morles on Land, on the Rocke, or in Deergfound, and in the meane time, I, with the rest of the company got drift-wood and water readie, A Beare with

se and about a South funne, a Brare with two young ones; the Dam I flew, and tooke the young ones taken ones abourd the thip, the wind Northerly, cold, foggie weather. The nine and twenrieth day, in Five Deere the morning, I went to the Eastfide, to the if any Mohorfes were on land; there I slew foure ex- slains ceeding fat Buckes and a Doe. In which time the skiffe came abourd and brought two Beares Two Beares skins, but found no beafts, and Dere-feared they found Sea-coales, which burnt very well.

Three Bucks

two Beauers.

The twentieth day, I fent the Skiffe into the bottome of Claffe come to fearth it for cammodities, the wind at South close weather with raine: at eight of the clock at night they came abourd. ties, the wind at SOUTH Close weather with rame, at right on the choose at highe they came about, but found nothing; immediately I got wood and water about, which was ready before, preparing to fee fayle the windiand weather aboutfaid, we flue there Deere. The one and owender, I wayed, the wind at North faire weather. The two and twentieth day, the wind came to the West, and then I stood to the Northward, at eight of the clocke half-weather. As swelter of the clocke at noone the wind came to the North and I flood to the Southwards by For forted The three and twentieth day, at an East north-east Same, the Boss brought same Whales finnes, and three Buckes, and one Doe: In which time I thought I had fewer Land bears Waft from po and three outker, and one row, in which there is a superior a superior and the control of the large is a superior and the control of the cont South, then I perceived it to be fogs. The foure and smentieth day, at four of the slocks in the afternoone I came into Bel-found and found but little Ice, then I fent the Skiffe to fecke for a arctinous retains into pre-pinou and round but interact, then a rent time same to section of Road for the Ship and also for commodities. The fine and swentieth day, at three of the electe in the morning, the Skiffe came abourd, haning beene in the mouth of the North Islae, which I call Low found, they went into it by Point-partition, but there is no good Channell that way for a Ship : neuertheleffe there feemeth to bee an Indetor Channell, but it is full of Rockes from fide

to fide, and the men told-mee, that you the Landley fome Mohorfes, which I ferit them to bill At eight of the clocke, the Skiffe came aboord, and brought the teeth of the layd beafts, and fome blubber. Immediately I fent them into Bel-found, to lecke for a Road for the Ship, the wind at West thicke foggie weather. About an North West Sunne, Lanchored in Bel-fewed, in fixten 20 A Beare flaine. fathomer ozie ground, this Harbour lyeth about two leagues about Pointe positives on the South A tat Bucke. fide of it, and here a flip may ride fafe from all windes. As a North Sonne, my Mare flue a Bear. were two and three inches

The fix and twentieth day in the morning, is blew hard, and I went on Land and the a Beare, I have not written of the and a Bucke which had cheer inches and an halfe in whickness of facous the haundhes. At this waternouse francisco of the clocke I feat both the Boats to feech the fat of those Mohories which invertibate the day before, and likewife to fearch if they could find any more the second at Morth with fogs. As fix of the clocke at night the Boats came about with the far, and brought two Buckes, but found ab the stocket at might the mount same across written and, and antiognous arrowants by the column in beatts on Land. Some across a stock of the batter of the party of the party of the party of the party of the stock of the same I wrighed the winds being at thicke of far. North and by West faire weather, and I sterred age. (betwitt an Hand and the point where I so Northand by Wett hare weather, and I necreature, therewire an mand and the point where I will South, week and by Weth, having these depths; 10-7; 6:5;, and 4; fathomes a then I was in the midded between the fail point, that a floud-only she hay South and North, one of the other and after keeping the some course, I had these depths; i.s., i.s., i.s., not z, and z; fathomes; and these depths I had fased, and after note. At fixe of the clocks, the windcame to the South wish these depths I had fand, and after note. At fixe of the clocks, the windcame to the South wish the te copens a narrang, and at the comments and at twelve, the right and twentieth day Law-with fogges, and I turned to the winds wards and at twelve, the right and twentieth day Law-sufficient North-east about four pleagues off, where I founded himse shiftle two fathomes fiream is ground with blacke flones, as which time it was calme; and continued to till the sine

and twentieth day at fixe of the closike in the morning, then the wand came to the North with

fogges, and I flood to the Southwards, and to fee what Commodities Locald find that way. regges, and 1 1000 to the somewhate, a more to be write to ommonther recent that the way.

Assume of the clocke I was netweethe (def-fense), where I mer with such lee, which put mer 40 from the Land, and I was enforced to fineer-Sputh-week 4000 you'll not formout; the windows

North-west which blew hard with forges. The retind-increased, I decod cowards Cherok Band (if possible I could attayne is) for forger and los. The thirtieffiday; it four of the clocks in the positions a source scarge and non-communications are consistent of the feet which I had part, the morning I flaw no leep sharing kept approximation of the present of the feet which I had part, the winde at North and by West, cold foggie weather with nine. From the time shooks fail rill twells of the clocke at stooks [Syred South ead], and name affected keapens, the fame wind and weather, at which time I founded it had eightie fathering greene occi like Kowets dongs. I founded as two of the clocke, and at fours of the clock, the first, eightie eight, the forend, eight tie two fathomes, and fayled fixe logues, the former course wind and weather. At which time I heard a breach which proued kee, then I fleered West to eschew it, the fogges being so thicke 30 that I could not fee one Cables length. The laft of July at noone, I had layled South and by Eaft halfe a point Southerly sight lognes

having little wind, and founded, and found one hundred and force farbomes thicks toggie weather, and in haling up the Lead, a fish followed it to the top of the water 1 thin 1 toyed to take fish but could not. At foure of the clocke in the afternoone, the winde came Southerly, and i

flood to the Westward, by reason the Ice lay both to the South and East of vs. at a Month Sunne it was cleare weather, and I faw the Ice round about vs, cold weather with fireft. The first of August, we beat in the Ice till moone; but shald finde no end thereof ; because it was to toggie, and the Loe packed very closes yet after many intricate courses, I got to the Westwards of it at mkl-night the same day, the windeat South-east, cold weather with raine and 60 fogges. And after I had seene so much kee that I could not come neere Cherry lland, to prosecute the reit of any voyage. I determined to fland for Englands. God would give melizare. From mid-night the first day, till eight of the clocke the second day before noone; I siyeld South-well and by South flue leagues, the wind at East South-east, thicke forger with raine. From the se-

cond day at eight of the clocke, till the third day at twelve of the clock at noone. I fayled West South-west fitteene leagues, the wind at South and by East, wet foggie weather. From noone about faid, till twelue at noone the fourth day, I fayled foure leagues South, the winde variable. and the most part of that time calme, and so continued till eight of the clocke at night at which time the wind came to the South and by East, and blew very hard; from the fourth day at noon till the fift day at noone I fayled South-west Westerly seuen leagues. The fixt day, the winde was at South-east cleere weather , at noone I found the shippe in 73. degrees , the North Cape bearing by my computation, East South-east Easterly. The seuench day at noone, I found the ship in 72. degrees 22. minutes, indifferent faire weather. And from the seuenth day at To noone, till the eight day at noone I fayled foure and twentie leagues, the course South South-

west, the wind at South-east and by East, at which time it beganne to be very foggie, and the winde came to the South, but immediatly it was calme, and continued fo till mid-night. Then the wind came to the North, little wind, and at a South Sunne the ninth day, I had fayled South feuen leagues. From the ninth day at noone till the tenth day at that time I fayled South , and ranne feuen leagues South, it being calme most part of the day, with much rayne and fogges.
From twelte the tenth day, nil noone the eleventh day, I sayled South and by West, and ranne fenenteene leagues, the wind Northerly. And from the eleventh day at noone, till the twelfth, 20 at that time, Hayled South and by West eighteene leagues, the winde at North North-west faire weather. From noone the twelfth day , vntill twelue at noone the thirteenth day, I (ayled South and by West fortie eight leagues, the wind betweene the North, and the West

North-west gustie weather. From the thirteenth at noone, till the fourteenth at noone. I savled South and by West fortie fine leagues, the wind betwixt the West North-west, and the West South-west gustie weather, latitude 64. degrees 21. minutes. From the sourteenth day at noone, till the fifteenth day at that time, I sayled South and by West nine and twentie leagues, at which time I observed and found the ship in 62. degrees 53. minutes faire weather, the wind at North, At foure of the clocke the same day, I faw Skut fueffe in Normay feuenteene leagues off, 15. minutes. and bearing South-east, from whence I hold it superfluous to write it, being a place well knowne. The last of August I arrived at London, Blessed be God for ever and ever. Amen.

A briefe note what Beafts, Fowlespend Fiftes were feene

BEafts: Buckes, and Does, white Beares and Forrer, of colour dunne and grey.

Fowles: white Partridges, a small land Bard, like a Sparrow, partly white, and partly browne, a Fowle with a combe and a tayle like a Cock, a redde Fowle of the bigneffe of a Pidbrowne, a Fowle with a Comer and a tayer nac a youn, a weeker rowre or the originate of a rich ageon; a white Fowle with a greene bill, the top of the bill of it and the eyes were rade, with The Columbia black feet. Wild Greefe, Coluidines, Galls, Sea-mewes, Willockes, Noddies, Ice-birds, Reeks, as Mailard. dine is as big and Sea-pidgeons. Fishes : great store of Whales, Gramposes, Mohorses, the white fish I spake of the seventh necrot of the

40 of Inne. a small fish like Cuplen, likewife I faw the bones of Cods, or Haddocks; but could colour, and take no fish: I often looked for Shel-fish, but could take none: divers of my company did fee the female browne.

CHAP. IL.

A Commission for I on As Poor E our Servant, appointed Master of a small Barke called the Elizabeth, of fiftie tunnes burthen, for Discouerie to the Northward of Greenland, giuen

the last day of March 1610.

Na much as it bath pleased Almightie God, through the industry of your selfe and others, to disconer unto our Nation a Land tying in eightie degrees toward the North-Poole entri-pole : We are desirous not only to disconer farther to the Northward along the said tayned by a Land, to find whether the same be an Iland or a Mayne, and which way the same certaine fitdoth trend, either to the Eastward or to the Westward of the Pole, as also whether the pend He was

Same be inhabited by any people, or whether there be an open Sea farther Northward then bath beene al- heard, milerareadie disconcred. For accomplishing of all which our desires, we have made choice of you, and to that bly and baiely end have entertayned you into our fernice for certayne yeares upon a fipend certayne : not doubting , but murthered beyou will securit your selfe in the businesse, for which you were so entertayned, as God may be glorified, twint Retasse our Country benefited, your selfe credited, and we in our desires satisfied. And for your better instruc-Ain to proceed in this your Voyage, we have thought good to fet downe our opinions what course wee from this thinke fit to be observed in the same: which is, That for ssauch as by your owne report of the great Voyage.

The three and twentieth day, at an East North-east Sunne, I was within three leagues of Corpeold: this day it was faire weather, and I tookethe Sunnes height at twelve of the clocke, and found it to be 32. degrees 30. minutes, the declination being 22. degrees 13 minates, the diffance of the Pole from my Zeneth, was 11, degrees 17, minutes, the com-Fair-weather plement thereof being 78. degrees and 43. minutes, the Poles alriede. All this day it was prement thereof neing 70. orgress and 45 minutes and Fine Fues actions. An time day it was colone a leie totennone, warme funfilme weather, and whereas I named this place Cape-celd, if I had I he with it this day, or the like, I should have given it another name. Here I tried to take fifth, but could perceive none, Item, there is a point that beareth from Cape-cold North & by West

which I called Faire-forland: this Forland, and Cape-cold, and Black-point, are all one Hand. At fixe of the checke at night, the winde came to the North North-weft, then I determined to 10 the or the loss found better; but comming neere it, I perceived it packt ful of Ice, fo that I could fee view the ice-sound petterpout comming neere it; percented it packetin of act, to that I could be no end thereof at the Tep-math-head, neither could I fee any open water in it. At a North Sun, the wind came to the North-east, and by North, then I flood to the Northwards, as before.

The four and twentieth day, at a North-east Sunnettle wind came to the South-west, faire weather and warme. At a North north-east Sun, I tooke the Meridian Alcitude, which was eleuen degrees aboue the Horizon, and by working accordingly, I found the eleuation of the Pole al one the Horizon, to be 78. degrees, 37. minutes. The fine and twentieth day, at an Eaft-fourtheast sun, I fet the boat to the land, neere Fayer-forland, and it being calme I founded fortie fine fathoms, where I proved for fish, but could find none, and within one league of the sheare I had

In this land five and thirtie, and thirtie fathome fireamy ground. At a South-east Soune, the Boat Came 20 In this had for an armore, and time to move account grown and form whales fins. The men told mee there was great by one a not such that is in the Sea, about the shoare side, and about thirtie on Land. Immediately I seat to good thee, there of Months in the Sea, about the shoare side, and about thirtie on Land. Immediately I seat o Duffiwe 24, my Mate, Nicolas Woodcock with the Boat on Land againe, to fee if they could kill any of the but n and count here. fate Moherles, and also to fearch what other thing they should hap to find that might proue benencoll. Moreouer I was certified, that all the Ponds and Lakes were vnfrozen, they being Fresh-water, which putteth mee in hope of a milde Summer here, after so sharpe a beginning as I haue had, and my opinion is such (and I assure my selfe it is so) that a passage may bee associated

Reprofa Po- tayned this way, by the Pole, as any viknowne way whatfoeuer, by reason the Sun doth give a great heat in this climate; and the Ice, I meane that that freezeth here, is nothing so huge as I

The fixe and twentieth day, at a North-east Sunne, the Boat came aboord againe, having slaine lut two Morfes, at twelue at midnight the wind came to the North, and blew fo hard, that I was enforced to try with a Mayne-course, cold frosty weather, with show. The sayd wind and weather continued till a South Sun, the feuen and twentieth day, at eight of the clocke at night, the wind came to the North-west and by West faire weather, then I stood towards the Land again. And at a South-east fun, the eight & twentieth day, I was within three leagues of Fajer-forland, and tranding in I founded divers times, and had thefe depths, 15. 17. 19. and 18. fathoms, within five, fixe, and feuen myles of the shoare, and when Fayer-forland did beare South and by East by the Compasse. It being two miles from me, I saw the Land beare North-east and by North, about nive leagues off, the which because it was full of knottie Mountaines, I called Knot. 40 tie-point, and betweene Knottie-point, and Fayer-forland, I law a great Bay, which because it was foggy on the fielden, I could not discouer. In the Sea, about the Forland, I faw great store of Mohorses and Sea-fowle, I founded in the Bay and had nintie fine fathomes rockie ground. I flood to Sea, and had very foule weather, with snow, and fogs, and frost, which weather continued till

Thirty day of the thirtieth day, at foure of the clocke in the morning, at which time I was within one mile of Fayer-forland in nine fathomes, and then I fayled East North-east about two miles, and had thefe dephs, 18.17.16.14. and 12. fathomes all rockes. Then I steered South with the like depths and grounds, but when I had runne South South-east three miles further, I had sandie ground, then did Fayer-forland beare Weit and by North, about three leagues of, the next caft I had tenne fathomes foule ground, and from thence I steered two leagues South and by East, having these 50 depths, 10.9. 8. and 7. fathomes, then I faw the Bay coursed our with Ice. I turned out the wind at North, This Sound I named Fowle-found, for in this Bay are three Sounds; this I spake lait of, which lyeth in South, and goeth out at Black point : another lyeth in East South-east, which I named Deere-found: another goeth in North, which is called Coffe-cone, and being neere the point betweene Fowle-found and Deere-found, it fell calme, and I fent the Skitte on Land, and ffanding after, with a little wind at West, I found the sayd Point very shoale, with a ridge of Rockes, where I had thele depths, 4.5.6.7.9.10.18, and then 30. fathomes. At a South Son, the

Boat came abourd and brought Wood, and some Whale-fins, The last of May, at an East North-east Sun, I was within three leagues of Knotty point, at which time I faw Ice all the Sea ouer betwixt the West and the Land : then I faw another Point foure 69 leagues distant from Knotty-point, the one bearing of the other North and by East, and South and

by West, and it is smooth Land, the which I named the Gurnerds no fe, indifferent warms weather : and finding the Ice to bee fo thicke that I could not passe it, and the wind comming to the Well, I flood to the Southwards againe, determining to fearth the Sounds better for a Road, and for commodities, because I saw no good to bee gotten in keeping the Sea amongst the Ice, and at a North Sun, I was in the entrance of Clofe-come, where I had no ground at one hundred & twenty North fathomes, and yet I was within two Cables length of a funken ledge of Rockes, that I veth on the Larboard (kle of the Baya mile from the shoare. The first of Iune I found a good Road in Clofe-come, on the South-west fide, where I rid in Iune,

feuen fathomes fand mingled with oze, at an East Sun I fent a Skiffe to a low Point, that Iveth on the North fide of the Bay, where they found some Whales fins, and three pieces of Mohorse teeth, and woon a little rockie Iland, they faw neere one hundred Mohorfes, which were there fleeping. In this time I went towards the bottome of the Sound , and flue a white Beare. At a ABeare flainte South-weft Sun, I went towards the rocke, to fee if I could kill any of the Morfes that lay there, and as wee went by the shoare side I espied Deere, three of them I slue, and one of my company one. But when I came to the rocke the Ice that the beafts lay on was hollow, and the

rocks that was betwirt the Ice and the fea flood floping toward the Seasthe which when I faw, I determined to go aboutd and let them alone, yet afterward I went on the rocke betwirt the Ice and the Sea : and as I with the reft of my company were killing them, the Ice brake, and Ice and beaits fird Into the Sea together, and carryed one of the men with them, fo that he escaped out of that danger very hardly; for befides the weight of dead Mohorfes, and Ice that bruiled him, the 20 beafts that were aliue strook at him in the water, and brussed him very foare. I had beene in the fame cafe, if I had not beene the numbler, and flipt on one fide. I killed three Morles, whole teeth His name was I tooke off. Then I espied the Beare, which my Mate had hurt before with a shot ; hee

went into the Sea, when hee faw the Boate, where I flue him with a Lance, and brought ABeare flaines

The second day at a North and by East Sunne. At a South Sunne, I went to the South shoare of Deere-found, where I found a good quantitie of Fins, and came abourd, at a North North-west Sunne. The third day; being Sunday; i rid full, having the wind at West South-West much wind. Then you she side of a Hill, a mile to the Westwards of the Road, I set up a Crosse, with A crosses to the Road. a writing ponit, lignifying the day of my arrivall first in this Land, by whom I was fet Coffe mad

out, and the time of my being heere. This Road Italied (roffe-road. At a South-east funne for all minds the fourth day, I wayed the windat West South-west, and when I was almost out the wind in-30 created with fogs, which made me purback into the Road, where I anchored the fame day at fix of the clocke, at afternone. The fifth day, at a North east and by Haft funne I wayed, and it fell calme, then I went to the East fide, and killed some Fowle, which I found in great abundance: There is great and when I was readie to go aboord, I faw fourteene Deere, at which time I fpent all my powder, flore of Fowle and thot but one that, with the which I flie a fat Buck. The lame day, at a South fun, I went on in this L Land and flor two Deere more. And at a South-welt fun I went on Land and flue a Dog and took A Buck flainer

the Faune aline, and brought it abourd, but it dyed the next day. The calme continued till the fixth day, at an East North-east funne failed we drone in the Bay, with a little foaking tyde that runneth there.) Then I fenr the skiffe to the rocke aforefaid, to fee what store of Mohorles were there; at three of the clocke they came abourd, and told mee there was neere ewo hundred beafts. Three Decre 40 I tooke both the boat and skifft, with all my company, and went to the rock, and in going thinker fifter a Better bor when I came to the both, the boath, began to goe into the far, then I prefently went on land, with all my company, and the eightic beath, whole teeth I Better than tooks, and moving above the mothed Better, and came above!! the fateenth day, pra North. Modafile.

eaft feb. Then I faw ewo white fiftes, which at the first fight I fopposed to be Beares, they had White fiftes. long fronts like Sturgeons, two flat Fins close by their gils, list bod and small towards their tailes,

The tenth day, I went on floare and flue flue Deere ; with the schich, and there that I flue Fine Deere, before I liante lengthened out my victuals, bleffed be the Ceater of the World, " which hath not " 1fa. 450 190 made any part thereof iti vaine, but fo that in these parts (which hash feemed vnposible so our Ancestors to bee tratielled voto, by reason of the extreme looks which they supposed to bee

50 here) I find the agreetemperate in the Lands, and nothing tho coldras I have tound at Chery Hand in flue fenerall Voyages. Moreouer, in this Land I have feene breat store of Deere, which have neither buff nor tree to shelter them from the mpping cold of Winter, nor yet amy extraordinane paftire to refresh them. If thefe (Ifay) hauma norhing but the Rockes for a house, and the Starry Canopie for a covering doe line here who may not man which hath all the gifts of God bellowed voon him for his health and fuccourse ::

The elettenth day if file morning T fent the skill oto a Beach ; sharlyeth Northwards from the Rocke where we fine our beafts, bite when they same to the Rocke, is beganne to blow hard at North North welt, that they could not proceed any further, wonthe Rocke they 60 found a Beare, and Bue him, and came aboord. In which time I tooke the beats and went

to the Eall'fide, and flue two Beares and two Deere. the marthus, and line two Beares and two Deere.

The twelfth day, at a North-east luide I wayed; and having very little wind, I lent the Two Beares. skiffe to goe to the place about syd, at a North funne, they came about and brought fume and two Deere Whales Finnes and a Beare, and told thee that it did blow very much wind at Sea, yet I had flaince

Deer - Cond.

it all this time calme in the Bay. Yet before I could get out of the Sound, the wind came to the North-west, and blew very hard, which made mee to put roome for Cross-road, where I rid till the fourteenth day, in which time I caused both the boates to bee trimmed, and the Compaffe vary thirteenth day at noone, I observed on Land, in this place, and found the Poles height 79.degrees, 18.degrees 16. fifteene minutes, and the variation of the Companie 18. degrees, 16. minutes North-weil : the fame day I flue a Bucke.

The fourteenth day, at a South-east Sunne I wayed, the wind at South-west foggie weather. at a South-west Sunne, I went on Land and slew a Buck. The fifteenth day, at East Sunne, I got out of the Bay, at which time I faw abundance of Ice to the Sea-wards, but the wind came to the South-east, and I fayled betwirt the Ice and the shoare. At a North-west Sunge, I fent to the skiffe (with feven men in it) to the Land under Knattie-point, at which time the wind. came to the North-east, and I stood to the North-wardes, where I had these depths, fifteene. Great flore of thirteene, and eleuen fathomes foule-ground. These depths were about a league, and to the Northwards of Knottie-point , I faw great store of Whales, the like Leaw in Deere-found. The fixteenth day, the Skiffe came aboord, and brought a few Finnes, and fine Deere, and they told mee that within the Bay, that lyeth betwixt Knottie-point and Gurnerde-nofe is a Hauen. in

Fine Deere

the entrance whereof is an Iland, and feuen fathomes going in, but within eight, nine, fifteene, and twentie fathomes good ground. This maketh Gurnerdi-nofe, an Iland, for this Haven 20eth out on the North-weit fide of Gurnerds-nofe, I named this Hauen, the Farre-hauen : I Yaur-Haurn. South South-west, the floud commeth from the 29

Then standing to the Northwards, I saw the Sea couered with Ice, which lay close to the Land which made me fland to the Southwards again, tobserved at Gurnerds-nofe, and found 74.degrees 50. the Poles height 79. degrees, 50. minutes. At a North-west Sun, the fame day, I fent the skiffe on Land to fearch the Coast to the Southwards of Knotis-point, where I founded and had twenty foure fathomes Poule-ground, and in the Fayre-way I sounded, having these depths, 30, 35, 45 Latitude of and 48, fathomes all Rocky ground. By the fetienteenth day, I was in the entrance of Clafe-cone The f r heft place of my be-ing this Voyage at a South Sun, at which time the Skiffe earne aboord, and brought a Beares skin, and a Buck, and ing this Voyage a good quantite of Whales Fins and an Vnicornes horne, which was fine footand sour inches ann y mann agus agus agus ann an the biggeft part of it, it was feuen inches and a halfe about. The eighteenth day, at a 30 Horne of a fin South Sun, I came into the Road, where I rid all that day, having very much wind and raine that wee could doe nothing. At a North Sunne, I fent my Mate, with the Skiffe, and fixe men after in Baffins to feeke for more Fins, Sec. The ninteenth day, at a North Sun, they came aboord, haping flaine ten Beares, three of their skins and fat they brought aboord, and a good quantitie of Fins, and fix Ten Beares paire of teeth. The twentieth day, in the morning, I fent both the Boat and Skiffe to flav the other feuen Beares, the wind being at North faire weather. But they were no fooner gone, but it blew very hard at North, which brought abundance of Ice out of the bottome of the Sound. but did the Ship no hurt. At a West South West Sunne the Boats came aboord with the Beares skins, the wind about faid fet fo much Ice out of the found vpon the Ship, that it inforced men

o let layle.

The one and twentieth day, at a North Sun. I flood sowardes Faser for land, and lent out the

skiffe. The two and twentieth day , at a South-east funnt, they same aboord, with the skiffe

laden with Fins, and killed fine Deere. Then I went on Land to fearth what I could find, and

I flew a Beare, and tooke a young one share; and at three of the clocke in the afternoone I came

abourd with the skiffe lades with Fine The three & twentieth day at a South-eaft fine the Boat

came aboord, and brought a good quantitie of Finnes, and a Beares skinne. Then I flood toward Cape-cold, and the fame day, at a South funne, I fent the skiffe on Land to the North-

wards of the Cape, where they found fixteene Moliorfes on a rocke, which they flue ; and at a

towardes the lee-found to feele what commodities it would yeeld. At a North funge a was 10

neere Black point, which hath a great many funken Rockes lying on the fouthermost end of

it, therefore you must come no neerer that shoure then twentie fine fathomes. The fine and twen-

tieth day, till a South fungie was palme, and the tyde droue the faip fo farre from the Land,

to fet fayle.

disconary.

flaine.

A Beare flaine North-east fun, the foure and twentieth day, they had brought all the teeth and blubber of them

Take beede of aboord; at which time the wind came to the North-west, and blew verie hard : then I sood

that I could not fend the boat on shoare, The fixe and twentieth days, at a South South-west Sunne, I came abourd, more laden with travell then commodities, at which time I flue a Buck. Then I flood toward Ice found, and at a Point which parteth Fould Sound and Ice found, I had thirtie fathomes oze, & fo to ten fathomes Rockes, then Thered Estualong the shoare, and had betwint thirtie and histeene fathomes oze and fand. Hi fifteen farhomes I anchosed haung the wind at North North-well fairs weather at a North-well fun, at a North fun, I fent the skiffe to the shoare to fearch for commodities, The feuen and twentieth day of Tune, at an East North-east fun, they came abourd, and brought a good parcell of fins. At fix of the clook I fent the Skiffe to the Land againe, and fer fayle with the thip; but it being calme, and the side fetting the Ship towards a ledge of rocks, made mee to anchor a-

gaine. At a South South-east Sun, they came abourd againe, and brought a good quantitie of fins ara South Sunne I fent the Skille towardes the mouth of lee-found, and in the entrance thereof I found a Coucin the which was twentie fathomes, and fo to thirteene, but by reason of the tyde. and edy-winds, I could not get into it; here the Skiffe came abourd and brought a few finnes. Then I fleered to another Sound, in the Southfide of les found, where I anchored in twentie tashomes oze, the same day are North Sun. The eight and twentieth day I flayed at the place abourfaid, and tried the Bestes greafe to bring it into oyle, and when we were all bushed, a Beare came (winstring outer the Bay, towards the Bip, which I shew, and split my Peece, the wind be. A Beareslaine, ing at West. The mine and twentieth day, and South east Sunne, I fent the skiffe to fearch the One south Weftwarde of this Bay, the wind at North weft. The laft of lune, the skiffe ABucke.

The first of fully , being Standay, I rid as the place aboutfaid, in hope to have more Mo. Iuly the first. ni Land, 44 bhlerued hecke insofeourdithis place in 78. degrees, 24. mitutes, and the va-riation Welthanis, letongeme degrees. Then I fent the skiffe to fee it any more beafts were riation vertical. The wind as Durthwest, Faire weather. The fecond day, at a North Morth-on Land. The wind as Durthwest, Faire weather. The fecond day, at a North Morth-daf Sume! they came aboott and brought swo Deere Thethird, wee flew a few Morfes, flaine. whole teeth and blubber wee brought aboord, Atra Northawell Sunne, at which time I flew a Green-harbard Pricket: this place I named the Green-harbarn, Immediately I fent the skiffe to take the teeth, one Detre and far of from beafts, which lay flaine in another place. The wind at Weft, thicke foggie wea- flaine.

20 ther. I false type halfe quarter. The fourth day, wee no fall at the Southwest with fogges and noth halfe type halfe quarter. The fourth day, wee no fall at the Southwest with fogges and raine, and very much windest the fame time! law grost flore office in hee found. The fifth day at lee. a North-caft Sunne I wayed; the wind at West thicke weather; and mitanding out wee slew a ABearessine,

The Bears, and tooks herews young odes Indifferent fairs weather, we lay be almost all this day. Two of Louisife (at a South Sunnt) the wind being at Eath blew fo taken. hard, with raine aild shielig weather , shae I was enforced to take in all the fayles fane a Mayne courfe, which flores continued till eight at night, as which time I tem most fayle, and flood to the Southwarder, hoping so get foint goods this sway: "The found that, at moon the flow of the time flow of the flow of the time flow of the fl

wino came to the value of the horizontal to goe; yet edulation by reason of abundance of Ice, which is about three leagues from the Land, which is about three leagues from the Land, which is doubt not politisly page. Are North-well and by West fun, I saw abundance of Levall alder the Land to the Southwards of Bel found. The Lee. and by Westing, and administration of the state of the st forced to fland to the Southwards to eichewit. I fayled by, and amongst the Ice, till a North North-west Sunne, at which time I was within three leagues of the shoare. Then I founded, and had thirtie fixe fathomes. Then! flood to the Wellwards, and finding all this part 40 of the Land fullof Ice, I purposed to stand to the Northwards agains to search for commodi-

ties that way : the wind being at North-well, Towned to windwards, till the tenth day, at eight of the clicke before noone, at which time well found a part of a dead Whale, which Adead Whale. I cauled to bee made faft to the Ship, determining to get fire Come Harbour, there to make the best of it. I could get into Bel-found, at which time I saw all the bottom of the Sound full of Ice, so that there was no refuge for the Ship. Then I was faine to turne out with the winde at Work, and begame to blow werie hard. At a North-west Sonne, it was favre weather, and I fent my Mate with the skiffe to fearch the Coasts towards Bel wint. The fourteenth day, at a North-east Sunne, the skiffe came abourd, and brought three Beares, which they had flaine. Immediately I fent the Boat for water and wood and then I Three Beares flood through the Ice, and got through it by a North Sun the fifteenth day, the wind at Northwest foggie weather. Then I turned to wind wards, to double Lownesse, and got cleere of it : at fixe of the chockeat night thicke foggie weather.

The fixteenthiday, at fine of the clocke in the afternoone, I got to Black point, the wind comming to the South, thicke-weather. Then I fent the skiffe to range the Coatt, and to fearch what they might find. The feuenteenth day, at ten of the clocke they came abourd, and brought Three Decree fome Fine, and three Deere. Then I frood towards Croffe-road, and ankered there at a North-fun, Bline. the wind and weather as about faid. The eighteenth day, about fine of the clocke in the morning. I fent the skiffe to fee if they could find any Mortes on Land , on the Rocke, or in Deerening, lienters and the trime, I, with the relt of the company got drift-wood and water readie. A Bete with found, and in the meane time, I, with the relt of the company got drift-wood and water readie, a bear with two young ones; the Dam I flew, and tooke the young ones taken,

ones abourd the fhip, the wind Northerly, cold, foggie weather. The nine and twentieth day, in Fine Deere the morning, I went to the Eastide, to fee if any Mohorfes were on land; there I flew foure ex- flaine. ceeding fat Buckes and a Doe. In which time the skiffe came aboord and brought two Beares Two Beares skins, but found no beafts, and in Deere-found they found Sea-coales, which burnt very well.

709

store of Whales in these Seas, wee are at an extraordinary charge this yeare, of setting out a stip and men for that purpose, which sop is called the Marie Margaret of London, in burthen one hundred and fiftie turnes or thereabout : Our meaning is, that you doe keepe company with the said ship, and not to leane her, till God lend you to the places, where she may make her Voyage: which by your report should be at a rlace named by you the last yeare 1610. Whale Bay,

And God sending you to the said place, we would have you to flay there the killing of a Whale, or two And God jending you to the Jacqueen, we would come you to pay lower to see though you are use, or two
of there for you better experience beardjer to expedite the buffering fit frough extremilies of the Let you
food to put from your Discourses. And in the means time while you are faring about thing of the
Wholes, you may couse from of your popules to be facilities the Could with this Studies for the finners,
Marfest teeth, Ambergree fo, or any other commodities, that may be found upon that Coulf. And basing 10 thus flaged a convenient time with the faid great ship for the purpose abone specified, wee would have you then to proceed on your Discourse for the saissing of our expeliations formerly mentioned, which is a Further disco. discours further to the North Pole as farre as possibly you can and how the Land attendis discours for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can and how the Land attendis discourse for the North Pole as farre as possibly you can also be a farre as possibly you can also be a farre as possible to the North Pole as farre as po trend, and whether there be any inhabitants in the faid Land, and whether there be an open Sea to the Northward beyond the said land. And in this your coasting the land, we doubt not but you will endeaser with home Seleps to gather up all the Whale firmes you can finde, and to kill the Morfes which you can come by on land, and to referve the teeth and blubber to the most advantage that may bee, the better to beare out the great charge which you know we are at in the fe Discoueries. And to that end we have lan

den in you eleven Tunnes of emptie caske. And having front so much time in this your Disconcrie, and in athering up of such commodities as 20 that Coast will affoord, and as the scason of the yeere will permit you, then we would have you returne for England, and in your way homeward to touch at the place where you left the Mary Margaret, to fee if Thee be not gone; and finding her there, and that the time of the yeers will permit, wee would have you melt your Blubber into Oile before your comming from thence, to aword the great trouble and inconnemell your plumeter me untergenze your commany, from tozenze, i a move un experient vousse and intermen-nience; pout kour be full into the difference 1610. by bringing the same Inther in Blubber. But if the said ship shill chance to be full sistence and a to be gone before; your comming student, yet we would beare you say there, or at Cheric Iland some small time to melt your Blubber; to which end we have appointed Thomas Edge, Thomas Edge our fermant in that hop to least a Copper and fact neceffaries as hall ferme your turne, for See [4], 13 ca. the performing of that businessly, believe him; and have delivered him the wife admertifement at that

place of their proceedings in the verage, and of their intent, what course they purpose to take, together 30 with their opinions, what cour (e they would have you take. In these matters of Discourries and uncertaine Voyages, the varietie of occurrences and Sea dangers is such, as we cannot drettly prescribe a course certaine to be beld: yet we held it fitting to fet downe Our opinions of the needfull: which are, that at your first dispursure out of England you keeps comfell together, and agree upon your places of meetings, if by tempatt of weather you chance to bee feparated; fill flaping your course dwells for Chery Iland, where we would have you flay. And if as your comming thither, you finde the same cheere of Ice, and that there be Merfes on theare, then wee would have you to worke upon them, as time and opportunitie will permit, alway having respect to your intended voyage. And baning diff arched your bufineffe in that place, wee would have you depart in company together The Whale Bay, as afarefaid, and to follow our infirmthens formerly fet demne to be done in that place, 40

And basing performed what may be done in the parts boyand Cherie Island, and fo returning bache agone for England, we bolds if you made, your Rendez you square at the faid Chris Hond, and there is find the state of the would have them frend the time in searching for the Lead Ora, or any other Minerall matter that may be like to be of worth upon the faid Land. And thus having stayed at Cheric Iland till the last of Angust the one for the other, and not meeting together, the flup fo staying having made her Popage, wes would have ber to returne directly for England, and to lease a Note in writing of the day of her departure. This is our opinion. Notwithstanding, if upon better grounds you shall among your selues sinde a convenienter course to be beld for the good of the Voyage, and the benefit of vs the Adventurers, wee leane it to your selves to agree upon, as time and opportunitie shall serve.

And for the anoyding of an Obsection beretosore used. That the want of sufficient withals hath

beene the cause of the overthrow of the Voyages by speedier returns home, then otherwise they would; wee have thought fit to let downe the quantitie of victuals delivered aboord your ship in this our Commission, to the intent to cleere our selues and our Agent of that imputation, and to lay the blame on your selmes, if by default the same be enil husbanded. The particulars are these. Beefe , 22.0 3, quarters , 1811, Bisquit 20.0 Beere 14. Tunnes. Fish, 200. of Huberdin, and halfe an hundred Lings. Cheese 300.0 weight. Butter three Firkins. Oyle three Gallons, Peafe ten Buftels. One-meale fine Buftels. Candels . fixe dosen. Aquavita , thirtie Gallons. Vinegar one rundlet of swentie Gallons. This proportion of victuals will last you seuen or eight moneths with good hubandry, together with the b lpes of Fish, Fowle, and Beatts that are to be had in abundance upon those Coasts. So that we hope 60 Jon shall bene no canse to the contrary, but obsersuily to goe forward in your businesse, whereby not onely the small Barke you goe in, but the great Ship may come home fully laden with one commodute or other, which we donot not but by your diligence and good endenours you may attayne vnto.

But if you healt chance by extremitie of les, or otherwise to be put backe from your discourse, or from
assuming commondates upon the coast of Greenland, whereby to lade both loops; then we would have you
flog at Cherie Hand, or other Hands threabout, so long time as possibly you can, and as the season of the peers will permit you, to finish the rest of your voyage. And if there bee sufficient lading betweene you both to lade the big ger hip, were would have ber to bee diffratched from thence with all freede . and route flay there as long as you may consumently for the good of the Voyage : which the more beneficiall it proueth, the more it will be for your credit, and we will not be unthankefull at your returne.

We would have you at enery place of meeting with the Mary Margaret, to deliner to Thomas Elee We would have you at every place of meeting with the Mary Margaret, to deliver to Thomas Ever or formant a particular Note of what goods you have taken into your life. And a your half lading here to we mould have you make a controll imagine of the whole Caryafon of goods laden in your lety, and baning figured the fame, to feeler to y, and dwrite the fame to our Agent refidence in London. And if you doe senance to market with the Mary Margarett as or fler your high two of lading, we would have you deliver a Copy of the faul muryee to our ferumer Thomas Edge for our better faits fattion, what cafaultes fower might happen by the war, and at any hand to have such an innoyce ever readic sealed, and for mortalises fake put up in fome fare place of enftodie.

We bold it fu , that you Iones Poole Should be as grand Pilot in this voyage to the Northward. And therefore we would have you to accompany the great /hip, and to bring her to the places of filling for the Whale; or to any other place, which you out of your experience shall thinke fit to bring her for the good of the Voyage and benefit of the Aduenturers. And our will is , That Steven Bennet Mafter of the 20 faid great hip together with the reft of the company in that ship , doe follow the faid Ionas Po. les dire-

dions, as they will answer she contrare upon their perils at their commune bonne.

And for that baretofore the Company have beene abused by level and bad people, who have imbessed part of that which by our great charges and adventures hash beene obtayned: Our monde and will is. That you longs Poole doe make fearch in your owne forp, that none of our Whale finnes, Morfes teeth, Oyle, or any other commodities gathered at our charge, he imbefiled or carried away by any of the Mariners, who will look to have the vitermost of their wages paid them, and to bee fed with meate and reners, woo was come to same not vicerous; of cour wages passecons, one to over yet who meets and druke sufficient. And God sending you note England, we would have you suffer new of your peoples to goe an source vossached: maker would we have you to leave the ship till your commons; into the River of Thames, then we give you order to the contrarie. And if you chance to be wonde bound topon the coasts. 30 you may fend up one of your people with your Letter, but not to come your felfe on Boare till our farther

The like order we would have Steven Bennet to vie in his ship, by vertue of this our Commission, which we have ordered to Thomas Edge our fernant to fee performed accordingly. And in as much as we have agreed here with a Tauner for all the Morfes bides which wee kill and Agreement Ann at more on we was agreement a now a leaver or an exercise some work of the country of the first plant of the flatting, and change of the flatting, with a Tance whereof we have appointed out to go in your love. We avoid have you referred the faid buder, and flore for Mories your flow there with in flead of ballaft. And if you obtay a greater quantities then you can bring away hades: with you, bearing alwayes regard to commodities of more value, which are Oyle, Teeth, and Whales finnes, that none of them be left behind; We would have you leave the faid overplus of hides in some conne-AO mient place, till the next yeare, that we fend more ftore of fripping.

A Commission for Thomas Edge our ferwant, appointed to goe as our Factor in the Ship called the Mary Margaret, of the burthen of one hundred and fiftie Tunnes, for the killing of the Whale and Morfes vpon the coast of Greenland, or any other place in the North Ocean : Giuen the 21. of March, 1611.

50 Y On menos ignorant of our imploying you beretofore in two fenerall Voyages to Cheric Iland. The first whereof, by reason of one Duppers going thinber, together with certains men of Hull, glutting Adventures A personately of responsive to a thoughout garge amount, required moderates men of 1701s, seming. Adventures the fail place, promoted to us though all pour puricipal. As if a inter-fection of Urgay, the and older in course you could not come to fit forting upon the fail Handly response the day the development of feel programs first bluewards that fame further leaves comply full the resente to give fully by which scapins now while though of faiting out that years adventure had been fully it be refuge to lade one flop backs against from Sant Michael'the Archaeged in Mills to date to before us; yet mountifylanding to table for, use that if yet that verage above fine hundred pounds. We entring into due consideration of the premises, doe not impute the camp of these our loss onto you; but to the accidents then happening contrarie to our expectation: pet thele loffes growing upon us in the times of your implayment, we can doe no leffe then put you in minde 60 thereof, to the intent to incomrage and ferre up your minde to doe your vitermost indenour to further the bufineffe in this your third imployment, that we may recover our felues of the loffes formerly fustained. And for that end we have made choice of you againe to goe as our Factor in the Ship Mary Margaret, of one bundred and fiftie Tunnees, the Mafter being Steven Bennet, for the killing of the Whale : And to that end, as rou well know, have bin at charge of procuring of fixe me of Saint loun de Luz, accusto-

Sixe Biscainers Whale (as I

" This was a conceir.as if all places had choic of all kindes, which experience taught other-

ther light.

med to that function : whosenames are as followeth : videlices, luan de Bacoyne, luan de Agerre, Martin de Karre, Mariene de Horifada, Domingo de Sarria, and Adam de Bellocke: which men wee would have to be viel very kindely and friendly during this their voyage, whereby being strangers and leasing their owne Countrie to doe vs fernice, they may have no infleasife of complaint, but rather to be have heard) by incouraged to doe to fernice bereafter, if there be cause. And although it be our meaning the should be encouraged by all good and curreous viage to be readic to doe vs fernice, yet we will have you together uile who had a meaning can you good and merton upage to not reasure to une to jerme, jet we will base you together limed and here, mit ho are were pople and Admirer; implyed in this V range, to observe and discently put in praisife the implyed with executing of that tonliness of firsting to tribule, as well as they. I add they to to home the better forts of the min Grand Whales from the worser, whereby in their striking they may choose the good, and leave the bad. And to that end we doe fet you downe bere under, the feur all forts of W bale; together with the differences of goodnesse betweener the one and the other, as we have gathered the same by information from men of excellencie nesse trustene the one and to enter, as we came gasorrea toe same us so your manus so we need as executable in that these so was a known to us, that there are eight severall kinder of Woder, all differing the one from the other in quantitie and qualitie. Which for your better mitration, we have thought good to The first fort of Whales, we called the Bearded Whale, which is black in colour, with a smooth skinne and I see just for a given access to even user or one, write a viac movine while a just a just a movine sums and white order the close; which Whale is the half of all the reft; and the elder it is, the more it date yields. This for a five hald do to peeled of half four chandred, and sometimes fine hundred finnes, and between

thungs onner the foreign of product dainy periode volcatiff foreign bounderd, and foreitmen fine bounderd finness, and between wise.

Secon the kinds of the force calour and follows to the fireness, but of momenta tiffe, and the finness not about one fathering, so the between the fine of the force calour and follows to the fireness. But of momenta tiffe, and the finness not about one fathering, which is and velocity in 0.0%, according to the longiff, sometimes a givine, forestimes a bounderd Hopfboads. The 10 decisions of the first fireness to the foreign of probable to called Transpa, being a long at the first, but me for there, the contraction of the contraction of the first fireness of the contraction of s one one extense in the second fine: whose bead is bigger then either of the two former, and in proportion as integer then his body. In the bead of this Whale is the Spermaceit, which you are to keepe in Cafee apart from your other Oyle: you may put the Oyle you finde in the bead and the Spermacett alloge-Spermacetic or form your other Oyle; you may put the Oyle you finde in the bead and the Spermaceti altogeneration of the standard of the Spermaceti altogeneration of the standard of the stan before mentioned. In this fort of Whale is likewife found the Amber greefe, lying in the entrals and out of the same, being of shape and colour like wnto Kowes dung. We would have you therefore your selfeto of the lame, being of jongs and course incourse course using, or e-would court you toerefore past jette to be prefers at the opening of this fort of Whale, and cause the refudue of the fade currents to be put into final Caske, and bring them with you mit England. We would be sure the Maiter affect to be by at the opening of this Whale, and to be made prime of the packing of those Earls. And although it is be that the Ambergreess is onely in this Whale and in none other, yet we would not because we absent at that the Ambergrees is weep means rouse man in more nousely are means and was you be adjust as the spening of any other; but they one secons to make a referencion of the entral of every whale, that you that precise to be couls of the least suffect to have any of the sud-Ambergrees, being a matter, ar you know, of good worth, and therefore no slightly to be regarded. The Teath identify of this fort of 40 Whale we would have you cause to be reserved for a triall; as also any other matter extraordinarie that you so all observe in the same. This Whale is said to yeelde in Oyle fortse Hogsheads, besides the Spermaceti. The fourth fort, &c. as Sup. 471.472.

And in as much as industrie and diligence are two principall steps to atcheese great enterprifes, and negligence and idlenesse are enemies to the same; we would have you in this charge committed wino you, negazence and succession to imbrace the one and to give that example of paines taking to the vest of the company of your Ship in your owne per son, as well in setting them on worke, as in putting your owne hand to the businesse when neede requireth, as that there be no idle time spent, but that every one be implosed in some businesse or other in helping to kill the Whale, or in searching the Bayes along the coast for Whales, Ambergreese, Morses teeth, or any other strange thing that may be sound upon that coast, or in killing the 50

On every Beech is great plends of drift wood, but sever a bull nor tree growth in those marriers of great plends of drift wood, but sever a bull nor tree growth in those quarters, as farre as we have hitherto discouered.

CHAP. IIII.

Relation written by IONAS POOLE of a Voyage to Greenland, in the yeere 1612. with two Ships, the one called the Whale; the other the Sea-horfe, fet out by the Right Worlhipfull the Muscouie Merchants.

He feuenth of Aprill, 1612. wee fet fayle at Blacke-wall, and went to Granefond. The third of May we came to Cherie Hand, where we found a thip of Holland, Cherylland. in which one Alan Salones an Englishman was Pilot. The fame day about a North finne wearchored on the West fide of the lland.

The fourth, we trimmed a shallop which I left there the last years and Alen Salowes went aboard our Admirall , and Mafter Ruffell fent for Mafter Thomas Edge, Mafter Arthington, Ishn Mafon, and my felfe: where wee had some speech about detaysing him, and to have brought him intde influed. but in the end hee was let goe. At a North funne we fent our faillop, to the South-east side of the Iland to fetch a shallop, which was left there the last yeere : but they could not get thither for Ice, and came aboard agains at an East

The eight, wee flood toward Cherie Hand againe, and were faire by it at a South funne: at which time the winde came to the South-east, and wee faw the Hollender standing with vs. Then we altered our courfe, and fayled West North-west, determining, if hee followed vs, to flay for him. At ten of the clock at night hee came to vs. and the Admirall fenthis shallon aboord of him to command him to be gone out of our companie; and are a North form hee ftood away from vs, and fayled North and by Eaft, and we lay by the lee.

The twentieth at a South Sunne we faw our Confort, and spake with them, and they told vs. that they had almost split their ship with a piece of Ice, which brake nine of their Timbers, so that they had five foot water in hold.

The one and two and twentie dayes, wee plyed to windward, the winde being at North faire weather. And at Blacke Point wee faw great flore of Ice driving to the South. At eight of the clocke at night Blacks Point did beare from mee East and by North nine leagues. And the Great flore of three dayes past we saw great store of Whales within ten or twelve leagues off the Land, Cape Cold.

The three and twentieth we were faire off Cape Cold; where Matter Edge and Matter off The three and twentiern we were name on Cape Cong. There were the form Whales thington went with the Backy in their Shallops for Groffe-rode, in hope to kill form Whales to

The fine and twentieth we got into Fonde Sound, all the Sounds being full of Ice; and the Foule Sound. Shallops came aboord and brought some Venison, which was very leane. And at facoif the clock the Backs went with the Shallops to Faire Foreland, to fee if they could kill a Whale and at a North-weit Sunne Mafter Edge went with a Shallop, to fee if Croffe-rode were quen.

The fix and twentieth, the two fhipsabouefaid dame into Fonde Sound : one of them was that Hollander before mentioned; the other was a thip of London, called The Diana, whereof one The Diana of

The manufacture of the Control of th Sounds. The twentie eight, we fent the long Boat and our Shallop to Brokemeffe, with a Shallop of ten Tunnes, there to be fet vp. The winde was at West with Inowe and frost. The fame Six Bifaguer: day the Bash; came aboord, but could kill neuer's Wibald. The winde came to the South South

west, with frost and snowe. The nine and twentieth, the winds was at South with much Inowe. The same day one of our men dyed, named Iohn Batcher , hanning layer fickelabout three weeks. The thirtieth , one Michael Perkins dyed abourd The Whats. The laft of May; the windle was at South; and wee

flood toward the Foreland in 79. degrees, The amentry somidnight, the Chyrurgeon of The content iday The first of June, we stood into Feeds Sound, where wee faw abundance of Ice drive out wich

the winde at East. The second day, the winde was at North and by Zast, rold frostie weather, 40 All which day wee lay under faile in the mouth of the Sound: The third day ; wee spake with Thomas Marmaduke of Hall, irra thip called The Hope well. Wee flent for him to come abourd. Tobase Transmisses of Early in the temperature of the transmisses of the temperature of t Northward; and as we were afterward informed, discouered as farre as 82. degrees; two degrees beyond Hakluyts Headland. The fourth, we fent our shallop on shore in Foule Sound, to see Manuality
Indicates: a fam harbour were open to ride in, and to put our Admirah on ground to flop her leake. The
st, degrees fame day, our long Boate came to va from Brokeniess. And we turned into the Sound, because
we faw the Ice drive out with the winder South and the whard The fift, we included in Poule Sound in seuenteone fithoms water and landie ground, where we faw the place where both the thins lay which wee loft the last yeere, coursed with Ice. The fame time wee fent our shallop with our Carpenters, to finish the aforesaid shallon at Brokennesse. The winde continued at South; and the Whale turned into the Sound by vs, and achnored there at a South-west by South Sunne. The nineh, the Admirals Boate and ours went with prouision and men to works woons Whale, which the Backs had killed; and we food toward the Foreland with the flips, where the Whale was killed, the winde at South, thicke foggie weather, And by an East North-east Sunne wee anchored in the mouth of Foule Sound in fifteene fachoms, giver fand with some fiells. At a Well funne the Boate came abourd for caske and other promision, and rold vs, that the Buke had killed two other Whales.

The feuenteenth, one Bate memed Chapel, tooke fine of our English men to him, and they 60 trimmed the shallop to kill the Whale. About a West North-west sunnethey went away, the winde at South. The twentieth, the Biscame shallop came abourd of vis from the Foreland, and told vs that they had ifrooken three Whales, which brake away.

CHAP.4. Nicolas Woodcock. Morfes and Whales. Basks and Hollanders. 715

The two and twentieth wee rid ffill, the winde being at North-west, with snowe and frost. The five and twentieth, we got the Whale on flote, having stopped her leake. We were no fooner off, but it blew most fiercely, so that the Whales long Boare and our shallop brake from the Whales sterne, and were split in pieces on the Ice, that lay on shoare. The same day about a South funne two men came from Fare Foreland, and told vs that Mafter Edge was come from the South in the Pinnasse, and had spoken with one Nicolas Woodcock an English min , which was my Mate to this Countrey of Greenland in the yeere 1610. The laid VVoodcocke was now Woodcock Pilot Piloto faship of Saint Sebastian in Beseay, and rid in Ice Sound. Moreouer, they spake with the of a Essay hip, men of the Boate of the Diana, and law the Hollanders Boate, but spake not with their men. The two men aboutfaid told vs likewife, that lohn Chapel our Baske with fine English men had The fourth

10 billed a Whale; and betwirt them and another shallop they had slaine another, and had them and such The feven and ewentieth we rid still, and our Carpenter went to worke to mend the knee of

our beake-head. And I went to fee what Morfes were on Land, where I found neere one hundred and fiftie. The eight and twentieth, the shallop that had all English men in her saue one Bake, came about for prouision, and told me, that they and lobannes Chapel, had flame a great The fix whale Whale clofe by our ship, which towed them off into the Sound, and our long Boate followed killed. them. At the same time we saw sixe Whales close by the ships side as we rode in harbour : and we faw great flore in the Sound , and within one houre there were fo many about our ships and in the Sound, that we could not count them. About a North-west sunne our long Boate brought 30 the men that strooke the Whale abouelaid, and towed their shallop on land : for the said Whale had funke her with his taile. The fame time our Carpenter went to worke on the broken shal-

lop, and I went to the place where the Morfes lay, where I found about three hundred on land. Three hundred Then I went abourd the Whale to get fome harping Irons: for they had all, but I could get but Mories. one, because the rest of the Backe had laid them vp, enuying that one Backe, that went with all English men, had done so much, because by their good wills they would not have vs to have any Biseniers can intent into this businesse. Moreover, hee that had the chiefest command in this voyage, did uic. greatly condemne the going of so many English men with that one Bake, either for feare they should kill none, and lole all their prouision for the faid vie, or for feare that our men should kill the Whale aswell , and as soone as they; yet was there none of the other Boates but had lost 30 more then they had loft. And as for killing, there was not one Whale killed with one Boate alone, faue ours, with all English faue the Buke aforefaid, which flue three without the helpe of any other Boate. This day the Backs flue another Whale at the Foreland.

The nine and twentieth, the broken shallop was mended, and I went to the Foreland, to fee Whale silled, whether the other shallops would come where the ships rode in harbour, where abundance of Whales were fill. The same time the Backs killed another Whale. Then I romaged my ship, The eight and put caske on land. All this day it was calme."

The last of lune, one came from the Foreland, and told vs, that the Basks had slaine two great Whales. All this day likewise it was calme : and there lay abundance of huge Whales in the harbour about our thips. One of the whales aboutlaid, Iobannes with the fine English men the 40 without any of the others helpe. For they flood on the land flouting, and faying, that it was vaposible for them to kill him, and would not once lanch their Boates to helpe them : yet hee was one of the greatest that were killed this yeere. All this day the whales lay so thicke about the ship, that some ran against our Cables, some against the Ship, and one against the Rudder. One lay vnder our beake-head and slept there a long while. At which time our Carpenter had hung a stage close by the water, whereon his tooles lay. And wee durst not molest the said whale for feare he should have overthrowne the stage and drowned all his tooles. In the end he went away, and carried the ships head round, his taile being foule of the Cable.

The first of July, at a North North-east Sunne, the shallops came to kill whales in the harbour where we rid, and strooke three, which all brake away. The same day, Iohannes strooke a 50 whale, that fmit in the fide of his shallop and split it. Now wee perceived the whales to begin to goe out of the Bayes. The fecond day, the Basks flue three great whales faire by our ships, in The ninth and leffe then foure houres; which were with our long Boate and men towed into harbour, and teach Whales made fast to our ship. And the Basks event with their shallops to Faire Foreland.

The feuenth day, wee had abundance of Ice about our ships, which with the winde and the twelfth and twee draue out off another Sound. The eight, vve rid ftill, and vvere troubled with much Ice, thinteenth by reason of a storme that blue at South-evelt and by evelt, &c. The rest is omitted as having Whales killed. nothing of note, but ordinarie accidents.

Y the prouidence of Almightic God wee departed from Queenborough the thirteenth day of May with fixe good Ships, viz. The Tigre, Admiralle the Matthew, Vice-admirall; the Sea-borfe, called the Gamaliel, the Io Reare-admirall; the Defire; the Annula; and the Richard and Banard; with the lobs and Francis shortly to follow.

The one and twentieth day, faire weather, the winde Southward, wee ftill making to the Northwards. This morning wee had fight of Land on the Coast of Norman. it lying Eaft and by North off about twelue or fourteene leagues. This day at noone, we were in the latitude of 61. degrees and 30. minutes, the variation of the Compasse at Scontes-men is eight degrees East, it being about ten or twelue leagues off: wee hauing made a North way halte East, about thirtie leagues.

The three and twentieth at noone, in the latitude of 65. degrees and 45. minutes, in which place, the Needle of Declination doth dippe vnder the Horizon 63. degrees and 30. minutes by 20 that Inftrument which declineth 54. at London.

The thirtieth day, about three of the clocke, wee espied the land of Greenland, being atayned meight bout eight or nine leagues off. The Southwardest part of it bare South-cast and by East off it. which shortly wee perceived to bee the Land lying in 76. degrees and 55. minutes, which is called Horne-found. This Land lyeth by our common Compasse North North-west, Within two houres after we had fight of Land, it began to fnowe, and was very cold. This evening the Compaffe was varied thirteene degrees Weft.

The one and thirtieth day, variable weather with snowe, and very cold, and the winde also variable : and in the afternoone the winde was at the North-east. In the morning , wee espied variance; and in the accumentation of the policy and their Mafter and Pilot came aboord of vs. And and their Mafter and Pilot came about the came aboord of vs. And and their Mafter and Pilot came about the came aboord of vs. And and their Mafter and Pilot came about the came about A thip of Saint wee knew them to bee that thip of Saint Iobn de Luz, , which had leave of the Companie to fifth. Tabin de Let. And they told vs, that there were eight Sponsords on the Coaft. Also, were efford another ship; on the coaft. Also, were efficied another ship; on the coaft. Which we supposed to be a French man, and had one Allan Sallar to their Pilot.

atter flaine in

The second of Lune, in the morning, about five of the clocke, our Generall sent our shallon to The Generall a small Pinke, that all this night we law along the shoare, to bid their Master and Pilot come awas Capraine boord vs, which presently they did. The Masters name was Clair Martin of Horne, and his Beniamin lofeph fhip was for Dunkerke, and he told vs that he was conforted with another ship that was his Admirall, the Captaines name was Fopp of Dunkerke, and that he was on the Coaft. Wee kept the Maiter and Pilot abourd of vs, and tent fome of our men abourd of her, and brought her vnder our lee : and then, we fent their Mafter aboord againe, charging them to follow vs. This after-40 noone we tooke their thallop with five or fixe men, whereof two were English men, and one Scot, at the Faire fereland.

Dutch ffip. 33, of May.

The fourth day also faire weather. This morning was the first Whale killed. Wee had no night fince the three and twentieth of May. The fift day, faire weather, but very cold, the winde North. Wee fayled along the Iland being about eighteene or twentie leagues in length; lying for the most part by the common Compasse North and by West halfe West ward. About nine of the clocke in the afternoone, we faw our other three thips, viz., the Gamaliel, the Defire, and the Richard and Barnard, which lay there to and fro, because they could not goe into their Harbour by reason of the Ice : and also, because there were foure other ships in a Bay or Coue. called Pooppy Bay, or Nickes Cone : and also other ships on the other side in Greene Harbour. We 50 fayled along the drift Ice vntill about one or two of the clocke in the morning, at which time, We came to an anchor in the entrance of the Sound, because the Ice came driving out so fast.

The fixt day, faire weather, the winde variable, till the afternoone : at which time it came to the Northwards. About three in the afternoone we weighed anchor, and about ten of the clocke we came to the foure ships lying in Poppy Bay: two of them being Hollanders, and one a Rocheller, and the other a ship of Burdeams. The Masters of the Hollanders came aboord of our fhip, to speake with the Generall, both of them being of Amsterdam, and brought a Commission granted by the Grave Maurice, for to fish in this Countrey. But, when they faw our Kings Maiesties Commission granted to the worshipfull Companie, they told our Generall, that they would depart this Coaft : having our Generals Ticket to thew to their Adventurers, that they 62 were there, and had made their Port, and how he would not fuffer them to fish. We anchored close by the French ship wherein was Allane Sallas, being readie to fight, if they refused to come

aboord vs. So, when we fent our shallop, the Master came presently and their Surgeon, who could

speake English. At the first, they denyed that Sallas was aboord of them : but, being hardly viged,

CHAP.S. Kings Armes and Croffe fet Dp. Th. Bonner Pilot to the Dutch.

they confessed that hee and one Thomas Fisher an English man were abourd, who were both prefently fent for. This Salles was their Pilot, and Fifter was their Gunner.

The seventh day faire weather, we road still at an anthor. This day I observed the latitude of the place, and found it in 78. degrees 24. minutes. The variation of the Compasse is in this Lat. 78. deg. place 15. degrees 21. minutes West. About a North Sunne a small thip of Bifeay came into the 24 minutes harbour where we roade.

The eight day, for the most part snow; the winde Southward. This day the Master of the Snowe. French thip, being a thip of nine fcore, or two hundred, called the Lagues of Bardeaux. agreed with our Generall that hee might fish on the coast our Generall was to have halfe the Whales to he could kill. Alfo, this day, the Mafter of the thip of Rochet, and the Mafter of the fmall thip

of Bilear, were agreed to depart from the coaft.

The mitch day, faire weather. This morning the Gamalies our Reare-Admirall, and the Defire weighed anchor to goe for Greens barbour, where two thips lay one of Dunkerle, and the Green barbour. other of Saint Sebastian in Bifeay. The Captaine of the Dankerke, called Fopp, had beene with our Generall, and told him that he would depart from this Coaft. Our Generall gave him leave to take the Pilot of the Small Pinke, and the other Dateb men he had taken of his keeping orily the English men and the Sours. Allo, the two thips of Holland , with the thip of Bifery , and that of Rochel weighed anchor, and departed from this Harbour. About fix of the clocke in the afternoone, came the Mafter of the ship of Saint Sebaffian aboord of vs, being brought by one of the Malters Mates of the Defire (they having taken two of his Shallops) to know our Generals pleature, whether he should have them againe, or no. Our Generall gave them him againe, vpon condition, that he would depart the Coaft. About a North North-west Sunne, we weighed anchor to goe for Horne-Sound, where we heard, that there were divers thips; the wind North-The tenth day, faire weather, the winde at North, being very close weather. About a North

Sunne we came to an anchor in the entrance of Low Sound, where we faw two ships ride at an- Low found. chor. Our Generall fent our shallop ro fee what ships they were, who found them to bee the two thips of Holland. Alfo our long Boate went on thouse to fet vp the Kings Maiefties Armes His Maiefties voon a low point of land , lying a great way off , called Low-wefe. We let vp a Croffe of wood, Armes and a

30 and nayled the Armes vpon it. The thirteenth day, in the morning, it inowed very fast, being very thicke weather, the Snowe. winde variable, we standing off from the land. About feuen of the clock it began to cleere vp, at which time we efficed three thips; and making toward them, at length we perceived them to be the three thips which came from the Bay where we road : the winde also was at Eaft and by South, and blew a very fliffe gale. Then we flood in for the floare, and fpent most of this day in turning vp Horne-Sound. And about a North North-west Sunne, at ten a clock wee espied fix thips lying at anchor on the South fide of the Sound, in a small Bay. The one of them was Captaine Fopt the Dunkerker, who came in before ve, and was appointed by our Generall to come into this harbour, and there to flay for vs. and to goe to the Foreland, to have his other thip 40 which we kept there. Foure of them were Bifcaines of Saint Sebastian; and one of them was in the harbour where we road and found the Front thip : The fixt was a thip of Amkerdam.

whetein Thomas Bonner was Mafter and Pilot, and about twentie English men more. All the Thomas Bonner Biscaines came abourd of vs as soone as we were at an anchoribut Thomas Bonner refused to come, English man, being fent for by our Generall. Our Generall commanded pur Gunner to shoot at him, he him- Master and felfe discharging the second Ordnance. Then presently be began to set faile, and cut his cable, Pilot, thinking to get from vs : but wee having shot him through three or foure times, they began to weave vs, fo we fent our shallop and he came aboord. There were fine or fixe more of the Englifb men fetched aboord, and some of our men fint to bring her to an anchor, where shee might ride fafe : for , fhee was almost run ashoare. This was about a North summe, or eleven a clocke. The Biscaines were charged presently to depart, so some as they had filled fresh water, which,

they faid, they wanted; and to bring what Whale finnes they had found, or had taken, or o-

The fourteenth day, faire weather, the winde at East North-east. This morning one of the Biscaines brought a few Whale sinnes aboord of vs, and the skin of a Beare, which they had killed. Then was our Boate-swaine sent abourd of them to search their ships, and to bid them depart. Our Generall kept the Holland ship, wherein was Thomas Bonner, to the vie of the Companie. This day I observed the latitude of this place by a Quadrant of foure foote Semidiameter, and found it to fland in 75, degrees cc. minutes: the Declination of the Needle vinder the Horizon, is 67. degrees 30. minutes, pointing to the Northwards : but pointing to the South-60 wards, it is 80. degrees. The variation of the Compaffe is 12. degrees 14. minutes west from

the true Meridian: but from our common fayling Compafie it is 17. degrees, because the 76.deg.51.min. Compafie is touched fine degrees and a halfe to the Eastward, and the variation is to the declination

This day in the afternoone, the foure ships of Bifesy departed from this Harbour, which is dog, 14 min. called

718

called Horne-Sound: and about a North funne, I, with the Mafter Thomas Sherin went afhore with other, to fet vp another Croffe with the Kings Maiefties Atmes, caft in Lead, nayled vp. on it. Then I observed the Sunne vpon his North Meridian, by my foresaid Quadrant, and found it elevated about the Horizon 10. degrees and thirtie minutes: But because his heigth at the South Meridian, and his height at the North did not agree, in finding of the Latitude, I did abate fine minutes from each, as the meane betwixt both; for his alcitude at the South Meridian was 36. degrees 40. minutes, the declination 23. degrees and 20. minutes.

The fifteenth day, faire weather, the winde in the morning South, but almost calme. This day about noone we weighed anchor with the thip of Amfterdam, and divers of her men were fetched aboord vs with their Shipper, and force of our men were fent aboord her with one of In our Matters Mates, called Mafter Spencer. All this day it was fo calme, that wee were faine to towe our fhip. Our Carpenter did trim vp two of the Bifcaine Shallops which they did leave behinde them, and they did leave divers Hoopes and Caske flaved afhoare,

The eighteenth day, faire weather, the winde variable, we flearing away Northward. This afternoone wee mer with another ship of Bises, being a ship of two or three hundred Tunner. Our Generall, as he did to the rest, caused her Master and Pilot to come aboord vs, to whom he shewed his Commission, charging them to depart this Countrey. They, feeing no remedie. were content, fo foone as they had filled fresh water. Wee met with them off the Southward part of the lland. Our Generall being to neere Greene Harbour, where the Gamaliel and the Defire road, wee went into the Sound to fee them, with this great ship of Bifen, and the ship of 40 Abundance of Amflerdam. We found that the entrance of Greene Harbour was quite stopped with Ice: and ran our ship into it, thinking to get through, but wee could not. Then weegot her out agame, and came to the Bay where wee roade on the other fide of the Sound in Poppy Bay, or

The ninetrenth day, faire weather, the winde Northward. This day about twelve of the clock we came to an anchor in the forefaid Bay. This afternoone there came another thip of Saint Sebattian into the Bay where wee roade : and about feuen of the clocke, the Captaine came aboord of vs, who told vs that he had lott fix of his men and a shallop vpon the coast of Grome-An Hand in 72 land, vpon an Hand in the latitude of 72. degrees or thereabouts. This was the Mafter which degrees on the had beene here the last yeere, and made a great voyage, Master Woodcocke being their Pilot. His 30 making fo great a voyage, was the cause that so many ships were here this yeere.

The twentieth in the morning, we had newes that the Iohn and Francis was come about two dayes agoe, and that they had killed one and twentie Whales at the Foreland, and had also twentie whales killed two at Greene harbour. This day it was very close weather with some snowe; the winde North-west. This afternoone the Captaines of the two Bifery ships were commanded to depart this Coaft.

The one and twentieth, wee perceived another ship standing toward vs. Wee lessened our failes and stayed for her to see what shee was. At length, we perceived her to bee another Bifcame. About a North finne we came to an anchor in Greene harbour, by the Gamaliel, and the Defire, and the ship of Burdeaux : and the Biscaine followed vs. So soone as they were come to an anchor, their Captaine came aboord of vs, to whom our Generall shewed his Commission as 42 he had done to the reft, charging him to depart those Coasts, and told him , that hee would take away some of their shallops. They earnestly intreated him not to take them away, and they would depart : the Captaine offering his bond to our Generall, that if he flayed either in Greenland, Groineland, or Cherie Iland, he would willingly forfait all he was worth. There was ano-A man flaine. ther Whale killed in Greene-harbour, in the killing whereof there was a man flaine, and a Boate

The three and twentieth day, faire weather, the winde Northward, Thisday, and the last night I observed the latitude of the place where we roade, and found it by both, to bee in the latitude of 78. degrees 7. minutes: the skie at both observations being very cleere, where I finde that there is no fensible error betweene a South observation and a North, the skie being 50 cleare. But if the skie be hasie, there will be some difference, as of eight or ten minutes, being observed on shoare by some large Quadrant or other Instrument for the purpose, also a South A South South-well Moone by the common Compasse, maketh a full Sea in this place.

ouer whelmed, by too much hafte of following him, after the harping Iron was in him.

The ninth of I.ly, faire weather, the winde at North. This day wee flood to the Southward along the Iland : but, toward night it fell calme, and then the winde came to the Weit-The tenth day, faire weather, but thicke and close, the winde South South-west. All this day we flood for Bell-Sound. Our Generall went on shoare this afternoone, and killed soure Deere, and brought a young Morfe aliue with him aboord,

The eleanenth day faire weather, but calme. This afternoone wee perceived five fhippes in 2 Bay in Bel-found. The winde was so calme, that we were faine to towe in our shippes, and about 60 a North North-walt funne, we came to an anchor by them, with our three ships, viz. the Tigre Admirall, the Mathew Vice-Admirall, and the Richard and Barnard, having made all things readie for to fight. These five shippes which rid here, the one was a great shippe of Biscay of seven

hundred Tunnes, and the two Hollanders, which we found the fixt of Isme in Pooppy-bay, and A Bifcayn thin hundred lunnes, and the dam, and another small shippe of Rochell. This great shippe of Bife ay, of 700, tuns. which we expected would have fought with vs, fent their Captaine aboord of vs before we came to an anchor, and submitted themselves vnto the Generall. The two ships of Amsterdam, whose Mafters names were thele viz. Cornelism Calias, William Vermogon, Admirall, and Iohn Iacob Vice-Admiral R thefe two would gladly have stood out with vs, it the Bifcaine would have affifted

The twelfth day faire weather. This day the ship of Iohn Incobe was valaden of such goods as thee had in her; as Oyle, Blubber, and Mories skinnes. The thirteenth day I was fent in a that-

10 lop to Greene Harberough. The foureteenth day, thicke close weather, the winde Northward; but toward noone it began to cleare up, and then it blew more winde. About a West funne, we came to a small lland, gan to create ap, and who fees vie to come where we found featen which we killed, and knocks Manyrecker or rather a note, where a many of the rockes, where are great multiendes of foule, and they are called Lizer, Hands. The Land all along is fo full of Rockes, that Lifer llands. it is enpossible for any hippe to come neere the Maine, but in the Sands which are very deepe,

and good to come in. All this evening and night wee rowed betweene this Iland and Ice-found, The fitteenth day, about nine or tenne a clocke, we came to the shippes in Greene-barberough where we found, that they had killed eighteene Whales in all. Foure of these ships were French. Eigh

30 mes, which had killed eight Whales for the Companis, according to the agreement which the Whales killed, Generall had made with them: which was, that they should kill eight for vs, and after, what they could kill, should be for themselves. Our English men had killed three in this place, and the Three Whates Bailes in the Defire also three. The Defire had taken in an hundred tunnes of Oyle when wee killed by the came there, and the was to be laden to foone as the could.

The scauenteenthoday also faire weather, the winde Northward. This day, toward a West Sunne, the Mafter of the French hippe came from Sea berfe Bay, who went thither to fpeake with our Generall because Marker Maffor and Marker Cooper had flayed his Shallops from going to Sea, in regard they would not observe the orders which the Generall had appointed them: which were that those Whales which our Englishmen did chase, they should not follow, nor our men should not follow, the Whales they chased. For the order of the Biscomer is, that who so doth

30 frike the first Harping Iron into him, it is his Whale, if his Iron hold. This evening, I say, he returned from Sea-borfe Bay, having loft his labour : for the Generall and Matter Edge were in Bellfound. We vaderitood by him that they had killed fome eight and thirtie Whales in all; and that there was one hundred and fixtie tunnes of Oyle ready made.

The five and twentieth day in the morning, the Defre weighed Anchor to go to the Generall, and the Mafter of the French thip also this morning went from thence to speake with the Generall, because of a Whale which was in strife betweenthis Biscaines and ours : when for pilfering and for some peremptorie speeches, two of the Rochellers were ducked at our Yard arme, the one on the one fide, and the other on the other. This day I also observed the latitude of this

place, and found it to be 77. degrees 40. minutes. Alfo, the variation of the Compaffe is 13. de- Lathude 77. grees 11. minutes Weit. This variation was observed the third of August in the morning : the degrees, 40. grees 11. minutes Well. I his variation was 17. degrees 24. minutes, and the declination was 14. Variation, 13. negat or the summe above the rotation was 17-taggers and assuments, and his Magnetical azimuth of degrees 41, minutes. North in the hairthyloof 77-taggers 42, minutes, and his Magnetical azimuth of degrees 41, minutes. North in the hairthyloof 77-taggers 42, minutes and his Magnetical azimuth of degrees 41, many the summer of the summer as he faid, he was bound to the fouthward to discouer beyond Point Looks and, having his direction from Master Edge, as he said. Our Generall rold him, that hee had hindered the Voyage more by his absence, then his discouerie would profit; and that it were best that he went backe Ladude 79.

with him to the Fore-land, and that he would give no licence to goe now for Discoverie, because degrees,14. with him to the Port-Land, and that he would give no free to go who had proceede. The twelfth him according to his Commiltion, to to proceede. The twelfth him according to his Commiltion, to to proceede. The twelfth him as Maday I obtained, and found the latitude of this place by an exact obtaining to the proceede. The twelfth him was Maday I obtained, and found the latitude of this place by an exact obtaining to the proceede. The twelfth him are made to the proceeder the p minutes. They in the Pooppy-Bay had feepe a thip of England off Black-point, and had spoken with London, her, who told them that they were come from Kildenni. The foureteenth day faire weather, the Winde at North North-east. This day about tenne a

clocke in the forenoone, we waied anchor to goe homeward, being fixe thips in company, viz. the Tigre Admirall, the Gamaliel Vice-Admirall, the lobn and Frances, the Annula, the ship of Burdeaux which the Generall agreed with to fifth in Greene-barborough, and the Bifcay thip which filhed in Sir Thomas Smabs Bay.

The fifteenth day very faire weather, all the forenoone almost calme; in the afternoone, an 60 easie gale at North-east. This day about twelue a clocke at noone, wee were again Fine Fore- Latinde 79. land, which is in the latitude of 79 degrees 8, minutes. This night was very electe and faire wea. degrees 8, minutes, ther, and also calme, by which meanes I had very good opportunitie to finde the suggest sefraction. on. For beholding it about a North North-east funne, by the common Compaste, at which time Sunnes refrathe funne was at the lowest, it was but one fift pare of his body about the Horizon, having about dion.

Nnn 2

deg. 7. min.

foure fifth parts below, fo neere as I could gelle. His declination for that inflant was 10, degrees 35. minutes North, being at noone in the 2. degree 7. minutes of Virgo, his daily motion was 58. minutes: whose halfebeeing nineteene to bee added 10 the former, because it was at twelue houres afore noone. I say his place at that inflant was 2. degrees 26. minutes of Verge, whose declination was as before to.degrees 35. minutes: the Latitude of the place was 78.degrees 47.minutes, whose complement was 11.degrees 13.minutes, the declination being fubftract d from the complement of the Poles eleuation , leaueth 28. minutes, foure five part of which 12, minutes; which being subifraced from 38, leaueth 26, minutes for the Refraction. But, I suppose the Refraction is more or lesse, according as the ayre is thicke or cleare, which I leave for better schollers to discusse : but this I thought good to note, for the better helpe of fach 10. as doe profesio this studie.

The fixteenth day also very faire weather, and for the most part calme: the winde that was was a North-west. This morning, we espied a ship out in the often, ouer against Cold-cape, which we flood with, and the also flood with vs. And when we came to her, wee found her to be the Defire, a thippe of Alborousb. Our Generall fent for the Matter and Merchant aboard of vs, who certification that they came from Killedaene, and that they had made but a bad Voyage of fit: and they were come to fee, if we could fraight them home. The Merchant was of London, whose name was Malter Cudner : the Mafters name was Fletcher, who also brought fixe men which Thomas Bonner had left at Cherie lland. These fixe men had killed but one Morse all this yeere at the Iland : who allo told vs, that William Gonrdon was gone, to the Northwards, At noone, the 20 Vanation 1. three and twentieth day, I observed the variation of the Compasse, and found it to be one degree degree semin. 5.minutes Eaft.

The three and twentieth day faire weather, with a finegale at North and by East. We stearing away South and by West halfe South : being armoone, by supposition, in the latitude of 69. degrees no minutes. Having failed fince yesterday noone; some thirtie leagues South, true.

The foure and twentieth day, very faire weather and cleere, the winde all the fore-noone Northwards, but about noone it came to the South-east. This morning I observed the middle starre in the Great Bearestayle, and found it to bee in the latitude of 68, degrees 24, minutes about two a clocke, at which time that flarre was on the Meridian under the Poic. Alfo I observed the starre in the Beares Rumpe about one a clock, and found the like latitude. Alfo all 30 Roffen.
65 de gno min. this day we had fight of Roff Hands, being about ten er eleuen leagues off vs. Alfo at noone I Th. variation observed the latitude by the Sun, and found vs to be in the latitude of 68. degrees no minutes, which did agree with the former Observations by the flarres. Also the warration of this place is 4. degrees 8. minutes East from the erue Meridian wee having runne fince yesterday moone fome two and twentie leagues South and by Well. Almost all the afternoon it was almost caline.

The fine and twentieth day also very faire weather, the winde this morning came to the East South-east a fine easte gale. We steered away South and by West halfe West ten leagues, being at noone in the latitude of 67. degrees 5. minutes. The variation of this place is 5. degrees drg. 3.minutes 3. minutes East, neere to the fet of our Compatie. This Eleming the winde came to the South South-west, which continued about two Watches.

The nine and twentieth day faire weather, with a good gale of winde at North North-eaft.

From two this last night to fixe, we stood away South, west and by Shuth, and at fixe we steered away South South-west, being at noone by observation, in 62, degrees no minutes. The land The bring at the daway South South-well, being at mone by obleration, in 62, degrees no minutes. Fine land the lind about about Southfield lyeth in this fort: from fixth three toward fixthe population independence leagues South South-weft halfe Weftward: from thence tenne leagues South and by Weft, which is two or three Hands, which see the Weltwardest land in Norses, lying in the latitude of 62 degrees 44. minutes. But whether these Hands, or a Point of Farid; which lyesh about three or source leagues more to the North, be called Sconteffeffe, I know not. The fixt of September we entred

CHAP. VI.

A Voyage of Disconerie to Greenland, &c. Anno i 61 4. Written by Ro. FoTHERBYE.

M. Cudger of

William Goar-

He ship Thomasine went downe from Black-wall to Woolwich the fixteenth of Aprill, and from thence to Granefend the three and twentieth, where thee remayned vitill the eight and twentieth of the same; and weighing from thence two Finnaffes all of the Gremland Fleet, set forth alfo at the charge of the faid Company, under the command of Mafter Beniamin Isfeph, Chiefe Captayne and Generall of the faid Fleet.

C. H. A. F. 6. Troubles by Ice. Hackluyes Head-land in Greenland.

We set sayle out of Telberie Hope the fourth of May, and came to an anchor the same day in Lee Road, where we stayed till the next morning, then wee fet fayle againe and went forth to We went forth

We proceeded in company of the Fleet, and met with firegling Ice the fine and twentieth of We proceed in company of the action of the parties which were partied without danger, hol10. minutes. ding on our courie all that day, till time of mid-night; then we found the Ice fo close packt together, that we were forces to tacke about, and frand to the Westward, till wee found more open paffage; wee plyed through it without any great danger, till the eight and twentieth day: but then being in fight of Land, we passed among it very much Ice all the fore-noone, which lav no great abandarice on both fides of vs: but a defire (as it feemes) to get through it, drew vs on to be the more intangled with it for about noone we could neither find a p. flage to goe forward, mor way to retyre backe agains, but being nine thips and two Pinnaffes (for the Professor and

the Defer lofbCompany through foule weather, the one and ewentieth of May, otherwise we had beene thirteene layle) we began very fuddenly to bee inclosed and that vp with Ice. Now maine, canied a flauter and a Grapuell cobe carried torth, and laid woon a great Hand of Ice, and fails the Ice. majors, cultivariants amore attraption sourcestricti cours, said said your agrees and or recand talks the lee-is were distributed Anchory and by chebreleness were thysic from forceable ruthing against other Ma. The said process affective and we had forth an anchorder furer word; and made fenders of an old Ca. It; which was hung ouer the ships sides to keepe the Ice from piercing of her plankes. Wee rid thus from the right and twentieth of May till the second of lung, fill floating as the wind droue vs

20 with our anchor, holding Hand, which now we seconfitted as the shoare, and made vie thereof accordingly, for vpon it our Carpenter fealed and trimmed our lefferfhallon.

Conchetecord of June we had a great homeming Sea, the wind being at North-west, whereby we judged we were not farte from an open Sea to windward of ys; there wee resolued to make tryall what we might doe, to free surfelues out of the Ice. In the afternoone about three a clock we got aboard our Anchor, letting full our fore top-layle, and putting forthour M zen; and clock we got about our Anchor, tetting full our roce top-bayte, and potting forthour M. zen; and fo droce a fleme for a while, cill the floating lland gaine ways then weeffield out top-layle, and attempted duers place where to pails, but that repails and fell afteron agains; nor withintanising at the length we prictuyled, and with multihador we recayled at rophs, Set at a North; and by we goe cleer West Sonner, parting very glady from thefie ill neighboring llands; which at our parting of the kee, from them game we or rather received from we force, but whileft we remay sed among it them they feemed much more perillous their they proued hurtfull, fo wee prayfed God for our fafe deliuerance, wifning that the rest of the thips which we left in the Ice, were as cleere out of

it as was the Thomafore, marte, mar y inches as was the 1 gomes present and the open Sea to the Westwards, we proceeded to the Northwards keeping Weemet wish the Ice full on our flarboord fide, and me with the TMay And Sarab, that got also free of the the Man And Lie the fifthed by that we come forth of its weekep company together till the next day when Santo being as high as Prince Cheric Halth we both dood in frostne floorer, the Mary An-Sarab going for Bel-found, her aff gned Harbour; but we proceeded to the Fore-land, where when wee Wecame to 40 came the fixt of lune, where met with two shallops that belonged to the Defire, wherein was the Fare land.

Cambers Applyard, and Wrilliam Schumer Harmoniers; by whom we wider flood, that the Proferous and the Define had more definedly profipered, thereall whe reft of the Fleet, they ecaped the danger that all the reft fell into, and came to the Fore-Land the third of Lune, finding the

Here was yet no works begunne, for they had not feene one Whale fince their comming into the Harbour, fo that for we there was no cause of stay to bee helpfull vnto them, and therefore we proceeded to the Northward, hoping to find the shoate fill as free from Ice, as it was at this We proceeded place; but it fel out contrary to our expectations, for being come as farte as Mandles Sound, in the to the Northlatitude of 70 degrees 34, minutes, we met with some stragling ke, and from the mayne top we Mandes nationed young the said Hartings Head-hand, which feemed to bee close to the floare, sended therefore we fent former men in a finding to Mandler Samuel to bee if it were open, that wee Hartings might harbour our ship there, and search for a leake which wee found her subject voto in fould Head land.

The Sound was open and we anchored in a good Harbour, but the Ice was not gone cleere in Minister from the fhoare, therefore we could not hale our thip aground, but we carined her and let vp our Biscaine shallop which we carried with we out of England in pieces.

The next day after our comming hither I went forth in a little fhallop (the other being then I went forth in wnfer together) to fee how the Ice lay at Hacklusts Head-land, and whether we might paffe with a shallon our ship that way or no. Being come forth of the Harbour, we perceited, that it was very foule weather at Sea, not with flanding I proceeded into Faire Hauen, where the South Harbour wis

then open, but much Ice lay then in the Sound unbroken from floare to thoare; other wife wee might have palled that way to Hackleys Head-land, betwist the Hand and the maytle Land, we flayed here till the next morning , then the weather beganne to cleere vp, and wee parforth to Sea againe, intending to goe without the llands : but being out of the Harbour wet found the

minutes. Wee flood a.

gaine for

fhoare.

foule weather to be such, as our little weake shallop was notable to endore, therefore we returned againe to out thip into Mandlen Sound, where we killed two Female Morfes, and took their Teeth, Hides and Blubber.

On the tenth of June we fet fayle out of Maniden Sound, and coasted along to the Northward, till we were pail Hacklayts Head land, but then we law the Ice lye before vs, extending wars, the wewer pair reseasons reson some times we saw the next to become r, executing close to the longer, do that nor vo to paffe further that way, it was not possible: therefore were turned to the Westward, to see if we could finde passage further from the shoar. We favled as the Ice trended Weft and Weft South-weft till the thirteenth day, and keeping fulla-Prince Charles longft it, we found it to trend neerest South and South South-west, we proceeded well thus far. till we came vnder the latitude of Prince (borles his Iland, in 78. degrees 40. minutes, being 10. eight and twentie leagues from shoare, but then we altered our course, and stood in for the Foreland, to goe and be helpfull to the other thips there for the furthering of their Voyage according to our Instructions (as some did vnderstand them) but contrary I am sure to some of our defires. When we came neere the Fore-land, we faw cleuen ships of Hollanders under fayle, plying to Eleuen Holland the Southwards; one of them came roome towards vs, and strucke her top-skyles twice, thips.
We anchored whereby we supposed they tooke vs for some of their Fleete, which they wanted, but wee in Sir T. Smiths held on our course still into Sir Thomas Smiths Bay, where we came to an anchor the fifteenth of lune, by the lobn-Anne-Francis, and the Defire, the Mary Margares being then underlyle to go

Here was yet no need of any helpe that we could make them, for they had hitherto neyther an killed nor feene one Whale fince their first comming in hither; therefore we thought it best not to flay here, but rather goe to Faire Haues, where wee should bee more readie to proceed on our Discourtie when the Lee would give vs leave, and in the meane-time wee might bee helpfull to Discourte with the temporal of the making of their Voyage, and to much the rather wee hafled, because we viderstood that the Hallanders also set forth a ship on Discourie.

We were driuen backe a-

Croffe-road.

We fee fayle

out of Croffe-

We fet fayle the feuenth of June, and met with the Proferow, that came from Crofe-road, and We went forth was going into Sir Thomas Smith; Bay, there to get some Bricke and Lime to mend their Fornace, as Nicholas Woodcocke the Mafter told vs, then we went forth to Sea, and being about foure leagues from the shoare, the winde began to blow so hard from the North-west, that wee were forced back agains to feek Harbour, and came to an anchor the nineteenth of Iune, in Croffe-read, 30 Here we stayed two dayes, much wind blowing at the North North-east, till the one and twentieth of Iune, and then in the after-noone the wind came to the East and by South, and the weather was faire, therefore at a North North-west Sunne, we weighed and let sayle againe, and so did the Thomas Bonauenture, that came to an anchor by ve this morning, beeing also bound for Faire Hauen.

This next day in the afternoone we were thwartof Mandlen Sound, and the weather being faire and calme, we fent a shallop to the Northward; to see what alteration there was amongst the Ice, and to feeke out some good Harbour for a shipy and also to fet up the Kings Armes at Hacklusts Head-land, or some other convenient place.

When Matte Affin was gone from the thip in the forefaid failiop, I went prefently into the 40 other shallop into Mandian Sond, there we to the when time and also to see if there were the other time any Mories come ashour; when I was within the Sond, I found no Beeches bare for Morfesto Maudien Sound. come vpon : for Ice and fnow lay vet vndiffolued from the shoare side, but I went to the Harbour, and there caused a Croffeto beset vp, and the Kings Armes to bee nayled thereon; vnder which also I nayled a piece of sheet Lead, whereon I ies the Moscoure Companies Marke, with the day of the moneth and yeere of our Lord. Then cutting vp a piece of Earth, which afterward I carried aboard our ship, I tooke it into my hand and faid, in the hearing of the men there in Trimitie Har. prefent to this effect.

Itake this piece of Earth, as a figne of lawfull possession (of this Countres of King Iames his New-land, and of this particular place, which I name Trinitic Harbour) taken on the behalfe of the 50 Company of Merchants , called the Merchants of New Trades and Discouries , for the vicof our Company of Cricicanus, causainos criscantes, of great Brittaine, France, and Ireland, whose Trainis Haber Royall Armsi are here fer up, to the end that all people who lball here arrise may take unite of his Mar.

testies Right and Title to this Country, and to every part thereof. God fane King lames. parallel of 793 . This is a good fafe harbour, and is voder the latitude of 79, degrees 34, minutes, as I have found by good observation, and have of Westerly variation 25, degrees. When I had here set up the We came to an Kings armes, I returned to ward our thip, which was come to an auchor at the entrance of Fabre benen, flaying till the floud came, because that at the Tide of Ebbe, there runnes a great current. out of the Sound; fo at the next floud, we came into Faire bauen and anchored by the Gamaliel and the Thomas Bonamenture, the three and twentieth day of Iune.

Then lobs Majon, Master of the Gamalies, came abourd of our ship, and I asked him if he had any worke for our men, for I would cause them to come a shore : he told me, that hitherto he had not seene a Whale come in, but his Furnaces and Coppers were already set vp, and therefore as yet he had no neede of helpe, but when occasion ferued he would imploy them. This day about

elemen a clocke Mafter Baffin returned in the Shallop from the Northwards : he faid that he had beene at Cape Barren, which is the point of an Iland three or four leagues from Hackluits head turned from land, but further then that he could not paffe for Ice which lay close to the shore, and he had not the North-Ger up the Kings armes in any place.

On Munday the feuen and twentieth day of Iune, I went forthagaine in the Shallon to the Gape Bartin Northward, partly to fee what alteration there might be in the Ice, with the Eafterly windes which had blowne hard fince the Shallop last returned, but chiefely to let vp the Kings armes in some place concernent, because there was none fet up to the Northwards of Mandlen found.

We rowed to Cape Barren, where formerly Mafter Baffin had bin, and finding the Ice there to gone from the shore, we proceeded further to an Iland which now we call the Saddle, in respect Saddle lied. of the forme thereof, more then a league diffant from Cape Barren. In our way thither it began to fnow, and grew to be a great and vehement from the West North-west, therefore we hafted and got to the lee fide of the aforefaid Hand, and there made fast our Shallop with a grapnell laid upon the leie shore, ving the best meanes we could with our shallops saile to keepe vs from the extremities of fo cold an harbour : we fluid here eight houres, and the florme continued drining the Ice still Eastward in great abundance and with wonderfull swiftnesse: when the weather began to cleere, I cauted the men to rowe to Leewards to another lland a league diffant,

20 which feemed then to be a Cape of the maine land, purpoling there to fet vp the Kings armes; but afterwards wee found it to be an Hand, and to the maine wee could not come for bro-This fformie weather continued from Munday night till Friday morning, during which time

we had beene but eleauen leagues at the furtheil from our ship, yet went we so tarre as we could hauegone, had the weather beene neuer so faire; for at foure leagues distance from Cape Barrenth: Ice lay firme and vnbroken two or three miles from the shore, and close agains to it lay the hattered Ice thronged together with this prefent ftorme. On Friday morning we came backe agains to Hackluits headland, and there I fet the Kings Iulie.

armes in the like manner as at Trositie Harbour : from thence we rowed towards our ship, and as we entred into Faire-basen, there came a Whale that accompanied vs into the harbour leaping The Whiles and advancing him felte almost quite out of the water, falling headlong downe againe with great began now to 30 noile; we halted aboord our ship, and I fent forth both our Silallops to strike this Whale if they coacin.

could, and told Mafter Majon of her comming in, who also went forth in his Shallop: but it feemes the Whale part under the Ice which lay yet unbroken betwixt the North harbour and the South harbour, for they could not fee her againe. The next day there came more Whalesin, and Robert Hambleton, our Masters mate strucke Two Whales

two, which valuckily elcaped; the first for want of helpe; the Gamaliels Shallop being in chase escaped, of another Whale, and our owne little Shallop not able to row against a head-sea to affist the other: fo that at length the Whale having towed the Shallop forth to Sea, the harpingiron came out : the fecond was also strucken within the found, and ranne under the Ice, which lay yet vnbroken at the East end of the Sound, and drew the Shallop upon it cleare out of the water; by 40 which meanes the Harpingiron came forth. Here we remained till the fixt of lulie, our men and Boates being helpefull at all times to further the Voyage.

The fixt of Julie we let faile forth of Faire-banen, intending to make triall if wee could to get to Westwards of the Ice, and so proceede to the Northwards, having fent away one of our Shal- We came forth lops the day before, prouided with twentie dayes Bread, to coast along ft the shoare, search the of Faire buten Beach for Commodities, and fet vp the Kings Armes at places convenient, hoping thereby to prevent the Hollanders, who now rid in the North harbour of Faire-hauen, and were ready for the first opportunitie, to discouer and take possession of other harbours, having two Ships to goe forth onely vpon Discouery.

We failed Weltwards from Faire-hauen feuen leagues, and then met with a maine banke of Ice which trended North & South, the Sea appeared to the Northwards to be open so far as we could We met with which trended North & South, the Sea appeared to the Northwards to be open to far as we could be so the Northon every fide, that we werebard from proceeding any further; then we flood in toward the flore, wards and being a little to the Northwards of Cape Barren, our Shallop had fight of vs, & came rowing Our Shallop to vs through the broken Ice, Maiter Baffin told vs the shore to the Eastward was much pestered came to vs. with Ice, and he had fet up the Kings armes at the entrance of a faire Sound , about foure leagues diftant from Cape Barren.

Now the weather being faire and calme, Master Sherwin, Master Baffin and I, went in the Shallop to the place where the Kings Armes were fet vp, purpoling (because the syre was very cleere) to goe vpon some high mountaine, from whence we might see how the Sea was pestered 60 with Ice, and what likelihood there was of further proceeding. According to this our intent, we ascended a very high hill, and from thence we saw the Icelye vpon the Sea so farre as we could different, to that the Sea feemed to be wholly toured with Ice, take onely to the Eastwards : we thought that we faw the water beyond the Ice, which put vs in some hope that we should ere long get paffage with our Shallops along the shore, if we could not passe with our shippe. Being

The (hallop re-

Weventned towards Faite

thus fatisfied, we returned abord our ship and plyed towards Faire basen, aduling amongst our felues of the best course we could to further the businesse committed vato vs. We refolued to make our discovery along the shore with both our Shallops, and to carry with

We intended

vs our prouision for the Whale-killing, conceiuing good hopes besides, of profit which the beaches would afford vs : therefore we intended when our ship was brought sate into harbour againe, to goe from her with both our Shallops, and to put in practife this our late resolution. But the weather falling calme, and a fogge succeeding, which continued three dayes, so that our ship came not into harbour till the twelfth of July; I went from her the eleventh day, intending to I went forth in fearch the Beaches, till Master Baffin came to me with the other Shallop, and then we to proceede both together: but before he came, I had gone so farre as that the Ice would not suffer mee to passe a Boates length further, and I had also searched a very faire Beach which was altogether IO Matter Baffin came to me at a place appointed the foureteenth day of Iulie, in the other Shal-

Mafter Baffin the other Shal-

lop, and we proceeded both together to the Eastwards againe, and found passage amonest the Ice about a league further then I had lately beene, fo that we came to the firme Ice, that lav almost two miles from the thoare of Red-beach, vnbroken vp this yeare. Here wee haled vp our Shallops out of the water, left the broken Ice which is carried to and fro with the winde, might plit them or brufe them : then Mafter Baffin and I with foure men more walked over the firme Ice and went ashore on Red-beach, where we trauelled about the space of three miles by the there file, but found no commodities as we expected to have done; for here had the Hulmen been Weehailedour in 1612. as we might know by fires that they had made, and gathered the fruites that many yeares before had brought forth. Thus as we could not finde that which wee defired to fee. fo did we behold that which we wished had not beene there to be seene, which was great abundance of Ice, that lay close to the shore and also off at Sea so farre as we could discerne; wherefore being thus fatisfied, and more wearie to know that we could paffe no further, then with trauailing to farre, we returned to our Shallops, and went abourd of our Ship in Faire banen on Sunto our Shallop day the feuenteenth of July, passing the neerest way betweet the llands and the maine Land, for

now the Ice was broken betwixt the South-harbor where we rid, and the North harbour, where The next day we fent our Shallop to the North-east side of Faire hauen, there to lye for the 10 comming of the Whales over against the Gamabels two Shallops that Iye on the other fide for the fame purpofe.

chor againe.

The twentieth of July, wee were vnder faile to goe forth of Faire banen with the Gamaliel. We were varieties of unity we were true and to got and anchor againe where we rid before.

Wekilleda

On the one and twentieth of July, our Harponiers killed a Whale, which iplit one of our Shallops and firucke the Harponier that was in her overboord; but both hee and the reft of the men were relieued and taken into an other Shallop ; then we fent our Carpenter to mend the Shallop 40 that was split; and on the five and twentieth day they helpt to kill another Whale. On the fixe and twentieth of July, I drew the plat of Faire banen, as it is here projected (but

here too coftly to infert.)

August. We went to the North-Shallops.

When this Scoale of Whales were past, we went out of Faire banen the first of August with both our Shallops, Mafter Baffin in the one, and I in the other, with fine men more in each Shallop, thinking that now we should finde the Ice broken and cleere gone from the shore, conceining fome good hope to proceede and make fomenew discourry, which was the chiefe occasion of our imployment. Wee passed ouer Red cliffe-Sound, which we found cleare of Ice; and from thence we proceeded to Red-beach, where we also found great alteration fince our last being there, not with standing the Ice was not cleerely voided from the shore; for in some places it was firme and wnbroken off, for the space almost of halfe a mile: so we rowed alongst it, till wee came neere 10 We port to the North end of the Beach which lyeth furthest into the Sea, and there we found an open way to the shore with our Shallops, and went on land; but seeing in all places great abundance of Beach with our broken Ice. we lay close to the shoare, and doubting that although perhaps with much adoe, we might get about the point of the Beach, yet should we still be pettered with Ice from proceeding any further, we resolved to walke over land, to the other side of the Beach, where we faw a hill about four miles diffant; from which we thought we should be satisfied, how much further it was possible for vs to proceede; so thither we traugiled, where when we came, wee faw a very faire Sound on the Falt fide of the Beach which was open within, but there lay very much Ice at the entrance of it, which although it was extended more then halfe over Sound, yet we doubted not but if we could get our Shallops about the Beach, we should finde either one way or other to 60 paffe over the faid Sound, & from the high land on the other fide, we should receive very good fatisfaction, if the weather continued faire and cleare as now it was, therefore we intended to make triall what we might do but before we returned we went down to the point of the Beach, at the

entrance of the Sound, and there fet up a Croffe, and nailed a fixe pence thereon with the Kings Armes. This being done, we returned to our Shallops, and according to our late determination. The kings Armes. 1 mis being about the point of Red beach, and with many crooked windings amongst the Ice, at you with many crooked windings amongst the Ice, at you with length we got ouer Wiches Sound (for fo it is now named.)

ngui we got out it have a series other fide, about two leagues from Red-beach, Mafter Baffir Wepaffed out and I clambred up a very high hill, from whence we saw a point of land bearing East North-east. Wither Sound: by the ordinary Compasse eighteene or twentie leagues diftant, as I supposed. Wee likewise saw another faire Sound to the Southwards of vs, which was much peftered with Ice, but we could not fee the end of it. Here vpon the mountaine wee fet vp a Warelocke, and then came downe

To againe with leffe labour, but more danger then we had in getting up, by reason of the steepinesse We found thereof: then we walked to the shoare fide, and there found many beach Finnes, whereby I conjedured that Mafter Marmadakes men in his first discouery, made in Anno 1612. had not beene woon this land to fearch the Beaches, for in all other places where we had beene heretofore, we could finde nothing at all. Now therefore we refolued to make further fearch along & this shoare. and to proceede with our Shallops fo farre as we possibly could : whereupon wee returned to our men againe whom we left with our Shallops, where we first landed.

Hauing flayed here a while and observed the latitude which I found to be 79. degrees \$4.minutes, we law a Shallop come rowing towards the extreamest point of this shoare, therefore we We met with nates, we law a Station office who were therein, and found them to be Mafter Marmadules men, Shalloo, larely come from their (hip the Hartf-eafe, which they faid they left at Sea amongst the Ice, about 20 a league from Red Beach : here they were fetting vp a Croffe, which they faid that they found a reague from Assa, and had beene formerly fet vp in the time of Master Marmadules first disco- Note, uery, by one Laurence Prestwood, whose name I law thereon engrauen, with two or three names more, and it had the date of the feuenteenth of August 1612. Vpon this Croffe they nailed the

arms arms. Fiere we parted from them, and according to our former determination we proceeded, some in the Shallops amongst the Ice, and others on shoare, till wee went about foure leagues further: in which space we found many more Finnes, and one paire of Morfes teeth, but now we found the I ce fo close packe together, that wee could not proceede any further with our Shallops : the 10e to the passes to the total and passes and passes any instant with our banapa; 30 wherefore Malter Amps and I intended to walke our-land writing the hould be better faitfail field how farre this Sound went in, for wee could as yet fee no end of it, and it feemed to make a

fenaration of the land; fo leaving our men here with the Shallops, wee travailed almost a league further will we came to the point of a fandie beach, that thot into the Sound, which was wonderfully ft ored with drift Wood in great abundance. From this point we received fuch fatisfaction mily it ored with a the we faw the end of the Sound which lies South in about ten leagues. It Theepd of Sir hath in it a good harbour that is landlockt, and doubtleffeit is a good place for the Whale-killing Thomas Smiths then any that I have feene in all the Conner, but nothing growing thereupon more than in or red, there places. This Sound is that which formerly had and ftill retained the name of Sir Thomas 40 Smiths Indet. if it be not every yeare as now it is peftered with Ice. Here I faw a more naturall earth and clay Inlet discoun-

Being thus fatisfied, we came backe againe to our Shallops, and feeing no way but one, we returned towards our Ship; but before we could get to Red beach, there arole a very great storme Werenurned turned towards our Ship; but Detore we could get to are-proper, there are to a way great with the from the Eaft North-eaft, after we had entered amongst the Ice in Wichet Sound, in that we were Shim from the East votertuesta, sittle we had entertue amongs the ten in 1992 persons to that we were Ship feparated the one Shallop from the other, whereby our danger was the greater: for whiles were A thornels-were both in company together, the one might haue beene helpfull to the other when neede te-gan when we quired, and more cafie it leemed to faue them both, then being separated to keepe either of them were amount from wracke; but God (who in his wonted mercie is ever ready to relieve the faithfull diffreffed) Ice. did not onely fo prouide that we met together againe, and indeede were helpefull the one to the other (other wife I doubt the one Shallop had miscarried, for the was in great danger) but also deother (other wife a wond amongst these perillous rockes of Ice, which it was very hard to shum, of the Ice.

50 and at the length brought vs into an open Sea, where with as scant a faile as we could make, we paft (wifely before the winde, the Sea comming divers times over the sternes of our Shallops, which wet our skinnes, that had scarse any dry cloathes on before to keepe them warme, b reason of a drizeling Snow which fell with the storme : then we went abourd our Ship into the We came a South harbout of Faire basen, the fift of August, with one hundred and fiftie Beach finnes, and one boord our ship. paire of Morfes teeth, giving thanks to God for his bleffing and mercifull deliverance.

ire of Morfes teeth, giving thanks to God for his blefting and merciful deliverance.

The minth of August, two ships of the Hollanders, that were appointed for Northerne Discourcers

very, were seene thware of Faire Hanen, sayling to the Southwards. The eleventh of August, we set sayle forth of Faire Hanen, the winde at South South-west, Our Ship 6c intending to make tryall, if yet the Ice would admit vs to have paffage to the Northwards or wentforth to the North-eastwards. We held our course from Cape Barren, North-east and by East, till seven Sea. the North-eattwards. We held our courie from Cape Barron, North-eatt and by East, this teen was a clocke at right, at which time having runne eight leagues from the floare, we met with the We englether which lay East and by South, and West and by North, and bore up alongst it to the East. It explicit floar wards, for the winde was now come to the North North-west; then wee tackt about to the the shore,

We plyed off

Westwards, and plyed off and on close by the Ice, till the thirteenth day at mid-night, sillexpecting a change of the weathr, that we might have made some adventure among it the shattend and on the lee wo dayes. Ice, for both on the twelfth and thirteenth day, the winde blew hard at North, and the weather was cold, thicke, and very winter-like with fall of frow: this winde being focontratie, droue both the Ice and our ship to leewards towards the shoare, so that wee were forced to put into Harbour againe, and came to an Anchor the fourteenth day in the North Harbour of Wee anchored Faire Hauen, where the Fleet of Hellanders lately rid, at which time the Harrfeafe was there are

North Harbor,

Now was the Land both Mountaynes and Plaines wholly courted with snow; so that almost all mens mindes were possessed with a desire of returning for England: But to prevent a sudden to refolution for a homeward Voyage without further fatisfaction, I made motion that once as aims we might goe forth with our shallops, to see what alteration there might bee found along the fhoare. It fell out that I was to goe in one shallop for this purpose, fo I tooke with me eight men. and went from our thip the fifteenth day of August. We rowed to Red-cliffe Sound, where we passed through much Ice that was newly congealed

I went to the Eastwards in a fhallop. Ice was newly go once to Point Defire.

Ice was newly We rowen to act as support of the sup and being ouer the Sound, we had a cleere Sea againe; then we proceeded to Red-beach, where finding the shoare cleere of Ice (which at my last being there was wonderfully pestered) I conceiued good hope to finde passage to the furthest Land from thence in fight, bearing East halfea point Southerly, nine, or ten leagues distant; to this end we put off from the shoare of Real-Beach, 20 and rowed a league and more in an open Sea, and then met with Ice which lay difperfed abroad. and was no hinderance to our proceeding, so that we continued rowing the space of fixe hours. in which time we had gotten more then halfe way ouer: but then we found the Ice to lye very thicke thronged together, so that it caused vs much to alter our course, sometimes Southward and fometimes Northwards, and even in this time, when we thought wee flood in most need of cleere weather, it pleased God to send we the contrary, for it beganne to snow very fait, which made the Ayre to thick that we could not see to make choice of the most likely way for vs to made the Ayer of things the design and the second and accordance must make way for visits partie, therefore I thought good to flay here a while, hoping that ere long the weather would be more agreeable to our purpole; to a Grapnell being laid forth vpon an Iland off, to hold fat our fhallop, a Tent was made of the shallops sayle to keepe the weather from vs, and we remayned 30 here fine houres, but finding no alteration in the conftant weather, I willed the men to take downe the Tent, and with faire tearmes perswaded them , that notwithstanding the wet weather, it were good to be doing fomething, to get ouer to the defired shoare, where we might refresh our selues, and haue fire to dry our wet clothes; they seemed well content with this motion, and so we rowed the space of foure houres more, the Ice still causing vs to hold a South and South South-east courfe, which carried vs further into Sir Thomas Smiths Inlet, and put vs from the place where we wished to be.

T could not

The thicke snowie weather continued all this time, which was very vncomfortable to vs all, but especially to the men that rowed; and as the snow was noysome to their bodies, so did it also begin to assomish their mindes, as I well perceived by their speeches, which proceeded upon 40 The original this occasion. The fnow having continued thus long, and falling vpon the smooth water, lay in fome places an inch thicke , being alreadie in the nature of an Ice compact, though not congealed, and hindred sometimes our shallops way; this I say caused some of them, not altogether without reason to say, that if it should now freeze as it did that night when we came ouer Red-

this time, and therefore I bade them row toward the shoare of Red-beach againe, where I intended to flay till the weather might happily be more convenient. So holding a West North-west course, so necre as the Ice would fuffer vs, wee came to the East-side of Red-beach, having beene 50 eighteene houres amongst the Ice, during all which time the snow fell, and as yet cealed not. When we had been here about an houre it began to cleere vp, and the wind to blow hard at East, which rather packe the Ice close together in this place then differst it, so that I was now out of hope to get any further then I had beene alreadie: wherefore I returned toward our flip, inten-Ireturned to- ding as I went to make a more particular Discouerie of Bread-bay, and Red-cliffe Sound, hoping wards our thips that one place or other would afford some thing worthy of the time and labour, When we were come to the West side of Red-beach, it began to blow much wind, where withall the Sea growing to be great, all men admied to passe over Broad-bay, whilst the winde and weather would ferue vs to fayle, for they faid it was like to be very foule weather : fo feeing that it was no conuchient time for coasting, we came ouer the Bay to Point Welcome (which I so named because it 60 is a place, where wee oftentimes rested, when wee went forth in our shallops) it is about source leagues distant from the North end of Red beach. At this point the Hollanders land fet vp Prince Maurice his Armes, neere vnto a Croffe which

was light and cleere, wee faw the Ice about a league from vs, which trended Southerly, having now a gale at East North-east, wee steered away South and South South-east, but in the afternoone we were embayed with a long banke of Ice, which wee could not weather. Wee mer with therefore wee were faine to tacke about, and the winde having come more Southerly then it was in the morning, wee flood off from the Ice North-east and North-east and by Northand then to the Southwards againe, making fundrie boardes to get forth to wind-wards

> The shird day before noone, wee had fight agains of Ice to Westwards of ve, and at noone were winder the parallel of 78. degrees. 27. minutes, according to my Observation ; then wee flood a way South to keepe cleere of the Ice, for wee had a great homing Sea, although but 10 fittle winde : and therefore durft not be to bold to edge too neere it, especially the wind being Eaflerly as then it was.

On the fourth day our men faw the Ice againe from the may ne top-maft head, and therefore wee still maintayned a Southerly course; the next day it began to be foggie, and continued close weather and hazie for three dayes, fo that wee had no more fight of the Ice; neyther could wee at this time receine any further fatisfaction concerning the fame : therefree wee kept a Southerly course so neere as wee could, although wee had but little winde, and the fame very variable till the ninth day , but then weethad a good gale of winde at West

On the tenth day beeing Saturday, wee were by my reckoning fiftie leagues diftant from 20 Low-feet, which bore from vs East South-east halfe a Point Southerly; this day the wind shifted to the South-west, and at night came to the South with much raine; then came backe agains to the West North-west and began a great storme.

This meht the Mafter and others faw, a light vpon the Fore-honner, which the Saylers call a A Corpo Santo. Corpo Santo : it appeared like the flame of a Candle, and (as Sea-men observe) it alwayes prefa-It is often feen geth an enfitting fforme; which to verific, this foule weather continued the next day, and grew geth an entuling norme, which to verifie, that the Soptimizer president mere mexically, and grew to be so whemene on Sunday night, that the Soptimizer pure-raked our ship, and wee were faint to lye arry with our fore course onely, and our Mayne top-mast also strucke, which last thing (as Seamen say) is feldome done at Sea, then about one a clocke we were forced to take in our fore course, and to lye a-hull for fue houres.

The fourth day of October, the thippe came to Waping with the whole number of men that they carryed forth (my felfe excepted that was come before) being fixe and twenting all in perfect health. nerwigen and controlling of the control of the cont

A true report of a Poyage Anno 1 615. for Riscourge of Seas, Lands, and Handi, to the Northwards ; se is was performed by ROS. A.T. ROTHELLIN, M. & Pin. 40 naffe of twentie tumes called the Richard of London: fer forthat the charge of the Right Worthipfull Sir THOMAS SMITH, Knight, my very good Mafter, and Mafter RICHARD WICHE, Governours: and the reft of the Worthipfull Company of Merchants, called the Merchants of New Trades and Discourries, trading into Moscouia, and King
I A M 2 & his New Land.

Y the proudence of Almightie God I went forth of Harmith Harbourin the foreful Pinnafe, the twelfth of May, in the company of eight hippire of the foreful Pinnafe, the twelfth of May, in the company of eight hippire of the Fleet, for King Lames his New Land, who in foul eweather out highest his latitude 71, degrees, or thereabours. So I proceeded alone towards King Lames his New Land; and met with lee in latitude 73, degrees 30, minute; if flood Northern Carlwards for the waft of King James his New Land, and had fundy conflictly with the Joe in rainie and wer foggie weather, and had fight of Land the sleuenth of Lone; and on

the nineteenth of the fame I anchored in Faire Hauen. Here I stayed till the third of July for the Pinnaffe had received fome burt amongst the Ice, which to amend, I was faine to hale her aground, befides divers other things necessary to be done, which detayned mee longer then willingly I would have flayed there.

From hence Mayled Morthward, but met with Ice in latitude 79. degrees 40. minutes, being fix leagues from Hacklents. Head land, then I coafted the Iceas it lay in Points and Bayes to the 60 West wards and South-westward, and being thirtie leagues from the Land in laritude 70 degrees 10. minutes, I found it to trend Northward and North-westwards, and coasted it to the latitude

CHAP.7. Northerne Difcouerie, Error of Gronland, Kings Armes fet DP. of 70. degrees 50. minutes, but then I was embayed with Ice, and was faine to fland out againe and failed about ten leagues before I got cleere : when I was out of this Bay, I proceeded South Westerly with the Ice on the starboard to the laritude 78. degrees 20, minutes, where being fortie leagues from the shoare, I was againe embayed with the Ice, and having hall faire Perill and Sun-shine weather all the day, which made mee the bolder to stand so neere it, the weather escape. on a fudden fell foggie, and the wind beganne to blow hard at South, which put vs to great trouble and no fmall perill : but the Almightie power who hath mercitully delivered vs heretofore out of as great dangers, preferred vs alto from this : when wee were gotten cleere off the Ice, we had the Sca much growne, and the forme increasing, but being defined fill to keepe the sca, I flood close by the wind vader a payre of coarse, till the Pinnasse waxt leake with bearing too much fayle, and there was forced to lye stry voder a mayne coarse only : and although shee ftemmed South-east and South-east by South, yet was she hurried violently to the North-eastwards, and by the mercifull providence of God we fell right with the Foresland, in latitude 70. degrees, then I flood ouer Sir Thomas Smiths Bay for harbour in Crafe-read, where I anchored the thirteenth of July being Thursday. I flayed here foure dayes, in which time my men mended the Sayles and ships tackling that had received hurt by the late storme, and made a new mayne Sayle to ferue in time of need, and on the feuenteenth of July I weighed out of Crofferoad, and fayling Westwards from thence came to Ice agains in latitude 78. degrees 40. minutes, which I coafted as it lay neerest South-welt-or more Westerly, but with many Points & Baves.

wherewith I was fometimes intangled, yet, God be thanked, got cleere againe, either by helpe of Oares or Sayles without any hurt. In this fort I proceeded with good fathsfaction, although not with fo good content, till I came to the latitude of 76, degrees, beeing about one hundred leagues from Point Looke-ons, but then was croffed with a contrarie ftorme from the South-well and South South-weft, which droue me to the South-eastward, till I came in the latitude of 74. and sould sould share which most in the state of the stat at that time that I was neere Land by abundance of Fowle, which we faw in great flockes : but Fogges fuch thicke forges have continued for three or foure dayes together, that we might fooner heare

30 the Land if anywere, then fee it, and fo did we first find this Ice by hearing the rur, thinking till we faw it that it had beene Land, so that we were embayed with it, before we thought that we had beene neere it; then I flood out againe and coafted the Lee fill to the Westwards Southerly, but could fee no Land, as I expedied to have done, wrill wee came under the latitude of 71. degrees thirtie minutes, and then we espyed a snowie Hill very high in the cloudes, for this day High Hill. was very cleere at Sea, but the fogge was not yet cleered from the Land, fo that we could fee no part of it, but only the top of a mowie Mountayne, which appeared very high although wee were fourteene or fifteene leagues diftant from it, bearing off vs South-east and by South.

Then I flood in for the shoare, supposing it had beene part of the Mayne of Groynland: for the 40 fogge lay on each fide of this Mount, as if there had beene a great Continent under it but it proued otherwife, for as we came neerer to it, the fogge difperfed more and more, and when wee

were fine leagues diffant, the Land appeared in forme like an Iland.
When I came necrer the (hore, I could find no Harbor to anchor in, Notwith flanding, the weather being faire & calme, I hold out my Boat & went alhore with three men more, and fet vo the Kings Armes: then we fearched a Sandie Beach, which was abundantly flored with drift wood, Drift wood, but yeelded no other fruits, that we could find worth the taking vp, fo I returned abourd againe, and fent alhoare my Boat to fetch fome wood. But before the men had laid into her the little quantitiethat the was able to carrie, they came aboard againe, for the wind began to blow hard, and the Sea to go eloftie, so that here was no place for we so abide any beinger; otherwise I was proposed to laue fearched further along it he shoare, but this gale of winde comming Northerly I stood from hence to the Wethwards, being definous to see more Land or finde a more open Sea. And haung sayled about fafteene or sixteene leagues I mer with see again, in latitude 71. degrees,

and coafted it eight or nine leagues further Westward, and South-westward as it lay, but then the wind came to the South-west, and we stood close by it a white to the Southwards, but finding the gale to increase, and confidering that it was the most contrary which which could blow a: gainst my further proceeding (for the Ice as we found did erend neerest South-west, and besides if there had beene any high Land within twentie leagues of vs, wee might perfectly have made it, the weather was to faire and cleere.) in these respects, and for the Realins following, I tooks it, the weather was to raire and occurrence to the North-eastwards againe, being now about two hun-6C dred leagues from King Lames his New Land in latitude 71, degrees.

First, I purposed to tayle alongst the South-east side of the Land that I had discouted, to be better fatisfied what Harbours there were, and what likelihood of profit to enfire; and from thence to proceed to the place where I first fell with Ice in latitude 72, degrees when I was driuen to the South-eastwards with a Westerly storme, for I am yet verily perswaded, that being

there we were not farre from Land, although wee could not fee it by reason of thicke foggie weather. Then my aurther intent was, if I found no good occasion to spend my time there, for to coast the Ice, or try the open Sea to the Northwards, betwixt 73. and 76. degrees, where formerly I had not received defired fatisfaction by reason of aftorme that draw me off, and then I purposed, if time might seeme convenient, to proceed to the North Coast of King James his New Land, to have seene what hope was there tobe has for passage Northward, or for compass fing of the Land, which is most like to be an Iland.

I stood away East and by South, and being neere the foresaid Iland, the winde came to the West and blew a very hard gale, where with I passed alongst the South-east side of the Iland ynder a paire of coarfes, but without that fatisfaction which I expected : for the winde blowing fo Io fformie, and the Sea growne very great, I was forced to fland further from the shoare then willingly I would have done, and besides there was a thicke fogge vpon the Land, whereby I could not be fatisfied what Harbours or Roads were about it, yet might we fee three or foure Capes, or Head-lands, as if there went in Bayes betwixt them. I sayled about it, and then stood to the Northward againe, and being now affured that it was an fland, I named it Sir Thomas Smiths Hand.

This Iland is about ten leagues in length, and stretcheth North-east and South-west: it is high Land, and at the North end of it there is a Mountayne of a wonderfull height and bigneffe, all couered with Snow, which I called Mount Hack/nyt; the base or foot of it on the East fide is almost foure leagues long, it hath three such sides at the base lying out to the Sea, and from 10 the south fide doub the rest of the lland extend it selfe towards the South-west, which is also, as it were, a place fortified with Castles and Bulwarkes, for or each side there bee three or foure high Rockes which stand out from the Land, appearing like Towres and Forts. It lyes in the parallel of 71. degrees, where the Needle varieth from the true Meridian Westwards eight degrees. The Land is generally so farre as I have seene, Rockie and very barren, and worse then the Land that I have feene in King James his New Land, under eightie degrees, for there is no grafte but mosse, and where I first landed vpon low ground, all the stones were like vnto a Smiths sinders both in colour and forme, the fand is generally mixed with a corne like Amber, the Beaches are abundantly stored with drift wood and many stones, light like Pumis, which will swimme on the water. I saw many traces of Foxes and the footing of Beares, but not any figne of 30 Deere or other living creatures, and very small store of Fowle.

From hence I stood to the Northward according to my former purpose, but was croffed with a contrarie florme from the North. west which put me off to the Eastward: but as the wind shifted I made my way to the North-westwards all I could, and came againe to the Ice in latitude 74. degrees, from whence I proceeded towards King lames his New Land, and had fight of the Land the eighteenth of August, being in latitude 77. degrees 30. minutes, and having a hard gale of wind then at North-west, I stood close by it vinder a paire of coarses, but could not weatther Prince Charles Iland, and therefore I bore vp, intending to goe into Nicks Come, which is on the North fide of Ice. found, there to attend a faire winde, and in the meane time to get ballaft aboard the Pinnaffe, and all other things necessary. But comming to enter into the Harbour, I 40. thought it not a place convenient, because I could hardly have gotten out agains with a Southerly wind, which would carrie me to the Northwards, and therefore I stood over for Green-harbor, where I anchored at one a clocke in the morning, the nineteenth of August.

Here I caused my men to launch a shallop, and to get ballast and water aboard the Pinnasse, and before nine a clocke at night I was readie to proceed Northward with the first faire winde. I stayed here fine dayes, during which time it blew hard for the most part at North and Northwest, and on the foure and twentieth of August, the winde came to the East North-east as wee Supposed, till we were out of the Harbour, so I set sayle to proceed Northward, and had the wind Easterly out of Ice-found, wherewith I stood North-west towards: Cape Cold, but being cleare of the high Land, we found the wind to bee at North North-east; therefore I resoluted of another courie, which was this.

Hauing peruled Hudfons Journall written by his owne hand in that Voyage wherein hee had Hadiss Held. with beging. fight of certayne Land, which he named Hold with bepg; I found that by his owne reckoning it flioned as be. should not be more then one hundred leagues distant from King Lamer his New Land, and in the latitude of 72. degrees 30. minutes or thereabouts: therefore feeing I could not proceed Northward, I purposed to goe to the South-westwards to have fight of this Land, and discouer it, if wind and weather would permit. So I food away South-west, and sometimes West Southwest, till I had runne one hundred and thirtie leagues, and was by account in latitude 72. degrees 30. minutes, where having the wind contrarie to proceed further Westward, I stood Eastward till I had runne thirtie leagues, in which courfe I thould have feene this Land, if credit might be 60 given to Hudfour Journall, but I faw not any. And having a hard gale of winde ftill Northerly, I conceined no courfe so good to be taken at this time, as to speed homewards; and so stood to the Southwards, directing my course for England, this beeing the eight and twentieth of August. After which time the wind continued Northerly till the fixt day of September, and then wee

were on the coast of Scotland in latitude 57. degrees, and on the eight day of September had fight of the land of England on the coaft of Torkelbire. Thus by the great mercy of God have we elcaped many dangers, and after a cold Summer have some caste of a warme Autumne. All elorie therefore be to God the Father, the Sonne, and the Holy Ghoft. Amen.

CHAP.7. Fotherbyes opinion and aduice. King of Denmarks (hips.

B; this briefe Relation, and by the plat wherein I have traced the ships way vpon each seuerall trauerse it may plainly appeare, how farre the state of this Sea is discoursed betwirt 80, and 71. degrees of latitude, making difference of longitude 26. degrees from the Meridian of Hacklurts Headland.

Now it any demand my opinion concerning hope of a passage to bee found in those Seas; I To answer, that it is true, that I both hoped and much defined to have passed further then I did, but aniwer, that it is the state of peares not yet to the contrarie, but that there is a spacious Sea betwixt Groinland and King James his New land, although much pettered with Ice; I will not feeme to diffwade this worflipfull Companie from the yeerly aduenturing of 150. or 300. pounds at the most, full former difference be made of the faid Seas and Lands adjacent, for which purpose no other Yes fell would I aduise vnto, then this Pinnasse with ten men, which I hold to bee most concenient for that action , although heretofore I conceiued otherwise, but now I speake after good experience, having fayled in her out and in aboue two thousand leagues.

Ro. Fothersy.

A Letter of Robert Fotherby to Captaine Edge. written in Croffe-rode, July 15. 1615.

M After Edge , By the mercy of God I came into Crosse-road on Thursday Last , being drinen from Sea users shoure by extreme tempost. At the beginning of the storme I was unmittingly en-AVA from Sea actro-power op extreme tempty. As the negaming of the former is not unwittingly ordered with the above forthe leaguest from land, it alitated 78. Leaguest and 30 cminutes, but, thanked as 35 to God, if you cleare of 11,50 and mithout much trouble and great danger. Having pixel under two overles to and againe so long till my Pinnasse was made leaks with bearing, I tryed it under a mayne coarse and flem'd South-east and South-east and by South, notwithstanding I was burried to the Northward, and prem a some ocean enter some control more some or control more or control more or control more for the feel tight with the Forcland, which by reason of the mility florms we could not set till we were within a league of it, then I should not be the work of the some some to an anchor here, where I must be spread to stay till our league of it, then I should not set to stay till our teague of a; voen 1 pron oner roc var anne came to an amour over, where c must respectate s for side our fails to templed, and a new mayne course to temple, if not a first course falls. Then I properly to go as to Sa againe, and to proceed in costing the let to the Welfstand, if it binder me to proceed Northward. I have already conflicts from Hackluy to Headland to the latitude afressiad, and intend to beginne agains so meare as I can at the place where I was put off with the storme. I came from Paire Hauen the fourth of Inly, and then had there beene killed twelnew hales, besides one found dead, and another brought in by 40 Fra. Birkes, which he found at Sea before be came into Faire Hauen.

When I came in huber, here were three Soins and a Pissassife of the King of Denmarks; they rid in Ships of the dripe mater about a league and a half from the Read, but meighed from thence, and the Admirall came line of Dorn marke. to an anchor close by me, and sent to intreat me to come abourd of him; I went abourd and was cont-

trough entertayned by the Generall, who questioned one of the Country, and asked one by what right the English Merchants did refert and fish in this place: I told him, by the King of Englands right, who bad gracted a Patent to the Mulcouic Company of Merchants, whereby he authorizeth them, and for-hiddib all others to frequent these places. Then he entreated me to goe with him to Sir Tho, Smiths Bay, to the two Engl In Ships there. I told him, it would be loffe of time to me, because I bad some businesse here to doe, and then to goe forth presently to Sea agains to prosecute my Discourry. He faid, that he would to due me goe with him to be witnesse what passed betwick him and you, for he had matters of importance to acquaint you with all, which concerned our King and theirs, and therefore intreated me to give direction

presently to weigh and set saile, for I must needs goe with him: I replyed againe, that it would be a great lose unto me of time, and I knew not how to answer it; but he told me peremptorily that I must goe with im. So seeing no remedie, I had the Mister be readie: then he presently weighed and kept me aboord him, but afterwards meeting with the two Captaines that came from you, be returned and anchored againe in Crofte-road. I received very courteous entertaynment of the Admirall, Vice-admirall, and of Captaine Killingham: but Captaine Killingham being aboord of me, went away as be seemed, discontented, because I would not give him a young Morse I have abourd, which I denyed to doe, because I writ to m; Master from Farte Haven, that such a thing I have, and will bring alme into England, if I may. 6. When he went off about of me, he faid, he would shoot downe my stag: And some after there came a shoe which five ouer vs, out of the Admirall, and I expected another; but some after there came a man aboord of me out of the Admirall, to fee if any of your men that came in the Shallop, would gee with them

into the Bay, and be swore unto me that the shot was made to call their Boat abourd, because they were ready to weigh. As farre as I can perceine, their purpose is to see what Grant the King of England bath

made ento the Companie, for they seeme to pretend that the right of this Land belongs to the King of Denmarke, and neither to English nor Hollanders. Thus with my hearise commendations to your selfe, and Master Bredcake, together with my praiers for your prosperous voyage, I commit you

CHAP. VIII.

Diners other Voyages to Greenland, with Letters of those which were there employed, communicated to mee by Mafter WILLIAM HELEY.

An. 1616. Edges lland was discourred, and a prosperous voyage was made, all the ships being laden, under the command of Captaine Thomas Edge. An. 1617. Watches Hand was differuered; and what voyage was made appeareth in the Letter following, written to Mafter Decrow by William Heley.

Laus Deo, in Portnick the 12. of August, 1617.

Worshipfull Sir,

I dutic remembred, May it please you to understand, that through Gods blessing on Voyage is personand in all the Harbows in the Countrie this yeare, with a greater our plus then our first will carry ; sethat in some places weemist of force leave good store of Oyle and Blubber behinde for the next yeere. Wee are all for the most part readie to set sayle, being full laden : onely I desire to see the Coast cleere of Interlopers. whereby our pronisans may be left in securitie. We tooke a ship of Flushing, called the

Noahs Arke (Master, Iohn Verlile) in Horne-found , baning out of bim two bundred boolbeade of Blubber, and two Whales and a balfe to cut up, a great Copper, and diners other provisions, and fon 30 bins away ballasted with stones. There were two more of them who were gone laden with Blubber, before tion any rampice must provide the control of the co Cudner, be rid in Portnick, where he killed cleuen W hales, and made some seventie and odde tunnes of Orle, which is laden abourd him and his Finnes. In whom, if our firps had come together shither as I desired, I would have laden fortie or fiftie tunnes of Oyle in him, and displaced his men and sent him for actives, I would come time of view or spire immes of the sem, and diplaced to some and feet him for England; but do weather insuing own fine getting chither, and his fedden departure after our com-ming in with the Pleasure, shee being laden and not sufficiently fitted to surprise him, he escaped, but I sent her away in company with him, whereby he may not doe any have on other places to the Country. I would have had him to have taken in some Oyle, for which I effered him fraight, so I might put some men 40 into him to see to it, and that it might be brought safe to London: but be resulted, yet prosesses, be parposeth to bring his ship and goods to London: his voyage is by the thirds, so that his men will rather dre then forgoe that they have got. The small ship Iolin Ellis is returned from the South Eastward, having made some further discourry, and killed some eight hundred Seamorse, and laden the teeth, and thirtie made jome journey and the state of the state in Oile: be brought some Sca. bor se blobber with him. He met with Thomas Marmaduke of Hull in those parts, who had not done any thing when he saw him towards making a voyage, but went for Hope Iland, and no doubt but bee will doe much foile there. As for the Beare Shee departed for Hamborough the third of Angust out of Croste-road; and the Gray-hound Beate, free departies for England, who, I bope, is safely arrived, and by whom I bope you understand of 50

The Whales killed this yeere in the Country are about one hundred and fiftie in number, and the Oyle made will be about one thousand eight bundred and odde tunnes, besides the blubber left for mant of cashe. The lading of this spip is one bundred and eightic tunnes, as by the Bill of lading here inclosed. Thus having not further wherewith to acquaint your Worship, with all praying God to send all home in fafety with a good paffage; I bumbly take my leave, and doe rest

> Readie at your Worthips command in all dutifull feruice.

A Letter of Mafter ROBERT SALMON to Mafter SHERWIN. In Sir THOMAS SMITHES Bay, the 24. of lune, 1 6 1 8.

Oning friend Master Sherwine , I kindly salute you , wifting you as much prosperitie as vinto my felfs, &c. Since our comming into the Bay, we have been much troubled with Ice and Northerly winder, fo as we have not beene two dayes free of lee. We had a forme Northerly which brought in much Ice, fo as we were inclosed withall eight dayes : there went fuch a Sea in the Ice that did beate our lines 10 very much for foure and twentie boures, that I did thinke we flould have floyled our forps: but I sharks God we cannot perceine any burt at all it bath done to vs; also we have broken two anchors with the let; we have killed threeene Woaler; but they yeeld but little, in regard of the Ice which hath much hindred us in the works, for in teredage, we could not doe any works the Bay mas fo full of ice : the Bay mas full as more recognized that prefent the Ray is fall of bearing my len up receive bory adapted at low at Dox 100e, and non at this prefent the Ray is fall of floatened les, the winds banging Netherly keepts it in. Here is fine fall of Elemmings which beare festivene and fixteene pieces of Ordanane in a keepts it in. fing; and they die man ent eighteene Shallops, fo that with theirs and ours here is thirtie Shallops in the jung; and then many for us to make a veryage: there is at the least fifteene hundred tunnes of shipping of the Temmings; we have reasonable good quarter with them, for we are merry about of them, and they remnings; we cause respondent gent quester must own you are merty according town, and told of oil; they have good fire of Sacky and are very kade to very pricing or any thing that we must. I am of very doubtful of making a verge this years, yet I hope Cross-road will before ver for one stip, the Company must take another course the next yeere : if they meane to make any benefit of this Country, then runfany may the start must be at the se mane; out of this Country, but as farre as I can vader stand by them, they meane to make a trade of continuance of it : they have every one of them Grave Maurices Commission under his Hand and Seale: we will let them rest this yeere, and let who will take care the Commission water as cumman seed or a seed of the seed the rest of his friends: we are well at this present, I thanke God : I pray let us heare from you when you the reft of on fremus: we are well as one professionand. One is group to weather from you would be been any consuspance; I hope wee [had go chome in companie to gether as wee came out. Thus with best on any consuspance; I hope wee [had go chome in companie to gether as wee came out. Thus with best of the constant of the professional way to be the professional to t

A Letter of Mafter TH. SHERWIN: Bell-found this 20. of lune, 1618.

After William Heley, your Letter I received, wherein I anderstand you have tooke very great M After William Heley, Josen Letter I received, wherein I, quantificant you have took very great, the griefe, which I am ours four for hou I am m goad hope to come to yo may fifty one of their dayes, that I may comfort you with a good couple of Hennes and a bottle of Canary wine, but I pran bec carefull of your selfs and keepe you warme, and take besele the Nodes doen to pick, wet your eyes: but as for the Flemmings let them all go being thoughteen, and absouph you be set firong enough to medalle with them, yet the worst work are too good for them, the time may come you may be recurring do to them against. The yet the worst work are too good for them, the time may come you may be recurring do to them against. The Captaine wishes they would come all into Bell-found and beat us out, and carry us for Holland; bere is a great fleet of them in this Country. Here came in two Flemmings, but mee bondled them very bonefly, but the bondled them very bonefly, but for feere of fleet-class, on badit beene be dater part of the years, we would have handled them better, now they be gone for Horne-found, I would that they had all of them as good a paire of hornes ter; most not pe gone yor incitite-tolling, women ton very come as you a paire of arrest growing on their heads, as in this Constry, A concerning our wonge, Matter Salmon concertific pass both in Horne-found, and in our harbour. My brother Bulle, John Mattin, and I, dranke to you, you word in 10th - to the for pasty. We have so little to doe wee feare we shall all have the Scurny, but we bane pulled downe the Flemmilh house, and brought it neere more fit for our turne. Thus praying you to remember my lone to all at Faire-hauen, I cease, with my prayers to God, to send you and vi all a prospe-50 rows voyage, with all your good health, that we may goe merrily home together.

A Letter of I a mes Bevers Ham to Master Heley. From Faire-hauen, the 12. of July, 1618.

Maßer Heley, My commendations remembred to your felfe, Master Salmon, Maßer Smith, and Maßer Beymond, as also to Maßer Wilkenson, Mate Headland, Maßer Greene, A The arm consists any morning and any or reasons and the rest of our good friends with you, wishing all your beatless any owns; I am very forty to vinder that the amounts of the amounts of the temmings, both with you and other places; as also fibe small bope three is, in making a voyage this yetre. For our parts we are and base beens so perferred with lee those three is, in making a voyage this yetre. For our parts we are and base beens so perferred with lee those twentie dayes, that we have not beene able to goe out to Sea with our Shallops abone twice in the time neither have we beene able to doe any good by reason of foule weather and fogs, nor have seeme any more then

20

one Whale in all that time, which after sheewas killed turned vs to much trouble, by reason of soule weather, and forced us at last to leave her in the Ice, where the Beares made a prey of her, who I seare will sor, and provide the process of the part of the process of the pro nets stole one, for which they have promised sutufattion, but they are so shut up with see that they are not able to firre either Ships or Shallops. All the Sea to the Northward of Hakluyts headland, and both Enfemand and Westward thereof, is packt so full of Ice, that I scare it will overthrow our voyage, and preour hips in much bazard, the Lord release us of that miserie in due time. I neither have nor will be lack our join in muce valuar, toe war areasy even you amyser or man time, a neuron comment mus of ince. To do my high dechemous for the good of the vapage, the profile time whereof I doe much wife and defire both here and in all other places. I progremember my lone to the Captaine, by your next commy to the both over and in all other places. I pray rememour my some is one capiame, by your next consey to the
Southward, which my commendations to all the ref of our friends; thus for prefens withing your bealth, to
I knady take my least, and relifies a leasing friend,
I had thought to have added a large Discourse of occurrents between the Dusch and English in

Greenland this 1618, and had prepared it to the Preffe. But having alreading ginen some Relation thereof from Captaine Edge &c. and feeing the infolencies of fome of the Dates were intolerable to English ipirits, which then fuffered, or hereafter should reade them; I chose rather to passe them by; aduiting my Countrimen not to impute to that Nation what some frothy spirit yomits from amidit his drinke, but to honor the Hollanders worth, and to acknowledge the glorie of the Confederate Prouinces, how foeuer they also have their finks and slinking lewers (too officious mouthes, fuch as fome in this businesse of Greenland, beyond all names of impudence against his Maiefire, and his Leege people, as others eliewhere have demeaned themfelues) whofe lothlom 20 neffe is not to be cast as an aspersion to that industrious and illustrious Nation. Every Body hat h its excrements, every great House its Vault or Iakes, every Citie some Port exquiline and dunghils, enery Campe the baggage; the World it felfe a Hell : and so hath every Nation the retriments, soumme, dregs, rascalitie, intempered, diftempered spirits, which not fearing God nor reverencing Man, spare not to spue out that to the dishonor of both, which saving the honor of both can scarsly be related after them. A difference is to be made of relation and personall faults. of which we have faid enough in the East India quarrels, twixt ours and the Dutch.

A Letter of IOHN CHAMBERS to W. HELEY. Bel-found Iune 16. 1619.

Oning and approved good friend, Master William Heley, &c. I am fore's to write in teares onto you for the loffe of our Men, by the most uncouth accident that ever bejell unto poore men. The thirteenth of lune last we were put ashore in the Ice Bay, our Shallops being not about a foone as wee Terrible Dil- beard of it, we made what hafte we could, and haled our shallops upon the Ice, and went abourd our ship. beard of it, we made what hafte we could, and hated our foodings upon the let, and went about our flow, and have the means on the local term of the could not get from and, a maine peace of the Cliffelding, the fear falleft fight that ever I belock being then about, expelling nothing wife has death, with all the refl that were in her: But God of his great merce and providence delinered up, that were not then appointed to dp., that were past all hope of the; for the let fill for high and for much, that it corried may no free. Mall, from our manner. Malf, from one was bouldfree. and first his at a covers that the heaved a piece of Ordinance sucr-board from under one buff. Decke, how, me were board among fill the lates. the Ice in all the fea, and get I thanke the Lord I was never burt with a piece of Ice, although it pleased code they were fooded and killed fields were the most cours who as piece of cee, autosomy to placifed God liby were fooded and killed fields were Tought course found to pres of for you. The Captaine bill me write you pass for you, The Captaine bill me write you pass for a five into the Heler, whoth I way you fare me and it be possible: I have write the particular of our want; in my Brother Sheewim Letter, which I pay you far you be a measure to further nee in. Thus ceasing any further to trouble you, I commit you unto the Lord, unto whom I pray to blesse and profper you in this your present Voyage, wish all the rest of your dayes.

> The men that are killed are thefe : My Mate Money, Nicholas Greene and Allin the Butcher. There be many more hurt which I hope will recouer it by the helpe of God and the meanes of a good Surgeon.

Ouing friend Master Heley, I kindely falute you, &c. Tour Letter I received the fifth of this tre-Jent: whereves I onderstand of the backwarduesse of your Ooyage, the which I am harstly sorre for but you must be content, seeing it is the will of God it shall be so, and that other harbours take neighbours fare with you : our best hopes of our Voyage was open you, for of our selves we doe little, in regard we are much troubled with Ice, and have bin fo this ten dayes, which bath made us hale ashoare like or seaven 60 times for it : we have had the windes at North-east, and East North-east, and at North-west, which now keepes in the leo: we have killed ten Whales, whereof eight are made into Oyle, which hath made one hundred and eleanen Tuns & a balfe the other two were killed the fourth of this prefent, being very large fift,

not doubting but they will make fixe and thirtie or fortie turnes : we have the bundred tunnes abourd. the not constructing.

The Master Bathet Taketh in, in regard Master Buthes bippe is not fitted up, we final make ber forerest Master Bathet Taketh in, in regard Master Buthes bippe is not sitted up, we shall make ber foreMaster Grane agains and all things offe for this Voyage. The fourth of this present, George Winelden. came from Horne-found, where they have killed foure W bates, they have hin much troubled with windes Easterly also much Ice, there is so much Ice off of Point Looke out, that George could not get about. Later 19, saye must acc, covere 19 must access 19 ye unit Loune out, year very general are get about, .
This lee but p mis 19 may Duke of Hull into Horne-lound, his lips here must be must be the chair the part of the same about of 10, his name is Medicale; whom the Captaine dash detains, bit Upage is viherebout in ma doord of 10, his name is Medicale; whom the Captaine dash detains, bit Upage is vitrij sant throune, for he bush loft one finallep must fixe men, and another flallep broken with the lee, his tery mettorsome, you continue the statement and you can, and more try and you can the test let, his there is not being all bridge, but Stemme breds, any clofe to the Vicolange, all George and meete with the Filening, George is the state who bundred tone, the which be thinke is call any with let, for the let did beate ber very fore. I understand by M. Catchers Letter, that there is cleanen faile of Flemmines and Danes about them, I doubt not but we hall call them to account of how many tunnes of Oyle they bane made, at they did call vs the last Voyage to account : my lone is such unto them, that I protest I could wish made, at they and can write easy wonger to account: my tome 11 picto with them, that is present towns with the which all my bears that we might got and fee them, and to fleenth polit blooks it the rything of one wifemer wrongs. All o' winders bear by Kobert Koxe, that A irian of Flinking is one of them. I bould be vemer wrongs. All o' winders bear by Kobert Koxe, that A irian of Flinking is one of them. I bould be veoner virong. Aipo : omariseon of Rovell Rose, tone A trian of running et one of reem. Alonald be vi77 glad to fee him, that I might believe the account with him. The Captains willed meets write onto you
concerning the Rulleboufe, that if you cannot fet it op, that then you foodld make an English house of it, and to place the post of a Deales length, and to be three Deales in length, and so much in breadth. and so to cover it with Deales the next yeare, and so be thinketh that it will make two frames : also bee 20 could will that you would remove the Coppers more up into the Bay. I pray you commend me to my lowing friend Master Sherwine, Master Wilkinson, Master Henderson and Michael Greene; also my loue prema creater Sickwing, crapper ventation, example, restricted som unternet directicajo my ione remembred wire pour felfe, I take my leave, boyang up findle pe sua at the Fore-land are it be long: till when, fray God to bleffe you and profer you in all your proceedings. A Letter of I. CAT efter to Master Helet fom Faire-hauen. Laus Des, this feuenteenth of Tune 1620.

Oning Brother, with my heft loude I falsace out, millishy was better them we at this time, to have good litter of whole's topsake for you and out a Fryage, for we listed level hiddle flore of whole, but have killed some as yet, In the Flemith barbons there is three Flemith gibeat jimpons, whereof is one Statestman of Farre, who have fet as See eighteen healthy with three Headwise in mention fielding; and have having most forthe Keye of Commarked lines, who have fet on Shi founces the lines with three Headwise in cases (hallow the Keye of Commarked lines, who have fet on Shi founces the lines with three Headwise the Commarked lines, who have fet on Shi founces the lines with three Headwise the Commarked lines whole, and found tome Whate of the List years tilling. I in currie (tailog : the Hollanders bane killed one Whale; and from the order of the last years killing. It thought good to fend to you the fource, becauft we hope you have good for red breaker, that you may for you to you which for you for you not have you do for you to you, which for you for you man, for we can great about, but our hope is, if that you are not you for you to have been and a 20 years. For me false, not for Countries to which time, it may folded for the three weins as thank, and me wither false, for their wee house him one and fifther men, which is to kittle at you know, therefore if you can figure or the your folded for you will fland to imped feed if your Fonge comments in, there is to the Northward good fitter of frie which putter by in good feed if your Fonge comments in, there is to the Northward good fitter of frie which putter by in good ender if your Fonge comments in the Northward good fitter of frie which putter by in good ender if you have have no had not you have the your had not you had you had you had you had not you had come from Denmarke to one holour, but any ear one come; prop you commend vis of Majer Wil-kinton, Maier Greene, Maßer Hedlum, Maßer Cleyborne, Maier Alpho, and all the refi year good friends. Humfrey Moore is very ficke, fo that we shall want a Harponiere. I know not what to write more to you, for with griefe I write thu. Thus kindely taking my leane, befeething God to bleffe vs , and fend vs a good Voyage, with a merry meeting, 1 reft

Your louing brother to vie IOHN CATCHER.

A Letter of ROBERT SALMON from Sir THOMAS SMITH'S Bay, Inly 6. 1621,

Oning friend Master Heley, with my lone I falute you, &c. These are to certific you, that upon the affreenth of the last, we arrived at Sir Thomas Smiths unfortunate Bay: fuce which time we have killed fixe Woales, which are almost reduced into Oyle, being some seventie tunnes or somewhat more; fo within a day or two we may gee fleepe, for I feare we have our portion of Whales in this place : wee have not feene a Whale this forreteeme dayes, and faire weather is as fearfe as the Whales for ten daies together nothing but blow, sometime Southerly and sometime Northwely : I doe verily persuade my selfe that 736

God is smeth displeased for the blood which was less in this place, and I fears a perpetuall carefe still to remains yet; God I know is all sufficient, and may if is please him, fend a Congge in this place. Newes from Faire-hauen I can write you none, for as yet we have not beard from him the reason thereof I cannot concerne; I feare his Shallop is miscarried, for certainely else we should have beard from home of a consecutive section of the sect angle. I am in good boys that you have done forme good upon the Whale, we destine to my your little good upon the many faces of the property of the whole of the property of the which I defire may be. Other names I have man permit payone former arms or some former and in your proceedings in this your Poyage, I take my leave: 10

CHAP.8: Peter Goodlard drowned. Difference of Whales.

Mafter CATCHERS Letter the nine and twentieth of June, 1623.

Rether Heley, with my best love I falute you, withing your health with a professou Voyage, che Since our departure, we have bad much foule meabler and troubled with lee before we could get into harhow and after we came into barbour, we never let fall anchor, by reason of the Ice, till the fixteenth of this wonth, in which time we killed fixe Whales at the Fore-land, which made but eighteene Tunt and a halfer to and fince we have killed fixe Whales more, which I bope will make in all upwards of eightie Tunnes. We have fit nine Shallops verie well, and I thanke God not one of our Men faileth, same one that was shot acham fit mer Shalipp verte well, and I hampe God mer one of an Men faith, faire one that was lost ac-cidentally wish a Muster. I hope from of the Shalippen hambory will apply our meant; of there is any which I face there will a sure harbour, mean fay lith, is supplied to make a Frage, by reason that the Flammings special hand law of which play Godwies than flatger from ver. For Burer basters, I deally and han that gray he he have to play Letter, for you of the proceedings; has Maliter Shepving wir, that there is had been mind to the control of the state of the control of the Missians which the En-thern Flammings mendefulfier to fifth the whole the deal and a faithful would got for the North lith our Flammings mendefulfier to fifth. Cape; but I thinke they are in Greene-harbour, or gone to the Eastward; which if they be in Greene-harbour, our Shallop going to Bel-found hold touch there to fee, and so certifie the Captains, and know his will what be would have done in it : I hold it not fit that they fould harbour there. There are no Danes in the Countrie as yet, &c.

Captaine WILLIAM GOODEARD'S Letter : Bell-found this eight of July, 1623.

this eight of Iuly, 1623.

Long friend Mafter Heley, I kinder false year, willing bath to you with the reft of your companies.

Long friend Mafter Heley, I kinder false year, willing bath to you with the reft of your companies.

Long friend the Long false year good increive for your filling to the Long false year good in your false year.

Joint false false for the Sel-toung three and invest Whater, and left mains were by from broken, year I bage.

Joint false for the Sel-toung three and invest Whater, and left mains were by from broken, year for board our Ship, and make account fair to manner that you will fill sure bound. Our Whater berry prose write were done for hip, and make account fair to manner the world false, which makes be done for you will fill sure board. Our Whater berry prose write man from the Bore-land, at which impossing had killed fifteensy Whater verie famile, and, we veries doubtful of Young there is food famile for the west to be formed, in which we fall all and false, to leave for them it berry by accepting. The force and translates for law, there was killed at Faire-humer, beauty that, which you very figulity people, by their all the house killed fifteensy to the fair to the translate more thanged and in series many, beauty there, which they proved your fair for the world from a fower of thous. He manner to the translate your fair for the world for the world from the Estate, your was and my independent out to be remained from them, they bear the was a fair for the world for the wo

anie loffe, I thinke, went fo neere my beart dec.

Many other Letters I could have added, but doubt I have already wearied you with this vncouth Coaft, whereto our English Neptunes are now to wonted, that there they have found not onely Venison but Pernassus and Helicon; and have melced a Musan Fountain out of the Greenland Snowes and Icie Rockes. Whole Elaborate Poems haue I feene of Mafter Heley, as also of Iames Presson, there composed : but we have harsher Discouries in hand, to which wee are now shipping you. This I thought good at our parting to advertise, thee, that Master Heley Cold and beate hath affirmed to me touching the divertitie of weather in Greeneland; that one day, it bath beene fo ftrangely waitmain minime to the concentrative in executive to version in the read and in one verse or trenger varieties that one and it is more verse or trenger varieties to delete the five a fails: another and abile.

CHAP, IX.

The late changes and manifold alterations in Russia fince IVAN VASI-LOWICH to this prefent, gathered one of many Letters and Obser-nations of English Embassadors and other Trauellers in those parts.

Of the reigne of IVAN, PHEODORE his fonne; and of Boris.

Gods mercy w England whiles warres haue infefted the fof the Eader, There prefent thee not what I would of Ruffien affaires, but what I could be Englishmen vader the government of his Maieflie, have enjoyed fach a Sunfine or peace, that our Summers day to many hath beene tedious; they have loathed their Mama, and longed for I know not what Egyptian field pots. For what elle are Warres but past set our the fire of Anger (how often of Furie, yea of Hell, the Furies or Deuris blowing the coales) and boyling mans fight whole 30

Families, Villages, Townes, Cities, Shires, Pronnees, not onely hurried thereby in confisions of State, harried and enflamed with combiffions of goods and goodnesse, but the skill of May Women, and Children, but thered and agit were boyled beyond the manifold shapes of Death, vnto the bones, into the Vapors, Frosh, Scumme, Chaos, nothing and leffe then nothing of Hovnto the bones, into the Vapors, Froth, Scumme, Chaos, bothing and leffe then nothing of Humanite! Such is the inhumanite; the immanite; the finantite of Warres! And flush Warres have made imprefinos into all our Neighbour Countries! (whiles were fit vnder the flushow of Beasi Paofics) have lightened on Tayles and balled the Service; have rebuilded in Barboris, have trome the edites there, and run the Griph Mape'in Edity; hind fishes or Fraces with earthquakes; have rayled Brigian fromes; Bibenses broyfes, Hungaries golfs, Germanies whitelewinds (thefe feller-funded in Ginill, that is, the vielder, vincillation affacters and worth of Warres) that Immention not the inundations and exundations of Filesal; the Spowless and Mifts of Sweder. the Danish Hailes and Frofts. But all these and more then all these Tempests, Turnado's , Tuffons have combined in Ruffia, and there made their Hell mouth centre, there pitching the Tents of Defruction, there erecting the Thrones of Defolation.

Peftilence and Famine had gone two yeeres before as direful Heralds, to denounce these dreadfull warres and mutations of State : the Pefulence poffeffing the Northerne parts of the World, and disposfessing it of many many thoulands : the Famine in Ruffia wanting necessaries to cate, necessarily denoured all things, not onely Cats, Mice, and impure Creatures, but mens slesh also, and that in neerest necessitude, Parents renoking to their wombes by vnnaturall passage the dearell pledges of Nature, which hausing even now dyed with hunger, were made prefervatives from like death to those which first had given them life. The Mightier made sale of the Poorer, 50 yea, Fathers and Mothers of their Sonnes and Daughters, and Husbands of their Wives, that price might bee had to buy Corne, which was now beyond all names of what soeuer price cre-

dible. But these things must be further searched.

Bloudineffe is a flipperie foundation of Greatneffe, and the Mercifull' have the promife to finde mers other wisdome (now ever feeming politice) is earthy, [mfuell, drailify; yea, name to the foole-wife Confutors, as appeareth in Parado's working wife; that is, cruelly, to preuent the multiplying I fraction. The greatest of Creatures on Sea and Land, the Elephant and Whale, liue on graffe, weeds, and fimpler diet, not on rapine and flesh or fish-deuonring prey : Thunders and all temperations fformes trouble not the higher aiery Regions, but the lower and those next the bafer earthy dregs, the fediment and finke of the World : nor doth ancient Philosophie rec. 60 kon Comets other then Meteors, or falling Starres to be Starres indeed, but excludes both from the heavenly Sphares. Had Alexander followed this rule, and fought Greatneffe in Goodneffe (like him which is Optimus Maximus, the Great God, the great Good of the World) and in him-

Gife rather then others, in being Mafter of himfelfe then Lord of large Territories; he neither had fighed after the conquests of other Worlds which Feelesophie had created before he had frene the t.nth part of this; nor had dyed by poylon in a forraine Countrie, forced to content himlelfe with possessing, nay, being possessed of a few feet of earth; then had he beene in very deed (now but in Title) GREAT Alexander. Great Goodnesse is the true and good Greatness.

I know not how fit a Preface this may feeme to the enfuing Ruffian Relation; this I am fure. that they which write of Inan Vafilowich, the Great Great Questian, doe lay hearie afperfions on his Father and Grand-father, but on himfelfe supersuperlatines of crueltie (that I mention not other vices) both for Matter and Forme. These things are deliuered particularly in the Hillorits of Alexander Ovagninus. Tilmennus Brederbachius. Paulus Oderbornus. Resoldus Heiden fen and others, in large Tractates written thereof purpolety. His merits of the English might procure a filence of his euils (wee of all men being in regard of respect to our Nation vnworthy to fpeake, that which hee , it those Authours have not been malicious , was worthy to heare) if fo dreadfull effects did not force an Hiltorian (that is, the Register of the execution of Acts of Gods bountie and inflice decreed in the Court of Diurne Proundence) to looke to the diretall Caufe in foregoing funes, that after Ages may heare and feare.

I will touch a few of these which Gwagninus alone relates. His owne brother being accused Al Gragnin An. 1570. by Wirkman, is laid without leave granted to cleare himfelie, to bee put to exqui- diring, Maic. An. 1570. by Wirkmati, is faid without leave granted to cleare nimetite, to bee pur to exquire brother fire cortures first, and after to death; his wife stripped and fer naked to the eyes of all, and onen to the Emperior nic cottures min, and attention unit may also with a rope into the River and drowned. Iohn Pistronich, a man for done to by one on horfe-backe drawne with a rope into the River and drowned. Iohn Pistronich, a man for done to control of principall command accused of treation, prefenting himselfe to him, not admitted to make a death. He

ny purgation, was set in Princely accountrements on a Throne, the Emperour standing bare-hea- addes principal ded before him and bowing to him, but soone after with a knife thrushing him to the heart, the Nobles, here Attendants adding other Furies till his bowels fell out; his body dragged forth, his feruants flaine, three hundred others in his Caille executed, his Boiarens all gathered into one house and blowne vp with poulder; their Wives and Diughters rauished before his face by his followers. blowne vp with pouncer; their wants and Diagnets samme objects as the six of purpolely let to gue them their fatall entertainment. His Chancellor Dubren fis fitting at table 30 with his two Sonnes, were allo youn accufation without aniwere cut in pieces, and the third

fonne quartered aline with foure wheeles, each drawne a diners way by fifteene men. Muessiedom/(cbly, supreme Notarie, displeasing him, his wife was taken from him, and after some weeks detayning was with her hand-maid hanged over her husbands doore, and so continued a fortnight, he being driven to goe in and out by her all that time. Another Notaries wife was rauished and then fent home and hanged ouer her husbands table, whereat he was forced daily to eate. In travelling if he met any woman whose husband he liked not, he caused her to fland with her nakednesse disclosed till all his retinue were passed. Cutting out tongues, cutting off hands and feet of his complaying Subjects, and other discrifted tortures I omit; as also the guarding his father in lawes doores with Beares cy of there, that none might goe in or out, hanging his fer-40 wants at his doores, torturing him for treasure; casting hundreds of men at once into the wa- 700, women

ter ynder the Ice; two thousand seven hundred and seventie thus and by other tortures execu- at one time; ted at Nonogred An. 1 169, besides women, and the poorer persons which Famine forced, did 378 priloners eate the bodies of the slaine, and were after slaine themselves; the Archbishop also let on a Mare at another, with his feet yed vnder the b-lly, and male to play on Bag, pipes thorow the Citiesthe Monks and Virgins floyled and flaine; Theodore Sirconi, the Founder of tweller Monasferies, tortured to flow his of noble blood receiption and the flaine; the flaint his flaint treasure and then flaine: Mazinity his Secretarie, by many dayes renewed tortures dying; hee expected to be treasure and then slaine. Macienty his Secretarie, by many cayes renewed tortures uying; nee supposed to the recreating hindless with letting Beares looks in throngs of people; Ielen Michelentech Wingswest and the throngs of people; Ielen Michelentech Wingswest and the Chancellos, his cares, lips, and other members one after another cut off by piece-meale, fight at only notwithstanding all protestations of his innocency; about two hundred other Nobles at the therime &c. for time variously executed, one his Treature, two other Secretaries; the Treatures wife fet "A Secretaries" on a rope and forcibly dragged to and fro thereon (by that torturing her naked fielh, to learne her curing off his

husbands treasures) whereof soone after shee dyed in a Monasterie, into which shee was thrust. All these are but 2 little of that which Granmus alone hath written. A taste and touch is too which the Emmuch of bloud, and in such immanities. He is also faid in a famine to have gathered many people, perour conin expectation of almes, on a bridge, and there guarded the bridge being cut to drowne them, as firming to be the readiest way for cheapnesse of corne. But I lothe such crudities. His last crueltie was on him-done purposethe readieft way for cheapnesse of corne. But I lothe such cruatites. His last cruetic was on num-felfe, dying with griefe, as was thought, for the death of his eldest some Issue, whom fally ac-there inflandy cufed he struck with a starfe wrought with Iron, whereof he dyed in few dayes after. Hee was a to eate whit man accuted for communicating in disposition with his father, and as a joyfull Spectator of his he had ut off.

But if any delight to reade the terrible and bloudie Acts of Inan Basilowich, he may glut, if not drowne himtelte in bloud, in that Hiftorie which Paul Oderborne hath written of his life , and both there and in others take view of other his vniuit Acts. I will not depose for their truth, though I cannot disproue it : adverlaries perhaps make the worst. For my selfe I list not to take

finkes against him, and would speake in his defence, if I found not an universall conspiracy of all Historie and Reports against him, I honour his other good parts, his wit, his learning (perhaps better then almost any other Ruffe in his time) his exemplarie seuericy on vniust Magistrates his Marciall skill, industrie, fortune, wherby he subdued the Kingdoms of Cafan and Aftreans which also the Turke sending from Constantinople an Armie of three hundred thousand to disposses him of, A. 1 609. betides his hopes and helpes from the Tartars, few returned to tell their difafters, and the destructions of their fellower) besides what hee got in Siberia and from the Pole, Sweden Prussian, extending his Conquests East, West, North, and South: yea, his memorie is sauourie fill to the Rustians, which (either of their feruile disposition needing such a bridle and whips or for his long and prosperous reigne, or out of distaste of later tragedies) hold him in little lesserputation (as fome haue out of their experience instructed me) then a Saint,

His love to our Nation is magnified by our Countrimen with all thankfulnesse, whose gainer there begun by him, have made them also in some fort seeme to turne Ruffe (in I know what loure or feares, as if they were still that up in Ruffia, & to conceale what fourer they know of Ruftien or teares, as it tiery were than you of mall torture with great paines of body, vexation of minds, and triall of potent interceding friends to get but neglect and filence from lone, yea almost contempt and scorne. They alledge their thankfulnesse for benefits received from that Nation, and their feare of the Duteb, readie to take advantage thereof, and by calumniations from hence to interuert their Trade. This for love to my Nation I have inferted against any Cavillers of our Ruffe Merchants : though I must needs professe that I distaste, and almost detest that (call it 20 what you will) of Merchants to neglect Gods glorie in his prouidence, and the Worlds inftru-Gion from their knowledge; who while they will conceale the Raffians Faults, will tell nothing of their Facts; and whiles they will be filent in mysteries of State, will reueale nothing of the histories of Fact, and that in so perplexed, diversified chances and changes as seldome the World hath in fo fhort a space seene on one Scene. Whiles therefore they which seeme to know moft, will in the fe Ruffian Relations helpe me little or nothing (except to labour and fruftrated hopes) I haue (besides much conference with eye witnesses) made bold with others in such books as in diners languages I haue read, and in such Letters and written Tractates as I could procure of my friends, or found with Mafter Haklayt (as in other parts of our storie) not seeking any whit to differace that Nation or their Princes, but onely defiring that truth of things done may bee 30 knowne, and such memorable alterations may not passe as a dreame, or bee buried with the Doers. Sir Ierome Horfey shall leade you from Inans Graue to Pheodores Coronation.

* Or Theoder Sir lerom HerThe most Colemne and magnificent coronation of PHEODOR IVANOVVICH, Emperour of Russia, &c. the tenth of lune, in the yeare 1584. (cene and observed by Master I EROM HORSEY Gen. tleman, and servant to ber Maiestie.

The death of

Lord Review. dopted as the

Hen the old Emperor Inan Vafilowich died (being about the eighteenth of April, 1384. after our computation) in the Citie of Mafes, having raigned fiftie four eyears, there 254, April 18. was some tumult & vprore among some of the Nobilitie and Comminaltie, which notwith tanding was quickly pacified. Immediately the fame night, the Prince Boris Pheodorowich Godonowa, Kn: 2 Iuon Pheodorowich, Mesthis Slafiky, Knez Iuan Petrowich Susky, Mekita Romanowich and Bodan I aconlewich Belikon, being all noble men, and chiefest in the Emperours Will, especially the Lord Boris, whom he adopted as his third fon, and was brother to the Empresse, who was a man very well liked of all estates, as no lesse worthy for his valour and wisedome : all these were appointed to dispose, and settle his Sonne Pheodor Inanomich, having one sworne another, and all the Nobilitie and Officers whosoeuer. In the morning the dead Emperour was laid into the Church of Michael the Archangell, into a hewen Sepulchte, very richly decked with Veitures fit 50 for such a purpose: and present Proclamation was made (Emperour Pheodor Inanomich of all Rusfa, &c.) Throughout all the Citie of Mofco was great watch and ward, with Souldiors, and Cunners, good orders established, and Officers placed to subdue the tumulters, and maintaine quietnesse : to see what speede and policie was in this case vsed, was a thing worth the beholding. This being done in Mosco, great men of birth and accompt were also presently sent to the bordering Townes, as Smolenske, Vobske, Kafan, Nonoggrad, &c. with fresh garrison, and the old fent Vp. As upon the fourth of May a Parliament was held, wherein were assembled the Metropolitane, Archbishops, Bishops, Priors, and chiefe Clergie men, and all the Nobility whatsoeuer: where many matters were determined not pertinent to my purpose, yet all tanded to a new reformation in the government: but especially the terme, and time was agreed upon for the 60 folemnizing of the new Emperours coronation. In the meane time the Empresse, wife to the old Emperour, was with her childe the Emperours son, Charlewich Demetrie Iuanowich, of one yeares age or there abouts, fent with her Father Pheodor Pheodorowich Nagay, and that kindred, being

fine brothers, to a towne called Ouglets, which was given vnto her, and the yong Prince her fonne, with all the Lands belonging to it in the fhire, with officers of all forts appointed, having The day of some, with all the Land october of the land, with allowance of apparell, iewels, diet, horse, &c., in ample manner belonging to the estate of a Prin- Pheader his coeffe. The time of mourning after their vieleing expired, called Sorachyn, or fortie orderly dayes, ronations the day of the folemnizing of this coronation, with great preparations, was come, being voon the tenth day of lune, 1584. and that day then Sunday, he being of the age of twenty fue years: at which time, Mafter lerom Horsey was orderly fent for, and placed in a fit roome to fee all the folemnity. The Emperour comming out of his Pallace, there went before him, the Metropolirane, Archbishops, Bishops, and chiefest Monkes, and Clergie men, with very rich Coapes and Prietts garments vpon them, carrying pictures of our Lady, &c. with the Emperors Angell han-

ners, cenfers, and many other fuch ceremonious things, linging all the way. The Emperour with his pobility in order entred the Church named Blaneshina or Blassednes, where prayers and service were vied, according to the manner of their Church: that done, they went thence to the Church called Michael the Archangell, and there also vied the like prayers, and feruice : and from thence to our Lady Church, Prechifta, being their Cathedrall Church. In the middeft thereof was a thare of majettie placed, wherein his Ancestors vsed to sit at such extraordinary times: his roabes were then changed, and most rich and vanaluable garments put on him ; being placed in this Princely feate, his nobilitiestanding round about them in their degrees, his imperiall Crowne was set vpon his head by the Metropolitane, his Scepter globe in his right hand, his fword of Iustice in his 30 left of great riches: his fix crow as alto, by which he holdeth his Kingdomes were fet before him. and the Lor i Boris Pheodorowich was placed at his right hand; then the Metropolitan read open-

ly abooke of a small volume, with exhortacions to the Emp-rour to minister true lustice, to inioy with tranquility the Crowne of his ancestours, which God had given him, and ysed these

Through the will of the almightse and without beginning God, which was before this world, whom we glorifie in the Trinitie, one onely God, the Father, the Sonne, and the boly Ghoft, maker of all thener, worker of all in all eury where suisiler of all things, by which will, and working, he both lines h, and gineth life to man: that our ovely God which enspire th enerse one of us his onely children with his word so discerne God through our Lord lefus Christ, and the holy quickning spirit of life, now in these perillous times estabijordus toke pethe right Scepter, and suffer us to raigne of our selines to the good profit of the land, to the lubining of the people, together with the enemies, and the maintenance of vertue. And so the Metropolitan bleffed and laid his croft vpon him. After this, he was taken out of his chaire of Maiefty, having upon him an upper reabeadorned with precious stones of all forts, orient pearles of great quantity, but alwayes augmented in riches: it was in weight two hundred pounds, the traine and parts thereof borne vp by ix Dukes, his chiefe imperiall Crowne vpon his head very precious: his staffe imperiall in his right hand of an Vnicornes horne of three foote and ta halfe in length befet with rich ftones, bought of Merchants of Authorge by the old Emperour, in Anna 1581, and coft him 7000. Markes sterling. This Iewel Master Horsey kept sometimes, before the Emperour had it. His Scepter globe was carried before him by the Prince Boris Pheodorowich: his ac rich cap befet with rich stones and pearles, was carried before him by a Duke : his fixe Crownes alfo were carried by Demetrius Inanowich Godonoua, the Emperours vnckle, Mehita Romanowich th- Emperors vnckle, Stephen Vafilimich, Gregorie Vafilimich, Iuan Vafilimich brothers of the bloud revall. Thus at last the Emperour came to the great Churchdoore, and the people cried, God faue our Emperour Pheodor Inanomeb of all Ruffia. His Herse was there ready most richly adorned, with a couering of imbrodered pearle and precious flones, faddle, and all furniture agreeable to it, reported to be worth 300000 markes fterling.

There was a bridge made of a hundred & fiftie fadomes in length, three manner of waies, three foot about ground, and two fadome broad, for him to goe from one Church to the other with his Princes and nobles from the presse of the people, which were in number infinite, and some at that So time prefled to death with the throng. As the Emperor returned out of the Churches, they were fored vader foot with cloth of Gold, the porches of the Churches with red Veluet, the Bridges with Scarlet, & stammelled cloth from one Church to another : and as soone as the Emperor was paffed by, the cloth of gold, veluet and scarlet was cut, & taken of those that could come by it, euery man defirous to haue a piece, to referue it for a monument : filuer and gold coine, then minted of purpose was cast among the people in great quantitie. The Lord Boris Pheodorowich was fumptuoufly and richly attired, with his garments decked with great orient pearle, befet with all forts of precious stones. In like rich manner were apparelled all the tamily of the Godonouaes in their degrees, with the rest of the Princes and nobilitie, whereof one named Knez Iuan Michalowich Glaska, whose roade, horse and furniture, was in register found worth one hundred thou-60 fand markes iterling, being of great antiquitie. The Embresse being in her Pallace, was placed in her chaire of Maietty also before a great open window: most precious, and rich were her robes. and shining to behold, with rich stones, and orient Pearles belet, her crowne was placed upon her head, accompanied with her Princesses, and Ladies of estate : then cried out the people, God preserve our noble Empresse Irena. After all this, the Emperour came into the Parliament

Ppp 2

house, which was richly decked : there he was placed in his royall feat adorned as before : his five crownes were fet before him vpon a Table; the Bafon and Ewreroyall of gold held by his knight of gard, with his men standing two on each side in white apparell of cloth of uluer, called Kindry with scepters and battle-axes of gold in their hands, the Princes and nobility were all placed according to their degrees all in their rich roabes.

The Emperour after a short Oration, permitted euery man in order to kiffe his hand ; which being done, he remoued to a princely feate prepared for him at the table : where he was ferued by his Nobles in very princely order. The three out roomes being very great and large were belet with plate of gold and filter round, from the ground vp to the vauts one vpon the other : among which plate were many barrels of filter and gold: this folemnitie and triumph lasted a whole Io weeke, wherein many royall pastimes were shewed and vsed: after which, the chiefest men of the Nobilitie were elected to their places of office and dignitie, as the Prince Boris Pheodoromich was made chiefe Countellour to the Emperour, Master of the Horse, had the charge of his person. Lieutenant of the Empire, and warlike engins, Gouernor or Lieutenant of the Empire of Caran and Astracan, and others: to this dignitie were by Parliament, and gift of the Emperour given him many reuenewes and rich lands, as there was given him, and his for ever to inherite a Prouince called Vaga, of three hundred English miles in length, and two hundred and fiftie in bredth. with many Townes and great Villages populous and wealthy: his yearely Reuenew out of that Prouince, is fine and thirtie thouf and Markes sterling, being not the fifth part of his yeare Reuenue. Further, he and his house be of such authoritie and power, that in forty dayes warning they 20 are able to bring into the field a hundred thousand Souldiours well furnished.

The conclusion of the Emperours Coronation was a peale of Ordnance, called a Peale royall. two miles without the Citie, being a hundred and seventy great pieces of brasse of all forts, as faire as any can be made; these pieces were all discharged with shot against bulwarkes made of purpose; twentie thousand hargubusers standing in eight ranks two miles in length, apparelled all in yeluet.coloured filke and stammels, discharged their shot also twise ouer in good order; and so the Emperour accompanied with all his Princes and Nobles, at the leaft fiftie thousand horse, departed through the Citie to his palace. This royall coronation would aske much time, and many leaves of paper to be described particularly as it was performed: it shall suffice, to vnderstand that the like magnificence was never feene in Ruffia.

The Coronation, and other triumphs ended, all the Nobilitie, officers, and Merchants, according to an accustomed order euery one in his place and degree, breught rich presents vinto the Empe-

rour, withing him long life, and joy in his kingdome.

The same time also Master lerom Horsey aforesaid, remaining as seruant in Russia for the Queens most excellent Maiestie, was called for to the Emperour, as he fate in his Imperial feat, and thealso a famous Merchant of Netherland being newly come to Mosco (who gaue him selfe out to be the King of Spaines Subject) called John de Wale, was in like fort called for. Some of the Nobilitie would haue preferred this fubiect of the Spaniard before Mafter Horfer feruant to the Queen of England, whereunto Master Horsey would in no case agree, saying, hee would have his legges cut off by the knees, before hee would veelde to such an indignitie offered to his Soueraigne the Queenes Maieftie of England, to bring the Emperour a present, in course after the King of Spaines 40 Subject, or any other what souer. The Emperour, and the Prince Boris Pheodorowich percening the controversie, sent the Lord Treasurer Peter Inanowich Galaum, and Uasili Shalkan, both of the Counfell to them, who delivered the Emperour backe Mafter Horfeys speech : whereupon he was first in order (as good reason) admitted and presented the Emperour in the behalfe of the Eng-Life Merchants trading thither, a prefent, withing him ioy, and long to raigne in tranquilitie, and fo kiffed the Emperours hand, he accepting the prefent with good liking, and auouching, that for his Sifters sake, Queene Elizabeth of England, he would be a gracious Lord to her Merchants, in as ample manner as ever his Father had beene : and being difmiffed, he had the fame day fent him, seauentie dishes of fundry kinds of meats, with three carts laden with al forts of drinks very bountifully. After him was the foresaid subiect of the Spanish King admitted with his present. 50 whom the Emperor willed to be no leffe faithfull & feruiceable vnto him, then the Queen of England fubicets were & had been, & then the King of Spains fubicets shold receive favor accordingly.

All these things thus in order performed, prayles were sung in all the Churches. The Emperour and Empresse very demoutly reforted on foote to many principal Churches in the Citie, and Youn Trinitie Sunday betooke themselves to a progresse in order of procession, to a famous Monafterie called Sergine and the Trinitie, fixtie miles diffant from the Citie of Mifco, accompanied with a huge armie of Noblemen, Gentlemen, and others, mounted ypon goodly Horles with furniture accordingly,

The Empresse of denotion tooke this journey on foote all the way, accompanyed with her Princeffes and Ladies, no imall number : her Guard and Gunners were in number twentie thou- 60 fand : her chiefe Counfellor or Attendant, was a noble man of the bloud Royall her Vicle of great authoritie, called Demetri Inanowich Godonoua. All this progresse ended, both the Emperour and Empresse returned to Mosco : shortly after, the Emperour by the direction of the Prince

Roris Pheodorowich, fent a power into the Land of Siberia, where all the rich Sables and Furres are gotten. This power conquered in one yeere and a halfe one thousand miles. In the performance of this warre, there was taken priloner the Emperour of the Country, called Chare Si- Chare Sibrish beriky, and with him many other Dukes and Noble men, which were brought to Mofeo, with a Prince of Sibeguard of Souldiers and Gunners, who were received into the Citie in very honourable manner, ris then prifoand doe there remaine to this day.

Hereupon the corrupt Officers, Judges, Judices, Captaines and Lieutenants through the whole Kingdome were remoused, and more honest men substituted in their places, with expresse commandement, under seuere punishment to surcease their old bribing and extortion which they had yied in the old Emperours time, and now to execute true inflice without respect of persons: and to the end that this might be the better done, their lands and yearly flipends were augmenred : the great taskes, customes, and duties, which were before laid vpon the people in the old Emperours time, were now abated, and some wholly remitted, and no punishments commanded to be vied, without fufficient and due proofe, although the crime were eapitall, deserving death : many Dukes and Noble men of great Houfes, that were vader dipleafure . and imprifoned twentie yeeres by the old Emperour , were now fet at libertie and reftored to their lands ; all prisoners were let at libertie, and their trespasses forginen. In summe, a great alteration vniuerfally in the gouernment followed, and yet all was done quietly, civilly, peaceably, without trouble to the Prince, or offence to the Subject : and this bred great affurance and hos nour to the Kingdome, and all was accomplished by the wisedome especially of Irenia the

Empreffe. These things being reported and carried to the eares of the Kings and Princes that were horderers upon Ruffis, they grew so fearfull and terrible to them, that the Monarch of all the Serthians called the Crim Tartar or great Can himselfe, named Sophes Keri Alli, came out of Sophes Keri Alli his owne Countrie to the Emperour of Ruffia, accompanies with a great number of his Nobi- King of the litie well horfed, although to them that were Christians they feemed rule, yet they were Crims arrivall perionable men, and valiant : their comming was gratefull to the Emperour, and their enter. at Mosco. tainment was honourable : the Tarter Prince having brought with him his wives also, receiued of the Ruffe Emperour entertainment, and Princely welcome according to their estates.

Not long after, one thousand and two hundred Polish Gentlemen, valiant Souldiers, and 30 proper men came to Mosco, offering their service to the Emperour, who were all entertayned : and in like fort many Chirkeffes, and people of other Nations came and offered fernice. And as foone as the report of this new created Emperour was fored ouer other Kingdomes of Europe, there were fent to him fundrie Ambassadors, to wish him joy and prosperitie in his Kingdome : thither came Ambaffadors from the Turke, from the Persian, the Bogharian, the Crim , the Georgian, and many other Tartar Princes. There came also Ambassadors from the Emperour of Almaine, the Pole, the Swethen, the Dane, &c. And fince his Coronation no enemie of his hath prevailed in his attempts.

It fell out not long after, that the Emperour was defirous to fend a meffage to the most ex- The new Emcellent Queene of England, for which feruice he thought no man fitter then Mafter Ierome Horpetor Phendre Grafuppoing that one of the Queenes owne men and subjects would bee the more acceptable to Lucies and her. The fumme of which meffage was, That the Emperor defired a continuance of that league, Requests to friendship, amitie and intercourse of trassque which was betweene his Father and the Queenes the Queene. Maiestie and her Subiects, with other private affaires besides, which are not to bee made

Master Horsey having received the Letters and Requests of the Emperour, provided for his Master Horsey iourney ouer Land, and departed from Mofco the fift day of September, thence vnto Oiner, to voyage from Torstook, to great Nemograd, to Vobike, and thence to Nybonse in Linema, to Wenden, and so to Masse to Eng.
Riga: (where he was beset, and brought forthwith before a Cardinall, called Ragenil, but yet land our linds

fuffered to paffe in the end :) From thence to Mito, to Golden, and Liben in Curland, to Memel, to Kening shargh in Prussia, to Elbing, to Dantzike, to Seetine in Pemerland, to Rostock, to Lubeck to Hamborough, to Breme, to Emden, and by Sea to London. Being arrived at her Maielties Royal Court, and having delivered the Emperours Letters with good favour, and gracious acceptance, he was forthwith againe commanded to repasse into Russia, with other Letters from her Maie-Rie to the Emperour, and Prince Boris Pheoderowich, answering the Emperous Letters, and withall requesting the favour and friendship, which his Pather had yeelded to the English Merchants : and hereunto was he earnestly also solicited by the Merchanes of London themselves of that Companie, to deale in their behalfe. Being thus dispatched from Landon by Sea, he arrived in Mosco, the twentieth of Aprill, 1586, and was very honourably welcommed, and for the 6c Merchants behoofe, obtayned all his Requests, being therein specially fauoured by the Noble Prince Boris Pheodorowich , who alwayes affected Mafter Horsey with speciall liking. And hauing obtayined primitedges for the Merchants, he was recommended from the Emperouragaine.

to the Queene of England his Miltreffe , by whom the Prince Boris , in token of his honourable and good op mon of the Queenes Marellie, fent her Highnessea Royall present of Sables.

Luzarns, cloth of Gold and other rich things. So that the Companie of English Merchants, next to their thankfulnelle to her Maiestie, are to account Master Horseys paines their special benefit, who obtayned for them those priviledges, which in twentie yeeres before would not

The manner of Master Horsey, last dispatch from the Emperour, because it was very honorable, I thought good to record. Hee was freely allowed post-horses for him and his servants, wictuals and all other necessaries for his long journey: at every Towne that he came vnto from Mosco to Vologda, which is by Land five hundred miles, he received the like free and bountifull allowances, at the Emperours charge. New victuall and proussion were given him vpon the full allowances, at the Emperous crarge. New victors are promoted to a good mine your tree Ruser Dword at energy Towne by the Kings Officers, being one thousand miles in length. When I to he came to the new Caffle, called Archangel, he was received of the Duke Knez Valid Andrewich I fuenegorodiky by the Emperours Commission into the Castle, Gunners being set in rankes after their vie, where he was sumptuously feasted: from thence he was disparched with bounafter their vie, which was a state of the Dukes Boat, with one hundred men to rowe him, and one hundred Gunners in other Boats to conduct him, with a Gentleman Captaine of the Gunners. hundred Countries in once Deas .

Comming to the Road where the English, Dutch, and French thips rode, the Gunners discharged, and the shippes shot in like manner fortie fixe pieces of their Ordnance, and so hee was brought to his lodging at the English house vpon Rose Iland.

And, that which was the full and complete conclusion of the favour of the Emperour and Bo-And that which was the tun and complete continuous to the radial of the Emperour and Boris Pheoderowich toward Mafter Horfo, there were the next day fent him for his further prouifion vpon the Sea by a Gentleman and a Captaine, the things following. Sixteene line Oxen, feuentie Sheepe, fix hundred Hens, fine and twentie flitches of Bacon, eightie bushels of Meale, fix hundred loaues of bread, two thousand Egges, ten Geele, two Cranes, two Swannes, fixtie five gallons of Meade, fortie gallons of Aquavita, fixtie gallons of Beere, three young Beares, foure Hawkes, store of Onions and Garleeke, ten fresh Salmons, a wilde Boare,

All these things were brought him downe by a Gentleman of the Emperour, and another of Prince Borss Pheodoronich, and were received in order by John Frese servant to Master Horfez, together with an honourable prefent and reward from the Prince Boils, fent him by Mafter Francis Cherry an English man: which present was a whole very rich piece of cloth of Gold, and

Wan Vasilowich is reported to have had seaven Wives, and of them to have left three children

I dermine, Theodere or Pederder and Demetrine a younging by his last wife, and a Daughter, which was the wife of L. Bons aforefad, whole fifter Phendre I have a first aforefad, life time, who would have caused her divorse for her barrennesse (as he had caused Iuan his cldeft some diversetimes to doe and his refusing it at last, was the occasion of that angry, last. and fatall blow, before mentioned) but being protracted by faire excules for a time, the dinorte of foule and body in the Father preuenced that in the marriage bed of the Sonne. Yet by his Testament he ordained, that if within two yeares she proued not fruitfull, hee should marrie amp-Disorce riged ther. The executers viged this after that terms expired but Germa or Irema, fo wrought with her 40 husband, that their counsels were frustrate: wherein she was affifted by the politicke wisdome of her brother Born, who was now become chiefe Pilot, though not the Mafter in that Ruffian thip; and is faid formerly to haue been no small doer in those cruel designes of Islandis deceased Matter; yet had he cunningly cast the blame on him now dead, and wifely infinuated into the peoples fauour, by mitigating the feueritie of his Decrees. You have read before of his great Revenues and wealth, recorded by eye witnesses. Thuanus faith, that three hundred of the Knazeys and Boistens, whereof the Senate of the Empire consisted, by adulfe of the Executors, had subscribed. Beris made the simpler Emperor beleeue, that it was a conspiracie against him: whereupon they were all committed, ten of which (whom he thought his most dangerous adversaries) were suddainly and primly executed : to the reft, he procured the Emperours pardon and fauour, feeming very 50 forrowfull that this elemency had beene so much foreslowed : and that the hastie execution had preuented his officious indeuors for their deliuerance. And that he might feem ferious, he got their

goods to be reftored to their heires : fo working himfelfe into the good liking of all degrees. But soone after, yong Demetrius the Emperours brother was slaine, as hee was going to Church betwixt two Boiarens, by a mad man (as he feemed) who was thereupon fuddenly flaines but the author which let him on worke, could not be found : whereupon Boris was suspected to Demeritualian affect the fourraigntie. Thuanus elsewhere telleth, that he corrupted those which were about formetell har. Demetrius : and the great Bell being rung as is viviall in cases of fire to bring the people together, Demetring at that noise running forth, some were set in that tumult to kil him, which accordingly was effected, as he was comming downe a Ladder: the rumour whereof, caused the tumultuous 60 people(making no curious fearch for the doers) to kil those of the Family which they met in their furie, to put the fulpition thereof from themselves : which notwithstanding, Born exercised senerer tottures and terrible executions upon them, and as one which harrily executed the fact, burned the fort to expiate the parricide. This place being farre remote from the Court, whi-

C HAP.9. S.1: Pheodore dieth. Empresse a Nun. Boris saith nay oft, but takes. 745

ther he was thought purposely to have fent him, could not admit so open evidence of manifold tellimony; but that it gaue occasion of other Tragedies, by another supposed Demetrins, as shall anon appeare. Meane while, Boris could not escape aspersion of the fact path, and suspicion of like intended to the prefent Prince; and therefore was forced to consure vp his best wits to "Some write worke him into better reputation. He did hereof either take occasion, or make occasion by disthathe canfed ners fires in divers Cities of the Kingdome, the Houles being of wood, and eafily confumed : diversplaces in which loffe (made, as some deliuer by his own incendraries, he seemed much to commiserate, and Assistance in which tone (made, as tome details) red, and then by affected bountie, repaired those ruines out of the publique Treasure; others say, out of his price afterwards out uste purse :) thus, not onely raising so many Phamizes out of those ashes; but making denouring of his owne To fire, become fuell to his magnificence, and raking reputation out of the flames and cinders: thence colt repaired erecting a Thearricall fcene whereon to acte in popular spectacles, his many parts of cire, in-them.

dufty, alacrity, wisedome, power, bounty, and whatsoener might fether his nest in the peoples hearts, thus eatily ftoln and entercained in affection to him, whiles Theodore Lined, which was not long : he dying in the yeare 1598. on twelfe day , having luned thirty fixe yeares, and reigned neere foureteene. His impotency of body and minde, you have read before in part. Thus my affir. D. Flat. meth, that luan Vafilowich his Father faid, he was fitter to ring Bels in Churches, then to gouerne an Empire; aluding therein to his superexteeding denotion and most denout superflict. Death of The on. His death caused a new aspertion on Boris as procured, in some mens conceits (and reports) by

oyion. His dead body was buried with his ancestors, in Saint Michaels Temple in the Castle, and 20 Souldiours were prefently fent to the borders, to prohibite ingreffe or egreffe. Theodores will was read, and therein Gernia (or Irenia) his wife, and the Patriarch, entrufted with the administration of the State. Hereupon a g-nerall State affembly was affembled at Mofor, and their oathes The Empresse giuen to the Empresse. After this the Empresse went into a Nunnery, to passe there the fortie succeedeth. dayes defined to publique forrow: in which time (whether of ther owne or with her brothers accord) making shew of vnspeakable forrow for her deceased Lord, the renounced the world, and Rnsamvic of transferred the Imperiall government vpon the Knazeys and Boiseens, which her Husbandhad forme dives transferred the Imperial government vpon the Knazers and sources, which her instantial mourning for bequeathed to her; that they, according to their wildome, and knaze to their Countrie, might take an Emperous care thereof. This was done by her brothers counfill, to try what the people would doe : who death.

30 were so moued therewith, that they came thronging to the Nunnerie gates, lamentably imploring her care in so perillous a time, whom onely they were bound to serue. And when she bad them goe to the Knessey and Boiseous; they peateffed ag ninftthem, faying, they had fworte to her, and would be ordered by L. Bow, ber brother. Hercupon Boris Pheodorowich goeth out to appeale their tumult, and undertaketh for the fortie dayes of mourning, together with the Kuszers and Boistens to administer the Empire. In which time, the Emprese renounced se- The Oncene cular cares, and professed her selfe a Nunne; changing her name from Germa to Alex. surneth Nan.

The time of mourning being past, the people were called into the Caftle, and the Chancellour

made an Oration, perswading them to sweare-obedience to the Knazers and Boiarens . Which 40 they with out-cryes disclaymed, offering to doe is to the Queene and L. Boris. The Councell fitting to confider hereof, the Chancellor came forth againe, and commanded them to I weare to the Knazeys and Boiarens; the Queene thining mo w become a Nunnie. Whereupon they all na-med Boris her Brother, as one worthy of the State; to whom aboy were readie; to sweare. Hee Borishis willing being prefent, role vp and modeftly excused himselfe; protesting his viswilling stelle and vn wor- vn willing nesse, thindle, and bidding them chief from other more working in a twenting in a twenting in a continue thindle, and bidding them chief from other more working dayding in with bid into the Church, they laid in manner forecable hands on him, with food cryes and tamentations, befreehing him not to for sake them. Whereat he wepe and that refored, alleaging his infusiciteises and to kindle greater defire in the people and Nobles, absented and his himselfe with his Sister in the Nunnerie the space of a moneth. In which space the prople fearing his flight, besieged the place, and with continual clamours vrged the Queene, to perforate her Brother to accept of the Empire which the had refused. Shee againe fends them to the Knavey and, Bour for; the mention of whose names seemed to cast them into a fit of mutinie and sedition. Boris then commeth forth and tels them, if they were no quieter, he also would take Sack-cloth, and (as his Sitter had done) enter into a Monafterie. They made fo much greater ftirres, cafting out fore defperate threats of looking to themselues, where the Common wealth was desperately neglected. The Queene

command, praying for his bleffing therein. Boris after new excules, at last feeming ouercome by his Sifters intreaties, and to have held out 60 fufficiently to remoue enuie, affenteth to her, and thee fignifieth as much to the people, to whom the prefents him, praying them to be as loyall to him, as they had beene earnest for him. Borss also spake unto them : Forasmuch as it seemeth good to the Dinine Grace and Providence, whereby all Es is his specia things are gonerned, that by common confent and continual Prayers intreated, I take on mee the Principalitie oner you, and all the Proninces of Russia, I will no longer resist, how beamie socuer I concerne

then wonne by their importunitie perswadeth her brother no langer to refit Gods will, which

had put this constancie into the peoples mindes, and to accept that which thus God feemed to

this burthen to my shoulders, but have determined to undertake your protection with greatest sidelitie. being readie to fray the Russian Scepter and Government, as farre as Gods grace shall enable mee. On the other side bee you faithfull to mee and to my command, as God may you before. I am your most

loyfull acclamations followed, with all protestation of their fidelitie and future obedience. He entring into the Monasterie, after Prayers, received the first Benediction. The people retur-Born Emperor. ned full of joy, and the Bels (of which are numbred in Mosco, three thousand) resounded the publike Fettinitie. All the Magistrates and Officers, & such as received Salarie of the King, go pretently to the Monasterie and carrie Gold, Silver, Precious Stones, Pearles, Bread, and Salt, (after the folemme custome) with withes of long life & al happines, and defiring to accept in good worth 10 their Presents. He with thankes rendred, accepts only the Bread and Salt, Lying, these were his; the rest they should take to themselues. Then doth hee bid them to a Feast, and presently His Wife, Son, with Mary his Wife, Theodore his Sonne of ten yeeres old, and Arfonica his Daughter being fix.

with Many his Wife, I geome in some or very series only and Marymes on Mangater being fix-teene, he goeth out of the Monafetrie with pompous Procession to the Castle. Like Prefense were offered to his Wife and Children, which accepted only the Bread and Sale, remitting the reft to the Prefenters. When he was comne to the Caffle, he chose his Sifters Lodging; for that of the Prince deceased, as offensive by his death was destroyed, and after new built After Festivall entertaynment of innumerable people, solemne Oath was taken of all the

Tariare

Gouernours; those things being in action till May. Then came newes that the Crim Tarter; had entred the borders thinking to find all things troubled with an interregne; whereupon he affem. 20 bled an Armie of three hundred thousand, and went in person against them. But the Tartars hearing how things went, returned home and fent Embassadors to the Emperours Tents. He returned with them to Mose, where the next September (which is the beginning of the Rusfam New yeere, which enters in other places with Ianuary following) hee was publikely bleffed by the Patriarke, earrying a golden Crosse in his hand, and on the fourteenth of September. Bail cromned, before the Knazers, Boilerens, Bilhops and other Orders, had the Crowne feton his head by the

Ruffian New

Patriarke, and the Scepter put in his hand, with the Solemnitie in such cases accustomed, Twelue dayes together all Orders were feasted in the Castle, and the Magistrates and Officers had a yeeres pay given them. Merchants also of other Countries had Immunities and Priviledges granted. The Rustickes had their payments to their Boiarens reasonably rated, and their 30 persons made more free. Germane Merchants had moneyes lent them to repay seuen yeeres after without Viurie. Widdowes, and Orphans, and poorer persons received much Almes. Pheeseres Obsequies were solemnely performed, and the Priests zichly rewarded; and that Empire which feemed dead with the death of the boufe of Beals , now was as it were remised and receiued a glorious Refurrection.

Thus have we delinered you Thurnes his report touching Born manner of acquiring the Empire without publike emie, and cunning wiping off the afperions of *Pheedore* and *Demetris* their deaths. And as every bodie is nowished by Aliments correspondent to the Principles of the Generation, so did hee seeke by politike wisdome to establish that which by wise Policies he had gotten. Wherein his care was not hit leto multiply Treasure, and as at first hee had see- 40 med popularly prodigall, so after a small time of his Reigne, hee became providently penurious, the wonted allowances of the Court being much that tened from that which had beene in former times, as I have received from eye-witneffes. Likewife he was carefull to hold good tearmes with his Neighbouring Princes, and aswell by:plots at home, as by forreigne Aliance indeuoured to fettle on his Race this new gotten Empires. He is faid for this end to have fought a Wife for his sonne out of England, and a Husband for his Daughter out of Denmarke. His Wite was a woman of haughtie spirit, who thought hentoo good for any Hollop (so they call a slave, and fuch the efteemed all the fubjects) and on fuch tearmes flie is faid to have beene denied to a great man his best Souldier and Commander of his Armie.

But while his Sunne shined now in the height of his course, and with brightest and war- 50 mest beames of prosperitie, there arose grosse vapours out of Demetrine his grave, which grew quickly into a blacke darke cloud, and not only eclipfed that Imperiall glorie, but foone eagen-dred a blondie florme, which with a floud fweps away that whole Family, and ouer-whelmed also the whole Empire. Contraries set together cause the greater luftre; for which cause I will bring on the stage a Gentleman, which attended Sir Thomas Smith employed in Honourable Embaffage from his Maiestie of Great Brittaine to the then flourishing Emperor Borit and out of much to infult his large Relations deliuer you this which followeth in his owne words (omitting the most part * to our purpose not so pertinent) in the Booke printed, Anne 1605.

feemeth too

LIB. IIII.

ð. II.

Occurrents of principall Note which happened in Russia, in the time while the Honourable Sir THOMAS SMITH remained there Embassador from his Maiestie.

It Thomas Smith Knight, accompanied with Sir T. Challenor and Sir W. Wray Knights, diuers Gentlemen and his owne Attendants. June 1604. then lying at Greenwich, where by the Right Honourable the Earle of Saliburie he was brought to His Majestis presence, kisled his Hand, &c. The next day

he tooke leave of the Prince, and on the twelfth being furnished with his Commission, he came to Granefend, and next morning went abourd the lobn and Francis Admirall : and the two and twentieth of Iuly anchored within a mile of the Archangell. The fixteenth of September, hee came to Vologda : the five and twentieth to Periflame, and there flaid three dayes, and then departed to Troites, (that faire and rich Monasterie) io to Brattesheen and Rostonekin, fine versts from the great Citie of Musco. The fourth of October, the Prestane came and declared the Emperous pleasure that hee should come into the Mosco that forenoone : presently after came Mafter I. Mericke Agent, with some twentie Horses to attend his Lordship, which forth-with

was performed. Then we did ride, til we came within a little mile of the many thousands of Noblemen and Gentlemen on both fides the way, attended on hersebacke to receive his Lordship. Where the Embaffadour alighted from his Coach, and mounted on his foot-cloth Horie, and to rode on with his Trumpets founding. A quarter of a mile farther, met him a proper and gallant Gen:leman a-foot of the Emperours (table, who with Cap in hand, declared to the Embaffadour, that the Emperour, the young Prince, and the Mafter of the Horfe, had so farre favoured him, as to fend him a Jennet, very gorgeously trapped with Gold, Pearle, and Precious Stone: and particularly, a great Chaine of plated Gold about his necke, to ride vpon. Whereupon the Embaffador alighted, imbraced the Gentleman, returned humble thankes to them all, and prefently mounted. Then he declared that they likewife had fent horfes for the Kings Gentlemen. which likewife were very richly adorned, then for all his followers : which Ceremonie or State o performed, and all being horfed, he departed, we riding orderly forward, till wee were met by

three great Noblemen, severed from the rest of the multitude, and the Emperours Tolmache or Interpreter with them.

They being within speech, thus began that Oration they could neuer well conclude: Which was, That from their Lord and Mafter the mightie Empetour of Ruffia, &c. they had a meffage to deliuer his Lordship. The Embassadour then thinking they would be tedious and troublesome with their vivall Ceremonies; prevented their farther speech with this (to them a Spell) That it was unfitting for Subiells to hold discourse in that kind of complement, of two such mightie and renowmed Potentates on horsebacke. They (hereby not only pur by their Ceremonious Saddle-fitting, but out of their Paper instructions) allighted suddenly, as men fearing they were halfe valvor-

40 fed, and the Embaffadour prefently after them, comming very courteoufly all three, faluting the Embassadour and the Kings Gentlemen, taking them by the hands. Thus like a Scholer, too old to learne by rote (the Duke named King Volladamur Enanywich Mamfoliker) with his Lesion before him, declared his message; which was, that he with the other two Noblemen, were sent from the Great Lord, Emperour and great Duke Boris Phedorowich, felfe-upholder, great Lord Emperour, and great Duke of all Ruffia, Volademer, Moskoe and Nouogrode, King of Catan and Tedious Titles Aftracan, Lord of Vobskoe, great Duke of Smolenskoe, Tuer, Huder, Vghory, Perme, Viatsky, Bolgory, &c. Lord and great Duke of Nouogrod in the Low Countreyes, of Chernigo, Rezan, Polotskey, Rostoue, Geraslaue, Bealozera, Leisland, Oudorskey, Obdorskey, Condingskey. King

of all Syberia and the North Coasts, Commander of the Countreyes of Iuersky, Grysitisky, and Emperour of Kabardiuskey, of Chirkasky, and of the whole Country of Garskey, and of many other 50 Countreyes and Kingdomes Lord and Emperour, to know of his Maiesties health of England, the Queene and Princes. The fecond, being a Captayne of Gunners (the Emperours Guard) named Kazrine Danydowich Beabeerchoue, pronouncing the Emperout and Princes Title, faid hee was fent from them to know his Lord hips health and viage, with the Kings Gentlemen. The third, was one of the Secretaries, named Pheodor Boulteene, observing the former order did deliver what he had in command from the Emperor, Prince and Empresse, to informe the Embassador of their much fauour towards him, and the Kings Gentlemen, in prouiding for his Honourable enter-

tayne and case, a faire large house to lodge in : Also that they three were fent from the Emperour, Prince, and Empresse, to be his Pressant, to supply the Emperours goodnesse toward hint, to prouide his necessaries, and deliuer any sute it pleased the Ambassadour to make to the Emperour. To all which the Embaffadour very wifely gaue answere (as they made report vnto the

So we all prefently mounted againe, the Preflauer on either hand of the Ambaffadour his Horse and Foot-cloth being led by his Page, some small distance, his Coach behind that, and

fome fixe thousand Gallants after behind all: who at the Embeffedors riding through the guard. that was made for him, very courteoufly bowed himfelfe. Thus was he followed by thoulands. and within the three wals of the Citie, many hundreds of young Noblemen, Gentlemen, and rich Merchants well mounted, begitt the wayes on every fide: divers on foot alfo, even to the gate of the house where the Emballadour was to be lodged, which was some two miles. Whether being come, he was brought into his Bed-chamber by the Noblemen his Prestauer, where with many thankes for their honourable paines; they were dismitt, betaking themselves to their further affaires. The next morning came three other Pressames with the former, to know of his Lordships health, and how he had rested the night past: withall, that if his Lordship wanted any thing, they all, or any one of them, were as commanded, for readie to obey therein. Thefe, to with the Interpreter and fixe Gentlemen were most within the walls, lodged in a house over the gate, besides we had fittie Gunners to attend, and guard vs in our going abroad.

The eight of Ochober being the fourth day after our comming to Mufco, the Prefiance came to his Lordship to let him vinderstand, they heard he should goe vp the next day : wherefore they defired his speechand Embaffage to the Emperour: and the rather, that the Interpreter might (as they pretended) translate it. To this purpose, very earnessly at severall times they made demand. The Embassadour answered, that he was sent from a mightie Prince, to bee his Embaffadour to their Emperour, and being fent to their Mafter, he deemed it, not only a difficnour to him, but a weakneffe in them, to require that at his bands.

His audience. The leventh of October, his Lordship being fent for by his Pressaner there wayting, having 20 excellent lennets for himfelfe, the Kings Gentlemen, and good horses for the reft : as likewife two gallant white Palireis to carrie or draw a rich Chariot, one parcell of the great Present, with his followers and the Emperours guard, carrying the rest; on each fide the streets standing the Emperours guard with Peeces in their hands well apparelled, to the number of two thouland by efteeme, many Meffengers posting betwixt the Court and our Pressures. Thus with much state, foftly riding, till we came vnto the vtmost gate of the Court (having passed through the great Caftle before) there his Lordfhip dilmounted. Then met him a great Duke (named Knafe Andria Metewich Soomederone) with certayne Gentlemen, to bring him vp. So in order as we rode, we alcended the staires and a stone Gallerie, whereon each side stood many Nobles and Courtiers, in faire Coates of Persian Stuffe, Veluet, Damaske, &c. At the entry to the great 30 Chamber, two Counfellors encountred the Embaffadour, to conduct him through that Roome. round about which fat many graue and richly apparrelled Personages. Then we entred the Prefence, whether being come, and making obey fance, we staid to heare, but not vnderstand, a very gallant Nobleman, named Peter Basman, deliuer the Emperours Title : Then the particular of the Presents, and some other Ceremonies : which performed, the Embassadour hauing libertie, deliuered so much of his Embassage, as the time and occasion then associated: After which the Emperour ariting from his Throne, demanded of the King of Englands health , the Princes, and Queenes: then of the Emballadors and the Kings Gentlemen, and how they had beene vied fince they entred within his Dominions : to all which with obeyfance wee answered as was meete. Then the young Prince demanded the very fame.

The Embassador haung taken the Kings Letter of his Gentleman Vsher, went vp after his obeyfince to deliuer it, which the Lord Chancellor would have intercepted. But the Embassadour gaue it to the Emperours owne hands, and his Majestie afterwards deliuered it to the Lord Chancellor : who tooke it, and shewing the superscription to the Emperour and Prince, held it in his hand openly with the Seale towards them. Then the Emperour called the Embaffadour to kille his hand, which he did, as like wife the Princes, and with his face towards them returned. Then did hee call for the Kings Gentlemen to kiffe his hand, and the Princes, which they after obeyfance made, did accordingly. Afterwards, his Majestie inuited his Lordship, the Kings-Gentlemen and the rest to dine with him, as likewise Master I. Mericke Agent by name, who gaue his attendance there on the Embassadour, and was now (as divers times) very graciously v- 50 ied of the Emperour and Prince : no stranger (that I euer heard off) like him in all respects.

Being entred the Presence, we might behold the excellent Majestie of a mightie Emperour

feated in a Chaire of Gold, richly embroydered with Persian Stuffe : in his right hand hee held a golden Scepter, a Crowne of pure Gold vpon his head, a Coller of rich stones and Pearles about his necke, his outward Garments of Crimson Veluct, embroydered very faire, with Pearles, Precious stones and Gold : On his right side, (on equall height to his Throne) standing a very faire Globe of beaten Gold, on a Pyramis, with a faire Croffe voon it, vnto which before hee spake, he turned a little and crost himselse, Nigh that, stood a faire Bason and Ewer, which the Emperour often vieth daily.

Close by him in another Throne sat the Prince, in an outward Garment like his Fathers, but 60 not fo rich, a high blacke Foxe Cap on his head, worth in those Countreyes fine hundred pound, a Golden Staffe like a Friers, with the likenesse of a Crosse at the top, On the right hand of the Emperour, flood two gallant Noblemen in cloth of Siluer Garments, high blacke Foxe Cappes, great and long chaines of Gold hanging to their feet, with Pollaxes on their shoulders of Gold.

And on the left hand of the Prince two other fuch, but with Silver Pollaxes. Round about the benches fat the Councell and Nobilitie, in Golden and Perfian Coats, and high blacke Foxe Caps. to the number of two hundred, the ground being couered with Cloth of Arraffe, or Tapiffrie; The Prefents standing all the while in the Roome, within little distance of his Majestie, where he and the Prince often viewed them. Being now by our Prefianes and others come for to Dinner, who led vs through much presse and many Chambers to one very faire and rich Roome. where was infinite flore of mallie Plate of all forts; Towards the other end flood the Emperours Vncle, named Stepbean Vafelewich Godonoue, Lord High Steward, being attended with many Place Noblemen and Gentlemen, whom my Lord in his passage faluted, which with an extraordinary to countenance of aged Ioy, he received, making one of their honourable Nods. The Embaffador entred the dining Roome, where we againe viewed the Emperour and Prince, feated under two Chaires of State, readie to dine, each having a Scull of Pearle on their bare heads, but the Princes Dining rooms

was but a Coronet. Also their Veitments were changed. The former Duke, that for that day was the Embaffadours Prestane, came, as commanded Change of from the Emperor, and placed the Embaffador at a Table, on the bench fide, fome twentie foot from the Emperour. Then the Kings Gentlemen, Maiter Mericke, Maiter Edward Charrie, and all the reft were placed, to that our eyes were halfe opposite to the Emperour. Ouer against the Embeffadour fat his Pressauer uppermost. Also in this large place fat the Privile Countill, to the Two hundred number of two hundred Nobles at feuerall Tables. In the midth of this Hall might feeme to Nobles gueste and itand a great Pillar, round about which, a great heigth flood wonderfull great pieces of Plate. very curiously wrought with all manner of Beasts, Fishes and Fowles, besides some other ordi-

narie pieces of feruiceable Plate. Being thus fer (some quarter of an houre as it were, feeding our eyes with that faire Piller of Three bund Plate) we beheld the Emperours Table ferued by two hundred Noblemen, all in Coats of cloth dred noble of Gold. The Princes Table ferued with one hundred young Dukes and Princes of Caffan, A- Scruttors. Arican, Syberia, Tartaria, Chercasses and Russes, none about twentie yeeres old.

Then the Emperour fent from his Table by his Noble Seruitors, to my Lord and the Kings Gentlemen, thirtie Dilhes of meate, and to each a loafe of extraordinary fine bread. Then followed a great number of strange and rare Dishes, some in Silver, but most of massie Gold; with boyled, baked, and rofted, being piled vp on one another by halfe dozens. To make vous particular Relation, I should doe the entertaynment wrong, consisting almost of innumerable Di-

fhes: Alfo, I should ouer-charge my memory, as then I did mine eyes and stomacke, little delighting the Reader, because Garlicke and Onions, must befawce many of my words, as then it Garlike and did the most part of their Dishes. For our Drinkes, they confilted of many excellent kinds of Meades, befides all forts of Wine Meads. and Beere. Divers times by name, the Emperor fent vs D.fhes : but in the midit of Dinner hee called the Embaffadour up to him, and dranke our Kings health, where the Emperour held fome

discourse of our King and State. But at one time (thriking his hand aduisedly on his brest) Ob, faid bee, my deere Sifter Queene Elizabeth, whom I loued as mine owne heart, expressing this his Memory of Q. 40 great affection almost in a weeping passion. The Embassador receiving the Cup from his Prince. Elegabeth. by hand, returned agains to his owne place, where all of vs standing, dranks the same health out of the same Cup, being of faire Christall, as the Emperour had commanded, the Wine (as sarre as my judgement gaue leaue) being Alligant.

Thus passing some foure houres in banquetting, and refreshing our selues too plentifully, all being taken away, we did arise. The Embassadour and the Kings Gentlemen beeing called by name to receive from his Emperiall hands, a Cup (or rather as they call it a Tendonor) of excellent red Mead, a fauour among them neuer observed before, which Cups for they were great and the Mead very strong, we often sipped at, but without hurting our memories, we could not say Amen vnto : which the Emperour perceiuing, commanded them to be taken away; faving: Hee

SO was best pleased with what was most for our healths. Thus after our low courtefies performed, wee departed from his prefence, riding home with the same former guard and attendance to our Lodings; where our Pressures for that instant left vs, but shortly after they came againe, to accompany a great and gallant Duke, one of them that held the Emperours golden Pollaxes, named Knes Romana Phedorowich Troya Naroue, who was fent from his Majestie to make the Embassadour and the Kings Gentlemen merrie: likewise hauing instructions to drinke their Emperours, our Kings, and both the Princes healths, and divers Princes elie, which hee did himfelfe very freely and some of vs, as many of them as wee could with our owne healths, there being such plentie of Meades and other Drinkes, as might well haue made fortie Ruffer haue stumbled to sleepe. Thus light-headed, and well laded especi-6c ally if you take knowledge of the thirtie yards of cloth of Gold, and the two standing Cups

with couers, which the Embaffadour rewarded him withall, before he departed. But viwelcome newes within foure cayes after our audience so vihappily came, as not only our Affaires, but any elie, except counfeil against present danger, was not regarded. For this was Newcool Deheld for currant, that one who named himlelfe Demetrie Enanowich Beals, as the Sonne of their mering

late Emperor Iuan Vafillowich; hee that in the reigne of Pheodor Euanowich his brother was in his infancie, as was thought, murthered at Ongleets) is now reviued againe, and vp in armes for his right and inheritance: whereupon prefently was fent an Armie of two hundred thousand Souldiers, either to take or flay him, But he was fo ftrengthened with Poles, Coffacks, &c. that a number of Ruffes yeelded to his obedience.

Voon the one and twentieth of November, the young Prince of an ancient custome going to a Church within Mosco, the Kings Gentlemen vpon knowledge thereof (the Ambassador being vnwilling to be teene publike, as also for that the Emperor himselfe did not goe as hee was accuflomed) went and attended where his Excellency might feethem, and they fafely behold him. Princes pomps. who rode in a very faire and rich sled, having a gallant Palfrey lead by two Groomes to draw it, to many hundreds running before to sweepe the snowe away where he should passe, and were said to bee flaues . which I verily beleeue, because certainly they were his Subjects. Then came the Prince richly apparelled with two Tartar Princes standing before on his sled, and two young Dukes behind, with two hundred fleds following him.

The eight of Februarie, the Emperor fent vs sleds to ride abroad, and this day the rather, I me ergneter actionates the control of the control Drums brought in, with more glorie then victorie. About this time returned Peter Basman, one of the Generals, who had performed very honourable feruice, and certainly, he was the man of greatest hope and expectation in the whole Empire, who was brought into the Melon, with all 20 the Countell, Nobles, Gentlemen, and Merchants, a grace neuer performed before to any Subiect. But not without suspition of some extraordinarie secret herein, and 'des particular fauours, bountifull rewards, and a promise he should neuer goe againe vntill the Emperor himselse went, he was, being but a young man, made a Privie Counfellor. Forthwith one thing I will you shall observe the Emperors favour, and his then noble Spirit, he making divers times sure(as was thought) because they were in great danger, to goe againe to the warres, once profitated himfelfe to obtayne his defire, but falling downe too humbly, hee could not eafily rife againe. whereby the Emperor understanding of his many and great wounds, was said to weepe, rising himselfe vp to raise and helpe him vp, but extraordinarie Causes have the like Effects, as hereafter you shall understand

We were lodged in the same house where the young Prince lebn of Denmarke, brother to that King and our now Queene of England, did lodge, (who would have matried the young Princesse Ouck finia, the Emperors only daughter, but that he vulnappily there died) but not in any of those lodgings: for it is a custome there, that where a Prince dyes (especially a stranger) not of long time after to let any other lodge there.

Now the Ambassador vnderstanding of the convenience of his passage downe by sled-way, also rearing (as wise men had cause) what the issue of these warres would be, knowing the state here yied in any futes, bethought himfelfe aduitedly that it was high time, being the middeft of Februarie, to defire a second audience for his sooner dispatch, which he forthwith requested, and wrote a letter to that purpose vnto the Lord Chancellor.

Second audience.

Vpon the tenth of March, the Ambasilador with the Kings Gentlemen all richly apparelled, and all his followers decently attending, very honourably (as before) and with the like recourse of beholders, and guard of Gunners (but that they were faid to bee Citizens by reason of their Citizens Soul warres, but in like apparell) was attended to the Court, being received with the former grace, or more, he ascended the Presence : the Emperour and Prince holding their wonted state, onely changing their Vestments with the season, but for the riches nothing inferior.

So ioone as the Ambassador and the Kings Gentlemen were come opposite to his Throne, hee commanded feates that they might fit downe : then with a Maieflick countenance, reprefenting rather constraint then former cheerfulnesse, he declared, that He, his Sonne and Councell, had confidered his Maiesties Letter, the Maiestie of King lames of England, as also on whatsoever 50 elle was defired, and in token of his joyfull received antitie with the renowmed King of Eng-Land, as with his Predeceffor, he had wrote his Princely Letters to that purpose. Herewith the Chancellor from the Emperour deliuered the Ambaffadors his Highnesse Letters to his excellent Maiestie. Withall understanding by the Chancellor hee had some farther matter to intreas of, then in his Briefe to his Maiestie was remembred : therefore hee had appointed foure principall Councellors to confule with him of his Requelts, which was done. After, the Ambaffador yeelding courteous thanks for his Maiesties fauour, his Loruship attended by many Nobles, proceeded to the Councell Chamber, whither prefently after came foure Councellors, and the Emperours Tolmach: who after falutations, we withdrew to the next chamber, where wee palfed away an houre in discourse, among many young Nobles, having the Ambassadors Interpreter. 62 In the end, after three or foure goings and returnes of the Chancellor from the Emperour, wee went againe before him (where after hee had commanded vs to fit downe as before) by the mouth of the Chancellor was openly deliuered a Briefe of the whole Embaffie (and that dayes particular defire, according to the Ambassadors request, confirmed.) Also in good and pleasing

language, was declared the great defire that the Emperour had, for the continuance of peace and amitie with the renowmed Lawer King of England, as with the late Queene Elizabeth; with that that in due time (all actidents well cided) he would fend an honourable Ambaffador for further affaires, as likewife to congratulate with our King of his pappinelle in fo plaitible tomming to his Right and Inheritance. Likewife, a Grane of a new Privaledge for the Companie, which he faid (hould be wader the golden Seale, &c.

Peter Bafman Demetrius, re-

After the fulpicious death of the old Emperour Beris Pheederewich, &c. by the appointment of the Prince (then their expected Emperour) and the Counfell, Peter Bafman (that noble 30 Sparke) was speedily dispatched and sent as Generall watto their ill-succeeding warres, as their laft hope (indeed hee prooued fo in a contrarie fense) and the onely refuge to the Commons; whither being come, hee with himfelfe prefested mole of his command, as many as freely would offer themichues : Vader which were all the English, Scots, French, Dutch and Flowmings, what toener ; and with him , or mather before ben (as leaft suspected) Ries Vafile Enanch Goleeche, the other Generall, a man of great birth, and in the prioritie of place, to bee received before Poter Bafmen. All which, the now well knowne newly opinionated Emperour very graciously received, happily not without four ichouse of many particulars.

Demetrate now lent Mellengers with Letters which earted the Suburbs, where the Commons in infinite numbers brought them life, and the fraction Plaine before the Callle gate a within which, as daily they did vie, to now were alk the Counfellors in confutation; but 40 happily not in a fecret Counfaile ; also wherein was the Emperial Court.

Tumuk of the There their Beyerens, made demand for many of the Counfellots , especially for the Godonomet, to come to heare their right King Demetrine Entenmech speaking vato them by Letters : Who yet after refufall (and I cannoe condemne all) many cames the Commons being refolmed, elfe to feach themout. Then, by the Boyerestatout was read the Emperours Letters . to

All indistinuous life and by the (being confident to be some conficures, of his init Title, made the Principal patients and dangers) had in his Francia figures and dangers) had in his Princels wisdome and clements agains wrote these (but certaint) but less Peac-requiring and Grace-60 offering Letters: yea, was content to defire them be might), and doubted not foorth but to bould command, such growing as the good of the Communication and State in generall; us be that without much freedings of the Subsetts blood, defined the Kingdome.

Alfo to this end bee had fent men of great birth, viz. Rues Pheodor, Euanowich Methithfosky, and Rues Demetre, Euanowich Suskey; and given them Commission to difflace his Enemics, and Preltaue the Go.lonoues, and others, till his further pleasure were home, conse-ming those monstrom bloud suckers and Traytors, with returns of the Commons answere thereunto: Likewife to demand bis Messengers, and they to bee brought before the Commons, whom hee had reafon to beleeue were ill-intreated, if not murthered; witball, that if they did fubmit themselues now to him, at to their lawfull Prince and Soueraigne, (which hee was trucky resolued their consciences were quiltie of) that yet they should finde him a gracious and mercifull Lord; if otherwise, a sewere and inst Renenger of them, and their many muscheedes towards bim, as bee that had bis Sword To ever unfreathed to execute his vengeance on them all: and was casily persuaded they were not ignorant ener roycemene receems on vergeoner or comments as no macestry per peace represent new specied of the many Victories bee bad obtained from edit and wilding to fight with the world forms able and wilding to fight with but Southers: and how afficied and troubled becomes the gall were: But that now, in be had their chiefe and strongest Heads and Armes in his owne hand, the whole World mirbt not hea truth him they durif once frenke epoch against him. as affored that all (excepting a very few, and they of the worst) in heart, were but loyall Subjects, of the

But before this Letter was halte read, the Heares and Hands of the multitude were strangely combined together, not one freaking, but all confusedly like fettered and chayned Horles flamping; being indeed without any feare, but of not doing mischiefe enough, all (as one) running violently into the Caffle, where (meeting two of the pitifully tormented Meffengers) 20 they pawfed to heare them as furficiently as their infufficiencie would permit them, definer the vilde manner of their torturing, whisping, and roating, which was in deede a Whija and Spurre to drive them, wethout wit or humanitie, as if they had beene fired like Gun-powder with the very sparkes or heate : Such barbarous crueltie, beaftly actions, and inhumane spefacles, as without the great Deuill had beene their Generall, no particular could have a-Sted : laying violent hands on all they met : but not killing (the great mercy of God) any man of account.

man or account.

Thus the whole Citie was in an vproare, all the Counfellors houses, sellers, and studies ransacked, beginning with the Codomora; spoyling, renting, and stealing all they met with, but carrying little away but drinke, which they could not carry away.

30 Tie Commons (no doubt) would have made this day little inferiour to the maffacre of Paris, fo violent and deuillish were their fudden resolutions but that the Nobles (best beloued and obeyed) intreated, where none could command: of hers perswading, all wishing an end to this most miserable and neuer exampled mischiefe. But the multitude did what they would and could; especially on the greatest, which certainly were the worst : So as the Empresse fiving to a fafer lodging, had her coller of Pearle pluckt from her necke.

Then the Prince, Empresse, and Princesse, were prestaued (a second command being come from the Campe) with the Godonomes, and many others that were fufpected most : The Nobles ioyning in one counfell for the prefent ordering of these sudden accidents, and for answere to the Prince Demetria Engagement, who suddenly was by generall consent concluded 40 (by the particular knowledge of Bodon Beling a great Counfellor, that was printe to his departure, and forme others) to bee their right and lawfull Emperour, onely a few excepted. So as the young Prince was by many (but particularly by his mother) counfelled to leave the

Kingdome vtterly, before it forfooke him; to follow his Fathers example in murdering himselfe, and herein his mother (that Map of miseries, that Cradle of crueltie) and his onely deare fifter would affociate him. Letters were deuised, and Messengers framed to effect this desperate treacherie on his in-

nocent life; so as in very few dayes (for Mischiefe hath the wings of Thought and Resolution) they three did confent (an wnhappy coniunction) to destroy themselues; and rather to lay violent hands voon their hatefull lives , then make an Enemic feeme cruell in executing Iuflice on them : which " yet certainly this Emperour neuer dreamt of , but determined the " Thus hesbin

60 However it was with Boris for other things, I thought it not amiffe to adde this testimonies of his refrect to the English Nation and Merchants in Priviledges granted them, as followeth,

Ne Almightie God without and before the Beginning, the Father, the Sonne, and the Holy Ghost, whom we glorifie in the Trinitie, our onely God, Creater and Preserver of all things energwhere, by which Will and Working, be lineth and gineth life vnto Man; Our onely God which suffirath enery one of ou bu Children with bu boly Word, ibrough our Lord le su Christ, the Spirit of Life, now in this latter times, establish vs to bold the right Scepter, and suffer vs of our selucs to reigne, for the good of the Land, and the happinesse of the People, together with our Enemies, and to the doing of

We the great Lord Emperour and great Duke Boris Pheodorowich of all Ruffia, fole Comman. der of Volodemer, Molco, Nouogrod, Emperour of Cazan, King of Aitracan, Lord of Vobsko, and 10 great Duke of Smolensko, of Twersko, Vhorskoy, Permskoy, Vatskoy, Bolharskay, and of a thers, Lord and great Dake of Nouagrod in the low Country of Chernego, Rezan, Polotskay, Roflouskoy, Verallauskoy, Belczerskoy, Leeflinskoy, Owdorskoy, Obdorskoy, Condinskoy, and ROUSKOY, ICIAINUSKOY, Detections, Jord and Commander of Euerskoy Land, and Cabardinskoy all Siberia, and the North parts; Lord and Commander of Euerskoy Land, and Cabardinskoy Country, and of Cherces, and Igarskoy Land, as also of many others Lord and Commander, with one Country, and of Cherces, and againable thank, or any of the base befored on the Merchants of England viz.

Sonne Prince Phedar Borisowich of all Russia. We have bestowed on the Merchants of England viz. Some France I was Delivery of the Webb, Knight: Richard Saltanstall, Alderman; Nicolas Moshley, Alderman; Robert Doue, William Garaway, John Harbey, Robert Chamberlin, Henrie Anderson, John Audwart, Francis Cherie, John Merick, Anthony Marlar; Wee bear granted and licenced them to come with their hips into our Dominion the Country of Dwina, with all 10 granted and incircus vorms or come freely from the Sea side and within our Dominions, to the Citic of our Empire of Molco. Also there made sute out out Sir Iolin Hart, Knight, and bis Companie, to gratifie them to trade to our Citie of Molco, and to our Heritage of great Nouogrod and Vobsko, and to all parts of our Empire, much their Commodities, and to Trade freely without custome: when which wee all parts of our compression and great Duke Boris Pheodorowich of all Ruffa, with our Sonne Prince Pheodor Borisowich of all Ruffia, have granted onto the English Merchants, Sir John Hart, Knight, PRODUCT DOTHOUGH OF AN ALLES, SOME AS A MORE FOR ELIZABLE PARTED AND THE PROPERTY OF THE STATE AND AND AND A STATE AND AND ASSAULT OF THE PROPERTY OF THE STATE AND ASSAULT OF THE PROPERTY OF h at their ples jure, Any we cause communica, not 10, and any times of Lustome for their goods, nor any subset Cultimes to their Boats or Plating by any place by Land, we for puffing by any place by Water; 30 not for Cultimes of their Boats or Headmaggs, our for puffing our strades and Eerries, nor for any entries of Waters: at alfold manner of alpha, Cultimes or Danies what feature we command hall not be taken of them : But they finall not bring paster mean goods into our Dominions, nor likewife recent your tagen of thems. Danied y from one congression of the second of the secon pawnes by them to owne or colour them, Likewife they frall not fend any of our Subjects to any Towns or Cuie to bay Commodities. But what Citie they came into them scheen shey shall sell their owne Commodities, and buy our Commodities. And when they shall come to our Heritage to great Vobsko and Nouagrod, or to any other Citie within our Dominione with their Commodities, that then our Gentle-Notifical, or to any ever time was one. Demonstra mine tour commonstrate, that tous our venter-men and Generatour, and all short effects field fifty and let them spill according to his and Leiter, and to take so manner of Casisans of them what fenur for any of their Commonities for passing by, my 40 for paling ever any Bridge: a their final they also keep appear Casino what flower or all our Dominions, and where speare they bappen to comm, and doe proceed to buy and full, as also where speare they had and the control of th them lease to trade in all parts of our Dominions with their goods freely without Custome. And livethem leaves to trade in all parts of our paramonane, amounting, grammy sea, partonic onjoinne, and incoming whosp leaves the English Merchantifolds de dispuss to his you of full, or harter them more without my self whosp leaves the English Merchantis wares whole fals, and not by technic (Citab by the Merchantis wares for wares, then fall they full their wares whole fals, and not by technic (Citab by the Merchantis wares whole fals, and not by technic (Citab by the Merchantis wares). pack and by Clothes and by remnants; and Damasks and Voluets by the Piece and not by the Tard, or pack and by Clothes and by remnants, and Dominas, and resures to your rece and not by the Tark, or adjecting, and lake for amountains is the feel of samples, not to feel from the finesh; that is to fay, by the Zolotnicks. Alfo they feel feel Wines by the Proplem Alfo to Hopfbeed, but by the Gallon, 50 Quart or Pas or Charles they feel met it is moreoure; they fould buy, fell and exchange their owns Commodities them selves, and the Ruffe Merchants shall not sell or exchange for them or from them their Commodities, neither hall they carry any mans goods to no manner of place under colour of their owne. and which of the English Merchants would at anytime fell his Gommodities at Colmogro on the Dwing, or at Vologda and at Yerallauly they may, and of all their Commodities throughout all our Cities and Dominion, our Gentlemen, Conernours, and all other Officers hall take no manner of Cuflome according to this our Imperial Letter of fanour. Alfo through all our Dominions, Cittes, and Townes then Shall hire Carriers, Boats, and men to labour or rowe in the faid Boats at their owne cost. Likewife when as the English Merchants shall defire to goe out of our Dominion into any other Kingdome, or into their owne Land, and bakwe thinks it good for them to take with them from our Treefine 60 any Commodities to sell or exchange them for us , for such Commodities as shall be fitting to our Kingdome, and to deliver them to one Treasurer : and with those their and our goods, our Gentlemen and Gomernours shall suffer them to passe through all Cities and Townes within our Dominions without Cu-

stome se before. And when they have ended their Market, and doe desire to goe from the Mosko, then they flull appeare in the Chancerie to the Keeper of our Seale, the Secretarie Vaffily Yacolo-wich Schellcalou. Likewife, if there happen to the English Merchants any extremitie by Sea, or that a flip be broken, and that it be neere any place of our Kingdome, then we command that all those goods shall bee brought out instly, and bee given to the English people that shall at that time bee in our Land, or if they be not here, then to lay them up all together in one place, and when the Englishmen come into our Land, then to deluer those goods to them Also wee have bestowed on the English Merchants the House of Yourya, in the Mosko by a Church of Saint Maxims neere the Marget. to dwell en it as in former time, keeping one House-keeper a Russe, or one of their owne strangers; but no other Russe folkes they shall not keepe any. Likewise these Merchants baue Houses in diuers our Chies as followeth: A House at Yeres, a House at Vologda, a House at Colmogro, and a House at Michael as journess. In John sell, being the fripping place: these fast Houses they sell keepe as in former time according to this our Imperial Letter of favour, or gratisted without paying any manner of Rent or anywher duties what foeuer, either at Mosko, Yerellaue, Vologda, Colmogro, or at the Caftle of the Archangell. neither shall they pay any taxe. Also at these Houses at Yereslaue, Vologda, Colmogro, and at Atchangell they fhall have House keepers of them owne Country-men, or Rufles of a meane fort that are not Merchants, amanor two in a House : to lay up their goods in those Houses , and tomake sale of their goods out of these Houses, to whom they will according to this our Imperial Letter of fanour, but their Ruffe House-keepers in their absence Shall not fell any of their Commodities. And the English 33 Merchants fhal come with their flip to their Port, as informer times they baue done to vinlade their goods out of their foips, and likewife to lade them againe with our Russia Commodities, at their owne charses of out of their loops, and uterange to that town against most very account a Commonweite, at their other darket of Boates and hire of men, and ferrying even the feet great from their hops to their House at the Caffle of Archangell. Lukewife our Officers, Custowers, and Swernemen shall take a sust note of all such goods as they have both of Ruffia and English Commodities , and the note to paffe under the Merchants Firms, because it may be knowne what goods passeth of the strangers and of the Russes. But they Shall not looke ouer their goods, neither unbind any packs in any place, and when they doe fend their owne Enplishmen from Archangell to our (tie of Mosko, or doe fend Russia Commodities into their owne Land, Then all our Officers and Customers shalllet them passe without dalay, according to this our Letter of fauour. And when foener the Merchants fhall be defirous to fend any of their owne Countreymen into their owne Land, or into any other Kingdome over Land: they (hall doe it freely with our Imperiall Maiesties order, was bout carrying any Commodatie over with them, and they shall bave their Letters of Passe vision them in the Embassidours Office. And concerning any matters of debate or controversic in Merchandize, or insurie, then they shall be indeed by the Keeper of the Seale, and Secretarie Vassily Yacolowich Shelcolou, doing right and Inflice to both parties with equitie and truth. and what cannot be found out by Law, or Inquisition, there shall be wied Lots. His Lot that is taken forth, shall bane Lot Live. right done unto him. Likewife, in what place elfe in all our Kingdome there doe happen any matter of discord in Merchandize or by miuris, then our men of authoritie, or Gouernours, and all manner of our Officers hall doe true Instice betweene them: and what cannot be sought out by Law shall be sought out by Lot : his Lot that is taken out shall have right done unto him as before mentioned, as also they shall not 40 take any custome or dutie of them for any Law matter, not in any place in our Kingdome. Moreover, this our Impersall Letter in all our Realme and Dominion, our Officers, and all manner of our subjects

coan me apoer or orace in a suppoint or monotonic properties the respective of fausair, that then those paper fall better on imperial Letter of fractivale, it given at one imperial Palece and Honfe in our Cities of Mosks, from the perce of the depriming of the World (107), in the month of Mosks of monotonic common to the monotonic depriming the World (107), in the month of Mosender's being underwritten as followeth. ð. III.

One pretending himselfe to be DEMETRIVS, with the Popes and Poles belpes attayneth the Ruffian Empire : his Arts, Acts, Marriage, fauour to the English, and mi-(erable end.

Auing thus prefented you Bris his Tragedie out of that printed Author, and his furely and mature view of this Pretender, against whom Born his defire of secrecie (permitting none guiltie of the murther to furuiue) had vnfurnished him of Arguments. He produced a Parfe given him by his Mother; with the Historie of his life after that fending him away and acknowledging another whom the was more willing to act that bloudy Q993

Scene then her own Son: with other particulars which bred strong confidence in such as (weary of Boris) were defirous it should be so. But for the death of the youg Emperor, & his mother, it is by most alcribed to Demetrius, who seeing the people of Musco his friends, and the Emperour and his Mother in hold, pretended he could not come thither whiles his enemies lined, wherevpon they in a mutime flue them; to auert the enuie whereof, it is probable that it was made to be their owne act, and their Keepers therefore by him imprisoned. Boris his daughter was thrust into a Numnerie, and so made dead also to the succession. But as I have before delivered out of the diligent, learned and incere Historian Thuann, Boris his attayning the Scepter, I shall likewife intreat your patience out of him to receive thefe Relations of Demetrius.

Tbn.L.135.

The I-faires

These your patience out or min to recent the true or falle) Demerrim, some yeeres after in 10 the horders of Polonia and Musconia, appeared one which called himselfe Demetrius, and in testimonie thereof, shewed a Wart in his face, and one arme shorter then the other (noted before in the true Demetrism) a man of sharpe wit, bold courage, liberall mind, gentle behauiour, and of parts composed to a Scepter-worthinesse. First, was he made knowne to the Ichnices of principal pall note in Poland, to whom he promised if he might receive helpe for the recovery of his just Inheritance, his first careshould be to reduce the Russians to the Vnion of the Romis Church. This thing was commended to the Pope as conducing to the enlarging of the holy See, by his avde, and furtherance with the Polsh King and Nobilitie, to be promoted; which also was done by the seliuites themselves, who brought him to George Miscins Palatine of Sendemir a man potent in that Kingdome, with whom he couenanted also to marrie his Daughter if hee succeeded 20 in his Ruffian Enterprize. He had lurked awhile in Liefland, cafting off his Cowle, and had there learned to speake and write the Latine Tongue : and had written to Pope Clement the Eighth, with his owne hand not inelegantly. And being by the faid Palatine, and Vifnouitzi his Sonne in Law, brought before King Sigismund, he made a pithy and Masculine speech, that he should remember that himtelte had beene borne in Prifon and Captiuitie, whence Gods mercie had deimpri and by livered him to learne him to fuccour others afflicted with like difaftre.

Thus by the Kings fauour, the Palatines money, the Iefuites industrie (not to mention the

Warres and prey, and leades with him tenne thousands of them. Paffing Borifthenes hee first 30

charged vpon Zerniga, & fummoned them to yeeld to the true heire Demetring, which was done by Inan Takmeny, who had before conceived diflike against Boris. Coreles commanded the Coffair, a notorious Sorcerer. He was the Author of the fiege of Putimos a populous Citie, which Michelowich Solickoni held with eight thousand Coffee, whom also he wrought with, that hee admitted and followed Demetrine. Hereupon Borse lends an Army of an hundred thouland men again't him. He alfo fends Ambassadors into Poland, to put them in minde of the league betwixt both Nations, and earnestly desired this counterfeit Demetrine, a Prietts Bastard and notable Sorcerer, to bee deliuered vnto him aliue or dead, adding threats if they perifted, and withall working under-hand with the Nobles to deterre the King from his ayde. But by the Popes and Isluites preuayling power nothing was effected, the King and the Poles refoluing to affilt him, 40 as thinking it the best course to accord both Nations.

Both Armies met at Nouogrod, where Palatine Sendomir the Generall, in the end of Ianuarie

1605, thinking to find a revolt in the Ruffian Armie, gave a rash on-let, & was put to flight, and

atter returned to Poland. Demetring retyred himfelte to Rilskie Calile (in the borders) with a

few, and forfaken of others, he forfooke not himfelfe. Hee had brought with him two Dinines

Louiszi, which had beene Authors of the Expedition, and now encouraged him by their exhor-

both parts, Demetrius got the better, and the lately conquered, and prefently fewer, became V.-Horseat the first encounter a thousand being flaine, two hundred taken, and the rest put to flight, leauing their footmen to the flaughter, and the baggage to the spoyle. Hereupon five neighbouring Callies with their feuerall Territories, yeelded to Demetrins, one of which, Bialogrod yecided him a hundred and fiftie Peeces of Ordnance. The Captavnes were delivered into his Co hands. Soone after Ialeka and Leptina yeelded, in which Hinsko Otiopeius that famous Sorce-Seuria yeelds. rer was taken : after which all Seueria, a large Principalitie, came in, and eight Castles ; Demetrius vling great modellie in this vnexpected victorie. Boris memewhile tent tome with large

promites to murther him, and the Patriarke excommunicated all which favoured him. Demerems writ hereof modeltly to the Patriarke, and to Bons alto, effering faire conditions to his Family, if he would refigne his viurped Empire, which he with indignation rejected. That havpetied when the Emballadors of Denmarke and Sweden were in his Cources youne leaguit with Borndyeth. him against the Pole. In that consultation Boris is faid to have beene in such rehate, that hee fell Some say, that downe fuddenly, much bloud passing from his mouth, nofthrils and eares; and in the end of A. bee had vid prill hee dyed; some say of an Apoplexie, others, of poyson which hee drunke " after he bad to poyson oreigned fenen yeeres. His Wife with her Sonne were advanced to the Throne after him, and the the shire Nobilitie Iworne to them. The dead bodie was baried without any pompe. Conflantine Filler 2 Nequeenin lex

10 Lieflander of Rie made an elegant Oration in his prayle, whole brother Gaffar tenied Boring in line was elegant Oration in his prayle, whole brother Gaffar tenied Boring in line was elected at Preferry Peter Baffaran was tent away with an Armie. * Hodmins (a neere Kintman 6) Bb. quam new arru) besieged Crom, to rayse whom, Demetrins vied this policie. Hee sent's simple main this ther, ring san, which besing deceived himselfic might deceive others, with Letters that fortie thousand wife some say of comming to ayde the befreged. He being taken (fent by a way which he could not escape) and 60000 min. examined with tortures confesseth the same with his Lesters : which caused a turnult in the Campe; and in the end, the befreged taking advantage of the rumour still increased by some sent purposely with reports that they had feen the new auxiliaries issued with a counterfeit shew of great numbers, and caused the Ruffians to consult of yeelding Basman also the new Generall Basman yeel ve lided and cried out with a loud voyce, that Demetrins was the true heire, and therefore all true dith. 20 heartel Museomie: should follow his example, which the most followed. Hedanin: was taken, and refusing to acknowledge Demetrin: was call in Prison. In the Tents were huge Ordnance

to nd. After this Campe-alteration, followed the like in Mofco, the people refounding the name of Demetrins. The En presse and her sonne were committed to ward, where some write that they poyloned themselves, some that Demetrius commanded it The Germanes flying out of the Boriffian Campe to Demetrius drew many with them.

From Crom do h Demetrius now march towards Mosco, the people all the way flocking to fee their new Prince, who in twentie remoues came thither on the 19. of lune, and entred with Demetrius compompous procession of Souldiers & Priests, the Russian Priests having Banners with the Pictures meth to Moles, his pompous of the bleffed Virgin and their Tutclare Saint Nicolas, in the end of al the Patriarch, and after him entrance. Demetrius by himlel'e on a white Palfray with a gallant trayne of attendants. Thus hee goeth to the Temple of our Ladie, and after Prayers, from thence to Saint Michaels Church in which his Father lay buried, and hearing that Boris lay there interred, he presently commanded his body to be taken up and to be removed to a meaner Chappell without the Citie. Paffing by Boris

his peculiar House, he could not endure the fight, but fent workemen prefently to race the lame; faying, they were infamous with Sorceries, and that an image was faid to be placed under the ground, holding in the hand a burning Lampe, having vnderneath ftore of Gunpouder buried : things to dispoted, that the Ovle failing, and the Lampe breaking, the fire should shad it not beene before spied and removed) blow vp that, and the houses adioyning. Thus had Boris impea-

ched him, and he now Boris of Magicail arts, which are vival acculations in those parts. Thence he went to the Imperiall Pallace, and beganne to governe the Empire, more inclining Poles advan-

to the Poles and forreiners, then to the Ruffes; which votimely expressing himselfe, hastned his cod ruine. Seventie nuble Families of Born his kin red or faction were exiled, that their Goods micht be hared among t ftrangers, and new Colonies of men planted, brought into Ruffia, His clemency was remarkable to Sunky, who being condemned for not onely refusing to acknow- Clementic to ledge this Emperour, but vttering allo reproachfull speeches of him (as being of bale Parentage, and one which had conspired with the Poles to ouerthrow the Russian Temples, & Nobility) and now his prayers ended, and the fatall ftroake on his knees expected, on the feauenth of July, by vnexpected mercy, even then received his pardon. The last which yeelded to him were the Plescouites. Some tell of exceeding Treasures also which hee found laid up for other purposes, so which through his profulenelle foone vanished. The first of September, was defigned to his in-

fes it was haltned, and his Mother was fent for out of a Monasterie (into which Boris had thrust her) far e from the Court. An honorable Conuoy was herein employed, and himielfe with Refres robin great hew of Pietie went to meet her, embraced her with teares, and bare-headed, on foot, at- Moihet. tended her Chariot to the Castle; whence afterwards she removed with her women into a Monaftene where the Noblest Virgins and Widdowes of Ruffia vie to fequetter themselves from the World. His Mother was noted to answere with like affection to him, whether true or d ffembled on both parts. At his entrance to the Kingdome, after Ceremonies ended, Nicolas Cnermacourus a Ieluite made him a goodly Oration : the like was done by the Senate. To the Ie- leftits,

appuration (being New yeeres day to the Ruffer, as sometimes to the lowes) but for other cau-

60 fuits was alotted a faire place of entertaynment not far from the Caffle, wherein to observe the Romile Rites and Holies : and even then by their meanes he had declared himselfe in that point, but for feare of Suiskie hee stayed till fitter oportunitie.

Having thus letled things, his care was to recompence the Poles, to enter league with that Na. Emb. fligt to tion, and to confummate the Marriage. For which purpose hee fent three hundred Horfemen Poland.

with

with Athanasius the Treasurer, who in November came to Crassus, had audience of King Sigifmund, where he with all thankfulneffe acknowledged the Kings forwardneffe with his No. bles to recouer his right, whereto God had given answerable successe beyond expectation; that bles to recome may; it; whereto the may guest and where meeting only one expectation; that he deploted the Turkely inclone is in Hamps and other parts it. vindicate which, he would willingly joyne with the Pale, and other Christian Princer: meane whiles hee was willing to make an enertlafting league with him, and to that end entreated his good leave to take write himfelte a Wife out of Poland, namely, Anna Maria, the Daughter of George Miccinfie the Palatine of Sendomir, to whom for money, men, and endangering of his owne lite, bee was so much engaged. The eight day after, the Contract was folemnely made by the Cardinall, Bishop of Cregaged. In engine usy areas, and course, and the Embaff alour with her Parents featled by the King. Demetrius had fent her and to

Thus farre have wee followed Thuanus, and hee lacobus Margaresus a French Captayne of Demetrius guard of Partifant, which published a Booke hereof. Now let vs present you a little English Intelligence touching this Demetrous and his respect to men of our Nation in those parts, and first his Letter to Sir John Mericke.

The Copie of a Letter sent from the Emperor DEMETRY EVANOWICH, otherwife called GRISHCOOTREAPY OV: the which Letter was sent to Master IOHN MERRICK Agent, out of the Campe, as Master MERRICK was ta-29 king his Iournie to the Sea fide, the eighth of Iune, Anno 1605.

TRom the great Lord Emperour and great Duke Demetry Evanowich of all Ruffia. To the Eng-I lith Marchant John Merrick, wee give to understand, that by the init indgement of God and bis Strong power, we are raised to our Fathers throne of Vladedmer, Mosko, and of all the Empire of Rus-12; as great Duke and fole commander: likewife we calling to memorie the love and amitie of our Fa-114, as great time and one commonant: energy is recamp to commerce use time and amoust of our ta-ther the great timed improves and great Duke from I all Williams for fall Ruffin, and our Brother Theo-der Eusnowich of all Ruffin which was bild, and kept by them and other great Christian Princes, the GOE ELIMONICA of an KUMLA PORCE OF AN ESCA, AMACEN OF INTO MORN OWNERS FOR A CITIZENE PTIME F. THE CE, IN the fame forme and manne does we kinemife intend, and pumples to hold and keep. Lone and amine: but spe-cially, and about all others, doe we intend to fend and to have love and frendly with your King Imms, 10 and all you his English Merchants, we will fauour more then before. Further, as soone as this our Letter and allyon out Eligetti reteriorative or minimum and allowed the the hipping large of Michael the Cart of Such and the Archangell, then to come up to Molco to behold our Maisties prefere. And for your post Hosfe I have commanded shall be given you; and at your comming to Mosco, then to make your appearance in our Chancery, to our Secretarie Ofanasy Vlassou. Written in our Maiesties Campe at Tooly, in the yeare of the world Anno season thousand one bundred and thirteene.

The Copie of the translation of a Passe given to Master I o HN MERRICK, which was given him in the time of his being in the Campe at Molodone with the Emperour DEMETRY EVANOWICH, otherwise called GRISHCO OTREAPYOVE.

Rom the great Lord Emperour and great Dince Demetry Buanowish of all Russia, from Mosco to our Cities and Cailles, as also to the Caille of Archangell at the Shipping place and haven to our Generals, Secretaries, and all other our Officers, &c.

There did mare suite unto us the English Marchant Iohn Merricke and his Company, that we would gratific them to be suffered to passe to the new Castle of Archangell, or to the Sipping place or hanen, in regard of trafficke of Merchandise.

Also, that if he doe send home any of his fellowes and servants from the shipping place, being of the English, that then they might be suffered to paffe into England. Alfo that to what seme Citie of ours the English Marchant lohn Mericke, and his fellowes, doth or shall come unto ; then all yee our Generals, Secretaries, and oll other our Officers, shall suffer them to passe enery where, without all delay. And as for our Cutiomes, as far paling by or for bead mony, our cutiome of goods, you hall not take any of them nor of their fermants. Likewife, when the English Merchants John Merricke mit bis fellowes and servants, Shall come to the Castle of Archangell, then Timophey Matphe wich Lazaroue, and our Secretary Rohmaneum Mocaryoue J, Voronoue, at the forefaid Cafile of Archangell, [hall suffer and permit the English Merchant, John and his companie to trade freely. Moreover, when at the stopping place they have ended and finished their Markets, and that then the faid Iohn Metricke Shall defire to 50 Send into England any of his fellowes or servants with goods, then likewise they shall be suffered to passe. But Rulls pergle, and about the integer of McGoldhalm to fufficied to pall further that if lohn Mer-Ticke with but fillowes and fernants doe not goe for England: but after them that worked doe purpose to come backe againe to Moloo; that then at the Castle of Archangel Timophey Matphewich

Lazaroue, and our Secretarie Rohmaneeu Voronaue; at alfo at all other our Castels and Cities, our Generals, Secretaries, and all other our Officers Shall let paffe the English Merchant John Merricke with his fellowes and fernants, without all flay or hinderance, and as for customs of them, their goods, or their fermants, there fhall not be any taken.

And after the Reading of this our Letter and Paffe, you Shall keepe the Copie of & by you : but this you hall deliner backe againe to the faid Iohn, and his companie. Written at our Campe at Molodone the yeare from the beginning of the World 7113, the eighteenth of Tune.

The last of July 1605. at Archangell.

- The Copie of the translation of a Commission that was sent from the Moske, from the Emperour DEMETRY EVANOWICH, alias GRYSHCA OTREAPYOVE by & Courrier named GAVARTLA SAMOTLOWICH SALMANOVE, who was fent downeto the Castle of Archangell, to Sir THOMAS SMITH, then Lord Embaffadour : as followeth.
- The great Lard Emperour, and great Duke Demetry Euanowich of all Russia, bath commanded Gauarcela Samoylowich Salmanoue, to goe to Vologita, and from Vologita to the new Casile of Archangell, or where seems to shall emersake the English Andassadars Sir Thomas Smith. Also when he bath ourrooke the Ambassadour, then Gauarcele shall send the Ambassadour his Interpreter Ri-chard Finch, willing him to certific unto the Ambassadour, that the great Lord Emperour and great Dute Demetry Evanowich, fole commander of Ruffia, bath fent unto him one of bis Courtiers, in regard of bis Maissies affaires: and after some two boures respite, Gauarcela himselfe shall ride to the Ambassadour, and deliner onto bim bis Maissies speechet, as soloweth.
- He great Lord Emperour and great Duke Demetry Evanowich of all Russia, and of many King. domes Lord and commander, Hath commanded thee, Thomas the English Ambassadour, to certific voto lames, King of England, Scotland, France and Ireland, that by the init indgement of God. certific two lattice, and y interesting southern statement and the state of the sta norie the fending, love and amistic betwixt our Father, the great Lord and Emperour, and great Duke Evan Valily wich of all Russia, of famous memorie: as also our Brother, the great Lord and Emperour and oreat Duke Feoder Euanowich of all Ruffia, fole commander, with their fister Elizabeth, Queene of England : in the like manner doe we purpose to bane sendings, and to be in low with your Lord King
- 40 lames, and more then bath bin in former time. And in token of our faid lone and amitte, we doe intend to favour all bis subjects in our Land, and to give vinto them freer libertie then they have had heretofore: and you his Ambasadour, we have commanded to dispatch without all delay or bundrance. Therefore we would have you to make knowne unto your Lord King lames,our Maiesties lone. And as some as God shall grant the time of our Coronation to be finished, and that we are crowned with the Emperiall crowne of our predecessours, according to ourmanner and worthinesse; then we the great Lard Emperor, and great Dube Demeetry Evanowich of all Ruffia fole Commander, will fend our mellenger to falute each other. according to the former manner. And concerning those Letters which were fent by you from Bostis Godenoue, we would have you deliner them backe againe to our Courtier Gauarcela, and after the delimerie of our freeches to returne him to the Emperour, under written by the Chancellour Ofanaly Euanowich Vialeou.

The Copie of the Translation of a new Priviledge that was given to the Company, by the Emperour DEMEETRY EVANOWICH, otherwise called GRYSHCA OTREAPY OVE, the which Priviledge was fent into England over-land by OLYVER LYS SET Marchant, and servant to the foresaid Company.

> OD, the Trenitie, before, and without the beginning, the Father, the Sonne, and the boly Ghoft Destablish us to hold and keeps our Scepter and Realme for the good of our Land, and the bappinesso of our people. Wee the resplendant and manifest, and not the miserable upholder, but sole commander, the great Duke Demetry Eurnowich, by the mercy of God, Cafar and great Duke of Rusha, and of all the Empire of Tartaria, and many other Kinodomes; as also of the great Monarchie of Moico. Lord Emperour and Commander, Have bestowed, and gratisted unto the English Merchants, viz. Sir

Thomas Smith, Knight, Sw Iohn Spencer, Knight, Sir Humfrey Wild, Knight, Robert Doue, Robert Chamberline, William Garaway, Iohn Haruey, Richard Stapers, Iohn Merricke, Richard Wryght, Richard Cocks, Thomas Farrington, Richard Wych, George Bowles. Bartholomew Barnes, Richard Bowldra, John Caften, Edward Chery, Thomas, the fonne of Alexander alias Hicks:we bane given them free liberty to come with their loops into our Realme and Dominson, and to the Country of Dwina, or to the Califle of Archangel, and to Colmogro, with all maner of commodities, and to trade freely, as also to come from the sea side by land or by mater, to our great dominion and Casiats (in) of Mosco, & great Nouogrod and Vobsko, and all other cities within our dominions, to trade with all manner of commodities, in the same forme and manner, su heretofore was bestowed on the English Merchants, in the time of our father of famous memory, the great Lord and Cafar, and great Duke Eun 10 Vaffilywich of all Ruffia, fole Commander, and as was granted unto them in the time of our Brother the great Duke Theodor Enanowich of all Ruffin fole Commander. And as for custome of their goods, or for passing by, as also for the custome of their boates, or for Head-money, or for going our bridges or Fer-Tes, or for entrie of goods, As also all manner of Custome what soener, we command shall not bee taken of them : Alfo the English Merchants shall not bring nor fell other mens goods in our Dominion, at their owne : neither shall our Subjects buy, or sell, or traff-que for. Also our Subjects pawnes they shall not keep by them, nor fend others about the Cities to buy goods: but what Cities they come into themselmes they fault rafficke and fell their owne commodities, and buy R. Ac commodities freely: And when they come into our Dominion of great Nouogrod and Vobsko, or to any other Cities within our Realme totre ficke with their goods, and that after the market is past, they field bee defirous to paffe for Mulco, or for Eng. 10 Land, then our Gentlemen and Concruours, and all people shall according to this our Castats Letter, let them passe without delay, and as for Customes for them and their goods they shall not take any. And whither foener they paffe with their goods, without buying any commodities, or felling their owne; Then thereofe in those Cities they shall passe, and not take of them any manner of Custome what sever as before: theory on toole that toog load pale, and not sake of them may menner of Unitoms now your and offers adjoint English Meccount foul traffice as fallworth. They final however their owns goods, by the solid Salectath by the Packe, and by the Clother: Damaske and Velust not by the preceding the attember of by resaile and retaile weights they hall not barter or fell. Alfo goods, which is foldby meight, by retaile, or by the 2 clotnicke they hall likew fe not fell. And Claret wine they hall fell by the piece, but by retaile, as by the Vender stop, or Pot and Charck they Shall not fell. Likewise they Shall buy and sell, and barrer their goods themselves : but the Russe Merchant shall not fell nor barter their goods for them ; neither 10 [ball they carry other ment goods in colour of their owne, not to any place what soener. Also if the English Merchants beeminded to make sue of their commodities at Colmogro, or on the Dwing, or at Vologda, or at Yeraslaue, then they shall doe st freely. And for their said goods in all our Cities within our Realme, our Genslemen and Governors, and all manner of our Officers shall not of them take any Tole or custome, according to this our Cafars Letter of Fanor. And in all our Cities within our dominion they Shall byre Carryers Boats, and men to row them freely as before. And as the order is of the Merchants within our Realme : fo likewife if the English Morchants be destrous to goe out of our Realme, into any when on scame, is necessify to engine exercises or university upon my our scame, into any other Kingdome, or into them owned (many) at all fifthey be defined in our Realme to the may state ple commoditie, and to early it into their owne Land, then shall they likensife by and traffices freely at pleasure, and those Staple commodutes which are fitting for our Calars Treasure, they hall like wife bring 40 pragners, com tony singer community more arranged by the management of the management of the second section is a second real section and the Critics, see Officers, fall not take any measure of Culteme: but they shall suffer them to pass without any shainey the management of the second section see that they shall suffer them to pass without any shainey to the Alfo when the English Merchants have ended their market, and shall defire to goe from the Mosco, then they shall appeare in the Embasadours Office, to our Chancellour and Secretarie Evan Cowrbathere to your appears as we save you not you have no constituted and unterstance that Constitute to the Handleton, Moreover, if that he to providence of God, the English Merchant besse any forwards, and that the faul foop be brough or dissent on my place within our Realise, thin our Celtine. mandament to tolof places where the ship is brought in, that our men in office dee feet out the English
Marchants goods will, and to give them to the English people that shall bee at that time in our Land.
But if at that time there bee none of them in our Realme, then to gather them together, and to lay them up in one place : and fo when the English Merchants doe come there, by our Cafars Order, to deliver 50 those goods to the said Merchants. And whereas the English Merchants according to their former Letters of Fanor had a honfe in the Molco by the Church of the holy Maxim by the market, which was granted unto them by our predecessour the great Lord and Cafar of Reffia, the faid English Merchants Shall dwell in the fard boufe as beretofore they have done: Keeping one boufe-keeper a Rulle, or one of their owne fir angers, but any other Russes they shall not keepe. Moreover the faid English Merchants baue bouses in other Cities, a bouse at Yerallaue, a bouse at Volugila, a bouse at Colmogro, and a bouse at the hipping place at the Castle of the Archangell : and those boufes they hall keepe and hold by them, according to our Calars Fanour or Gratitude, as in former time they base done, and for any subsidie, vent dutie, or any custome what seuer for the said houses there shall not be any taken of them: and their other boufes, as at Yerallaue, Vologda, Colmogro and Archangell, they foall have boufe-kerpers of 60 their owne countrie-men or Ruffes, but the Ruffes fall bec meane men, a man or two at aboufe: And they Shall lay their goods in those houses, and likewise Shall make sale of their goods out of their houses, to whom they will, according to this our Calars Letter of Fanour, and their house-keepers being Ruffes Shall not buy or fell any manner of commodities in their absence. Also they shall come with their ships to

the Shipping place, as before with their Commodities, and to unlade out of the Shippe their goods; and to lade their hippe with Ruffe goods with their swine bired labourers , as alfo to carry their owne goods oner in their owne Boats and Veffels, to their owne boufe at the Cafile of Archangell. And what former goods ther have, our chiefe Customer, and Officert, and Sworne men, Shall take a note of the goods under their owne firme, both of goods they bring in, and alfo of goods they carry out. Burshey |ball not looke over. neither unpacke their packes in any place; as also they hall suffer them to passe and places, without all flay or delay, according to this our Critats primitedge and Latter of famous. Alfo whenfemer the English Merchants fhall be defirom to fend out of our Realme into their owne Land any of their ferments. ouerland, or into other Kingdomes, then they final the role foud their people overland with our Cactars or-go der freely, has instruct carying any Commodistes, and their paffe final be given them in the Embaffadours office Emitter concerning any matter of contronerfie that any man fall have to doe with them either in barcaining, or in iminer, according to this our Calars order they fhall be indged by our Counfelon and Soereter E an Cowroaton Hramoteeu . Therefore, as before, whereformer they, or any of their farments, in all our Banlone, in what Civie foener, have any matter of controverfie in Bargaining, or in Inverse a. gamft any man, or that any man bane any matter against any of them, then mall our Cities, our Gentles gamps any man, or true and all other our Officers, Shall undge them, doing inflice between enter of them men, and Gonemours, and all other our Officers, Shall undge them, doing inflice between enters with equitie and truth. This primitedge or letter of fanour was given at our Calars Pallace of Molco. 20 From the world Anno 7113 in the moneth of December.

The Copie of the Translation of a Contract, made by the Emperour DEMETAY EVAN OWICH, otherwise called GRYSHCAOTE AFY OVE, and the daughter of the Palatine SENDAMERSKO, chiefe Generall of Poland, in the time of DEMETRY his being in Poland, the which was sent ouer by Master Io HN MERRICE, and translated out of Ruffeinto English for the Kings Maieftic, as followeth.

A True Translation of a writing out of Polish into Russe, given by a Monke who left his babit, called by the name of Gryshea Octrapyous, supposed to bethe Son of the Emperour Evan Vassiliwich, named Demeetry Eusnowich, who gane this affirence under his firme, to the Palatine Sendamersko, at alfo buth beene anouched by one Bewcheesko, principal Secretary unto the faid Derbetry before all the Nobilitie of Russia that this faid writing was written by the Generall his owne band, as

Wee Demetry Euanowich, by the mercy of God, Prince of all Ruffia; of Owgleets Demetry. uskoy, and Lord of all the Empire of Molco, and being of the Stocke of Prestrone; Calling to memorie our former life ; being not in that forme and manner, as is in other great Monarchies, as was in the time 40 of our Predecessions, and other Christian people. Neueribelesse, by the providence of Jed aimightnes from whom proceeds to a beginning and an end, and from whom comments life and death. We have by howespied whom proceedits a sequency one as each grow women commerce is a weak water. I want to a seal made choicy with our own fall fig. with good living, in the time of me being in the Kingdome of Pclush for Companies, of great and bowerable brits, and of gody education, and is fash a companies, with views we for the final by the meters of God, line paracasis; which is the refferents and Neghel Lady Matina, daughter to the great Palatine Sendemersko . And upon this occasion bane taken him for our Father, and baning requested of him to give vato ve his Daughter Maryna in mariage, and in regard that wee are not yet in our owne Kingdome, therefore doe we purpose bereafter to take order for her comming unto us with the Generall Sendamersko. Likewise, when I doe came to line in my owne Kingdome, then shall the Palatine Serdamersko remember bis fanhfull and true promofe with his Daughter, the Lady Marypa her vow, my felfe remembring my owne vow, and fo both of veto hold it faithfully with love and affection

30 on, and to shat end doe we binde our felues by any writings. Likewife, first and principally, in the name of the boly Trintie. I doe give my faithfull and true princely promife, that I will take in marriage the Lady Maryma. If an the contrary, I doe not , then, I wish that I might give this as a curse upon my felse: alfo to foone as I fhall make entrance into our Kingdome, and herstage of Musco, then will I give the Palatine, the Lord ber Father, aremard of tenne thousand peeces of Polith gold. And to the Lord Maryna our wife, in confideration of ber great and long lourney, as also for the providing and furnish, and make a ing of ber felfe, I will give out of my Treasure Veluets wrought with Silver and Gold. And the Melfengers that shall be sent to me from the Lord her Father, or from the Ludy her selfe. I shall not hald or keepe, but shall let them passe, and will reward them with gifts, which shall be a token of our Princely fai-60 Mont; and thereunto doe we give this our Princely promuso. Secondly as some as we shall come to the Imperiall throne of our Father, then prefently will we fend our Embassadour to the resplendant King of Po-

commentari.

hand writing, and to comme to the property of the Rolle people to the Latine Religi. 20 in this Bill to hold and keepe carefully: as alfothat I hall bring all the Rolle people to the Latine Religi. 20

this lingring journey, they continued from the end of Jandary to the fixe and twentieth of A.

or courters and records, accessed the open as a second of the second of

definited operation with the calibered Polanders to the borders, whereaster committee many without her; is turned with the calibered Polanders to the borders, whereaster committee many out riggers to the greater discontent of the Ruffer. Many of them found greateness not withleading, in his to 40 much respect to the Poles and many made qualities of his birth. Many were suffered of con-Spiracie, and divers tortured, which was but quersching fire with Oyle, the flame growing greater. And now beganne Dometrine torepent of his haftie difmiffing his guards, and began a new Check-roll of Lieflanders and Gormanes, to which hee added at hundred English Halbers * I suppose diers and as many Sents (their Captaynes hee calleth Mathias Conssessand * Affert Lant) this should bee and an hundred French under laques Margiret armed with Partifant. Then also he inlarged his Alexander Gofenshie Corninus was fent Embaffadour from Poland with rich Prefents and Let-

this fore [aid as appeareth:

ten he rd of in ters from King Sigifmand to Dementer, which because they expressed not the Title of Emperous commentaries o shele afe faires which

that place of were not received nor opened. In excuse whereof the Embassiadom vied words insufficially femile, which Ruffien patience, that he should goe and deprive the great Tarke of those Tirkes. Demerring dif. 50 fembled not with flanding, in regard of his past experience, and hoped bedpes from the Pole. The dayes tollowing were spent in pastimes and sloth. Saturday was solemne to the Roffins; a Yeast then happening which they preferre before Eafter. The Emperour and Empresse fate clowned in the Hall, and made a great Feaft to their owne and to ftrangers ; in which the Fole Embaffafought to little dour refused to be prefent, except he might fit at the Princes Table , as the Millian Embussadour purpole in our Merchants had beene honoured at Cruconia. The Ruffes denied ftiffely , but Demerius at length yeelded. Many peremptoric and licentious passages happened, the Palet carrying themselves domineeringly to the Russes, as Victors to the conquered. Demerring at first over-bold, now beganne to feare, ty to the Ruffer, as y locals to bee warie, and fene for all his guards. On Friday, the Ruffer preparing 60 for offence, and the Poles for their defence (for they and not the Prince, feemed to bee then in danger) in the Euening the Nobles command the people to arme against the next day. The Empreile was this while fecure, and made ready a magnificent Feaft against Sunday. But on Satur-Blondie day. day (the fixteenth of the Kalends of June) the Confpirators affemble early, and a great cry is

rayled to kill the Poles and Demerries. Some greedie of spoyle runne presently to the Poles Lodgings, assault them and embreyle all with slaughters. Others runne to the Castle. Few of the guard were there, delay having bred fecuritie in Demetrins, nor were any of their Captaynes feene. Marearet then lay ficke as he after told me (Thuanns) which difeafe faued his life. Things were done with fuch furie and coleritie, that many Ruffes in Polab attise were flaine before they

were knowne. Peter Balman came running forth halfe naked, & was killed by one of his own feruants. Snirkie P. Balman flain. their Leader, carrying a Sword in one hand, a Croffe in the other, caused the great Bel to be rung in token of fire that Demetrias might be raifed & come forth of his Parlor. He awakned with the 10 noyfe, now feeing a greater danger then fire, taketh a Turkifb Sword, and fuddenly flips downe

out of a window, breaking his legge with the fall, whereby he was eafily taken by the people, and by Smirkers command carried into the greater Hall, where Embassadours have audience. ken and flaine: There some vpbrayding his impostures, he with his sword layd one on the ground : and then defired the Nobilitie to permit him to speake to the people, which was denyed. Some say that he obtayned of Sninker, that he might be tryed by the testimonic of Vasilowich his Wife; which being brought out of the Nunnery, affirmed before the Nobles on her oath, that her Sonne Demetring was many veeres before murthered by Boris his perfidies, which she at first freing the peoples fauour, and suft reuenge on Boris, willingly diffembled, whereupon they ranne vpon him, and with many wounds flue him. Thus writeth Peter Paterfon of Vofal which then was in Contumelious 20 Ruffia. When they had slaine him, they thrust a rope thorow his secret parts, and drew him tage.

thorow the myre into the Market place, where he remayned foure dayes lying all gorie and myrie on a boord, with Peter Basman vnder it, and an vely Vizar ouer it, a Bag-pipe in his mouth, with other lascinious cruelties exercised on his dead body.

The Palatine Sendomir (or Sandamershe) was blocked up in his House, and other Poles Hou- Poles flaine; fes rifled, many of which died not vareuenged, howfoeuer by numbers ouercomne. Viteneskie after much flaughter of the affayling Ruffes, when he faw Ordnance brought, fet forth a white flagge in token of yeelding, bidding his Servants caft abroad his money; which whiles the people were gathering, he and his made way with their Swords with great flaughter, & yeelded to the Beier ens which came from the Castle. The miserable Bride was not only spoyled of in- The Ottenes. estimable Treasure, but of all her Apparell, and Iewels, carefull only of her Father and Vncle, 30 and chinking it a happy purchase, if the might saue her hie and recour her Country. Meane-

while, without her Garment to couer her, without Bed to lye on, without securitie of life, shee while we respected in poore Weels the iffue of the peoples furie,

Many Merchants endured like fates. Ambrofe Cellar, befides the loffe of thirtie, thousand Merchants

Crownes, loft his life, Lanies Win was with his own Sword beheaded: Nathan loft one hundred footled. and fiftie thousand Florens: Nicolas Limborough fiftie thousand. Two of Anthone had lent two hundred thouland Crownes to Demetrius, which now was not to pay them. Marcellius loft an Rulles flaine. hundred thousand Florens. Twelve hundred Poles loft their lives; many were faced by the Boise rens. Foure hundred Ruffes were flayne. At night the tumult ceafed. Scarfly would the peo-40 ple giue leaue to bury the bodies after three dayes wallowing in the durt, in the Germant Church-yard.

After this tempest was calmed, the Boissens affembled in counsell about a new Election. where Smiskey made speech to them, professing himselfe forrowfull for that had paffed, in the execution of a just zeale to the Imperiall Family and his Countrey, and in hatred of a cruell Swifty speech. Tyrant: that Inan Vafilowich, how ever injuriously taxed by some, had left Kingdomes annexed to his Inheritance as Monuments of his great spirit; by whom he had beene fent to Stephen King of Poland to treate of peace, and ever fince had so carried himselfe in the State, that none could justly blame him : that Iohn being dead, Theodore succeeded, but another ruled, who murthered the yonger brother, and as was thought, after that poyfoned the other; fo attayning the Empire,

which how miserable was it all his time? that Demetrus therefore (whosoeuer he was) found friends, himselfe amongst others, but when their Religion was endangered, Forreiners advanced. Lawes violated, Exotike fathions brought in, liberties suppressed, he with stood with the peril of his life; which it grieued him to have enjoyed, as a Theeues benefit, by his grant which had no right to take it : yet feeing their forwardnesse in a cause so just (would God it had not beene so bloudy) more regarding his Countreyes fafety then rumours and reports, hee had beene their Cantavne to doe that which God the dispofer of Kingdomes by the fuccesse had appropued, fo that now they were freed from a cruel Tyrant, nor had they any Sorcerer or Impostor to mock them : that it remayned now, feeing the Imperiall Family was extinct, they should now feeke one of nobleft bloud, of wifeft experience, of most religious zeale, who might esteeme his peo-

60 ples hearts his strongest Forts, such an one as either is, or is thought to bee the best man to become their Prince. Thus was himsefe chosen Emperour the thirteenth of the Kalends of June. He is chosen A writing was published to justifie the killing of Demetrine, a runnagate Fryer called Grifike, or Emperous. Gregorie Strepy, professed in the Monasterie in the Castle (which therefore hee would neuer enter left hee should bee knowne) with other aspertions of Herefie, Sorcerie, affectation of indu-

often flande. red : and by ill willers, bad was this Deme-

cing Popery (the Popes Letters also challenging his promife produced) to give the lefuites Temples, Colledges, and other necessaries; with other ouer-tures to the Palatine, Sardan mersko, for Smolensko, and Nonogrod; his bringing in Poles in Ruffian Roomes, his luxurie, rior. pompe, referuing Boris his Daughter in a Nunnerie with intent of inceffuous luft, hauing murthered her Mother and Brother; making a filuer Throne with fixe Lions on each fide, and other pride; abuting Nunneries to lust and lasciniousnesse, &c. But wee shall give you hereof moreauis made worfe, thenticke tellimonie then this of Thurns in Snisters Imperiall Letter to His Majestie, Meane. while touching this Demerius we will produce a few English Testimonies extracted out of their Letters and Relations: wherein if some circumstantial discrepance appeare (in things done both fo farre and fo foule in tumultuous furie, where men had rather hade themfelues then be- to come witnesses, lest whiles they would bee Spectators, they should bee forced to bee Actors. and have their parts acted in that bloudie Tragedy)it is no maruell. I produce all Witneffes I can. in a cause of so remark cable consequence, and choose rather to bee proline then negligent, that the Reader out of to much enidence may better weigh and examine the truth.

part of this intelligence I found in Ma-Occasion of Beris ill gouemment.

"He late Emperour of Russia called by the name of Demetry Emanewich, is now credibly faid (as some of them say) to have beene the Sonne of a Ruffe Gentleman, named Gregorie Penpoloy, and that in his younger yeeres he was shorne a Frier into a Monasterie : from whence her afterwards privily got away, travelled into Germanie and other Countreves, but had his moft a-Papersithe la. biding in Poland, in which time he attayned to good perfection in Armes and Military know- 10 terby confe- ledge; with other abilities of lufficiencie; Afterwards finding a conceit taken by the Ruffes of a rene, &c. Son

ble bloud. See fup in Fletcher

eight or nine thousand. And then proceeding to a new Election they chose Emperour Vasilee Enanowich Shorker, who not long before was at the Blocke to have beene beheaded, for reporting that hee had feene the true Demetry Enauerich after he was dead, and did helpe to burie him. But the Emperour did recall him, and afterwards advanced him to the chiefest place of dignitie about his person. He This might is the next of bloud I living, descended of the Race of the old Emperour Inan Vasilenich, of the berumoured: perumoured:
Others sayhee age of fiftie yeeres or thereabouts, neuer married, but kept vnder during Boris time, a Prince of 50 was not of that great wisdome, and a great fauourer of our Nation, as did specially appeare by the care heehad but of very no- to guard the English House from rishing, when the late Demetry was brought in by the Poles.

The late Pretender was o ftature low, but well fet, hard fauoured and of no prefence; howfoeuer otherwise of a Princely disposition, executing Iustice without partialitie; And not remitting the infolence even of the Poles; well feene in martiall practiles, and trayning his Noperson descri- bilitie to the Discipline of warre, to make them the readier against the Tartar, not given either to women or drinke, but very liberall and bountifull, which occasioned some grieuous Exactions Some say that to Women'to University to the same and the option of lich as knew him, not viewor-he was not like how to maintage the same and longer continued Empire, which hee lost chiefly through the greatthat he feemed neffe of his minde, supposing that none of his Subjects durft attempt any fuch matter against 60 a dozen yeeres his person, when as in the meane time the practice went on with luch a generall Conjuration, elder : but that the Ruffes were summoned by the ringing of a Bell tobee readie to enter the Court. And

mistake this for an other after Pretender calling himfelfe the fame Demetrius, &c. as after shall appeare, a deformed man.

to shake off that Government which would have made them a more noble Nation then formerly they have beene.

TT is reported by fome of Ours, that hee the rather was inclinable to our Nation in the refor & he bare to his Majestie, having read that his worthy Worke dedicated to Prince Henrie. Hee is faid also to have beene a resolute man of his hands, to have delighted in fighting with the Beare; active and ftrong. I have likewise heard that hee gave the command of his Guard confifting of strangers to Captayne Gilbert a Scot; to have made one Buchenstoy (a Learned and Reli. Captayne Gil gious Protestant) his Secretarie; and otherwise to have beene so alienated from Russian manners, Buchantes, so and so well affected to Strangers, that they compired as aforefaid. The people are faid to haue entred the Caffle (which was a quadrant, having a high bricke wall of feuen flories, and another of flone, and a Market place) with flones in their pockets (which are rare thereabours) and some Stones rare a

Some report from Captayne Gilberts Relation, that lying on his bed not long before his death (as hee thought; awake) an aged man came to him, which fight caused him to arise and Capraine Gilcome to Captayne Gilbert, and his guard that watched, but none of them had seen any thing. a Vision. Hereupon he returned to his Bed, but within an houre after he againe troubled with like appa-20 rition called, and fent for Buchinskie : telling him that he had now twice feene an aged man, who at the second comming told him, that though for his owne person he was a good Prince, yet the injustice and oppreisons of his inferiour Ministers must bee punished, and his Empire should hee taken from him. In this perplexitie his Secretarie gaue him good and holy counfell, faying till true Religion were there planted, his Officers would bee lewd, the people oppreffed, and God Almightie offended, who perhaps by that Dreame or Vision had admonished him of his dutie. The Emperour feemed much moued, and to intend that good which that Countrey was not fo happy to receiue. For a few dayes after (as that Relation auerreth) his Ruffe was not fo happy to receive. For a few dayes arer (as that retaiton auterren) nis anye Secretaric came to him with a Sword, at which the Emperour jefted, and hee fuddenly afrect Another mas-fawrie speeches assulted him, with many other Grandes of that Configuracie, and (like another net of him and the configuracies of t Take the present of the profit taken and imprisoned, the strangers murthered, the English except, who have in all changes been

well beloned of the Ruffiens; as in leed they deferue, historia alway done good fertice to the Emperiors. And their interest faued the life of that worthy man Bushingley; which they required with

much obsernance to the succeeding Emperour Suite, who comes next to be spoken of; and first

you shall have his Letter to our Gracious Souereigne.

SVISKIN the Successour his Letter to our King, describing the former DEMETRIVS bis Acts and Tragedie.

The Copie of the Translation of a Letter sent from the new Emperour. Vassily Enanowich Shoskey to the Kings Maiestie by Master Iohn Mericke.

The love and mercie of God that guideth us in the wayes of seace, we glorifie with the Trinitie.

I find him called Shesher. Suiskey, Ziska, &c, the just

Rom the great Lord Emproor and great Duke Vassily Etanowich of all Russia, fale Commender of Voludomer, Mosko, Novogred, King of Cazan and Afracan, of Syberia, Lord of Volsko, and great Duke of Smolensko, Twerskoy, Yaulurskoy, Dearmskoy, Vatakoy, Bollhankoy, and of abor: Lord and great Duke of Novogred and the Low Country, of Chemcego, Rezanskoy, Polotskoy, Rothouskoy, Yerelladeskoy, Beallozerskoy, Leeflanskoy, Owdorskoy, Obdorskoy, Condinskoy, and Commander of all the North parts : alfo Lord of the Land of Ecuerskoy , Cattalinskoy , and over the Empire of the Got . gians of the Land of Cabardinskoy, and Echarskoy Land, likewife of many other Lordings Lord

To our belowed Brother James King of England, Scotland, France, and Ireland, Weegine to una derst and that Sigismund King of Poland, and great Duke of Letto, on Anno 7109 and Vind unto the late Emperous Boris, but Embelladon's munch Lewis Sapengo, being Chanceton of the givent Duke-demo of Poland, requisiting the full Empresses Boris , that the former league and pears made of concluded upon by the great Lord Emperour and great Dake Theodore Euanowich of all Ruffia, and

League with

bim Sigismond King of Poland, might be stedfastly bolden and continued till the time of that league were expired. As also that the Emperour Botts would inlarge the Said league for thirtie yeeres more. whereupon the Emperour Boris reelded thus farre unto the request of the King of Poland, that he would continue the old league till the full time were expired, and affent to a new league for twentie yeares more; and to that effect be tooke an Oath, to hold and keepe all the contents fastbfully, mentioned in the fuld Writing, touching the same league: and instead of the King of Poland, bus Emballadom Lewis. Sapeagor was sworne in the presence of the Emperour Boris. And after the Polish Embassadour was departed from the Mosko, the Emperour Boris fent unto Sigifmund King of Poland his Embellaasparted promotion recognises. Comperior to the state of the principle of the Princip Constitution of the Princip Council, called Michael Cleabowth Sallteccouse, with home others to end and finish the afterfaid chapter, to the which league the King of Poland homefree man from me in the 10 preferes of the Emperours Embassadam to build and keepe the said league saidfully, according to the teyour of their Writing.

But not long after Sigilmund King of Poland, with one Pauarade, entred into fuch a practife, as be therein fall fied his Oath, and made way to the shedding of much Christian blond : First, by retaying gainst the pre- and upholding one Gryshca Otreapyoue, a Runnagate, a Coniurer, and one that left his profession being a Monke, and ran away out of Rusta into Poland; and being come this ber, tooke upon him to be the Son of the ereat Emperour Euan Vaffilawich of famous memorie, and by name Demetry Euanowich: when as it was well knowne in our Kingdome, that before be was storne a Monke, bewas commonly called Yowihoo, Son to one Bowghdan Otreapyoue, dwelling at a place called Galitts: and when bee had committed much villanie, to sawe his life be shoare himselfe a Frier, and so runne from one Monasterie 20

A Frier. Magician,

to another, and lastly, came into a Monasterie called Chowdo, where bee was made one of the Clearkes being so placed there by the Patriarke of Mosko bimselfe: But be did not leane off his former life; for be continued fill in his most Devillesh altions, as be did before be was soone, committing villary, for saking God and falling to the fludie of the Blacke Arce, and to many fuch like enils he was inclined. Also there was found by him a Writing which showed how he was falne from God, and the same was made well knowne to the boly Patriarch of Mosko, and of all Rulla, and to the Metropolitanes, Archbilhops, and Bilhops,

and to all the holy Cleargie: whereupon the faid Rulers of our true Christian Faith, which is from the Greete Church Grecian Law, for these his most ungodly works, consulted to fend him to perpetual Prison , there to end his life. Whereupon this notorious Instrument of Satan, perceising this bis ouerthrow, and that his vile pra-Flight to Letto. Elifes were disconcred, ran away out of the Kingdome of Mosko, beyond the borders, and into Letto to a 30 place called Keevene : thus according to the Deuils instructing of him, as one for faken of God, be made

place collect necycus: tous according or one scenario superscripty own, no one projection of voice made this bis doing manifolify human to all people Jeaung off bis Mank: Habit, and mishall by the compilland addition of our Teamine the Polish King, and one off bis Polistines named Sandamersko Kourza, manifoli Duke Constantine, and Duke Velhamerskoy and bis Brethren with other Polish Lords that were of bis Councell, began to call him the Son of the great Lord, Emperour and great Duke Euan Vaffily wich,

by name Prince Demetry of Owelitts. As also by his villanous treacherie and the Denills persuading of him, he made much trouble in our Land, by sending abroad many of his intissing and provoking Letters, to divers places upon the borders of our Country: that is, to a place called Done, and to the Volgoe, to our Cossiacks and Souldiers, na-

ming him felfe to be the Prince Demetry of Owglitts. Moreoner, there came to our Kingdome of 40 Mosko many Polish Spies, which brought and differ ed Libel's bothin (itie and Townes, and in the high-wayes, practifing to rayle diffention in the Kingdome of Mosko. Alfo it is well knowne, not only to them in the Empire of Mosko, but likewife in other Kingdomes, that the great Lord Emperour, and great Duke Evan Vallily wich of famous memory, had a Some called by the name of Prince Demetry, and after his Fathers decease, there was given unto him and his Mother the Cuie of Owelitts. But in the recre 7095, being in the Reigns of the great Lord, Emperour and great Duke Theodote Euanowich of all Russia, this foresaid Demetry was murthered by the order and appointment of Boris Godenoue. And at his Funerall was his Mother now called the Empresse Martha, withher owne Bre-

Demetra af

Buriall.

thren by name Michaila and Greegory the Sonnes of Theodore Nahouo. Likewife to bis burying, there was fent from the Mosko Metropolitanes, and Archimandreets, and Abbots: and the oreas Lord Emperour, and great Duke Theodore Euanowich fent to his Funerall many Nobles and Courtiers of the Land which (aw him buried in the chiefest and principall (bureh of Owelists, Moreoner. Martha the Dutches and Empresse his Mother is yet living , and many of ber Brothers and Vnckles, which doe at this present time serve vs the great Lord Emperour, and great Duke Vassily Etianowich. of all Ruffia fole Commander: Likewife in thefe last yeeres past, as in Anno 7111. and in Anno 7112. and 7112. concerning that forefaid Traytour and Hereticke, the forfaken of God Gryfhca Otreapyoue, many of our Gentlemen, Captagnes and others our Officers did many times write from the North parts of the borders of our Kingdome into Poland and Letto, and to others their inferiour Cities, to the

Rulers and Governmers of the same; as also our spirituall people: the Patriarke, the Metropolitans, Archbifospi, and Bifosps wrote unto the fristnall people of Poland, declaring unto them what that Heretick 60 Lettetsto Ps- and Traytor was, the wife from whence be came and what manner of per son he was at also of his demea-land.

nour, and the wife of the occasion why her runne away to them out of the Land, at also the manner of the making away of the Prince Demetry, and withall requested the Rulers and Spiritual people of Poland, that they knowing what Runnagate this was , would not give credit wato him, nor to make a breach of the late le aque concluded upon.

CHAP.9. S.4. Ruffe ftory of Demetrius in Suiskys letter to King Tames. 767

But the Gouernours of the Dukedome of Poland and Letto, as also the frintual men . according to the King of Poland bu com nandment, game no credit unto our writings, but began, more then before to intice and persuade men to uphold the Traiter, and to aide him. Merconer, to make trouble and differtion in our Land, they tooke this for faken of God, Greelica unto them, and cald him by the name of Prince Demotry of Owglis: likewife the King gaue unto him a chaine of gold, with many Palificaldes. thousand peeces of Polish gold, to the defraying of bis charges; as also sent in armes to our borders with one of bus Lords, the Palatme Sendamers ko, and another of his chiefest Lords, with man trooper of Poles. But when the Emperour Boris understood bow that this Gryinca Ocreapyoue was called, by the name of Prince Demetry Euanowich of Owglits, and withall, that they did aide and below bim

againfithe Kingdome of Rullin: he could bis Compell to fend a melfenger, at from themselver, to the Sweening lent.

10 Polith Lord Panameterada, which Melfenger was named Smeetnay Otreapyone, being Vachleso the feid Gryfhea Otreopyoue being the Son of one lamateen Otrepayou, onely to declare unto them what this Grylhea was; but that Polith Lord Panameerada would not fuffer him, and his Unchlo to be brought face to face. But be made answer to the faid Messenger Smeetnay that they did not aide bins.

neither did they stand for him in any fort. So after be had feat away the Meffenger Smeetnay, the Kong of Poland, and the Lord Panameerada did aide Grythca Otreapy out with men and treasuremore liberally then before, purposing to make great firife and trouble, and to feed much bloud in the Kingdome of Mosco. Alfo at the fame time Sigreat just on a some to make ports more oversoon for temporary source. Expense part time starting affording the great part time starting affording the great part time starting asserting the Kingdome of Mosko; and crim Tatur, text ; and to that end be flouid and Cry flow with bis forces, against the Kingdome of Mosko; and crim Tatur, text ; and to the text of the confideration, did promifer a gime unio the forefaid Crim. Frince, what he would demand. Then

the Emperon: Bois understanding what praitifes were in band, being altogether contrary to the laque; thereupon purposit be sent to Sigitmund King of Poland, another Speciali Messenger, one named Polsweensyn property the swelf at the same time, the body Parriarke of Molco, and all Rushi, with the Me-nicke Agarcous; the welf at the same time, the body Parriarke of Molco, and all Rushi, with the Me-tropolitans, artebishops, and Bishops, with all the rest of the body Ciergie, sont their Messengers with Another Mcc Letters to the State of Poland, and fo the great Dubedome of Letto, to the Archbolhops, and Bahops, lenger, and to all the Spiritualite. Moreover, in the faid Letters, the Emperour Botis with the Patriarke, and all the boly affembly, wrote unto the Lord Panameerada concerning Grythca, making it knowne unto them what be was, and wherefore be rame away into Poland, and likewife that the Sonne of the great 30 Lord Emperour, and great Date Evan Vafiliwich, the Prince Demetry was dead: And to that

intent, that the King Sigifmund should not give crede to the said Grysnca, and that they should not full Christian blend nor violate the league. Bill Unristant comma row victate ing tengent. Hereupon Siri, sand further by word of mouth, Hereupon Siri, sand further by word of mouth, but be and Panametral deliuncies to the just unforger in his uniforge; that be edd to bela and keyen their Leque, and tomeroure, data are victate or break bit sath to measure of way: and them; ded write, that be did not ande that forefaid Gryfica, neithendid gine credit unto him : withall denying that he was with him in his Krugdome: and further he did write that if there were any out of Poland or Letto that did aide or affift hous, that then they found be executed. But after be had diffurehed a-

way the messinger of Botts, we regarding his oath, still more and more did aids and beipe that Crysti-40 ca Ottrapyoue. Affethe Palatine Sendamersko, and Mybala Ratanisko came into the Kingca Unicapyous, supera e mature schametesko, som, suprata takanisko come mio och kny-dome of Molco, to a place called the Land of Secuesko, putting the people of that Land in feare, and perfuading them there, this Grythics must be true Prince, and thus the King of Poland and Pan-meerada, had found out the certaintse thereof: and therefore they will have Poland and Letto stand for him. All o from out of many other Kingdomes they goe to aide and affect him: likewife other inferiour Kingdomes are willing to stand for him: marconer that Grythca in the fore faid Land of Securisko. and in other places of our Borders, by the meanes of his dimellish practises and consurations did intise and mover power y one Drawit, of the memory of the immunity products and known them to fall to him. Heavily the popule of high forefield place of the Lend of Securetko, and on the Bardart, bring fimple people, and reforming feldome to the Critic of Modero, and before the control of the Control of the Control of Control of the Securety of Control of the tree of the Critic of the Control of Control of the Critic of the Critic of the Critic of Control of Control of the Critic of the Critic

upon against those Polonians and Lettoes, and other enemies that were already entred the Kinedome of Mosco, the Emperour sent his Nobles with a great Armie: but by the appointment of God, the Emperson Bon's deceased's upon whose death, the chiefest of the Nobles departed the Campe. And after their departure, the Armie hearing of the death of the Emperour, and heing drawne thereto by seare and otherwife, at last reelded themfelues oner unto Gryfica, as the Borderers had done before.

Allo the fore faid Gryflica, by the belpe of the Dinell, and King Sigil nund, and Panameerada, come into the Citie and Kingdome of Molco, to the great disquietnesse and trouble of the whole Land by whom the Religion was corrupted, and by him were many true Christians put to exile, for denying his right and interest to the Kingdome of Molco. And Shortly after be was setled in the Kingdome, and he tooke to wife the daughter of one Sandamersko, as was appointed by the King of Poland and Pana-6c meerala: the which wife of his was in Molco with her Father and Brother Senatskoy, and with one Vestinenetskov, with their Polish and Letto Lords, and other people, by whom Religion was prophaned: as also we were forced and driven to receive many wrongs and insuries, which the people of the King. dome of Mosco could not indure. Also, at last this Greeshea, by the counsell of the Palatine Sanda- Mutation of mersko bis Father in Law, and by the counsell of Veshneustskoy, and other Polish and Letto people, Religior.

which he branght in with him, was purposed, by a secret politicke denise to have put to death the Me-tropolitans, drobbishops, and Bishops, and all the body mass previous distinctly, with the Nobles and Courto oppose and, an according to the accor on and lequites brought with him many leturtes.

The which we the great Lord and great Duke Vailly Eusnowich, of all Ruffia, with the Metrone. litans, Archbiftops, and Biftops, and with all the bols formual affembly, and with the Nobles, Court. ers, and Commons of the Kingdome of Molco, well-emfidering, and percessing what an alteration this To are common of the resident of the overthrow and otter undown to our whole Kingdome: we then mentade be to our Ubritismo faith, with two overcome amouser vanishes to our moise A segaine: we then convertify formed and Lementad, and which the trush proper to the daughts: Trimine our outs' Lard God, to that linesh and defendath mankinds, that it would place him be definer vis, and the Common mankin from those wile, cruell, discelles attempts, and desifes of theirs. Thus desiring the mercy of God, we all returned and flood fledfash to our former unspotted and true Christian faith, unainst that usurper and turned and posse pecupus o on young von young own time constitute jatto, against to at younge and
constraint of philox and the Constitution that of production to fland in the fame manifold; and a true to the
dash bosping and longing for the time that all people, and war the time and Sondain; and many other of the
Empire of Molco mughs come to garber thempoleus together, or that they might thempole percence and dis Emptre of recovering the control of of our Religion. The largenesse of the Kingdome of Mosco cannot be unknowne unto you our louing Brother, how farre it extendeth it selfe both to the Somith, and to the West, at also to other places, that in balfe a yeares space they could not gather themselves together. But when as the power and warlike Soul- 10 donns, and all other people were gathered seather, then through the mercie and fanour of God, this enemy of Gods Commonwealth was discoursed to all what he was. And the Empresse Martina, being Mother of the true Prince Demetry Euonowich, ded certific unto us before the Metropolitans, Archbishoppes, and Biskoppes, and before all the boly assembly, as also to the Nobles and Courtiers, and other by copies, and a specific, and a spire as two cost surmons, me and the street, and other Officers, and men of warth without mer Empire, did free deliver, thus her Some the Prince Demetry was marrhered beyond reason, at a place cald Owellies, by spiriments of Bosts Godenous, and that he dyed in her armses; yet did this Grythea fulfat, call himslift by the name of hims that was

marsteres.
Also we found in the cutteds of this Gryfica, the Copie of a wirling, which was the controll and
agreement that he made herwise him and the Paletine, before his comming out of Poland; in which 30
was written, that as some as he did come to the Kingdome of Mosleo, thus then he would take to write daughter of the Palatine, and would gine her two Proumees, culted great Nouogrod and Volsko, daughter of the Palatine, and wouse gine not two evolunces, causin great Novogood and volsko, with compell, Courtiers, Gentlemen, and Priests, fitting to a Confrequence, with inferior Castles and Lands, freely in the forefaid, to build and fer op Monatteries, and also to fet up the Romilli Religion; Lamas free or story; or you not or measure so from the sound of the so Jana preces of Voulth year, wento us on our Kullia account, twee awarea trousjana Markes: and to bis wife, so confluences of ber long Norman, be promised to since clust of Gold, and clust of Silver, and of all the boff things that was in the Preclavies of the Kingdome of Molico. Likewife, that here the fail Grylica, at his commission to Molico, would take order to bring thefe Hongs to Infle with all dispace, whereby he might draw all the Dominion of Molico from our true Circina Religion, and for the same ture. A ned vs into the Romilh Religion, and to have destroyed the boly Charch over all the Empire of Mosco. sea of into the comman actigent, some waste conveyed to the Country Country over a new among of patter of allow, and for being which they be for the performing of the the fail of Gryfhea was source to the Palatine Sandamersko, in the prefiner of the Landberr of the Land CHYPICE WAS PROTECTOR FAILURE ADDRIBUTED, ON THE PROJECT OF THE LAND, at the first plant of the Land, at the first plant of the executing to the some beath writing, would belt find the first common with all digenes, at the guide to the control of the Empire of Moleco to the Romifi Schopien. The whole commonst and expressed to the Control Standard hand be about the first first the control Standard hand to the the foreign of the Control Standard hand be the the foreign of the Chyrica were true, and both that the foreign of the Chyrica were true, and both that the trafted one to another : moreoner, the Palatine did certific unto our Nobles, bem Gryfica fent him a Lester under his owne hand and Scale, in which he promifed to give him Smolensko, with all the Prouinces belonging thereto, and another place called Securiow, as also gaste him liberty to set up Monastee 50

ries, and the Religion of the Church of Rome. Further, there was found by him Letters which were (ent to him from the Pope of Rome, and the Cardinals, and Priest, to that effect, that he should remember and withall be mindefull to take in hand speedit rebose matters and businesse upon which he had ginen to Sigi mund, and the Cardinals bis troth and vow, the which was, as before faid, to be him lefte of the Romish Religion, as also to bring all the people of the Kingdome of Ruifia into the same Romish Religion, not onely them that of them selves were willing thereto, but also others by compulsion, and to put them to death that fought to contrary the same. And not onely them of the Kingdome of Russia but the term to acate to manyong to content you prome. Arm not more yourself you a configurate of acusting out of the many of the good people of fearing Refigure and that doe from to the Kneydown of Mocion, as the debutch, and the Calamiff, them the myst be found feets to bring into the Romit Refigure with the district, and the Calamiff, them the myst be flound feets to bring into the Romit Refigure with the functions. Moreoner, Gryshca bim felfe, before vs. and our Nobles, and Constiers, and before our Com- 60 ms, did acknowledge as much, and thereupon yeelded himselfe to be in fault: as also shat be did all with belpe of the Dinell, having for faken God.

For which these his vile actions, this Gryshca, according to the true instice received an end to his life, and was by abundance of people stain in the Mosco, where be lay three dayes in the midst of the Citis, to the view of all such like vsurpers, and disturbers. And because his body was loathsome unto us, we caused Slaine & burniat to be carried out of the Citte, and there to be burnt.

This Enemie thus baning ended his life, then the Kings fonnes of diners Countries, now dwelling within our Kingdome, with the Patriarke, Metropolitanes, Archbishops, and Bishops, with the Nobles. Courters, and the Commons, made entreaty unto us Valil Euanowich, to raigne and governe over Election of them and ouer all the Kingdome of Mosco, as their Lord, Emperour, and great Duke of all Russia. Ac. Switte cording to which entreatie made unto usby the faid Kings sons of diners Countries as likewise by our Nobles. Courtiers, Merchants, and all the rest of the Commons of all the Kingdome of Molco. Wee are

come to the great Kingdome: of Volodemar, Mosco, Novogrod, and as also of the Kingdome: of Ca 2211, Astracan, and Siberia, and over all the Proninces of the Empire of Mosco: as also wee the great Lord Emperour, and great Duke of all Ruffia, are crowned with our Imperial Crown : and for the faid Kings sonnes of diners Religions, and our Nobles, Courtiers, and Souldiers, and all manner of Peaple, doe ferme our imperial Maiesty with defire and good liking voluntarity, and not by delusions and constructions, as the Poles and Lettoes were bewitebed by Grishca. But we the great Lord Emperour compressions, as the cuts comments and proceedings of the poles and rept Duke Valid Emmovich, with great ears flaved and referende on People from the flavel of the Poles and the Lettices, definding them from death; and withall have commended to be go emany of them into Pokahl and Lettic but the chieffest of them their were of the Comment, and that pratitions are the proceeding the comments of the pratition of the proceeding the process of the process o Ced to bring trouble and diffention in the Kingdome of Mosco, are now taken. And we to doe an konour unis the dead budy of the true Demetrie, have (upon conference with our Metropolisanes, Archbiliops, and all the boty Assembly, our Nobles and Courtiers, and all the Kingdome of Mosco) sent

and an anopy, and we see the second of the second of the Citie of Owglets a Metropolitan, named Filareta, of Rollow and Yeraliue, who we salled before he was made Metropolitan, Theodor Neckete, which being one of the Nobles in times past, and with him the Archbishops of Aftracan, called Feodosia, and our Nobles the Duke Eurn Michalowich with him the Archonopope of Attracts, cause a cocount, who are very ever too Duke Ellis Michalowich Vorotinskay, with the reft of his fellowes commanding them to bring op with them to bod of the Prince Demetric Eunowich, who was muribred by the appointment of Boris Godonous, and to bring it of to our Citie of Mosco with great honour, which bod, shall be buried in the principal Church of Mosco, to our citie of notice was great convent, whose very jeasure written in the principal (burch of Molco, called Michael sisk Archangel, neave to bit faither the great Land Emperous nead great Duke Euan Vallowisch of famious memorits, and by Gods power bit body fall mor be touched or abufed any manurer of way. Likewife will me, by the fautor of God, bower the Eventual of Demetric Evanowisch with special solutions, which body performatio many cures, and works to miraculously vine shown, that came to Miracket, him with Fasts to be cared of their disfasses.

And now most loning and deare brother, wee calling well to minde the great amitte and friendship that was betwirt the great Lord Emperour, and great Duke Eisan Vanly wich, and his Sonne Theodor Eunnowich, the Emperone Boris, and the great Lady Queene Elizabeth : the like brotherly lene doe we defire to have with you, most touing and deare brother, to be established and continued betwint us.as it was with them, during our lines. Therefore may it please you, our louing brother James, King of Eng. land, after the bearing of the se great and strange dangers past, to resoure with viz, that be bath delivered from such a vile enemy, and that be, our merciful God, bath divided and scattered that wicked coun-Cell, and that he hath turned their cruelty upon their owne head, to their fhame and confusion. And concerning your Merchants that were in our Kingdome, Iohn Mercicke with his fellowes, we have graced Six lohn Merchants

cerumy your nacrousn's some consistency at also beauty given unto the faid lohn Merricke, and his fellowes, ricke, a new primitedge, and Letters of famour, by which they hall come into our Kingdome, and to traficke two waters, the weathers, the consistency of the consistency of the constants. with all manner of goods freely, without paying any Custome what focuer, and as to them was gran-bad not time, in regard of many our Emperial affaires, but hereafter doe purpofe to fend, to vilue you in rour Kingdome. Written at our Emperial palace and Citie of Mosco, from the beginning of the World Anno 7114 the fourth day of lune.

Thus is Demetring painted out by his Enemies, which perhaps were not altogether led with Thu, L135 simplicitie of truth, but in many things made him worle, that they might make their owne caule (bad enough) to appeare better. They tell also of great outrages committed by the Poles, Polishin olen-(like those sometimes here in England by the Danes) their proud infulting over the men, rauffig. cies ments of women, fetching them out of their houses and husbands bosomes to serue their lusts : neither did Demetrine, as they fay, punish them; one onely being sentenced, and hee violently refcued from execution by the Poles. They fay also that Demetrion his body was plucked out of the grame and burnt, the affect throwne into the aire, the feeds, as the fequele feemed to fliew, of many Demetrij after.

Smiker is allo by some reported to have beene chosen by lot in this manner. The Nobles cast co lors foure times to receive a Successor, as it were, by divine sentence in lot-oracle: in query of Choosing by which times the lot fell vpon Suisker (tor as some fay, there were three or source neerer then hee) lot. he modeftly refuting and enforced by constancy of the various lot to accept that Scopter; whereof others thinke him as ambitious, as was modelt Boris before him. However, he hath left his name and memorie written in as blacke inke as either Borss or Demetrius, if Reports bee true.

attendant in Court, and pare an ASE state that the country of the could not be admitted audience till Ianuarie. Hee thereby complayned of Sandomersker artes which obtunded that with G, he put Changeling on Raffia, whereby aboue two hundred of principall Nobilitie had loft their lines: demanding reflitution of the moneys which that Impostor had caused to bee transported into Dute of Clasrence his broPoland, and restitution of goods; otherwise hee would with Charles of Sweden Duke of Suderman, enter Poland with an Armie to bee reuenged for the league (which they had fworne) broken, &c. Sigismund answered modestly, with excuse of their helping the right Heire in their conceits, and that his defire was that peace should continue (being loth in times then tumultuons Aprinted book 1614 rels of a at home, to prouoke a forreine enemie, foncere in dwelling, foremote in affection) Sandemers be 1614, tello: a great man, na. ftill remayned prifoner in Russia. But things being better feeled in Poland, and growing worse in 20 med Trigue, Ruffia, by the diflike conceined against Swirker, a double danger grew to him both from another reuited Demetrius (yea many precending that Name and Title did after arife, as out of his diforfed aftes) within Ruffes; and from the Poles without, willing both to affift him vnder colour of Reuenge, and with hope of Conquest also, to inuade and fish for themselues in troubled As for that Demetrisse new rifen from the dead (not to mention the others of inferiour note)

and to preuent the furis of Suiskey Stabbed himielfe, &c. Cap, Gilbert, * Thuan tels

I shall relate Captaine Gilberts reports which knew him and was by him entertayned, as I receiued them of a indicious friend of mine, which had them from his owne mouth. Hee being at Coluga (as before is faid) receined a Letter from this new Demetrius , fo written that it appeathat fourteene red to bee of the former Demetrine his owne hand : and thus also he vied to doe to others being 30 able to counterfeit his writing, and to relate such other particulars as seemed impossible to any milling in the Kings flable on but Demetrius to doe. Hereupon Captaine Gilbert went with his Guard of Souldiers to meete kings state on him and the Polake Generall which came with him. And whiles he was yet a good distance off. the manner of the control of the con

to be the former Demetrius, had not he differed from this in person, as night from day. Thus also A ftrange lug- he faid he affirmed to the Pole Generall, asking him how he liked this Demetrius, that This and That were as like as Night and Day (for the former was of goodly personage, and this a very deformed wretch.) The Pole replyed, It is no matter, Captaine, this Demetrius shall serve our 40 turne to bee reuenged of the perfidious and bloudie Ruffe. And this Demetrius acted the other fo neerly, and could in cunningly and confidently relate particular passes of past-occurrents, that the Lady of Demetriae was by him bedded. Thus was miserable Rassia ground between these two Mill-stones, the pretending Demetrine and the super-intending Pole. Swiskey is helped not a little by the English, which brought him strangely and adventurously powder and munition to his Cattle to Mose, which yet at last by revolt of the Citizens delivers vp it selfe and him to the Poles. And as for that pretending Demetrius, he was afterwards murthered in his Campe by

a Tartar. But it is meet to take hereof larger view. Sigismund King of Poland layeth claime to Sweden, as sonne to King John (who is said to have

vniutly deprived Ericas of his life and Kingdome) whole yonger brother Duke Charles first re- 50 ceiued his Nephew King Sigifmund (then also elected and still continuing King of Poland) but vpon warres which after arofe betwixt them, the iffue was, that the Pole holds the Title; but Charles obtayned both Regall Title and Power, wherein his Sonne hath succeeded. Snickey takes hold of this difference, and Charles affifts him with an Armie fent vnder the command of Pontiss noted the solution of the solu Forreine aides retinue : and the Poles obtayned Articles of composition and departed. But milerable were the diffresses by famine, fire, fword, rapes, and other outrages in other parts of Russia, caused by other Poles; and yet these but as a beginning and prelude to other following. For the King of 60 Poland entred with a huge Armie (some say of an hundred thousand men) inuaded the Musemire, and especially laid siege to Smolensko. He is reported thence to have sent twentie thousand

Smister had fent to King Charles for more aide, which he procured out of England, and other

Countries, of which I had rather let you heare an eye-witnesse speake of this, as elsewhere other Committee, or when their country on the state of the sta you have feene tragedies of Princes and Grandes. And first you may reade King Charles his compact and promifed stipend to such voluntaries, which for the more violerstanding Readers deoht I have here inferted.

1100-Souldiers shipped from

Bout a fortnight before Midfummer, which was A. 1609.4 companie of Voluntaries, to the A number of a thouland and two hundred Souldiers, were at feuerall times thipped from Eng-Land to passe into Sweden, to aide the King of that Countrie in his warres against the King of Poland. To which aide divers other Nations didlikewife refort, as Franch, high Dutch, &c. Of the Englis Companies that went thither, the first was commanded by one Calvine a Scot; who to by appointment was made Lieutenant Colonell, and chiefe of the other Captaines out the

Colonel Cal-

A tempeft.

After the first Companie was gone, a second number of three hundred men (of which I the Relator of this, was one) were put into one ship belonging to Sweden, and came from thence for vs. We were affaulted with a great tempest, and were toiled so long, that all our victuals were almost spent : the miferie of which, threw vs into more desperate seares : now were wee assulamout peaks the mine and Shipwrack) what course to take for our reliefe no man prefently knew. Continue without foode it was impossible, and as impossible was it for vs to recouer the Land in any short time, without the affured destruction of vs all. At this season, our

Commanders were these; Lieutenant Benfon, Lieutenant Walton, who was Prouost Martiall of 10 the field; and an Ancient of the Colonels companie. The common Souldiers vowed and refol-Another tem. ued to compell the Mariners (fesing the present mileries, and no hopes promising better) to set Another terms. vs all on shoare vpon the fift Land that could be discovered. Our Commanders did what they petro memu. vasal via money sport alter this generall resolution, because they feared it would bee the loss of the greatest part of our Companies, if they came once to bee scattered : and besides, they knew that it would redound to their dishonour and shame, if they should not discharge the trust impofed upon them by our Captaines, which truft was to conduct vs and land vs before, whileft our tea you men oy our espenies, when that was to solute ve the reft of our Companies. Yet all this not with flanding, Land being discoured, there was no eloquene in the world able to keep yet about our flip, but every man swore if the Mafter of the ship would not set vs on the shore, 30 the failes should be taken into our owne hands, and what was resoluted woon (touching prefent landing) (hould in despite of danger be effected. Vpon this the Master of the ship and the Mariners told vs. that if we put to land in that place, we should all either perish for want of victuals. which were not to bee had in that Countrie, or effe should have our throats cut by the people Wee resolued rather to trie our bad fortunes on the land, and to famish there (if that kind of death must needes attend vpon vs) then to perish on the Seas, which we knew could affoord vs no fuch mercy : and en shoare wee went, as fast as possibly we could. When our Officers saw, that there was no remedie, nor force to detay ne vs aboord, they then disheartned vs no longer, but to our great comforts told it, that the Master of the ship (which thing hee himselfe likewise openly confessed) knew both the Land and Gouernour thereof (as indeed we proued afterwards he did :) and therefore defired they all our companies not to mife-behaue themselues toward 40 the people, for that it was an Iland called Inthland, under the Dominion of the King of Denmarke, but subject to the command of a Lord, who vader the King (as his Substitute) was the

And that we might be the better drawne to a civil behaviour towards the Inhabitants, our Officers further told vs, that they would repaire to the Lord Governour of the Countrie, and acquaint him with the cause of our vnexpected landing there; vpon which we all promised to ofter no violence to the people; neither was that promife violated, because we found the Inhabitants tractable, and as quiet towards vs, as we to them : yet the greater numbers of them ran away with feare, at the first fight of vs, because (as afterward they reported) it could not bee remembred by any of them, that they euer either beheld themfelues, or euer heard any of theiran- 50 ceffors report, that any strange people had landed in those places and parts of the Iland : for they thought it impossible (as they told vs) that any ship should ride so neeee the shoare, as ours did by reason of the dangerous Sands.

Our Officers to foone as they were at land, went to the Gouernour of the Iland, whileft the Souldiers (who flayed behind them) ran to the houses of the Handers, of purpose to talks with the people, and at their hands to buy victuals for a present reliefe: but when weecame among them, they could neither understand vs nor we them; so that the Market was spoiled, and wee could get nothing for our money, yet by fuch fignes as wee could make, they understood out wants pitied them, and bestowed vpon ws, freely, a little of such things as they had. In theend, a happy meanes of our reliefe was found out by a Souldier amone ft vs who was a Dane by birth, 60

but his education having beene in England, no man knew him to be other then an English man. This Dane made vie of his owne native language, to the good both of himfelfe and vs , certi-

fying the people (who the rather beleeued him because he spake in their knowne tongue) of the cause that compelled vs to land vpon their Coast, and that we intended no mischiefe, violence. or money : to which report of his they giving credit, flood in leffe feare of vs then before, and thereupon furnished vs with all such necessaries, as the Countrie affoorded to sustaine our wants. The foode which wee bought of them was onely fish, and a kinde of course bread, exceeding cheape. Of which foode there was fuch plentie, that for the value of three pence wee had as Fish cheaper much fish as twentie men could eate at a meale, and yet none of the worft forts of fish, but even of the very best and daintieft, as Mackrels and Lobsters, and such like. In which our trading with the poore simple people, we found them so ignorant, that many, yea most of them regargo ded not whether you gave them a Counter, or a Shilling for the bigger the piece was, the more Ignorance

fish they would give for it : but besides fish wee could get no other sustenance from them, or at Bores, least, could not understand that they had any other. But observe what happened in the meane time that we were thus in traffique with the Handers for victuals, our Officers (as before is faid) being gone to the Lord Gouernour, who lay about twelve English miles from the Sea side, the Master of our ship on a sudden hoysed vp sailes, and away he went leauing one of his owne men at shoare, who accompanied our Officers as their guide, through the Hand. The cause of the ships departure, did so much the more amaze vs, by reason it was so vnexpected, and the reason thereof vnknowne to vs : But wee imagined the Matter of the ship and Mariners feared to receive vs into the Veffell againe, because some of our men at their being at Sea, threatned the Saylers, and 20 offered them abules before they could be brought to fet vs on land.

On the next day following, the Lord Gouernour of the Iland came to vs, bringing our Officers along with him, yet not being so confident of vs, but that (for any dangers that might happen) he came strongly guarded with a troupe of Horse-men well armed. And (vpon his first approca) demanding where our ship was, it was told him in what strange manner it stole away and for fooke vs : he then asked what we intended to doe, to which we all answered, that we would be ruled by our Officers: hereupon hee inquired of them, what they would have him to doe in their behalfes: they requested nothing else at his hands, but onely his fauourable Passe through the Countrie, and a thip to carry vs forward into Smeden: to which request hee made answere, that he could grant no such licence vntill he had made the King of Denmarke acquain-20 ted with our being there, for the Hand belonged to the King, he faid, and he was no more but

an Officer or Substitute vnder him. Yet in consideration that our ship had so left vs in a strange Land, he promifed to doe all that lay in his power to effect our good: but with all told vs, that the people had inward feares, and were possess with surprises that our intents of landing vpon fuch a Coait, were not, as we our felues affirmed, only to get foode, but rather to make i poile of the poore Inhabitants. And therefore, to remooue all such feares and realouses out of the peoples hearts, he held it most consenient for the generall safeties of both parties, to separate our numbers, and to spreade vs abroad in the Countrie, one and one in a house, where it was agreed that we should receive both a lodging, and meate, and drinke, vntill hee had sent to the King of Denmarke some of his owne men with our Officers , to understand his Maiesties pleasure, and

40 what should become of vs. To this we all agreed, and accordingly for that purpose, were by the Lord Gouernour, fafely by these armed horse-men which were his guard, conducted to his owne house. To that place were al the people of the Iland summoned together, they came at the appointed day to the number of fine or fix hundred, circling vs round with Bils, Holbards, two-hand Swords, and diners other weapons: And at the first fight of vs grew into such rage, that presently they would have cut all our throats, and hewed vs to pieces, but that the authoritie of the Gouernor kept them from offering violence, yet was hee faine to vie the fairest meanes of perswasion to allay their furie, For they would not beleeve but that our arrivall there was to destroy them. Yet the Governour the wed vnto them all our number, which was but three hundred men, and those all vnweaponed, and so consequently, neither likely nor able to vndertake any mischiefe against them:

50 Charging the vnruly multitude, vpon paine of death, not to touch the least finger of vs, but to divide vs equally into feuerall Villages, as it should feeme best vnto them, and so bestow kinde and louing entertainment upon we till they heard further from him, which command of his they accordingly performed.

Immediately upon this fetling of them and vs in quietnesse, one of our Officers with two of the Gouernours men, were fent away to the King of Denmarke, to vinderstand his Highnesse pleasure, which Messengers were no sooner dispatched about the businesse, but the Handers grow- Icalouse of the ing more and more suspitious, came againe to the Gouernour, and neuer would cease or give ouer people. troubling him, vntill they had gotten him to make Proclamation (in hearing of vs all.) That if 60 any of vs would freely diffeouer the true cause of our landing vpon that Coast, and reueale the

plots of any dangerous enterprise intended against them, he should not onely be rewarded with great flore of money, and have new apparell to his backe, but also should without tortures, impritonment, or death be fet free, and lent backe againe into his owne Countrie. This Proclamation ftrucke vs all with feare and aftonishment, because albeit we to our selves were not guiltie of Griffia a bafe coward and traitor to his

any plot, or villany intended to the place or people, yet wee knew this might be a meanes to endanger all our lives, how innocent foeuer. Our suspicion of danger fell out according to our changer an our mes, now museum owner. Our imprison or unger that our morning to our feares; from of Thomas (origina Welch man, one of our owner company, went and kneed before the Gouernour, and with a face counterfeiting a guiltinesse and fearfull destruction, told him that we came thither onely, and for no other purpose, then to surprise the Hand kill the Inhabitants, make spoile of their wives and goods, and having set fire of their Towner and Villages, to flye to Sea againe. Yet for all this would not the Gouernour beleeue him, telling him it was a matter very volikely, that so small a number, so distressed for want of soode, so weather-beaten and so disarmed, should venture vpon an enterprise so full of dangerous events; but the villaine the least Allarum given, other ships that lay hourring at Sea, and furnished both with men and armour, would on the sudaine, and that very shortly land for the same desire of spoyle, as these their fellowes had done, and therefore counselled the Gouernour to preuent such imminent mis-

The Gouernour being thus farre veged, presently called before him Lieutenant Walten, whose lodging was appointed in his house, and having related to him all that Griffin had discovered, and withall, demanding of Lieutenant Walton what he could fay to this matter of treason and conspiracie: the Lieutenant at the first stood amazed, and etterly denied any such intended villang. protesting by the faith of a Souldiour, that this report of the Welch-man proceeded from the rancour of a vile traitors heart, and therefore on his knees intreated the Gouernour, not to give 20 credit to fo base a villaine, who for the greedinesse of a little money, went about to fell all their liues, and co make all the inhabitants of the Hand become murderers. The rest lay scattered about and knew nothing of the matter. Now soone after, just as the traitor had told the Governour. that more ships were not farre off, but were ready to second vs vpon our arrivall, it chanced that in the very heat of this bufineffe, and their feares of danger where none was, two other shippes full of armed Souldiers came to the same place of the Hand where our shippe put in : These two fhips had brought Souldiours out of the low Countries (a ceffation of warres being there) and were going into Swetbland, as we were, but by croffe windes and fowle weather, lay fo long at Sea, that wanting victuals, they were driven in hither for fuccour. Whole fudaine approach and ariuall being fignified to the Lord Gouernor, the Welch-mans words were then thought true; all 30 the Hand was presently up in Armes to resist the strength and furie of a most dangerous supposed

enemy : and fo fecretly did the Inhabitants put on Armes, that we who were kept like prifoners amongst them, knew not of these vproares. But night approaching, the Generall gaue speciall charge that fecret watch should be fet and kept ouer every Souldior that lodged in any mans house : which by the common people was as narrowly performed, for they did not onely watch vs as the Gouernor commanded, but among a themselves a secret conspiracie was made, that in the dead of night, when wee should be fast asseepe, they should come and take vs in our beds, and there to binde vs with cords: it being an easie thing to doe so, when our company were diuided one from another ouer the whole Hand. At the houre agreed vpon, the plot was put in force, for they entred our Chambers, and bound every Souldier as he lay, making them all rea- 40 dy like so many sheepe marked out for the slaughter. For mine owne part, I had fine men and three women to binde me, who fo cunningly tyed me fast with cords, whilft I flept and felt nothing, nor deampt of any such matter, that with a twitch onely I was plucked starke naked out of my bed, and faid vpon the cold earth vnderneath a Table, with my armes bound behinde me, fo extreamely hard, as foure men could draw them together, my feete tyed to the foote of the Table, and my necke bound to the vpper part or bord of the Table.

In these miserable tortures lay I, and all the rest in severall houses) all that night, and the most part of the next day, our armes and legges being pinched and wrung together in such pittilesse manner, that the very bloud gushed out at the singers ends of many. The enduring of which torments was so much the more grieuous, because none knew what we had done that could in- 50 cense them to this so strange and spitefull cruelty, neither could we, albeit we inquired, learne of our tormenters the cause, because we vnderstood not their language.

Whileft thus the whole lland was full of the cries of wretched men, and that every house seemed a shambles, ready to have Innocents there butchered the next day, and that every Hander had the office of a common cut-throate or executioner; Gods wonderfull working turned the streame of all their cruelty: For the two ships that came out of the low Countries, and whose arrivall drave so many miserable soules almost vpon the rocks of destruction, having in that dolefull and ruinous night, gotten some prouision aboord, weighed Anchor, and departed towards Swetbland. Which happy newes being serued up at breakfast to the Lord Gouernour betimes in the morning, and that the Shippes had offerd no violence to the Countrey, but had paid for 60 what they tooke : About eleauen of the clocke the very fame day at noone, wee were all like vnto so many dead men cut downe, and bidden to stand vpon our legges, although very few had fearce legges that could fland.

Of one accident more that befell, I thinke it not amiffe to take note, which began merrily, but

ended tragically, and in blond; and that was this: Foure of our company being lodged in one Village, and they being bound to the peace, as you may percente the reit were; it happened that an Hoalf, where one of themtlay, had tipled hard, and gotten a Horfes difeafe, called the Seas I Effects of gers: In comes he stumbling, to the roome where the poore Englishman was bound to the Table drunkesnesses gers: introduced the state of the character of the charac thould not of cape with his Harobeotic cleft his bead. And thinking in that drunken murderous humour he had done a glosious act, away he reelessour of his owner house to that house where

the other three Souldiones lay bound, where beating at the doores and windowes, and the Hoaft In asking what he meant to make fuch a damnable ney le; he told him fo well as he could flammer is out, that the Lural Conternour had fent him thirther to put the three Emplify men to death. You on this, the divelland be (hand in hand) were det in, the one standing to close at the other efficier. shat he never left him till hedradcheft two of their heads, that lay bound i and being then were ry (in fould freme) with playing the butcher, he neuer cealed five aring and flaring, and foul rilling with his bloudy Axe about their heads, till the people of the house had hung the third man vpon a beame in the soome. But they basing left custing in the Hang-man trade, then will to practite it, eyed not the index to fait about his necke, as to frangle him: for that after he had hung an houre, hee was cut ddwine, rettined againe, was well, and afregwards was flaine

Fo Thus bloudy feaff being thus ended, and all flormes as we well hoped, being now blowne ouer to our freedome, and fitting at liberty from our tormereors; on the necke of their former miferies fell a milulifete more dangerous to vs then all the roll : for tidings were brought to the Governour, that our Auncient, who trausaled with the Governours two men to the King , had traverously murdered those his guides, and then ranne away hamfelfer upon this rumour, nothing but thundring and lightning flew from the common peoples inforthes : there was no way now with vs but one, and that one was to have all our throats cut, or our heads cleft with their Axes. Burthe Gourmorpittying our misfortunes, laboured both by his auchierity, & by faire specches, lealoufer to keepe that many headed dogge (the multihude) from barking. And in the end, when he faw

nothing but the bloud of vs poore Englishmen would farisfie their thirt; because they fill held 30 vs in suspicion and teare; he most nobly, and like a vertuous Magistrate, pawned to the inhumane Rafcals (to my knowledge) his honour, all that ever he was worth; "yea, his very life vnto them, that within three dayes the meffengers fent to the King, thould returne home, and that during those three dayes we should be of good behaviour to the Handers: and besides that, if they did not returne in fuch a time, that then he would deliver ve vp into their hands. Our Auncient with the Gouernours two men, came home upon the third day, to the Gouernours house, King of Detand brought from the King of Denmarke his heence, to carry vs not onely through the Country, but commanding that we thould be allowed thipping allow a consumerit place, to carry vs to Smeneland, whither we were to goe: And according to this Licence the Gouernour Caufed vs to be called all together the very next day; at which time, Thomas Griffinthe Welch Indee, who had

40 all this while lyen feafting in the house of the Lord Gouernour, began to tremble and repent him of his villanie, begging most bale forgivenesseon his knees, both from the Governour, and vs his Countrimen and follow Souldiours, protelling that what he did, came out of his feare to faue his owne life. But our Officers (vpon hearing him (peake thus) had much adoe to keepe the companies from pulling downe the houle where Griffin lay, because they would in that rage have hewed

the villaine in peeces. But leaving him and all fuch betrayers of mens bloud to the hell of their owne confciences, let vs fet forward out of this infortunate Iland, and not flay in any place elfe, till in small Boates wee come by water to Elzmore in Denmarke, where wee joyfully got aboard once more; Elzmore.

and are hoyfing vp failes for Sweneland. Yet even in this fun-fhine day a fforme fals vpon vs 50 too : for our Officers not having fofficient money to furnish vs with victuals, wee were enforced to pawne our Auncient and Lieutenant Walton , for the fafe returne of the Shippe , with condition, that they should not be released vittill a sufficient summe of money was lent to defray all charges. So that we left our Officers behinde vs; but the King of Sweueland did afterwards release them, and then they came to vs. But before their comming, wee having a good winde, landed at a place called Newless in Swene : and from thence were carried to Stockholme (the Stockholme. Kings leate)and there was the King at the same time; betweene which two places, it was a daies march on hortebacke.

Voon this our arrivall at Stockholme, wee met with the rest that had gone before vs, and with divers others of our Countrimen, that came out of the Low-countries, as before is re-60 lated. In this place we lay so long, and had such poore meanes, that wanting money to buy foode, wee wanted toode to maintaine life, and fo a number of vs were readie to flatue: till in the end, our mileries making vs desperate, we fell together by the eares with the Biergers of the Towne : in which scambling confusion and mutinie, every man got one thing or Milery after other, of which he made present money to relieue his body withall : yet lay wee at the misery,

walles of the Citie, crying our continually for money, money, till our throates grew hoarfe with bauling, but the Hones of the walles gaue more comfort to vs, then the Inhabitants. One day (aboue all the reft | wee heard, that the King was to ride a Hunting; and weeimagining that all the abuses, wrongs, and mileries, which wer endured proceeded from fome vinder-hand hard d'aling, and packing of our Captaines and Off. cers, refolued to gather about the King at his comming torch, and to cry out for money; but the King being angry (as wee supposed) cameriding amongst vs, drawing his Pistoll from the Saddle-bow, as if hee purposed to have shot some of vs : but seeing none of vs to thrinke from him, nor to be dilinayed, hee rode backe againe, wee following him, and defiring, hee would either gine vs money, or elfe to kill vs dur-right; one amongst the rest (whole name was William Attane) spake to the King aloud , thus : I hold at beneur to doch the bands of a King, but basely to Starne to death, I will mener suffer it. V pon these our clamours. the King looking better vpon our necessities, fent money the next day, and immediate. ly after gauevs a moneths meanes in money, and two moneths meanes in cheath, to make

Captaines cozenage.

Of the cloath wee received some part, but the money being payed, was by our Captaines fent into England to their wives; no part of it ever comming to the poore common Souldiours hands : for prefently upon this, wee were commanded abourd the Ships, with promife that when wer were aboord, wee should have our money. But being in the Shippes vnder hatches, away were wee carried with prouision onely of one moneths victuals; when by rea- an fon of the weather, wee were forced to lye eight weekes at Sea : in all which time, wee had nothing but pickelled Herrings, and falt Stremlings, with some small quantitie of hard dryed meates : by which ill dyet, many of our men fell ficke, and dyed. In the Shippe wherein I was, wee lived foureteene dayes without bread, all our best foode being falt Herrings, which wee were glad to eate raw; the belt of vs all having no better fire

Finland.

At the last, it pleased God to send vs to a place called Virasound in Frederic, where were landed, (Finland being fibited to the King of Swandand.) From Finland wee were to got to Wepborough, a chiefe Towne in the Countrie of Finland: where wee no sooner arrived, but our Souldiers ranne some one way, and some another, so long that the Captaines were left alone so with the Shippes : This running away of them, being done onely to feeke foode, fo great was their hunger.

Difperfing.

By this carelesse dispersing themselves, they lost the command of the whole Country, which they might easily haue had, if they had beene vnited together: and not onely were deprined of that benefit, but of Horfes also, which were allowed by the King for them to ride upon. So that , what by the reason of the tedious lourney (which wee were to trauell, being fourescore leagues) and what by reason of the extreame cold, being a moneth before Christmas, at which time the Snow fell, and neuer went off the ground vntill Whitfontide tollowing; but all the Raine, and all the Snow that fell, freezing continually, divers of our men were it arued to death with the Frost. Some lost their singers, some their toes, some 40 their noses, many their lines: insomuch, that when wee all met at Weyborough, wee could make no more but one thousand and foure hundred able men; and yet when we were landed at Vfrafound, wee were two thousand strong; the extremity of the cold Countrey having killed so many of our Souldiours in fo little time.

At our landing at Weyborough wee had good hopes to receive better comforts, both of money and victuals: for the Inhabitants told vs, the King had allowed it vs, and in that report they spake truth : yet contrary to our expectation, wee lay there about foureteene dayes, and had nothing but a little Rice, of which we made bread, and a little butter, which was our best reliefe. Drinke had we none, nor money : our Captaines gauevs certaine letherne pelches, onely made of Sheeps skins, to keepe vs from the cold.

Their mifers.

At this place we received armes to defend vs against the enemy, and fix Companies that were 50 allowed by the King for Horsemen, received Horses there. From thence wee were to march into Rullia, where our enemies continued. But the journey was long and vncomfortable: for wee marched from Newyeares day vntill Whitfontide, continually in Snow, having no reft, but onely a little in the nights. So that the miseries and misfortunes which wee endured woon the borders of Fynland, were almost infusferable, by reason the number of them seemed infinite. For all the people had forfaken their houses long before wee came, because they were evermore oppressed by Souldiours : by which meanes we could get neither meate nor drinke , but were glad to hunt Cats, and to kill them, or any beaits wee could lay hold on, and this wee baked and made them ferue for daily sustenance. The greatest calamitie of all was, wee could Wantof meate get no Water to drinke, it had beene so long frozen vp, and the Snow so deepe, that 60 and of Water, it was hard to fay, whether wee marched ouer Water, or vpon Land. So that wee were compelled to digge up Snow, and with stones redde hot, to melt in tubbes, and then

CE AP.S.S.4. Enhath provided by their fleding tuemien Cruel Poles.

This off-stion continued about twelve or four steene dayes, till we came into Russia. Vpon our very first entrance into which Kingdome, we marched ouer an arme of the Sea, that was eight leagues ouer, many of vs flaruing to death in that passage, by the cold freezing windes that blew the fame day. In which frofty journey, I faw to much bread as a man might buy for twelve pence, fold away in little bits, for the value of fortie fullings. But this mifery ended the next day, at our fetting footing Ruffis, where we found plenty both of corne and cattle; onely the people of the Countrey rame away, leaning all their goods behinde them, but so cunningly hidden, that the bell politics of ours could hardly finde them out. By this meanes of the peoples running away, we were glad to play the Millen, and to grinde all our corne our felies.

to bake our bread, and to drefte our owne victuals. Their marched wee vp to Newsgrod (a Nouogrodichiefe Citte in Ruffa) where wee were to receive all our meanes that refted behinde vnpayed: but our Captaines beguiled vs, and kept it for themfelies : yet to stoppe our mouthes, they told vs wee should goe into Mascony, and there all reckonings should be made euen.

Wee had scarce marched about three dayes towards Muscour, but that newes came. how a certaine number of our enemies lay in a sconce by the way; the strength of them was not perfectly knowne, but it was thought they were not about feuen hundred, and that we must vie some stratagem to expell them from thence : vpon which relation, our Captaines drew mies. forth to the number of three hundred Englis horfemen , and two hundred French horfemen : fo that in all we were about fine hundred that were appointed to fet vpon the supposed feuen hundred Polanders, (our enemies) that fo lay infconied : vpon whom we went. Our chiefe Com-mander in that feruice was Monfier to Veite, a French man, who to valiantly led vs on, that They fled,

the enemy hearing of our comming, fled ouer a water that was by the sconce; yet not with fuch speede, but that wee flue to the number of foure hundred of their fide, and loft onely three men of our owne: but we rooke the sconce. About the sconce stoods faire Towne calleded - Sconce taken men of our owner. our we consecutive in consecutive in the posterior and the first successful and the first successful and the first successful and the first successful and the consecutive first s riches, but also with a number of Polish Horses, and as many armes as served to arme five hundred men; our want of that commoditie being as much as of any thing befides : for of those five hundred men that went woon the service, there were not three hundred fixed armes; yet

through the hand of him that deales victories, or overthrows, as it pleafeth him beft, the day was ours. Quer this river Volen the enemies were never driven before, either by the Emperor of Ruffin,

or by the King of Swethland: for which caufe (as afterward wee heard) the next day when they departed from the other fide of the River, they burnt that halfe of the Towne on which fide they were themselues, and in most bloudy, barbarous, and cruell manner, made havocke both of men, women and children, albeit (not aboue halfe a yeare before) the Inhabitants on Ples cruelfier that fide had revolted from their owne Emperour, and turned to them. In which tyrannicall moft execrable

votors, their cultimes was, to fill a loud fulfor geople, and their cultimes with yearname years and years and their cultimes was a supering for the the house was fired about fair ears, a sup often times, were young children their by they begin, and, and to such my high fair ears, a sup often times, were young children their by they begin, and, and to such my high their series, and often times, the such that they have the property of the such as a supering the supering their their property of the such as were cultimestally and female, byte for the Pote, and were cultime Gallete, whose cruelty farre exceeded the Polish.

Whole clearly at my humburns to the earth, all the first cheufant (which, as I flid before, if ad our the filter, days of the fronces and were by we imposed of the tenen humbred came downs in full battaglion to the fixing lide with the forecoment, a st. jr refearly whey and they, hories would have fwom ouer, to ight with vs. which being perceited, our poore fine, hundred flood seady to refift them. But whether they feared our numbers to be greater then they want, and that wee had fome other fecret forces. I know not : but away they marched, the felfs lame day in which they came downe in that brauery, not doing any thing, of which, wee for our parts, were not much forry; because if the battailes had joyned, wee knew our felues

farre vnable to withitend them. And this was the fertice of the most neare, that wee Two or three other fronces and Townes we tooke from our enemies, they not once daring Gayriffe Canto refif vs. because they knew nothing of our numbers and force. But the different dealings taines.

of our Captaines, made the whole Armie discontenn; informach, that our Souldiers would of tentimes deny to goe forth vpon fernice, because they had beene almost a yeare in the Land. tentimes deny to goe from your reasons, occasion ency man ocean amoust a years in the sample.

So and had recytled no more bloom on Rubble (amounting to the value of ten fullings Equify.). So

that young heightificontents, fiftie of our men ranne away, to the enemy at one time, soil, difco,

the top annew young ranne was likewife kindling, but it was perceived, and quenched with the bloud of the confpirators, of which, the chiefe were hanged. On therefore we went ; when

758 Fuerhom the Finlander, P. le Guard Generall of English. Go. LIB. IIII.

HONDIVE bis Map of Muscouia.

we'came within fortie leagues of Musiconie, newes was brought, that the enemy had beleaguard feuen thouland Ruffer that were our triends, and that valefic wee forced the fielde to break vp, the feuen thousand Ruffes would enery man be flarted where they lay. This fad report," (albeit we had re olued neuer to goe voon any more fernice, whill wee had our pay) to wrought in our hearts, that wee much pirtied the mileries of beheis. Deckife wee our felues had tafted

Our Generall (whose name was Energorne) was a Fynlander, and with a company of Fynland Our Grierrai (winds interes was a mereware) was a primener, and wrisin a company or tymene blocks (as they termine them) well appointed on Horiebacke, wais by the King of Sensetleds. Femilial Good first fifer vs., as our Compos, until weethould come or Powerse to Gheerd, who was chiefe Grieral Good first whole armite of strangers that came into the Land. 6 to that according as he was neral out-the wilder arms of managers that came into the Lands 10 dayaccoroung at news fent and challed by the King, he out-rooks we before we came to 'briese. By the intractic got therefore of this Fysicser, and the flattering promise of our event ciptaines, we were con-related to got wron this feruies, and to deline the Angle, or to dye our felties in the action. Yet with childition, that (as they promifed to vs) we should by the way meete our chiefe Generall, Ponton le Guard, who with certaine numbers of English, French and Dutch (which the veare before were come into the Land) was voon a march out of Mulcony, not onely to sheete vs, but to toyne with vs, and pay vs all our money which remained good tovs; pro-uided likewife, that fo foone as ever wee should release the senen thousand Russes, our money should be payed downe. On these conditions (I say) wee yeelded to goe upon the

At length Powise le Gastal met vs (according to the promife) and with him was money brought to pay vs, and his word guide that prefently wee should receive it. But the lamentable eftate, in which the poore befledged Rafes were (within the fconce) being as the point of death for want of foode, required rather speedy execution, then deliberation's fo that the necessities of their hard fortunes crauing liaste, on wee went, having about nunreene or twenty

CHAP.O.S.4. Ruffe flight; French fight & flight: Englishbonor & copolition. 779

shouland Ruffes, that were people of the fame Countrey, joyned to our Armie, to aide them in this enterprize. But as we all were upon a march, the enemy having received intelligence of our approaching, let forward, to the number of eight thouland Lanciers and more, to intercept ys by the way : and being within one dayes march of the place to which were were likewife 20ing, they fet he pop three or foure Villages hard by the place where we lay at Graffe with our Horfes, for a token that they were comming. And this was done vpon Midiummer day laft in do. 1610. the morning, by breake of day. Then came they thundring wich shours and cries to fer vnon ve: but no fooner was the Alarum given, when the greatest part of those nineteene or twenty Bale Russe thousand Ruffer, that were soyned to vs as our side, fled most bately before any blow was al- flight To uen. This tudden cowardize of theirs somewhat amazed vs : but the houre being now come.

wherein we were not to talke of dangers, but to goe meete them, with our fixe companies of English harfe, we brauely relifted the Polanders, and with great hurt to them, but with little loffe ypon our part, charged them three (euerall times. Ar laft Pontus le Guard (our chiefe Generall) tooke his heeles and fled too. leaning vs vtterly P. de Guard

deflitute of all direction : which much attonifhed vs, as not well vaderstanding what to doe : fleein, for our greateft ftrength (being by their light) taken from vs, none but wee ftrangers were left in the field, and of vs there was not in all, about two chouland, and of that number there were shone fix hundred French horlemen, who leeing both the Generall gone, and the Ruffes fled, French flee. rurned their backs upon vs, and ranne away too most valiantly, yet not out of the field, but to

20 the enemy. Then were wee not about twelve or foureteene hundred at the most left to relist eight thoufand at the leaft : voon whom notwithflanding, our fix companies of English horsemen, charged three feuerall times, without any great lo le, but with much honor : And at the fourth time, for Englishmonut. want of powers to (econd them (which the French should have done) all our fix companies were feattered and overthrowne with the loffe of few of our colours. The Captaines over thefe fixe Companies of Horse, were these :

Captaine (rale,of whose company I was. Captaine Kendricke, Captaine Benson, Captaine Carre, Captaine Colbron, Captaine Creyton. Which in Capraines had not in all their companies aboue five hundred men. In this battaile.

20 Captaine Creyion was flaine in the field; Captaine Crale was fhot in the knee, and within a fhort time after dyed of that wound; not about twelve of his companie escaping. Captaine Kendrick was wounded in diners places of the head, and dyed. Captaine Benfon was shot in the hand, and wounded in the head, and yet escaped, and liued : onely Captaine Carre and his Cornet escaped, but all his companie scattered and lost. Diners other Officers were staine, whose names I can-

Thus were all our English horse-men dispersed and ouerthrowne, to the number of five hundred and vowards. Ou Generall Exerborne with his companies of Finland, or Finland, or were also put to retrait ; fo that there was not left in the field aboue fixe or feuen hundred, which were foot-men. And of these, one halfe was English, one halfe Dutch, who kept onely a cer-40 taine place by a wood fide, barricadoed about with wagons, having with them foure field pieces, wich which they did great spoile to the Enemie. But their number being but few, neither durft they venture on the Enemie, nor durft the Enemie enter voon them , but kepr them field (as it were belieged) in that place onely, because they could no wayes escape. The inconvenience of which cooping up in so narrow a roome, being looked into, and the dangers on every fide well confidered, it was held fitteft for fafetie, to fummon the Enemie to a parley. In which parley, the Enemie offered, that if they would yeeld, and fall to their fides, they should have good quarter kept. And if any man had defire to goe for his owne Countrie, hee should have libertie to goe with a Pasport from the King of Poland. Or if any would ferue the King of Poland, hee should have the allowance of very good meanes duly paid him. Vpon these compositions they

all yelded, and went to the Enemie; onely Captain Toke; and his Officers, with fome few of their Soulders, went backe mote the Countrie, and came not to the Enemie, as the reft had done: who from thence marched by to the Fells League, being ten miles diffant from the place, and there they continued. But fuch as defired to trauell to their owne Countries, were fent to the King of Polands Leaguer, which lay at that time at a place called Smolensko, and there accordingly had their Palle, to the number of one hundred, of which number I my felfe was one. What became of the reft I know not : but I with fine more held together in trauell. vntill we came to Dantzicke, a great Towne in Pruffia, being diliant from Smolenske one hun-

To make an end of this Storie of the Foxe and the Beare, the pretending Demetrius and con-60 tending Suiskey; it is reported, that Demetrius feeing these perplexities of Suiskey, rayled a great Armie of fuch Ruffer as voluntarily * fell to him (the Pole having now rejected him, except some . Some fay i.e Voluntaries) and againe laid fiege to Mosco; Zolkiewsky for Sigismund, beleagred another part had recoce. thereof with fortie thouland men, whereof one thousand and fine hundred were English, Scottish, which is sensity and French. Smither feeing no hope to withfland them, his Empire renouncing him . hee would credible.

feeme to renounce the Empire first, betaking himselfe to a Monasterie. But not the fanctitie of Moles yeelded. the place, nor facred name of an Emperour might protect or secure him. The Musiconites yeel. ded up their Citie and his Person to the Pole, and the Caftle was manned for Sogismand, All ioyne against Demetrins, who betaketh him to his heeles, and by a Tariar (as before is faid) was flaine in his campe. Charles King of Sweden dyed Octob. 30. 1611. and Gustamus his some fire. ceeded. Sigifmund obtayneth Smoleniko also after two yeeres siege and more : in which time the Defendants had held out fo refolutely, that the Polifo Peeres and States (which in that Kingdom beare great (way) had called the King to their Parliament, the rather in regard of the King of Denmarke warring vpon Sweden (in which warre diners thousands of our English voluntaries * Vader the affilted the Darry but the fittle defining to trie his fortune, carried the Citte with two bunders to what the pieces of Ordnance and other rich fpoile. Many were flaine, and divers great perform taken, of which was the Archbishop. Many were blowne vp (as was thought) by their owne voluntaries act, by fire cast into the store-houle, in which is said to have beene (if our Author mistake not) fifteene thousand veffels of poulder; whereupon feemed to returne the very Chaos, or in flead

John Poole,&c. A conjume, attended to the World. It is accounted one of the strongest Forts in Christendome, the quandets mile thereof a field into the world. It is accounted one of the intologist ports in continentiame, the opportunities of the walls able to be are two Carts meeting in the breach. It was taken the twelfth of Iuly, 1610. Suitey was carried into Poland and there imprisoned in Warmphorough Caffle, and after the Suiters impri- leffe of libertie and his Empire, exposed to scorne and manifold miseries, hee dyed in a fortaine countrie. But before that Tragedie, the Poles are faid to have more then acted others. For when they held him prisoner before his departure from Mosconia, they sent for many Grandes in Smil. 20 key name, as it he had much defired to feethem before his fatall farewell, to take a friendly and

Foith cruelie. honourable leaue of them. They come, are entertayned, and in a private place knocked on the head and throwne into the River; and thus was most of the chieferemayning Nobilitie destroyed. The Poles fortified two of the Forts at Mofeo, and burnt two others, as not able to man Their reward, them. But the Muscounte also there held them belieged till famine forced them to yeeld the Russians finding there fixtie barrels of pouldred mans field (it seemeth of such as had dyed, or Enters of mans Were I laine, that their death might giue life to the Suruiuers) a just, but miferable and tragical fleth forced to specificacle. We shall conclude this Discourse with giuing you two Letters, the one taken out of a Letter written from Colmogro Sept. 7. (the yeere is not dated) amidft thefe broiles; the other from Captaine Margaret before mentioned by Thuantet: and after them, for further illustra- 30 tion and profitable vie of this storie, is added part of a Letter of Doctor Halls.

> Captaine MARGARETS Letter to Master MERICK from Hamborough, lan. 29. * 1612.

 \mathbf{R}^{I} gbs worshipfull Sir , I could not omit this commoditic without commending my service to your worship, and also briefly to advertise you of the State of Mosco, which is not as I could wish. Also Mosto cheged I lest Master Brentter in good bealth at my departure; but three dayes after the Towns within the by the Roffis. red wall was burns with certaine fire Bals for in by the Ruffis, fo that there is but three boufes left whole,

the English bouse also being burnt. Master Brewster is constrained to base his dwelling in a Seller vn- English house der the Palace, without great friends except Misslofsqui. The Generall Cotqueuilfh is arrived there, butat and left a sufficient number of men to keepe the Castle, and the red Wall, hee himselfe with his Armie it gone towards Refan, and be bath fent with much to doe, and upon certaine conditions, to the Riner of Sagia towards the Volga, to bring vietuals to maintagne them that are in the Caffle befreged of the Mulcourses. The King of Poland is altogether refolaed to goe there in perfon this fummer, and if the Ruffes have no formaine beloe, as there is no appearance, no question it will come to passe as I writ last to your Werflow, that they will be forced to yeeld. I write briefly to your Worflow, because I hore to take my youage to France through England, and there to meet with your Worfhip; intreating your Worfhip to ac-10 cept thefe few itnes as a testimony of the fermice I have vowed to your Worlbip, erc. and fo I end in haste:

Thus have we finished source Acts of this Tragedie: the first, ending with the end of Beeles family; the second, with the raine of that of Boris; the third, with that (whatsoever) Demetrius; the fourth, with this Suiker, attended with that fladow or shoft of another Demerrius. Now as I have feene fometimes the Spectators of Tragedies whiled with discourse of a Chorne. or (as in our vulgar) enterrayned with mulicke, to remit for a time those bloudie impressions fixe ed in attentine mindes ; fo have we repretented Pheedres Coronation added to the firft ; Boris his Charter to the Englife to conclude the fecond; that of Demetrins to the third, and for this fourth I have here made bold with a Leeter of my worthy friend (fo am I bold to call that good Man, zealous Protestane, elegant Writer, industrious Preacher, learned Doctor, and Reuerend Deane Doctor Hall, a Hall adorned with fo rich Arras, and with all the ground, light, life, the All of thefe, Christian humilitie) which may fetue as a Letter of commendation to my intent. as it was intended to another worke, which had it beene publike, might have prevented the greateft part of this: A worke of Maiter Samuel Sombeby, in Sir Tb. Smith: Voyage mentioned, Mafter Sa. touching those Ruffian occurrents which he in part law. As a Traueller he deserveth place here, Sautheby. And howfocuer I have neither beene fo happy to fee the Worke nor the Workman, yet this Epiftle tells what we have loft, and my worke eafily proclaimes the defect of fuch a Wardrobe. point can what we made on, and my worker any programms the detect of fuch a Wardrobe, being (as you fee) like a Beggars cloke, all of dimerifyed parches; so much more labour to mee, in both getting and fittehing them, though so much left satisfaction to thee. Once, as I have getting and some some in the midth of Marine Discourries, to refresh the Reader a while on Land : fo amidit thefe tragicall, harfh Relations, I'thus feeke to recreate thy wearie fpirits with this chat of mine, and after thele Minds gates, more really, with this Letter fo viefull to the present subject, so pleasing in the stile. The whole, and the next following to Buchingki. the Reader may finde in his fo oft published Decades of Epistles.

Rauell perfittih wisedome; and observation gives perfection to travell; without which, a man may please his eyes, not feede his braine; and after much earth meassured, shall returns with a weary A plane to year, on seems one of the seems o 40 tion; fo, the end of observation is the informing of olders: for, what is our knowledge if smothered in our selves, so as it is not knowne to more? Such secret delight can content name but an ennione nature. You have breathed many and cold aires, gone farre, seene much, beard more, observed all. These swe yeares you have she m smitation of Nabuchadnezzats seven; connersing with such creatures at Paul sought with at Ephchis. Alas! what a face, yea what a backe of a Courch base you seven? what a manjouges with at Epinetus, Atlas: wost a jours jour on the first the with clofe Atheifine , Treachers with eners! what people! Amough thoom, input and Superflution firstes with clofe Atheifine , Treachers with Cruelts, one Deuill with amother; while Truth and Vertue doe not formuch as gine any challenge of refustance. Returning once to our England after this experience, I imagine you doubted whether you were on Earth, or in Heasen. Now then (of you will beare mee, whem you were wont) as you have observed what you have feene, and written what you have observed; so, publish what you have written: it shall not you have written. 50 be a gratefull labour, to vs, to Posternie. I am deceined, if the fickleneffe of the Russian State, have not

jeeilad more memorable matter of Historie sben any other in our Age, or perhaps m any Centuries of our Prodecessors. Hom shall I thinke, but that God sont you thusber before these bronles, to be the winnesse, the Register of so famous mutations? He loues to have those sust exils which hee doth in one part of the World, knowne to the whole, and those enils, which men doe in the night of their secretie, brought forth mto the Theater of the World; that the en: Wof mens sinne being compared with the enill of his punishment, may instific bis proceedings, and condemne theirs. Tour worke shall thus bonour him; besides your second service, in the benefit of the Church. For whiles you descourse of the open Tyra mic of that Rullian Nero, Iohn Basilius; the more fecret, no leffe bloudy plots of Boris; the ill successe of a stolne Crowne, though les upon the head of an harmelesse Sonne; the hold attemps and miserable end of a false, yet aspiring & challenge ; the perfidionfnesse of a service people, omworthy of better Gouernours ; the misse-carriage of wicked Gonernours, vieworthy of better Subjects; the viewit vsurpations of men, inst (though late) renenges of God; crueltie rewarded wab blond, wrong claimes with overthrow, treachery with bondage; the Reader, with some secret borror, Shall draw-in delight, and with delight instruction : Neuher know I any Relation whence hee fkall take out a more casie Lesson of Instice, of Loyaltie, of Thanke-

But abone all, let the World fee and commiserate the hard estate of that worthy and woble Secretarie. Buchinsky. Poore Gentleman bis diffresseralls ever to any thoughts Etops Storke, taken amongst the Buchinsky, ever continuous nie autregremani ener vom toonguse union stere talen amougit the Cranes: He now nourthes his base, onder the difficulte of a foreigne Prince; As one in the rance, and bangliment. Hee served as all Master; but, mit but boust beart, with cleane bands. The Masters ininstice doil no more infect a good Servant, than the truth of the Servant can infession in Master. A bad Worke man may ofe a good instrument; and oft-times a cleane. Naphin respetts a fine Majler. A bad Work mus may vie a good rosst numen : ann openmes a crease, iv age in mostic a fone mouth. It sopes me yet to ibnice, that his piete, as it ever beld friendling in Hausen, so mus a mount him friends in this our abort World: Lo, even from our Iland ynexpelled deliuerance takes a long stych, and Jeends in this our over rous is an energy prime.

Selffelt bim Reynold hope; per arbote , from Heisten, by the The God; moves benefirst, will be knowned to the feel and fearer human Christians, for a practitor of measure, a former of rout, at the rewarder of pietic. The mercy of our gracious King, the compassion of an honourable Complessor, the lone of a true friend, and (which wrought all, and fet all on worke) the grace of our good God; hall have lone of a true friend, and spoice wronger an, and see an or work;) we grace of our good coal; shall now lofe those bonds, and gine a flat welcome to his liberie, and a wiling farell to his diffress. He shall? boge) line to acknowledge thu; in the meane time, I doe for him. Those Russian Affaires are not more worthy of your Records, than your love to this frend is worthy of mine. For neither could this large Sed Worthy of your Keeras, than your some to wan pean as wat sy of muce. Let neather could the large Sad chrome or quently, now time and defence (mich as a want to heread ingring confumption of friendling) about the beats of that offiction, which has kindneffe bred, religious own flow. Both reactiff, and worth fadicumment this tree letter, which to [as free the bath bourn more large and of follows. Never times yeel, dad more love; but, not more fuiltle. For every man loves thought one womber, lower the of these to the

desc-1. No Age affoorded more Parasites, sewer friends: The most are friendly in sight. Serviceable in

expectation, bollow in love, trustleffe in experience. Tet now, Buchinsky, see and confesse thou bust found

one freend, which bath made thee many, Oc.

Of the miserable estate of Ruffia after Swiskers deportation, their election of the King of Polands Sonne, their Interregnum and popular estate, and chusing at last of the present Emperour, with some remarkabe accidents in his time.

Hus have we seene the Russian sinnes veterly rooting up so many Russian Imperial Families and persons : the whole Family of Inan extirpate, that of Boris succeeding, annihilate; two pretending Demetri and Suiskie extinct; and yet have wee greater abhominations to flew you. No Tyrant, no Serpent, no Dragon is so exorbitant and prodigious as that which hath many heads and therefore in divine Visions Monarchies (how euer excessiue and tyrannical) haue beene resembled by simpler and more vniforme beasts, but the 40

Dan.1467.68 D.will in a great red Dragon with seven heads and ten bornes, and the Beast likewise to which hee gase bis power and bis fost and great substrints, which opened his meach in blafthemic against God or.

1.40 17.1. of 17 now was Ruffia a Monster of many heads, that is, a bodie fallen into many pieces. One man possessed of the Wife of that double Demetrius, got to Afracan, there feating himselfe to set vp an vsurped shop of Rule; the Southerne parts choic Prince Vladylans, Son of K. Sigifmund of Poland; chofe of the North thought of other Princes; and at last when neither the Fig. trees freetneffe nor Olines fatnesse, nor cheering Wine from the Vine could take place in their inconstancie, the 50 Brambles conceived a fire whole deusers of the Ceders of Lubonus: a popular government happened, or if you will, a Confusion of the multitude bare (way, which killed and murthered enery Great Man, whom any Rascall would accuse to be a friend to the Poles, or to any of the dead Emperours, whom those popular injudicious Judges fancied not. And now Russia blushed with impudencie, that is with shamelesse fight of the daily effusion and profusion of her best bloud; now enery man was an Actor: and oh had they beene but Actors! too really did they present (not represent) bloudie Tragedies, of which their whole Countrey was becomne the Theatre; the Deuill the Choragus (a Murtherer from the beginning) and the whole World Spectator, itupid with admiration, quaking with horrour of fo vincouth a light!

Now for the ouertures betwixt the Muscouites, and Stanislam Stanislamich Zolkiewskie, Ge-69 nerall of the Polakes, touching their Election of Vladiflaus Sonne of King Sigifmund, and the Articles propounded : also the answere of Prince Vladiflaus to the same Articles , Anno 1612. I have here expressed in Latine as I found them: fearing I should be over-tedious to translate them, especially seeing the businesse came not to esfect : and the English Articles following of the

eschalls

gainst the Rebels, and that even to this present, they doe keepe, and will keepe their oath

once made, and their due obedience vnto their Lord. And, in that Lepin was punished of God for his treacherie, and departed this life with so shamefull a death, wee thinke it to bee for the good example of others, to reduce them into their former estate, to revoke others vnto their fidelitie, and for keeping their oath alrea-

Therefore, after many circumstances, they inferred, that they would presently send their Therefore, atter many streamment: but mooued with the perf wasien of the honorable Lord Generall, to wit, that his Maiestie would bee contented with their fidelitie once made, and performed vader bath, and with their griefe for the same cause, and will cheerefully forgine them ; and doth not refule to give his Sonne to raigne over them. Adding withalf, that many them; and doth not reture to give me soome to rayine our them. Adding withan, that many Kingdomes, to wit, the Kingdomes of Hingdomes, the Kingdomes of Belemia, and a great part of Refile, doe earnethy requelt, that he would receive them wader the happy government of his Marethe: that they might entay the primitedges of Poland, and Liven, to which, none in the

whole world can be compared. But , because his Excellent Maieftie, as a Christian Lord , reichting all other Kingdomes,

and Dominions, will graciously receive vader his Rule and government the fact Dominions, and that he is forry for their destruction : he therefore now admonssherh them, if they will bee vnder his prosperous Rule, and enter into an vnion together with the Kingdome of Poland, and the great Duchy of Litow, and live friendly with them; if they will performe, and confent therevnto , His Excellent Maiestic promiseth to remit their offence , and to receive them under his The King as happy gouernment and authoritie, and refuseth, and by no meanes will alter or change their taith sense. and conscience, or places dedicated vnto God, or builded fordeuotion : neither will impose on them any other Religion, or alter their ancient Manners, or Customes, but will bestow on them tnem any other accogning on over their ancient organizers, or Customes, but with beflow on them privileges and offices: and that the Rights and Priviledges, which the Pelar, with the great Duchy of Liter doe enjoy, thall be conferred on them: and that they finall be equalled with the 30 Kingdome and great Duchy of Liter, &c. which illusticities and priviledges, in former times,

their Predecessors wanted. For this perswasson therefore of the honourable Lord Generall, which he had in charge from his Maiestie to make, they yeeld all thankes: but notwithstanding they propound, and plainly adde, that their oath shall be so, that his Maiesties sonne shall succeed in their government, with certaine additions, to wit, that they will have none other over them but onely his Maiefties fonne, and that the whole Land doth make it knowne, and propound their in gement and fen-tence, by way of denunciation, that by no meanes, but by offering his Maieffies fonne, these troubles of Molconia can be extinguished. Adding withall, that at that time, in the first troubles, when the honourable Lord Generall came into the Country of Mofconia , and required the

40 oath for the Kings Maiesties sonne : if his Maiestie had made any mention thereof, it is certaine, that the Commons and all the Nobilitie, would not have confented thereunto by any meanes, and that greater effusion of bloud had rifen thereupon : And that they had taken for their Prince Klutziniky, called the Wor, to whom all were not affembled, who also at that time had a great Klutziniky a power of men, as well of Poles, as Ruffes and Litomes. They therefore feeing the great discord was or Presenamong it the people, taking counfell, did freely choofe for their Lord and Emperour his Excel. der, schnowlent Maieflies sonne, vnto whom they had a great affection, and who had a long time before laven in their hearts : affuring themselves also, that by this election of his Maiesties sonne, many troubles and diffentions would be pacified, and so rejected the aforesaid Wor Klutzinsky: As alfo they received into their chiefe Citie the chiefe Generall. But, when it was heard that his Ex-

50 cellent Maieflie, would by no meanes give ynto them his fonne for their Lord, and to rule over them, they fell into such effusion of bloud and insurrections, As also the same time, the whole Country of Mocconia looked and expected nothing else then his Maiesties sonne. Calling to memorie, for their better aduice, that it was to be feared, least whilest his Maiestie came too late with his fonne, divers parts of the Land should choose vnto themselves several Lords. As to the Southward the Castles Stracken and others, to the King of Person; part of Pomerland and Si- Astronom. beria, to the Kings of Denmarke and England; Nouogrod, Plesco, Inamogrod, and others, to the Laplands King of Sweden and that the other Cities would choose to themselves other Lords separate from the reft. In the meane feafon, they defire his Excellent Maieffie, to make a speedy end of these warres, according to his Obligation and promife ratified by the oath of the honorable Lord Ge-

6c nerall, and the whole Armie : and that his Maiestie himselfe, with his sonne, would come into Molcouis. They request also, that his Excellent Maiestie would retayne with himselfe and his Sonne, Counfellors, and Me flengers of their Commonwealth, for the ordayning and concluding of perpetuall Conditions. They request also, that his Maiestie, in the name of his Sonne, would fend voto all the Inhabitants of the Townes, and write voto the feuerall Cities, fignifying his

Pramiflane.

B' what manner their naturall Lords ruled ouer them, they alleged, to wit, beginning from 10 Lord and Limpton Physical Engenese (i.e. Emperous of Low, such rate that I Lord and Limpton Physical Engeneses), in whom their Race craded.

This Bern Gedoman shipting with Phender Engenese, was created (by the ones force and power) Emperous or Lord: but after a little time, the pleature of God to working, being timed out of the Imperial Liest, departed this life thamefully, and by violent Leath, together with his Wife and Children.

Write and Children,

That Chriftophorus Orrophy the Roftrige, being of bale defects, ruder the Name which he did
bears of Emperour, otherwise Domeriy Ensequent, Lines as Orgetz, did fraudulently and by decist (wherewish he decisited the common people, and other that believed them) obtains the
Imperial Seate by force, without the confert of the Spiritualitie, and all the chiefe Bullops and as Gregorij Butro-Demetry Eus-Lords, and great men of the Kingdome, who durft not withfland the fame, dering the Commons to veeld thereunto.

Lord Palatin of How the excellent Lord Palatin of Syndomics, gage his daughter in marriage to the Roftrigo, and himselfe (many Gentlemen both of the Kingdomete Palatin great Ducky of Lines, co.

Vafili Eu**ano**-web Suir**iey.**

and himselfe (many Gentlemen both of the Kingdomess Polond, and great Duchy of Liero, accompanying him came into Mofemia.

Then, that Unit Enterwise Swing, with his brethern, and many others allocated to this attempt, and fifting by pother great men of the Land, did kill the Robing. with many Gentlemen of Polond, and the great Duchy of Lower, and put the red inpedience Calles. And himselfe
was made Emperour, although he were not elected by all the Sagtes. Whereupon many of our
for did not willingly acknowledge him Emperour, and many would not obey him:

How another named the Wor, this riv pat Losing, and caused himselfer to bee named Demoris, and to accounted. Whereof when many thoth Robins and Poles Jheard, they affembled vario
him, thinking him to be the true Downeys; and the Robins of much the more willingly draw
worth him. Decays of the mantherers.

Other Wers, or How others called Wers, did name and call themselves somes of the slaine Emperour, as luen, pretenders . 1. Peter, Pheoder, and by many and divers other names; and under the same names, did consume nan, Peter, the State, and thead much bloud. Pheeder.

How the Kings facred Maieflie, comming to Smolerike, lent his Meffengers the Lord of Pre-The King of miliane, and other noble men, who comming vnto the Campe, the forenamed Wore field away: but divers of the Refler came vnto his Maiestie. And taking counsell with the Beiseries, at that 40 The Lord of time remayning with Suckey in the chiefe Citie, we first our Mellengers to his Majeslie at that time, being at Smolenske, viz. Michael Salticene, and others, requesting that his Majeslie would

grant vs his Sonne to be our Lord. How they were dispatched away, and what answere they brought from his Maiestie , with conditions engroffed, and figned with his hand and feale.

The Articles are before

concitions engrosed, and ingress when his passes and the passes.

How that after the depoint of Sauker, the noble, Lond Generall of the Kingdome, comming into Mojessus, concluded all the faid businesses and traptice and traptice and confurned them with the oath of himselfe, and his fellow Souldien. And that they after that outh , likewife made their outh for the fame. Then, that for the greater defence of the faid principall Citie from the West, they fent Souldiers into the Citie, and fent also their Meffengers from the whole Countrie Fiderets, 50 Valle Galichin. the Metropolitan and Vafili Galichin, with others, vntothe Kings Maieffie, and required an oath in his Maietties behalfe, of all the feuerall Provinces,

How that his Maiesties Souldiers dwelled and behaued themselves in this capitall Citie of Moleo, before the troubles began, without injuring any man, punishing the enill according to

How the Boiarins handled other Gentlemen, and principall persons of the Ruffe Religion, although more inclined vnto them : but especially the Officers and Servants of the Wors, as also fuch as had fled ouer.

It followeth, how they often fent word vnto the Citie of Smolenike, and willed them to deliver up the Citie unto his Maiestie, to bee under his prosperous government and power. As for 60 the secret plots of their Messengers, Galechin and others, they faid, they were ignorant, as also of some vnknowne practifes, handled with the Wor called Halufin. But they faid, that they had written very often to the Citie of Smolensko, and commanded them to doe whatforuer flood with his Maiesties pleasure, and Liked him, without further effusion of bloud.

How

comming into their Dominions, and willing, that out of the feuerall Prouinces, all forts of men fend their Meffengers, to treate and conclude of the affaires of all forts of People, and of perpetuall tranquillitie. Promifing after the faid Charge and Letters to all people in generall. and notifying from their faid Lord, that (by Gods grace) there may bee throughout the whole Land of Moscosia, tranquillitie, peace, and securitie.

To conclude, they pray heartaly vnto the Lord God, to grant vnto his Maieslie in this busneffe begun, a prosperous and speedy end.

Thus haue wee feene diffolute refolutions, or refolute diffolutenesse, men onely conflant in inconstancy, resoluted vpon irresolution. As we often see sicke persons turning every way, and incontrancy, resource you memorial time longing for day, and in the day for night; such was now to the Ruffian ficknesse, they would and they would not, and yet would againe, and againe would not, they fearly knew what or why; fluctuating in an inward florme of diverlifyed hopes, feares, defires, distracted affections, no lesse then in that outward broile of State. For it was not long that they looked toward Poland, whether for breach of conditions of that part, or out of inueterate hate to the Pole, or their Nationall icalousie and diffrust of Strangers, or a naturall inconfrancy; they fell off from that Prince; and their Chancellor (Father to the now raigning Emperour) employed there with others in Embaffage) were detayned thereupon prifoners. It is also reported that they made secret ouertures to His Maiestie of Great Britaine, and that Sir Iobn Merick and Sir Willam Ruffel were therein employed : but the firong consulfions and sharpe agues and agonies of that State could not, or would not endure the lingring of such ag remote paticke; the wheele of Things being whirled about before such a Treatie might admit a pallage of Messengers to and fro. Once that Russian Head grew so heady and giddy, that Many-headd at laft it bred innumerable Heads, year the whole Body became Heads in the worst of tyran-body.

Many-headd and the property of the state of the stat ftroully multiplying two for each cut off) like this: for besides so many Wor's after the first and second Demetrins (which might make up that comparison) each limbe, nay almost each haire of this Hydra (not the Nobles alone, but the baleif which had nothing but themselves, and were nothing but Numbers) became so many prodigious Heads; they also like Pheraobs leane time denouring the fat, and upon light pretences beheading themselves in cutting off the heads and nobler Persons among it them.

When they had thus made away almost all the Grandes, and left the South parts to the spoile of the Poles, which once againe were drawing neere to Moses to besiege it; the Poles alio suffered some disafter, their Souldiers mutinying for want of pay, and banding themselves to returne into Poland, there inuaded the Mints and Custome-houses, and some governments, detayning them for their pay; fending also threatning Letters to divers Cities and Townes, forced divers Nobles and Plebeians to composition. The Turkes and Tariars brake likewise into Walachia, Moldana, and Polonia, fo that Zolkiewsky or Sulcosky the Generall was forced to go against them, of whom he made so great a slaughter, that the Great Torke committed the Polake Embaffadour at Conftantinople to Ward, and threatned the Poles with inuasion. These mytinous Souldiers continued meane while that and the next yeere to spoile Poland, doing much 40 damage to the King and the Bishops, challenging many millions due, as they faid, for pay. Yea they passed further into Prussia, and made sporte in every place, on the eight of November 1613. passing with a great prey to Thorn, being parted into three Bands, the Sapians, the Shorouians , and Smolenskians. Another companie of them terrified Silesia. The Tartars likewise made impression and committed great spoile in Podolia.

ruine of Rufsia.

Pezarsia cho-Treaturer.

Thus an Armie divided could not conquer, nor lo veterly exterminate Ruffia as otherwise opdence permits porcunity was offered : the Pole Souldiers being herem like angry Elephants which sometime recoyle vpon their owne troupes and doe more ipoyle then the enemy could either have effected or expected. But whiles the Inuaders were thus inuaded, the Ruffes were forward to worke those executions on themselues, which their enemies could have wished to them; till at laft awakened with the horrour of their owneeuils, some began to thinke of a better course. In the 50 Strange altera. North about the Dwina, a bold fellow, a Butcher, rayling at the Nobilities basenesse, and the tion of affaires Officers corruptions, said, if they would choose a good Treasurer and pay Souldiers well, they by a Bucher. might haue those which would fight and expell the Poles their Enemies : prouided, that they would first choose a worthy Generall, for which place he recommended to them a poore maymed Gentleman, called Powarsty, who had done good feruice, but being neglected, now had retyred himselfe not farre off. The multitude appround the Burchers counsell, and chose Powers-ky for their Leader, and that Burcher for a Treasurer, deliuering into his hands what money they had, which he so faithfully disbursed, Pozarsky also discharging so well the trust reposed, that a great Army was gathered, and the fiege of Mufco thereby rayfed. And joyning with Knes Demetry Mastroukswich (a kind of Tartar which commanded an Army of Costaks in fer- 60 uice of the Ruffe) they tell in confultation with Boris Liein, the third Great Souldier of that Countrey, vpon choice of an Emperour. Their mindes herein difagreeing (some naming one, fome another) fome named Maftronkrwich himtelfe, other for further securitie against the Poles,

and to recompense the fufferings and imprisonment of the Ruffian Chancellor in Poland, named and to recompense the fafferings and imprilionment of the Raylan Chancellor in Polana, named Micalamich his young Sonne Micalamich, under whose Empire (hauing a good Councell appointed) they Son to the mis young some Armies, This was first approved by the Coffake, and then by the other Armies, the Chancellor Burcher alio was taken to become a Counsellor, and those three Leaders aforesaid were made choica. Militarie Commanders for the present Emperour against the Poles. Embassadours also were sent to divers Princes to mediate betwixt them and the Fole, and betwixt them and the Sweden: and by his Mijellie of Great Brittaine (w.om God long preferue to reigne ouer vs) his counte-nance and incrrection, there hash been some agreement, and the young Emperour hash fetled has Dommions in peace, making at laft a truce for fourteene yeeres with the Polar, obtaying His Fathers 10 also in that Treatie his Father the Chancellour his libertie and returne out of Poland, who fince returne and is confecrated Patnarke of Ruffia.

His Embassadour to the Emperour came to Line in December 1613, and thence was conneigheu by the Emperours Officers to the Court, where hee had folemne audience, where after rich prefentsoi Furres and his Letters, he delivered his speech, that Michael Phedorowich was lange. now by vnanimous confent advanced to the Russian Empire, and willing to entertayne and coneinne the ancient confederacie betwixt both Empires : defiring the Imperiall Majeffie to dehort the Pole from his vinuit attempts, to deliver the Ruffe Captines, and not agains to infelt the recouered Musico, but to enter into prace, and abitayne from Christian bloudihed. Likewise to fend an Embaffadour to his Court, &c. This mediation Cafar promifed, and gaue the Embaffadour 20 liberall entertamment, and gentle dispatch.

Not long after in May 1614. the Ruffian Embaffadour had audience with the States of the United Provinces at Hages and before that in England. I was prefent both at his arrivall at Granefend, and his honourable entertaynment into London, and Lw him alio prefently after the running at Tilt at White-hall, the foure and twentieth of March, admitted to his Maieflies prefence, performing that Ruffian Rite of bowing with his face downe to or neere the ground, &c.

Anno 1615. The Turkish Embassador treated with the Cafarean Majestie about the mediation betweet the Pole and the Museomite, who employed to that purpose Erasmus Heidel and the Baron of Dobn. The Pole no: withitanding fent an Army in his Sonnes challenge (who was 30 Shortly to follow to Smolenske) into Musconia; Pontus Tellagard the Sweden Commander infefling allo the Ruffians at the same time. But the next yeere 1616. Sir John Merike Knight, negotiation.
a nan of great experience in those Northerne parts, was employed his Majesties Embassadour to Sir Dadso Dies. negotitte betwixt those two Great Princes, the Mosconite and the Sweden, the Articles of whose was also sent comp sition I obtayned by the mediation of Sir Thomas Smith (my ancient Benefactor in this Embassador in kind) and have here communicated to thee, but in another Chapiter as being now past our Tra- a troublesome kind) and have here communicated to thee, but in another Chapiter as being now part our fra-gicke Thunders: as also the following Ruffe-China Newes, that you may see not only the face of could not with Ruffis washed from her bloudy pollutions, but her hands further then ever extended (fortunate in fartie passe repetitions) from the bloudy pollutions of the treaty of Commerce) as far as China: likewise the Ruffe Patent to the English. Sweet is the name to Moseo for of Peace, and the thing it leffe a Heauen upon Earth. BLESSED ARE THE PEACEMA the enemis, in KERS (His Maieflies word elfe-where, here his deed) for they shall be called (said the only begot of Micalawich.

	ten Son) the Children of God; even the God of peace will make them his heires of Heaven, which
	(models of Deity) feeke to establish the peace of God vpon Earth. And let it not seeme tedious
Ċ	here to prefent these His Majesties Trauels, amongst our other Trauellers, but in a more glorious
	manner (I ker to God vommeable which moueth all things) who hath not only been our Sunne,
	and with lightfome heate and influence filled our Brittifb Hemisphere, but hath dispersed his
	bright rayes of Light, and warmed with tweet quickning beames of heat, those remoter frozen
	Chimates of Sweden and Ruffia, (not to mention, or but to mention the quarrels of Denmarke and
	Sweden) and after their long frostie Night (such is the nature, such was the state of those States)
	to reduce the faire day-light of Peace, the warmth whereof hath thawed the Icie hardned hearts
۵	of Enmity, and filled all things with tweets, and cheere of a returning Spring. Nalla falm belle,
	paceme te poscimuu omnes.

Ordnance and remaine.

inc., a nym. 10. And as for the Russe Ordnance in these Castles which shall be given to our Lord Emperour and great Duke & c. from be Kings Maieste G. A. & c. which Ordnance shall remaine there, shall be given to bis Maielties Officers, and what munition of Artillerie, as proussion for Warres, and Bels, and olber to our orangest Office, matters, which there is the Land of Rulla out of those Casiles, before the 20 matters, which the Kings Matesties great Commissioners, and the great Lord King lames &c, great Ambassadour Sir Ioan Metricke, Knight, did erest, as the twentieth of Nouember, such Ordnance and promissions shall remaine to the Kings Maiesties wse, and Crowns of Sweden, wishout all contradiction

11. And because the late great Lord Emperour, and great Duke Vasilly Euanowich of all Russia. Sam. did gine and confirme by writings, unto their high, mighty, late Lord, King Chatles the ninth of The court of Veter Coeffin Sec. and to the Crowne of Sweden the Castle Corela, and the Promine thereof, for that faithfull and and the Terri. good willing aide which was done with bim, against the Polith people: in like manner dails confirme. totics, confir and establish the same by this contract of our great Lord Emperour, and great Duke M.F. &c. the same med to Swidin reelding and donation of the great Lord Zarg, and great Date Valily Euanowich, &c. for himselfe, 30 feliang and aumanon of the great come scales are greated by the property and present of the whole empire, and bereafty being Emperors, and great Deket of all Russia, and for the whole empire of all Russia, that the faul Callega, Corella, with all profess researces, and rents, by Lund and piecy an Activity, vom so Jam Caping provincing mounts properly interested, and tents, by Lana and by Water, according to their fromer augment, and now being bonderers, nothing exempted in all, accordingly as it was by former Emperater, and great Duketegfull Rustin, as they possife the delds of hereafter it shall remaine to their Kings Muselite, GoA.of Score, and to bus Manshes Successions, and bereafter following Kings of Sweden, and the Crown of Sweden, without all cassillation or contradiction for enertasting times.

ners o both fides to meet;

12. And that bereafter there be no more difficulty or variance concerning the borderers of the Land, it is concluded and agreed upon, that in this yeare 7124, upon the first of Inne, our great Lord Emperour, and great Duke M.F. &c. and their bigh, mighty King G. A. &c, shall fend on both sides, speciall good Courtiers, and Notaries, to meete between Lodiga and Orcicke, at the mouth of the River Lava whence it doth fall into the Lake of Lodiga, fothat they shall meete upon the faid River, on the midf of the Bridge, which of both fides their people fall make upon that Ritter, and when there the one fhall hand showed the other their ample Commissions, and shall appeare that they are worthy to measure out the bordersthereby, betweene the Emperours Maiefile, and the Kings Maiefiles Lands: fo that from the borders of Nouograd, Lodiga, and Odow, with their Prominces, and also from Somerskey, Volott, be desided from the annesent and former precinits, and borders of Oreleeke, Copora, Yam and Europe gorod, in suff manner as it ought to be, at the Jame time next enfang the first day of lane, then the faid Courtiers and Notaries, through presence in the faid manner on both sides, shall meete together open the borders of Nouogrod, betweene the Province of Olimets and Corela at Salomensky Towne, by the Lake of Lodigs,; which Courtiers also fall view the same Pronunces according to the former borders. and as the former are express, how they have bin, and confirme the same, and if they so chance, that they cannot bappen upon the former auscient bordars, then Shall they, by just inquisition, make new borders and Land-marker, in such manner, that hereafter there be no further controversic concerning those borders, and those Courtiers or Gentlemen shall not part asunder of neither side, till they have sufficiently and friendly ended that businesse in all manner, and what those Coursiers shall finish and effect in this manner. the same according as befitteth there shall expresse by writing upon parchment on both sides, and confirme the same by their subscription, Seales, killing of the Crosse, and oath interchangeable; and as concerning the desiding of borders, and the Gentlemen shall doe it; as namely of Novogrod, Lodigs, Odo, Somer key, Voloft, of one part, and also betweene Orefeke, Copora, Yam, and Euanogorod, on the other side, and also betweene the borders of Nouogrod and Corela, Shall be set downe and aritten, the 50 fame shall be wremouseable and fast for ever lasting times, by our great Lord Emperour, and great Dike Michall Fedorowich of all Russiacoc, and ebe Konge Maussiac Gultanus Adolphus, Sec. and ibser successioners, and bereafter being an both fides, for enertafting times, according to this contract of an enerCHAP. 10. Contract betwixt Michalowich E.R. and G. A. King of Sweden. 795

lasting peace: and for more sirme consirmation of the same, that it shall be held and kept : it shall be delaying further in the Letters of contract, which shall be bereafter given betweene both Princes. from the Emperours Maiestie, by hissing the Crosse, and confirmation of bu faid Letters by his great Scale. and by the Kings Maiesties oath upon the bely Enangelists.

12. As also the former, of bleffed and most famous memory, great Lord Emperour, and creat Duke Fedor Eugnowich of all Rullia, Sam. our great Lord Emperour, and great Duke Michail Fedorowich, of all Russia, Sam, oc. Vnckle meonclusion of peace made at Tavim, in the yeare 7102. did veelde and gine oner all bie pretention and claime to the Countrey of Leifland, at alfo the great Lord yeene smay be and groat Dute Vassiy Eunowich, of all Russia, Sam. in a conclusion of peace made at Emperour, and groat Dute Vassiy Eunowich of all Russia, Sam. in a conclusion of peace made at to Wyburgh, in the years 71 17, did renounce the same; so it is now here concluded and agreed, that our The title of

oreat Lord Emperour, and great Duke M.F. &c. and bis successours, and bereafter being Emperours Leisland telisand orest Dukes, shall at no time for ever challenge unto themselves any right, or pretence to the Countine for ever challenge unto themselves any right, or pretence to the Countine for ever challenge unto themselves any right, or pretence to the Countine for ever challenge unto themselves any right, or pretence to the Countine for ever challenge unto themselves any right, or pretence to the Countine for ever challenge unto themselves any right, or pretence to the Countine for ever challenge unto themselves. tres of Leifland; neither fall our great Lord Emperour and great Dake Mi.F. of all Ruffia, Sam. morbie "Dings, and rrey of Lemanu; neuner fone wer great Low a Emperame was great Long rute ey an Allens, Januar bette facelfourt, great Lords, Emperours, and great Dukes of all Rollis Jovensfor white voine their great Lords, 7:173,000 coal Roy Gillus Mallophus, no he facesform bereafter being Konge of Sweden, wer to the Oremon of timed.

Sweden, with the title of Leifland, or those Califor which the Emperours Maiefite bath new renewal sed to the Kings Maieflie for ener, neither by Lesters of confirmation to write themselves, or name themselves to them, nor suffer his Uoyanodes, Servants and Commenders, to write themselaes with the stille of Lestand, or the Townes aforesaid, neither in writing wee speeches, to name themselves. As also our great Lord Emperour, and great Dite M. F. of all Ruffia, Sam. bis successions; and bereafter being great Lord Emperour, and great Duke of all Rusha, in their writings and speeches ; Shall gime to their

Kings Matefie, and bereafter being Kings of Sweden, their accustomed title of Leitland, and Corella. Item, on both sides, the great Commissioners have agreed, since at this Treatie we could not accord upon the full title of both the great Potentates , As to intitle the Empereurs Muiefte, and of many other Dominion: Lard and Conquerour, and the Kings Maieftie, mab the title of Ingermanland, wee bane of both fides great Commissioners, referred the same to both great Potentates liking therein; and if that either Potentate will be pleased to write the other with the full title, as to the Emperours Maiestie , the Title to be Kings Maiefite doth write the full title with the word Longuezon; and that the Emperant Maiefite guen.
alfo doe write to the Kings Maiefite bus full title with Ingermanland, then both the Potentates are to

ge fend thofe sules by their Ambaffadours, and nominate the fame full sitle in one of their Letters of confirmation, and the other, Letter to be written according to this our present agreement : and if in both the Letters, the titles be written to the full at the Emperours Maiefties full sitle, with Conquerour, and the Kings Maieste with Ingermanland, then both fides Ambaffadours Shall (hem one the other the faid Let-Amps conserve who insert them, fall yet to each Prince with the fame; if there are inter fall the Perentials follows the theory and having flowers them, fall yet to each Prince with the fame; if there are inter fall the Perentials follows the theory, and fall find the fail Letter of confirmation with the flows that, according to the one prefers agreement: the Ambassadours of both sides shall in lake manner make known to fame one to

the other, and fo proceede therewith to both Potentates. 14. Alfo it is agreed and concluded, that there fall be free commerce of Trade betweene both the great Kingdomes, the Empire of Russia, and the Kingdome of Sweethen, and both Kingdomes Subjects: Trade,

Sam. Merchants of the Dominions of Ruisia, from Nouogrod, Plesco, and other Cities and Townes, paying their due cuftome, Shall baue free liberty without let to traffiche at Stockholme, Wiburgh, Reuell, Narue, and other Townes in the Countries of Swethland, Fynland, and Leifland, and they that dwell and plant themselves at Iuangrod, Yam, Copora, Nettingburgh, and Coreilla, what Nation foeuer, either Ruffe or other people, shall have free liberty mithout let to trafficke, and to trade, paying their due custome, in the right Custome houses, at Molco, Nouogrod, Plesco, Lodiga, and other Townes of Rulsia, with the Emperours Maiesties subjects, and also have libertie to travell through the Dominions of our great Lord Emperor, and great Duke M.F. Oc. for their trade of Merchandize within the 15. And by reason heretofore our great Lord Emperour and great Duke Michall Phedorowich, of

50 all Russia, & c. bis Maiefties subietts Merchants, had their free bouse of merchandize at Reuell, also now by contrail of Taulin and Wiburgh, it is concluded they flowed have a good place for a bowle, ap. Merchants of pointed them in Rettell, at all 6 in other the Kings Maiesties Townes, as at Stockholme, and Wyburgh, to both Kings ome and the stockholme, and Wyburgh, to be stockholme, and which we should be stocked the stockholme, and which we sho they shall have house and Dinine Service, according to their Religion, in the faid bouses, without let or and Churches binderance, but at Reuell in their Church, as formerly they have done; yet to fet up no Church, accor- in each others ding to their Religion. And as heretofore their Kings Masesties bis Subjects, base had a free house of Countries trade at Nouogrod, now also according to the contract of Tautina, and Wyburgh, they are to have a goodplace for a boufe, prepared them at Nouogrod, and the Empresur Maufius other Citier, at Motico and Plelco, boufe for the faid pumpic, and of their Dissue Service according to their Religion, in the boufe; but to build no Charches for that of e any where.

For breutie, I have omitted the following Articles to the 29.the lubstance whereof is as followeth. The 16. determineth what debts shall be recoverable. The 17. the fine effect Majating han central setter . And I respect that Antalidour may speedily reflected the entrance and control of the control of baffadours with speed to me backeagaine. Anno 7128, the three and twentieth of September in the Emperours Dominions at Soldins, 2 Cazacke of Siberia, called English Persian, did report, beeing examined of his Trauels. The uellers of their Voyage to Ca- last yeere past 7127, hee said that the Boisven and Voyaned Knez Euan Simonowich Koorockin. fent him from the Caftle of Tomo, and ba followe Andre De, to conduct the Kings Alimes Anbaffadours, as also to inquire or fearch the Kingdomes of Catay. They went from the Caffle of Toma near balladours, as allo to inquire or learch the Kingdomes or Cates. They went from the Callleet Child beyond 0. See 19.24 and 19.25 and transled letter 2 are 2 Angle. But much expectigious cenne ob. See 19.24 and 19.25 them thence is they passed intoght his Eddl find Welley by the Collins of Starrangery, where are regarded and the Collins of t very few at drice. Thus their whole trained from Tome Caffle to this gate, was tweltie weeker belides forme dayes that they flood fill, and from the gate to the great Empire of Catal tenne 90 dayes, and came to the Citie or Caffile of Cats, about the beginning of September, and were lodged in the great Embaffadors houfe : and having beene there in Catay Foure daves, there vied to come vnto them a Steretary with two hundred men vpon Affes very well apparelled, and did entertayne and feast them with Sacke and other Drinkes made of Grapes, and told them that the Emperour, or King Tambur had fent him to aske them wherefore they were come into the Dominions of Catay. Whereupon they answered that our great Lord and Emperour had fent them to discouer the Dominions of Catay, and see the King thereof; but hee answered them againe, that without prefents they could not lee the King, and withalf gate them a Letter, which Letter they brought with them to Talborke , and from thence is fent to the Emperours Maiestie by them. Out of Catay they went about the twelfth of October, and came to the Castle 60

of Tabolike about Whitfontyde the fame yeere 1619.

v 201571

THE YEAR OF THE WE

A Description of the Empires of Catay and Labin, and other Domimions alwell inhabited, as places of Pasture * called Vlusses and Hords, and of the great River Ob . And other Rivers and Land pallages.

Rom Kness to the River Bakanna is fixe dayes travell, and from Bakanna to Kinchike, is nine with their I dayes trauell, from Kinchike to the great Lake, (in which Lake Rubies or Saphires grow) beafts. is three dayes trauell, and the compasse of that Lake is twelve dayes trauell on horsebacke, There Their Journal, IO falleth also into the faid Lake foure Rivers, to wit from the East, South, West and North, yet the or daily jourfallethallo into the faid Lake rouse Kiners, to wit from the East, South, west and Ameri, yet the neyes from water doth not increase in the Lake, nor decrease. There falleth yet another Riner into the faid place to place Lake, which commeth from betweene the East and the North, and is called Kitta, ypon which Huge Lake, we went fifteen dayes to the head of it, where we found the King Altine in progreffe; the way is very stony. And from the King Aline to an Vluffes fine dayes travell; the Vluffes is called King Aline. Algunas, and the Duke in it is called Tormofine; from him to another Uluffer fine dayes, the V- Vieffer, or Tarluffer is called Chikursha, and the Duke in it is called Carakula; from thence to an Vluffer five dayes called Sulduffa, wherein is a King called Chaksara, from him to an Vinffe called Bifue, fine dayes, the Dukes name is Chichine; from him to an Vluffer called Iglethin, fine dayes, the Duke is Talebils Cherekta, from him to an Vluffes called Beshuta, fine dayes, the Duke is called Cherker.

20 from him to an Vinfes called Girnt, foure daies without water, the Duke is called Chickenge, From him to an Vinfes called If the fine dayes, the Duke of it is called Checken. From him to at Vinfes cilled Tulent Vnient foure dayes, the Duke is called Tayku, Kaim. From him to the Vinfles Toper fin three dayes, there is a King called Bak buta. From thence to an Viules of the vellow Mu. Yellow Mugali, galls called Mugolebin, wherein is a Dutcheffe called Manebika, with her Sonne Ouebai Taichie, it is within two dayes journey of the Land of Mugalla, a very dangerous passage through Mugalla, or the cliffes of the Rockes , which being past they came into the Land of Magalla, wherein are Tatavia Orien. two Caftles or Cities built of stone, they are called with them Balbim, in one of them is a Duke talk imm Bugcalled Talay Taifeen; and in the other the Duke is called Egiden Taifeen; there is also a third Citie in it called Lobin, wherein doth gouerne a woman called Dutchesse Manchika with her Soone, 30 the faid Dutcheffe doth command all the Cities of Magalla, and her command extendeth into Catay. If any man be to travell over the borders, and into Catay, he must have a Passe under her

Scale; which if they have not , they may not palle through Catay. The Land of Manalleis great and large from Bughar to the Sea; all the Cattles are built with stone foure foure; at the corners, Towers, the ground or foundation is layd of rough, grey frome, and are courted with Their builles, the gates with counterwards as our Raffe gates are, and vpon the gates abrum Bels or dings W. ceh-bels of twentie poode weight of metall, the Towers are covered with glazed Tiles : the houses are built with stone foure cornerd high, within their Courts they have low Yasits, also of ftone, the feelings whereof, and of their houses are cunningly painted with all forts of colours, and very well fet forth with flowres for flew. In the faid Countrey of Mugalla are two 40 Churches of Friers, or Lobaes, built of (quare flone, and fland betweene the Baft and the South;

vpon the tops of them are made beafts of itone, and within the Church just against the doore when the copy of the large of the forme of women of two and an halfe fathorne long, Friers. gilt all ouer from the heads to the feet, and fit a fathome high from the ground spoin heafts made of stone, which beafts are painted with all manner of braue colours. Those kolos heafts are their hand a Veffell, and there burne before them three tallow Candles, on the tight full of them Candles, are erected eight Idols more in the forme of men, and on the left full eight Idols more in the forme of men, and on the left full eight Idols more in the forme of Maydens, gilt all ouer from the head to the foote, their armes fireadhed out after the manner as the Mugall people, or Religious men vie to pray. And a little way from theile Idols fland two Idols more made naked as a man is in all parts, not to be differned, even as abough he 50 were aline, having before them Candles burning, as small as a straw, and butne without stame Candlebur.

only in an Ember or Coralf. Their feruice or finging in these Churches is thus. They have two Transpets of a greatile mith, flame. about two fathomes and an halfe long, and when they found on their Trumpets, and bears up gion. on Drummes, the people fall downe vpon their knees and clap their hands againe, adding their armes afunder, they fall to the ground and lye fo halfe an houre. They Churches are concred with glazed Tiles. As for bread in the Land of Mugalla there growe hall magnitude Coline, with graced a real solutions and the second property of the pr are not faire, but the women exceeding faire, and weare for their Apparell, Yelness and Dankette; Prople and

the Capes of their Garments both of the men and women hang downers sheir flourished. They arrive diffill Agnauite out of all forts of Graine, without Hops, As for Persons Stomer and Gold they have none, but for Silver they have great flore out of Casay. Their Books they weare of their Diffilled wins

Such are the Tartars dwellings or flee-

799

owne fashion. They have no Horses, only Mules & Asses in abundance; they till and plough their ground with great and small Ploughes, as we doe in Siberia at Tebolske. Their Cuttuffs are in our Language Patriarkes, and both in Mugalla and Catay are but two Cattuffs; the one was about Cutuffs or Patwentie, and the other thirtie yeeres of age. Within the Churches are made for them high places with leats whereupon they fit: the King doth honour them with bowing downe before Lobas or Friers them. Their Lobas: are in our Language Friers, which are short about twentie yeeres of age,

Continuation, and know no women from their Mothers wombe, they eate flesh continually every day, and shaue both Beards and Mustachoes: their Garments are of Damaske of all forts and colours, and their Hoods yellow, they say that their Religion and ours are all one, only the Resse Monkes are

Beyond the Land of Magalla are three other Countreyes or Dominions, stretching towards Three King. Burbar, the one called Orim, the Kings name there is Englar, the Citie is offtone, and the King-Ortus. Taleuth.

The other is called Dominions of Talguth, the Kings name is Sauelanche, his Cities are also of ftone, and his Kingdome rich. Sher.

The third Countrey where the chiefe Citie is, is called Shar, and the King thereof is called Zellezner, or Iron King, his Kingdome is rich, and not farre from Bugbar. From this Iron King come Diamonds, and all these three Kingdomes are under the South, and on the other side of the Blacke Mugali, blacke Mugalis are the yellow Mugalis, stretching all alongst the Sea, aswel Townes as walking

people, with their Families and Herds. From the Countrey of Mugalla, where the Dutcheffe Manchika dwelleth, to the Citie of Estate.

Walls of Catay, Shrokalga in Catay, is two dayes travell on horsebacke: and the bordering or frontier wals stand vnder the South towards Bughar, two moneths travell, all made of Bricke of fifteene fathome

high, whereupon they told about a hundred Towres in fight, on both fides of them, but towards Buebar, and towards the Sea, the Towres are not to bee numbered, and enery Towre standeth from another about a flight shot distant. The faid well are neth downe towards the Sea foure moneths trauell. The people of Catay tay, that this wall fretcheth alongst from Bugbar to the Tower becoms Sea, and the Towres vpon it fland very thicke; it was made, as they fay, to be a border betweene Mugalla and Catay. The Townes vpon it are to the end, that when any enemy appeareth, to kindle fires vpon them, to give the people warning to come to their places where they areap- 30

pointed upon the wall. At the entring without the wall dwell the blacke Mugali; and within is the Countrey and Cities of Catay. In the wall to Catay are fine gates, both low, and straight Cara Catay. or narrow, a man cannot ride into them vpright on horie-backe, and except these finegates But fiue gares there is no more in all the wall; there all manner of people paffe into the Citie of Sbrokalga. in the wall. Within the borders or wall is a Citie or Caftle of Catay, called Shirokalga, built of flone, the Shirecalga.

Gouernour thereof is called Duke Shubin, who is fent thither for a time from Tambur King of Catay, the Castle is very high walled and artificially built; the Towres are high after the manner of Moseo Castle, in the Loope-holes or Windowes are Ordnance planted, as also vpon the Gates or Towres; their Ordnance is but short, they have also great store of small shot, and the Watchmen euery-where vpon the Gates, Towres, and Wals, well appointed; and affoone as 40 they perceive the Sunne going downe, the Watch dischargeth their Peeces of Ordnance thrice, as also at the breake of day in the morning, they shoot out of their Pieces thrice, and doe not open the Castle Gates till the fixthoure of the day. Within the Castle are thops built of stone, and painted cunningly with divers colours, wherein they have all manner of Merchandizes, as Veluets, Damaskes, Dorogoes, Taffataes, Cloth of Gold, and Tiffue of divers colours, fundry forts of Sugars, Cloues, &c. in the Gouernours houle is a frong Watch of Partifant and Halberds, and their Drummes made like great Barrels. When the Governour goeth abroad, they carry a Canopie ouer him, and make way before him with Rods, as before our Emperour in Mojes.

And from Shirotalga to the Citie Tora is three dayes travell:this Citie is large, built of flone, and the circuit of it is two dayes trauell, with many Towres, and foure Gates to come in at, the 50 Markets in the Citie are well and richly accommodated, with lewels, Merchandizes, Grocerie, or Spices, the Citie well inhabited having no place void or waste in it. The houses and shops are buile with stone, with streets betweene; the Gouernours here are called Duke Bywand Duke Inchate, freere they have Post Stages as wee , their Markets have a very odoriferous smell

And from this Citie, to a Citie called Tayib, is three dayes journey, it is built of flone, large, and high walled, & is in compaffe two daies travel about, at the first comming to it are five gates barred and botted with Iron, very thicke and close, fastned with Nailes; the houses and shops, or Ware-houses are all built of stone, wherein are all manner of Merchandizes, Spices, or Grocerie, and precious things more abundant then in the aforefaid Cities, they have Tauernes or Drin- 60 king houses flored with all manner of Drinkes, as Aquanita, Meade, and Wines from beyond Seas in abundance, there they have also their Watch, Ordnance, and Munition in great store; the Governours of this place are one Duke Tuga, and the other Duke Zumia, there wee faw Sinamon, Annifeeds, Apples, Arbuzes, Melous, Cucumbers, Onions, Garlicke, Radifli, Carrets,

Parlenips, Turnops, Cabbage, Limons, Poppiseeds, Nutmegs, Rice, Almonds, Pepper, Rubarbe & many other Fruits, which we know not, so that they want nothing whatsoeuer groweth in the World; the shops are within the Citie, stored of all manner of Commoditie as is faid, as also vi-Stualling and drinking Houses, stored with all manner of Drinkes, where they have also Dicers and Whores, as with vs. Their Prifons in the Citie are of stone, for theft they hang the theenes, and for Robberie or Murther they stake the Murtherers, or elfe head them.

And from Shirokales to a Citie of Catay, called Shirooan is a dayes iourney: this Citie is built Shirooan of flone high walled, and large in compaffe, it is a dayes travell, it hath twelve Towres; whereupon, as also on the Citie Gates is planted Ordnance and small shot great store, with a continu-To all Watch or Guard, night and day at the first comming are fine Gates well turnished with Ordnance and Warlike Munition; and from one Gate to the other through the Citie is halfe a dayes going. The Gouernour of this place is called Duke Sanchik. For Victuals and Merchandizes. here is more then in the Cities mentioned, all their shops very full, and the Citie so populous, that one can hardly passe the streets for the throng of people. The Ambassadors Houses are also faire built of ftone, their Wels couered with Braffe, fo that this Citie is adorned more with pre-

Now from the Citie of Tayth, to a Citie called #bite Castle, is two dayes trauell: this Citie is white Castle. built of white stone, and thereof hath his name, it is high walled and large, being in compasse or circuit three dayes trauell, athe first entry it hath three Gates under one Towre, the Gates are high and wide with strong fron barres : and the Gates fastened with Iron Nayles whited with Tinne, it hath great Ordnance in the Gates and Towres : fome Peeces carrying fhot of two Poole waight, the shops within the Citie reach from Gate to Gate, and betweene them are ffreets paued with stone, all their shops and houses are built of stone before their shops. They haue grates painted cunningly, with all manner of colours, flowres and fuch like, and voon the shops are the houses painted cunningly with Pictures and flowres in divers colours, and the pain-

ting within is voon Paltboord adorned with Damaske and Veluets; heere is more abundance of Riches and Commodities then in any of the Cities afore mentioned. The Gouernours names here were Duke Toynan, and Duke Sulan. From this white Citie, or Caffle, to the greatest Citie of all Cataya, called Catay, is two dayes

iourney, where the King himlelfe dwellerh, it is a very great Citie, built of white ftone foure Citie of Catal, 30 fquare, and in compafie it is foure dayes journey, vpon every corner thereof are very great H Catar be the Towres high built, and white, and alongst the wall are very faire and high Towres , likewise same with the white and intermingled with Blue or Azure, vpon the Gates, Wall, and Towres, the Loop-holes me(as before in or Windowes are well furnished with Ordnance, and a strong Watch. In the midst of this white Gerand the Citie standeth a Castle built of Magnet, or Load-stone, wherin the King himselfe dwelleth, called ferued) many Tambun; this Castle standeth so in the midst of this Cirie, that every way you have halfe a dayes difficulties a. going to it from the Gates, through the ffreets which hath from thoppes on both fides with all rife, But this manner of Merchandizes; ypon their shops they have their houses built of stone, cunningly pain-nach the tot do not then the former Cities. The Castle of Magnet is curiously stee forth with all manner of contact themse

40 artificiall and precious deuices, in the middeft whereof standeth the Kings Palace, the top where- feeme to agree of is all gilt over with Gold. And they would not admit vs to come before their King without to place some Presents, saying, it was not the manner of Catay, to come before their King without some Cata, North Present , and though (faid they) your white Emperour had but sent with his first Am- from china, if baffadours to our King some thing of no great value, our King would have sent him many speake of the precious things, and difinified you his Ambaffadours honourably, and have fent his Am- wall The Tarbaffadours with you: but now hee only endeth his Letter to your Emperour. The Citie to names fo Danatous with your old now the only enter his Letter to your appendix, and is incomof Catay, where the King dwelleth, is baile voon an euen plaine ground, and is incompaffed round about with a River called Youga, which falleth into the blacke Sea, which is from
paffed round about with a River called Youga, which falleth into the blacke Sea, which is from
paffed round about with a River called Youga, which falleth into the blacke Sea, which is from
particular, that the Citie Catay feuen dayes trauell, fo that there come no thips neerer the Citie Catay, then fe- irishard to re-

50 uen dayes trauell off, but all things are transported in small Vessels and ship-boars. The Mer-concile them. chandizes the King doth send into all parts of his Dominions of Casay, and from thence are car- And the seuits ried ouer the borders, into the Land of Mnyalla, to the King Aline, to the black Kollmakes, make foure moneths to the Iron King, into Bagbar and other Dominions, their Patriarkes and Friers, trauell with the uell from the Commodities, as Veluets, Sattens, Damaskes, Siluer, Leopard Skinnes, Turkeffes, and blacke wall to Pequin, Zenders, for which they buy Horses, and bring them into Catar, for in Catar are but few hor- which shere fes, only Mules and Alles, and Cloth they have none, their Horses and Silver goeth into strange but a few Countreyes, or as they say, Nemufy, the Silver is made in Brickes, which they call Krisfy, va-wisy the Ruflued each Kriefy at fiftie two Rubles, their Apparell they weare with long broad hanging fleeues, for entred the like the Gentlewomens Summer-coats or Lettink; in Ruffia, the people are very faire but not will athe watlike, timorous & most their endenour is in great and rich traffick. They told vs that not long North East

60 before our comming, the people of Mugalla had taken two Castles from them by deceit, also part of it: thornesse of their journey admits not. Perhaps this chiefe Citie was but the chiefe of that Prouince where the Vice-roy resided, and they were willing to make the most of their travells Ruffies fide Yet the necrenesse of the Sea, there also cause the feruple. I sup-pose rather that their Ruffes entred China but a little way, and received the Vice-royes Letter only (thereobserved with Regall Rites) and had much by Relation, of that little which they tell. How ener I haue here offered this to thy view at more leifute to vie thy Vuu 2

CHAP. XIL

Notes concerning the discourry of the River of Ob, takenout of a Roll, written in the Ruffian tongue, which was attempted by the meanes of Antonie MARSH, achiefe Factor for the Moscouie Company of England, 1584. with other notes of the North-caft.

Irst he wrote a Letter from the Citie of Mosco, in the yeare 7092. after the Russe accompt, which after our accompt was in the yeare 1 384. vnto foure Ruffer that vied to trade from Commero to Pechora, and other parts Eastward : whose anfwere was: By writings received from thee, as also by reports, wee understand thou

How to finde out Obfrom

Scaled with

the Golden

wouldest have vs feeke our the mouth of the River Ob; which we are content to doe; and thou must give therefore fiftie rubbles! It is requifite to goe to feeke it out with two Cochimaes, or companies; and each Cochima muft have ten men and wee muft goe by the River 60 Pechera vpwards in the Spring, by the fide of the Ice, as the Ice swimmeth in the River, which will aske a fortnights time ; and then we must fall into Onfon River, and fall downe with the freame before we come to Ob, a day and a night in the spring. Then it will hold vs eight dayes to swimme idowne the River Ob, before we come to the mouth : therefore fend vs a man that

can write; and affure thy felfe the mouth of Ob is deepe. On the Ruffe fide of Ob foiourne Samoeds, called Ugarskai & Sibierskie, Samoeds; and on the other fide dwel another kinde of Samoeds. called Monganet, or Mongafrity, Samoods. We must passe by sue Castles that stand on the Ruser Parties and of Ob. The name of the nirth Tesson Gorodob, which standeth upon the mouth of the Ruser Parties with don. The fecond small Cattle is No fore-gerodock, and it standeth hard vpon the side of 06. The third is called Nechelour-geskey. The fourth is Charedonada. The firt is Nadesneda, that is to fay, The Cafele of comfort, or traft; and it standeth vpon the River Ob, lowermost of all the former

CHAP. II. Anthonic Marshes intelligences of Ob & Ruffian icloudie.

Caftles toward the Sea.

Heretofore your people haue bin at the faid River of Obs mouth with a Ship, and there was Ashipwracke to made shipwracke, and your people were flaine by the Samords, which thought that they came at the mouth to rob and fubdue them. The Treesthat grow by the River are Firres, and a kinde of white, foft of 06. and light Firre, which we call Tell. The bankes on both fides are very high, and the water not fwift but full and deeps. Fish there are in it as Storgeons, and Cheri, and Pidle, and Nelma, a dainrwire, out that an early a state of the white Salmons, and Moucoun, and Sig, and Sterlid: but Salmons there are none, An Illand neets Not faire diffaint from the maintain are the mouth of Ob, there is an Illand, whereon refort many the mouth of wilde beafte, as white Beires, and tie Murfes, and fuch like. And the Sameed tell vs. that in the Ob. winter feafon, they oftentimes finde thete Morfer teeth. If you would have vs travell to fecke winter season, they obtendings must unter proper even a your woman many standard season when the most of Ob by Sea, we must gootly the fillest Ougant, and Nama Zembla, and by the Owner of the Season with the Company of the Season Sea mouth of Ob, by Sea, is but a finall matter to fiyle. Written at Pachera, the yeare 7092. the Matthewe land twenty one of February.

Master M A K S M also learned these distances of places and Ports, from Cattinos so Ob by Sea.

Rom Corners to the Bay of Medernske (which is fornewhat to the East of the River Perbera) coninet.

Its found dayes fayling. The Bay of Medernsky is over a day and a halfe fayling. From Me-40 demute Samereft to Corneces, is fixe dayer frying. From Corte Bay to the fartheft fide of the cardemite. River Ob, is pine dayer fayling. The Bay of Caroke is from fide to fide, a day and a mights Caroke.

He learned another way by Nona Zembla and Manhafeban Tar to Ob, more North-eastward. From Contines to the Hand of Colgoine, is a day & nights fayling. From Colgoine to New Zem. Contines, the are two dayes fayling. There is a great Ofer sor Lake your Nosa Zemble, where wonderfull Colgoine ftore of Geefe and Swannes doe breede, and in moulting time cast their feathers, which is about Saint Porere day 1 and the Ruffes of Columpro repaire thither yearely, and our English men venter thither with them fenerall shares in money othey bring home great quantitie of Doune-Feathers, dried Swannes, and Geele, Beares skinnes, and Fish, &c. From Naromske Reca or River Naromske.

Third Volume Raneis Gaulle that passed the Ocean betweene layer and Nova Hispania, in the Latitude of of English voyages, pag 446. of Tartarie; running thus East and East and by North about three hundred leagues from Iapan, we found a very hollow water, with the streame running out of the North and North-west, witha full and very broad Sea, without any trouble or hinderance in the way that we past. And what winde focuer blue, the Sea continued all in one fort with the fame hollow water and farcame, vn- 30 till we had passed seuen hundred leagues. About two hundred leagues from the Coast of New Spaine we began to lofe the faid hollow Sea, whereby I perswade my selfe that there you shall finde a Channell or ilrait paffage betweene the firme Land of New Spame and the Countrie of Afia and Tartaria. We found all this way Whales, Tunnies, Bonicos, which are fiftes that ke. pe in Channels, Straits, and running Waters, there to differfe their feede, which further confirmeth me in that opinion.

See of thefe Tom.I.

But feeing thus we are sopped from Russia, and base againe taken Sea'chat which the permitted not to Se-pinn Burrough, Pet and lackman, ner others, English and Dutch, which have assembled that North east paffage; and that which Mafter Batten faid to me, that if he might have imployment, he would adventure to discouer from the Coast of China and Iapan on the North of Alia buberward; all 40 thu shall be suddenly permions to our swifter and unstayable aboughts, to fel us in a new discapers by Damih and English aflistance for a North-west passages footen, not so fortunately attempted, as by Rea-son is seemeth probable and almost certains, especially that may where Sir Th. Button and Nelson left. But we will disconer these Disconeries more methodically and bistorically to you, that you may see the English ancient right, as I may fay, to those parts of the new World.

O CHAP. XIII.

Discoueries made by English-men to the North-west : Voyages of Sir SEBAS- 50 TIAN CABOT, Mafter THORNE, and other Ancients: and of Master WEYMOVTH.

Voyages. The defire of Riches in some, of Knowledge in others, hath long wheten the mens industries, to finde out a more companies. ted mens industries, to finde out a more compendious way to the East Indies, by a shorter cut then the viuall passage, which in going to the places of principall

Trade there, and the returning thence by enforced compassings, is made no lesse a Voyage for time, cost, danger and labour, then the immediate compating of the whole Globe, 60 as in Master Candifier circumnauigation (not to mention others) is enident. But if either by the North-east, or North-west, or North, a passage be open, the sight of the Globe (the Image of the fite of the World) eafily sheweth with how much ease, in how little time and expense the same might be effected, the large Lines or Meridians under the Line contayning fixe hundred miles,

contracting themselves proportionably as they grow neerer the Pole, where that wast Line and Circumference it selfe becomes (as the whole Earth to Heauen, and all earthly things to heauenly) no Line any more, but a Point, but Nothing, but Vanitie. Hence such laborious fearches from Columbus his first discouene (that also occasioned by a conceit of finding the East by the West, whereupon he named Hispaniola Ophir, thinking he had then arrived at the East Indies) especially the English, seated commodiously for that discouerie, and to reigne ouer the Northerne and Westerne Ocean, haue herein beene more then industrious.

Doctor Powell in his historie of Wales faith, that Madoc fonne of Owen Guyneth left the Land in contention betwirt his brethren, and prepared certaine ships with men and munstion, and sought ad-To mentare by Sea, spling it et al. and leaving the Casif of Ireland 6 forer Nerth that see came vate a Land outcomen, where he saw many france thing. There he left many of his people An. 1170, and returned for more of his owne Nation and Friends to inhabite that large Countrie, a going the fecond time thither with ten failes. This westerne Land is like to be some part of the West In- Some thinks des, though the vnineriall lauagenes of those parts make it questionable where. But he which seeth that the Merid ther, chough the winnerfall langenes of those parts maker it questionable where, but he winch been user the above frome of our English in small time have growne wilde in Fested, and become in language and cas Minest [American] and a small profited that a continuation of the profited that the small profited that the s men are easier infected in a contagious aire, then sicke men recourred in that which is wholsome they were stranand found) will not wonder that in fo many Ages the halfe civilized Well-amongh Barbarian, gen) wrte without fuccession of Priests and entercourse of these parts, might wholly put on feritie. Meredub bence derived, 20 ap Rife 2Wellh Poet, which lived before Columbus had begun his discouerie, hath these verses.

> Madoc wrf, myedic wedd, Iawn Genau, Owyn Guynedd No finnum dir, fy enaid oedd Na da Mawr, ond y moroedd. that is.

Madoe I am the fonne of Owen Gwynedd, With stature large and comely grace adorned, No lands at home nor store of wealth me please, My mind was whole to search the Ocean seas.

Columbus also lent his brother Bartholomen to King Henrie the seventh, to make offer of his sernice in the New-Worlds discourrie, which fell by the way into the hands of Pirats . whereupon pouertie affaulted him with fickneffe in a forraine Countrie, fo that hee was forced to get some. D.F. Colon de vipouertie analyte in. ta paris Chrige what about him by making of Maps : one whereof had this more ancient then elegant in. ta paris Chriflopb. Col. 6.131 scription.

Columbus de Terra Rubra, opus edidit iftud Londoniy: An. Domini 1480, at q, in super amo Ollano decimaq, die cum tertia mensis February. Laudes (bristo cantentur abunde.

I anna cui patria est, nomen cui Bartholomans | Whose Countrie Gennais, whose name Bartholomen Colon de Terra Rubra, this worke fet forth new At London, A thousand foure hundred eightie Februarie thirteenth, fing praise to Christ on height

One of these Maps hee presented to King Herrie with the said offer, who cheerfully accepted the same, and sens to call his brother into England, who before he could effect it, was imployed 40 by the Kings of Castile.

Columbus his fortunes awakned others industrie, amongst the rest lobn Cabota a Venetian, and his three fonnes Lewis, Sebastian, and Sanciss, who obtay ned a Patent of King Hourse the seventh for discouene with fine ships with English Masters, Mariners, and Colours also, the same to erech in whatfoeuer Lands vnknowne before to Christians , to hold the fame to them and their Heires See Hal. tom. 4, as Vaffals and Lieutenants to the Crowne of England, paying the fifth part of their gaine at Pag. 5.

In the yeere 1497. Iohn Cabot a Venetian, and Schaftian his some (these are the wordes of the great Map in his Maiesties privile Gallerie, of which Sebastian Cabor is often therein called the Authour, and his Picture is therein drawne, with this Title, Efficies Schaff. Cabois Angli, fili, Ie. Ca.

standing by the Sphere (saith he) that if I should saile by the North-west, I should by a shorter Tract come into India; I thereupon cauled the King to be aduertised of my densie; who immediately commanded two Caruels to bee furnished with all things appertaying to the Voyage which was, as farre as I remember, in the yeere 1495, in the beginning of Summer. I beganne therefore to faile toward the North-west, not thinking to find any other Land then that of Co. to Florida dif- thay, and from thence to turne toward India. But after certaine dayes I found that the Land concred by the turned toward the North, which was to me a great displeasure. Neuerthelesse, sayling along by Englip: from the Coast to fee if I could finde any Gulfe that turned, I found the Land full continent to the 56. degree vnder our Pole. And feeing that there the Coast turned toward the East, despaying as he writ to Journal of the Coast of that Land toward 10 the Equinoctiall (euer with intent to finde the faid passage to India) and came to that part of this firme land, which is now called Florida; where my victuals fayling I returned towards England: was cause of the tumules and preparations of warres against Scotland caused that then no more consideration was had to this voyage. Whereupon I went into Spaine, &c. By the King and Queene there he was fet forth and discouered the River of Plate, and sayled into it more then sixe score leagues. After this he made many other voyages, &c. Sir Seb. Caber was after by King Edward the fixt See [40, 1,3,c.1, conflicted grand Filot of England with the annual stipend of one hundred and sixtie in pounds thirteene shilling and foure pence, and was Author of the Russian and North-easterne discourres. thirteen thillings and four penergana was among a manager at a superstance of the penergan pe These were clothed in beasts skins, ai d dideate raw fleth, and spake such speech that none could vn erftand them, and in their demeanour like to brust beafts, whom the King kept a long time after. Two yeeres after I saw two of them at Westminster, apparelled like English, &c.

Thern and Eliet Mafter Robert Thorne writes, that his Father and Mafter Hugh Eliet a Merchant of Briffell first finders of were the first discouerers of New-found Land; and if the Manners would have been engled and followed their Pilots minde, the West Indies had beene ours: so that it seemeth this Discourie was before that of Columbia. Master Haklust hath published the particulars of these things more fully, as also divers Treatiles touching the North-west of Sir Humpbrey Gilbert and others: to which I referre the Reader; and no lelle for the Voyages made by divers English into thole parts: three by Sir Marton Frobifor, in the yeeres 1576, 77, and 78. Two of Captaine lobs 30 Danies, in 86, and 87. that of Mafter Hore, An. 1536. that of Sir Humpbrey Gilbert, 1582, that of Mafter Charles Leigh to Ramea, An. 1597. and before in 1593. that of George Drake; with those of laques Carrier, and divers others. My purpose is not to fteale Mafter Haklerts labours out of the World , by culling and fleecing them for our purpose, but by this Index to in-Arnot men where they may have festivall store in this kinde. I had rather give you new things. Such are to the World, these that you had before in Hudsons voyages set together, as also those of Greenland: and fuch are those of Waymonth, Knight, Hall, Baffin, &c. And first, as foreman of our Quelt, we will give you Sir Humphrey Gilberts Letter, written with his owne hand from New-found Land, whereof he tooke formall possession to the Crowne of England, and was as a Martyr of those Discoueries. It was written to S.r George Pechbam (a great Aduenturer in that 40 voyage, and a greater in one of longer lire, his written Treatife of Westerne planting, extant in Mafter Haklusts third Tome) and I have here inferted, it being hitherto vnprinted, as a memorial of both their worths; and after it (though in time before) wee will recreate you with a plaine Mariners Letter endorsed in homely phrase, To the Honorable Kings Grace of England, here (as I thinke) given you from the Originall. I have also another written to Cardinall Wolfer touching the tame voyage in Latin , by Albertu de Prato ; for the antiquitie, rather then any remarkable raritie, worthy here to be mentioned.

> S Ir George, I departed from Plymouth on the elementh of Imme with fine failes, and on the thirteenth the Barke Rawley ran from me in faire and cleare weather, haming a large winde. I pray you solicute my brother Rawley to make them an example of all Knaues. On the third of August wee arrived at a Port called Saint lohns, and will put to the Seas from thence (God willing) fo foone as our ships will be ready. Of the New-found Land I will fay nothing, until my next Letters. Be of good cheare, for if there were no better expelation, it were a very rich demaynes . the Country being very good and full of all forts of victual, as fish both of the fresh water and Sea-fish, Deere, Pheasants, Partridges, Swannes, and ainers Fowles elfe. I am in haste, you shall by enery Messenger heare more at large. On the fifth of August, I entred here in the right of the Crowne of England; and have engraven the Armes of End and, divers Spaniards, Portugals, and other ftrangers, witnessing the same. I can stay no longer; fare you well with my good Lady: and be of good cheare, for I have comforted my felfe, answerable to all my bopes. From Sant Iohns in the New-found Land, the 8. of August, 1,83.

> > Yours wholly to command, no man more,

HVM. GILBART.

CHAP. 13. Ruts Letter to King Henric, and Pratos to Cardinal Wolfey. I mentioned before Master Thornes fathers finding New-found Land, with Master Eliot. Their animated King Henrie the eight to let forth two thips for discourre, one of which perished in the North parts of New-found Land. The Mafter of the other, John Rut, writ this Letter to King Henrie, in bad English and worse Writing. Ouer it was this superscription.

Master Grubes two ships departed from Plymouth the 10. day of June, and arrived in the New-found Land in a good Harbour, called Cape de Bas, the 21. day of Iuly : and after we had left the light of Selle, we had neuer fight of any Land, till we had fight of Cape de Bas.

Leasing your Honorable Grace to beare of your sermant John Rut, with all his Company here, in

Pleaging your thought of the day of Green of your frames Santial Configuration of the good health, thank he to God, and your Green of the Mary of Gillocd, with a description of the state and then wee came into 52. degrees and fell with the majne Land, and within ten leagues of the majne Land we met with a great Iland of Ice, and came bard by her, for it was flanding in deepe water, and fo went in with Cape de Bas, a good Harbor, and many fusall llands, and a great fresh River going op farre
one in with Cape de Bas, a good Harbor, and many fusall llands, and a great fresh River going op farre
unto the mayne Land, and the mayne Land all wildernesse and mountaines and woods, and no natural ground but all mosse, and no inhabitation nor no people in these parts: and in the woods wee found feeting of diners oreat beafts, but we faw none not in ten leagues. And please your Grace, the Samson and wee kept company all the way till within two dayes before wee met with all the Ilands of Ice , that was the first agricompany au roe way it witten two angre organ were not were also from an affect was the first of any of land an inhibit, and there role of great and a martinalism great forms, and much fourle weather; I truit is Almighte laft to heave good neare of her. And place from Grace, we were confidenting and a writing of all our order, how we would alway and when God does found foule weather, that with the Cape de Sper free should goe, and be that came first should tarry the space of fixe weeks one for another, and watered at Cape de Basten dayes, ordering of your Graces libip and fill-ing, and fo departed toward the Southward to feeke our fellow: the third day of August we entered into 30 a good Hauen, called Samt John, and there we found eleven faile of Normans, and one Brittaine, and a good remem, caused sum it with, some or we remember you by a visitiants, and and we proceed that the property of the property of the process of the proces of God, as we were commanded at our departing : And thus left faue and keepe your bonorable Grace, and all your honourable Reuer, in the Hauen of Saint Iohn, the third day of August, written in bafte. 1527.

By your ferwant lobe Rue, to his vecermost of his power.

I haue by me also Albert de Prate's originali Letter, in Latinstile, almost as harsh as the former English , and bearing the same date , and was inderfed , Remerend, in Christo Patri Domino Domino Cardinali & Domino Legato Anglia : and began , Renerendissime in Christo Pater (alutem. Renerendissime Pater, placeat Renerendissima paternitati vestra, scire, Deo fanente postquam eximmus à Plemut qua fuit x. Iuni &c. (the substance is the same with the former, and therefore omitted) Datum apud le Baya Saint Ioban in Terris Nouis, die x. Augusti, 1927. Rener. Patr. vest. bumilis ferung, Albertin de Prato. (the name written in the lowest corner of the sheet.)

The voyage of Captaine GEORGE WEYMOVTH, intended for the discouerie of the North-west Passage toward China. with two flye Boates.

N Sunday the fecond day of May, 1602. in the afternoone, I weighed anchor and fet faile from Reactiffe with two Fly-boates, the one called the Diffenery, of feuentic Tunnes; and the other called the God freed, of fixtie Tunnes, to discouer the North-west passage, having in my thips fine and thirtie men and boyes, throughly violualled and abundantly furnished with all neceffaries for a yeere and an halfe, by the right Worthipfull Merchants of the Moscome and Turkie Companies: who for the better successe of the voyage provided mee of a great travailer and nies. 60 learned Minister one Master John Cartwright. The Master under mee in the Discouerie was one Master Cart-William Cobreth, a skilfull man in his profession; and in the God freed, one loke Drewe, and Mate wright had bin in the faid thip one Iohn Lane.

The first of Iune, we descried Buquhamnes in the Latitude of 57 degrees. The second day former Tome, we faw she Point of Buqubammes North-west from vs, being a very smooth land; and the land Buqubamme,

and I agreed with one of the fisher men to carry me betweene the Isles of Orkney, because I was

not acquainted with the coast. The fourth day, at ten of the clocke, wee descried the lifes of

Orkner. Some of those Southerne Hands are prettie high land; but the Northerne Hand, which

is called the Start, is very low land. There is no danger, giving the shore a good birth, voletheir

be by the Norther point of the Start: there doth a ledge of Rockes lye a mile from the floare.

At noone I found my selfe to be in the latitude of 59. degrees and 30 minutes, the point of the

North, the winde at North-east, with fogge some three or soure houres, and then cleare again:

the ayre very warme, as in England in the moneth of May. The foureteenth was faire weather,

and the winde at East North-east, and our course West and by North. The fifteenth much raine

all the forenoone, our course West, the winde at East and by North. The sixteenth, the winde

was at North North-east, with much raine, winde and fogge. In the forenoone, being very cold,

and at noone, I observed the Sun, and found vs to be in 57. degrees and 35. minutes: we found the

variation to be eleuen degrees Westward; and by that meane I found my felfe to be one degree

more to the Southward, then we should have bin by our course; for we could not see the Sunne

twelfth day, we could not finde any variation at all. Then we flood close by a winde to the

Westward, the winde being at North North-east. The seauenteenth wee ranne North and by

West, the winde at North North east, faire weather. This day we saw many gray Gulles, and

fome Pigions. The eighteenth at noone I observed the Sunne, and found our selves tobe in the

lay North from vs, as farre as we could ken ie from the head of our maine topmast : and about

two of the clocke in the afternoone, we faw the South part of Groneland, North from vs forme

ten leagues. As we coasted this Ice to the Northward, we found it to be a maine banke of Ice;

for we law the other end of it to beare West North-west from vs; the winde being at South

teenth, the winde was at East South-east, with some small raine. The twentieth, our course was

againe. Seeing this change of water, in often to be thick, and cleare againe fo fuddenly, we imagi-

ned it had beene shallow water: then we founded, and could fetch no ground in one hundred and twenty fathomes; and the Sea was so smooth, that we could differe no current at all. At this

time I reckoned the Cape of desolation to beare North North-east twentie four leagues from vs.

The one and twentieth, the winde was variable. The two and twentieth, we were in the lati-

by West. The season and twentierh, the winde was at West South-west : then our course was 50

South-west, little winde : Then we ranne West South-west, to cleere vs of the Ice, The nine- 40

in 96 houres before this day at noone, and at our last observation before this, which was the

Orkney.

The Statt. 59.degi ees 30. Faire Ile.

Two fmall I-

Start bearing West: and at one of the clocke in the afternoone, we saw a faire lle, which bare Ster bearing Wett: and at one or time cooker in the authority, which care North eaft and by North from vs: and at eight of the clock eat night, wee were North of the North-eart and opposite Holm vs. and reeign of the december of the Holm I directed my course West and by North. The fifth day about ten of the clockern the morning, we ranne fome tenne leagues, and then we faw two fmall Hands, fome two leagues off: and a teight and nine of the clocke we faw foure or five Boats of Fisher-men, and spake with one of them, and they were Scottilb-men. The fixt, in the morning fell much raine, and lafted till one of them, and they were sermemen. In custing the mounting cut much raine, and lafted cill mine of the clocke; and at ten of the clocke it cleared up, and became very faire weather, and very temperate and warme, and our courfe was Well. The featernth, the wind was at East and by North, faire weather, and our course West. The eight, at noone I observed the Sunne, and found vs to be in 59. degrees and fortie feuen minutes, and we ran West South-west. The tweifth day we held our course West, the winde at East North-east, with sogge in the 57, degrees 55 morning: at noone I observed the Sunne, and found my selfe in 57, degrees, and 55, minutes, 10

min no variation here was nothing at all. The thirteenth at noone, our course was West and by

Variation ele-Westward.

No variation.

Guis and Pigions, 53.deg. st.min. latitude of 59. degrees, and \$1. minutes. And then we first descried a great lland of Ice, which Greneland.

A maine bank

Blackwiter as Well North-weit, the winde being at North and by East, little winde. This day sometimes we thick as puddle came into blacke water as thickers puddle, and in failing a little space the water would be cleare

so,deg.37-min tude of 60. degrees and 37. minutes : the winde being at West, wee ranne North and

North-west and by North, the weather faire and warme, as in England, in the moneth of Store of Guls, May. This day we faw great flore of Gulles, which followed our Ship fundry dayes, The eight and twentieth, the winde being at North and by West, wee directed our course to the Westward; and about twelve of the clocke the same night, we descried the land of Appe ed n 6 sees. The victorials and a degrees and 30 minutes; which we made to be Warwick; foreland, and a minutes; which we made to be Warwick; foreland. This Headland rose like an Hand. And when we came neere the Foreland, we saw source small llands to the Northwards, and three imall Ilands to the Southward of the fame Foreland. The Foreland was high isnd : all the cops of the his were conered with Snow. The three small llands to the Southward were also white, that we could not discerne them from Ilands of Ice : also there was great store of drift Ice vpon the Eastfide of this Foreland : but the Sea was altogether 62 voide of Ice : the Land did lye North and by East, and South and by West, being fix lesgues

The nine and twentieth, at fixe of the clocke in the morning, wee were within three leagues of this Foreland : then the winde came up at North-east and by East, a good stiffe gale with

force; and wee wereforced to fland to the Southward; because wee could not wether the togge: and were well-tolered than the food to the Southward along by Warmicks Foreland, we warmicks Fire could discerne none otherwise, bot that it was an Iland. Which if it fall out to be so, then to be an Iland. Lambers Inlet, and the next Southerly fifter, where the great Current fetteth to the Weft, The greatest must of necessitie be one Sex; which will be the greatest hope of the passage that way. The hope of the mun or secentific be one say, with fogge and Snow. This day wee came into a great North-west thirtieth, the winde was at North-east, with rogge and show. I his day wer came into a great passage, whirling of a Current, being in the latified of 61. degrees, and about twelve leagues from the A current

CHAP. 12. Current Maine banke of Ice. Blacke mater. Thicke forges.

coal of America.

The first day of July, the while was at Well, with fogge and Snow, the ayre being very gold, fastioned as to This day were cause into imany Outrilly. Which feethed to 'nume' a great cliteries; but give to the which way it did it. we could not well dideren. The greatest likelihood was, this is thought for the Well. But having contriry, whole field fixeren the greatest likelihood was, that A curren like it hold for the Well. But having contriry, whole field fixeren or guernesse dayer, we by note to the always lay its remember in more given the contriry. We have find a but yets to current in way.

The second day, wee descrited a maine Banke of Ice in the latitude of 60, degrees the winde A maine bank was at North North-well; and very faire weather. Wee wenting fielh water did sayle close of ice in codes was at North North North Tee, and hovied out our Boate, and loaded her twice with Ice, which made vs grees. very good fresh water. Within twenty leignes of the coast of "Imerica", wee should oftencoast of sanditimes come into many great outrfals. Which doth manifestly show, that all the coast of Amecasemen to

The third, the winde was at South-well, very foggie; and as wee flood toward the coast of America, wee met with another maine Banke of Ice. The fogge was to thicke, that we were hard by the Ice, before wee could fee it. But it pleafed God that the winde was faire to put vs cleare from this Ice againe; and presently it began to cleare up, so that wee could see two or three leagues off; but we would fee no end of the Ice. Wee judged this Ice to be some tenne leagues from the coast of America. We found the water to be very blackish and thicke like pud- Blacke puddle

The eight, the winde was at North North-west, very faire weather; wee standing to the 20 Westwards met with a mighty maine Banke of Ice, which was a great length and breadth, and it did reft close to the floare. And at elemen of the clocke in the forenoone, wee descried agains is the certains on marts. This is readed to the Lind of America, in the lating deep of 3 degrees and 5; aminutes, being very high Lind; and America, in the lating deep of 3 degrees and 5; aminutes, being very high Lind; the different is tild if it as lands, the toppes being coursel with Snow. This Land was South-west and by different mes. West, former fine lengths of the 3; we could come for nearly 16; of the great quantities of Lee, which deg. 13 minutes. refted by the shoare side.

The ninth, the winde being at North-east and by East, blew to extreamely, that we were forced to fland to the Southward, both to cleare our felues of the Land, and of the Ice: for the day before we passed a great banke of Ice, which was some sourcteene leagues to the Eastward of vs, when the storme began; but thankes be to God, we cleared our selues both of the Land and of the Ice. This day in the afternoone the fforme grew to extreame, that we were forced to

fland alone with our forecourse to the Southward.

The security mas very foggie, the winde being at East: and about two of the clocke in the afternoone, weesaw four great Hands of Ice, of a huge bignesse: and about soure of the clocke we came among fome fmall cattered Ice, and luppofed our felos to be neere fome great
Banke. The fogge was very thicke, but the winde large to fland backe the fame way wee in; or elfe it would have indangered our lives very much. And at nine of the clocke at night we heard a great noyle, as though it had bin the breach of tome thoare. Being defirous to fee what The loathlome it was, we flood with it, and found it to be the noyle of a great quantity of Ice, which was noyle of Ice, very loathforme to be heard. Then were flood North North-well, and the fogge contiso mued fo thicke, that wee could not fee two Shippes length from vs : whereupon we thought good to take in some of our layles; and when our men came to hand them, they found our fayles, ropes, and tacklings, so hard frozen, that it did feeme very strange vnto vs, being in the Sayles, worth

chiefest time of Summer. The eighteenth day, the winde was at North-east and by North, the ayre being very cleere frozen. and extreame cold, with an exceeding great frost; and our course was North-west. This day in the forenoone, when we did fet our fayles, we found our ropes and tacklings harder frozen then they were the day before : which frost did annoy vs so much in the vsing of our ropes and fayles, that wee were enforced to breake off the Ice from our ropes, that they might sunne through the blockes. And at two of the clocke in the afternoone, the winde began to blow ve-

through the blockes. And at two of the clocke in the atternoone, the winde began to blow ve-for ry hard, with thicke fogge, which freezed fo fall as it did fall vpon our layles, ropes, and tackling, freezing as fall that we could not almost hoyfe or strike our sayles, to have any vie of them. This extreame frost stirfell and long continuance thereof, was a maine barre to our proceeding to the Northward, and the difcouraging of all our men.

The nineteenth day, the winde was at North and by East, and our course to the Eastwards.

Mutinie.

The same night following, all our men conspired secretly together, to be are up the helme for England, while I was affeepe in my Cabin, and there to have kept mee by force, vntill I had fworn vnto them, that I would not offer any violence vnto them for fo doing. And indeede they had drawn in writing, the causes of their bearing up of the helme, and thereunte set their hands and would haue left them in my Cabin : but by good chance I vnderftood their pretence, and

The twentieth day, I called the chiefest of my Company into my Cabin, before Master lobe Carrieright our Preacher, and our Mafter, William Cobrath, to heare what reasons they could alleade for the bearing up of the Helme, which might be an onerthrow to the Voyage, feeing the Merchants had bin at fo great a charge with it. After much conference, they deducted mee in

Concluding, that although it were granted, that we might winter betweene 60 and 70. degrees of latitude, with latetic of our lines and Veffels, yet it will be May next before wee our diffuore them, to lanch out into the Sea. And therefore if the Merchants should have purpose to proceede on the discouerie of these North-west parts of America; the next year pose to proceede on the obscuber or these vortice were parts or **Districts*; the next years you may be in the aforefail altitudes for **England*, by the first of **May*, and so be surnished better with men and victuals, to passe and proceeds in the aforefail askind.

Seeing then that you cannot assure vs of a last harbour to the Northward, were purpose to

beare up the Helmefor England; yet with this limitation, that if in your wisedome, you shall beare up the Heimetor cogresse; yet with this limitation, that it in your whichome, you mall thinke good to make any discourty, either in 60 or 57 degrees, with this faire Northerly winds, 20 we yeelde our liues with your selfe, to encounter any danger. Thus much we thought needefull to fignifie, as a matter builded vpon reason, and not proceeding vpon feare or cow-

68.deg.53.min

Then, wee being in the Latitude of 68. degrees and 53. minutes : the next following, about eleuen of the clocke, they bare up the Helme, being all fo bent, that there was no meanes to periwade them to the contrary. At last understanding of it, I came forth of my Cabin, and demanded of them, who bare up the Helmer They answered me, One and All. So they hoysed up all the North, the fayle they could, and directed their course South and by West.

The two and wentieth, Hent for the chiefest of those, which were the cause of the bearing up of the Helme, and punished them seurely that this punishment might be a warning 30 to them afterward for falling into the like mutinie. In the end, vpon the intreatie of Mafter Carturight our Preacher, and the Mafter, William Cobreath, vpon their fubmiffion, I remitted some part of their punishment. At twelue of the clocke at noone, wee came hard by a great lland of Ice : the Sea being very smooth and almost calme, wee hoysed out the Boates of both our Shippes: being in want of fresh water, and went to this Iland to per some Ice A great Iland to make vs fresh water. And as wee were breaking off some of this Ice (which was verie painefull for vs to doe; for it was almost as hard as a Rocke:) the great Iland of Ice gaues mightiecracke two or three times, as though it had bin a thunder-clappe; and presently the mignice tacket two or unfectiones, as unsugnished our acumuler-cappe; and preferrly the Hand began to outerfrow, which was like to have finke both our Boates; if we had not made good hafte from it. But thankes be to God, we estaped this danger very happily, and came 40 aboord with both our Boates, the one halfe laden with Ice, There was great flore of Sea Foule vpon this Iland of Ice.

The fine and twentieth and fix and twentieth, the winde being at East, did blow a hard

The feuen and twentieth, the winde was at South South-east, and blew very hard, our course

was West. The eight and twentieth and nine and twentieth, our course was West and by South, the winde blowing very hard at East South-east, with fogge and raine. The thirtieth, the winde

Shippes sicke, wee thought it good to returne with great hope of this Inlet, to bee a passage of more pessibilitie, then through the Straight of Danie : because I found it not much peffered with Ice, and to be a straight of fortie leagues broad. Also I sayled an hundred leagues West and by South, within this Inlet; and there I found the variation to be

35, degrees to the Westward, and the needle to decline, or rather incline 83, degrees and

like a thunder-Great flore of Sea Foule vp.

on the Ice. An Inletin 61. gale, and our course was West and by South, with sogge. This day in the afternoone I did reckon

The return out fore the Sea. Now because the time of the yeare was farre spent, and many of our men in both

Thevariation 35. degrees Westward.

The fifth of August (the windeall that while Westerly) wee were cleare of this Inlet agains. The fixth the winde was at East South-east with fogge. The seauenth, eight, and ninth, we pas-An Iland en the coath of a commence of the inches of the i deg. & 30.min. darke, we were forced to stand to the Northward againe. This night we passed by some great Ilands of Ice, and some bigge peeces which did breake from the great Ilan's: and we were like

to finke some of them two or three times : which if we had done, it might have endangered our Shippes and lines. Our confort, the Godfpeede, Brooke's little piece of Ice, which they The Godfpeede thought had foundred their Shippe; but thankes be to God they received no great hurt, for piece of lee;

CH AP. 12.

our Shippes were very firong.

The tenth day, the winde was at North-east and by North, with fogge and rame; and our course was to the South-eastward: for we could by no meanes put with the thoare, by reason of the thicknesse of the fogge, and that the winde blew right vpon the shoare, fo that we were forced to beare faile to keepe our felues from the land, vntill it pleafed God to fend vs a cleare: which God knoweth we long wanted. At fixe of the clocke in the afternoone, it was calme: and then I judged my felfe, by mine account, to be necrethe Land : fo I founded, and had ground in 160 factiones, and fine grey Ofic Sand : and there was a great Hand of Ice, a ground within a league of vs, where we founded, and within one houre it pletfed God to fend vs achtere. Then we well we law the land fome four leagues South-west and by South from vs. This land lyeth East and by South; and West and by North, being good high land, but all Hands, as farre as wee bould dif- Many Handt. cerne. This calme continued vitall foure of the clocke in the afternoone of the elebenth day; the weather being very cleere, we could not differ ne any Current to goe at all by this Land. This day the Sea did fet vs in about a league neerer the Land, fo that wee judged our felues three leagues off. Here we founded againe, and had but eightie fathoms.

The variation of the Compasse we found to be 22. degrees and 10. minutes Westward. At The variation 20 fue of the clocke there forung vp a fine gale of winde, at East South-east, and being so neere 32 degrees to night, wee flood to the Southward, thinking the next day to feeke fome harbour. But it pleafed God, the next day, being the twelfth, to fend vsa ftorme of foule weather, the winde being A Storme at East and by South, with sogge: so that we could by no meanes get the shoare. Thus wee were forced to beate up and downe at Sea, untill it should please God to fend vs better

The foureteenth, I thoughe good to hand to the Wellward to fearth in Inlett in the latitude of & 6. degrees. I have good hope of a passage that way, by many great and probable reasons. The fifteenth the windercontinued at the South with exceeding fame weather, and ou

course was West. We were this day at noone in the language of the degrees and 31. Suinter 300 (1.4 course) of found the variation to be 17. degrees and 13. minutes 3160 tile Westward: And about seven of variation 17. A round one variation to or 17,00 green as a symmetric to the variation and a fine of the similar of the clocks carried, we described the Land against being come fragues on the Edward of the sides remains later. This Land dis bacse from we South-week-weeks which which which we give all a boot nine of the They dried clocks the time sight, when wends currect the Week's Which thew right was not fix to from the the hand again. tring into this Inlet. a broken to be be and and of or

The fixteenth, the winde was at Wolf North-Welf , and was very faire weather , and our course South-west : about time of the clocke in the foreneone, we cante by a great fland of Ice; and by this Hand we found fome preces of Ice broken off from the faid Hand : And being in great want of fresh water, wee soyled out our Boates of both Shippes, and loaded them twice with Ice, which made vs very good fresh water. This day at moone wet found our felues to be in the latitude of 55 degrees and twentie minutes : when we had taken in our Ice and Boates, the \$5 deg. 20 min. weather being very faire and cleare, and the winde at Well North-well, we bent our course for the Land; and about three of the clocke in the aftermone; we whe within three feightly of a pleatint bor the floar. As is a very pleatint low Land; but all Itansi; and goodly founds going between them, toward the South-went. This Land oth Rand in the heativities of 3; deprive; and Minde found the variation to be so the Well 28. degrees and 24 we insure. This don't is voide of fee, ye. The variation leffe it be some great Hands of Ice, that come from the North, and so by windes may be differt 18.deg. and 12. woon this chaff. Also we did limbs the ayre in this place to be very temperate. Truely there is min.Weftward; in three fourfill places great hope of a passage, betweene she latitude of ou and y a degrees if the area. force doe not hinder it, which is all the feared have. At fixe of the clocke, wee being becaused Green bose of

so by the thorre, there appeared vnto vs a great ledge of rookes, betweene vs and the thorre; as a pallage him by the inorge, there appeared with 5 s great ledge of roomes, betweene verland she thickey, "as a pallage furnishough the Sea did she ouns it with a greatable light. As we all beheld it, did this who either choice in these places a fudden in vanishacket and ways; which formed very strange wife very light, and to the Estimate of the state of very function of very furnishing the color legges, without a great Rocket lying thing these leggeds of the land wire than Rocks strangly supposing a to the should water, by this tooken ground, founded, but could get no getting in one vanishing. The eighteenth, the winde was at North-west, and the storme increased more extreame, and lasted vntill eight of the clocke in the morning of the nineteenth day, fo furious, that to my remembrance, I neuer felt a greater: yet when we were in our greatest extremities, the Lord They were en-deliuered vs his vinworthy ferunts. And if the winde, with so great a storme, had bin either They were ear red 30 leagues Northerly, or Southerly, or Easterly but one day, we had all perished against the Rocks, or the Ice: for wee were entred thirty leagues within a Head-land of an Inlet, in the latitude of 16. degrees. But it pleafed God to fend vs the winde fo faire, as we could defire, both to cleare our to They returned to these of the Land and thee. Which opportunities can'ted we for this time to take our leases of the This Book was could open the Country of the Country of

The fourth, in the morning, wee deforted the Hand of Silly North-east and by East, some by w.c.shruik foure leagues off vs. Then were directed our course East and by North: and st tenue of the clocke in the forenoone, wee descried the Lands end, and next day were forced to put into

CHAP. XIV.

IAMES HALL his Vojage forth of Denmarke for the discourry of Greeneland, in the yeare 1605, abbreniated.

N the name of God Amen, we fet fayle from Copeman-bauen in Denmarke, the fecondday of May, in the yeare of our redemption 1605 with two Shippes and a Pinnace: The Admirall, called the Evel, a thippe of the burthen of thirty or for-Finance: 1 per numerous categories and chiefe commander of the whole Fleet, Captaine, and chiefe commander of the whole Fleet, Captaine, and chiefe commander of the whole Fleet, Captaine Islan Committee and Captaine Grantelmon, ferunit water the King's Maichite of Demmarks, my following principall Palot. The Lyon Viceadmirall, being about 30.

the foreiaid burthen, wherein was Captaine; one Gelfein Lindwelf, a Davife Gentleman, and Steereman of the fame, one Poer Kilon of Gentleman, but Steereman of the fame, one Poer Kilon of Gentleman. De Pinnace, a Barke of the burthen of twelter Lafts, or thereabouts; wherein was Kentruman or commander, one lobs Knight, my Ishn Rnight of Countrie-man. So setting sayle from Copennen-bauen, with a faire gale of winde Easterity, wee came voto Elfanere, where we anchored, to take in our water.

The third day we tooke in our water, at which time, the Captaines, my felfe, with the Lieutenants, and the other Steeremen, did thinke it consenient to fee downe certaine Articles, for the better keeping of company one with another, so which Articles or commants were were all fenerally fworne, fetting thereinto our hands.

The fixt we came to Fleerie, into which harbour, by Gods lielpe, we came at two aclocke 40 in the afternoone. The fewenth day we supplied out wants of wood and water. The eight day, about 1000 a clocke in the afternoone, we fet fayle for ab of the harbour of Fleen in abbut fix a clock it fell aime, tillabout eight, about which time, the Nafeof Norman, by the Daide manical-led Lyndis, 1946, bare next hand North-west of vs. fixe leagues off; as which time I directed my courfe West North-west, finding the compasse varied 7. degrees 10.minutes, to the Eastwards of The thirteenth, we had fight of the Hand of Fore Ile, and allow the South-head of Shorland,

called Smitherne bead, which are high Lands; at noone, the Hand of Faire He bearing West halfe a point Northerly a foure leagues off /I made observation, and found vs in the latitude of 5.9. degrees 20. minutes. This night about feuen a clocke, wee came about an English league to the Northwards of the North-well and of Farre He, wee met within great rice of a twee, as 50 Araca was ride though it had beene the rage of Portland, it feeting North North west. Being out of the faid race, I directed my course Wost and by North, having the winde North-east and by North. this cuering Faire Ile bearing Baft South-east foure leagues: Sweeterne bead, North-east and by North eight leagues: the Hand of Fole, North-east and by East, fenen leagues. I found by east observation, the compasse to be varied to the East-ward of the true North for degrees

The fourteenth in the morning, the winds came to the East Southeast, wee steering West and by North away; this morning the lland of Favalle did thew in my fight to be about ten leagues off at which time would deferie two of the Westermost Hands of Orengy, which did beare South well and by South ater or the year

The eighteenth, the ministent Month-well and by Well, wee laid it away South well and by Well, and fountimes South well. This day so mome weawere in the Latreade of 58 degrees

40. minutes. The nineteenthday, the winde at South-west and South-west and by West. wee lying as the night before, being at noone in the Latitude of \$9. degrees and a halfe. The foure and twentieth day, the winde at North-east and by East, we steering still with a fresh gale West South-well, this evening we looked to have feene Buffe Hand, but I doe verily suppose the same zuffe Hand to be placed in a wrong Latitude in the Marine Charts. The fixe and twentieth at noone, wee wrong placed. were in the latitude of \$7. degrees 45, minutes. The thirtieth day in the morning betweene feuen and eight, the weather began to cleere, and the Sea and winde to waxe leffe, wee looking for the Lion and the Pinnasse, could have no fight of them, we supposing them to bee afterne of ys, we standing still under our courses. This day the winde came to the North-east and by East. To being very cold weather, we lying North North-well away. Making my observation at noone,

I found vs in the latitude of 59. degrees 14. minutes, our way North North-west fortie leagues. This afternoon between one and two a clock we deferied Land, it bearing North North-east off ys about ten leagues off North-east & by North off vs about ten leagues, it being a very high rag- First fight of ged land, lying in the latitude of 49. degrees 50. minutes, lying along it South-caft and by South. Graniend, and North-west and by North.

This Head-land wee named after the Kings Maiesties of Denmarke, because it was the first Cape christian. part of Greenland, which we did fee. This afternoone about one a clock, bearing in for the shoare we faw an Hand of Ice, which bore West South-west of vs three leagues off, so having the wind at East South-east, we bore in for the shoare, where wee found so much Ice that it was impossible an either for vs or any other ship to come into the shoare without great danger : yet wee put our felues into the Ice as wee thought convenient, being incumbred and compaffed about with the The shorefull fame in fuch fort, as the Captaine, my felfe, the Boatfwaine with another of our companie, were of Ice.

forced to goe ouerboard woon an Hand of Ice, to defend it from the ship, at which time I thought it convenient to stand off into the Sea againe, and so being cletre of the Ice, to double Cape Defe- Cape Defel-Lation, to the North-westwards of which I doubted not bue to find a cleer coast, so standing away to all this night West South-west, to cleere vs of the Ice, which lay farre from the shoare, being very thicke towards the Land with great Hands of Ice that it is wonderfull. This evening, the Cape Christian bearing North-east and by East fine leagues, I found the Compasse varied 12, de- Compasse vagrees Ic. minutes to the North-westwards. Moreouer, standing to Seaward from the foresaid ried. 30 Cape, we came in blacks water, as thicke as though it had beene puddle water, we fayling in the Blackwaser. fame for the space of three houres.

The one and thirtieth in the morning faire weather, with the winde somewhat variable, wee fleering away North-west and by West, betweene foure and fine in the morning we had light of the Lion againe, but not of the Pinnaffe. They being a Sca-boord off and hauing efficiency, they Sight of the flood with vs. at which time the Captaine, Lieutenant, and Scereman came abourd vs. earnerfly Lion. intreating mee to bestow a Sea Chart of the Steerman , and to give him directions if by tempefluous weather they should lose vs, they protesting and swearing that they would never leave vs as long as winde and weather would permit them to keepe companie with vs. By whose special so theirs perswaded did give them a Sea Chart for those Coasts, telling them that is they

40 would follow me, that by Gods affiftance I would bring them to a part of the Land void without peffer of Ice, and also harbour the ships in good Harbour, by Gods helpe; they swearing and protefting, that they would follow mee fo long as possibly they could, with which oathes and faire speeches I rested satisfied, thinking they had thought as they had sworne, but it fell out otherwise. So having made an end with vs about noone, they went abourd againe, wee being this day in the latitude of 59. degrees 45. minutes, having flood all the night before, and this forenoone alfo, fo nigh the shoare as wee could for Ice, the Cape (briftian South South-east and North North-weft, and from the Cape to Cape Defaision, the Land lyeth East and by South, and West and by North about fiftie leagues. This day betweene one and two a clocke, the Viceadmirals Boat, being newly gone aboord, it fell very hafe and thicke, fo that wee could not fee 50 one another by reason of the fog , therefore our Captaine caused to shoote off certaine Muskets with a great peece of Ordnance, to the intent the Lion might heare vs , which heard of them they presently stood with vs, at which time the fogge began somewhat to cleere, wee having

fight one of another and to flood along it the shoare, as night as we could for Ice. The first of Iune, wee had a fresh gale of winde at South-west, wee steering North-east and Iune 1605. by North into the shoare, about three in the morning there fell a mightie fogge, so that we were forced to lye by the lee, for the Lion playing upon our D rum to the intent for them to heare vs, and to keepe companie with vs, they answering vs againe with the shooting of a Musker, wee trimming our failes, did the like to them , and to flood away North east and by East : larboard Ilands of Ice. tackt aboord halfe a glasse, when we were hard incumbred amongst mightie Ilands of Ice, being Mighie in-60 very high like huge Mountaines, to I caused to cast about and stand to the Westwards North- cumbrance of

west and by West. About twelve of the clocke this night it being still calme, wee found our Icc. felues fuidenly compatt round about with great Ilands of Ice, which made fuch a hideous novie Amichite curas was most wonderfull. fo that by no meanes wee could double the same to the Westward: North North wherefore wee were forced to fland it away to the Southwards, South South West, stem- wed.

ming the Current, for by the same Current wee were violently brought into this Ice, so being incumbred and much to doe to keepe cleere of the mightie Hands of Ice, there being as both and others did plainly fee vpon one of them a huge rocke stone, of the weight of three hundred pounds or thereabouts, as wee did suppose. Thus being troubled in the Ice for the space of two or three houres, it pleased God that we got thorow the same.

The second day in the morning about three a clocke, I came forth of my Cabin, where I found that the Shipper whole name was Arnold had altered my course which I had set, going contrarie to my directions North North-weft away, whereupon hee and I grew to fome speeches. both for at this time and other times hee had done the like. The Captaine likewife seting his bad dealing with we, did likewife roundly speake his minde to him, for at this instant wee were to nigh vnto a greatbanke of Ice, which wee might have doubled if my course had not been alrered, fo that we were forced to cast about to the Southwards, South and by East and South South east, with the winde at South-west and by South or South-west till ten a clocke, when we stood againe to the Westwards, lying West North-west and North-west and by West, being at noone in the latitude of 60, degrees 18. minutes, Cape Defolation is, I did suppose, bearing North and by West three or source leagues off, the weather being so thicke and hasie that wee could neuer fee the Land.

The fourth day betweene one and two a clocke in the morning, it began to blow a fresh gale Eafterly, we fleering away North and North and by West, webeing at noone in the latitude of 59. degrees 50. minutes, hauing made a West and by North way source and twentie leagues. This 20 euening about feuen a clocke we had very thicke water, and continued fo about halfe an houre: about nine a clocke we did see a very high Hand of Ice to the windward of vs. and about halfe an houre after with some drift Ice, they in the Lion thorow the fearefulnesse of their Commanders prefently cast about standing away larboord tackt, till they did perceine that I flood fill away as I did before, without impediment of the Ice, they cast about agains and followed vs.

The fift in the morning, being very faire weather with the winde at East South-east, our course North North-west, some of our people supposed they had seene the Land : our Captaine and I went aboord the Pinnasse, when after an houre of our being there wee did see the supposed Land to be an hasie fogge, which came on vs so fast that wee could scarce see one another. But the Lion being very nigh vnto vs, and it being very calme, weelaid the Pinnasse aboord of her, and fo the Captaine and I went abourd of them.

The ninth day about foure a clocke, it began to blow an easie gale at South-east and by South, I directing my course still North North-west, when some of our people would not be persuaded but they did fee Land, and therefore I stood in North and by East and North North-east, till about three a clocke in the afternoone, when wee met with a huge and high lland of Ice, wee Reering hard to board the same, and being shot a little to Northwards of it, there fell from the top thereof some quantitie of Ice, which in the fall did make such a royse as though it had beene the report of fine Cannons. This evening wee came amongst much drift Ice, being both windwards and to leewards of vs, yet by Gods helpe we got very well through the same, when 40 being cleare I directed my course againe North North-west.

816

Hand of Ice.

A mightie

The tenth day the winde at South-west and by West, I steering still North-west and by North. This forenoone also wee met with great Ilands of Ice, it being very hase and thicke weather, the which did drive them in the Lion into great feare, and calling to vs very fearfully periwaded me to alter my course and to returne homeward, saying that it was impossible for vs by any working, and course keeping to sease vpon the Land, which did drive all our companie into such a feare, that they were determined, whether I would or not, to have returned home, determined to had not the Captaine as an honeft and resolute Gentleman stood by mee, protesting to stand by me so long as his blood was warme, for the good of the Kings Maiestie, who had set vs forth, and also to the performing of the Voyage. Which resolution of his did mitigate the stubborne- 50 neffe of the people : yet nothing would perswade those fearfull persons in the Lion, especially the Steerman, who had rather long before this time have returned home, then to have proceeded on the action, as before the faid Steerman had done when he was imployed eight yeeres before in the faid action or discouerie. Therefore our Captaine and my felfe feeing their backwardnesse now, as before we had done, went our felues the same evening into the Pinnasse, having a mightie banke of Ice of our larboord fide, and spake to them very friendly, giving order both to our owne thip and to them, that they should keepe a Seaboord of vs (for I did suppose this banke of Ice to lye in the narrowell of the Streight, betweene America and Groenland, as indeed by experience I found the same to be) therefore I determined to coast the Ice alongst till I found it to bee driven and fall away, by reason of the swift current that setteth very forcibly through the said 60 Strait, and then by the grace of God to fet ouer for a cleere part of the coast of Groenland, so all this night we coasted the Ice as close aboord as we could East North-east and North-east and by East, till about midnight, when we found the faid banke to fall away.

The eleuenth day, being cleere of the Ice, I flood away North North-east till fixe a clocke,

when we met with another great banke of Ice, at which time the Commanders of the Lion being now againe very fearfull as before, came vp to our fhip, perswading the Shipper and Com. Another banke panie to leaue vs, and to ftand to Seaboord with them. But the Shipper who was also Lieftenant of Ice. of the ship, being more honestly minded, said, that he would follow vs so long as he could: with which answere they departed, vfing many spitefull wordes, both of the Captaine and mee. faving we were determined to betray the Kings thips, at which time they shot off a peece of Ord- The Lims denance, and so stood away from vs. I seeing their peruerse dealing let them goe, wee coasting partingsrom along it the Ice North North-east with a fresh-gale, it being extreme cold with snow and hayse. the Sea also going very high by reason of a mightie current, the which I found to set very force- A mightie cur-Io ably through this Strait, which being nigh vnto America fide, fetteth to the Northwards, and rena on the other fide to the contrarie, as by proofe I found. So coasting alongst this mayne banke of Ice, which feemed as it had beene a firme Continent till about eleuen a clocke, when weeefpyed the Ice to stretch to windward, on our weather bow wee tetting our starboord takes aboord, flood away East and by South with the winde at South and by East, till wee had doubled a Seaboord the Ice, at which time I directed my course directly ouer for the cleere coast of Groineland. East and by North, which course I directed all the Frost to goe, wee standing away our course all this night, it being very much fnow and fleete.

The twelfth day in the morning about fourea clocke, we espyed the Land of Groenland, be- Sight of Land, ing a very high ragged Land, the tops of the Mountaines being all coursed with flow, yet wee 20 found all this coast veterly without Lee, wee flanding into the Land efpyed a certaine Mount aboue all the reft, which Mount is the best marke on all this Coast, the which I named Mount Mount Cun-Cunning barn after the name of my Captaine. We comming into the shoare betweene two Capes zintbarn or Head-lands, the Land lying betweene them North and by East, and South and by West, the or Head Janus, the Land 1941g better die the Cape, after the name of the Queenes Mas Queene Most Southmost of which Forelands I named Queene Annes Cape, after the name of the Queenes Mas Cape, after the name Cape. Cape. of the Queene Mother. So standing into the Land, we came amongst certaine Hands, where sayling in still amongst

the same vnto the Southermost foot of the foresaid Mount, wee came into a goodly Bay, which wee did suppose to be a River, being on both fides of the same very high and steepe Mountaines, 30 wee named the same King Coristiansu Foord, after the name of the Kings Maieste of Denmarke. Christians Foord, So fayling vp this Bay, which wee supposed to bee a River, the space of fixe or seven Enelish leagues, finding in all that space no anchoring, being maruellous deepe water, till at the length we had favled up the Bay the foresaid distance, at length I brought the Ship and Pinnasse to an anchor in fixteene fathom shelly ground, at which time our Captaine and I went aland, giving Our anchothankes vnto God for his vnipeakable benefits, who had thus dealt with vs as to bring vs to ring. this defired Land into lo good an Harbour; which done, the Captaine and I walked up the Our first lan-Hills, to feet if we could fee any of the people, hauing our Boat to row along fix with vs. Hauing dings deries gone along it the Ruer fishe vpon the tops of the Hills the space of three or toure English miles, tend. at length looking towards our Boat, wee faw vpon the River fide foure of the people standing Our first fight 40 by their Houses or rather Tents, couered ouer with Seale-skins. Wee comming downe the of the people,

Hills towards them (they having efpyed vs) three of them ranne away vpon the Land, and the other tooke his Boat and rowed away leaving their Tents. Wee being come downe the Boat of Scale Hills called to our men in the Boat, and entring into her rowed towards the Sauage who was skins in his Boat made of Seale-skins. Hee holding up his hands towards the Sunne, cryed Tota; wee doing the like, and shewing to him a knife, hee presently came vnto vs and tooke the fame of the Captaine. When hee had prefently rowed away from vs, wee rowed a little after him, and leeing it was but in vaine wee rowed aland againe and went into their Tents, Our entring which wee found couered (as is aforefaid) with Seale-skins. Wee finding by the houles two into their Dogs being very rough and fat, like in thape to a Foxe, with very great abundance of Seale fift,

50 lying round about their Tents a drying, with innumerable quantities of a little fish like vato a Smelt (which fish are commonly called Sardeenes) of which fish in all the Rivers are wonderfull skuls, their fifthes also lay a drying round about their Tents in the Sunne in great heapes, with other fundrie kindes. Then entring into their Tents, wee found certaine Seale skins and Foxe skins very well dreft; also certaine Coates of Seale skins and Fowle skins with the feather side inward : also certaine Vessels boyling vpon a little Lampe, the Vessell being made after the manner of a little Pan, the bottome whereof is made of thone, and the fides of Whales finnes; in which Veffell was some little quantitie of Seale fish boyling in Seale oyle; and searching further, wee did finde in another of their Veffels a Dogs head boyled, fo that I perfwaded my Exters of felfe that they eate Dogs flesh. Moreouer, by their houles there did lye two great Boates, be- Dogs.

60 ing couered under with Seales skins, but aloft open after the forme of our Boates, being about twentie foote in length, having in each of them eight or ten tofts or feates for men to fit on, which Boates, as afterwards I did perceive, is for the transporting of their Tents and baggage from place to place, and for a faile they have the guts of some beast, which they dresse very fine and thin, which they fow together.

Alfo

Of the other fort of Boats There is one of their Boars in Sir T.Smiths Hall The manner of killing of

Their comming to our

Alfo the other forts of their Boats are fuch as Captaine Frebisher, and Master loby Danie brought into England, which is but for one man, being cleane couered ouer with Seale skins artificially dressed except one place to sit in, being within set out with certaine little ribs of Timber, wherin they vie to row with one Oare more i wiftly, then our men can doe with ten, in which Boates they fish being disguised in their Coates of Seale skinnes, whereby they deceive the Seales, who take them rather for Seales then men; which Seales or other fish they kill in this manner. They shoot at the Seales or other great fish with their Darts, vnto which they vie to tye a bladder, their great fifth which doth boy up the fifth in fuch manner that by the faid means they catch them. So comming aboord our ships having left certaine trifles behind vs in their Tents, and taking nothing away with vs, within halfe an houre after our comming aboord, the Sauage to whom wee had given 16 the Knife with three others, which we did suppose to be them which we saw first, came rowing to our ships in their Boats, holding vp their hands to the Sunne, and striking of their breftcrving Tota. We doing the like, they came to our shippe or Captaine: guing them bread and Wine, which, as it did feeme, they made little account of; yet they gave vs fome of their dryed fifthes, at which time there came foure more, who with the other barrered their Coats, and fome Scale skinnes, with our folke for old Iron Nailes, and other trifles as Pinnes and Needles, with which they feemed to be wonderfully pleased, and having so done, holding their hands towards

The thirteenth, there came fourteene of them to our ship, bringing with them Seale skinnes, Whale Finnes, with certay ne of their Darts and Weapons, which they bartered with our peo- 10 ple, as before. This day I made observation of the latitude, and found this Roadsted in the laof the latitude. titude of 65. degrees 25. minutes, and the mouth of this Bay or Sound, lyeth in the latitude of 66. degrees 20. minutes. Also here I made observation of the tydes, and found an East and West Moone to make a full Sea, vpon the Full and Change, more it floweth, three fathome and an halfe water, right vp and downe.

The fourteenth and fifteenth dayes we rode still, the people comming to vs , and bartering with vs for pieces of old Iron, or Nailes, Whale Finnes, Scales Skinnes, Morfe Teeth, and a kind of Horne which we doe suppose to be Vnicornes Horne, at which time the Captaine went with our Boat, to the place where we had feene their Tents, but found them remoued; and the other fish and the Seale fish lying still a drying : the Captaine taking a quantitie of the Sea fish into the 30 Boat, caused some of the Mariners to boyle it ashoare, the Sanages helping our men to doe the fame, the Captaine ving them very friendly, they having made about a barrell and an halfe of Oyle , leaving it aland all night, thinking to bring the same abourd in the morning. But the Sauages the same night let the same forth. Yet notwithstanding, the Captaine shewed no manner of discontent towards them.

The fixteenth day, I went into the Pinnaffe, to discouer certaine Harbours to the Northwards, the wind being at East South-east, I loosed and set faile, but instantly it fell calme, and so Our departing continued about an houre. When the wind came opposite at the West North-west a stiffe gale, in the Pinnaffe we spending the tide till the floud being come, I put roome againe, and came to an Anchor a from the thip. little from the Frost in twelue fathomes sandie ground. About one in the afternoone, the Frost 40 departed from vs further vp the Bay, which we did suppose to be a River, promising to abide our returne two and twentie dayes.

The seventeenth day, the wind continuing at the West North-west blowing very hard, wee rode full, the people comming and bartering with vs. The eighteenth day, the winde and weather as before, wee riding still. This forenoone there

The Sauages

came to the number of thirtie of them, and bartered with vs as they had done before, which done they went alhoare at a certaine point about a flight-shot off vs, and there vpon a sudden begin to fling began to throw itones with certaine Slings which they had without any injury offered at all; yea, they did fling fo fiercely, that we could fcarce fland on the hatches. I feeing their brutish time they went to their Boates, and rowed away. About one a clocke in the afternoone, they came againe to vs crying in their accustomed manner, Thone, they being fixtie three in number, the flipper inquired of me whether they should come to vs or not. I willed him to have all things in a readinesse, they comming in the meane time nigh to the Pinnasse, I did perceive certaine of them to have great bagges full of itones, they whifpering one with another began to fling ftones vnto vs. I presently shot off a little Pistol which I had for the Gunner, and the rest of the tolke to certainly tell, but they rowed all away making a howling and hideous noise : going to the same point, whereas in the forenoone they had beene, being no fconer come on Land, but from the Hils they did so affaile vs with stones, with their slings, that it is incredible to report, in such and bonnets two mens height, to fhield vs from the force of the stones, and also did hide vs from their fight; fo that we did ply our Muskets and other Peeces fuch as wee had at them : but their subtilitie was such, that as soone as they did see fire given to the Peeces, they would suddenly

dealing, caused the Gunner to shoot a Falcon at them, which lighted a little over them, at which so flones againe. discharge, which indeed they did, but whether they did hurt or kill any of them or not, I cannot fort that no man could fland vpon the Hatches, till fuch time as I commanded for to lofe failes 60 ducke downe behind the Chiffes, and when they were discharged, then fling their flones herce-

the meccenth day in the morning, about four a clocke, they departed away.

The americanth day in the morning, about four a clocke it beeing calme, I departed from this Roadsted, so causing our men to row along it the shoare, till the tide of the ebbe was beint at which time it began to blow a fresh gale at North-west and by West, we turning downer till ahout two a clocke, when the tide of floud being come : when I came to att Anchor Idan exceltent Hauen, on the South fide of Caming bans (Mount, Which for the goodnesse thereof, I hamed Denmarkes Hanen.

The twentieth day , in the morning the weather beeing very tamic with I little die and to of wind, I looked and caused to row forth of the foreshed Hatboar, and comming forth the weether the llands and the maine, the people being as it fremed looking for watfored vs : making a hi- Thanson lend deous noile at which time at an inftant were gathered together about Tenentie three Boats with come against decons notice at which times at an initiant were gethered together about tenerals three Bodd with men trowing to vo. I feeting them, thought include to present the worft became wewwither to time his present therefore to differents the nexter; I thought it best twenter into bailet with them for fome of their Darts, Bowes and Janvanes, I we testing injury one of them to be Pathlock and by furnished therewish fo rowing Bodt to Son strong the fellands, there furnished the at the manner of one hundred since he wire perfect to the manner of one hundred since he wire perfect to the presenting their desired makes retrieved Science on to make the son of the Bodt to the son of the son of the Bodt to the son of the son of the Bodt to the son of the son of the Bodt to the son of the son of the Bodt to the son of the son of the Bodt to the son of the son of the son of the son of the Bodt to the son of the son of the Bodt to the son of with our failes, to defend ve from their Stones, Arrowes and Darts. They feeling this, went certaine of them from vs rowing to certaine llands, to which they did thinke wee would come: The fibrillate leaning no more but about ten mentani Beater about ve, who rowed stongs the finate of an often Sauges bout with the making fages of fireadhig tow. At Engle perceibing, that with what in midded to goe forth among it that the leaning town which the rest of their folks were, they threw certaine theis and trifler into the Boat, making fignes and tokens to ferch them', the which my Boy called William Huntries did. He being in the Boat, they prefently thot him through both all this night North and by East along it she hand. p, wheeler all the Red charte berg. It is there, co.

fill close weather til noone, we steering as before, being in the latitude of co. degrees. This day at noone I went away East South-east; this afternoone it was halle and still weather, when we had moone I went away Battone and any close weather with the wind at North-west and by West, Drift Ice. our course East South-east til about ten aclock, when we met with a mightie bank of Re to wind. A mighty bank ward of vs, being by supposition seven or eight leagues long, wee steering South South east to of see get clere of the tame. We metal all along the this ice a might to feel of Whales. Moreover, we whates fight with a great current, which as night as we could suppose, fee West North-west our for A walls. merica. This day at moone, the weather being very thicke, I could have no observation, this Enening by reason of the Ice, wee were forced to Iye South and by West, and South South-To west, to get cleere of the same, amongst which we came by divers hoge Ilands of Ice.

The feventeenth day; being cleere of the Ice, about foure in the morning, I directed my A great cucourfe South-east by South till noone, at which time I went away East and by South, the weather being very hayse and thicke: about midnight it fell calme, the wind comming vp Easterly. The eighteenth day, the wind ftill Eafferly, welving Eaft South-eaft, away vinder a couble

of courses larboard tackt. This day in the forenoone, we faw certayine llands of Ice. The nine-

teenth day, the wind full Easterly with the weather very hafie. The first day of August also it was very thicke weather, with a faire gale at South-west and by West. This forenoone wee met with a foull of Herrings, so that I knew wee were not farre from the Iles of Orksey, so having a shrinke at noone, I found ve in the latitude of \$8. degrees 40. minutes, at which time I founded with the deepest Lead, finding 42. fathomes redde fandie ground, with some blacke dents. This Euening betweene fine and fixe a clocke wee sounded againe, when we had no more but twentie fathomes dent ground, whereby I knew that we were game, which we had no me of our men looking forth prefently, espired one of the Ilands of We fell with Orkener, it being very thicke, wee cast about , and stood with a small sayle to Scaboord againe. Orkener. welving West North-west off all this night.

The tenth day, about five in the morning, we came thwart of the Caftle of Elfonnere, where wed if charged certaine of our Ordnance, and comming to an Anchor in the Road, the Captaine with my felie went ashoare, and hearing of his Majesties being at Copennan-Hanen, wee presently went abourd againe, and fet fayle comming thither about two a clocke. The Pinnaffe also 30 which he had loft at Sea, in which my Countreyman John Knight was Commander, came also the fame night about foure a clocke, both they and we being all in good health, praifed bee Almightie God. Amen.

CHAP. XV.

The fecond Voyage of Mafter I AMES HALL, forth of Denmarke into Groenland, in the veere 1 606. contracted.

E departed from Copeman-Hanen, the feuen and twentieth of May, in the veere of our Redemption 1606, with foure ships and a Pinnaffe. The Frof beeing Admirall, wherein went for principall Captaine of the Fleet Captaine Godske Lin- Godske Line Godske Line deno a Danish Gentleman with my selfe, being under God Pilot Maior of the Fleet. In the Lyon which was Vice-Admirall, went for Captaine and Commanmander, Captaine Iohn Cumungham a Scottif Gentleman, who was with me the yeere before. Captaine Cum-In the Tenren went Hans Browne, a Gentleman of Normay. In the small ship called The Gillestonre, ningham.

went one Caffine Ricker for a Dans. In the Pinnaffe called the Car, went one flipper Analysis Han Bisme a 50 Noll, of Bargen in Names. So by the proudence of God, wee weighed and fet faile about fix Names. a clocke in the Euening, with a faire gale at South South-west, comming to an Auchor in Elfo- Richarlona

meure Road to take in our water. The nine and twentieth in the morning, we shot off a Peece of Ordnance, for all the Cap- Andres Not of taines and Commanders to come aboord of vs, who being come, our Captaine commanded the Bergen. Kings Orders to bee read, which done, they returned aboutd, at which time wee weighed with a faire gale at East North-east, standing away North and by West till I had brought the Cole North-east and by East off, when I steered away North North-west, and North-west and by North. This Evening about five a clocke, I fet the Annold, it bearing West halfe Norther-

ly, three leagues and an halfe. All this Edening wee stood away North-west and by North. The thirtieth day, the wind at East South-east, wee steering as before, this morning about fixe 60 a clocke, the Lefeld bore West and by North of vs sixe leagues off. At fine this Evening, the Seam bearing West South-west fine leagues , I directed my course West North-west, with the wind at North-east and by East.

The one and thirtieth in the morning, very halie weather with a stiffe gale at East North-

A great cur-

East, was recung. West North, west away, till about nine a clocke, when we had a firmler of the

Land which was the wester gate of Marde, we steering along it the Land, Wee came eq an an-Our comming, chor in Flaggre, where we were to make and take in wood and water. The lecond of June we weighed, and came forth of the Harbour, of Flecorie about fixe in the morning, having a fresh gale at East North-east. About eleven at noone, i fee the Nafe of Northmay, it bearing North North-weit fours Jeagues off. The fourth day in the morning about two a clock, we were taire by the high Land of the Teader, I caufing to caft about flood to the South wards, Well and by South and sometimes West. This day at noone, I found my felfe in the latitude of 57 degrees 45 minutes , the Nate of Normay bearing East North-east two and twenter tion or 57, organization of the Northwards, lying North with 10 leagues off. This day at moone also I cattabout and shoot to the Northwards, lying North with 10 the flemme, having the winde at North North-west. This afternoone died one of our Green. landers called Oxo. All ting quening, and the night following, the winde as before, we lying al-

One of our The fift and fixt moffwhat

Shot'and.

io North with little winde. The fewenth day, the winde at South-west and by South and South South-west , we steering West and West and by North. This day at noone we were in the latitude of 78. degrees 40. minutes. The tenth day about foure in the morning, it began to blow a fresh gale at Kaft and by

South, at which time we flood along ft the Land to the Southward, till I had brought the South Head of Shotland, called Swinborne Head, North-west and by North about three leagues off : and Fare He next hand South-west and by South eight leagues off, at which time I directed my course away West with a fresh gale at East South-east about halfe an houre to three. I fet the an South head of Shotland it bearing North-east eight leagues off, Faire Mexicxt hand South-east se-uen leagues off, foule next hand North foure leagues, wee still steering away West with a fresh gale at East South-east. All this afternoone and the night following it was very thicke and raynic weather, the winde continuing as before. This night at midnight dyed the Groenlander

der dved.

which we had aboord vs, named Omeg. The fourteenth day, the winde as the night before a faire gale, we steering as we did before, with havie weather having a shrinke, at moone I found ys in the latitude of 58, degrees 40. minutes, having made a West and by South way Southerly two and thirtie leagues, differing to the Westward from the Meridian of the Nase 19. degrees 45, minutes. This afternoone we had a faire gale at South-east with thicke weather, we steering away West.

The fifteenth day, the winde as before, we steering away West, being by my imagination in the latitude of 58. degrees 40. minutes. The three and twentieth day, the winde at the Northeast a faire gale, we steering betweene the West North-west, and the West and by North, being at noone in the latitude of 36. degrees 10. minutes, having by reason of a Northerly current contrarie to my expectation, made a West way Southerly two and twentie leagues. The Comraste

alios I do in perpendicular and a surface of the wellwards.

The first of luly wee faw Land being eight leagues off, with agreat banke of ice lying off South-well, wee fetting our tacks aboord had biff East and by South and East South-east, to double the fame, about two a clocke having doubled the fame, were went away Weft and by South all this euening and night following. This Land I did suppose to be Buffe I land; it lying 40 more to the Westwards then it is placed in the Marine Charts.

The second day thicke weather with the winde at North North-west, we steering West and by North. This afternoone we were in a great Current feeting South South-west. The which I did suppose to fet betweene Buffe Hand and Freseland over with America; wee steering West North-west with a faire gale at North. This night about nine a clocke, the Pinnasse came soule The Pinnaffe came foule of of the Vice-admirall, where with her anchor shee tore out about a foot of a planke a little about water, and broke downe the beakes head.

The fixth making observation, I found vs in the latitude of 58. degrees 50. minutes, contra-South current, rie to my expectation, whereby I did fee the Southerly Current to bee the principall cause. The fewenth day, the winde at North and by East, we lying West North-west, being at moone in the latitude of 59 degrees 40. minutes, our way North-west two and twentie leagues. This eue-50 ning I found the North Point of the Compasse to be varied 12. degrees 5. minutes, to the Wellward of the true North.

The eight day, the winde came vp more Southerly betweene the South-west, and the Southwest and by West with an case gale, we seering away North-west and by West; being at noone in the latitude of co. degrees 30. minutes, having by reason of the Current and Variation made a West way Southerly about ten leagues.

A current fetting South-Sight of Ame-

The ninth day clote weather, it being calme all the forenoone, wee perceiving by our ships which lay becalmed, a violent Current letting South-well. This day at noone, we were in the latitude of 59, degrees 40. minutes. The tenth about foure in the morning, the winde came vp to 60 the North North-weit. I cashing about stood to the Westwards, lying West with the stemme, being in the latitude of 60, degrees 16, minutes. We saw the coast of America about nine leagues res in 58.de off, at which time I made observation of the variation, and found the Needle varie 24, degrees to the Westwards of the true North.

CHAP. IS Observations of Convents and Variations in Groen poyage.

The Hill rops were covered with flow and the hours to the Northwards full with Ice, bot to the Southwards it feemed cleere; Here I found a great Current to fet West into the shoare, A Current. which about midnight did bring vs to bee incumbred with very many Hands of Ice, having much todoe toget cleere off the fame withour danger : but by Gods helpe it being faire weather with a freshigale at South-west . wenget cleere off the same, standing East South-east and South-east and by East.

The four exact in the morning being cleere of the Ice, I went away East North-east and North-east and by East till eight a clocke, when I directed my course North-east and by North , being an noone in the latitude of 19 degrees, the Cape or Head land which wee faw to that night bearing West South West inteene leagues oif. All this afternoone and night followme it was for the most pare this weather : this evening I found the variation 23, degrees 55, Variation ele-

The inteendufaire weather with a fresh gale at East South-east, our course as before, be-

ing in the latinuce of 60, degree, no immure, the thips way. North and by Bath northerly twen-tic leagues. This afternoon eaulithe nigher ollowing the wind as before, we fleering fall. Northeaft and by North.

The eighteenthalfo thicke steather, being forced to stand away North North-west to double a great banke with great Mountaines of Iceannoft ineredible to be reported, yet by the helpe of God wee rallen the fame, Jayling alkthis day by great and huge mountainous Ilands of Ice. 20 With the winds at South-west and by South; being at noone in the latitude of 63, degrees 44. minutes. Wee shid fee our telnes beset round about with mightie bankes of Ice, being forced to Compassed

make more take, and to lye to and againe all this night to keepe vs cleere of great and small about with Ise, Hands of hee, where many times we were in fuch danger, that we did looke for no other thing then prejent death, if God had not been emiercifull vato vs and fent vacleere weather, where by his additance we kept our fekies very hardly and with great difficultie cleere of the Ice. The nineteenth day in the morning cleere weather with a fresh gale at South-west, wee

plying amongst the Lee to fee if wee could get a gut to get cleere of the same, at which time wees law the Land of America about the latitude of 64, degrees, it lying next hand South and Land of America North, being high ragged Land couered with fnow, the shoare being all beset with Ice. So *ka. lying of and on a nongit me lee in great perill till about noone, when God of his goodnesse

fent vs to eine a little gut where wee went through, and flood South South east away, commine full by many llands of Hee. Heere I did finde both by my course and reckoning (the variation also of the Compasse respected) that were were carried with a mightie Current to the Amighie cur-Weltwards, as both now and arterwards wee did probably prooue and fee the fame. For I fee- rent feeting to ting my course from the coast of America in the latitude of 58. degrees and a halfe for the coast the westward, of Groenland North North-east with a compasse, whose wyers were placed more then two third parts of a Point to the Eastwards of the North, the variation being 23. degrees: 30. minutes Northwesting and 24. degrees, as by observation I found betweene the latitude of e8. Note. and a halfe and 54 degrees, yet I did finde my felfe contrarie either to mine owne, or to any of their expectations which was in the Fleet with mee, carried almost foure Points with the Cur-

rent to the westwards over our ind gements. The twentieth, wee still layled to the Eastwards by many great Bankes and Ilands of Ice, Here I did give The twentieth, were still layled to the natwards by many great status and reads of rection to being still compassed in, were being forced to stand to the Southwards to get cleere, where the other freebeing sometimes becalmed , weedid plainly see and perceine our selves carried into the Ice to manto direct the westward very violently. This Current setteth West North-west. The twentieth in the their course

evening I found the Compaffe varied 23. degrees.

The one and twentieth day in the morning faire weather, wee efpyed a gut through the Variation ob-ke, it learning cleere to the fouthwards of the same, where bearing into the same about noone. wee were cleere of all the Ice by the mercifull prouidence of God. Here I observed the lati-

tude, it being 63. degrees 33. minutes. Now having the one and twentieth day at afternoone caused the Admirall to call the other Captaines and Steermen aboord, with whom wee might conferre, and having shewed briefly my reckoning with the other events, which contrarie to my expectation had happened, the cause whereof at that instant they did plainly see and perceine: They confessing, the Current as they did now plainly see, to bee the cause of the same. The Current, So having done; I gaue to the other Steermen directions, that being cleere of the Ice they should goe betweene the East and the East and by North over for the coast of Greenland and not to the Northwards of the East and by North, because of the former events. And now at this instant, by Gods helpe, being cleere I called to them, giving the fame directions. This afternoone and the night following it was calme. This evening I found the Compafe varied 23. degrees 25. Variation ob-

The two and twentieth day at noone I found vs.in the latitude of 63. degrees so. minutes. The three and twentieth faire weather, the ayre very cold, as with vs in the moneth of Iamuarie, the winde variable betweene the East North-east, and the South-east and by East, being at noone in the latitude of 63. degrees, having made a South-east and by South way

eleuen leagues. This day at noone I cast about to the Westwards, the other ships doing the like lying North-east and by North with the stemme, finding this evening the Needle varied to the Variation ob-Wettwards 22. degrees 70. minutes.

The foure and twentieth, the winde variable betweene the South South-east and the Southeast and by South with raine and fogge. This day about cleuen a clocke wee did fee much been Iceward, wherefore I cast about to the Southwards, the winde comming to the East North. east, wee lying South-east with the stemme, supposing the ship to have made a North and by West way hale Northerly two and twentie leagues. This afternoone, by reason of the sogge we look fight of the Lion and the Gilliftonre, wee looking earnefly forth for them, and thooming both we and the Uris divers pieces of Ordnance, but wee could neither fee nor heare them . as IQ which time the winde came up Southerly, we standing away our comit betweene the East and

The five and twentieth , wee had fight of Greenland , being about ten leagues to the Southward of Queene Ames Cape. Wee flanding away East South-east in with the Land with the winde at South. All this night it did blow very much , wee iteening North be Week and North North-west. The feuen and twentieth day in the morning was reasonable cleere weather with a fresh sale

at South South-west. This morning betweene foure and fue of the clocke, I cipyed Queene Annes Cape to beare East by South next hand of mee, and King Christians Foord South Southeast of me , being thwart of Romels Foord , Queene Sophus Cape bearing North halfe westerly, 30 about fitte leagues off. Therefore I thought it contenient to put into Commendess: Food where the filter was, both in regard that I had swome to his Manestie as concerning the same; and also because were expedicly commanded to being home of the same. So hauing a saire gale at West South-west, were came into the aforesaid River, anchoring in a very good Sound, hard by the Vre infixteene fathoms , at the mouth of Cumminghames Foord, about fine of the clocke. There came pretently foure of the Countrie people vato vs after their old accustomed manner. This evening about time of the clocke the Vrim anchored by vs. This night the Admirall. my felfe, and Captaine Browne went on Land to fee the Myne of filter : where it was decreed, that we should take in as much thereof as we could.

On Sunday the third of August, the Sauages feeing our curtesie toward them , bartezed Seales 30

end, it being about five a clocke, Eaft South-eaft of to three leagues off. This night about ten 40 a clocke it fell calme.

The twentieth , wee did fee the streame had fet vs to the Northwards. This streame fetteth wader the Hands of Farre next hand Baft and Weft. So cathing about wee flood to the weft-wards. fring Weft South-weft and formetimes Weft and by South, and some rimes South-weft, it being very raynie weather, about midnight it fell calme and so continued all night voto the

The first of October in the afternoone about foote of the clocke, we had fight of The Holmes. The second day, wee steered away South-east and by South and South South-east for The Col. And about eight of the clocke this night wee came into Twee, where wee rock all the day following. The third day at night the winde came to the North-east; fo wee weighed and came into Elfener Road. The fourth day, by the proudence of God, we arrived in our defined Port of Copen Hauen, 1606.

The senerall burthens and numbers of men employed in the shipsof the Fleet aforesaid, were as followers.

THe Trust being Admirall, was of fixtie tunnes, had eight and fortie men. The Lion Vice-admirall, was of feuentie tunnes, had eight and fortie men. The Vrm or Eagle Reare-admirall, of one hundred comnes, had fiftie men. The Gilliflowre was of fortie tunnes, had fixteene men. The Pinnaffe called the Cat, was of twentie tunnes , had twelve men. Brederanfies Food 60 is most Northerly. Comminghams Foord is next in fixtie feuen degrees and odde minutes. The Found wherein they law the Towns ten leagues up the fame, is two leagues to the South of Comsinghiam Foord. The Kings Foord is in fixtie fixe degrees and an halfe.

CHAP. 16, Pentle frith: SMargarites Hope, in Orkney. Their pourty.

William Hantris of Semborow in Torke-fhire, is Mafter Hall his man , and is allowed thirtie pound by the yeere of the King of Denmarke, for his skill in Nauigation.

I have alfo Matter Halls Voyage of the next yeers 1607, to Graenland from Denmarke, written, and with representations of Land-sights curionsly delineated by Iosias Hubett of Hull, but the Danes and with representations of Lana-Inguis currently accurate of collecting collections of the the Dance (embine perhaps that the given for Defended winded to attributed to the English Felse) after the Cention perhaps that the property of the Defended to the property of the Land [above degree of the property of the Defended of the property of the Defended of the Defe mased the prhale.

The Voyage of Master IOHN KNIGHT, (which had beene at Groenland eighteenth of April 1606.

Set fayle from Granefend in a Barke of fortie tunnes, called the Hope-well, well April 18, 1606; victualled and manned at the coll of the Worshipfull Companies of Moscouie, and the East Indie Merchants, for the Discouerie of the North-west Passage the eighteenth of Aprill 1606 and arrived the fixe and twentieth of the fame moneth in the Ile of Orkner, in a Sound called Pentlefrith. Heere wee were flayed Pentlefrith in

with contrary winds at West and North-west, and with much storme and soule Origing.

weather aboue a fortnight. In which meane space, I entertained two men of this Countrey, which are both luftie fellowes at Sea and Land, and are well acquainted with all the Harbours of which are outsined to the control of Other general rates, where we make a supplied to the area and a good was opined as on our Yoyage. In this Country we found little worthy of Relation. For it is poor a and hath no wood growing ypon it. Their Corne is Barley and Oases, Their fire is Turife, their houses

are low and vnfeemely without, and as homely within, are low and vnfeemely without, and as homely within.

Vpon Manday the twelfth of May, I fee thyle from Saint, Margarites Sound or Hope in Orkmy, at nine of the clocke in the moming, our courfe being Well fain by South 1 and at eight of
my, at nine of the fill called Hope, did bear Well Southerly eleuen or twelve leagues,
the clocke at night, the Hill called Hope, did bear Well Southerly eleuen or twelve leagues,
and the Stack South and by East Eafterly three leagues and an halfe, the winde beeing at Eaft

South-eaft.

This day was for the most part calme, and sometimes wee had a fresh gale of winde : our course was West and by South, halte a point Southerly. This day I passed by two small Hands. Two small 40 The one of them is called the Ciete, and the other the Row. They are diffant foure leagues the one Ilands. from the other. The course betweene them is South-west and North-east. The Southermost is called the Clete, and is the leffer of the twaine : it is diffant from the North-east part of Lewis, called the Bling-head, seven leagues : and the course betwixt them is North-west and South-east. The Bling-head Alio this Bling-bead is distant from the Farre Head, of the Hieland of Scotland West and by the Northest North halfe a point Westerly, and is distant seventeene leagues. Also the course betweene Blong- parto: Levis. bead and the North-west part of Lewis, is West and by South halfe a point Westerly, and faire low Land without Wood. There is good riding all along the shoare, the winde beeing off the Land, and in some places are very good Harbours for all winds. From eight to twelve at night, we ran fixe leagues West South-west.

This morning we had a fresh gale of wind at East North-east sour course was South-west and by West two houres fine leagues. From two to ten South-west, and by South 20, leagues. From ten to twelue West South-west fixe leagues. The latitude at noone was \$8. degrees 27. minutes. Fifty eight de-

From Wednesday at noone till Thursday at noone, was for the most part raine and fogge, the grees 27.min. wind at North-east and by East : our course was West halfea point Southerly : our latitude at noone being Thursday, 58. degrees 23. minutes. From Thursday at noone till Friday at noone, being the fixteenth, our way was West Southerly about twentie leagues: the latitude at noone was 58. degrees 19. minutes. This night the wind was fometimes variable betweene the South and by Well and South-east, with faire weather, the Magneticall Declination 18. degrees: the height of the Pole was 58, degrees 10, minutes. Also in the morning the Sunne beeing tenne Eighteene de-60 degrees aboue the Horizon, was diffant from the Eaft to the North-wards of the Eaft twen-

From Friday at noone vntill midnight was little wind Southerly, and fometimes calme, and from midnight till twelue at noone the next day a stiffe gale of wird at East North-east. This foure and twentie houres I judged our way to be made good West, something Southerly thirrie

Turce

leagues. The latitude at moone was 58, degrees 10. minutes. Also the summe did rise fiftie degrees to the Northward of the East.

From Saturday at noone being the fewenteenth, till Sunday at noone being the eighteenth.our courfe was Weft and by South a fiffe gale of wind fiftie leagues, being close weather, we made From Sunday at noone till Munday at noone I fteered away West and West and by South, ha-

uing a storme at East and by North : our courfe was West and Southerly fiftie leave From Munday at noone till midnight, our course was West and Southerly sind from the time till noone West and by North and West among. I judged wee sayled fortie leagues these ig fours and twentie hours, being for the most part foggie. The latitude at moone was 57. degrees

A corresponding

From Tuesday at noone till noone on Wednesday, our course was West and by North force fine leagues, being foggie weather without observation. Here wee had a current, which I indee fetteth to the Northwards.

From Wednerday at noone till Thurklay at noone, being the two and twentiesh, our course was West and by North sittie leagues with much fogge and close weather; and much winde

From Thursday at moone till midnight, our course was West and by North. Then the winde came to the North : wee tooke in our mayne course, and I spooned away with our fore-faile till Friday, the winde being at North North-east, I judged our way West South-west, the 10 twelue houres that I spooned about fifteene leagues, the other twelue houres West Norther-Many Gulles ly fine and twentie leagues. This three and twentieth day, wee faw many Gulles and much Rock-weed.

and much Rock-weed. A current to

From Friday at noone till Saturday at noone, I judged our way to bee made South-west and by West, but it proped West and by South, rather Westerly, twentieleagues by reason of a current, that I indge fetteth to the North-eastward. The latitude at moone was 57. degrees 52. minutes. The variation of the Compaffe was about a point to the Westward. This forenoone and all night the wind was at Northa very hard gale; wee spooned with our fore-sayle. Also this forenoone, we faw much Sea Tange and Rock-weed.

The variation

An Owle,

From Saturday at noone till Sunday at noone, our course was Southward about twentie 30 leagues, the wind being Northerly. This day we saw much Rock-weed and Drift-wood. The latitude was fiftie frum degrees. The variation was to the Wedhward threeme degrees or there about. The funne being fine degrees, bigh in the morning, was twentie foure degrees to the Northward of the East. "I

From Sunday at noone till two of the clocke the next day in the morning, beeing Munday, our course was West North-west, we made our way West and by North twentie leagues, having a tresh gale at South-east and by East : it fell calme till foure of the clockes then it blew an ease gale at West South-west, wee stemming North-west, &c. betweene that and North Northeast the wind being variable. The wind freshed toward noone. This morning we faw an Owle.

The latitude at noone the eight and twentieth, was 57. degrees 57. minutes. The variation 40 of the Compaffe was fourteene degrees and an halfe to the West. This day wee had blacke water, and many ouer-falls, streame leeches, and fets of currents, as it seemed to the Northward, and an halfe to the

grees of lati-White fowles. Dead Cowes.

The thirtieth, we found our latitude to be fiftie eight degrees. Heere it seemed that we were Fiftie eight de. in a tyde gate, which I judged to fet North and South, or that it was the Eddie of the currents, which we saw the other day. Also wee saw white Fowles, which cheeped like Spar-hawkes. Also we saw driving many dead Cowes.

The variation of the Compalle 24.degrees Northweftward.

The one and thirtieth, the funne being fiftie degrees about the Horizon, I found it to bee twentie feuen degrees to the Eastward of the South : againe in the afternoone, the funne beeing fiftie degrees high, it was distant from the South to the Westward fiftie one degrees : at noone 50 it was 55. degrees 6. minutes, the height of the Pole was 58. degrees 3. minutes. The variation of the Compasse was twentie foure degrees toward the North-west, Our way made these twentie foure houres was not aboue fixe leagues West, being little wind for the most part.

From Saturday at noone till two of the clocke it was calme: then it began to blow an easie gale at North. At night I observed the sunne setting, and found it to set twentie one degrees to the Westward of the North, the winde continuing variable betweene the North and the West North-west till noone, being the first of Iune. Then I found my selfe by observation to be in the latitude of 57. degrees 35. minutes. I judged our way from noone to noone West and by South or thereabout thirteene leagues.

From Sunday at noone till ten of the clocke the same Euening, it was calme. Then it began 60 to blow a stiffe gale of wind at South South-east. Our course was West till noone, the next day being Munday, twentie three leagues. This day wee faw many blacke Fowles like Willockes flying in flockes together.

The fourth my latitude at noone, was 56. degrees 40. minutes. The latitude next day at

noone was fifting fixe degrees. The variation of the Compaffe by the Scale was twentie degrees, Latiende se. noone was artistize degrees. The variational the Company of the funde was twente degrees. Landade and by my other Infrument twentie foure degrees to the Welt. The funde was twentie two degrees. degrees and an halfe high, and to the North of the West that ie degrees by the Inflament, and Variation 24. twentie fixe degrees by the Scale,

Our latitude at noone the theuenth, was fiftie eight degrees. And at night the funne did fee wire. Our latitude at noose the Estuanth, was not cognitive and at high the value of Fifty sight des-fourteene degrees to the Westward of the North, and did rife fifthe degrees so the Estward of greet.

The chirecenth, the Ice feemed to be dispersed thinner with the wind, or lome other accident: then I fet fayle with our two courses, but was forced to take those in sgaine; and moored to ano then I ret myste with our bouts mile so the Westward of the original lest Street forme I mal courses A fmall curto the South-weithward. For the great fisher of fee that webe for its what despidrate to the South- sent code ward, and the scher final ico which was flotic desire with the wind which was warfable betwine South-weit. the North-weft and the North. Here we were in fight of Land, which bore Weft Douth west Sight of Land from vs, flewing in some partialite Hands. Our laurede as moone was 47, degrees set infinites.

From Friday at moone call eight of the clocke as nighte, were consumed a moored cartificative.

faid Ice : then it fellicalme; and I looked and sowed so the Well ward with our Oares, hoping to set shorough, till twelne of the clocke, then the leegerw very thicks. I moored against till foure of the clocke the next morning. Then we rowed and layled with an easiegale of wind till eight or the clocke the next manage. Then we know an in ayearwing an easing size of wind till eight of the clocke the next morning being Standay. Then't object no blow a freith gale Editerly, and 20 we cannot the fine among the few with our Oars till noone. Our lantitude was first eight degrees. From Saturday at noone till midnight wee guided our shippe to the Westward among the Ice with our Oares, hoping to get thorough: but were were fuddenly compelled about with many great Hands of Ice, and continued fo diffressed with a fore storme of wind at South-east, being foggie and thicke weather twe were so bruised betweene mightie great Hands of Ice, that we were in danger every minute to be crushed in pieces with force of the heaving and fetting of the faid Ice with the great Sea that the wind made, had not God of his mercie provided for var for our owne endenours did little antile to our helpe, though wee employed all our industries to

The nineteenth, we descryed the Land of America, which rifeth like eight flands - the Nor- The Land of thermost part of it did beare North and by West about fifteene leagues from vs. I observed the Angua deflatitude, and found my felfe to be in 56. degrees and 48. minutes. The variation of the Compalle cryed in 56. latitude, and round my iene to be in you degrees at this Coaft shewesh like broken Land or Ilands; degrees 48, was twentie fine degrees to the Weitward. All this Coaft shewesh like broken Land or Ilands; minutes. and the tyde of floud commeth from the Northward.

the vetermost of our powres.

Tuesday the foure and twentieth all the morning, there blew a from Northerly, and such a showeth like fuffe of the Sea, and fo much Ice came in, that our fafts brake that were fast on shoare, and our broken lighted Rudder was driven from our sterne with the force of raightie Hands of leet to that we were forced to hale close into the bottome of the Cour to fane our clothes , furniture and victuals : wee did our best, but before we had done, our ship was halfe full of water : the night comming vpon vs being wearie, we tooke a little reft.

On Wednesday, we went hard to worke when the thip was on ground, to get the water out of her, and to ftop so many of her leakes as we could come by, and to saue so much of our bread as we could; and some went to building our shallop. Also I caused our Boate to be lanched our the Hand; and fent my Mate Edward Gorrell, with three others, to feeke for a better place where Edward Gorrell to bring our ship on ground, if it were possible, to mend her againe. But they returned without the Masters any certaintieby reason of the abundance of Ice, which choked every place. They found wood Mate. growing on the shoare.

Thuriday being faire weather.] Here Master Iohn Knight ended writing in this Iomrnall. On this Thursday the fixe and twentieth of lune in the morning, our Mafter caused some of our men to goe aboord our ship, to saue what things they could. And hee and Edward Gorrell his M. Ishn Knight Mate, and his brother, and three more of our Company tooke the Boate, 'carrying with them paffeth durite foure Piltols, three Muskets, fine Swords, and two halfe Pikes for to goe oner to a great Hand, a great Hand,

which was not about a mile from our ship, to looke if they could find any Harbour or any Coue, where he and to get our (hip into for to mend her. Also he carried an Equinoctial! Diall with him , and pa- three of his per to make a Draught of the Land. When they were passed ouer to the other side, our Master, his company seem per to make a Draught of the Land. When they were patied ouer to the other fide, our marrer, his to have bin in Mate, and his brother, and one more went on shoare, leaving two of vs. in the Boate with one tercepted by Musket, one Sword, and an halfe Pike to keepe it : which two flayed in the Boate from ten of the Sauages, the clocke in the morning, vittill eleven of the clocke at night, but could heare no newes of them after their departure vp into the top of the Hill. Then did the Trumpettor found two or three Their Trumtimes, and the other did discharge his Musket two or three times, and so they came away to the petror.

60 other fide to the West of the Company, where the ship was : where they were watching for our comming; who feeing vs two comming and no more, they maruelled where the reft of the company were. When wee came on shoare, they enquired for our Master and the rest of our company. But we could tell them no newes of them after their departure out of the Buat, but that we did fee them goe vp to the top of the Iland. Which report did ftrike all our men into a

Their Shallop nor finither?

great feare to thinke in what extremitip we were, because we did want our Matter and three of our best men, and our Ship lay funkey and we had nothing to trust to but our Shillion, which was not at that time halfe finished. This night lying curshoare in our Tent, which was between two Rocks, we kept very good watch, for feare of any peoples fudden affaulting wives: or if one They could two Rocks, the transfer and his company had trausiled fo farre, that they could not come against that sight, and would shoote a Musket, that wee might beare them. But they came not at all ...

The next day being Friday, and the feuen and twentieth of June, wee confulted to goe open fenen of va with our Boate, to try if we could fee or learne any news of our Matter, or any of our 10 men : foewe were afraid that they were either futprifed by; the Sauges of the Countrie, or effe denoured by the wilde Beafts. So we tooke with vi fourn Minkers, and Swords, and Targets, and fuch promition as we had in the Ship, and went downe to the Sea-fide, but wee could not get othen tree for Ices At length werecurned, with much adoe to get on shoate, land went to our Ship, to

faue what things we could all that day. On Sacurday, the eight and twentieth, we did likewife faue what things we could, and gat

all our, things out or our Jamp, and muor, naturation at nous, manufacture weathers, popular in con-troface her, and or mend all things, as well as we could; for the law yapon hard wherefore we kept her as light as we could, for beating and bruising of her hulf. That night about mine of 20 the clocke, it began to raine very fore, and so continued all night : and about one of the clocke at nielst our Boate-Swains and our Steward being at watch, and their watch almost out, the Steward went aboord the Ship to pumpe, leaving the Boate-Swaine at watch fome Musker shot length from our Tent; while he was in pumping, there came ouer the rocks a great fort of the the Countrie affaultourmen Countrey people toward the place where the Boate-Swaine was: who when they faw him, they shot their arrowes at him, running toward him as fast as they could. Whereupon hee difclockearnight, charged his Musket at them, and fled to our Tent as fait as hee could, thinking they had befet vs, they were so many of them in sight. The Steward hearing his Musket goe off; came out of

that were alleepe in our Tent, to come to rescue the Boare-Swaine, and the Shallop. We made what hafte we could; when we came towards them, and faw fo many of them in our Shallop,

we were afraid we were betraid. At this time it rained very fore; yetcalling our wits together,

we fent two of our men backe vnto our Tent, the reft of vs made toward them, and thot at them

fome three or foure Muskets : who when they faw vs shoote, they stood in our Shallop, and

held up their hands vntovs, calling one to another. Then thought we with our felues, that we

were better to dye in our defence in pursuing of them, then they vs, being but eight Men and a

great Dogge. When they law vs marching toward them to fiercely, our Dogge being formoft, they ranne away : but we durftenot purfue them any further, for it was in the night, and they

were in fight abone fiftie men. Thus we recoursed our Shallop. Then we fent fome more of our

before we could overtake them, they were gotten into their Boates, and were rowing away

through the Ice; which was fo thicke, that they could not passe away, but stucke fast; for their

Boates were very great : wee feeing them flicke fast in the Ice, fome fetting with Oares, and fome rowing, came fo neere them, as we could, and thot at them some dozen that, before they could get cleere: which that caused them to cry out very fore one to another; for their Boates

men to our Tent to keepe it; and the rest followed toward the place whither they fled. But 40

all our thingsout of our Ship, and made her cleane in hold, having faire weathers koping in God

the Ship, and as he was comming, faw the Sauages running to our Shallop, and cryed out to vs

Aboue fiftie Sauagesin

Very great

The descriptio werefull of men-As farre as we could judge, they be very little people, tawnie coloured, thin or

of the Sauages no beards, and flat nofed, and Man-eaters. . On Sunday, the nine and twentieth, all day long we gat fuch things as we could abourd our Shippe, for feare they should come ouer with more men, and befet vs, our Ship lying betweene two great Rocks, and all without so full of Ice, that we could not passe any way to Sea, no not with a Boate. That day, two of our men kept watch vpon the Rocks, to give vs warning, if they did come over with Boats. Then did our Carpenter make what shift hee could with our Shallop, and did tench her in some places, but neither calked her, nor pitched her. Then did

wee take her, and bring her downe close to the Shippe, and there shee did stand all night.

On Munday, the thirtieth day in the morning we went to worke to cut the Ice with Axes and Pick-axes, to get our Shippe; for all about the Iland was nothing but Ice, and no place to ride free neither with Shippe nor Boate. That night it pleafed God, that wee got her out, and came away rowing with our Oares; but the was exceeding leake, and our Shallop too; and, which was worfe, we had neuer a Rudder to firre our Ship withall. Wee rowed allthat night among

The first and second dayes of July, we continued also rowing up and downe among the floting and driving Ice, with little hope of recovering our Countrey.

A great Cur-

The third of July, we had a gale of winde at North, and a great current feeting to the Southward: Then made we fast our Ship to an Iland of Ice, and went to worke, and to stow her things within boord, to make her stiffe; for wee had neuera whit of balast in her. Then did our Carpenter make what shift he could, to hang our Rudder, having nothing convenient in our

Ship to make Gudgins, nor Pintels. Then were we forced to breake open our Maiters Cheft, and Ship to make triugins, nor Pintels. Then were we retected to order open and the live Chert, and to binde our finall trongins to take all the Iron bands off it, to make fast two Pick-axes, for two Pintels, and to binde our finall trongins Ruddertwithall. So, as it pleated God, that night we hanged our Rudder, having but two Pin-made faft to rels and a Cable through the middle of it, to keepe it to with two tacks. Then were we in good in Rudder, hope to get cleare of the Ice, because wee had some steerage, though it was but bad: for before, and hung the wedurft beare but little fayle, our Ship being fo leake, and her stemme to fore beaten with the Rudderte the rocks and Ice, and having no feerage, but were forced to rowe with our Qares, till wee were all Stern-post, &ce

fore and weary.

The next day about tenne of the clocke in the morning, the winde came to the West North-The next day about tenne of the closes in the land by North, to get vs out of the Bay:

They get out welt, and was rathe weatch being out, which was the third watch that we had after we came out of the Bay, of the Countrey (for before, continually we did watch all, to keepe our Shippe cleare of the Ice, where they or me country our country out the water and the recipe our shippe under or the fee, where as never as we could we began to Pumpe our Shippe, but could not make her (wike in a thou- rode, find throaker, if the had frood but one halfe houre vnpumped. Then were were forced to vnrom- see our Ship, to fee if we could find our leakes. We foom found a great many of leakes, but not that which caused ws to Pumpe so fore. At the last, we found it close abast our foresoot, whereher keele was fplintred in two or three places, where the Sea came running in fofaft, that it was not Our Shippes possible to keepe her free with both our Pumps, and wee could not come to it to stop it; for it Keelewas splins possible to keepe her tree with both our pumps, and wee could not come to it to hope; for it dintwo or was ynder the timbers. Then did wee take our maine Bonnet, and basted it with Occom, and three claces. was vinter to the control of the season of the control of the cont houre. Then vpon confultation had among our felues, wee refolued to shape our course towards to touch allest Newfound Land, to fee if we could get any place to mend our Ship, hoping there to meete with found Land.

fome Englib ur Freuch men. At this time we had one of our men very licke, and another had his hand very fore splitted; and most of vs all were so fore with rowing and pumping, that we were frarce able to ftirre, but that we must perforce. The fift of Iulie, wee shaped our course for New found Land, with the winde at West

The one and twentieth, the winde was at South South-west; and we fell with the Land, be- Broken Blands

ing nothing but broken Ilands. Then we flood to the Westward, being in the latitude of 49. de. in 40.degrees 30 grees and an halfe. The two and twentieth was faire weather, and the winde very variable; and about fixe of the clocked night, the winde came to the Weft North-weft. Then we freered in among the I- Many broken la

lands, to feef we could finde any harbour to mend our Shippe; for the was very leake. When laids which we were come in among them, we found nothing but broken llands, and a great current, which were the files did fer from Hand to Hand, and had no ground at an hundred fathoms. That night we were ve- de Fogary fore intangled with funken Rocks, and in great danger of casting away our Ship, hauing very Sunken Rocks.

thicke weather : wherefore we kept to and fro all that night.

The foure and twentieth of Iuly, in the morning, we spied some dozen Shallops, which were Twelue Shalfilhing forme two leagues from vs. Then wee made what way wee could toward them, &c. lops of Fishermning tome two respections were a new were more waste way were come coward epicin, exc. support of We remained in this Bay of Fage, in repairing our Shippe, and refrencing of one felues, vacual menther two and twentieth of August. Then taking our leaser of our kinde and louing friends, with giving them noth hearite thanker for this goodness, for every ators, we pur forth to the Sea, with giving them noth hearite thanker for this goodness, for every ators, we pur forth to the Sea, much with an indifferent and reasonable good passage we arrived lafely in Dortmonth in Desonshire, and fent word to Lordon vnto our owners, of the loffe of our Mafter and his three companions, and of the dolefull faccesse our Voyage, the source and twentieth day of September, 1606. The rest of this Journall, from the death of Master John Knight, was written by Oliner Browne

one of the Company.

CHAP. XVII.

The fourth Voyage of I A MES HALL to Groeneland, wherein he was fet forth by English Aduenturers, Anno 1612. and flaine by a Greenclander. Written by WILLIAM BAFFIN.

Ednefday, the eight of July, 1612, in the morning I perceived the Sunne and the Moone, both very faire aboue the horizon, as I had done duers times before.

At which time I purposed to finde out the longitude of that place, by the Moones comming to the Meridian. Most part of this day I spent about finding of the Meridian line; which I did vpon an Iland neere the Sea, hanging at the extreames of my Meridian line two threeds with Plummets at them, instead of an index and fights.

Thursday, the ninth day very early in the morning I went on shoare the Iland, being a faire

morning, and observed till the Moone came just vpon the Meridian. At which very inflant, I observed the Sunnes height, and found it & degrees, 53 minutes, North: in the eleuation of the Pole 6c. degrees 20. minutes. By the which, working by the doctrine of iphericall trians gles, having the three fides given , to wit, the complement of the Poles elevation; the complex ment of the Almecanter; and the complement of the Sunnes declination, to finde out the quantite of the angle at the Pole : I say, by this working, I found it to be foure, of the clocks, 17 ani-nutes, and 24 seconds. Which when I had done, I found by mine Ephemerides, that the Moone came to the Meridian at London that morning at foure of the clocke, 25, minutes, 24, feconds: which 17. minutes, 24. leconds, substracted from 25.34. leaueth 8.10.0f time, for the difference of longitude betwire the Meridian of London (for which the Ephemerides was made) and the Meridian passing by this place in Groenland. Now the Moones motion that day, was 12. degrees 7. minutes : which converted into minutes of time, were 48. minutes, 29 legonds : which workminuted differences twintercongrette monitoring to suite years on minuted passeound a writer your research long; ing by the rule of proportion, the workers that is if a 8, minutes, 20,1000 piles the time that the med between Moone commeth to the Meridian fooner that day, then file did the day before, gine job, the Moone commerce of the earth, what shall 8 minutes to seconds give, to wit, 60. segress to minutes, or neere there about: which is the difference of longitude betweene, the Meridian of London, and this place in Groenland, called Cockins Sound, lying to the Westward of

Objection.

This finding of the longitude, I confesse is somewhat difficult and troublesome, and there may be some small errour. But if it be carefully looked vnto, and exactly wrought, there will be no 20 great errour, if your Ephemerides be true. But some will say, that this kinde of working is not for Marriners; because they are not acquainted to worke propositions by the table of signs, and an instrument is not precise enough to finde out the houre, minute, and second. For the bule of one minute of time, is the loffe of 7 degrees of longitude. I answere, that although the most part are not vied to this worke, yet I know lome of the better fort, which are able to worke this and the like propositions exactly. And those which yee cannot, and are desirous to learne, may in short space attaine to such knowledge as shall be sufficient for such things. And how near ceffary it is, that the longitude of places (hould be knowne, I leave to the judgement of all skiffill Marriners, and others that are learned in the Mathematicks.

This afternoone it was agreed by the chiefe of our Company, that our Master, Lames Hall, 30 should goe in the smaller Ship, farther to the Northward.

Variation 23. deg.58.min.

The forefuld Thursday in the eneming, he departed out of the Paisence into the Harrf. safe, to Cackim Ford in get forth of the Harbor, which our Master called Cockim-ford, in remembrance of Alderman Cackin. 6, degree in one of the Aduenturers : which place, is in the latitude of 65 degrees, 20 minutes. And the variation of the compane is 23 degrees, 58: minutes, to the Westward. That curning was very calme, and we towed our Shippe forth with the Shallops and Ships Boar. But within, an houre or two after we were got into the Offin; the winde being at North, it blew a great florme which continued all that night.

The foureteenth, our Mafter turned the Ship vp to the River againe, toward she River where The foureteenth, our Malter turned the Ship vp to the Kuter agains, toward the Riner where the fuppoled mine should be. But the tyde was to faire from titatewe good not get posses, but of were constrained to Anker in a roade at the South fide of the Riner, four thirtee leagues from the Paisene, in which place are many good Rode, steed to be found.

Thurlday, the fixteenth day, the winde wise a North, welf, and blew, to fitting again, that we could not get to Sea tharday. That night, eighteene of vice wene into the lands to which the could not get to Sea tharday. That night, eighteene of vice wene into the lands to which the

Greatfooting. fome Deere, but found none. But we perceiued the foote-ffeps of some great, Beath, which wee tome veres on the series of th

any meanes get to the River, where the supposed Myne should bee. Wherefore our Master bare roome for Ramelsford, being a River Southward of another, called Cunninghams ford, some twelue leagues. And we came to an Anchor at the entrance on the Southfide of the Ford, about feuen of the clocke.

Wednesday, the two and twentieth day, about nine orten of the clocke, the Sauages came to barter with vs, being about fortie of them, and continued about an houre and an halfe: At which time our Master lames Hall, being in the Boate, a Sauage with his Daro frooke him a deadly wound upon the right fide, which our Surgean did thinke did pierce this liner. We all mufed deadly woun-; that he should strike him, and offer no harme to any of the rest: vnlesse it were, that they knew him fince he was there with the Danes; for out of that River they carried away five of the people, whereof neuer any returned againe : and in the nexp River, they killed a great mumber And it should seeme that he which killed him, was either brother, or some neere kinfman to Ibme of them that were carried away : for he did it very resolutely, and came within soure yards of him. And, for ought we could fee, the people are very kinde one to another, and ready to revente any 60 wrong offred to them. All that day he law very fore pained, looking for death every hours, and religited all his charge to Matter Andrew Barker, Matter of the Harts-cafe, willing him to place another in his roome Mafter of the imall Ship.

Thursday, the three and twentieth, about eight of the clocke in the morning he dyed, being The death of resy penitent for all his former offences: And after we had throwded him, wee carried him in lames Hall the Shallop, to burie him in some out Hand, according to his owne request while he was lining. the Shanop, to build him, we went in the Shallop to seeke for the mine, which we had expected Overne South folong. All that day we rowed along toward the North, passing by a Cape called, One one Sophias as Cave.

Cape. That night we flaied at an Iland, some three leagues short of the River.

Friday, the foure and swentieth, in the morning, wee rowed along, and came to the place, Priory, the course also a vertice in a time investing, a weer rower stoney, a maxime to the place, the interior is on the South-fide of the entrance of Comming fount filter: And we found direct place, Comming fount is on the South direct place, Comming fount, which when our Goldinith, When the Dayse had digged; it was a kinde of failuring flone, which when our Goldinith, Rucci, to lames Carlile, had tried, it was found of no value, and had no mettall at all in it : but was like The supposed water Magenie Budde, and of a dietering colous. That day after we had dyned, we rowed up Mine found to unto Associate listone, and or a generaling contain. I have seen into the Mountaines, and the fine charge leagues, where clears of our company weathy into the Mountaines, and the clear in the Country. That carning we returned, the charge we returned to the country pleafains, then they had feen in the Country. That carning we returned to the country of the country and came to the place where the Dasse had digged their (uppofed Mine, and tooks fome of it in our Beats to carry with vs. and recurred toward our Ship. The night we rowed and failed, and

the next morning about nine of the clocke, we came to our Ship.

Sangday, the fue and twentieth, being Saint Lemer bis day, in the forenoone, we came to our Shippe, lying on the South fide of the River, called Ramels River. And as foone as our Mafter sample, 19 mg on the South as on more to trade with ve, he determined to depart with the Shippe Many of their an into the Kings Ford to the Passence: and rowing about the harbour, where we lay to finde some winter houses neerer way out to the Sea, we found among the flands, where many of their winter houses had in Ramels Rivet bin, and fome of their Tents were but lately carried away. In which place were also found one The fashion of of their lone Boates, made of wood, and bound together for the most part, with shuers of Boates. Whales fins, and coursed with Seales skinnes, being iome two and thirtie foote in length, and fome fine foote broad, having tenne thoughts or feares in it. That day about twelve of the clocke Rameli Ford in we weighed anchor, and departed out of Remair Ford, which list in the latitude of 67 degrees, and the variation of the companie is 24 degrees 16 minutes, being a very faire River, and one of 67 degrees. the most principall, which wer law in that Country, firetching in East and East and by South is 24 degrees This night, about one of the clocke, we came to the Patience, lying in the Kings Ford. Sunday, the fixe and twentieth, Master Andrew Banker, and our Merchant, Master Williamon

with other of the Company, were in conference about returning home, because that fince our Mafor was flaine, none of the Sausges would trade with vs, as they were wont.

Wednesday, the nine and twentieth, we were likewife occupied about taking in of ballaft; for our Shippe was very light; and that evening it was agreed, that a desires Barker, Mafter of the Hartf-esfe, should goe Mafter of the Passener, which was fore against the minds of William Goer- William Humite den : and William Hautrice was appointed Mafter of the Hartreofe, and John Gartenby , one of Mafter of the the quarter Malters of the Pasience, was Malters mate of the Hartiesfe.

Tuefday, the fourth of August, in the morning the winds being Northerly, a very small gale we They come out got to Sea, where the winds came to the Southward, and we tacked sometime on the one boord, of harbour.

40 and formetime on the other, making fmall way on our course. Munday the tenth, was raine and foule weather, as it had continued enery day fince wee came Thick and fogfrom harbour, fauing the feuenth day, which was fomewhat faire : For commonly while the gieweather, winde is South, it is very thick and foule weather. We tacked sometimes on one boord, and some- the winde betimes on the other, making a South by West way, at noone fixe leagues.

Wednesday, the twelfth, it waxed calme, we being somewhat Southward of a Cape, called Barnile Cape : and about three or foure of the clocke in the afternoone, the winde came to the North and by West, an easie gale, with faire weather.

The eighteenth at noone we were in 58 deg. 50 min. The feuenteenth day, I tooke the varia- Variation 13. tion of the compaffe, finding it to be 13. degrees 22, minutes, concrary to the observations of o- degr. 24, min. 50 therein this place. And if any doe doubt of the truth thereof, they may with a little paines proce

it. The eighteenth of August, the declination of the Sunne was 9. degrees \$8.minutes, for the Meridian of Landon. But we being almost foure houres of time to the Westward thereof, there are three minutes to be abated from the reft : and fo the declination was g. degrees 55 minutes; and his height about the horizon was 24. degrees 40. minutes in the latitude of 49. degrees 0. min. and his diffance from the South to the Westward, by the compasse, was 81. degrees. And for truth of the first observation, I tooke another shortly after, finding them not to differ about

Wednesday the nineteenth, the winde still continued with thicke and hasie weather, we being at moone in the latitude of 58, degrees 30.minutes, or thereabout, making a South South-east 60 way, about ten leagues.

Thursday the twentieth, was faire weather, the winde at East North-east, wee steered away South-east and South-east and by East, making at noone a South-east and by South way, about thirtie leagues, being at noone in the latitude of 57. degrees 20. minutes. This day in the after- Variation 11. noone, I tooke the variation of the compasse, and found it about 1 1. degrees 10 minutes.

of London and Ceckins Sound in Graculand.

Variation 7. degrees 23.

minutes.

Friday the one and twentieth, faire weather, with the winde at North and North by Raft and we made an East South-east way, halfe Southerly twentie foure leagues, being at noone by obleruation, in the latitude of 56. degrees 50. minutes.

Saturday the two and twentieth, laire weather, the windat North and Nith by East, wee made an Balt way halfe Southerly, some twentie two leagues, being at noone in the latitude of 6. degrees 47. minuter.

Sunday the three and twentieth, faire weather, the wind at West North-west, we making an East and East by North way about twentie four leagues. This day I tooke the variation of the Compaffe, and found it to be 7. degrees 23. minutes, being 2t noone in the latitude of 57. de-10

Munday the foure and twentieth, being S. Bartbolomenes day, faire weather with an North North-west, wee making an East North-east way, halte Northerly about twentie seuen leagues and were at noone by observation in the latitude of 58. degrees 4. minutes. This day I observed and found the Compaffe to be varied 7, degrees 20, minutes,

Tuesday the fine and twentieth, faire weather and calme: the winde at North, wee made a North-east and by East way seventeene leagues, being at noone in the latitude of \$8.degrees 30. minutes. This day I found the common Compaffe to be varied one point, and the true variation to oee 6. degrees 4. minutes.

We drief lay the fixe and twentieth faire weather also, with the wind North North-west, we made a North-east and by East way halfe about twentie two leagues, being in the height of 50, 20

Thuriday the feuen and twentieth indifferent faire weather, with a stiffe gale of wind at the North North-west, we making a North-east way about thirtie one leagues, being at noone in the latitude of 60, degrees 10, minutes.

Friday the eight and twentiet, the wind at South-east with a stiffe gale, wee made good about noohe a North-east and by East way about twentie sine leagues. This day in the aftermoone it blest to great a ftorme, that wee were in great diffrese, the winde at East South-east. But about eleven of the clocke it came to the North-west, and North-west by I with. And we ranne fome twentie leagues.

Saturday the nine and twentieth, it blew fo ftiffe, that wee could beare nonebut our fore- 30 faile, making an East and by South way halfe Southerly, about thirtie leagues.

Sunday the thirtieth, all the forenoone it blew a very stiffs gale, and about noone the winde came Southerly; and it blew a very great storme, which continued all that day and that night in fach fort, that we could not faile at all, but all that night lay at hull.

Manday the one and thirtieth in the morning about foure of the clocke, the winde came to the South-west a very stiffe gale. At which time we set our fore-faile. The wind continued all this day and night, we steered away East and by South, making at noone an East North-east way about thirtie foure leagues.

Tuefday the first of September, the wind still continued at South-west, blowing a very stiffe gale, we steered away East and by South, making an East way about fiftie leagues. This day at 40 noone we were in the latitude of 60. degrees 45. minutes.

:Wednesday the second faire weather with the wind at South-west, wee made an East and by South way halfe a point Southerly about fortie two leagues, being at noone in the latitude of 60. degrees 10. minutes. This day I observed, and found the Compasse to be varied three degrees to

Thursday the third day faire weather, the wind at South-west : wee made an East by North way at noone about twentie leagues. This day in the after-noone, the winde being at North North-west, it blew a very stiffe gale for two Watches; and toward seven or eight of the clocke the storme so increased, that our shippe was not able to beare any faile. And all that night wee

Friday the fourth, the storme still continued, and we could beare no faile all that day till about foure of the clocke in the afternoone, at which time we fet our fore course, and our maine course. The night before in the storme, we lost The Hartf-eafe. This day wee made fome twelue leagues East and by North. And we fell to lee-ward lying at hull fome five leagues South by West.

Saturday the fift calme weather, but very thicke and close all the forenoone : the wind continued still at North North-west, we making from the time wee set our courses the day before, about ewentie leagues East halfe Southerly; beeing at noone in the latitude of 59. degrees

Sunday the fixt, faire weather, the wind at North North-west, we steering away East Northeast, and East and by North, made an East by North way, halfe Northerly some 29. leagues, 60 being at noone in 60. degrees 10. minutes. This day the Compasse was varied to the East fixe Ground found. degrees. This atternoone it was almost calme : and wee founded, and found ground at fixtie

eight fathomes. This Euening about ten of the clocke the wind came to the South-east. Munday the feuenth, very faire weather, the wind South-east and South-east by East, wee

eacked in the morning to the North-ward, and ranne East North-east and East by North vntill Land described. feuen or eight in the afternoone : at which time we tacked up to the Southward, and went away South-west till toward twelue a clocke that night twentie leagues.

Tuesday the eight, in our morning Watch I found our selves to be in 59. degrees 20. minutes: And about fine of the clocke I efpied Land, which we supposed to bee the lles of Oriney, as The Head afterward we found them to be the same. And toward three of the clocke, we came to an Anchor in a Channell running betweene the llands; where the people came to vs, and brought vs Hennes, Geefe, and Sheepe, and fold them to vs for old clothes and shooes, deliring rather them then money. There are about eighteene of their Hands, which are called by the name of the

Wednesday the ninth, it was thicke weather, and the winde so Easterly that wee could not

Thursday the tenth, faire weather, and the wind came to the North-west, and about noone we weighed Anchor; and toward fine of the clocke we were cleere of the lles. The Channell Thelying of for the most part lyeth North-west and South-east. All that might west ood away South-east. Friday the eleuenth, faire weather, with the wind at North North-west. And about nine of in Origina. the clocke in the morning, we fteered away South South-east. At which time wee had fight of

Bushbam-neffe: And about two of the clocke we were thwart of it. The feuent centh, we came Bushbam-neff. to an Anchor in Hull Road, for which the Lord bee prayfed. Here I thinke it not amiffe briefly to relate the state and manners of the people of Groenland, Hall.

for a much as I could learne : As also what likelihood there is of a passe into the Sea, which lyeth vpon Tartarie and China.

The Northwest part of Graniend is an exceeding high Land to the Seaward, and almost nothing but Mountaynes; which are wonderfull high all within the Land, as farre as wee could tarnet of floor thing out Mountaynes, which are wonder an ingual within the Band, so ther, and all gliffer very pure. ring, as though they were of rich value; but indeed they are not worth any thing. For our Gold-fmith Lesses Cerlile tryed very much of the Vre, and found it to bee nothing No profitable worth. If there bee any Mettall, it lyeth 6 low in the Mountaynes, that it cannot bee well Vre. come by. There are some Rocks in these Mountaynes, which are exceeding pure Stone, finer, 20 and whiter then Alabafter. The fides of these Mountaynes continually are coursed with Snow for

the most part, and especially the North sides, and the North sides of the Valleyes, having a kind of Molle, and in some places Graffe with a little branch running all along the ground, bearing a Cominual of Molle, and in some places Graffe with a little blacke Berrie, it runneth along the ground little blacke Berrie. There are few or no Trees growing, as farre as wee could perceive, but in one place forms fortie No Trees, miles within the Land, in a River, which wee called Balls River. There I saw on the South Balls River. fide of an high Mountayne, which we went vp, and found (as it were) a yong Groue of small A Groue Wood, some of it fixe or seven foot high like a Coppice in England, that had beene some two small wood, or three yeeres cut. And this was the most Wood that wee faw growing in this Countrey; be-

ing some of it a kind of Willow, Juniper, and such like. We found in many places much Asselica. We suppose the people eate the Roots thereof, for some causes. For we have seen them have many of them in their Boats.

There are great flore of Foxes in the Ilands, and in the Mayne, of fundry colours: And there White Hars. are a kind of Hares as white as Snow, with their furre or haire very long.

Alfothere be Deere, but they are most commonly vp within the Mayne very farre; because the people doe so much hunt them , that come neere the Sea. I faw at one time seuen of them together, which were all that wee did fee in the Countrey : But our men haue bought divers Coates of the people made of Deeres skinnes, and have bought of their Hornes alfo. Thee feem Befides, we have divers times feene the footsteps of some beaft, whose foote was bigger then to be Elkes, or the foot of a great Oxe. Furthermore, the Inhabitants haue a kinde of Dogges, which they Losses. 50 keepe at their Houses, and Tents, which Dogges are almost like vnto Wolues, living by fish, as Dogges, like the Foxes doe. But one thing is very strange, as I thought : for the Pizzels of both Dogges and Womes,

The people all the Summer time vie nothing but fishing, drying their fish, and Seales fielh Foxeare woon the Rockes for their Winter Prouision. Every one both man and woman have each of them bone: to allow a Boate made with long small pieces of Firre-wood, couered with Seales skinnes very well the Mortes a Boate made with long imali pieces or Fire-wood, concred with Seales sainles very with dreft, and fewed fo well with finewes or gues, that no water can pieces them through, beeing which I have fome of them about twentie foot long, and not past two foot, or two foot and an halfe broad, in by me one of forme of a Weavers shittle, and so light, that a man may carrie many of them at once for the sone, weight. In these Boates they will row so swiftly, that it is almost incredible: for no ship in the The great 60 World is able to keepe way with them, although thee haue neuer fo good a gale of wind : and switmeffe of world is a die to keepe way with them, atthough their Boate, and holding their Oare in Their Oares the middle, being broad at each end like our Oares, will at an instant goe backward and forward, broad at both

as they pleafe.

Salmons and Mories, &c. Angles and Lines.

In these Boares they catch the most part of their food, being Seales and Salmons, Morfes, and other kinds of fishes. Some they kill with their Darts, and other some with Angles, having a Line made of small shuers of Whales Finnes, and an Hooke of some fishes bones; with which Line and Hookes, we also have caught very much fish.

Their great Boars 32, foot

Also they have another kinde of Boate, which is very long. For wee have seene one of them thirtie two foot in length, open in the toppe like our Boates; having tenne feates in it. In which when they remoone their Dwellings, they carrie their Goods or House-hold-stuffe: for they remoone their Dwellings very often , as their fishing doth serue, liung in the Summer time, in Tents made of Seales skinnes, and in Winter in Houses some-what in the ground.

Wee could not particularly learne their Rites or Ceremonies : but generally they wor-They worthip fhip the Sunne, as chiefe Authour of their Felicitie. At their first approach vnto vs they vied with their hands to point up to the Sunne, and to firike their hands upon their breffs. crying llyont; as who would lay, I meane no harme: which they will doe very often, and will not come neere you, vacill you doe the like; and then they will come without any feare at all.

Their burials,

They burie their dead in the Out-Ilands neere the Scafide. Their manner of Buriall is this. Vpon the tops of the Hils they gather a company of stones together, and make thereof an hollow Caue or Graue, of the length and breadth of the bodie, which they intend to burie, laying the stones fomewhat close like a wall, that neyther Foxes, nor other such beasts 20 may denoure the bodies, courring them with broad flones, shewing afarre off like a pile of ftones. And neere vnto this Graue where the bodie lyeth, is another, wherein they burie his Bow and Arrowes, with his Darts and all his other Provision, which hee vied while hee was liuing. Hee is buried in all his Apparell : and the coldnelle of the Climate doth keepe the bodie from fmelling and flinking, although it lye about the Ground.

They burne

They eate all their Food raw, and vie no fire to dreffe their Victuals, as farre as wee could perceine. Also wee hane seene them drinke the Salt-water at our shippes side : But whether it bee viuali or no, I cannot tell. Although they dreffe not their meate with fire, yet they vie fire for other things, asto warme them, &c. Divers of our men were of opinion, that they were Man-eaters, and would have devoy- 30

They are not

red vs, if they could have caught vs. But I doe not thinke they would. For if they had bin so minded, they might at one time have caught our Cooke, and two other with him, as they were filling of water at an Iland , a great way from our ship. These three I say were in the ships Boate without eyther Musket, or any other Weapon, when as a great company of the Sauages came rowing vnto them with their Darts , and other Furniture , which they neuer goe without, and flood looking into the Boate for Nayles, orany old Iron, which they so greatly desire, while our men were in such a feare, that they knew not what to doe. At length our Cooke remembred that hee had some old Iron in his pocket, and gaue each of them some, as farreas it would goe, with his Key of his Chest. And presently they all departed without offering any harme aball. But this I speake not, that I would have men to trust 40 them, or to goe among them unprouded of Weapons.

CHAP. XVIII.

A true Relation of Such things as happened in the fourth Vojage for the Discourie of the North-west Passage, performed in the yeare 1615. Written by WILLIAM

Fter three fundry Voyages towards the North-west, to the great charge of the Adventurers : the last being under the command of Captaine Gibbins (in which was little or nothing performed.) Yet the Right Worthipfull Sir Dudley Digges Knight, Mafter Woffenbolme Efquire, Mafter Alderman Imes, with others being not there with discouraged, This yeere 1615 againe fet forth the Discoury, a ship of fiftie file tunnes or thereabouts, which flip had beene the three former Voy-

ages on the action. The Mafter was Robert Bileth, a man well acquainted that way : having beene employed in the three former Voyages : my selfe being his Mate and Affociate, with fourteene others and two Boyes.

The fixteenth, we weighed Anchor at Saint Kasharines, and that tydecame to Blackwall, the 60 winde being at South South-west. The seventeenth, wee went downe to Granefend, and the eighteenth to Lee, where we anchored that night,

Vpon

CHAP.18. Icie fles of Diffolution; the Ile of Resolution.

Voon the fixt of May, we faw Land on the Coast of Greenland, on the East fide of Cape Fare. Granded. well and that night we had a great storme : fo wee kept a Southerly course to get about the Ice Cape Fatemell which lay on that shoare, and then kept our course vntill the seuenteenth day of May, all which which may be sayled by many great Ilands of Ice, some of which were about two hundred foot High Icie torenoone we ray to any five the first proued by one shortly after) which I found to be two hundred and fortie Hadden high about water (as I proued by one shortly after) which I found to be two hundred and fortie Hands. foot high, and if report of some men be true, which affirme, that there is but one seuenth part of the Ice aboue water, then the height of that piece of Ice, which I observed was one hundred and fortie fathomes, or one thouland fixe hundred and eightie foote from the toppe to the bottome : this proportion I know doth hold in much Ice, but whether it doe fo in all, I know not.

This feuenteenth of May, about noone we were come to the firme Ice, as one would suppose. being in the latitude of 61, degrees 26, minutes or thereabout, being the latitude of the Sou h part of the Ile of Refolution: we comming to this Ice, our Marter asked my opinion concerning ile of Refolutions the putting into the Ice. My judgement was it would be best for vs to fland, and ply it vp to the Northwards, Hee answered, we were on the North fide of the South Channell, and much lee we must passe through, and if that we could get some two or three leagues within the Ice, it would every tide open, and we should get some thing onward of our way, having all the Channell to the South-wards of vs. So with this resolution we put within the Ice, the wind being at East North-east: this first entrance I liked not very well, scarce finding any place to put in our ships head, and being necrethirtie leagues from the shoare, towards Euening wee were fastamone the

20 the Ice. But fometimes each day the Ice would a little open, we making what way we could towards the North-west in for the shoare till the two and twentieth day, having had the wind all Southerly. Yet we plainly faw that we fet to the Southwards, for all that wee could doe.

The two and twentieth day, the wind came vp at North North-west : then our Master determined to stand forth againe. For if the wind should have come to the North-east, it would be vnpoffible for vs to fetch any part of the Channell, feeing wee droug fo fast to the Southwards. with Southerly winds, and having fo farre into the shoare, not having seene the Land.

Our Mafter was also determined to spend some twentie, or soure and twentie dayes in Frea tum Danis, to fee what hopes would be that wayes, supposing there would be little good to be 30 done in Hudfons Streights for this time limited : then we plying to get to Sea-ward, and so by eight a clock at night, the three and twentieth day, we were cleere of the thick Ice : againe. the Lord make vs thankfull, the wind at North-west and by North faire weather : but no sooner were we forth of the Ice, but that our Master changed his opinion: and beeing cleere of this thicke Ice wee stood to the Northward as much as the Ice and winde would give ve leave, running some thirteene leagues true North-east by North, being in the latitude of 61. degrees 50. minutes. The foure and twentieth day faire weather : the fine and twentieth day, also faire weather ther, the wind at North and by West, till fixe a clocke, we having made a North-east by North way about twelue leagues and an halfe, our latitude at noone 62. degrees 20, minutes, at fixe 2 clocke the wind was at the North North-east. The fixe and twentieth day, all the forenoone

40 faire weather and cold: but in the afternoone it blew very hard, being close hasie weather, that about two a clocke this afternoone wee tooke in our failes and hulled with our ship till the next morning at foure a clocke, all the time that we fayled this day we past through many ledges of Ice having great quantitie to the Northward of vs, and having runne about twentie one leagues true vpon a West course. And note where I put this word true, I meane the true course, the variation of the Compaffe, and other accidents allowed.

The fenen and twentieth day close foggy weather with much fnow freezing on our shrowds and tackling : the like we had not all this yeare before: but towards foure a clocke in the afternoone it began to cleere vp, and about five a clocke we faw Land, being the Hand of Refolution, and bearing West from vs about thirteene or sourteene leagues. This morning we set sayle, and slood so to and fro as the Ice would fuffer vs, and at ten at night, wee moored our ship to a piece of Ice, the wind being at West.

The eight and twenrieth day being Whitfunday, it was faire weather. but the winde was at the West, and West by North: al this day we were fast to the piece of Ice. Yet we plainly perceiued that we fet a great deale more into the Streights with the floud. Then we fet forth with the ebbe the nine and twentieth day, the wind was variable, and faire weather: about eleuen a clock we fet faile and tacked to and fro along by the Hand. And about two a clocke the next morning, the wind came to the South South-east, but we had so much Ice that we could doe but little good with a faire wind, the wind continued all this day and night a stiffe gale : this night (or No night tather Euening, because it was not darke at all) we were set within the point of the lland : fo

6c that now we were within the Streights. The one & thirtieth day also faire weather, the wind for the most part at North North-west. the afternoone being cleere wee faw the point of the South shoare, called Buttons Iles, to beare from vs due South by the Compaffe, which is indeed South South-east, somewhat Eastward, be- Variation 14 cause here the Compasse is varied to the Westwards twentie soure degrees.

degrees

Dogges,

Situation.

The first of Iune, wee had some snow in the forenoone, but very faire weather in the afternoone, the wind at West North-west. We perceiving the Ice to be more open close abourd the floare, made the best way we could to get in, and to come to Anchor, if the place were connenient; and by feuen a clocke we were in a good Harbour, on the North-west side of the Hand of Resolution, where an East South-east Moone maketh full Sea, or halfe an houre past seuen on the change day, as Sea-men account the water doth rife and fall, neere foure fathomes; the Compaffe doth vary to the West 24. degrees 6. minutes, and is in longitude West from London 66. degrees 24. minutes. The breadth of the South Channell, or the diffance betweene the Hand and the South shoare, is fixteene leagues, and the North Channell is eight miles wide in the

Vpon this Hand we went on shopee, but found no certaine figne of Inhabitants, but the track of Beares and Foxes, Rockes and stonie ground, hardly any thing growing thereon: it is indifferent high Land to the Northward, haung one high Hill or Hummocke on the North-east fide.

but to the Southward it falleth away very low. The second of Iune in the morning the wind came vp at East South-east, with much snow and fowle weather ; about noone wee weighed Anchor, and flood vp along by the Iland, so well as the Ice would give vs leave to get to the North shoare. Wee continuing our courses so neere the North shoare, as conveniently we could, with much variable weather and windes, but stedfait in continuance among Ice, till the eight day, having the wind full contrary to vs, and being formewhat neere a point of Land, or rather a company of Ilands, which after wee called Sauge 20

Iler, haung a great Sound or In-draught, betweene the North shoare and them. At sixe a clocke we came to Anchor neere one of them, being the Eastermost fauing one: But whiles weewere furling our failes, we heard and faw a great company of Dogges running vp and downe, with fuch howling and barking, that it feemed very ftrange. Shortly after we had moored our ship, we fent our Boat somewhat neerer the shoare, to see if they could perceine any people; who returning, told vs that there were Tents and Boats, or Canowes, with a great many Dogges, but people they faw none. After Prayer, when our men had fupt, wee fitted our Boate and our felues with things convenient : then my felfe with feuen others landed, and went to their Tents. where finding no people, we marched up to the top of a Hill (being about a flight shot off) where we faw one great Canow or Boat, which had about fourteene men in it, being on the furthest, 30

with 14. men. or North-west point of the Iland, and from vs somewhat more then a Musket shot. Then Icalled vnto them, ving some words of Groenlandih speech, making signes of friendship. They did the like to vs; but feeing them so fearefull of vs, and we not willing to trust them, I made another figne to them, flewing them a Knife and other Trifles, which I left on the top of the Hill. and returned downe to their Tents againe. There wee found some Whale Finnes to the number of fortie or fiftie, with a few Seale skinnes which I tooke aboord, leaving Kniues, Beades, Bagge of Ima and Counters instead thereof; and amongst their houses I found a little bagge, in which was a company of little Images of men; one the Image of a woman with a child at her backe, all the which I brought away.

Among these Tents being fine in number, all coursed with Seales skinnes, were running vp 40 Their Dogges described. and downe, about thirtie fine or fortie Dogges; most of them muzled. They were of our mungrell Mastiffes, being of abrinded blacke colour, looking almost like Wolues. These Dogges they vie in stead of Horses, or rather as the Lappinus doe their Decre, to draw their sleds from place to place over the Ice: their sleds are shed or lined with great bones of fishes to keepe them from wearing, and their Dogges have Collars and Furniture very fitting.

These people haue their Apparell, Boots, Tents, and other necessaries much like to the Inba-The people bitants in Groineland, fauing that they are not so neate and artificiall, seeming to bee more rude and vacuuill, ranging up and downe as their fishing is in season. For in most places where wee came ashoare, we saw where people had beene, although not this yeere; but where their I hotation or their abode in Winter is, I cannot well conjecture.

This Hand lyeth in the latitude of 62. degrees 30, minutes, and in longitude West from Long. don, 72. degrees or neere thereabouts, being fixtie leagues from the entrance of the Streights: here the Compasse doth varie 27. degrees 30. minutes , and a South-east Moone foure degrees East maketh a full Sea : it doth ebbe and flow almost as much water, as it doth at the Resolution. and here the floud commeth from the Eastward, although our Master was of opinion to the

The tenth day in the morning, at fixe a clocke we fet fayle, the winde at North, which continued not, but was very variable till noone, and then it came to North-west, we having sayled along by the shoare, about some nine leagues and an halfe North North-west, the Icelving to thicke in the offen, that wee could not well get out of it: then perceiuing a good Harbour betweene two small Ilands and the Mayne, wee went in with our ship, where wee moored her, 60 and flayed till the twelfth day at Evening.

In this place it is high water on the change day, at nine of the clocke, or a South-east Moone maketh a full Sea : the latitude of this place is 62 degrees 40 minutes; and the floud doth come

from the Eastward, although our Master was perswaded otherwise, as well in this place, as as Salusse Hands: for being among Hands, every point hath his fenerall fet and eddie. But I going to therop of the Hand, plainely perceived the Ice to come from the South-east, and from the North-west on the cibe. In this place is no figne of people, as we could perceive.

The fixteenth day, lying fill in the Ice, the weather being very close and hafey, as it hath heene these fix dayes : and being neere a great company of Ilands, in the atternoone, the winde being at Welt North-west, wee stood in amongst these Hands, and in the evening we moated our Shippe to one of them in a small coue, the better to defend her from the Ice. In this place wee flayed all the feuenteenth day; and upon the eighteenth, being Sunday, about eleuen a clocke naye art the characteristic alme, making the best way wee could to get forth. Here are a great Many Hands company of thands, each hath his fruerall sexand eddy, that the Ice doth so runne to and fro, and and sugrall

with fuch violence, that our Shippe was in more fafetie further off then in this place: the lati- tyde Strs. tude of the He we rode by is 63, degrees 26. minutes, and longitude Well from London, neere 72. degrees 25. minutes: the Compaile hath variation 27. degrees 46. minutes; and at a quarter of an houre after nine on the Change day, doth make a full Sea. This Euening, and the next morning, wee had a faire freering gale of winde at South-east, wee standing along by the Land, it beeing all imali broken llands; to a point of Land about twelue leagues in diftance from the lle wee put laft from : which Point, I called Broken Point, it being indeede Brain Point. a point of broken Iles.

On the nineteenth day, by twelve a clocke at noone, wee were about foure miles from the Point before named, fait inclosed with Ice, very faire weather; and well we might have called this Point Fairenesse or Faire Point, for from this day till the thirtieth day, the weather was fo faire, and almost, or altogether calme, that in few places elsewhere, finer weather could not be : and till the feuen and twentieth at night, wee were fo fast inclosed vp with Ice, that at some times one could not well dippe a paile of water by the Ship fides : while wee were thus fast in the Ice, you the one and twentieth day, I faw both the Sunne and Moone at one time, as indeede it is vivall in faire weather.

This one and twentieth, being faire weather, as afore is faid, and I feeing both the Sunne and Observations Moone fo faire : I thought it a fit time to make an observation for the longitude.

30 But the two and twentieth day being very faire and clease, and alfo calme, being almost as fleedy as on shoare : it was no neede to bid me fit my Instrument of variation to take the time of the Moones consuming to the Meridian, having also my quadrant ready to take the Sunnes almi-canter, it being indifferent large, as of foure foote femideamiter: have taken the variation of my needle as precifely as positible I could, which was 28 degrees 20 minutes West, and if any be defirous to worke the fame, they may, but my worke was as followeth.

The Sunnes almicanter, at the inftant when the Moone was on the Meridian, was 26. degrees 40, minutestand the Sunnes declination for thattime 23 degrees 6, minutes, By which three things given, I found the houre to be five a clocke 4 minutes 72 feconds, I third 4. fourths, or 76. degrees, 13, minutes, 16. seconds, of the equinoctiall afternoone : and according to Seales Ephe-40 merides, the Moone came to the Meridian at London at fourea clocke 54 minutes, 30. feconds: and after Origanue the Moone came to the Meridian at foure a clocke 52. minutes, 5. feconds, at Wittenberge the same day. Now having this knowne, it is no hard matter to finde the longitude of this place fought. For according to the Moones meane motion, which is 12.degrees a day, that

is in time 48.minutes; and to this account, if the be on the Meridian at twelue a clock this day, to morrow it will be 48.min.past 12.So I having the time found by observation at this place, viz. 5.

houres, 4. minutes, 52. feconds, 1. third 4. fourths : but in this I neede not come fo precife: and at

Landon, at 4 houres , 54 minutes, 30 feconds : which substracted from the former, leaueth 10. mi-

nutes, 22. feconds, 1. third, 4. fourths, now the Moones motion thae foure and twentie houres, was 22.degrees, 38.minutes : which converted into time, is 50. minutes 25. feconds 20. thirds : then the proportion flandeth thus; If 50.minutes, 25.feconds, 20. thirds, give 360. degrees, what 50 shall 10. minutes, 22. seconds, 1. third, 4. fourths give? the fourth proportionall, will be 74. degrees 5. minutes, which is West of Landon; because the Moone came later by 10 minutes, 22 feconds, and by the fame working by Origanus Ephemerides, the diffrance is 91 degrees, 35 minutes, West of Well. But whether be the truer, I leave to others to judge : in these workings may some errour be committed, if it be not carefully looked vnto : as in the observation, and also in finding what time the Moone commeth to the Meridian, at the place where the Ephemerides is supputated for, and perchance in the Ephemerides themselves: in all which, the best judicious may erre: yet if observations of this kinde, or some other, at places farre remote, as at the Cape Bo-

nasperanze, Bantam, Japan, Nona Albion, and Magellan Straits, I suppose wee should have a truer 60 Geography then we have. And feeing I am entred to speake of celetiall observations, I will note another which I made the twenty fixt of April, being outward bound at Sea, by the Moones comming in a right line, with two fixed Starres; the one was the Lyons bears, a Starre of the first magnitude; the other a Stane in the Lyons rumpe, of the second magnitude, as followeth : The circumference or outward edge of the Moone, being in a right or ftraight line, with those

two Starres before named : at the instant I tooke the altitude of the South ballance, which was 2. degrees 38.minutes, because I would have the time : but in this it is good to waite a fit time. as to have her in a right line, with two Stars not farre diffant, and those not to be much different in longitude, because the Moon will soone alter the angle or position, and such a time would be taken when the Moone is in the nintieth degree of the eclipticke about the horizon, for then there no paralell of longitude, but onely in latitude ; but who to is painefull in these businesses, shall foone fee what is needefull, and what is not : my observations were as followeth:

Righ: affention 46.deg.22.min.30.dec. To Right affention 46.deg.22.min.co.de.

Declination -- 13.deg.57, migadec. Declination -- 22.deg.32.min.co.de.

Lynu beart Longitude -- 24.deg.29, mig.4fec. Longitude -- 24.deg.32.min.go.de.

Lattude --- 00.deg.26.min.30.fec. Lattude --- 14.deg.32.min.co.dec.

Almiemer -- 33.deg.40.min.co.de.

Paralax — co.deg. 47.mm.46.fec. Moones Latitude — 03.deg. 20. min.00.fec. North. Almicanter - 37, deg. 00. min. co.fec. Latitude of the place - 56.deg.43.min.

These notes I have set downe, that if any other be desirous to trie, they may spenda little time therein; my felfe haue spent some therein, and more I would have spent, it leisure would have permitted : but finding it not to my minde, I have not here fet downe my particular worke: Mafter Rudflon, the working of this observation I received from Mafter Rudflon.

But if it had pleased God, we had performed the action we were bound for, I would not feare but to have brought fo good contentment to the Adventurers, concerning the true fcituation of notable places, that small doubt should have beene thereof: but feeing so small hopes are in this place. I have not fet downe fo many observations as otherwise I would

We lying here inclosed with the Ice with faire &calme weather (as before is faid) till the seuen and twentieth day at evening, at which time we fet fayle; the winde at South-east, an easie gales all the eight and twentieth and nine and twentieth dayes, we made the best way through the Ice we could; but the nine and twentieth day, the Ice was more open then it had beene these ten dayes before, and at noone we saus bury lland, it bearing due West from vs.

The first of July close foggie weather, with much raine, the winde at South South-east : by 30 noone this day we were some three leagues from the Land: but having much Ice by the thoare, we flood along the Hand to the Northward : and the next morning wee were faire by another small Ile, or rather a company of small Hands, which after we called Mill Hand, by reason of erinding the Ice, as this night we made proofe thereof: at noone, being close to this Ile, wee took the latitude thereof, which is neere 64 degrees. Here driving to and fro with the Ice all this day, till feuen or eight a clocke, at what time the Ice began to open and feperate; The Ice, as is faid, beginning to open : we had not flood along by the Ile, on the East fide thereof, an houre; but the Ice came driving with the tide of floud from the South-east, with such swiftnesse, that it ouer went our Shippe having all our fayles abroad with a reasonable gale of winde, and put her out of the streame, into the eduy of these Hes.

This Iland or Iles, lying in the middle of the channell, having many founds running through them, with many points or headlands, encountering the force of the tide, caused such a rebound of water & Ice (which can one way, and the streame another) our ship having met the Ice with the first of the floud, which put her so neere the shoare, that she was in the partition betweene the Ice, which the eddy caused to runne one way, and the streame the other, where shee endured great distresse; but God, which is still stronger then either Ice or streame, preserved vs and our Shippe from any harme at all. This continued till towards a high water, which was about one a clocke; then with no small trouble we got into the channell, and stood away to the Northwest ward. After we had past some distance from this Iland, wee had the Sea more open then it was fince we put first into the Straits; and failed all the next day through an indifferent cleare 50 Sea, with the winde at South-west: but towards eight a clocke at night, wee were come againe into much Ice; this Ice being more thicker and bigger then any wee had beene among: this place where we began to be inclosed againe, is fixe and twenty leagues distant from the fmall Iland we were at last : and our true course North-west by West : after wee were fast in the Ice, we made but fmall way, yet we perceived a great tyde to fet to and fro. The next day, wee founded, and had ground at one hundred & twentie fathoms, fofe Ofey ground: flanding more Northerly: the next morning we had ground at eightie fathoms, then the winde came to the North, and we letting lomewhat Southward, had ground at a hundred and ten fathoms. Thus feeing this great abundance of Ice in this place, and the more we got to the North-west ward, the shoulder it was, the Ice also being foule and durtie, as not bred farre from shoare: our Master determined to 60 stand to the Eastward, to be certainely informed of the tide.

The fixt day in the morning, we brake in a planke and two timbers in our Ships bow, which after we had mended, we proceeded for to get to the East fide, which we called the North shoare, because it is the Land stretching from the Resolution, on the North fide of the S. raits.

The fewenth day we faw the land, it being but low land, and the Sea is should, in respect of other places, having ten or twelve fathorn about a league off from shoare, some thirty fathoms five or fix leagues off thore, but further off tome twenty or eighteene leagues, there is a hundred or a hundred and fine factioms; having very good channell ground, as small flower & shells, some twelve or foureteene leagues from shoare, but the further off the more Ofey: and also here is a very great tide runnerh to the Northward, which this evening we found to be the tyde of ebbe, for comming with our Shippe neere the shoare, about seuen a clocke, we hoysed out our Boate, then I with fine other went on floare, and found it to ebbe : we flaied on floare about an houre and a halfer in which time the water fell about three foote and a halte, and a South-fouth East Moone ma-10 ketha full Sea, or halfe an houre past tenne, as Sea men account : we faw no igne of people to be here this yeare, but in yeares heretofore they have beene, as we might well fee by divers places where their tents had itood and perchance their time of fifting was not yet come, therebeing fuch great abundance of Ice as yet. Engrea administration and a year.

The eight day the winde was at West, and the ninth almost calme: wee recking necreto this

floare the tenth day, our Mafter determined to fland for Notting and lland to make trial of Notting came the tide there; yet the winde was at South-welt, so that we were forced to turae, but towards liand. night it came to the North North-weft, to that then we flood away to the Weft wards, leaning the fearch of Notting game Ile, having a great fwelling Sea, come out of the West with the winder which had blowne, which put ws in some hope: the eleuenth day in the morning, we saw Land 20 West from vs, but had no ground at one hundred & thirty fathoms to standing along by the Land which here lay about North-west by North, the next morne we were thwart of a Bay : then flanding over to the Northwards towards a faire Cape or head land which we law, in the afternone it was almost calme, and being about a league from shoare, we hoysed out our Boat, and sent fome of our men in her, to fee what tide it was by the shoare, and from whence it came; they went from the Ship at five a clock, and came aboord againe at eight, who brought vs word, that it was falling water, and that it had eb'd while they were on shoare somewhat aboue two foot: also they affirmed, that the flood came from the Northward in this place, the which we also perceiued by the fetting of our Ship, the fetting a pace to the Northward, although no whit of winder allowe might feeby the rocks, that the water was nowfalne: this put vs in great comfort and

30 hope of a pallage in this place. Then our Matter called this Cape or head land, Cape Comfort, for the reasons beforesaid; also Cape Comfort. we had one hun ired and fortie fathoms in depth, not a league from the shoare: and here a South by East Moone maketh a full Sea: the latitude of this Cape is 65 degrees 00. min, and 84 degrees 20. minutes Welt from London. But this our fudaine comfort was as foone quailed, for the next day having doubled the Cape, and proceeded not past ten or twelve leagues, but we saw the land trending from the Cape to the Weltward, till it bare from vs North-eaft by East, and very thicke peftered with Ice, and the further we proceeded, the more Ice, and the more Northerly, the flouider water and finall hew of any tide. At fix a clocke this afternoone, we founded, & had ground in o :e hundred and thirty fathoms, foft Ofey, having had at noone one hundred & fiftie fathoms.

This was the fartheft of our Voyage, being in the latitude of 65, degrees 26 minutes, and longitude West from London 86 degrees 10 minutes: for seeing the land North-east by East, from va about nine or ten leagues off, and the Ice fo thicke : our Mafter was fully perswaded, that this was nought elfebut a Bay, and so tacked and turned the Shippes head homewards, without any far-

The fourteenth day, the winde was for the most part at South-east, that we could make but fmall way backe againe: and the next morning very foule weather, we comming to an Anchor in a small Inlet, neere the Cape Comfort, on the North-west fide thereof; here wee found, as on the other fide, a South by East Moone, to make a full Sea; but from whence the floud came, we could not well ice, it being to foule weather at Sea : in the afternoone the winde came to North 50 by West then we waied, and stood along to the Southwards by the shoare, with a shifte gale of

winde, and very hafey. By the fixteenth day at noone we met with a great quantitie of Ice,lying some few leagues within the point of the Land: among this Ice we saw a great number of Sea Morfe, not teeing any more in all the Straits but here, and these very fearefull, not suffering a Ship or Boat to come neere them: by eight a clock we were come to this Southern point, which Sea Harle raises I called Sea Horsepoint, where we came to anchor open in the Sea, the better to try the tide ! here most apparently we found to all our companies fight, that in this place the tide of floud doth come from the South-east, and the ebbe from the Northwest. We weighed, and stood over with a stiffe gale of winde, which continued all this day, and toward night very foule weather & a fore florme: by tenn: a clocke we were come to Anchor on the North-weit fide of Nottinghams Ile, 60 where are two or three smal Iles, lyeth off from the greater, which make very good Sounds &Harbors: about this lie we had store of Ice, but nothing as we had heretofore in other places. We staied about this Hand il the feuen and twentieth day, having much foule weather, many stormes, often fogs, and vncertaine windes, many times we weighed anchor to goe to that fide of the Ile, where

this Ship road when Captaine Button was in her; finding in other places of this Ile the tyde of

842

Swan Iland.

Dieges lie.

floud to come from the South-east ward, and the time of high water on the change day, to be an halfe an houre past ten, and not at halfe an houre past seuen, as they supposed. In these ten dayes we staied about this lle, we fitted our Ship with ballast, and other necessaries, as we had neede of

Then proceeded as followeth the fixe and twentieth day, being indifferent faire weather, we paffed betweene Salisburies Ile and Notting bams Ile at the South Point thereof I meane of Notting bass Ile, where are many small low Iles, without the which had beenea fit place for vs to have anchored to have found out the true let of the Tyde. But our Mafter being defirous to come to the same place where they had rode before, stood along by this lle to the Westward, and came to an anchor in the eddy of these broken grounds, where the ship rode at no certaintie of Tyde.

The feuen and twentieth, the next morning the weather proued very foule with much raine and winde, to that our Reger anchor would not hold the ship at eightie fathoms scope, but was driven into deepe water , that wee were forced to fet faile, the winde being at East, and then come to the East North-east and about noone at North-east, still foule weather, being vnder faile, westood away towards Sea borse Point : our Master (as I suppose) was perswaded that there might bee some passage betweene that Point of Land and that Land which they called Swan Hand: to this afternoone we faw both Sea borfe Point and Noting bans Hand, the diffance betweene them is not past fifteene or fixteen leagues, bearing the one from the other North-west

The eight and twentieth day in the morning, wee were neers to Sea borfe Point, the Land trending away West South-west so farre as wee saw, and very much pessed with Ice. At seuen 20 a clocke our Master caused ws to tacke about, and stood away South-east and by South

The nine and twentieth the next day at eleuen a clocke, we came to anchor at Digges Ile, hauing very foule weather. At this place where we rode it lyeth open to the West, having two of the greatest lies, breake off the force of the Flood, till the Tyde be well bent; for after the water were rifen an houre and a halfe by the shoare, then would the ship ride truly on the Tyde of Flood all the Tyde after. Now the time of high water on the change day, is halfe an houre post ten or neere thereabout.

The thirtieth day, being faire weather, wee weighed and flood along close by Digger Ile, where we prefently perceived the Salunger to bee close on the top of the Rocks: but when they faw we had efpyed them, divers of them came running downe to the water fide, calling to vsto 30 come to anchor, which we would have done if conveniently we could. But in this place the water is so deepe, that it is hard to finde a place to rise in, which we seeing lay to and fro with our ship, while some of our men in the Boat killed about some sevents fowles, for in this place is the greatest number of fowles (whom we call Willacks) that in few places else the like are not seene, for if neede were we might have killed many thousands, almost incredible to those which have not feene it, Here also as we lay to and fro with our ship, wee had sufficient proofe of the set of the Tyde: but when our men were come aboord againe, we fet all our failes for homewards, making the best expedition we could; but on the third of August, were were forced to come to are chor about thirtie leagues within the Refolution Ile on the North shoare. The next day wee weighed anchor: And the fifth day in the forenance, we past by the Refolution Iland, but saw it 40 not: Thus continuing our courses (as in the briste lournall may be seene) with much contraine windes and foule weather.

Wee had fight of Cape Cleere in Ireland the fixt of September: the next morning by day light, we were faire by Seely, and that night at two a clocke the next morne, we came to anchor in Plymonth Sound with all our men linng, having onely three or foure ficke, which foone

The next years being agains employed in discourie, amongst other infrustions they received this. For your course you must make all possible halfs to the Cape Detolation, and from thence, you William Bassin as Plats, keeps along the Confl of Gronaland and ye Frection Davis, writing you come toward the 50 beight of eightst degrees, if the Land will give you leave. Then for four of monthlying, by keeping too Reproduce the course of the plats of the course of the plats of the course of the lating of fixth degrees; then divertly your course to the lating of fixth degrees; then divertly your course to the lating of the course of t you come to the latitude of facts aggress then arets from course to fai with the Land of Yesten about that height, faising your farmer of following the time of the years and winder will give you leave, although our defiret in, if your voyage prove for professor that you may beaus the years before you, that you goe force Southersty as then you may teach the North part of Ispan, from whose or from Yesten, if you can permyle is without adaps, we would have you to force before or from Yesten, if you can permyle is without adaps, we would have you to from home one of the men of the Country, and fo God bidfing you with all expedition to make your returns

60

CHAP.

CHAP. XIX.

To the Right Worshipfull Master Io HN Wostenholme Esquire, one of the chiefe Aduenturers for the discouerie of a passage to the North-west.

Orthy Sir; there neede no filling a Iournall or Short Discourse with preamble, complement, or circumflance, and therefore I will onely tell you, I am proud of any Remembrance, when I expose your Worth to my Conceit, and glad of any good fortune when I can avoid the imputation of ingratitude, by acknowledging your many funours: and (ceing it is not unknowne (to your Worship) in what estate the businesse concerning the North-west bath beene heretofore, and how the onely hope was in searching of Fretum Dathis, which if your felfe bad not beene the more forward, the action had well nigh beene left off : Now it remaineth

for your Worthing to know, what hath beene performed this yeere: wherefore I entreat you to admit of my Juryour er which to come, when we have be plaine bighway in relating the particulars, without which any refined phrases and eloquent speeches. Therefore briefly, and as it were in the forefront, I intend to shew you the whole proceeding of the vor-

therefore oriesy, and many there is no pallage, or boyed poligies in the North of Davis Streets, we age in a word: as namely, there is no pallage, no boyed poligies in the North of Davis Streets, we have age in a word is at one and if the Cocumplerence thereof, and finds it to be no other then a great Bay, as busing coaffed all or never all the Cocumplerence thereof, and finds it to be no other then a great Bay, as the Map here placed dath truly | hem: wherefore I cannot but much admire the works of the Almoghtic, Homiocuer the when I confider how vaine the heft and chiefest hopes of man are in things uncertains. And to speake of no passage this when I consider now wante we can amount of the North-meft; How many of the hess front of men hane set wy maxem other matter, then of the hopefull passing et at wayes, and not such in Conference, but asso in Writing and their whole undersort to prome apolloge that wayes, and not such in Conference, but as so in Writing and count disc. theer whose macrows to prome a justice com myst, some to energy or conjecture, and any or returns and former directions, and the world, year what great some or some parties some some that altern a year section of its world point early experience off. Neither would the vaine glorious Spaniard base scattered abroad so The Return world the vaine glorious Spaniard base scattered abroad so The Return resulting unan Many and Iournals, if they had not beene confident of a passage this way, that if a bad pleased (then by him many fulse Maps and Iournals, if they had not beene confident of a passage this way, that if a bad pleased (then by him many fulfe Maps and lowrals, if they had not neven complaint of a psyling visit way, treat if who presign which they may be used to clearly a partie of the Amentarers and tree when they may be used to clearly the way princip either Amentarers and tree when the contractive, and for my owne part, I would hardly have believed the contract, until mine eyes became into its limit is both with the contractive, and for my owne part, I would hardly have believed the contractive, until mine eyes became into its low to the contractive, and for my owne part, I would hardly have believed the contractive, until mine eyes the came. Discovered to the state of the time as we had almost coasted the Circumference of this great Eag. Neither was Master Davis to be and to the most hlamed in his report and great hopes, if he had anchored about Hope Sanderion, to have taken notice of indicious more blamed in his report and great hopes, if he had anthored about Hope Sainterion, to make taken notice of the aprobable; the Tydes: for to that place which is in 72. degrees 12. minutes the Sea is open of months and that by and that by and of a good colour, onely the Tydes keepe no certaine course, nor rife but a small height, as eight or nine that Tydes are ana of a good country, and the flood comments from the Southward, and in all the Bay beyond that place the Tyde is so small, gument from and not much to be tegarded, set by reason of som melting on the Land, the Ebbe is stronger then the the West, asia and not much to be treated, set by reason of some melting as the tama, the three is promper to entre the winds to lading Northely, the ferre, part file years, the great less of Multi Sing. Flood, by meaner whereof, and the winds to lading Northely, the ferre, part file years, the great less of Multi Sing. Mich Sing and the great to the Southward, some in Fretum Hudson, and others toward New Yound Land, for in nonespectation.

40 all the Channel where the Sea is open are great quartities of them driving up and downe, and till this reth. yeere not well knowne where they were bred. peere not well goomne mover tony were vreu.
Now that the worst is knowne (concerning the passions) it is necessarile and requisite, your Worship Bound understand what probabilitie or hope of profit might here he made hereaster, if the voyage hee at-tempted by sitting men. And sirst for the killing of sirbales, certaine it is that in this Bay are great numbers of them, which the Bilcainers call the Grand Baye Whales, of the same kinde which are killed as Greenland, and as it feemeth to me easie to be strooke, because they are not vsed to bee chased or beaten for we being but one day in Whale Sound (fo called for the number of Whales that wee faw there) Store of Grand Recping and lying aloft on the water, not fearing our frip or onght elfe ; that if wee had beene fitted with Ben Whales. men and things necessarie, it had beene no hard matter to have strooke more then would have made three men and toting rescapate, in the second water we can immerst to some privace more toom would name made three fine and that it is of that fore of brilled the second to some forest I being the differential, Beffix which as 50 rocke fulfilleries notice to know them agains; befide a dead Whale wee found at Sea, having all her finnes Greenland.

(or rather all the rough of her mouth) of which with much labour, we got one bundred and fixtie the same enening we found her; and if that foule weather, and a storme the next day had not followed, wee had no doubt, but to haus had all or the most part of them, but the winde and Sea arising shee broke from vs , and we were forced to leave her. Neither are they onely to be looked for in Whale Sound, but also in Sir Tho. Smiths Sound, Wostenholme Sound, and diners other places.

For the killing of Sea Morse, I can give no certaintie, but onely this , that our Boat being but once ahoure in all the North part of this Bay, which was in the entrance of Alderman Iones Sound, at the returne, our men told us, ther fam many Morfes along by the shoare on the lee; but our ship being under The hones is alias, and the winde comming faire, they present the same abourd mithout further search, besides the people shillkeps in the 60 inhabiting about 74. degrees, told vs by diners signes, that toward the North were many of those beasts, Robes at Wind-

baning two long teeth, and showed us diners pieces of the same. As for the Sea Unicorne, it being a great filb, having a long borne or bone, growing forth of his fore-head or nofirtil (fuch as Sir Martin Frobilher in his fecond voyage found one) in dusers places we faw of footlong and them, which if the horne be of any good value, no doubt but many of them may be killed.

creffed. &cf

And concerning what the Shoare will yeeld, as Beach finnes, Morfe teeth, and such like, I can little

fat, because we came not on so one in any of the places where beginning of spining shows.

But here some may obtect and aske, why we sought that so at the obster: is that I assume, that while
were the threshold, the weather was severed with solution, the weather was severed the sound to the missing the was called the the control of the weather than the severe the sound to the missing the was called the severe the sound to the missing the was called to the severe the sound to the missing the was called to the severe the severe the severe that the severe the severe the severe the severe that the severe the severe the severe that the severe the holme Sound, were prefently our flip drone with two anchors a head, then were we forced to fland forth with a low faile. The next day in Whale Sound, we lost an Anchor and Cable, and could fetch the place no more: then we came to anchor neere a small lland, lying between Sir Tho. Smiths Sound, and Whale no more to come to come to account and the come of the west of the come of the few men (as seventeene in all) and some of them very weake; but the chiese cause wee spent so little time 10 to sceke a Harbour, was our great desire to performe the Disconcrie, having the Sea open in all that part. and fill likelihood of a passage: but when we had consted the Land so farre to the Southward, that hope of passage was none, then the secre was too farre frent, and many of our men very weake, and withall me basung some beliefe that ships the next yeare would be sent for the killing of Whales, which might better doe

n town wee.

And feeing I baue briefly fet downe, what hope there is of making a profitable voyage, it is not vnfit
your Worship bould know what let or hinderance might be to the fame. The chiefest and greatest cause is, that some yeere it may happen by reason of the Ice, tying betweene 72. degrees and a balfe, and 76. degrees no minutes, that the |bips cannot come into those places, till toward the middest of July, so that want of time to stay in the Country may bee some let: yet they may well tarry till the last of August, in which face much businesse may be done, and good store of Oile made: neueribelesse if store of Whales come in (as no searce to the contrarie) what cannot bee made in Oile may bee brought bome in Blubber, and the Finnes will arife to good profit. Another hinderance may bee, because the bottome of the Sounds will not be so some cleere as would be wished, by meanes thereof now and then a Whale may be loss the same case sometime chanceth in Greenland) yet I am perswaded those Sounds before named, will all be cleere before the twentieth of Iuly: for we this yeere were in Whale Sound the fourth day among many Whales, and might have strooke them without let of Ice. Furthermore, there is little wood to bee expected, either for fire or other necessaries, therefore Coles and other such things must bee provided at home, they will bee so much the readier there.

Thus much I thought good to certifie year Worship, wherein I trust you will conceine, that much time 20 hath not beene frent in vaine, or the businesse over carelesty neglected, and although wee have not perforand mis overly first the delice, in the unjustice were uniquity projection, and interpose are come an perjor-med what we diffred (that is, to have found the pallage) yet what was promifed as to bring certaintie and a true difference intribuil make manifest, that I have not much orred. And I done shell figs (without booking) that more good discourse both not in scort rime (to my

varies on a sure eventy jet [mittems voajing] that more good discoverie bath not in storter time (to my remember once) beem done, force the allies was attempted, considering how much lee who have piled, and the discount of the discount of the left of the attempted in all other winters of the Compiled Variation of the store of the considerable degrees, a thing almost incredible and matchlesse in all the world beside, so that without great care, and good observations, a true description could not base beene bad. In fine, what seven my labours are or shall be, I est come them too listle, to express my thankefull minde for your many savours, wherein I shall be e-40 ner studions, to supply my other wants by my best endenours, and ener rest at

Your Worships command.

WILLIAM BAFFIN.

A briefe and true Relation or Journall, contagning such accidents as happened in the fift voyage, for the discouerie of a passage to the North-west, set forth at the charges of the right Worshipfull Sir Tho. Smith Knight, Sir Dudly Digges Knight, Master Iohn Wostenholme Esquire, Master Alderman Iones, with others, in the good ship called the Discouerie of London; Robert Bileth Malter, and my Selfe Pilot, performed in the yeere of our Lord 1616.

TN the Name of God, Amen. The forenamed thip being in full readinesse upon the twentie lixe of March, we fet faile at Granefend, being in number leventeene persons, having very faire 62 weather, which continued till the second of April: by that time we were off Portland, then the winde comming Westward with soule weather, we kept Sea till the fourth day, then being not able to fetch Plimonth, bore roome for Dartmouth , where wee flayed eleuen dayes , in which time was much foule weather and westerly windes.

The fifteenth day of Aprill, being cleere of Darmouth, we were forced the next day to put into Plimenth. The ninetcenth day we fet faile from thence, and the twentieth in the morning we nail betweene the Lands end and Silly with a faire winde. Continuing our course, as in the briefe Table or Journall is let downe, with enery particular from noone to noone, that here I need not make a tedious repetition, nothing worthy of note happing, but that we had a good paffage, and the first Land we saw was in Freum Danie, on the coast of Groinland in the latitude of 65. Grainland degrees 20. minutes. On the fourteenth of May in the forenoone, then fixe of the people being a filhing came to vs, to whom we gate small pieces of Iron, they keeping vs companie being very iovfull, supposing wee had intended to come to anchor: but when they saw vs stand off from

to shoare they followed vs a while, and then went away discontented, to our feeming. We profecuting our Voyage, were loth to come to anchor as yet, although the winde was contrarie, but fail plyed to the Northward, vntill we came into 70. degrees 20. minutes: then wee came to anchor in a faire Sound (neere the place Mafter Danis called London Coaft.) The twentieth of May at evening, the people espying vs fled away in their Boates, getting on Rocks wondring and gafing at vs, but after this night we faw them no more, leaving many Dogs run- Men and does.

ning to and fre on the Hand. At this place we flayed two dayes, in which time wee tooke in fresh water and other necessaries ; here we had some dislike of the passage, because the Tydes are so small as not arising about eight or nine foot, and keepe no certaine course, but the neerest time of high water on the change

20 day is at a quarter of an houre past nine, and the Flood commeth from the South. The two and twentieth day at a North Sunne, wee fet faile and plyed full Northward, the winde being right against vs as we stood off and on. Vpon the fixe and twentieth day in the afternoone, we found a dead Whale, about fixe and twentie leagues from thoure, having all her Dead Whale, finnes. Then making our ship fast, wee vied the best meanes wee could to get them . and with much toile got a hundred and fixtie that evening. The next morning the Sea went very high and much tone got a fing, the Whale broke from vs. and we were forted to leaue he and let faile, and having not ittood patt three or foure leagues North-werthyard, came to the lee, then wee tacked and food to the fhoare-ward, a fore florme enfined.

By the thirtieth day in the afternoone, wee came faire by Hope Sander for, the fartheft Land Hope Sander for, 30 Mafter Danie was at, lying betweene 72. and 73. degrees; and that evening by a North Sunne we came to much Ice, which we put into, plying all the next day to get through it.

The first of June, we were cleere of the Ice before named and not farre from shoare, the winde

blowing very hard at North North-east, then we put in among diners Ilands, the people see- Tents, Men ing vs fied away in all hafte leaving their Tents behinde, and vpon a finall Rocke they hid two and Womens young Maides or Women. Our finp riding not farre off, we elpyed them, to whom our Mafter with time other of our companie went in the Boate, they making figures to be carried to the Hand where their Tents were close adjoying. When they came thither, they found two old women more, the one very old, to our eftermation little leffe then fourescore, the other not so old. The next time we went on shoare, there was another Woman with a child at her back, who had hid 40 her selfe among the Rocks, till the other had told her how well wee had vsed them, in giving

them pieces of Iron and luchlike, which they highly efferme, in change thereof they give vs Seales skinnes, other riches they had none, faue dead Seales, and fat of Seales, some of which fat or blubber afterward we carried aboord, the poore women were very diligent to carry it to the water fide to put into our caske, making flew that the men were ouer at the Mayne, and at an other small Hand something more Eastward. Then making fignes to them that wee would shew them our ship and set them where the men were : the foure youngest came into our Boate; when they were aboord they much wondred to fee our ship and furniture : we gave them of our meat, which they tasting would not eate. Then two of them wee set on the sland, where they suppofed the men to be; the other two were carried to their Tents againe. Those that went to feeke the men could not finde them, but came as neere the flip as they could, and at evening wee fet 50 them over to the other.

This place wee called Womens Hands; it lyeth in the latitude of 71. degrees 45. minutes : Womens Handse here the Flood commeth from the Southward, at nep Tydes the water grifeth but fixe or feuen foote, and a South South-east Moone maketh a full Sea. The Inhabitants very poore, living chiefly on the fielh of Scales, dryed, which they cate raw, with the skinnes they cloathe themselves, and The people dealso make courrings for their Tents and Boats which they dreffe very well. The Women in their served apparell are dafferent from the men, and are marked in the face with divers blacke strokes or Women. lines, the skin being rafed with fome that pe inftrument when they are young, and blacke colour put therein, that by no meanes it will be gotten forth.

Concerning their Religion, I can little fay: onely they hade a kinde of worthip or adoration. Religion. to the Sunne, which continually they will point vnto and firike their hand on their breaft, crying Home; their dead they burie on the fide of the Hils, where they line (which is commonly on fmall Hands) making a pile of ftones over them, yet not fo close but that wee might fee the dead body, the aire being so pierling that it keepeth them from much flinking sauour. So likewise and Does. I have seene their Does buried in the same manner.

Vpon the fourth day we fet fayle from thence, having very faire weather, although the winde were contrary, and pived to and fro betweene the Ice and the Land, being as it were a channell of seuen or eight leagues broad : then on the ninth day, being in the latitude of 74. degree 4. minutes, and much pettered with Ice, neere vote three small llands, lying eight miles from the thore, we came to anchor neere one of them.

Thefe llands are vied to be frequented with people in the latter part of the yeare, as it feemed by the houses and places where the tentshad stood but this yeare as yet they were not come: here the tides are very imall, especially the floud, which ariseth not aboue fine or fix foot, yet the ebbe runneth with an indifferent ftreame, the cause thereof (in mine opinion) is the great abundance of Snow, melting on the Land all this part of the years,

The tenth day wee fet sayle from thence, and flood through much see to the Westward to try if that further from the shoare, wee might proceede; but this attempt was soone quailed. for the more Ice we went through, the thicker it was , till wee could fee no place to put in the Seeing, that as yet we could not proceede, we determined to fland in for the shoare, there to

abide fome few dayes, till fuch time as the Ice were more wasted and gone (for we plainely faus that it confumed very faft) with this resolution we flood in, and came to anchor among many Ilands, in the latitude of 73. degrees 45, minutes. On the twelfth day at night here wee continued two dayes without shew or signe of any people, till on the fifteenth day in the morning. 42 Inhabitants about one a clocke, then came two and fortie of the Inhabitants in their Boatesor Canoas . and an

gaue vs Seale skinnes, and many peeces of the bone or horne of the Sea Vnicorne, and shewed vs divers peeces of Sea Mors teeth; making fignes that to the Northward were many of them; in exchange thereof, we gaue them small peeces of Iron, Glaffe Beads, and such like; at four efence rall times the people came to vs, and at each time brought vs of the aforesaid commodities, by region thereof we called this place Horne Sound.

Here we flayed fix dayes, and on the eighteenth day at night, we fet fayle, having very little winde; and being at Sea, made the best way we could to the Northward, although the winde had been contrary for the most part this moneth, but it was frange to fee the Ice fo much confumed in fo little space, for now we might come to the three llands before named, and stand off to the Westward almost twenty leagues, without let of Ice, vntill we were more North (as to 74, 30 degrees 20 minutes) then we put among much feattered Ice, and plyed to and fro all this month. fill in the fight of shoare, and many times fast in the Ice, yet every day we got something on our way, nothing worthy of note happening, but that at divers times we law of the fifthes with They fee many long hornes, many and often, which we call the Sea Vnicorne: and here to write particularly out Snow, and often freezing, in to much, that on Midfummer day, our shrowds roapes and failes

Sca Vnicornes, of the weather, it would be superfluous or needelesse, because it was so variable, few daves with-Sharp froft on were fo frozen, that we could fearfe handle them; yet the cold is not fo extreame, but it may Midiummer well be endured. The first of July we were come into an open Sea, in the latitude of 75, degrees 40, minutes,

which a new reusued our hope of a passage, and because the winde was contrary, wee stood off 40 twenty leagues from the shoare, before we met the Ice : then standing in againe; when we were neers the Land, we let fall an anchor to fee what tyde went, but in that we found small comfort. Shortly after the winde came to the South-east, and blew very hard, with foule weather, thicke, and foggie: then we fet fayle, and ran along by the Land: this was on the fecond day at night. The next morning we patt by a faire Cape, or head land, which wee called Sir Dudley Digges Cape, it is in the latitude of 76.degrees 35.minutes, and hath a small Iland close adioyning to it, the winde still increasing, we past by a faire Sound twelve leagues distant from the former Cape, having an Iland in the midft, which maketh two entrances. Vnder this Iland we came to anchor: and had not rid past two houres, but our Ship drove, although we had two anchors at the ground. then were we forced to fet jayle, and fland forth : this Sound wee called Woffenbelme Sound : co hath many Inlets or smaller Sounds in it, and is a fit place for the killing of Whales.

The fourth day at one a clocke in the morning, the storme began agains at West and by South, to we hement, that it blew away our forecourse, and being not able to beare any fayle, wee lay a drift till about eight a clocke, then it cleared vp a little, and we faw our felues imbayed in a great Sound then we fet fayle and stood ouer to the South-east side, where in a little Coue or Bay we let fall an anchor, which we loft with cable and all, the windeblowing fo extreamely from the tops of the hils, that we could get no place to anchor in, but were forced to fland to and fro in the Sound, the bottome being all frozen over; toward two a clocke it began to be leffe winde, then we flood forth.

In this Sound we saw great numbers of Whales, therefore we called it Whale Sound, and doubtof leffeif we had beene prouded for killing of them, we might have strooke very many. It lyeth in the latitude of 77 degrees 30 minutes. All the fift day it was very faire weather, and wee kept along by the Land till eight a clock in the cuening, by which time we were come to a great banke of Ice, it being backed with Land, which we feeing, determined to stand backe some eight

leagues, to an Hand we called Hacklans ile, it lyeth betweene two great Sounds, the one Whale Sound, and the other Six Thomas Smiths Sound : this laft runneth to the North of feuenty eight Sir Thomas degrees, and is admirable in one respect, because in it is the greatest variation of the Compasse of Smith: Sound any part of the World known: for by divers good Observations I found it to be about me points in 78, drg. or fitty fix degrees varied to the Westward, so that a North-east and by East, is true North, and so Variation of of the rest. Also this Sound seemeth to bee good for the killing of Whales, it being the greatest the compasse and largest in all this Bay. The cause wherefore we minded to stand to this Iland, was to see if 56. degrees to and tagget an armous or fuch like on the fhore, and so indeed this night week came to anchor, the West, we could find any finness or such like on the Most may but with such foule weather, that our Boat could not limb. The next day were were forced to list. Which may to fayle, the Sca was growne to high, and the wind came more outward. Two dayes wee fpent nable D. G.d. and could get no good place to anchor in then on the eight day it cleared up, and wee feeing w bettirile.Tom, t company of llands lye off from the shoare twelve or thirreene Leagues, were minded to goo see 1.2. c.1. that company of handary control in the could Anchor. When we were fomething neere, the winde tooke vs where more them, to see if there we could Anchor. When we were fomething neere, the windered tooke vs where more floort; and being loth to spend more time, we tooke opportunitie of the windered left the sear-carrie floort; and being loth to spend more time, we tooke opportunitie of the windered left the sear-carrie floort. ching of these llands, which wee called Carejes Ilands, all which Sounds and Ilands the Map the compasses

doth truly describe.

So we flood to the Westward in an open Sea, with a stiffe gale of wind, all the next day and variation to So we food to the weltward in an open sea, with a time gate of which, an the next day and it. Now till the tenth day at one or two a clocke in the morning, at which time it fell calme and very the known continuous to the known continuous till the tenth day at one or two a clocke in the morning, at which time it fell calme and very the known continuous till the tenth day at one or two a clocke in the morning. forgie, and wee neere the Land in the entrance of a faire Sound, which wee called Alderman tinents of 464 20 lones Sound. This afternoone being faire and cleere, we fent our Boat to the shoare, the ship be- &c.must be vaing vnder fayle, and affoone as they were on shoare, the wind began to blow; then they returned speakably more againe, declaring that they faw many Sea Morfes by the shoare among the Ice, and as farre as then here there againe, declaring that they law many sea Mories by the invare among the tee, and as larre as they are they were, they have no figure of people, nor any good place to anchor in along the shoare. Then here is more having an eafie gale of wind at East North-east, we fanne along by the shoare, which now trend variation then deth much South, and beginneth to shew like a Bay.

deth much South, and beginneth to linew like a Bay.

On the twelfth day we were open of a nother great Sound, lying in the Latitude of pudgrees. Brighten a.

20. minutes, and we called it Sir Lamb Lank Latins' Sound: here our hope of paling beginn to be 3 minutes. Before the surface of the court of the surface of the su tweene the shoare and vs. but cleare to the Sea ward, we kept close by this ledge of Ice till the this and the ewent the induce and vs, but cleare to the Su way, we want to the latitude of 71. degrees 16, formet/opage minutes, and plainely perceited the Land to the Southward of 70. degrees 30. minutes, then we will having so much lee round about vs, were forced to shad more Eastward springing to have been of this iournal foom cleare, and to have kept on the off side of the Ice, vntill we had come into 70. degrees, then we were something to the company of the source of so have flood in againe. But this proued quite contrary to our expectation: for wee were for- troublefome ced to runne aboue threefcore leagues through very much Ice, and many times fo fait, that wee and too coffly could goe no wayes, although we kep can courfe due Eaft; and when wee had gotten into the conference open Sea, wee kept so neere the Ice, that many times we had much adoe to get cleare, yet could Sound. not come neere the Land, till we came about 68. degrees, where indeede we law the shoare, but Sir lames Loncould not come to it by eight or nine leagues, for the great abundance of Ice. This was on the caffer Sound. 40 inter and come on it of eight of mine registrations with recording more to fee if commented way of light entering the could come to anchor, to make trial of the tide, but the lot led w into the latitude of 6, de and find them grees 40. minutes. Then we left of feeking to the Welf foare, because were weren the future subside grees 40. minutes. Then we left of feeking to the Welf foare, because were weren the future subside in the complexity. indraft of Cumberlands Iles, and should know no certaintie, and hope of passage could Iles.

Now feeing that we had made an end of our discouery, and the yeare being too farre spent to goe for the bottome of the Bay, to fearch for dreft Finnes; therefore wee determined to goe for the Coast of Gromeland, to see it we could get some refreshing for our men: Master Hu-bers and two more, having kept their Cabins aboue eight dayes (besides our Cooke. Richard Waynew, which died the day before, being the twenty fix of July) and divers more of our company fo weake, that they could doe but little labour. So the winde fauouring vs, we came to anchor in 50 the latitude of 65, degrees 45, minutes, at fix a clocke in the evening, the eight and twentieth

day, in a place called Cankin Sound. The next day going on thoare, on a little Iland we found great abundance of the herbe called Scurnie Graffe, which we boyled in Beere, and so dranke thereof, whing it also in Sallets, with

Sorrell and Orpen, which here groweth in abundance; by meanes hereof, and the bleffing of Scuruy Graffe. God all our men within eight or nine dayes space were in perfect health, and so continued till our arrivall in England.

Wee rode in this place three dayes before any of the people came to vs; then on the first of August, fix of the Inhabitants in their Canous, brought vs Salmon Peale, and such like . which 60 was a great refreshment to our men : the next day following, the same six came againe, but after that we faw them no more vntill the fixt day, when we had wayed anchor, and were almost cleere of the harbour; then the same six and one more, brought vs of the like commodities, for which we gaue them Glaffe Beads, Counters and small peeces of Iron; which they doe as much esteeme, as we Christians doe Gold and Siluer.

20

In this Sound we faw fuch great Scales of Salmon (wimming to and fro, that it is much to be admired: here it floweth about eighteene foote water, and is at the highest on the change day. at feuen a clocker it is a very good harbour, and eafie to be knowne, having three high round hils like Piramides close adioyning to the mouth of it, and that in the middest is lowest, and along all this coast are many good harbours to be found, by reason that so many Ilands lye off from the maine.

The fixt of August, by three a clocke in the afternoone, wee were cleere of this place, having a North North North-west winde, and faire weather, and the Lord sent vs a speedy and good passage homeward as could be withed : for in nineteene dayes after, wee faw Land on the Id coast of Ireland, it being on the five and twentieth day : the feuen and twentieth at noone we were two leagues from Sely, and the thirtieth day, in the morning wee anchored at Doner in the roade, for the which and all other his bleffings the Lord make vs thankfull.

CHAP. XX.

A briefe Discourse of the probabilitie of a passage to the Westerne or South Sea, illustrated with testimonies : and a briefe Treatife and Mappe by Mafter

Thought good to adde somewhat to this Relation of Master Baffin . that learned-vulearned Mariner and Mathematician; who wanting art of words, fo really employed himselfe to those industries, whereof here you see so euident fruits. His Mappes and Tables would have much illustrated his Voyages, if trouble, and cost, and his owne despaire of passage that way, had not made

vs willing to content our felues with that Mappe following of that thrice lear-ned (and in this argument three times thrice industrious) Mathematician, Master Brigger, 30 famous for his readings in both Vniuerfities, and this honourable Citie, that I make no further Voyage of Discouery to finde and follow the remote Passage and extent of his name. Mafter Baffin told mee, that they supposed the tyde from the North-west, about Digges Iland was mifreported, by miltaking the houre, eight for eleuen and that hee would, if hee might get employment, fearch the passage from Iapan, by the coast of Asia, or (qua data porta) any way hee could. But in the Indies he dyed, in the late Ormus businesse, flaine in fight with a shot, as hee was trying his Mathematicall projects and con-

Now for that discouery of Sir Thomas Button, I have solicited him for his Noates, and receiued of him gentle entertainment and kinde promifes; but being then forced to flay in the Citie 40 vpon necessary and vrgent affaires, he would at his returne home, seeke and impart them. Since I heare that weightie occasions have detained him out of England, and I cannot communicate that which I could not receive : which if I doe receive, I purpose rather to give thee out of due place, then not at all. Once he was very confident in conference with me of a paffage that way, and faid that he had therein fatisfied his Maiestie, who from his discourse in private, inferred the necessitie thereof. And the maine argument was the course of the tyde: for wintering in Port Nelson (see the following Mappe) hee found the tyde rising every twelve hours fifteene foote (whereas in the bottome of Hudfons Bay it was but two foote, and in the bottome of Fretum Danis discouered by Baffin, but one) yea and a West winde equalled the nep tydes to the spring tydes; plainely arguing the neighbourhood of the Sea, which is on the Well fide of America. The 50 Summer following he found about the latitude of 60 degrees a strong race of a tide, running sometimes Eastward, sometimes Westward; whereupon Iosias Hubbard in his plat, called that place Hubbarts Hope, as in the Map appeareth. Now if any make scruple, because this discourry was not purfued by Sir Thomas Button, let him confider, that being Prince Henries Servant, and partly by him employed (whence I thinke he named the Country New Wales) the votimely death of that Prince put all out of joint; nor was hee so open, that others should have the glory of his dif-

And if any man thinke that the paffage is so farre, as the Maps vie to expresse America, running out into the West : it is easily answered, that either of negligence, or over-busie diligence, Maps by Portugals in the East, and Spaniards in the West, have beene fallely projected. Hence 60 that fabulous strait of Anian, as before by Francis Gaules testimonie and nauigation is euident: And hence the Portugals to bring in the Moluccas, to that moity of the world agreed vpon betwixt the Spaniards and them, are thought to have much curtalled Afia, and the longitude of those Hands, giving fewer degrees to them then in inft longitude is requisite. So the older Maps

of America make the Land from the Magelane Straits to the South Sea, runne much Weft. when as they rather are contracted somewhat Easterly from the North. The like is inftly supposed of their falle placing, Quinera, and I know not (nor they neither) what Countries they make in A. merica, to rum fo tarre North-westward, which Sie Francis Drakes Voyage in that See this Nous' Albien, being little further Westward then Aquarules) plainely enince to be otherwise. This cassile Yea the late Map of California found to be an Iland, the Savages discourses in all the Countries appeareth in Northwards and West wards from Virginia; fame whereof filled my friend Master Dermer with a fo much confidence, that hearing of ftrange Ships which came thither for a kinde of Vre or earth, Voisge, &com fo much confidence, that hearing or triange simps which cannot not be determined to be determined for paring that be-In cable to any parts of America, hee supposed them to come from the East, neere to China or In there with pan, and therefore he made a Voyage purpolely to discours: but croffed with divers disafters, hee returned to Firginia, frustrate of accomplishment that yeare, but fuller of confidence, as in a Letser from Verginia he fignified to me, where death ended that his defigne foone after. But how of-

ten are the vitall Charts rejected by experience in theis Nauigations, in this worke recorded?

Painters and Poets are not alwayes the best Oracles. For further proofes of a passage about these parts into the West Sea (or South, as it is called from the first discourry thereof to the South, from the parts of New Spaine, whence it was first descried by the Spaniards) there is mention of a Portagall (and taken in a Carricke in Queene Ehzaberhe dayes, of glorious memory) confirming this opinion; Sir Martin Frebilber alto from 20 2 Portugall in Gume, received incelligence of fuch a paffage, he faying he had patt it. The Pilots of Labone are fail generally to acknowledge fuch a thing; and the Almirall of D. Garcia Geoffrey Lass a of Cite-Real, in the time of Charles the fifth, is reported by the Coait of Bassalaes and Lass brader, to have gone to the Molaccas. Vasco de Coronado writ to the Emperour, that at Cibola he was one hundred and iffre leagues from the South Sea, and a little more from the North. Antonie de Herere, the Kings Coronifta Maior (part of whose worke followeth) maketh with vs also. in the diffunces of places by him described. But to produce some authority more full, I have here prefented Thomas Comlet a Marriner, and Malter Michael Locky Merchant, and after them, a little Treatife alonbed to Mafter Brugger, together with his Map. And if any thinke that the Spa-mard or Paringal would from have discoursed such a passage : these will answere, that it was Some of our 30 not for their profit to expose their East or Welt Indies to English , Dutch , or others , whom Merchants are they would not have sharers in those remote treatures by so neere a passage. First Thomas Cowles said not to be auerreth thus much.

Thomas Cowles of Bedmester, in the Countie of Somerset, Marriner, des act nowledge, that fire yeares paft, at my being at Lisbon, in the Kingdome of Portugall, I did beare one Martin Chacke, By ears paft, at my being at Lishon, in the Kingdimie of Portugall J did beare and Martin Chacke, and Portugall of Lishon, reade a Body of his some making, mich to had fe as if he prove before that time, in Print, in the Portugal is eagent, designing that the fad Martin Chacke bad frand, trother peares now paft, a my from the Portugal Indies, through a guile of the New for tomal Land, which he shought to be in my degrees of the cleaning of the New Body Body are to the beautiful as the land of ALLUL and prome power or some our court to commonar as, one of the medical control power on fine medic before the other four Solin of this company that he was formated from, a before find. And fince the fame time, I could never fee any of thos? Books, because the Kreg commanded them to be called in, and no more of them to be printed, less in time it would be to their bindrance. In witnesse where of I fee to my band and marke, the minth of April. Anno 1579.

A Note made by me MICHAEL LOK the elder, touching the Strait of Sea, commonly called Fretum Anian, in the South Sea, through the North-west passage of Metaincognita.

Hen I was at Fource, in Aprill 1596. happily arrived there an old man, about threefcore yeares of age, called commonly Inan de Fues but named properly Apostolos Valerianos, of Nation a Greeke, borne in the Hand Cefalonia, of profession a Mariner , and an ancient Pilot 6c of Shippes. This man being come lately out of Spaine, arrived first at Ligarno, and went thence to Florence in Italie, where he found one lohn Donglas, an Englishman, a famous Mariner, ready comming for Venice, to be Pilot of a Venition Ship, named Rayafona for England, in whole a pany they came both together to Venice. And John Donglas being well acquainted with n fore, he gaue me knowledge of this Greeke Pilot, and brought him to my fpeech : and in

CH AP.20.

talke and conference betweene vs, in presence of lobn Douglas: this Greeke Pilot declared in the Italian and Spanis languages, thus much in effect as followeth,

First he faid, that he had bin in the West Indies of Spains by the space of fortie veeres, and had failed to and from many places thereof, as Mariner and Pilot, in the fertice of the

Alfo he faid, that he was in the Spanish Shippe, which in returning from the Hands, Philippia Oantaine Gan. nas and China, towards Nona Spania, was robbed and taken at the Cape California, by Captaine Candish Englishman, whereby he lost fixtie thousand Duckets, of his owne goods.

Also he faid, that he was Pilot of three small Ships which the Vizeroy of Mexico fent from Mexico armed with one bundred men, Souldiers, vnder a Captain, Spinierd, to difcouer the Straits 10 of Anian, along the coast of the South-Sea, and to fortifie in that Strait, to reful the paffage and proceedings of the English Nation, which were feared to passe through those Straits into the South Sea. And that by reason of a mutinie which happened among the Souldiers, for the Sodomie of their Captaine, that Voyage was overthrowne, and the Ships returned backe from Ca-Isforma coast to Nona Spania, without any effect of thing done in that Voyage. And that after their returne, the Captaine was at Mexico punished by inflice. Also he faid, that shortly after the faid Voyage was so ill ended, the faid Vicerov of Mexico.

fent him out againe Anno 1 cg 2, with a small Caravela, and a Pinnace, armed with Mariners onely, to follow the find Voyage, for discourry of the same Straits of Anian, and the passage therect, into the Sea which they call the North Sea, which is our North-west Sea. And that he followed his course in that Voyage West and North-west in the South Sea, all along the coast of Nona Spania, and California, and the Indies, now called North America (all which Voyage hee fig-Land trending nified to me in a great Map, and a Sea-card of mine owne, which I laied before him) vittil hee in 47. degrees, came to the Latitule of fortie feuen degrees, and that there finding that the Land trended North and North-east, with a broad lislet of Sea, betweene 47.and 48.degrees of Latitude : hee entred thereinto, fayling therein more then twentie dayes, and found that Land trending still fometime North-west and North-east, and North, and also East and South-eastward, and very much broader Sea then was at the faid entrance, and that hee paffed by divers llands in that favling. And that at the entrance of this faid Strait, there is on the North-west coast thereof, a great Hedland or Iland, with an exceeding high Pinacle, or spired Rocke, like a piller 30

Also he said, that he went on Land in divers places, and that he saw some people on Land, clad in Beafts skins : and that the Land is very fruitfull, and rich of gold, Siluer, Pearle, and other

things, like Nona Spania. And also he faid, that he being entred thus farre into the faid Strait, and being come into the North Sea already, and finding the Sea wide enough every where, and to be about thirtie of fortie leagues wide in the mouth of the Straits, where hee entred; lice thought he had now well discharged his office, and done the thing which he was sent to doe : and that hee not being armed to resist the force of the Saluage people that might happen, hee therefore let sayle and returned homewards againe towards None Spania, where hee arrived at Acapillo, Anno 40 1502. hoping to be rewarded greatly of the Viceroy, for this femice done in this faid

Alfohe faid, that after his comming to Mexico, hee was greatly welcommed by the Viceroy, and had great promites of great reward, but that having fued there two yeares time, and obtained nothing to his content, the Viceroy told him, that he should be rewarded in Spaine of the King him felfe, very greatly, and willed him therefore to goe into Spaine, which Voyage hee did performe.

Alio he faid, that when he was come into Spaine, he was greatly welcommed there at the Kings Court, in wordes after the Spanish manner, but after long time of fuite there also, hee could not get any reward there neither to his content. And that therefore at the length he ftole away out of Spaine, and came into Italie, to goe home againe and Ilue among his owne Kindred and Coun-

trimen, he being very old. Also he faid, that hee thought the cause of his ill reward had of the Spaniards, to bee for that they did vaderhand very well, that the English Nation had now given over all their voyages for discoverie of the North-west passage, wherefore they need not feare them any more to come that way into the South Sea, and therefore they needed not his feruice therein any more.

Also he said, that in regard of this ill reward had of the Speniarde, and understanding of the noble minde of the Queene of England, and of her warres maintayned to valiantly against the Spaniards, and hoping that her Maiestie would doo him justice for his goods lost by Captaine Conside, he would be content to go into England, and lemether Maistin in that very get for the disposerie perfectly of the North-west pilage into the South Sea, and would put his life into the 50.

The students hands to performe, the fame, if the would furnish him work onely our ship of fortie s burden and a Pinnaffe, and that he would performe it in thirste dayes time, from one end to the other of the Streights. And he willed me to to write into England.

And upon this conference had twife with the faid Greeke Pilot, I did write thereof according ly into England voto the right honourable the old Lord Treasurer Cecill, and to Sir Walter Raterob, and to Maiter Richard Hakluye that famous Cofmographer, certifying them hereof by my Letters. And in the behalfe of the faid Greeke Pilot, I prayed them to disburse one hundred pounds of money, to bring him into England with my felfe, for that my owne purfe would not tretch fo wide at that time. And I had answere hereot by Letters of friends, that this action was very well liked, and greatly defired in England to bee effected; but the money was not readie, and therefore this action dyed at that time, though the faid Greeke Pilot perchance liveth fill this day at home in his owne Countrie in Cefalonia, towards the which place he went from me

10 within a fortnight after this conference had at Venice. And in the meane time, while I followed my owne basinesse in Umice, being in Law suit asainft the Companie of Merchants of Turkie, and Sir John Spencer their Governour in London, to recover my penion due for my office of being their Confull at Aleppe in Turke ; which there held from me wrongfully. And when I was (as I chought) in a readinesse to returne home into England, for that it pleased the Lords of her Maiesties honourable Prime Counsell in England, to looke into this Caufe of my Law fat for my reliefe; I thought that I should be able of my owner pur fe to take with me into England the faid Greeke Pilot. And therefore I wrote vinto him from Venice a Letter, dated in July 1596. which is copied here-vnder.

Amigo & servitor de V.M.

And the faid Letter came to my hands in Venice, the 16. day of November, 1 co6. but my Law fuite with the Companie of Turkie was not yet ended , by reason of Sir Iohn Spencers fuite made in England at the Queenes Court to the contrarie, feeking onely to have his money difcharged which I had attached in Venice for my faid pension, and thereby my owne purse was 60 not yet readie for the Greeke Pilot.

And nevertheletfe, hoping that my faid fuite would have fhortly a good end; I wrote another Letter to this Greeke Pilot from Venice, dated the 20. of November, 1 596. which came not to his hands. And also another Letter, dated the 24. of Ianuarie, 1596. which came to his hands. And thereof he wrote me answere, dated the 28. of May, 1,97, which I received the first of August

1997. by Thomas Nordon an Emplish Merchant yet living in London, wherein he promited fill to goe with me into England, to performe the faid voyage for discourtie of the North-wieft patigue into the South Sea, it I would find him money for his charges according to his former writing, without the which money, he faid he could not goe, for that he faid he was undone vetterly, when The Ship Sants to Was which came from Chims, and was robbed at California. And yet againt affect ward I wrote him another Letter from Penics, whereemto he wrote me aniwere, by a Letter written in his Greeke language, dated the 20.0 Oktober, 1998. the which I have full by me; wherein he promiteth full to goe with me into England, and performe the faid voyage of discourriered the North-west passings into the South Seasy by the faid strengths, which he calleth the The Sarehot.

The Streight of Nous Spans, which he faith is but thirtied alses woyage in the freights, if I will fend of Nous Spans, which he faith is but thirtied alses the thirtie dayes for that I had not yet recoursed my pension owing mee by the Companie of Turke aforefaid. Streight.

And fo of long time if they deform any furder proceeding with him in this matter.

And so of long time! they de from any furder proceeding with him the his matter.

And yet hilly, when I my fells was at Zante, in the moneth of lune 1602, minding to piffe from thence for England by Sea, for that I had then recoursed a little money from the Companie of Tarthe, by an order of the Lords of the Prine Controlled of England, I wrote another Letter to this Greeke Pilot to Cylaints, and required him to come to me to Zante, and goe with mee into England, but I had none aniwers tierest from him, for that as I heard atterward at Zante, he was then dead, or very likely to old of great fischnele. Whereupon I returned my left by Sea from Zante to Venice, and from thence I went by land through France into England, which I armied 20 are Christmas, An, 1602, laft(s), I thanke God, after my absence from thence ten yeers time; with great troubles had for the Company of Tarties business from the cet en yeers time; with great virubles had for the Company of Tarties businesses.

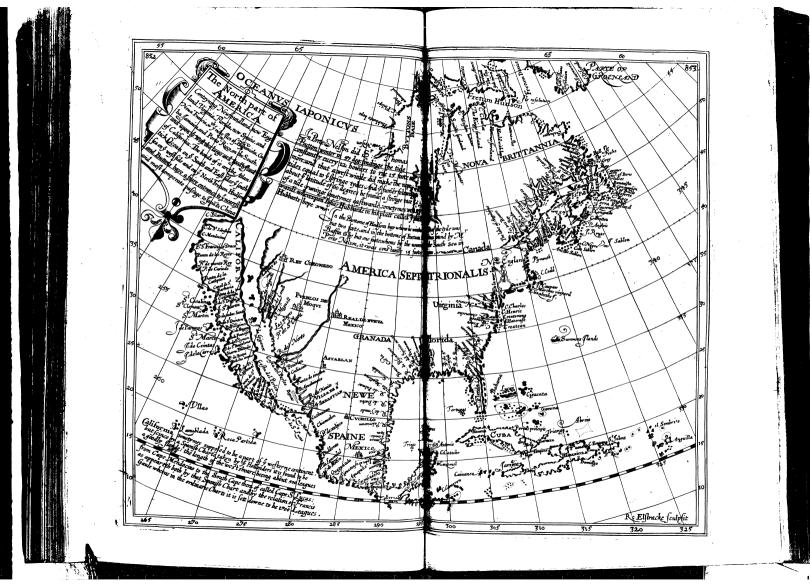

A Treatise of the North-west passage to the South Sea, through the Consinent of Virginia, and by Fretum Hudson.

The noble plantation of Virginia hash fome very excellent prerogatives above many other 30 famous Kingdomes, namely, the temperature of the aire, the fruitfulnesse of the toile, and the commodium sele of situation.

The aire is healthfull and free both from immoderate heate, and from extreme cold; for that both the Inlubitants and their Castell doe profiper exceedingly in flature and fitength, and all Plants brought from any other remote climate, doe there grow and fruelitie in agood or better manner, then in the fold from whene they-eape. Which though it doe manifeffly prooue the fruitfulude for the foller, yeelding all kindes of Graine or Plants committed voto is, with a rich and plentifull increase; yet cannot the fatneffle of the earth alone produce fuch excellent effects, whelfe the temperature of the aire be likewise for fauourable, that those tender iprouts which the earth doth abundantly bring forth, may be cherifiled with moderate heate and feafonable moi-tof flure, and treed both from korching drought, and nipping frest.

These blettings are so much the more to be element, because they are bestowed young place significant the strength of the surface of t

tuated to conveniently, and at fo good a distance both from Europe, and the West Indies , that for the mutuall commerce betwixt there great and most rich parts of the habitable world, there cannot bee deuted any place more convenient for the fuccour and refreshing of those that trade from hence thither : whether they be of our owne Nation, or of our Neighbours and Friends, the multitude of great and nauigable Ruers, and of fate and spacious Harbours, as it were inuiting all Nations to entertaine mutuall friendship, and to participate of those blessings which God out of the abundance of his rich Treasures, hath so graciously bestowed some upon these parts of Esrepe, and others no leffe defired vpon those poore people: which might fill have remay ned in 50 their old barbarous ignorance, without knowledge of their owne miferie, or of Gods infinite goodnesse and mercy; if it had not pleased God thus graciously both to draw vs thither with defire of fuch wealth as those truitfull Countries afford, and also to grant vs so easie, certaine, and fafe a meanes to goe vnto them : which paffage is in mine opinion made much more fecure and easie by the commodious Harbours and refreshing which Virginia doth reach out voto vs. The coasts of Florida to the West, being not so harberous; and of New England to the East, fomewhat more out of the way, amongst to many Flats and small Ilands not to fafe: Neither is the commodiousnesse of Virginia's situation onely in respect of this Well Atlanticke Ocean, but also in respect of the Indian Ocean, which we commonly call the South Sea, which lyeth on the West and North-west fale of Virginia, on the other fale of the Mountaines beyond our Fails, and openeth a free and faire paffage, not onely to China, lapan, and the Moluccaer; but also to New 60 Spaine, Peru, Chili, and those rich Countries of Terra Australia, not as yet fully discouered. For the Sea wherein Mafter Hadfon did winter , which was first discovered by him , and is therefore now called Fretum Hadfon, doth thretch fo farre towards the West, that it lyeth as farre West-

ward as the Cape of Florida: So that from the Falls aboue Henrico Citie, if we shape our journey rowards the North-weit, following the Rivers towards the head, wee shall undoubtedly come to the Mountaines, which as they fend divers great Rivers Southward into our Bay of Chefes sock, folikewife doe they fend others from their further fide North-westward into that Bay where Hadfon did winter. For fo wee fee in our owne Countrie, from the ridge of Mountaines continued from Derbifbire into Scotland , doe iffue many great Rivers on both fides into the Eaft Germane Ocean, and into the Westerne Irish Seas : in like fort from the Alpes of Switzerland and the Grizons, doe runne the Danubie Eastward into Pontsu Euxinus, the Rhene into the North Germane Ocean, the Rhofne West into the Mediterrane Sea, and the Po South into the Adriatike 10 Sea. This Bay where Hudfon did winter , ftretcheth it felfe Southward into 49 degrees, and cannot be in probabilitie fo farre diffant from the Falls as two hundred leagues; part of the way lying by the Rivers fide towards the Mountaines from whence it fpringeth; and the other pare on the other fide cannot want Rivers likewife, which will conduct vs all the way, and I hope carry vs and our prouifions a good part of it. Befides that Bay, it is not vnlikely that the Wefterne Sea in some other Creeke or River commeth much neerer then that place : For the place where Sir Thomas Button did winter, lying more Westerly then Master Hudsons Bay by one hundred and ninetic leagues in the fame Sea, doth extend it felfe very neere as farre towards the west as the Cape of California, which is now found to bee an Iland firetching it felle from 22. degrees to 42, and lying almost directly North and South; as may appeare in a Map of that Iland which 20 I have feene here in London, brought out of Holland; where the Sea vpon the North-well part may very probably come much neerer then fome doe imagine : who giving too much credit to our vivall Globes and Maps, doe dreame of a large Continent extending it felfe farre Westward to the imagined Streight of Anian, where are feated (as they fable) the large Kingdomes of Cebola and Onimira, having great and populous Cities of civill people; whose houses are taid to bee five stories high, and to have some pillars of Turguesses. Which relations are cunningly set downe by some youn set purpose to put vs out of the right way, and to discourage such as otherwise might be defirous to fearch a paffage by the way aforelaid into those Seas.

Gerardus Mercator, a very indultious and excellent Geographer, was abuted by a Map fent vento him, of four Euripi meeting about the North Pole; which now are found to bee all tur30 ned into a mayne Icie Sea. One demonstration of the crastic fallhood of these vitall Maps is this, that Cape Mendeine is see in them West North-west, distant from the South Cape of California, about fourtheen founded leagues, whereas Perasic Gant that was impliced in those discountries by the Vice-toy of New Spaine, doth in Hugo Lingbostem his booke set downer their distance to be onely fur bumbled leagues.

stance to be onely fine hundred leagues. Befides this, in the place where Sir Thomas Button did winter in 57. degrees of latitude, the conitant great Tydes euery twelue houres, and the increase of those Tydes whensoeuer any firong Westerne winde did blow, doe strongly perswade ve that the mayne Westerne Ocean is not farre from thence; which was much confirmed vnto them the Summer following; when fayling directly North from that place where they wintered, about the latitude of 60, degrees, 40 they were croffed by a ftrong Current running fometimes Eastward, fometimes Westward: So that if we finde either Hudfons Bay, or any Sea more neere vnto the West, wee may affure our selues that from thence we may with great ease passe to any part of the East Indies : And that as the World is very much beholding to that famous Columbia for that hee first discoursed vnto vs the West Indies; and to the Portugal for the finding out the ordinarie and as yet the best way that is knowne to the East Indies, by Cape Bona Speranza: So may they and all the world be in this beholding to vs in opening a new and large paffage, both much neerer, fafer, and farre more wholesome and temperate through the Continent of Virginia, and by Fretum Hudson, to all those rich Countries bordering vpon the South Sea, in the East and West Indies. And this hope that the South Sea may eafily from Virginia be discourred ouer Land, is much confirmed by the confrant report of the Sauages, not onely of Virginia, but also of Florida and Canada; which dwel-50 ling fo remote one from another, and all agreeing in the report of a large Sca to the Westwards, where they deferibe great thips not valike to ours, with other circumstances, doe give vs very great probabilisie (if not full affurance) that our endeaours this way shall by Gods bleiling have a prosperous and happy successe, to the encrease of his Kingdome and Glorie amongst these poore ignorant Heathen people, the publique good of all the Christian world, the neuer-dying honour of our most gracious Soueraigne, the mestimable benefit of our Nation, and the admirable and speedie increase and advancement of that most noble and hopefull Plantation of Virginia; for the good fucceffe whereof all good men with mee, I doubt not, will powre out their prayers to

Chap. 2. Of the Nanigation of the

How many

The Ocean that is toward the East, is called the North Sea, and that which falleth to the West, Mar del Sur, or the South Sea : this washeth Nona Hispania and Peru: that washeth those Regions which are situated on the South coast of Brafile toward the Magellan Streight: and effectially the North coast from Brafile toward Caffile, and other Septemrienal parts. These two vatt Seas are duided into other lefter Seas and Gulfes, and are sayled by foure principall Naugations. The first and most ancient, from Castile to Terra firme, and to Nova Hispania. The fecond, from Caftile to the River of Plate, and the Streight of Magellan, The third, from the coaft of Nona Hilpania to Guatimala, and Panama, to Peru, Chile, and the Streight. And the laft, and newest, from Nous Hispania to the Ilands of the West, and trafficke of China, as it is seene in the Table preceding.

The first Nauigation, because it is most vied, called Carrera de las Indias , The course of the Indies, is divided in two, one to the port of Saint John of Ulna in Nama Hift aria, whitherto from Simil is fayled about one thousand and seuen hundred leagues in two moneths and an halfe; and another to Nombre de Dies, and now to Porte belle, which is in the Kingdome which they call Terra firme; of one thousand and foure hundred leagues, in two moneths large, and both goe by one course, till they come to the Ilands of the North Sea, from Saint Lucar of Barrameda, whence yee cannot take Sea without a Pilot skilfull in the Channell, a fit winde and spring Tydes , and light of the day, or lights, for to fee the markes of the Barre.

going out of Saintlace In what times

Difficultie to

The Times for to begin these Nauigations, are divers. For Nona Hispania, the winter being 20 paft, from the beginning of April vnto the end of May, and not after, that they may not come tions are to be to the Hands of the North Sea after August, when the North windes begin to reigne, and the Vrecanes doe begin, which are stormes and great gusts arising of contrarie windes. And to Terra firme, the Nauigation is before the entring of the Winter, in all August and September, that they may come to Porte bello from Nouember forward, when by the beginning of the North windes that Coast is alreadie least diseased, and more healthad.

they goe.

What thing

From Saint Lucar they goe to the Canaries, whither there is about two hundred and fiftig legges of Nauigation, of eight or ten dayes, through the Gulfe de let Tegues, which in winter is very dangerous for flormes: and in the Port of Comps they cast anker when they thinks it good, or elle in the Port of Comms, which is the best of thook Bunde. Ten me Commiss they 30 good, or elle in the Port of Gomms, which is the best of thook Bunde. Ten me Commiss they 30 faile to Deffeada, which flands in 15. degrees and little more; and to Dominica, whither they make feuen hundred leagues, through the great Ocean, and they flay fine and twentie dayes. whereby they cannot returne, because the Brises are ordinarie, and contrarie at their returne. The Brifes are windes which comprehend all the Easterne windes with all their quarters and are fo ordinarie and firme, because the swift motion of the First Momer, doth carry after him the Element of the Aire, as the other fuperior Orbes : and so the Aire followeth alwaies the motion of the Day, going from East to Welt, never varying, and the effectuall motion of the Aire carrieth after him also the vapours and exhalations that doe arise from the Sea, and therefore the Brile winde which runneth from the East, is so continuall in those parts. This voyage from the Canaries to Dominica, Peter Aries of Anila, which was called Gentill and the Inster, made the 40 first, the yeere of 1914, when hee went with an Armie for Governour and Captaine generall of the Kingdome of Golden Caftile, now called Terra firme, fince which the Nauigation hath beene ordered, that vntill then went out of order.

Because it is now ordered that fresh water and wood be not taken in the Iland of Descada, and in Dominica, the Fleet of Nona Espanna goe hence to Occoa, a Port of the Iland Hispan-yola, to take refreshing, and they stay long because the stormes from (what doe overtake it. And they They take wa- that goe for Noua Efpanna, doe water in the Iland of Guadalupe, and there they divide the courter alreadie in fes. The fleet of Nona Espanna goeth in demand of the Cape of Saint Antonie, which is in the the He of Gua- furthest part and most Occidentall of the Hand of Cuba, to which place they faile about five hundred leagues in twentie dayes ordinarily, in fight of Saint Iohn of Porto Rico and of Espannola, two 50 leagues off the Port of Saint Domingo, running along the coast by the Point of Nizao, and betweene the Hands of Cuba and Lamagea, they goe with great heede of the shoales, which are cal-led the Lardines, neere to the middest of the coast of Cuba where many ships have beene lost, pasfing afterward in fight of the Hand of Pinos and Cape Correntes twelve leagues short of the Cape of Saint Antonie. From whence there are two courses to the Port of Venacruz, both of tenor twelve dayes; one which they call Wathin Land, of two hundred and fiftie leagues, for the Summer time from May to September, when there bee no North windes which are croffe windes on the coast of Tucatan, whereby they paste; and another which they call Without, for the time of Winter, of about two hundred and eightie leagues somewhat higher in altitude: and the best Nauigation, for to goe to the Port of Saint Iohn de Vina, is to leans to the coaft of Florida, and the Playnes of Almeria, that no contrarie wind stay him from scalonable attayning the Port of Saint

best Nauigation on from that Cape of S. An-

The fleets that went from Dominica, and now goe from Guadalupe to Terra firme (whither is about foure hundred leagues voyage of fifteene dayes) they goe in demand of Cartagena, farre off

the coast of Torra firme, where the Brifes are almost perpetuall; and contrarie to the returne and the Southerne windes continuall in Summer, and the Northerne in Winter; which are eroffe winder. They doe reknowledge by the way the Cape de Pella between Sana Martha and a Ve- a Officia winds. I have Cape del Again neere Carragena, where they valade the merchandife that are Penier. to gos to New Kingtonie; and those which are to pale to Pers, are carried to Perte belle, whis b Or of the thereo from Carrigeme are ninetle leagues, foure or fixe dayes fayling, reknowledging the Point Needle. of Captina, and from the Canaries to Cartagena is fine and thirtie dayes fayling.

Finole that good Hunduras and Guatemala, goe in companie with them of None Efrance, The voyage of write Cape Tiburen, the vitmost Westerne part of Espannela, from whence running along by Bundara and In the Hand of Landyes on the North fide, white the Point of the " Negrillo, the vitermost of it, c Or little the pair to Sealin demand of the Cape of the Camaron, the beginning of the Gulfe and Prounce black Mooie. of Handaras; from whence they goe to anker to Traville fifteene leagues to the West from the Capil; where the merchandize are maden that are to remaine there, and the rest doe, passe to the orbit of Carallas; and to Gossa Duke, along the coast by the Gulte of Handwas, to transport them

to Guatemala.

He returne from the Indies to Spaine, cannot be made by the course which they take in go- Chep. 3.

If ing thither, and therefore they must come to a reaser hereby. ing chither, and therefore they must come to a greater height, going out of the Tropicks Whereinhee to feeke fresh windes which doe blow from towards the North; all the Fleetes doe meete in the profequent 20 Port of Hansens, about the moneth of Inne, to come to Spaine before Winter; for the East winde sagainft them, and is traverse in the Channell, and the Southalso is traverse in the Coat under the Coath also is traverse in the Coath also is traverse in the Coath also is traverse. from the Cape Saint Vincent to Saint Lucar. The fleet of Terra firme, departeth from May for- The Fleets doe ward from Porte bille, when the North windes doe alreadie ceafe; and returneth to Caregena to returne to catake the freight of Silver and Gold from the new Kingdom of Granada: and also for to aword the file by another take the treight of Singer and Gold from the new Magdon of Oranna and and of the way.

Coaft of Verapua, and the fireame of Nicaragua, whence they can hardly get out if they ingulfe When theficers themselues by reason of the Brises, and contrarie and dangerous Currents that are in the way. oughtio depart From Cartagena they goe for Gape Saint Antonie, the further West of Cuba about two hun- to come for dred leagues, voyage of ten dayes, with care of the shoales that are in the way of Serrona and Calife Serranille, and a Destafrices, and from the Cape of Saint Assonie to the Asson, are neere fittie Husther the Serranille, and the flips that come from Husdaries, doe come also to reknowledge the Cape of from carage. Sint Antonic.

The fleetes of None Espanse doe depart in the beginning of May, while the North windes d Ortake adoe laft, which doe ferue for the returns to the Anna, afcending a little in altitude vnto the way fleepe, Sound, which they call In Tortugas, vnto which place they faile about three hundred leagues in The thips of fifteene daves.

The ships of Santa Martha and Venezuela, to come to Castile, came out betweene Cuba and Hispaniola, to reknowledge the Cape of Saint Nicholas in the Western part of it, from whence distinct Hispaniela, to reknowledge the Cape of Salit Problem in the World in the through the middeft of the Iles of the Lucayer, they goe take the course of the fleets, and when Fleets of News they come in fight of the Cape of Saint Antonie, they goe to the Anana for feare of Pirates.

From the Anana to Castile, having past the Channell of Bahama (which the Pilot Antonie of Alaminos tayled first of all, the yeere 1519.) they doe faile through the Gulfe which is called of The voyage of the North, or of the Sagarzo, about nine hundred or a thousand leagues or more (a fayling of five them of Sazas the North, or of the Sagarzo, about nine hundred or a thouland leagues or more (a 127 ling of nine Martha and and twentie or thirtie dayes with ordinarie windes) by two wayes, one for Summer, in a greater Voucoula. height, till they come to thirtie eight or thirtie nine degrees, in the which stand the Ilands of Azores; and another for Winter, by a leffer height, because of the stormes and showres which from the Add doe come alwayes neere vnto it, whereby they goe vnto thirtie nine degrees no more, where- ne to Capita.

in flandeth the lland of Santa Maria, one of the lles of Azores, and they aftend one degree more Naugation for to touch in the Tercera, where the fleets doe alwayes come to take refreshing, without permitting any one to goe ahoare. And from the llands of Azorg vnto Saint Lucar of Barraneda, Saint Lucar.

50 the Mariners make three hundred leagues of Nauigation in fifteene dayes, others in thirtie for

the many Brifes that doe reigne in this Gulfe of the Azores, whereby they faile till they come. woon the Coast of Portugal, and the doubling of the Cape Saint Vincent; and after in fight of the Coaft vnto the Port of Saint Lucar.

The Navigation from Caftele to the River of Plata (whitherto there is one thousand and fixe Navigation 10 hundred leagues , and to the Streight of Magelanes neere two thousand) hath beene much lon- the Ruser of ger in the time then in the diffance of the way, because being necessarie to come to those Prounces in their Summer, which is from September forward, they cannot depart from Caffile at fuch time as not to passe the Equinoctiall by June or August, when in it the Calmes are many and very great, and therefore they flay five moneths in the Voyage, which might bee made in two or three, if from Simil they did depart by August or before : and touching in the Canaries they goe 60 North and South, to eight or nine degrees on the other fide of the Equinoctiall, from whence

fome doe faile Eaft and Weft, to reknowledge the Cape of Saint Augustine in Brasile, and afterward in fight of the Land vnto the River of Place and the Streight. Others from the eight degrees have gone straight through the South Sea to the Streight, although few have come to passe

Cape of Saint

Naugation of the South Sea Path atwayers occur and the South Sea Path atwayers occur and the South Sea South windes are very continuall, and the Current of the Streight ordinarie to the North; The Namigation of Nauigation of Parame to the Citic of The Kings, is wont to continue two moneths, and the returns leffe then thirtie dayes, and the fame from the Kings to Chile, from whence to Pana. me are fayled nine hundred leagues in lefe then two moneths, eight being needfull for the going, which is alreadie shorter then it was: for purting to the Seathey finde, better windes to

The Nauigation to the Westerne Bands, Malucas and Philippinas, from Caffele to the to Streight of Magellane paffeth foure thouland leagues, and so for being so long as for the difficultie of passing the Streight of Magellerss, it is held for disticult to vie it, and from Nosia E. frame through the Westerne Gulle, which is in the South Sea. This Nanigation was made, promote unough one westerne counts, which is not south soon in a sessing profession to the part of the National on the Coals of Nova filmens; as this time is a seade from the Port of Acquite. Irom whence to the Malman and Philippinas, they doe make a voyage of one thoutand fix hundred, or a thousand and feven hundred leagues, which is tayled in two moneths, or two and a halte, departing in November which is the time most free from calmes. And the returne to Nona Espanna is longer, because not being able to returne the way they went, it is necessarie to ascend to 39. degrees, and depart in May and June, when the Brifes bee leffe, and they fray foure moneths in fayling two thousand leagues that may bee in the 20

of the North. Herewas infer. bath in be Indies of the North and in New Spaine
The wea-

Ature having divided these western Indies in two parts by the Ishmos or narrownesses from Perte belle to Parama, placed the one to the North, and the other to the South; wherefore wee will call them the Indies of the North, and of the South. The Kings of Caffele and Lion, with the aduice of the supreme Councell of the Indees, have ordayned, that in each place there red Map or with the aduce of the upreme counces or the same, and Sudyers, and the same of because the first discouerers (which were loba Grijalne and his Companions) having not seene in the Ilands houses of stone, nor other things as in Spaine, which here they found with people 30 apparelled, and more civill; They named it New Spaine: which exceedeth the other part of the Indies in pastures, and therefore they have innumerable Cattle of all forts : and it exceedeth ter, to which I also in husbandrie and fruits: it hath no wine, because generally the grages doe not ripen with perfection, the raines of July and August not suffering them to ripen. The * vpper llands have also great Pastures, and a picasant prospect: for all the yeere they are green and Bounthing, with great pleasantnesse, and great Arcainces, which are very thick Groues and Inclosures, and in the Playnes are great Lakes and Quagmires. Neither Bread nor Wine grow in them; for the great ranknesse of the ground doth not suffer it to ripen nor eare : the Rivers for the most part haue gold. Florida, Nicaragna, and Guatimala are almost in this manner, as of all more particularly wee will rehearfe in their place, and in the Table tollowing thall the bounds of these Northern 40 Great paftures Indies bee feene.

"He Court of the Iland Hifpaniola, which in time and place is the first, being neerest vnto Ca-I file, it hath of bounds East and West fine hundred and fiftie leagues, and North and South more then three hundred, wherein are included the Ilands and Governments of Hispaniala, Ca-Of the bounds ba, Saint Iohn, Iamayca, Margarica, and the fifting of the Pearle : the Province and Goof the jurifdi- nernment of Venezuella, and for neernesse the Proninces of new Andaluzia, Guayana, and Florida, with all the Hands of the North Sea, which doe passe a hundred which are named, and are aboue fixe hundred great and small: and those which doe leane toward the Coast of Terra firms, the Mariners doe call of the Letward, and the other to the Wouberward. The temperature of 50 them all is commonly moist and exceeding hoe, and although they be plentifull in Pattures and Trees, they are not to of the Seedes of Caftile, not of Wheat, Barly, Vines, nor Olives : but there is great store of great Cattell and small, as Kine, Mares, Swine, and Sheepe, and therefore their principall trafficke is Hides and Sugar, for there is great flore; and although in the most of them there is gold : it is not fought for.

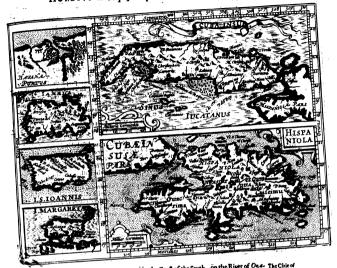

Chap. 6. Of the Iland

Cazabi bread. Townes.

The Countrie-men called the Iland of Hifpaniels, Apri and Quifqueys, which fignifieth Raughneffe, and a great Countrie. The figure of it is like a Chefnut leafe: it flands in nineteene degrees and a halfe of eleuation of the Pole, it compaffeth about foure hundred leagues and somewhat more, and hath in length East and West an hundreth and fiftie, and North and South from thirtie to fixtie where it is broadest, it is very plentifull of Sugar, and Cattell, and of Tace, the roote whereof maketh the Cazabi, the bread of the Countrimen. They have no Millet nor Wheat, although they begin to reape fome in the inward parts and coldeft. It is rich of Copper mynes and other metals, and some veine of Gold though but little is gotten, for want of workemen : it hath ten Spanife Townes.

CHAP. 1. Spanish plantations in Hispaniola, S. Domingo, Sugar planted. 861

HONDIVE bis Map of Hispaniola, Cuba, &c.

The Citie of Saint Dominicky or Domings nests the Coast of the South , on the River of Onds The Chie of ms. Itanda in the faid 19, degrees and a half- and 60, of Occidentall longitude from the Meridian Saint Domings. ma, random do um 19, degree and a name and do of October and the original Front and of Toles, from whence who it there may be by direkt line one thouland two hundred fortis found league; it that about fix hundred boofholds. There is refident in it the Audience or Countries of the Countries of t cell, the Officers of the Goods and Royall Treasure; a Mint house, and the Cathedrall Church. And the Archbishoprick hath for Suffraganes the Bishopricks of the Contestion de la Vega (which is writed with that of Saint Dominicke) those of Saint lobn, Cuba, Venezuela, and the Abbothip of lamages; and in the Citie are Monasteries of Dominicans, Franciscans, Mercenaries, and other two of Nunnes, a Grammar Schoole, with fourethousand * Pefer of Rent, and an Hospitall with * Pefe is foure twentie thousand. The Hauen which is great, and capable of many ships, is in the mouth of the fallings as 50 River Ozame, and hath the Citic on the West, which the Deputie Don Barbelomen Collen did 45%.

build the yeere 1494. On the Ealkide, better and wholfomer in fituation, and the chiefe Knight of Alcantara, Nicholas of Onasda being Gouernour of Hilpaniola, An. 1502. remoued it where now it is , from the other fide the River to the Batt, vpon occasion that the Citie had fallen by a great Earthquake. The Village of Salualyes of Tguer, eight and twentie leagues from Saint Do- Salualyes of miniche to the Eaft, of the Archbishoprick; the Captaine, John of Efgninel, did people it. The Tguq. winners to the East, or the Atthountspines, the Capanishicke to the East, toward the lland of The Village of Village of the Zepbo, twentic leagues from Saint Dominicke to the East, toward the lland of The Village of Saona: the Captaine also planted it in the time of Niebolas of Onando. The Village of Carny, Zepta. fixteene leggues from Saint Dominice to the North and very close in his circuit, Roderick Mexic El Comp of Trillo, founded it. The Village of Azas in Composella, in the coast of the South, foure and Azus. 60 twentie leagues from Saint Dominiete to the West, in his borders are many sugar Mills; it was

peopled by the Prefident James Vellas ques, it was called Compostella by a Galletian Knight, Who carried which held an Heritage in that fituation, and demo is the name of the place which the Indians to the Indian which held an Heritage in that ituation, and december is the maine or the place which the fugar had there. The first that carried sugar Canes to the Indies, and began to make triall of them. Ganes. there, was one Attenga, and the Bachellor Uelofa. The Village of Taguera, which they call to Taguera.

Santa Marie of the Port, feated on the Westerne coast of the Hand, is fiftie or fixtie leagues from Saint Dominicke, as betweene the North and the Weft; the chiefe Knight Niebolas of Onunda

The Citie of the Conception of the Valley, is in the Kingdome of Guarineex, which the first Admirall Don Christopher Collon built, neere to the which he obtayned the victorie in the great bartaile of the Valley Royall: it is twentie leagues from Saint Dominicke to the North-east, where is

a Cathedrall Church (although there is no Prelate, for it is wnited to the Church of Saint Dominicke) it hath one Monasterne of religious Franciscans, where is the wood of the Crosse which the The wood of the Croffe of Indians could not burne, cut, nor ouerthrow, which hath done many miracles. the Valley. Saint lago de los Canalleros is ten leagues from the Citie de la Vega directly to the North-eaft: Saint lage de

it was first a Fortresse which the first Admirall made in the Countries of the Cacique Guaracoust

It was more retresse when the next comment make the countries of the Cargos Unanaemil, for the fecuritie of the Valley, and the Fort Magdains which was four leagues of.

The chiefe Knight of Alessama, Niebslas of Onanda, An. 170.2 did people the Port of Plass in the North coasts, sue and thirtie or about fortie leagues from Saint Dominick, because the flags. of Castile might more commodicully trasficke, and because it was no more then ten leagues from the great Valler. where in other ten leagues stood the Village of Saint lames, and the Conception within fixteen, and within twelue the Mynes of Cibao, and it was of the Bishoprick of the Valler, the Port of Plate stands in little more then twentie degrees. The Village of Monte-Christe. is in the coast of the North fourteene leagues, to the West of Port of Plate, and fortie from Saint Dominiche, is of the Bilhoprick of the Valley; it hath a good Hauen, and certaine falt Pits in it; 20

Nicholas of Ouando did build it. LA Habella There was in old times in this lland the Citie of Ifabella, now difinhabited, which the fift Admirall built the yeere 1493, the Village of Verapaz in Xaragua, which James Velazques built La Verapaz. in the yette 1503, and the lame yetre peopled also Saluatierra of the Zabana, which fignifieth Playnes and Passures, in the Indian language: and that Province is plaine and faire. Hee also The Maguana,

peopled (betweene the two mightie Rivers Nepba and Tagni) the Village of Saint lobs of the Magnana, in the middeft of the Iland, where the Church continueth yet; and heere reigned Coanabo, who tooke Alfonso de Oieda. Hee also planted Villannena de Taquine vpon the Hauen, where Ords call himselite to fivin, being priforer in a ship, with two pairs of fetters; and it stands in the South coast, which the Admirall did call the Coast and Hausen of Brasile. The VII-30 lage of Bonao is necre vnto Cotay, which the first Admirall also built, where hee made a Fort for the securitie of the Mynes, which were the first that were found in this Iland. The Village

This land fourthed of much, that there were in the furthern chound a Castillane, may of
This land fourthed for much, that there were in the furthern chound Castillane, many of TADOO . SACRI-### there were them Noble people, and the Plantations of other parts which happened afterward, caused it to in the Hispania be difinhabited, for from it, and from the lland of Caba, went all the substance for the new Coun-

treyes that were found. The Ports, Roades, Capes, and Points most famous, and the Hands pertayning to the Coast of this Iland, are in the South Coaft, the Point of Nizae, ten leagues from Saint Dominicke to the 40 West. The Port of Ocoa, eighteene, which is a Bay where the Fleets which goe for Noua Epanis doe anchor and take refreshing, when they doe not anchor in the nooke of Zepezepin, Puerto Hermofo. Which is neere vnto it, or in another which they call the Faire Hauen, two leagues before they come to Ocea. Azus a Port and Towne twentie four leagues beyond Ocea la Calongia, a large

Point thirtie leagues, right against the Hands of Boats and Altobelo, fine leagues from the Coast, and the Beatados. Tagnimo about thirtie foure more to the Weit, and Abaque, an Iland neere the Cape of Tiburon, the furtheft West of Hispaniola: la Nabaza ten leagues to the Sea East and West from the Cape, and Cape Roje twelve leagues from it to the North : the Rookes, or Hermans; Trees, Ifle Oucillos neere the Coast that turneth to the East: Commite another little Hand betweene thefe, and Guanabo another Iland of eight leagues in length, in the nooke of Taguana. The Port 50 and Cape of Saint Nicholas, the furtheft West on the North fiele of the Iland, A little further the Port of " Mofquitos, in the North Coaft, and twentie leagues forward the Port of Valparayfe, or of the Conception, North and South, with the Tortuga an Iland neere the Coaft of hue leagues in length : Port Royall twelve leagues to the Well from Monte-Chrifte, which is as much. or a little more before Isabela, and this from the Port of Plate, other twelve leagues: Cabo Frances, and Cabo del Cabron, in the turning, which the Coast maketh to the East, before the Gulfe of Samana, which entreth fine or fixe leagues the Land inward, vnto the place where the Towne of Sanita Cruz flood. And in the River of Samana, was the first time that Armes were taken against the men of the Indies; because they would have done violence to the first Admirall. The Cape of Deceit, (Cabo del Enganno) is the further West of the Hand where the Coast returneth 60 by the South to the West, at the beginning of the which stands the Saona, an Iland which the fleets doe reknowledge, when they goe, and somewhat more towards Saint Dominiake is another little Hand, which is called Saint Katherine; and all the names rehearled were given by the

The Hand of Cuba which first was called luana, or loane, by the Father Don luan, and after Cuba. it was commanded to be called Fernandma by his Father. The Captaine Sebastian of Ocampo, made an end of compassing the yeere of our Lord 1508. by order of Nicholas of Onando: for entill then it was not wholly believed that it was Land, and the yeere Tell. the President Lames Velaz ques went ouer with three hundred Spaniards, by order of the second Admirall to pacific it. It hath two hundred and thirty leagues from the Cape of Saint Antonie, vnto the Point of Mayzi, going by Land, although by the Sunne, and by water there are not fo many. It hath in breadth from the Cape of Croffes, to the Port of Manati, fortie fine leagues, and then it hesinneth to threighten, and goeth to the last Cape, or Occidentall Point, where it is narrow, of 30 rwelue leagues, little more or lesse, from Matamano to the Anana. Her fination is within the

Tropicke of Cancer, from twentie to twentie one degrees, the Countrey is almost all plaine. with many Forrests, and thicke Woods: from the Easterne Point of Mayer, for thirtie leagues it hath most high Mountaynes, and likewife in the middest it hath some, and there runne from them to the North, and to the South, very pleasant Rivers, with great flore of fish. On the South fide it hath the little Hands, which the first Admirall called the Queenes Garden, and the other on the North fide, which lames Velazquez called the Kings Garden, the trees are of many differences, and wild Vines as bigge as a man a they gather do. Wheate nor other Seedes of Spaine. but great abundance of Cattle : it hath great Copper Mynes, and of Gold, and is it found in the

Rivers, though it be base in the touch. 20 James Velazquez peopled first the Citie of Saint James in the South Coaft, fortie leagues from S. 1840. the Cape of Tiberon, which is in Hiftaniela; and two leagues from the Sea, neere toa Port. one of the best in the World, for securitie and greatnesse. The Citie came to have two thousand Inhabitants; now it hath few with a Gouernours Deputie: the Cathedrall Suffragane to Saint Domingo, is resident in it, and a Monastery of Franciscas Priers. The Village of Baracea, is a Towne Baracea. furtheit Eaft of the Hand of Cute, at the beginning of the North Coaft 60 .leagues from the Citie of S. James toward the East North-east, which was also an inhabiting of the President James Velarquez. The Village of Bayame, which lames Velazquez also built, is 20. leagues from S. lames to Bayame the North-west, it is the foundest Town of the Hand, of a more open soyle, and of a good disposition, The Village and Port of the Prince, in the Coast of the North, is about fortie leagues from Puerts del Prince 30 Saint James to the North-west. The Village of Saints Spiritus, is a Port on the South side. betweene the Trinidad, and the Cope de Bases Percalle, of Figurea, about fiftie leagues from Saint Said Spirita.

Lames, a Colonie of Lames Velazquez. The Village and Port of Saint Christopher of the Albana, is in the North Coast, almost opposite to Florida, in twentie two degrees and an halfe is height, of more then fixe hundred Houholds; where the Gouernour refides and the Officers Royall. The Port is maruellous in greatnesse and securitie , especially fince that King Philip the Second , the prudent, fent the Campe-mafter lobn of Texeda, and Baptifla Antonelli, to fortifie it : in it all

the Fleetes of the Indies doe meete for to come for Spaine in company. It was first called the the greeces of the same a man lane; Falazquez built this Village, and all the ref to the land, with Parts de Ca-Port of Garonna: and Lame; Falazquez built this Village, and all the ref to the land, with Parts de Ca-Port of Garonna: and Lame; Falazquez de La Cafar, which afterward became a Dominieky Frier, remain and Bishop of Chiana.

The Ports and Capes, and point of the Coast of Cabe, and the Illands belonging to it besides those which are rehearsed are in the South Coast, the Port of the Citie of Saint Sames in twentie degrees, and twentie five leagues to the West: the Port of Santis Spiritse, Cape of the Croffe twelve leagues forward, and the Queenes Gardens, which is a great shelfe of Ilands and shoales: the Port of Trinitie in twentie one degrees, about thirtie leagues from the Cape of the Croffe, and ten more to the West, the Gulfe of Zagas, a great defence with some Hands, in the middest, and forward the Two Sifters, two Ilands at the beginning of the great shelfe, and Ilands, and shoales, which they call Camarco, betweene the Coaft and the Ilands, which is of ten leagues in length, 50 and seven in breadth twelve leagues from the Cape of Correntes, which is as many from the Cape

Saint Antonie, the furthelt Weft of this Hand. In the North Coaft fraudeth the Port of A- Wherefore it bana, and thirtie leagues to the East is the Port of Slaughters where was a Towne, and was called the ledde Matanças, of the Slangueers, because the Indians killed certaine Spaniards, which they car . Staugheers, ried in their Canoofe winder securitie to the other side, only one escaping, and two women whom they kept sometime with them. From the ' Maranças to the Port of Tucanaca, are fiftie ' Or Slaughleagues to the Kings Garden, which is a great shelte of little Illets and shoales, and at the end of ters. the Iland Obabana, eight leagues before the Port of the Prince, foure or fix from the Port of Fernando Alanse, and fix to the East of this, Cubana which is a point. The Port of Varocoa is about twentie leagues before the point of Mazzi, the fartheft Welt of Cuba, and the hidden Port and Gulfe neere to Cape f Rois, in the South-coaft, about twentie leagues from the Port of Pidge- f Or Red. 60 ens, which is about ten leagues from the Port of Saint I ames.

The

the first time avainft Indiane

El Bando.

La Ruenaueu

THe Iland of Iamasea was so abundant of victuals, and breedings, that it gaue great pro-uision of Cotton, Hories, Swine, and Cazabi, for the new Discoueries, and the first Admi. sall called it Saint Iames, when hee discourred it; and the first that passed to inhabitit, was the Captayne Ishn Efquuell, the yeere 1509. by order of the second Admirall Dom Diego Colon, It flands in seuenteene degrees and an halfe of altitude in the middest of it, and twentie leagues from Cobs to the South, and as many from Hift aniels, direct to the West. It hath in compasse one hundred and iffice leagues, it hath East and West fiftie, and twentie in breadth. There are in Simil, Melilla, it three Villages, Simil in which is the Seat of the Colledge, toward the North Coast somewhat 8. Oriflen, inha- Westerly; John Squinell a Gentleman of Simil peopled it : Meltilla, which stands in the 10 North Coast, fourteene leagues from Simil to the East: Orifton in the South Coast towards the West fourteene leagues from Simil, and are Plantations of the President Francisco de Garage which gouerned in it. But of the Towne dela Vega, whence the Admirals Lords of this L. land tooke the Title of Dukes, nor of other two Plantations painted in fome Maps, there is

Cape of Mo-

There is in the Coast of this Hand, the Point of Moranta the vetermost West of it, by the North Coaft ten leagues to the Weft, the Port of Iama, and tenne leagues forward the Port of The first civil Melilla, where they say the first Admirall arrived, and called it Santa Gloria, when hee returned warre among loft from Veragua; and heere happened to him the mutiny of the Porras of Simil and it was the the Speniards, first Civill Warre of the Indies. Other ten leagues thence standeth the Port of Simil, before the was in langua. Point Neerillo, from whence the Coast windeth, vnto the Cabo de Falcon, neere to Oriston, and goeth by the South to the Port of Guayans. And fine leagues from this Coast, are the Harmingat, a dangerous shoule, and seven leagues further las Viunas, small llands compassed with thoales, and to the South of them the Serrana, and a little Iland compafied with shoales, with other foure or fine neere vnto it, and to the North-west of it, the Serranille, and to the West of it the Roncador, another Rocke, and to the South-west of it, Saint Androwes, an Hand compasfed with shoales North and South, with Nombre de Dies, about fortie leagues from it, and neere from thence another called Santa Carilina, the . Commes directly West from Jameses, twenn Or Linguids.

Or Negrillo. tie flue leagues from the little Blackmoore, which are two little Hands fixe leagues the one from the other, and the great Common another Hand of feuen leagues in length, fifteene leagues an p Or open the from the Caymanes to the West, and to the North Coast, betweene Caba and Historials another

fhoale which is called P Abre-oio.

twelve and fifteene leagues from Hispaniela, to the East, of fortie five leagues in length . East and West; and from North to South, betwire twentie and thirtie, very plentifull of all that Hispaniols hath, and of Millet, Yuca, and of Mynes of Gold. The temperature is good, and almost one all the yeere, except in December and January. There is in it three Spanish Townes. with a Government, and a Bishoppricke : the Prefident lobn Power of Lion passed to discover this Iland the yeere 1 908, being Gouernour in the Province of Tyney, for Nicholas of Onando in Hifpaniola, and returned the yeere 1510. by order of the King to people it. The Citie of Saint 40 lobn, is in the beginning of the North Coast, on the East fide in eighteene degrees of height, and they call it of Port Rico, for the excellencie of the Hauen. The Bishop and the Governour are refident in it, and the Officers of the Kings Revenues : and it is Suffragane to Saint Dominge. Arrecibo ftands thirtie leagues to the West from Port Rice: the Towns of Guadianilla or Saint German the New, in the Westerne Coast three and thirtie leagues from Port Res to the

There was in old time in this Iland another Towne which was called Guanica, in the South

Coaft, at the end of it where now is the Port of Magains, which is very good, from whence it was removed to another fituation of the Westerne Coast, which they call Agrada, or the Was

the Manice, and Zeches, other two little Hands : the Port of Pines, and the Port of Mayne nez and the Bay of Saint German the old, and the mouth of the Ruer Guenabe, or the Watering, and that of Guadataca more forward, and afterward in the North Coaff, that of Camer, and of Cahere, and Tos, neere to Port Ries, and in the middeft of the Coast of the South Sea, leaning water it the Haberianas, foure or fine little Hands. There is also much Ginger gathered in this Who carried vnto it the Habersanas, route of the little larnes. The brought from the East, the Ginger to the land, which is a Root like vnto Madder, or Saffron, which the Portugals brought from the East, the Ginger to the lands of to this Hand of Barlemente.

this Hand of Davissmen.

The Hands which are to the North of Saint Iohn, Hispaniola, and Cuba, of which none is Bhellands of Bhellands of inhabited with Spaniards, are called the Lucayor. One the most Septentrionall, is about twen-the Empto. 10 tie feuen degrees of altitude, which is called Lucayoneque, or Tucayoneque, which bath almost to

the West Babanne another lland in twentie fixe degrees and an halfe, of thirrdene leagues in length, and eight in breadth, from whence the Charmell of Babama betweene Florida and the Where the finales Deles Minister talerth the name, whereby the Currents of the Sea doe goe for with the Channellof the North, that although the wind be prosperous the ships cannot enter it, and although they Babonais. be contrary they goe with the Currents. e contrary they goe with a self ocalies of an Iland in the middeft of them, of five leagues in length, Earn de Binisi

which the first Admirall gave the name the first time became to fabe, and it is that which fobs Paul of Lyon didagree to inhabit. Abacoa, is another in the middeft of the faid fhelfe of twelve leagues in length : Cigateo of twentie fine. Cigateo , another fmall lland in twentie fixe de-

20 grees: and Guamma fireene leagues of length, and sen in breadth, and neere vnto it Guanabani, Guanabani the the first Land of the Indias, which the first Admirall discouered, which he called Saint Sanions; first Land that the first Land of the smart, where the mitt notation are recovered, which the talks of the smart, but the first land of tweener leagues, and eight in breath, in twentie four degrees and an halfe, which waidfourers I smart of tweener leagues, and eight in breath of the famous Queene Bound I shells his particular Prop in the fadon, the Admirall tumoud Jabobs, in becour of the famous Queene Bound I shells his particular Prop in the fadon, the Admirall tumoud Jabobs. tectreffe, and that gaue him this Dikouerie. Immeto in twentie three degrees and an halfe, fifteene leagues in length, to the North of Hispaniola, Samana feuen leagues over, betweene Inmete and Guamma, three square of eight leagues in length, in twentie foure degrees, Tabaque of ten leagues, in twentietwo degrees and an halfe. Mina-par-vos, are three little llands in tris angle, compafied with fielues, to the South of Immete. Mayaguana, twentie leagues in length and ten in breadth; iss twentie three degrees. Trages of ten leagues, in twentie degrees and an 30 halfe. The Carear, an Hand of five leagues, in twentie one degrees, and to the North of it is an-

other, called Hanana, and another Concina. Majarey flands in twentie degrees compaffed other, called Hamana, and amounter Constinue. Createry manes in twentie degrees compalied with findness. Abrevious a great fields of fifteen legues, the middleft of it in twentie degrees, and among their llands are many little ones without name.

The Handsthat are from the Hand of Saint lobe of Porte-Rice, to the East of it, toward the The Handsthat are from the Hand of Saint som of Porte-Rice, to the East of it, toward the The Louised coaft of Terra firms, were called the Canibels, by the many Caribes exters of humaine field that Ortalism coart or 1 erraprise, were caused the community of the many convergences for them and in their language, Cambba, 1 co by Pallows sizes; for they were held for lich America.

Or thought of the control o Sentle Cruz, to the South-west from it, in 16. degrees, and a halfe of fixteene leagues, and Set bell fignificht. ba las Virgines, two little illets compaffed with fhelies, and other eight or ten Hands, the greatest

of ten leagues: Virgen gords, and the Blances or White Hands, Westward from Virgen gords, La Ane gada, of seuen leagues in length, in 18. degrees and a halfe compassed with shelues, as Sambrero is, a little lland neere vnto it : and these llands which are called the Weather llands or Men hunger. Barlouento, the first Admiral discovered : and in particular, the men of Santia Cruz, and others, had a custome to goe and hunt for men to the lland of Saint losm, for to este, and at this day they of Dominica doe it. They did eate no women, but kept them for flaues. Now they fay, that within this little while, they of Deminies did cate a Fryer, and that all they which did cate his field, Frier von his had fix ha fluxe, that fome dyed, and that therefore they have left eating humane fieth : and it fome food. may be, because instead of men, with lesse danger, they steale Kine and Mares, for the great quantitie there is of them, and with this they fatisfie their raging appetite.

Anguille hath ten leagues of length, it standeth in 18 degrees. Saint Mertin in 17 degrees and a halte, it is of fixteene leagues, compafied with little Illess: and neers vnto it Saint Emflace, Saint Bartholomer, and Saint Christopher, euery one of terme leagues. The Barbade in 17.degrees and a halfe, compafied with thehies, neere to the Redonds and the Snowes or Niewes, and grees and a name, companies many one, in 15 degrees and a halfe. The Antique, Guadalope, of CM Conference, of the leagues energy one, in 15 degrees and a halfe. The Antique, Guadalope, about fixe and Tada's Santa-from 14, to 15 degrees. The Deffends to the East of Guadalope, about fixe leagues, the first which the Admiral Dan Christopher discoursed in the Island Voyage that the made to the Indies, in 14 degrees and a halfe, for which the fleete goe al wayes from the Canaries. Marigalante, the name of the Shippe the Admirall had, five leagues to the South-west from the Defired, and from the Dominica, in 13 degrees, twelve leagues in length, where the

60 Fleetes take in water and wood, for it hath good roades, although with danger of the Cambals. Neers vnto Deminica to the South, flunds Marinino, Santia Lucie, and the Barbudys, the which because they fall on the left hand of the Fleetes, when they goe, they call them already of the Ilands of the Leeward (de Sosauento) which appertaine to the coast of Terrafirme: and of them the greatest, the first, and the most Orientall is the Trinidad, neere two hundred leagues from

A 4 5 3

Historicla, North and South with the Dominica, about fixtie leagues from it. It hath fiftie The di conery leagues in leangth East and West, and almost thirty in breadth. The Admirall discoursed it the of the Hand of years 1498, the third Voyage that he made to the Indies, and called it the Trinitie, because hathe Trinitie, uning great trouble in the Voyage, he had promifed to God to give fuch a name to the first Land that he should finde, and presently the Mariner that was in the top, saw three points of Land. whereby the name fitted enery way to his vowe: then hee discouered also the mouthes of the Dragon, and of the Serpont, the gulfe of Paria, and all the firme Land vnto Commana, which in-

infile American Vesputio claimes to himselfe, whose name vinworthily is given to the port which they call Peninsula Australis or Indies of the South. This Iland of Trinidad is knowne that it is no good Countrie, though it hath many Indian; it hath thirtie fine leagues of longitude. and others say more, and twentie sue of latitude, it stands in 8.degrees: the most orientall pare of it, is a point on the North fide, which is called de la Galera : and to the North of it a small I. landar compassed with little Iles, which they call Tabago : and in the South coast a Cape which they call the Round Point : at the East, the point of Anguille, at the West in the gulfe of Paria, which is that that is from the lland to Terra frame, which may be eight leagues of diffance, he cause the firme Land maketh an oblique semicircle, as a Diadem; and in the entrance of the Rast is the distance recited; in the entrance of the West, the straightnes is much, and with great depth. and two little Ilands at the end of the North coaft; by the West, which is called the Dragons month; and to the North S. Vincent, and Granada, other two little Hands. The Iland of Margarita, to named by (Irristopher Colon, the first Admirall (as also all the rest, a most inficient proote of the Finder, to the contusion of those which deprived him of the glory

of the discouerie of the firme Land, attributing it to themselves, although changing the times) it is twentie leagues from Trinidad Westward, and one hundred and seuency from Historials; in hath fixteen leagues in length East and West, and yet some say twenty, and the halfe in breadth it hath no flore of water, although it is very plentifull of Pastures for Cattle. There is in it two Townes, one neare the Sea, which reacheth to a fortreffe where the Gouernour is refident, and another two leagues within the Land, which is called the Valley of Santta Lucie; there is in his coast a good port, and a nooke, and many beds of Pearles, whither the fishing of them is remoued, which before was in Cubagua, and they fay it went away from thence, for the rumour 30 Wherfore men of the ordnance of the many Shippes that reforted to this Hand, to the trafficke of the Pearles, do fay that the which was very great. Cubaqua stands one league from Margarita to the East, there is no water fifting of the in it, and yet the new Cadix was built there, and they carried their water feuen leagues, from the River of Cumana. To the Kast of Cubagua are foure little Illets, close by the shoare, which the first Admirall called Los " Frayles : and to the East betweene them and Granada, other foure of cubequato the nert Admiran caused Los Fragios: and to the Latt ortweene them and Granada, other toure the Materiala, or five, which he called (Los Testigos) the Witnesses, and to the West after Cubagua, another lit-Handof Cuba tle Hand which he named (Tortuga) the Tortugfe, neere to the point of Araja: and from hence the discourry being made from below Paris, he went to Hiffaniols, with a purpose to finish the discourry being manerrom usuow a semantic that be seen, he went after to discourr, and Orthe Frient the discourry of Terras from: and as here after thall be seen, he went after to discourr, and the discourry of Terras would be nafted Nombre de Dior. The found the Hands of the Guanaies, and from before Veragua, untill he passed Nombre de Dior. The 40 Officers and Royall treasure are in Margarita: and it, and the Hand of Cubagua, are in elegen de-

I with the new Andaluzia, from whence to the River of Haeba, and Government of Santia

it, because when the Belzares , Almaines, went to gouerne in this Province the yeare 1528, by

a couenant which they made with the Emperour, they thought to inhabit in a Rocke and hils

that are in the mouth of the Lake of Maracaybo, where it falleth in the Sea, a Towne which

they named Venezuela. It stands in 8 degrees, a little more, and from hence the Couernment

tooke the name. His first Towne is the Citie of Core, which the Indians call Coriana, which commonly they call now Venezuele, it stands in II. degrees of altitude, and 79. degrees one third part

from the Meridian of Toledo, one thousand and five hundred leagues from it : here the Governor

is wont to be refident, and there is the Cathedrall Church fuffragane to the Archbishop of S. Do-

miniche. John of Ampues built first this Citie, and then those that went for the Beleares made 60

He Gouernment of Venezuela parteth the bounds in the coaft of Terra firme, to the East. Chap.8. Martha, with which it ioyneth by the Weft, is an hundred and thirty leagues, and within the newFlorida, and Land about eightie, vnto the bounds of the new Kingdome of Granada. In this Countrie are vaines of Gold of more then two and twentie carracts and a halfe : it is plentifull of Wheate, because there is two haruests in the yeare, and most abundance of all kinde of Cattle, great and is the reft that fmall. There goeth from this Prounce great Rore of Meale, Bisket, Cheefe, Bacon, and much So Cotten-linnen: and in the port of Gasyra, in the Prouince of Caraea, are laden many Coweremainerh of the limits of this Counfell. Hides, and Sar [aparilla. There is in it eight Spanish Townes : and the name Venezuela was given

grees, a little more.

Wherefore in was called the. nezuela,or lit-

The Citie of

their abode in it, the first was Ambrofe Alfinger : it is so healthfull, and of so good an avre, that there is no neede of Physicians. The fecond place is our Lady of Carnalleda, in the Province of Caracas, necreto the Sea, East from Core eightie leagues, and with a bad Hauen : Don Prageifes Faierde built it the yeare 1560.

CHAP. I. Herreras Description of the Spanish Indies. Vene zuelas Gonernment. 867

which went for that purpose from the Margarita. S. lames of Lyon in the same Province, fepen leagues within the Land, and three from Carnalleda to the South, and fixtic from Coro. S.lago de Leon. where at this time the Gouernour is most residence. The new Valencia fixtie leagues from Core. and twentie five from S. lames of Lyon, feven from the port of Burburata, The Captaine Villa. cinda peopled it. The new Xerez about infreene leagues, almost South from the new Valencia, and Xerez, twentie from the new Segonia, and fixtie from Core to the South-east, a new Towne. The new Seconds, in the Prouince of Bariquizimite, twentie leagues from Xerez to the South , and tenne Tucine. from Tuenyo, and eightie from Coro to the South-east, where the Officers royall, the Gouernour. and the Lieuetenant are refident at times: John of Villeges peopled it in the yeare 1572. The Citie 10 of Twenyo is famous, because in it they slew the tyrant Lope of Agaire, it stands tenne

leagues from Segonia, to the South-west, eightie fine from Core; it is the habitation of the Captaine Carnajal. Truxillo, on our Ladie of Prace, in the Prouince of Cayess, about eightie Trutillo, leagues almost to the South, direct from Cere, somewhat to the East, and twencie fine from Tasuyo, directly to the West. The Auditor Valley discovered this the years 1 249; the Bacheller Tollofs being Governour in

it ; and the yeare 1 cco. the Captaine lamer Gareia of Pareder inhabited Traxillo : and there may be in this Gouernment more then 10000d. Indier tributaries, and in themare not comprehended from eighteene vnder, nor abour fiftie yeares, because the supreme Counsell of the Indee hath prouded, that in no place of this Orbe, these doe pay tribute: and because darly 20 they increase and diminish in number, it cannot be said precisely and perfectly how many

The Lake of Maracaybo, which the Castilanes call of our Lady, is of fresh water, it entreth The Lake Mefortie leagues within the Land, from the Sea, and hath more then tenne in breadth, and eighty racque, in compaffe, with many Townes vpon his Borders in the end of it entreth a River that deicendeth from the new Kingdome of Granada, by the which, and the Lake, Marchandile are transported which came to the new Kingdome of Castele, and to other places; some of the men of this Lake doe line in Boates, their houses being made in the Trees within the water, and at the Border, whence it tooke also at the first, the name of Venezuela; sayling by some parts of this Lake, ye can fee no Land : there enter into it other great Ruers, it runneth to the Sea . it hath

about halfe a league of mouth, and in it the shoale and rocks about faid. The Ports, Capes, and Points of the coast of this Government, and those annexed vnto it, are The ports and to the Well, Marcapana, the Frebila, an Ilina against the River Operare, neer to another called points of the Recke of the Hary and afterward the Cape of the Codera, and Parite Fleebards, and the hance of Generament Sardinas or Pilebers: and opposite the He of Aues or Birdr, before Burburata, a maruellous ha- of Ventue a uen, which the Bachiler Tolefa peopled, and is a Scale or Port for the new Kingdome (Nueno Remo & Prouinces of Pers, and after that is Gulfo trifle, and to the North of the Bonagre, an Iland of ten leagues in length, and eight in breadth, and afterward Punta feca, and right against it Caracao, and a little forward Caracaute, toureteene leagues in length, right against the Cape of S. Roman to the South of the Hand of Aruba. S. Roman entreth twentie leagues into the Sea, it 40 Randeth twelue from Coro, the Indians doe call it Paraguana, it lacketh a little to be an Iland : it

may haue in compasse twenty fine leagues and more of plaine ground, with a Mountaine almost in the middeft : it is discourred a great way into the Sea. There is at the beginning of the Gulfe of Venezuela, the entrance and channell of the Lake of Marscapho, and at the entrance of it the River Muare, and to the West the Montes, three little Hets close by the Point and Cape of Coquibocoa, where onely in all the Indies was found waight and touch for the Gold, and afterwards the deepe Baye (Balna Honda) and the Portete, the Cape de Vela, which the Captaine Alfonfus of Ojeda named, when Americo Vefpneio went with him the first time, much after that the Admirall discourred this coast, which stands in 12 degrees, somewhat more. And there is from the Cape de Vela, to the River of Hache eighteene leagues, without any stone in them, nor water, but raine water. This Gouernment remained destroyed, fince the time of the Almamer, because they would not inhabit, onely feeke to make flaues, and to waste the Countrie. They called first the River of Hache, our Ladie of the Snowes, and after of the Remedies, neere

wnto the Sea, betweene Venezuela, and Saulta Marta, to the Eaft, thirtie leagues from it, and fixtie from Core to the Welt, North and South with the Care de Vela, with eight leagues of bounds betweene Venezuela and Sanda Marta, without howes of Gold. It is governed by Alcaldes immediate to the Counsell of Hispaniola, and the Spiritualtie is of the Bushopricke of Santia Marta. The Towne is 1000 paces from the Sea, on a little hill ; the Hauen hath the North for trauers, it is a most ferrile Countrie, and yeeldeth whatsoeuer is in Cafile : there are many Tigers, Beares, Ants, and Lizards in the Rivers, much Gold, and Stones of divers vertues, for the Spleene, 90 the Kidneys, for the Milt, and Flix, and they have good Salt-pits. Nicolas Federman for the Belzares, was he that began to inhabit this Towne. The government of Serpa, which they call the new Andalucia, and in the indian Language Guayana, extends the limits From the lland of Margarita vinto the river Mas aujon, three hundred leagues to the Eaft, and as many North and South within the Land , wherein the Indians Omagnes are included , and the Omyga,

with the Prouinces of Dorodo, to the fouth of this Gouernment , wherein falleth by the Coaff the Province of Maracapana, in the bounds of Veneculela, where the mouths of Santia Fe were inhabited in whole Borders is the knob of Unere, and neere vnto it a great Lake with great flore of fish and falt, and the Indians which are called of Perso, twentie leagues within the Land and the Indians Palenques, fo called for the Poles wherewith they fortified themselves, and the Prounce of Cumana, North and fouth with the Margarita, where is a Towne of Spaniards, which is called new Gordona, which the Captayne Gongalo of Ocampo built, when he went to chaffife

the Indians of Cumana, for the destruction of the Monastery of the Religious Franciscans, And to the East or the lland of Trinidad, and the River of Saint John of the Amazones, is the Prounce of the Indians Armaca, part of the Camballs, and all Warlike, that neuer are quiet or

After the point of Paria, which stands in feven degrees, and the Dragons Month necre was Trinidad frands the point Del Galle, or Anegada, to the South of the Trinitie, and the River of Paria, or Orinico, which some call Tayapari, and others will have that thefe two, and the River of Saint lobs, and of Orellans be all one thing, and also the Maranyon; but in this they are deceined. There be other Rivers in the Province of the Arnaca that are well knowne , the River of Saint lobn or of Orellana ipringeth in the Andes of Perse, right against Cauce, from whence it runneth fifteene hundred leagues, or more, winding vnder the Equinoctiall, by Countreves well inhabited, though not well discouered, till it came to run into the North Sea, whose mouth hath in breadth fiftie leagues; and in the first five hundred from the mouth vpward, many llands inhabited; and eightie or a hundred leagues more to the West, stands the River of Moranne al. most in the bounds whereby passeth the Line of the Diussion betweene Cakile and Portugall and is great and terrible, having fifteene leagues of mouth, and the ftreame commeth from the paris of the South, and the Provinces of Brafill, and they fay that the spring is vnder Popayan, and the bounds of the new Kingdome of Granada,

The Iland of

Seuen leagues from Cumana stands the Hand of Cubagua, where stood as was faid, the new Cadiz, which was difinhabited because the fishing for Pearles fayled: this Iland had no water that could be drunke, nor trees, nor beafts; for all is brackish, except those Hogges that have Strange Hogs the Nauell in their backe-bone, and some small Conies, and having so great inhabiting, they went feuen leagues to the river of Commons for water, although there was an opinion that it bred webbes in the eyes. In this River and coast, happed in the yeare 1530. the first of September, 30 Terra firme, the the haven being cleare, the Sea did rife foure fadomes from his ordinary course, and entring into yeare 1530. vo. the earth it began to shake, and the fortresse which the Captaine Jacome of Castellon had built ry admirable by order of the Counsell of Hifteniela, fell, and the earth did open in many places, whereout forang much falt water as blacke as inke, and did ftinke of brimftone, and the mountaine of the gulfe of Cariaco remained open with a great rife : many houses fell, many people died drowned, and with feare, and taken with the earth quake. Margarita one league from Cubagua a more pleasant Hand, the Bachiller Marcelo of Villalobos did people it.

Marenit. Florida.

The Propince and Government of Florida, bordering on the Counfell of Hisbaniola, according to the Government of Peter Melendez, is all that which lyeth from the River of Palmes, which doth confine with the Government of Panaco in new Spaine, limits of the Counfell of Mexico, 40 which is neere the tropicke in 22 degrees, voto the point of Bacallass, which falleth in 48. degrees, and a halfe, in the which are 1258.leagues of Coalt, and from thence to 73. degrees of altitude to the North by the Coast, and within the Land all that which hee discouereth. Of this hath beene coasted and discouered, from the River of Palmes vnto the Point of Santta Helena. and the Ruer Iorden, which are about 600. leagues, it is a firme Land of a good climate. plentifull, and well inhabited in many places, as those that went through it with Hernands of Soto did know it the yeare 1536, and 1537. John Pards borne in Cuenca, went by Land from Florida to new Spane, in leffe then two yeares, and it is the neerest Europe of any part of the Indies, & from the Bay of S. Isleph, which is eightie leagues from Panaco. There is also discouered vnto New found Land, but that which is particularly taken for Florida, is the point that goeth into the Sea North 50 and South, with the Hand of Cabe, of a hundred leagues in length, and twentie five in breadth East and West, and (when it is most) thirtie. John Ponce of Lyon discourred it Anno 1 512. on Eafter day, and for this cause he called it Florida: and afterward returned the yeere 1 ; 21. and retired wounded to Caba, where he dyed, leaving a report that he fought the Fountaine or River which that renued the the Indians faid that old men washing themselves therin, became yong. This Province is according to the temperature of Caftile, and many fruits were found there like the fruits of Spain, and it feemeth fit for Cattle and Corne. There is no Gould, neither feemeth that the Indians did know it, nor Silver afor it hath beene seene that they have found the Chests with bars of it and money in ther Gold, Sil. their coafts and made no account of it : yet Hernando de Soto, within the inward parts of the 62

uer, nor Monie. great River, found great abundance of Pearles. There are but two Fortreffes in this Prouince with men in Garison, both in the Coast that looketh to the East: the one is called Saint Make, in the point of Saint Helena, about one hundred leagues from the Hanans, and another of Saint Augustin, which is the principall, because HONDIVS bis Map of Florida.

40 the hauen is good, and is neere the channell of Ballama. It flands about fiftie leagues from les Martyres, which are many little llands inhabited, which are neare the point of Florida, whereby it ioyneth most with the Iland of Caba, a league and a halfe, and lesse, the one from the other, and Points of with a ranke of thelues with mouthes, in twensiethree or twentie four leagues, which thefe Florida. Martyreshaue in length; whose beginning on the West side, is called the Point of the Martyres, and to the East, the Head of the Martyres; and there is an Iland of foureteene leagues in length, and very narrow, the Point of it is the first of Torra firme to the East, in 24 degrees and a halfe, where a Towne of Spaniards was built, which continued not, and to the North, almost direct the River Ass, and more Northward in 28 degrees, the Point of the Caues, and forward the River of " Gnats, before the River of Matanca, which is so called by that which Peter Melendez did to the Or Malanitus. Captaine Ribas, and his Frenchmen; and the Point of S. Augustin in 29 degrees three quarters, and Shugher of 50 ten leagues from thence the River of S. Mathen, from whence the Coast turneth to the North the French in

ten leagues from thence the Kiner of S. Azarora, from whence the Count United State Hellen, Florida. See
North-east, all with the Ilands and Bays leaning unto it unto the Cape, or Point of Saint Hellen, Florida. See which stands in 22 degrees and a halfe, which was discouered by chance the yeare 1 529. In all the rest of the Coast that is betweene the point of Santta Helena , by New found Land

In all the rest of the Coast that is betweene the point of Santta Helena, by Nier Johna Land The Coast of and the Bacallan, which the Land of Labrador, which reacheth and passet the height of England, the North water there is no Towne nor Government of Spaniards, although by divers times and Nations, it hath the Baccallass. beene discouered and Nauigated, and it is knowne there is aboue one thousand leagues journey of Land without gold, and the more in height the worfe, and leffe habitable. There be many Riuers, and Ports, that because they are not well knowne nor frequented, there is no mention made

60 but of the River of the " Stagger, by another name of Santia Marie, which is a very great and "Or Los Games. maine River, almost in the midit of the Coast betweene the Baccallass, from whence the great The great Ri-River Ochelage entreth within the Land toward the West, which divers times the strangers ver of S. Mario haue nauigated , beleeuing to haue found that way passage to new Spaine. And in the Coast of Florida, which looketh to the Weft, are the 'Tortoffer, feuen or eight Hands together : and to 'Lat Tortuga.

Peace did feeke

"He second Audience which was settled in the Indies, is that of New Spaine, and Nume de Guzonau Canallero de Guadalaiara was the first President, till a Gouernour were provided. and because he gaue no satisfaction, there was another new Councell quickly fent, and for Prefident of it Don Sebaftian Ramirez of Fuenleal, which of a Judge of the Chancerie of Grandle went for President of the Councell of Saint Dominicke, and Bishop of the Citie of the Concepti. Ramirez Indge on of the Valley, a person of great Learning, Vertue, and Valour, Hee had the charge of the Gn. uernment, Iustice, and disposition of the goods Royall, the Warre remaying at the charge of the Marquese of the Valley, with order to communicate with the President, that which appertayned thereto; and betweene them was alwayes great conformitie. The bounds of this Coun-Great confor- cell, on the one fide doth not comprehend that which commonly is called New Spaine, and on 30 mity betweene the other it comprehendeth more, because the new Gallicia, which is a Councell by it selfe, is part of New Spaine.

The Prounce of Tucatan, falleth within the bounds of it, which as now it is, may have in length about foure hundred leagues, from the furthest East of Tucatan, vnto where it parteth bounds with the Councell of new Gallozia, and North and South, about two hundred from the end of the Gouernment of Panaco vnto the South Sea, his bounds remayning open on the North fide, whose principall Prouinces are the Archbishopricke of Mexico, the Bishoprickes of Mechoacan, and that of los Angelos, or Tlascala, and of Guaxaca, and of Chiapa, and the Gouernments of Panneo and Tucatan, with that of Tobosco, and for circuit or commerce, the Ilands Phillipinas, and the dispatch of the Nauigation of China.

New Spaine.

New Spanne is one of the best Provinces of the new World, and the most habitable in a good temper, having abundance and plentie of Come, Miller, and Cattle, and all other necessaries for humane life, except Oyle and Wine, and although in many places of it there is Gold, Silver is most generall, whereof there are many good Mynes.

The Archbishopricke of Mexico, falleth betweene the Bishopricke of les Angelos, and that of Mechoacan, it hath in length North and South, one hundred and thirtie leagues, and in breadth eighteene, which it hath by the Coast of the South Sea, vnto fixtie within the Land, wherein are included the Prouinces of Mexico, and to the North-east of it Lateotlalpa, Mexician, Xilotepeque, and Panuco the most distant : and to the West, Matalzingo neere to Mexico, and Cultepeque the furthest off : and to the East, Tezenco neere to Mexico : and to the South-east, Chalco, so neere to that of Mexico: and to the South of it Suchmileo, the first, and after Tlalue, and betweene South and South-west Coxxes, and Acapulco, the furthest to the South. There are no Trinexition more in all but foure Townes of Spaniards, although in the Province of Mexico are many Spaniards, deferi- ards dwelling in the Townes of the Indians. They called Mexico in old time, Tenoxislanjic flands in nineteene degrees and an halfe of altitude, and one hundred and three degrees of longitude from the Meridian of Toledo, from whence it may be diftant by a direct Line, one thousand seven leagues.
That is, the hundred and fortie leagues, which are eight houres of 1 Sunne: it flands in the middeft of two great Lakes that doe compaffe it, the one of falt water, because his bottome is Salt-petrish; the other fresh having fish, and voydeth into the Salt one; each is of five leagues in breadth, and eight in length, and both doe compaffe thirtie three leagues. They goe into the Citie by three caufies of halfe a league in length, and there are in it foure thousand Spaniards, and thirrie thousand 60 Houles of Indians or more. In the foure ancient streets wherein the Citie was divided, in the time of their Paganisme, which at this day is called of Saint lohn, Saint Mary the Round, Saint Paul, and Saint Sebastian; and the Tlatelulco is the principall street which they call Saint lames.

Tenoxtitlan.

cight hours

eight more to the West, the River of Cittle, and eather source, the River of Ania. In the Couff of the North, it hath that which falleth in the Godernment of Tamee. In the limits of this Councell are the Mynes of Puchuca, fourteene leagues from Mexico, and the Mynes of Talcatwentie vo, those of Mangalo, which are clearly the area we are the Apret of Thompson, which are clearly the area with the and Sails Lewes of the Peace, and in them all there may bee about four chimand Spaniard which as her better with industrie and labour doe attend these Mynes, all of Silver except one, which as her better been said, is of Lead, and procuring that the Indians taking example of them, that live polis to tickly and the first that with marvellous cunning and wisdome, brought in the breedings of cattell and tillages, which have beene the mightielt meanes for the preferration of the Mynes, was the about faid Prefident Don Schaftian Ramirez of Fuenteal, originall and the foundation of all the good of those Realmes.

The Protince of Panace to the North of Mexico, Nume of Guernan had in government; it breeding and hath fiftie leagues in breadth, and in length, and after it was incorporate with the limits of the Councell or Audience of Mexico. The Countrey that looketh toward New Spaine is the beft. plentifull of victuals, and hath fome Gold. That which runneth toward Florids is milerable. from whence till yee come to his bounds, are more then five hundred leagues. This government hath three Spanish Townes, Pannes, in somewhat more then twentie three degrees, and by ano- 20 ther name the Village of Saint Stephen of the Hauen, which Gonçalo of Sandonallbuilt, by order of the Marquelle Don Fornando Carter, when they went to refit Francisco Garay, and to pacific the ladians of Chila, the yeere 1 320, and it standeth fixtie five leagues from Mexico to the North North-east, eight leagues from the Sea, neere to a River whose entry is a Hauen : it is a chiefe Alealdia, or Institution promited by the Vice-roy of New Spaine. The Village of Saint Lames of the Valleyer, twentie five leagues from Painsco to the West. The Village of Saint Lane de Tampico, eight leagues from Panaco to the North-east, neere to the Sea : and although in the Coaft of this government are many Rivers, & fome rode vnto the River of Palmas, they are not knowne in the Gulfe of New Spain, but the River of Panaco, & his hanen, which is not very good.

The Bishopricke of Tlascala, which by another name is called de los Angeles, betweene 30 the Archbishopricke of Mexico, and the Bishopricke of Guaraca, is of 100. leagues, and more in length, from the Coast of the South to that of the North, and betweet the confines of the Archbishopricke, and of Guaxaca 80, and as many in breadth, by the Coast of the North Sea, and no more then 18. or 20. by that of the South. There is not in it all more then three Spanil Towns. which is the City or Towne of the Angels 22. Eigues from Mexico to the East, somewhat in-clining to the South, of 1500. housholds in foure streets: it is a Chiefe Instice-ship where the Cathedral Suffragane to the Archbilhoprick of Mexico is Refident, with Monafteries of Dominicks. Franciscan, and Austine Friers, one of Nuns, & one Colledge of more then coo. Indian children. to be instructed, with 10000. Pezos rent, which the Bishop Don Sebastian Ramirez built, which fent the Batchelor Salmeron Auditor of the Coungell to build this City, and although he had de- 40 termined to have made it in Tisfeste, he lett is becaule he would not endamage the festions, not touch their Lands, for he had a great regard in generall to the good of the Indians, and in particu-

The Citic was built in the bounds of Cholada, from whence went a 2000 mento warre, and it was feated in a Plame called Cuerlaxcoapa, neere to a Valley called Atulco, on the border of a fmall River that commeth out of the & Unlean, where they gather Wheate, Wine, and all the Frmits of Callile, Sugar and Flaxe, and all manner of Herbs. For it is a temperate Countrey, more hot then cold, although the Corne of the grounds neerest the Citie, are to me what blasted : and a little space from Tlascala, spring Pountaynes whence groweth a River that when it commeth betweene the Citie of the Angels and Cholula, it goeth very great and without fish, it past th through the Prouinces of Mechacan, and entreth into the South Sea by Zacatula, and there bee in it fo many Caymanes, or Crocodiles, that they have dispeopled some places.

In Tlascala to the North of the Angels, which stands in more then twenty degrees in height,

where the Cathedrall Church was till the yeere 1 550, when it was removed to the Cirie : the first Bishop was Frier Iulian Garces, the Valley of Atlifeo, which may have in breadth about Athiosfamous, one league and an halfe, where the Corne is neuer blatted, and there is gathered in it about 100000. Haneges, and there are more then 1000. Spaniards that do traffick in it, and 7. leagues from the Citie to the East, is the Valley of Ocumba: and in the Prounce of Tepeaca, the Marqueffe of the Valley built a Spanift Towne, which he called Segura : and in the Valley of S. Paul, may be other 1 300. housholds of Spaniards, in Farmes and Grangeries of cattle, that multiply to much, that there were men that with two shag-haird sheepe came to have about 40000.

La Veracru San Luan di

The Citie of Veracruz, one way stands fixtie leagues from Mexico, and by another fixtie five, it stands one quarter of a league from the Sea, it is of more then two hundred Spanife hou hholds. There is in it Treasurie Royall, and House of Contractation. The Port is called Saint John of VI-

na. a name which the Captayne John Gryalna, which discourred it the yeere 1518, and the frame of the Key that it hath, the Vice-roy Don Antonic of Mendoca began. It is fine leagues from the mouth of the River of Veracruz, between the Coast and the little Hand, which is about one league in compasse, compassed with shelues, and so low that the tydes doe couer it right aeainft the mouth of the River of Saint lobn of Flus. They goe into this Hauen by two Channels the most frequented is that of the Flat, the other is called the Gallifan Channell, which is very deepe, and there the ships doe fasten themselves to a great wall of more then source hundred foor with Rings of Iron and Braffe, and when the North winds are very strong, they are not very fure. The Veracruz flands in eighteene degrees, somewhat more, and there was wont to be to the valoading of the Fleets, and they stayed foure or fine monethes in valoading, because it flands five leagues from Saint Inan of Vina , therefore it is now made in the Port of Bustress. which is from the Port of Saint lohn of Vine about eight hunded paces, and it is finished in one moneth and an halfe, and it is called Buytron, by a House that was there of one called Buytron,

and they begin to make a Towne there in that fituation, There are in this Bishopricke two hundred chiefe Townes of the Indians, and one thousand There are in this Bilhopricke two hundred fiftie fine thousand Tributarie Indians, in thirtie fix hibitect, although there may be two hundred fiftie fine thousand Tributarie Indians, in thirtie fix charges of Doctrine of Priests, and thirtie Monasteries of Dominicke, Franciscan, and Au- Parish or · fline Friers: and in the Coast of this Bishopricke on the North Sea, is the River of Aluarado, Schoole diviwhere the bounds of the Bilhopricke of Guanaca, and the River of Almeria doe loyne neere to fion, San partie 20 the River of Saint John of Vlua, where the Towne of Medellin was built by Andrew of Tapia, the dos de destina, veere 1522. When the Marquelle Don Fernando Cortes fent the faid Andrew of Tapia, and Goncalo of Sandenall, to conferre with Chrispher of Tapia, which had Warrants to take away the Coterment of New Spaine from the Marquelle, and the Factor Salezar, and the Ouer-feer Perralmindez dispeopled. The River of Almeria springeth in the long Rome, in the Provinces of Totonaques, and Micantle, and betweene Mountaynes it goeth into the North Sea, and against this River is the Iland of Sacrifices, which the Captayne Grialua gave the name vnto , and the River of Zempodis to the North from Venerus, and vpward the River of Saint Peter and Saint Paul, which springeth in the same Rome , and the River of the Carones , Tufpa , and Tamiagua,

He Bishopricke of Guaraca (fo called by the Province wherein it is, and Antequera by the Chap. 10. Citie where the Cathedrall is resident betweene the Bishopricke of the Angels, and the Of the Bisho

1. Citie where the Cathedrall stretutent between the Ennoprise of the Languar, and the prickes of Guerral Enhanced and twentie leagues, from the prickes of Guerral Enhanced and twentie leagues, from the prickes of Guerral Enhanced and Enha of (biana, and one hundred in breadth by the Coatt of the South Sea, and fiftie by the North & of the Pro-Sea, wherein are included the Provinces of la Mifera, high and low; the high fortie leagues uince of Taba from Antequera to the Welt, & the low more to the South Sealobn Numer Sedenno, and Fernan . co, which is the from Antequera to the Welt, & the low more to the South Seal on 14 manes Southon, and I embaten of Badaioz inhabited first the Citie of Antequera: and after the first Councell of Mexico inhabounds debited it againe; the only Judges therein were Batchelour lobn Ortiz of Matienzo, and Delgadullo, fcribed. 40 which was the first, that as a man of Granada, began to breed Silke in Mexico. The Prefident and Gouernour, the Bishop Den Sebatisan Rammers, began the Cathedrall Church, the beginning of the good of those Kingdomes: the Church hath all the Pillers of Marble of one piece, very

great and bigge, and the Citie hath about foure bundred Spanif Housholds.

neere the Gouernment of Pannes

This Valley of Guarage, from whence the Marquelle of the Valley taketh his Title, begin- Guarage Title neth from the Mountayne of Cocole, in the bound of Gnax olotician. In it is gathered much Silke, of the Mar-Corne, and Millet; it hath the Zapoteca Tongue. There hath beene in it good Mynes of Gold, queffe of the The fituation of the Citie of Antequera (which as hath beene fait) they call Guaraca, was inha. Valley. bited with people of Mexico, which lay in Garrison by order of the second Motezuma, and the many Garrisons that the Kings of Mexico had through their Empire made general in it the Mozican Tongue. The River of this Citie doth finke under the ground; against Cimatlan, and ra-50 feth two leagues off, at the Mountaynes of Canlan, other two from Guaracu; and at a halfe a

league from the Citie right against a Hill that stands to the North, is a point of a little Hill, and there goeth a glade of a Valley alholaine, for the space of eight leagues, which is the aboutfaid faire Valley of Guantes, plealant, and temperate, and of a most healthfull Ayre, where plentis Stinking Rinte fully are gathered all kind of things, and especially fruits of Caffile, most pleasant. To the South west stands the Prouince of Tutepeque, which hath many Townes by the Sea-coast, and is of Tutepeque, more then fixtie leagues ; and that of the River of Aluarado , betweene the North and Northeaft : and that of the Zaporecas to the North eaft from Antequera, and Guazacoaloco in the Con-

fines of Tabasco, all rough Countrey, & notwithstanding the rich Mynes of Gold, little is gotten 60 because of the roughnesse. There are foure Spanish Townes. The faid Citie of Autequera is eightie leagues from Mexico, tonhe South-east in the high way of Chiapa, and Guatemala : and the first that entred to pacific this Promince, was John Nunnez of Mercado, the yeere \$522. by Commiffion of Don Fernands Cortes, and from thence were men of Was lent to ferue the King Quantity simoc, in the defence of Mexico, when Don Fornando Cortes fubdued it.

S. Alifonfo of S tower of

The Treasurer Alfonso of Estrada, when he did governe in Mexico, inhabited the Village of Saint Alifonfo de los Sapotecas, twentie leagues from Antequera, toward the North-eaft. They liue in it by Gold, Cotton-wooll, and Millet, there are about thirtie thousand Indians tributaries. It stands betweene most high Hils. Saint lago de Nexapa is in the Valley of Nexapa, twen tie leagues from Antequera to the East, in the way of Chiapa, and Guatemala. The Village of the Nexana. tie leagues from Antequera to the Ealt, in the way of Chiapa, and Guatemala. The Village of the al Elemino San-Holy Ghoff in the Prounce of Guazacoalco, at the Coast of the North Sea, in the Confiner of Tabalco, is ninetic leagues from Antequera. Gençalo of Sandonall inhabited it in the yeare 1622. It hath about fiftie Townes of Indians, it stands on the border of the River, on the fide of Chiapa : this River springeth in the Mountaynes of the Mixes , and Chomales, neere to Tecountenane, and with the waters of the Neighbour Prouinces of Chapa, and the Chomales, it in goeth into the North Sea, there enter into it thips of one hundred tun.

Cacas-money

In all this Bishopricke there is no River that doth not yeeld Gold, and the Indians doe live without want if they will worke, for they lacke nothing for backe nor belly : and they have the Cacao, a Fruit like Almonds, which feruerh for Money, and they make Wine of it, and it is eaten toffed, and is held for a great fuftenance. They are wholfome Countreyes, and pleafant. The Silke was before nourished by the Castilians, with the Mulberie Trees of the Coun. trey, wherewith the Indians ferued themselues, for to make Paper of the second barke: and the Spaniards have planted io many of Caffile, that they grow infinitely : and if the Indians did The Indians pay tithe of it, and of other things, fine Bishoptickes might be made; but none doe pay tithe Tithes.

This Bishopricke hath three hundred and fiftie Head-townes of Indians, and in them, and in

three hundred Granges of more then an hundred & fifty thouland tributary Indians, & one hun-

dred and twentie Monafteries of Dominicke Friers, and the rest Schooles of Priests for Doctrine. River of Alua- The Coast of the North Sea of this B thepricke, beginneth in the River of Aluaredo, that commeth from the Mountaynes of the Zapotecas, and betweene many other it goeth to the Prouince of Chinastla, and croffing overthwart the Mountaynes whence it fprung, goeth out into the North Sea, betweene the River of Guazacoalco, and Saint lobn of Ulna, and there is also the River called Agnalaice, whose mouth may serve for a Haven; and the divided Rocke, a point of the Land that commeth from the Mountaynes of Saint Martine, named by thips that have bin loft voon a thoale full of Rockes under water, which lye along the Coaft right against themin 10 the Coast of the South Sea. This Buhoprick hath the Hauen of Gnatules in fifteene degrees and an halfe, great, good, and frequented. The Prefident Don Peter of Aluarado fet this Province of Guatules in obedience, and the Port of Tecountepeque is neere, which also is reasonable; and the Towne is great, and there is in ic a great fishing for Shrimps, and other fish which they carrieto Guaraca, and in the high way of Cuyztata is a Myne of Christall-borill. Tecoantepeque is fortic fine leagues from Antequera, they paffe by the Mountaynes of the Choutales, Nixapa, and Mexalpeque, whitherto this Bishopricke extendeth, and hath many Townes subject by the Coast

The Bilhopricke of Mechacan (which is a Prouince betweene the Archbilhopricke of Me-

and fixtie within the Land, with open bounds, by the Septem rionall parts: in it are included

the Prouinces of Zacatula, and of Colina, both in the Coaft of the South Sea. The Citie of

Mechacan, or Pazenaro, in little more then nineteene degrees, and fortie feuen leagues from Mexico, of plaine way. In Guayang areo called Vallodolid, is Refident the Cathedrall Suffragane

to Mexico, with two Monasteries of Franciscans, and Anfine Friers. The Master of the field

Christopher of Olid built Mechanan, the Cathedrall was first Refident in Zinzonza, vinto the

yeere 1 544. that he removed it to Pazenaro. The Bishop was Don Basco de Quirogas and it hath

one Monasterie of Franciscan, another of Anfine Friers, and it stands seven leagues from Me-

ward the Zacatecas, wherein there are about fixe hundred Caffilians, in two Campes " which

they have with their chiefe Alcade or Commissioner, and the seate and dwelling of those that follow the Mynes is a Reall of Campe. The Village of Saint Michaell, in the Province of Me-

cheacen, is thirtie five leagues from Pazznare, to the North-east, in a rough Countrey. And the

Village of the Conception of Salaya, which was built by commandement of the Vice-roy, Don

Martin Enriquez, the yeere 1 570. for to affure the way of the Chichimecas. The Village of

The Mynes of Guamaxnato, are twentie eight leagues from Mechoacan, to the North, to-50

The Billio-pricke of Me. xico, and the new Galicia) hath in breadth by the Coast of the South Sea, about eightic leagues, 40

The Conception of Salaya. cheacan, to the Eaft.

The Village of Saint Philip fiftie leagues off Mechanan, toward the North, and fixtie two from Mexico to

the North-west, with one Monasterie of Austine Friers, in a barren sovie and cold: it was built for the securitie of the way of the Zacatecas. The Province and Village of Zacasula, in the Coast of the South Sea, stands in more then 18.de- 60 grees, and fortie leagues from Machoacan, to the South-weft neere the Sea: John Rodriguez, of Vilmorte, and Smon of Cuenes, built it the yeare 1923, it flands minetie leagues from Mexico, and the Proxince and Village of Calina, in Little more then 18. degrees, in the Couff of the South Sea, and in the confines of new Galicia, fiftie leagues from Mechacan, to the South-west, with a

CHAP.I. No Crosses in America till the Spaniards came. A Man 200. yecres old. 875

chiefe Commissioner, in a hot toyle, and plentifull of Cacao, and Cassia Fistola, with Gould, and well conditioned people. Gençale of Sandenal built it in the yeare 1522. All the Countrie of Methoacan is most plentifull of Wheate, Miller, and all kinde of Spanift Fruites, and Cattle, flored of Fish: it hath Graine, Cochinilla, and Cotten wooll, and the people is industrious, and given to labour.

There are in this Bilhopricke one hundred and thirtie Townes, the nintie foure head Townes with Schooles of Doctrine : this Bishopricke reacheth no Coast of the Sea of the North, in the South Sea are many Rivers, and in the furtheft Welt of the Province, almost in the border of the new Galeia, is the port of Nauidad, in the height of 19 degrees, good and frequenced, from to the Naugation is made to the Philipinas; and more to the Eaft, neere the Port of Saint Inner: there are very good Copper Mines in these bounds, of the which the Indians make very curious Veffels, for it is pleasant, and other so hard that they digge the ground with it instead of

Iron, which they could never doe till the Spaniards taught it.

The Prosince and Government of Tucatan (which tooke this name when the Captaine Francifcus Fernandez discouered it, and our Ladie of the Remedies , when John of Grigalna discouered Tucatari. Coismel) was at the first held for an Hand, because it was almost compassed with Sea, in sort that it may be called Penminda, and it compaffeth more then two hundred and fiftic leagues: it is in length where it extends it selfe East and West, about one hundred leagues, and as many North and South, from the Coast that looketh to the North, vnto the part that doth confine with the

20 Prouinces of Guatemala, whereby it hath ouertwhart about fine and twentie leagues. The tem-Provinces of Guaremala, whereoy it natu our twinit about meaning where tragges, a the terms of those which perature is hot, and very moift, and though there be no River, nor running water in it all, the wa- of those which perature is hot, and very moift, and though there be no River, nor running water in it all, the wa- fault the Crofperature is not, and very mode, and they finde fo many shels of Sea-fish under the stones, that this, and the crofter is so neare for Wels, and they finde so many shels of Sea-fish under the stones, that this, and the crofter is so neare for Wels, and they finde so many shell so so so that the crofter is so nearest the stones. Coast being so low, hath given occasion to suspect that it hath beene Sea in other times: it is of Lattenin much compassed with Wood: they gather no Corne, nor seedes of Castile, there is no Gould, nor Yacatas, whereany other kindeof Mettall, whence is knowne the invention (or deceit) of those which faid as there never any other kindedt raction, whence is another the Spaniard entred in it, Croffes of Latten, which was Croffe in the there were found in this Promince, when the Spaniard entred in it, Croffes of Latten, which was Croffe in the Indicibethat there were count in any Prouince of the Indies: it is very plentiful of game, especially wilde forethe Systems Boares and Deere, they breede vp in it greatstore of Poultrie: they gather much Cotten wooll, add. and Azure, the people multiplieth and liueth long; a man there was which attained to three hun- A Man of 3001 30 dred yeares: it hath all the kinde of Cattle of Spaine, and good Horses.

There are in this Gouernment without that of Tabasco, which goeth loyntly with it, foure Sognifb Townes, and one Bishopricke: and the Townes are buildings of the first Gouernour, the President Den Francisco of Monteio. The Citie of Merida is in twentie degrees height, almost in the middeft of the Prouince, neerer to the coaft of the North Sea, twelue leagues within the Land. In it are refident the Gouernour, the Officers of Reuenues, and treasure Royall, and the Cathedrall fuffragane to Mexico, with a Monasterie of Franciscane Frees, they called it Merida, for the great and auncient buildings that it hath like Meride in Caffile, and it caufeth admiration, that having no kinde of Mettall in the Province, fogreat Scones could be wrought, in the which were formed engrauen naked men, with eare-rings, whereof is inferred that they were Temples, AO and that it was a very famous Countrie. The Village of Valladolid is thirtie one leagues from Me. Valladolid.

rida, toward the South-east with a most sumptuous Monasterie of Franciscan Fryers, and 15000. tributarie Indians in the limits. The Village and port of Saint Franciscus of Campeche, in 20. de- Campeche grees, in the Coalt that looketh to new Spaine, about fiftie leagues from Merida to the West, declining to the South, it hath a reasonable Hauen, though little depth for being a Bay Don Frauvifem of Monteio gaue it the name. The Village of Salamanca the Prefident called fo by his Skimanca owne Countrie. In the Provinces of Bacalar, and Chetemal, seventie leagues from Merida, North and South, leaning to the West, and other seventie from Valladolid, neere to the Coast of the gulfe of Handuras : there are in this Prouince Monasteries of Franciscanes, and fix Schooles of Prietts for Doctrine.

Prietts for Doctrine.

The Coast of all this Prouince is so shallow, that in few parts ye can ride at anker at leffe then thing. foure or fue leagues from the Land, and to there is no Port but for small Shippes, and it floweth Tides. and ebbeth more in this Coast then in any other place of these Prouinces of new Spaine. The The Ports and Ports that are, be thefe: Ciclo, and Telisbaque, Cual and Cauquil: the River with two mouthes, points of this Campeebe in the Coalt that looketh to new Spaine, and in it the small Cape from whence the Gouernment. Coaft beginneth to winde to the East, and neere to the Point a little Iland which is called la Desconocida or the Vnthankefull, compassed with shelves: and to the West from this, about eighteene leagues, another which they call the Zarza, and the Triangle, which are three small Hands, close by another little Hand compassed with shelues, other hixteene leagues from a Cabo a Or Sharpe, Delgado, Ilands de Arenas (of Sandes) and the Redde (la Bermeia) and another Iland thirtie leagues

90 from the faid Cape to the North, and los Negrillos, three little llets compased with shelies, to the East from the B Redde, about thirtie fine leagues, and the & Scorpiones twentie leagues of the b Or Bermeia. coast North and South, with Merida, and the Cape of Contoche, the Point most to the East of c Or Alacrett, Tucatan, from whence goe foure little Hands, which are called de Mugeres of Women, leaning to the Coast in the which is the Hand of Commel, named by the famous Idoll Place in it, whither

Cccc 2

A famous worin Cozumel.

all the people of the Province went in Pilgrimage; it stands four leagues to the Sea, at the be-ginning of the Gulfe of Hundersa, almost North and South with Valladolid, more inward to the Gulfe, other three little Ilets with shelues, almost over against the Lake of Bacalal, which is within the Land thirtie leagues from the Lake of Chetemall, in the Coast that goeth painted with I-*Or take away lands vnto Salamanea, which is the first Pantoia, neere one thelfe called * Quita/nenno, and another Zaratan, and another Lamanay and the last Tiboh.

The Province of Tabalco, which goeth with the Gouernment of Tucatan, and falleth youn the Coast of the North Sea in the gulfe of new Spaine , hath in length East and West , about force leagues, from the confines of Tucatan, vnto the confines of Gonzacoalco, wherewith it ioyneth to on the East, and as much North and South from the North Sea, vnto the confines of Chiapa, It is all plaine ground of Marshes, Lakes and Quagmires, and so they goe ouer it in Boates, and Canoes; it is very moift, and hot, and therefore very plentifull of Pattures for Kine, and of Miller and Cacao, which is the greatest stocke or substance of this Prouince, wherein is onely one Town. which is Tabasco, and by another name, the Village of our Lady of the Victorie, so called for the Victory that Don Hernande Cortex had there of the Indians, when hee went to new Spaine, the yeare 1519. The tribute which the Indians doe pay in this Prouince, is two thousand Xiquipiles of Cacao, and enery Xiquipill are eight thousand Almonds, and one load maketh three X: quipiles or Terces. In the Coast of this Prouince besides other Rivers and Marishes, is found Riversofthis the Lake of Xicalango, or Port Royall, great and capable, with two little Hands at the mouth. and it was the Captaine Lewis Marin, that by order of Don Fernando Cortes, made an end of pa- 20 cifying this Prounce.

Lake of Xice.

Chap. II.

He bounds of the Counfell of new Gallicia or of Xalifeo (which Numo of Guzman faid hee had discouered, and Don Fernando Cortes, that the Captaine Goncale of Sandonall, did it in his name, when hee fent him to pacifie the Colomas) it parteth bounds with of Guadaluiara, the Counfell of new Spaine, neere by the Port of the Nativitie, and the Lake of Chianala. 20ing toward the North-east, whereby (and by the North, and somewhat of the West, for it is not all discouered) it hath the bounds open, for the rest to the West is all Sea: that which is inhabited on the one fide, and the other, may come to one hundred leagues, wherein are comprehended the Prouinces of Guadalaiara, Xalifco, the Zacatecas, Chiametla, Culi- 30 acan, the new Bizker, and Cinolos; and for Circuit the discouerie of the Provinces of Cibola and of Quibira.

The temperature of the Prouince, and borders of Guadalaiera, is good, and the Countrie plen-

tifull of Corne, and Millet, and other Seedes of Spaine, and many Vaines of Silver : there are in it Spanish Townes. Nunno of Guzman peopled the Citie of Guadalaiara, the head of this Kingdome, the yeare 1531. and gaue it the name of his Countrie: it stands in 106 degrees and a halfe of longitude from the Meridian of Toledo, 1780, leagues by a direct Voyage, & in 20. degrees one third part in height, eightie seuen leagues from Mexico, betweene the North and the West, more toward the West: in it is resident the Counsell, the Officers of the revenues, & Royall treafurie, and the Cathedrall Suffragan to Mexico, since the yeare 1570, forbefore it was commanded 40 to be built in Compostella: it hath one Monasterie of Franciscan, another of Austine Friers. Nunne The Haj Coople.

Sentia Marie of Guzzman built also the Village of the Holy Glouft in Topoque: and the Village of Santia Marie the Lakes.

of the Lakes, stands thirtie leagues from Guadalaiara to the South-east, with the chiefe Commissioner. It was built for to be sure of the Chichimecan Indies, that are in Countries between the North and the East, a barbarous people, which live scattered in the field, without any taste of humanitie or policie, liuing in Canes, & in the Groues like fauage beafts; they liue youn wilde chafe and fruits, they know no riches, nor pleafure; they goe naked, and some couered with Beafts skins: their weapons are Bowes and Arrowes, they are well bodied, great eaters, they make wine of cer-

Zalifeo.

The Chichime-

In the Prouince of Xalifco, which is plentifull of Millet, more then of Sheepe, or Horfes, there 50 is onely the Citie of Compostella neere the Sea, three and thirtie leagues from Guadalaxara, to the West, where the Counfell was at the first, and commanded to build the Cathedrall, vntill the yeare 1 960, that they removed to Guadalaiara to be more in the borders; there is in it a Monafterie of Franciscan Friers; and it was also inhabited by Nunno Guzman, the yeare 1531. which travelled two yeares in these Countries, which they called the greater Spaine, in emulation of Don Fernando Cartes, in all that time nothing being knowne of him in Mexico. The Village of the Purification, to the South-west, from Gnadalaiara, and thirtie leagues from it, neere the port of the Nativitie, in the confines of the bounds of this Counfell, and of that of Mexico, in a very hot and fickly Countrie : and vnto the end of the yeare 1531. Numo of Guzman discourred one hundred and fiftie leagues of Land by the Coast of Xalifeo, which stand 60 in somewhat more then 22. degrees.

taine rootes wherewith they drinke themfelnes drunke.

In the Prouince of the Zacatecas, are rich mines of Silver, and want of Water, Corne and Millet: there are three Townes of Spaniards, and foure Camps appointed of mines: those which they call of the Zacatecas are the principall, fortie leagues from Guadalas ara to the North, and

eightie from Mexico, wherein are ordinarie more then fine hundred Spaniards, fine hundred Shues. one rhouland Horles and Mules, and one Monasterie of Franciscane Fryers; and there is refident alwayes one of the Officers Royall of Gasdalsiers. In this Prouince also are the Mines of Agares, in the confines of the Zacatecas, and those of Saint Martin seuen and twentie leagues from the Zacatecas, to the North-west, wherein are wont to be about four hundred Spaniards. and Xerex of the Frontier, thirtie leagues from Guadalaxara, to the North, and tenne from the mines of the Zacatecas, in the way to them. There are besides these other Resies or Campes. whereof no mention is made, because they are so famous. The Village of the Erena, & the Mines The Erena whereon its mention at the first and twenty leagues from Zacatecas to the North-west, neere to "Or Saminarect called of the little" Hat, are fine and twenty leagues from Zacatecas to the North-west, neere to "Or Saminarect enter the of Saint Martin, and others that are in the limits. The Village of 'Nombre de Das, is fixthe 'the Nowed' by the house from the Civing Good date. eight leagues from the Citie of Guadalaisra, and tenne from the Mines of Saint Martin to the Gad.

North, with a Monasterie of Franciscan Friers, aboundant in Corne, and Millet, and good Mines in his Borders, The Village of Durango, in the Borders of the Mines of Saint Martin, and the Valley of Saint Saluador, eight leagues from Nombre de Dios, a wholesome Countrie, & many Rivers. with whole watering they gathered great store of Corne, and Millet, and of other Prouisons, and in the Borders are the Mines of Saint Luce, and a very good Salt-pit. And the Indians of this Kingdome in many places were in armes, and the Chiehimecas, and Gnachachiles did great hurt in the way of Guadalaura to the Zacatecas, and this warre was very coffly, and tedious, and was ended, the Marquelle of Villamanrique being Viceroy. The Indians are divided in this precinct in

20 one hundred and foure partitions or tribes.

The Prouince of new Bizkie, is North-west ward from the Zacatecas fiftie leagues from them; Name Project. a Countrie of Prouisions, and much Cattell, and of good Silver Mines, the Mines of Hindebe are in it, of SantiaBarbola, and of Saint John, and in it is the Prouince of Topia; and in this discourry, and inhabiting, Franciscus Tharra did many services. The Province of Chiametla, twenty leagues broad Chiametla, and long, in the Coast of the South Sea, about fortie leagues from Xalifeo, hath Mines of Silver, and in it stands Saint Sebastian, a Village of Spaniards, which was first of the Counsell of Mexico, and it flands in more then 22 degrees. Culiscon is a government in the South Sea, more to the Eaft, and West from Chametla; it is a plentifull Countrie of Victuals, and showes of Silver Mines. and west from Commerce; in a spicinist Commerce or recurs, and invest or insure states, whereof there is a Campe peopled, which they call of the Pripies. The Village of Saint Mis. Suitivest, charles the Enguestrom Compositeds, and one bundred and three from Guadalaises, Numes of charles the Enguestrom Compositeds, and one bundred and three from Guadalaises, Numes of

Guzmen inhabited it the yeare 1521. The Province of Civaloa, the last, and most Septentrionall of the new Kingdome of Galicia. Ciualea. two and fortie leagues from Culinean, one hundred and fiftie from Guadalaiara, to the North, was a Towne built in it that was called Saint John of Cinalon, of Spaniards, and could not be kept. This Prounce was discourred, Don Antonie of Mendoca being Viceroy in new Spaine, and they faid there was a Citie feene wrought with stone, which they called Granada, and that those Indiens were warriers, and that in the Countrie was great flore of Victuals. Quibira, flands in Quibira. fortie degrees, of a temperate and fruitfull foyle. Cibola, stands thirtie leagues from Cultacan, Cibola. toward the North, and Quibra two hundred from Cibola to the East; it is all of poore peo-40 ple; for that they have no Cotten, they weare Deere skinnes, and of the Countrie Kine,

which have a lumpeon the ridge of the backe, and long haire in the fore parts, the hornes leffer then ours; and in them conflitteth the greatest part of the sustenance of the people, for of the skinnethey cloathe, and make Shooes, and Cords; they eate the fielh, and make tooles of the bones: they have fundry languages in this Province, because they communicate little the one with the other. California is a great point of the Land that putteth out to the Sea in the vttermost West of California

new Spaine in two and twentie degrees height, from whence it extendeth to the North-west. nesre about two hundred leagues, although of it there is no certaine notice, nor of the Ports, and Ilands of the Gulfe California, which is made betweene the faid point, and Gulfe of new 50 Spaine, which goeth along that way, as to the North-west; in the which alchough there be many Riuers, Capes, and Points, and landing-places, there is no particular notice had of them. because they are not much frequented. At the beginning, and entrance of this Guise are very long and narrow Ilands along the Coast, and very close with it, which is called the Gray anall, that reacheth from the River of our Ladie, or of Sebastian of Bora, vnto the River of Christmas in Cultucan, The River of the Village of Saint Michael is called Cignatian; and neerer to new Syame is the River of Pafila, and against it the Defar Hand, and afterward the River of the Hoth Ghost. and the port of Kaliseo, and to the South of the point of California, is Annublada or the Cloudie Hand, and the Hand of Saint Thomas, and the Hand of Flores, and another which is called Las Monias.

T was first called the Counsell of Gustemala of the confines, because it was commanded first to Chap. 12. be built in the confines of the Provinces of Nicaragua, and Guatemala, without affiguing any of the Countil certaine Towne, It hath in length East and West two hundred and fortie leagues, and from the of S. James of Meridian from 84. to 98. of longitude, and North and South, in breadth one hundred and eigh. Guatemule.

a Or tiue Peace. b Or Rich coaft.

tie. from 9.to 10. degrees of height, vnto eighteene or ninereene, in the which are comprehelded the Provinces of Guatemala, Soconusco, Chiapa, Suchnepeque, the Verapaz Honduras and Cacos, Saint Saujour, and Saint Michael, Nicaragua, Chuluteca, Taguzgatja, and b Costarica; and in every one of these Provinces they alter in speech : and according to the opinion of Religious men, it was the worke of the Diuell, for to plant diffentions and discord betweene these National ons which were bloody and reuengefull. The Gouernment and Prounce of Guatemala on the Guerema's. South Sea coaft, in length of it may be about feuentieleagues, and in breadth North and South thirtie, it is a Countrie of a good temperature, plentifull of Millet, Cotten wooll, Corne and other fruits, though they preferue not the Seede of one years for the other : the waters are few, to but when it raineth they are very violent from Aprill to October, the windes are North and

South, and the North laiteth but fifteene or twentie daye, and it is very cold, and furious. There are in it fine Spanish Townes, buildings of the President Don Pedro of Aluarado, in the yeare 1524. and 25. The Citie of Saint lames of Guatemala, whose situation was called Cachequill. which fignifieth an Eagle, because the Generall of this Nation, when hee went to warre, did beare an Eagle for his Plume : it is the head of the Gouernment, where the Counfell is refident. in 24 degrees and a halfe of height, and 93 degr. from the Meridian of Tolede, from whence it may bee diffant by a greater circle of one thousand sixe hundred and sixtie leagues, and it is twelve from the Sea, and a towne of fixe hundred Spanish housholds: the Officers of the goods and Royall Treasure, are resident there, the melting house, and the Cathedrall Suffragane to Mexico. with one Monasterie of Dominicans, and another of Mercenarie Friars, and one Hospitall, and 20 in the bounds fine and twentie thousand tributarie Indians. This Citie is feated in a very pleafant Valley, with fruits of divers forts, and all kinde of provision and dainties,

Saint Saluador. The Citie of Saint Sautour, which in the Indian language is called Cuzcatlan, is fortic leagues

from Saint lames to the South-east, with one Monasterie of Dominicans. The Village of the Trinitie, which in the Indian tongue was called Conzonate, fixe and twentie leagues from Saint lames to the South-west, four leagues from the Port of Axacula. It is a chiefe Commissionership with title of his Maiestie, with one Monasterie of Dominicans, in a plentifull foile of Cacao, and the Indians of it are of the iunidiction of Saint James, it is a place of great trafficke, and the Porta touch for the ships of Pern, and of New Spaine. The Village of Saint Michael fixtie two leagues from Saint James, and two and twentie from Saint Sanieur to the South-west, two leagues from 30 the Sea and Bay of Fonseca, which scrueth it for Hauen, and in the bounds are eightie Townes of Zerez, Indians. The Village of Xerez of the frontier, in the Indian Speech called Chalateca, in the confines of Guatemala and Nicaragua, eightie leagues from Saint lames, and twentie from Saint Michael to the South-east, both plentifull of Cotton wooll and Millet, Neere the Citie of Saint I amer is that * Volcan fo famous of Guatemala, and in all the Indies are many of these Volcanes (but the mouthes like most famous are those of Guatemala, which hath burst out divers times, casting fire, stones, and

ashes, with great hurt of the Countrie.) That of Arequipa, of Tlascala, Quito, and others. In this Countrie are many fprings of water, hot, and of fundrie properties and colours; there is much and good Balme , which the Spaniards knew without learning it of the Indians , against the which some Author speaketh, and also liquid Amber, Gumme-anime, Copall, and Suchicopall, 40 and other Gummes, and Liquoris most perfect, and beasts that breed the Bezar stone, they gather Cacao deferi. great flore of Cacao, which is great riches; it is a meane Tree, the leaves like a Chefnut though bigger, it giueth flower and fruit enery Moone, and the fame doe in that Countrie the Orange trees. The Cacao is a tree that loveth moisture better then the Sunne, and therefore they plant

neere him another tree to shadow him.

The Ports of this Gouernment in the South Sea, beside the rehearsed, are the Bay of Fonseca Ports of this neere to Saint Michael, in twelve degrees and a halle of height, Gil Gonçales of Anila gave it the Gouernment name in the yeere 1 522. for the Bilhop lobn Rodrigues of Fonfeca, Prefident of the Councell of the Indies. And within the Bay is an Iland which he named Petronilla, by a Neece of the Bishop. The Port of Acazula, neere to the Trinitie, in twelve degrees height, is the best of this Govern- 10 ment for New Spaine and Peru, and the Bay of Guatemala twelve leagues from it, and the River of Xicalapa feuen leagues from the Bay to the Welt. On the North fide this Province hath no coalt, for it commeth not to the Sea by fortie leagues, vnto a landing place which they call the Port of the fresh Gulfe, from whence the merchandiz: that goe from Spaine, are conveighed by the Gulfe of Honduras, into the Land with carriages vnto Guatemala, Saint Sautour , and the Trinitie, and twelve leagues before Guatemalu, in the high way of Mexico, is the great Lake of Atu-

Soconufco.

lan, of ten leagues in compafie, and foure in breadth, without bottom. The Prounce and Government of Soconnico is the furthest West from Guatemala voon the coast of the South Sea, of length and breadth about foure and thirtie leagues, plentifull of Cacao (the greatest trafficke of it, and of all that in it is sowne except Wheat) there is no more then one 60 Spanish towne, which is called Guenesian, founded by Don Pedro de Aluarado, where the Gouernour is relident; her coall which is in the South Sea, beginneth feuen leagues from the River of Ayutla to the West, and presently the Rivers Coatlan, Capanercalte, Colarl, Hazzatlan, Amune, and Quizatatlan.

The Province and Bilhoprick of Chieps is Mediterranean, betweene Soconnico by the South, Chieps. and the vecermost of New Spaine by the West, and by the North and the East, betweene Tabal and the Verapac, in length East and West about fortie leagues, and some lesse in breadth, some " Or me lele fertile of Wheat and Millet, and other Seedes, and of Cattell, except Sheepe that are not peace. many, It hath one Towne of Cashlians, which is called (nie Royal, feuentie leagues from Saint Imes of Gnatemala toward the North-east, which by a particular priviledge is governed by ordinarie Julices. The Cachedrall is refident here with one Monasterie of Dominiche Friars, and many Indian Townes in her limits: Chiapa is the principillest Towne of them, from whence the Promince tooke the name. The Countrie-men haue skill in breeding of Horfes, that those of this IO Countrie become the best that are in New Spaine: they are Musicians and Painters, and learneany Trade that doth confift in arte: they were in old time of Nicaragua, and the Captaine lames of Mazarieges, the yeere 1531. built this Citie in a Valley where now it flands, round, of a marnellous firmation in 18. degrees and a halfe, fixtie leagues from the North Sea , and as many from

The Province of Verapes (4 name which the Dominiete Priars gave it, because they pacified Verapes. it with preaching) is also Mediterranean betweene the bounds of Seconsfee, Chiapa, Tacatan, Hondarss, and Gueremala, of thirtie leagues over, and as many from Saint lames of Guaremala; a most Countrie, and therefore the better for the Millet that in it is gathered twice a yeere, and for Wheat. There is Cotton wooll, and some Cacao, and much Fowle of those that give the co- Picture fra 20 loured feathers for the pictures which the Indiany doe make, which is a merchandize of this Pro-thers, uince, and the Kings of Mexico carried them from this Pronince, which was the most esteemed thing they had, and it was sudged for a great finne to kill these Fowles, but to plucke them and to let them file. There is in this Countrie but one Monasterie of Dominicke Friars, with one Indian let them me. I neve in its me countrie but one measurement of a service resistance from the fraction chairs children the area there, by order of the religious men for to infirmed. Towns of foundation that are there, by order of the religious men for to infirmed. Hence the better; for before they lived feattered and like faunges, and now they live like Christient the better; for before they lived feattered and like faunges, and now they live like Christient the feature of the featur ans, and in temporall things politikely.

In this Prouince there is no Governour, but a chiefe Iustice, prouided by the Councell. The River of Zacasula divideth this Prosince from the Province of Guatemala, from the which it extendeth vnto the fresh Gulfe, whither all the Rivers of it doe runne, whereby and by the many 30 falls of waters that descend from most high Hills, the Countrie was so moift, that the Millet rotrails of waters that unexula them mon inguisate, the sometime was up month that can alter order by it is bettered in the temperature, fine the cutting downs of the Woods : it high many ted; but it is bettered in the temperature, fine the cutting downs of the Woods : it high many ted in it is Lions, Tigres, and Buffes, whole sich that the lands are does cateful though it be laftious and foft; it is called the Profe Guife, for the multitude of the Rivers which on that fide doe enter into the Sea. Guife date. The water is freth, and there are exceeding great Filhes, and specially the Manati, which is the Manati a fifth See calle, which I wimmeth fodelicately, that being very great he maketh no noyle; when hee defended. Seeth he goeth to the Deepe, and waxeth angrie and fierce against them that seeke him , and giueth great frokes ; his flesh is very fat like vinto fat beefe.

40 North Sea, more then one hundred and fittie leagues, and in bredth from the Sea witto the O' Hondaras. bounds of Coffa Reca and Gazemala, in parts eightie: is hath many Hills, and is plentiful of Sindayas, and bounds of Colla Rica and Chatemata, in parts eighte: Is nath many ritins, and is preparated of the Rick, or Millet, Wheat, and all forts of Cattell, and fome Hynes of gold and fither other is in it like Spa- the Rich Conf. mile Townes in one Bishopricke, and the first Bishop was Friar Islan of Talaners, Frior of Prade, Handers.

on the Oluce to Sime to Space.

The Citic of Falladolid, in the Indian language, is called Compagna, in more then fixteene degrees, finals fixtle leagues from Saint Laure of Guatemala to the East, and about fortie from the North Sea : mitis the Gouernour resident, and the Cathedrall, fince the yeare 1558, when it went from Traxillo, whereat first it was; and one Monasterie de la Merced. The Captaine Along of Cacerer pacified this Countrie, by order of Don Peter of Almerado: it flands in the mid- Or of our 50 delt of the two Seas, and from the one to the other are three and fiftie leagues, from the Port de Lady of the Canalles or of Herfes in the North Sea, wato the Bay of Fonfeca in the South Sea, and the Inginer Vilitation of Batifia Autonet visited this way, by order from the King ; because many thought that by it the the Inginer trafficke of the North Sea was more easie to the South Sea, and hee found that it had many in - Bestilla Antene

The Citie of * Gracius à Dies, is thirtie leagues from Valladeled almost to the West; the the Pote of Ca-The Citie of Gracius a Dies, is there i eagues from rangement almost to the wind the sales of Hurfet, Captaine Gabriel of Rojar peopled it 1530, for the benefit of the Mynes of gold that were there to the Bay of the the Bay of Laptaine Games of so par peoples it 1 330. for the perms of the suprae or goal that were interestable of shorts, and had great encounters with the Lankaux, which fall faced him many time in a Fort that Engles. The had, But the Gouermouro Houters and Nieuragues, not fuccouring him by realth program. Thanks been had, But the Gouermouro Houters and Nieuragues, not fuccouring him by realth program. Bes betweene them , hee was forced to forfake it. And in the year 1936. Captains Gonçale of to God 60 Alasrade, inhabited this Citie againe. The Village of Saint Perre is thirtie leagues from Co- Saint Perre managena to the North, forneswhat aside to the West, and eleven from the Port of Canalles, where the Officers Royall are refident, because the Port of Canallos is fickly, whither the difpatches of the fhips doe come. The Prefident Don Peter Alwarado built it 1536.

The Village of Saint Iohn of the Port de Canallar is in 15, degrees of altitude, cleuen leagues Saint Iohn.

88a

from Saint Peter, foure from Comayagua, it is inhabited with Factors of the Merchants and with Black-moores, because it is an vnwholsome Port; for although it be a Bay, it is a good one, it was called the Port of The Horses, because some were cast in the Sea by aftorme. The Citiens Truxillo is fixtie leagues from Comanagua to the North-east, and fortie from the Port of Horfes to the East, and one from the North Sea: the Cathedrall was here, the Hauen is called Saint Gid it is good, though it be a Bay dead and sheltered, where the ships that goe for Guatemala doe touch first. Francisco de las Casu, began to inhabit this Citie 1524. and because they were all people of Estremadura, he called it Travillo, and Don Hernando Corres ended the inhabiting of it when he went to the Theeras. The Village of Saint George of Olancho, is fortie leagues from Comayaona to the Baft, of fortie housholds, and in her borders sixteene thousand tribusarie Indians, and 10 much gold, chiefly in the River of Guayape, ten leagues from this Towne. This Valley of Olesche is very pleasant and profitable, and in it was much gold gotten, and the Gouernours of Henduras and Nicaragua, had in other times great differences: for every one would have it in his inriidiction , and therefore here it was where Gil Gonçales Danila tooke one hundredand twentie thousand Pefos of gold of Hernando of Soto, and difmified the people which Pedrarias Danila had for his defence; and here Gabriel of Rojas defended the entrance of Gonçalo of Sandonal, for Don Hervando Cortes did fend him from Traxillo, and here the Indians killed John Gryalus, a very famous Captaine, and others.

Points and

The coalt of this Prouince is all in the North Sea , in the Gulfe which they call de Honderes. which is all the Sea coast betweene this Province and Tucatus, to the place where it isyneth 20 with it by Verapaz, where it was called the Gulfe of Guanajas, the first Point is of the Thurras, fo called, because they first found many pompions on the Sea, which they call Thurs in the language of Hispaniola; it flands in fixteene degrees of height. Neere to the Frefb Oulfe a Port for Gustemala, where Saint Gil of Bonauifia was built, neere to the Cape of Three Points to the East from the Fresh Gulfe, and Gil Gonçales Danila peopled it 1524. And more to the East is the River Piche, and Rio Baxo, and the River of Ulna, by another name Balabama bafore the Port of Horfer, which stands in fifteene degrees. And afterward the River and Point de la Sal, and Triumpho de la Cruz, a Cape of three points, where the yeere 1,24 the Master of the field (brille, pher of Old planted; and the River Hubma or of Xegua, and to the North of his mouth the L land of Villa; and to the North-east, Guayana, Helen, and Guanaja, and Saint Francisc North 20 and South with the Point of Truxillo, which are the Hands of the Guanajos. The faid Point is called by another name, Cabo Delgado, the Small Cape, or of Honduras, from whence to the Cape Or Strimpe of Camaron, in fearch whereof they goe from Jamages, are thirteene Rivers, and at the Pointof the Cape a plazell or great shelfe of more then twentie leagues into the Sea, and in the middest of it neere to the Coaft a great Hand, which is called the Hand de los Bazos (of the flelues) and another to the North, neere the shelfe called Saint Millen, and having passed the shelfe, the Bay of Cartago, and the Deepe Bay, before the Cape of thanks be to God, which stands in fourteen degrees Cabe de Gracias one third part, and to the North of it three Hands, which they call the Viciofas, and Quita fuenne or Take away fleepe, and Roncador, the Suorter, two dangerous shelves, and having passed the Cape, the Gulfe of Nicmefe, where hee was loft in the yeers 1510, and the River of Tare in thirteene 40 degrees, where the Governments of Honduras and Nicaragua are joyned.

The llands of the Guangjes, which are the rehearfed, the first Admirall Don Christ opher Colon discoursed 1502. in the last voyage he made to the Indies, when he discoursed Torra firme in the coaft of Veragua, where his ill lucke appeared; for if as he went to Veragua, hee had gone to the other fide, he had discourred New Spaine.

The Province and Government of Nicaragna, which the Governour Iames Lopez of Salzede, called the New Kingdome of Lion, on the West ioy neth with Guatemala, and on the North with Honduras, and on the South with * Cofta Rica. It is of one hundred and fiftie leagues East and West, and eightie North and South, a plentifull Countrie of Miller, Cacao, Cotton wooll, store of Cattell, without Corne or Sheepe, it hath fine Spanift Townes. Lion of Nicaragua is one hutte 50 dred and four leagues from Saint lames of Guatemala about the South-east, and twelve from the South Sea, neere to the great Lake of Nicaragua, where the Governour is resident sthe Royall Officers, and the Cathedrall, and lames Alwarez Offerio was the first Bishop. It hath fine Monasteries of Mercenaries, and in her bounds one hundred and twentie thouland tributarie Indians. The Citie of Granada is fixteene leagues from Lion , which and Lion were built by the Captaine Franciscus Hernandez. 1523. and Granada stands by the border of the great Lake, and soure and twentie leagues from the Port of Realeis, betides the great Lake, stands the Lake of Lindiri, and Lake of Nica. the famous Vulcan or Fierie month of Maffayaten. The great Lake ebbeth and floweth, it hath Tokan of Mat. many Hands, it runneth into the North Sea, by the River which is called El Defaguaders, or The Vending, it hash great flore of Fish and many Lizards. At two leagues from it, and feuen from Gramade is the great fierie mouth of Mombacho, very high with many Groues of diners fruits, of co which much refresh the Countrie. A Friar perswading himselfe, that that maffe of fire that in to many yeeres burned without confuming within the mouth of Maffaya was gold, having made by a certaine arte certaine Cauldrons with their chaines to draw it, they fearcely came at the fire, when the Cauldron and the Chaine were melted like Lead.

The new Segonial which was the beginning of Rear Arrashis planeation, by thirtte leagues Segonia. from Low to the North, and as many from Grandia, from which Rorthward allo, in which limits much gold is gotten. And Isena Citie is thirtie leagues from the North Sca. in the end of the Isen great Lake, whereby the River which they call the Voyding, and the merchandize which are carried from Nombre de Dies, and now from Porte belle , are conuayed in it. The Village of Realeje one league from the Port of the Possession, which commonly is called of the Realers, flands in a Realers leven degrees and a halfe, and is one of the best Ports and fureft in all that Coast, wherein are made good ships by reason of the good prouition of Timber there.

There are in this Gouernment many Townes of Indians, and in them flore of tributaries, and 10 in the Confines of this Gouernment , and of Cofia Rica , and of Niceya eight and fortie leagues from Granda, in the South coalt, is a Corregidorship; in which, and in the lland of Chra, which is of the writington thereof eight leagues to the Sea, are many tributarie Indiana of the Crowne Royall, subiect in other times to the Councell of Panama, vnto the yeere 1573, at which time it was incorporated in Coffa Rica; whole Gouernour placeth a Depurie, and the Bishop of Nicaraqua & Vicar. There is in it a regionable Port, in the coaft of this Province on the North Sea. After this is the River Two that divideth it from that of Hondards, the River of Tarepa, before Pere and Ri-After this is one acted the think the control of the Rene and the Rene at the mouth, and after, fome other Rivers common to folia Rene. In the South See, it hash become fides the Realeis, the Port of Saint lames, before the Chira, and the Port of Parright against 20 Nicoya, in the Gulfe called of the Sair pirs , before the Point of Saint Lawren , and the Cape of De Sainen. Borrica, at the East fide whereof are the Hands of Saint Marie, Saint Martha, Cobaya, and Se-

baco, neere to the bounds of Veragua, common to Costa Rica. In the Coalt of Nuaragua, on the South fide, the Village of Brazelles was peopled \$729. and Brazelles In the Court of researages, on the South hat, the villege of Dracess was propied 1729, and Issues Lopes of Salcedo difinhabited it, becaule they had received in it Pedro de los Ries, Governour of Castille del Ore, which went to take the Gouernment of Nicaragua, where Saleede had thrust himselfe, and had gone from Hondaras his owne Gouernment vnto it. Captaine Francis cm Hernandez, planted it x 524. in the doubtfull Streight, in the feate of Vritina, and on the one fide it had the Sea, on the other the Playnes, and on the third fide the Mountaine of the Mynes, and in all this Orbe there are no Indians more expert in the Caffellan tongue then thole of Ni-

The Province and Gouernment of Costa Rica, the furtheft East of the Northerne Indies, and ColaRica Councell of Gustemala, hathin length Eaft and West ninetie leagues from the Confines of Veragua vinto those of Nicaragua, with which it ionneth by the North, and by the West In it are two Townes, it is a good Countrie, with many showes of Gold, and some of Siluer. The one Towne is the Village of Aranjues fine leagues from Chomes Indianes, a Towne of the in- dranjue, ridiction of Nicoya. The Citic of Carrage, fortie leagues from Nicoya, and twentie from the Sea almost in the middest of the Prouince, hath a Port and landing place in the Coast of the South Sea, and the North Sea, wherein there is fome Rivers betweene Nicaragua and Veragua, 40 of Unexam

of Veragua.

"He part of the Indies of the South is vniustly called America, it is all that is discoursed Chap. 14. from Nombre de Dies and Panama to the South, wherein is included Tarra firms, the Otthes Kingdomes of Pirm, the Pirm Chile, which the Indians call Chile; The Prouinces of the othersonia Streight, the River of Plate and Brafile, where are five Councels of Panama, new Kingdome of Granada , Saint Francisc of Quito, Lima, the Chareas , and the clouen Governments : part of their Coast toucheth in the North Sea, and part in the South : in the which for the most part reigneth the South and the South-west, which contrarie to his nature is there pleasant,

and doth mitigate the great heate, whereby that Countrie may bee inhabited, although it ne-50 per rayneth nor hayleth in it, but in a very little diffance. And the two rowes of Mountaines Agreat diffethat runne equally through all these Indies, have a great difference, though they are in one ale rence of t mcitule of the Pole: for the one is well replemished with Trees and it alwayes rayneth in it, and persure in the two towns of it is hot: the other is all bare, and cold in Summer and Winter. These rowes are called Andes, piru. and Sierra or the Monntayne; they have most high Hils, and goe in fight the one of the other one thousand leagues, almost equally. In the Hill are bred fundrie beasts, and in the parts where The two rowes they open they make Valleys, which is excellent dwelling, as that of Xanxa, and Guaylas, and doe runne altuey upen tuey make a mary, which is account whealing, as that or some a more and working and of the market file of the some and the some file of Colles, where are infinite Rivers, Lakes, and Paltures, without Trees or Wood, for Quilities of the difference of the Countrie, though wholesome and much inhabited. There follows the Prounce 60 eth after it the Prounce of the Charcas, hot and of great plentie, with very rough Hills of of collection

great riches of Mynes : and the figure of thefe ladies is trene in the Table before going.

He limits of the Counfell of Panama, which was first called Cafilla del Ore, and afterwards Terra Firme, are very small, for the Counsell is principally resident there, for the dispatch of the Pleetes, and Merchants, which goe and come to Pirm: it hath in length East and West. about nintie leagues, from the confines of the government of Cartagena, and Popayan, vnto the Castle of Vergens, and in breadth from the South Sea to the North fixtie leagues, and thence the countrie downeward vnto eighteene by Nombre de Dies, or Porto bello to Panama: it is a ground generalof Persona, and ly very rough with Mountaines, full of quagmires, the ayre close with vapours, most, hor, and for her bounds, this cause very fickly from May vnto November, a barren soyle, and destitute of many things: for this came very near recommendative there groweth nothing but Millet, and very little, though there be good Pastures for Kine, and breeding of Cattle. The government of Veragna Randsin the bounds of this Counfell, and in it, and in that of Panama these Towner following.

The Citie of Panama is in the coast of the South Sea, neere vnto it, in g. degrees of latitude, and 82.of longitude from the Meridian of Toledo, from whence it is diffant by direct way one thoufand fine hundred and fixtic leagues. It is a Towne of fix hundred housholds, the most are Merchants and dealers. And with the Counfell are resident the Kings Officers, and Royall treasurie, which doe goe already to Portobello, when there is any Fleete to the dispatching of it, and likewife the Cathedrall fuffragan to the Archbishopricke of the Kings (delos res) is here resident with three Monasteries, of Dominicke, Franciscane and Merced Friers. The Port of this Citie is reasonable, although at low water the Ships remaine dry, and therefore in Summer they ride in the 60 ftrand, and in winter in the hauen of Perice, two leagues from the citie. Pedrarias Danila peopled it, being Gouernour of Cashillo, del Oro, or of the Gold, against the will of the dwellers of Santis Marie, the auncient of Darien, the yeare 1519. and a little after the Cathedrall Church was removed thither; and it might have had a better feate, and more wholesome, and to the

CHAP.I. Porto bello, Strange case of a Lizard. River of Snakes.

purpole for the trafficke of the South Sea, not going very farre from whence the Citie now stands.

The Citie of Nombre de Dios, was by lames of Nicuesa first planted 1510. and afterward by lanes of Albitez, by order of Pedrarias, and he was the first Admirall that discovered her ports I is removed to Persobele for the first Admirall discovered it, and gave the name, because it was portebile. more wholeforner, and fitter for the loading and valoading of the Fleetes, and for their fecuritie, and of the new Citie of Saint Philip, which is built there ; the Inginer Baptifia Antonelli, bath made a Castle, and app sinced another on the other side the hauen , for to keepe the entrie. The Merchandize are carried from Portobelo to Panama by two wayes, one by Land with carriage, to which is eighteene leagues of leffe difficultie then by the way of Nombre de Dios : the other by

Sea, and the River of Chagre, whose mouth is eighteene leagues from Portobelo, to the West, whereby the Merchandize goe vp when the water reacheth to the vent of the Croffes and from thence they go in carriages fine leagues to Panama.

The Village of Nata (tands thirtie leagues from Panama to the West, in the Coast of the Saint James of South Sea, Captaint Franciscus Companion peopled it, by order of Peter Arias, for the warre Nata. with the Casique Urraca. The inhibiting of Acla, and Captaine Gabriel of Roise finished by commandement of Peter Arias in the Coaft of the North Sea, and entrance of the Gulfe of Vraha, Aila. right against the Hand of Pises, whereof at this present there is no more memory then that there was the death of that famous Captaine, whose memory will last eternally, the President Base 20 Numez of Balnsa, and of his company. In the breach of Almagro, and in the head of the River

Chiepo, there is Gold, and in times past was much gotten. In all these Rivers are many Lizards or Crockables, and very great, which put the first discouerers and pacifiers to great trouble, and did deuoure some men. It happened that a man being in a Boate neere to the Kings Astrange case Houle in Panama, a Lizard came and matched him from the Steame of the Boate, and carried of a Lizard, him a way to eate him on certaine Rockes, and having begunne to teare him in pieces, they flot at him with a Caliuer and killed the Lizard, fo that he before his death received the Sacraments

The Province of Veragua, which stands in somewhat more then tenne degrees, doth confine Veragua. with Coffarica, on the West isie: it hath in length East and West fiftieleagues, and in breadth 30 fine and twentie : aMountainous Countrie, full of bushes, without Pastures or Cattle, Wheate, Barley, little Millet or little Pulse; but full of Gold with many vaines of it, and rich Mines in the Rivers, and breaches, and those Indians that are, are in warre : it hath the Citie of the Conception fortie leagues from Nombre de Dies, to the West, where the Governour and the Officers (which they of Panama at this present doe prouide) are refi- The Conception. dent. The Village of Tringie stands fix leagues to the East of the Conception by Sea (for The Tringie. yee cannot goe by Land) neere to the River of Betblem , at three leagues from the Sca. The Citie of Sanita Fe stands twelve leagues from the Conception to the South, with mel. "Hely Faith, ting houses, and Deputie Officers. The Citie of Charles, in the coast of the South Sea, Charles. neere to the Sea, fiftie leagues from the Citie of Santta Fe, to the East : all the Indians of this

40 gouernment are in warre. There is no Port of name in the two Coasts South, and North, of this government, and in all The Ports the bounds of the Countell, are the Ritters, Ports, and points following. The Bay of Carabaso, or of Saint Harome, in the coalt of the North Sea, and the confines of Veragua, and to the East of it, and of the River of the Trintie, of the Conception, and of Bethlebem (where was the first inhabiting that the first Admirall made in Terra firme, of all that Orbe, in the yeare 1503. which continued not : and right against the Shield, and land, and the River of Chagre, and more to the Eleftude. East a league the Portete, to the place where the Admirall came discouring the same yeere, and the Ports of 2 Langeltas twelue leagues from Nombre de Dies, to the Welt, and the Port de 201 Langle Gallinas or of Hennes nine degrees, and the Port of Bonamenture ix, Portobelo five, and right against it the Hands of the Lookings, and those of the Proxissons or Bastimentos : and having Nombre de blu Miras.

50 Dies two leagues, the Ruer of & Sardinilla, and the Hand of & Sardina, foure; and the Ruer of c Or Little Pil-(Millet or Mayz, and the River of Snakes, or Culebras, eight; and at the entry of the Gulfe of thered, Vraba, where in the yeare 1509, the Bachiller Enerfo built the Citie of San a Marie of Darien. d'Or Pichard. This Bachiller Encifo was he that published that in the Province which was called Caftilla del Oro, there were places where the gold was filled with nets, which encouraged many people to goe to the Indies, which paffed in the yeare 1514. With Peter Arias Danila : and the Preident Bafco Numez of Balboa, went 1513. from the Darien in demand of the South Sea, and discourred it. The Point of the Hand of Captina, Handsright against the Mountaines of Saint Blas, and the Iland of Comagre, and the Iland of Pinos, more within the Gulfe of Uraba, and in the 60 inward Port of it, the Port of Nilcos, necre to the mouth of the River of Darien, which di-

uideth the bounds of this Counfell, and those of the Gouernement of Cartagena, and there is Culara de Uraba, where in the yeare 1510. Alonso of Oieda inhabited Saint Sebastian of Vraba. This Gulfe stands in 8. degrees, it hath foureteene leagues of longitule into the Lands, and in the entrie it hath fix in breadth, and a little forward fiftie,

In the South Sea stands the Cape of Santia Marie, and point (de Guerra) of Warte, and toward Panama, the Gulfe of Parita, or Paris where stands Nata, the point of Chiame, the Countrie of that Cazique Chiapes, the friend of Basco Nunnez of Balbos, which holpe him in his discourty: and passed the Port of Panama, the River of Chepo, and the Balfa, or of Congor in the inner part of the Gulfe of Saint Michael, North and South from the lland of Pearles, and the Point or Port of Pinyas, at the entrie of the Gulfe on the South fide, which is fiftie leagues from Panama, and twentie ouerthwart to the Gulfe of Vraba, and Puerto Quemado, or Burns Hauen, necre to the Cape of Corrientes, in 5. degrees of altitude Septentrionall.

Chap. 16. THe bounds of the Counfel of the New Kingdome hath in length East and West, three bundred

leagues, and as many North and South, wherein are comprehended the Prouinces of the New Kingdome, the governments of Sandia Mariba, and Cartagena, and part of that of Popagan; & for borders the Prouinces of the Derade, or new Stremadure : the Prouince of New Kingdome, which is that which the Counfell gouerneth: it hath in length from East to West foureteen leagues and is the new
Kingdome of eightie in breadth North and South of plaine ground, for the most part with Valleys and hils, and good Pastures for all fort of Cattle, which are in abundance, and in many places, Wheate, Miller. and the fruits of Castile, and generally much Gold and very fine, and Mines of Copper & Steele: and the Countrie men for the most part are able men, great traffickers, and doe weare Cotten 10 cloath, And the Townes that be in the Kingdome of Spaniards, are the Citte of Sanda Foot Bogota, which was built at the foote of Bogota, to called by the Cazique which was called Bogota, which the President Gonçalo Xmenes, of Quefada built, and gave the name to the Citic and to the Kingdome, because he was of Granada, though in the discovery the President Belalcazar, and Nicholas Federman had part : it flands 72 degrees and a halfe of longitude from the Meridian of Toledo, which by a greater circle may be one thousand soure hundred and fortie leagues, and 4. degrees on this fide of the Equinoctial, it hath more then fix hundred housholds, in it is resident the Counfell, the Kings Officers and Royall treasurie, and Melting house, the Cathedrall Metropolitane, whole fuffragans are, Popayan, Cartagena and Santia Marta, with a Monafterie of Dominiche and another of Franciscane Friers, and in her borders more then fiftie thousand tributarie Indiane 30 Lake of Gua- and the Lake of Gnatauita, which was a worthipping place of the Indians, where it is reported that they did cast great summes of Gold in offring to the Idols. The Village of Saint Michael in the bounds of Sancia Fe, twelve leagues from it to the North,

no Deaw in it. In all the Kingdome there is no generall tongue, that which is most enderstood,

are called Canupeis, fine and twentie leagues in length, to the North-weit of Bogota, a

rough Countrie, found, plentifull of Pastures, Gold, and Emeralds : there are two Townes;

the Citie of the Trinitie twentieleagues from Sanda Fe, to the North-well, which the Cap-

taine Lanchero inhabited the yeere 1,82. when hee went to warre with the Indians " Mofcas,

a quicke and fearefull Nation : and in these bounds stands the rich Mine of the Emeralds, with

many Indians which yet are peaceable, and in the Prouince of (biagnachi, which tignifieth

The Village of Palma in the Colimas, of a temper botter then cold, fifteene leagues from Sanita

Timia, which tooke the name of the Carigue, almost to the North, direct to that of Bogota, and 50 in all like vinto it: The Citie of Timia stands two and twentie leagues from Saulta Fe, to the

Fe to the North-weft, the Captaine Don Gutierre of Onalle built it 1572. in the Prounce of

North-east, on a high hill, a strong scituation, for the warre with the Indians. There goe out of this Citie aboue two hundred Horse-men, and it is the most aboundant of Victuals of all

the Borders, and there is the greatest Market in all the Realme : it hathone Monasterie of Do-

is that of the Panches. In the Province of the Mufos, and Columns, which by another name 40

was built for trafficke with the Pauche Indians, because being of a hot Countrie it did them burt to goe to Santia Fe, which is cold. The Citie of Tocarma fifteene leagues from Santia Fe, to the West, somewhat inclined to the North, with a Monasterie of Dominicke Friers, was inhabited the yeare 1545, by the Captaine Hernando Vanegas, in the border of the maine River Pais, which runneth into the River Magdalene. It hath no gold, and is most hot, and by night there falleth

Snailes, for there be many.

Gould, and of Wheate. The Citie of Belez, thirtie leagues from Santta Fe to the North, and fiftrene from Tunia, hath one Monasterie of Franciscane Fryers : the Captaine Goncalo Ximenez Roudon inhabited it. It is a Countrie where many thunderboults fell, and there fall not fo ma- Thunderboksi ny fince the holy Sacrament of the Altar is there abiding; it hath one fierie month that caffeth many thones. The Citie of Auriquita of Thegue, by another name Saint Schaffian of the Gould, Marquita, is fortic leagues from Santia Fe to the North-west, the Captaine Pedrose peopled it 1551. in certaine Meadowes, leaning to the hill, the temper is very hot. The Citie of Thaque is three hun. Theene. dred leagues from Santa Fe, almost to the West : it is the first Towne of the New Realme, that doth confine with Popayan , the Captaine Andrew Lopez of Galarza peopled it 1551. by commission of the Counfell, for to eschew the harmes these Indians did with those of Tocarma, and Cartago, and for to open the way to the government of Papayan, it hath a Monafterie of

The Citie of the Viltorie of the Remedies, fiftie leagues from Santia Fe, to the North-west. Villoried in is very rich of Mines. The Citie of Saint Iobn of the Plaines, fiftie leagues from Santia Fe to Remedies, the South, is a Countrie of much Gould. The Citie of Tudela which the Captaine Peter of Vefus built, by order of the Bachiller Don Michael Dinz of Armendariz was difinhabited, becaple the Indian; " Moxeas received hurt by it. And there are of the limits of the Coun- Or Fhes. fell of the new Realme, feuen Townes of the gouernment of Papayan, Santia Fe of Antiochia, Caramanta, Arma, Anzerma, Cartago, Saint Sebaitian of the Sauer, and Saint Vincent 20 de las Pazes.

then one hundred and fiftie leagues, and in more then three hundred it is not waded: it commeth

acid Fase!
The Merchandize enters this Kingdome, by the great River of Magdalone, from the Baranea *Or Material
of Malomba, of the jurification of Cartagena, and the first that fent to discover this River, was comple. Garcis of Lerms. Governour of Sanita Martha 1531. It encreth into the Sea fo broad and ftrong, Ris Grande or that at the passing, the Ships are wont to be in danger, if they goe not somewhat distant, for the MagdierRiver, combat of the current, and working of the Sea. It hath an Iland in the mouth, it is nauigated more

from aboue Popayan from two Fountaines that are fortic leagues diffant, by which ioyning the River is made: it was called of Magdalene, because on that day was the mouth discovered, in 12.

degrees of height, and fix and twenty leagues from Cartagena. The Province and Government of Santia Marthain the coaft of Terra firme is feventie leagues Santia Marthain 30 in breadth and length, betweene Carthagena and the River of Hacke: it is a plentifull Countrie of Millet, and Potatoes, much Gould, and Copper, and some Emeralds, and other Stones: in it are fine Spanish Townes; and though there be many of the Countrie-men, the most are in warre. The Prefijent Bafidas peopled the Citie of Santia Martha 1529. neere to the Sea, in 10. degrees of latitude, and 74. of longitude, one thouland foure hundred and twentie leagues from Toledo, where is resident the Gouernour, and Officers Royall, and the Cathedrall fuffraganto the New Kingdome. The Port is redonable. This Gouernment hash four Prouis-ces, Pesigng, Beina, Chmica, and Toyrona, which fignifich a Forge, and with great reafon, because in that Countrie are an infinite quantitie of discritie of Mettals, and Stones of great

40 esteeme and value. Tenerife stands by the border of Ris Grande or the great River (which is that of Magdelene) Tenerife. fortie leagues from Sancta Martha to the South-well, part by the Sea, and part by Land : Franeifem Euriques did people it, by order of Gençale Perez which governed in Saulta Martha, by Tandameque, Commission of the President Luge. Tamalameque, or Village of the Palmes is fixtie five leagues from Santia Martha to the South, and twentie from Tenerife, two leagues from the Great Riner : the Captaine Baribolomew Dalma peopled it 1561. The Citie of los Reger in the Valley of Ppari, The Kings. is plentifull of Millet, Prouision, and Cattle, and of much Copper, to the South-east of Santia Marba, fiftie leagues from it, and thirtie from the River of Hache: the Captaine Santi Anne peopled it, by commandement of the Bachellor Michael Dinz., *La Ramada was built be- 25mRaRamada

to fore, called first new Salamanca, fortie leagues from Santia Martha to the East, and eight from the River of Plate, at the overflowings of the Snowie Mountaine. It flands in the Valley of Vpani, where there is as much Copper as Stone. The Merchandize of this Gouernment goeth vp to the New Kingdome by the marth of this Citie, which is eight leagues from it by the Sea, and afterward twelue vnto the Barranca of Malambo, in the great River. Ocanna is also in this Go- Ocanna. uernment, which the Captaine Franciscus Hernaudez inhabited 1972, and was first called Sanste Aune. There is in the Coast of this Gouernment the River of Bubia, necre Rama- bortoweri da, and the River of Piras, and that of b Palomine, where a Captaine of this name was drow- gen. da, and the River of Paras, and that of Palamine, where a Cape of a Agnia neere Santta COr Novemend, and the River of Don Lames, the c Ancones of Buritaca, and the Cape of a Agnia neere Santta d'Orthe Neidle.

Martha, right against the hill of Bonda, and the River of Gayra, to the West. The Province and Government of Cartagena, in the Coast of Terra firme, and the North Sea, hath in length East and West, from the River of the Magdalene, vnto the River of Darien, eightie leagues North and South, and as many vnto the confines of the New Kingdome, though men lay it is more in Voyage. The Countrie is Mountainous of Hils and Valleys, of high Trees, rainie and moift; the feedes of Caftile beare no feede, there is no Wheate, nor Gould, but in fome places.

The Citie of Carthagena trands neare the Sea, two leagues from the Point of Canon, to the West. in tenne degrees of laritude, and Teuentie fix of longitude, one thouland foure hundred and fixtie leagues from Toledo, of more then five hundred houlholds, among them about two thouland women, In it is refident the Gouernour, the Kings Officers, & treasurie Royall, and the Cathedrall fuffragan to the New Realme, with Monasteries of Dominick and Franciscan Friers. The scitturion is plain, and almost like an Iland, the Sea compasseth it on the North fide, & it is a rough coast, and very shallow; and on the land side it hath an arme of the Sea which reacheth to a Marish, which is to the Lake of Canapore, which ebbeth & floweth after the order of the Sea, & at the fame hours and they paffe from the Citie to Terra firme, by a Bridge and a manner of a Caufie, which hath about two hundred and fiftie paces. The Citie is built on Sand, & within two fathoms they finde fresh water, though sometimes it is vnwholesome, not so much as the coast of Nombre de Diesa for the avres in respect of the Marish are wone to cause diseases, but for the first partit is wholsome. The Hauen is one of the least of the Indier, though the great Ships doe ride farre from the Citie-It hath at the entrie an Iland like that of Efembrera in Cartagena of Caftile, whereby they called it Carta gena, and the Hand was called Codego, now they call it Cares, it hath two leagues in length & line tle more then halfe a league in bredth: it was wont to be anhabited with Indian Filhers, & it hath no water. The first that law Carthagena, in the year 1502. was Roderick Bastidas, & the year 1604. 20 Iuan de la Cofa or Iohn of the Thing went a shore, and found Lewes Guerra, and they were the first that began the warre with the Indians, which were proud and bould, and both men and women fought, with venomed arrows. Afterward returned Alanfoof Oieda with John of the Thing for Pilot Maior, & Americo Ve Spucio for Mariner, & some years after Gregorie of Obiedo took voon him to inhabit Cartagena, & performed it not. The year 1 32, went Dan Pedro of Eredia born in Madrid. and inhabited it, and pacified a great part of the Countrie, though with labour and cunning, becaute the people were very warlike, and there was a woman that before they could take her, being about eighteene yeeres old, flew with her Bow eight Spaniards. The Village of Saint lames of Tolu, is fix leagues from the Sea to the South-west of Cartagena

two leagues from it part by Sea (for by Land it cannot be gone) and part by the Marishes and 30

Amar misn

Saint lames of

Mountaines. It is a found Countrie, of great breedings, and tillage, and fruits of Callile: the Prefident Don Peter of Heredia peopled it. The Village of Marie thirtie two leagues from Cartagena, to the South, is also the inhabiting of Don Peter of Heregia, in the yeare 1534. The Village of * Hoy Croffe. * Sanita Cruz of Mopox is Cementic leagues from Cartagena by the Sez and River of Magdalene, being among Quagmires, A Captaine of Don Pater of Heredia peopled it 133, The yeare of 190

one in the Bachiller Englisors bath been faith intubited, a six of Manue, the auncient of the Daries, which is the Bachiller Englisors bath the faith in the fair of the six of

Alonfo of Heredia inhabited Saint Sebastian againe, for the President his Brother, in certaine little 40 bils, almost halfe a league from the Sea. And in the yeare 1527, the Bachiller lobn of Vadillo went out of Saint Sebastian, with a good number of Souldings, and passing rainy troubles, & most rough

Mountains, & thick woods, came to the Citie of Antiopasis, of the government of Papayas, & there was a Solution that from these came to the Citie of the Pass in the Charact which is 1200, less in the Taracteria of Antiopasis, which is 4 Solution that from the Charact which is 1200, less in the Earnaca of Antiopas, which is 4 Solution though of the intridiction of Cartagena, thrite leagues from it, on the border of the great River, and twenty from Santia Martha, & ix from the Sea, where the Merchandize that are carried by Land to the New Realme are vuloaden, & from the Barranca are carried up by the River in Canaces. Lower then Novex entreth the River of Canace into the River of Magdalene, which allo (pungeth about Popayan : & more toward Cartagena and to the Well, standeth the Knobbe, and the point of Zamba, and Butrie del gate or Arbitera, and the 50 feuen Cottages, and the point of the Canone, two leagues from Cartagena, and the point of Touces at the entrie of the port, right against the Hand of Carex, and the point of the Ship in Terra firme; at the other leffer entrie of the port, and almost to the North, is a little Hand which is called Sardina, and in the coast of Talu the Hands of Barn, which are fix, and at the entrie of the Gulfe of Vraba the fix, which are called of Saint Bernard, right against the River Zenn: and more within the Gulfe, the strong Hand, and the Tortonfe. The port of Zenn stands five and twenty leavues from Carragena, it is a great Bay that hath his entrance by the East, it is secure : here they make store of

Salt, and it tooke the name of the Towne Zenn, which fandeth on the River. In the Provinces of the Darade, or new Estremadura (which circuit pertaines to the bounds of the Counsell of the New Realme) many Captains have entired by Sea, and by fundry parts of the Land, and have never found the riches which the same promiseth. They fall on the other side of the River of Saint John of Amazones, by another name Orellana (which some erromoutly wil have to be the Merangon) and here is the Qrinico, and other great Rivers, and the Gulfe of Paris which maketh the firme land, with the Land of the Trimitie, & the mouthes of the Serpent, & the Dragon,

CHAP. I. Two Rowes and bigbonyes the wonders of Nature and Art in Peru. 887

which the first Admirall named, where he saw himselte in great danger, for the conflict which the fresh waters make there with the falt, whereof he had yet no notice, and here beginneth the Great Tydes. flowing of the Sea to be very great, vnto the streight of Magellan, and goeth continuing through

all the coast of Piru, and New Spaine.

The Prounces of Pira (whole name hath extended it felfe more than it was at the beginning) Pira, or Pura. include all the Empire of the Ingui, or more; for when it was won it was divided in two goperments, that of Don Franciscus Pigarro, called the New Cafile, from the Quite vnto the Cuzco. fixtic leagues below the Chincha: and that of Don lames of Almigro, called the New Toledo, two hundred leagues toward the Streight from Churche; which governments were distinct vatil to the Councell de los Reget was established, and a Vice-roy prouided for the Kingdomes of Prim, in whose government are included, the Councell of Saint Francis of the Quito, that of Lune (or de (as Reges of the Kings) that of the Charcas, the government of Chile, & countries of the Streights, the Hands of Salemen to the West, and for borders the Provinces of the River of Plate, and that

which determinately is comprehended under the government of the Vice-roy. It hath in length North and South from two thousand leagues vpward, and East and West, that which is discouered from the South Sea thehe North Sea. The two Romes that have beene spoken of, doe passe The two Romes red from the south sea to she worth sea, if he two street hades from Popayan, and yet ma- of the indies of ny will have, that from Terra firme and New Spaine, till it ends in the Strengte , and the other " Of Marellen. leffe, from the Quite vnto Chile, along the coaff, twelve leagues diftant, little more or leffe. The two wayes passed betweene these two Mountaines, the one which they called of the In- The two great

gas, by the Ander from Patto vnto (Bule ; which hath nine hundred leagues in length , and fine wayes of Pine. and twentie foote of Cawfie, and enery foure leagues very fumpenous houses, which they call Tamber, where was prouision of victuals and apparell, and every halfe league men that were in postes for to carry messages, and orders from hand to hand. The other way went through the Postes. middeft of the Playnes, along the coaft of fine and twentie foote broad, betweene two walls of a mans height, from Para vnto Chile, where both the swayes met. And it is to be noted, that all the Indies of the South are not to be winderstood by Pires, for as hath beene faid, it is not but Pire is not all that which beginneth from Saint Erancis of Quite, which is wader the EquinoCrial Line, and the Indies of runnet helong wrote Chies, going out side the Tropicke; which may be tire hundred leagues, thrifting and me mare of an and fire in breadth, shough toward the Charlespar there is more, and it is duisded in three parts : The Playnes , which have ten leagues in breadth, and in parts leffe, they are the coast Les Llane

of the Sea : The Hills, which have about twentie, and is all Hills and some Valleys: and the LarSierra. Ander other twentie, which are most thicke Groues and Woods , and in so little space as fiftie leagues equally distant from the Line and Pole: there is so great disersitie, that in the one place Disersitie of al noft it tayneth alwayes, and in the other almost neper; which is the Coast, and in the armer. third which is the Mountaines that fall in the middell of thele extreames, fometime it rayneth, and fometime not, for it hath his Summer and Winter as in Caffele: and the causes of not rayning in the Coaft, and rayne in the Ander, are spoken of in the beginning of

"He bounds of the Councell refident in Quite, and confining Northward with that of Pana- Chap. 17. I ma, in the Port of Bonamentura, and on the North-east with the New Realme, and on the Of the Coun-South wigh that, of Lame; hath in length by the South coaft, which is the place where it leng- cell of Saint thens most, about two hundred leagues from the Port of Bonanciane, which is in the Gulfe of Francisco the Panama, or of Saint Michael, the Port of Parts in the coaft of Pirs, and from thence cruffe to the vectermost of Popayan, more then other two hundred and fiftie, the limits remayning open on the East fide : in it is included three Governments, besides those of the Councell , which are Popayan, Quixes, la Canela, and that of Inande Salmas, of the Pacamoros, and Gualfango, divided in * Or Cynatwo Bilhopricks.

The Protince and Government of Quita, which the Councell governoth hach in length eightic al Quita. The Prounce and Courtment of Land and in it their Townes of Spaniarde folloagues, from neere the Equinoctiall to the other fide, and in it their Townes of Spaniarde follows. lowing. The heaven and earth thereof, although it flands under the Equinoctiall, is like to that of Castele, cleere and faire, rather cole then hot, and in parts wherethe how continuerh all the yeere, it rayneth from October to March, which they call the winter; and in the other mo- Aire and fesneths they cut their Graffe, which though it be not long into fit for the Cattell of Caftile, where fone. of there is great store; and of Wheat and Barley, and gold in some places : and in this Region they live pleasantly, for there is nothing more pleasant for immane life, then to enioy a wholetome and cleere skie, for they have no Winter to trouble them with cold, nor Summer to molest with heat. The Townes are, the Citie of Saint Franciscus of Ques , where Athanalya Emperous of Pinn As

was borne, it stands in halfe a degree of height from the Equinoctiall, and eightic two from the Meridian of Toledo, by a greater circle one thouland fixe hundred eightic fixe leagues from it, and fixtle from the South See ; it is of fine hundred houlholds : In it is resident the Countell for matters of Lattice, for those of the Government are at the Vice-roy his charge. There are also in this Citie the Officers of the Kings Renes and treasurie Royall, and the Cathedrall of this Bi-Dddd 1

shopricke, Suffragane to the Archbishop of The Kings (los Reyes) there are three Monasteries of Friars dela Dommiche, Franciscan, and Mercenarie Friars : and in her mridiction eightie seuen Townes, or parcial parcialities of Indians. In the fituation where this Citie was built, were certaine great lodgings which the King Topaynga built, and his sonne Guaynacapa beautified, and were called Into from whence the Citie tooke the rame; the President Sebastian of Belalcapar, a souldier of Don Francifem Picarro built it, a loyall man to the King, by order of the Prefident Don Iames of Almagro, which left him for Governour of the Province when hee went voto it, having ended the agreement with the Prefident Don Peter of Almarado.

Riner Bamba. Raine a wonder. Payta. Admirable bigh-way. LIB. V.

The River Bamba in the Province of the Parmaes, is a Countrie to Caffile in the temperature. of herbes, flowres, and other things: it is a towne of (hepheards, it flands fine and twentieleagues Io to the South-west of Saint Francisco of Quito, the way to the Kings, wherein are fortiethon. fand head of cattell, the greatest part sheepe. Here the Tages had certaine Royall houses, and here the President Belaleazar had a tedious battaile with the Indians, and overcame them, and in this place was the agreement rehearfed of Don lames of Almagro and Don Peter of Almarado and in it was the Citie of Quite firlt built. The citie of (wester (which the Marques of Canyete commanded to be built, being Vice-roy of

Zamera.

Pira, which by another name is called Bambs, one and nitie leagues from Quito to the South) is a Corregidership provided of the Vice-roy, with one Monasterie of Dominicke, another of Francifean Friars. In her inritiation are rich mynes of gold, tome of filter, and rich mynes of quickfilter, copper, Iron, and Brimitone. The citie of Loxa, otherwise called la Zarça, eightie leagues 20 from the citie of Quito toward the South, and thirtie from Cuenca, is a Gouernourfhip promided by the Vice-roy; it hath Monasteries of Saint Dominiche and of Saint Francis, it stands in the way from Cuzco to Quito, from whence it is eightie leagues, in the faire Valley of Cuxibamba. betweene two Rivers. Captaine Antonie of Mercadillo built it in the yeere 1 446. for to bacifie the countrimen which were somewhat disordered. The citie of Zamara, which is called of the Alcaydes, is ninetic leagues from Quite South-eastward, having passed the Rome of the Andez : it is a Gouernment prouided by the Vice-roy: it hath a Monasteric of Franciscans; they reape no Wheat because the countrie is very raymet it hath nich Mynes of gold, wherin they find graines of foure pound waight and more : the Captaine Mercabile peopledit the yeere 1 (49. by a couenant with Captaine Benauente : It stands ewentie lengues from Laza, hauing past the Rome 30 which divideth the banker of the South Sea from the North, the Indian did call it Zamara : that part of the countrie is called Poroance , which fightfieth Indians of warre : much gold is gotten there, and there hath beene graines brought to his Maiettie of twelue potind waight, and there

are Salt-pits of falt-water.

The Rivers

to the South H w the riners are palled in

The citie of Inen is fine and fiftie leagues from Loxa, and thirtie from the Chachapayas; Captaine Lames Palomine built it 1549. in the Prouinces of Chaquimaye, in that of Chacaynea. The citie of Saint Michael of Pinca is in the Prouince of Chila, one hundred and twentre leagues from Quine South-eastward, and fine and twentie from the Port of Payen, where the bounds of this Councell doth end. It is a Government at the providing of the Vice-roy : it hath one Monasterie of Mercenaries. Though in this countrie rayne is holden for a wonder, there are good wa- 40 tered grounds, that beare good Wheat and Miller, and the feedes and fruits of Castile. The port of Payte stands in the inrisdiction of this Citie, in fine Southerne degrees, which is good, great, and fecure, where the ships that goeffrom Guatemala to Pine doe touch. The Marques Doe Franciscus Picarro built it in the yeere 1531, the first of these Kingdomes, and where the first Temple was erected in the honour of God, and the holy Mother Church of Rome. All the Prouince and borders of the Valleys of Tumbez are drie, and the high-way of the Ingas paffeth through these Valleys of Piera, betweene trees and pleasant shadowes, and betweene the principall Valley are joyned two or three Rivers : the Citieswas built at the first in Tangarala, from whence it was remound because it was a fickly situation, and now it stands betweene two Valleys, and yet is immewhat fickly, especially tor the eyes, for the great windes and dusts of the co Summer, and great moiftures of the Winter.

The Citie of Saint Lames of Guayaquik by another name Las Culata, fixtie leagues from Quine, and fifteene from the Sea to the South-well; it is a Gouernment prouded by the Vice-roy: the Prefident Belalcazar peopled it, and many of the Indians having rebelled, and flaine many Spamierds, the Captaine Franciscus of Orellana peopled it againe 1537. it is a most plentifull and pleafant Countrie, and hath great flore of hony in the hollow places of trees : The waters of this River which runne almost under the Equinochiall, are thought healthfull for the French difeate, North Sea are rootes of Zargaparilla that are in the River: it is not very great, nor those that run to the South Seware fo bigge as those that runne into the North Sea, because they runne but a little way ; but notwithstanding they are strong and with sudden flouds, because they fall from the Mountaine. 60 The Indians doe vie many thirts for to paffe them; they have in some places a rope over it, and abasket on it, and the pallenger being put into it, they pull him from the other fide. In other Rivers the Indian goeth riding on a truffe of firaw, and carneth the paffenger behinde him tin other places they have a great Net of gourds; ypon the which they lay the cloathes and the perfons, and the Indians fattened with certaine coarder goe fwimming and pulling as coach-horres; and a thouland other arces they vie for to paffe the Rivers. The Port of this Citie flands neere and a circumstance are very broad, whereby they bring up the merchandile from the Sea, and they goe by land to Quite. The yeere 1 168, Captaine Contero planted the citie of Caffre, in the Caffre, Valley of Vols, the Licentiate Lope Garcia of Castro being Gouernour. Vift in in the Prouinces of Ville Burnig ando, Imdisono, and Gualapa, which they call the Prosence of the Emeralds, and he went ahout it from Ganganil, and discourred all these Prounces from Passao vnto the River of Saint

Iohn, which entreth into the South Sea. 10 . The Citie of Puerte Vieje is about eightie leaguer from Saint Francis of Quiteto the Welt, Ocali Port. though nor of open way, and other fiftie from Saint lames of Guayaquil, whereby yet goe from Quite: in her borders flands the Poffee, which is the first Port of the countrie of Pan, and from it, and from the River of Saint James, began the government of the Marques Don Franciscal Popular per and because this countrie is fo neighbour to the Equinoctiall line, that it flands in one degree; some beleeue it is vnwholfome but in other parts as neere the Line men line with much health, plentie and abundance of all things for the full enance of man, against the opinion of the ancients and so it is that the Indians of this countrie doe hor live long, and in many of them there breede certaine red warts in the foreheads and nofes, and other parts, which beside the dilease being gricuous, it disfiguresh them very much, and it is beleeved that it proceedeth of eating some fish. 30 In their bounds stands the towne of Manta, whither great riches have beene brought from with- Mania,

in the Land; and it is held for certaine, that here is a Myne of Emetalds, which are the best of How the Emein the Lana; and it is measter section, a manufacture anymous finestime, which are determined the selection and their grown in a floor like Cipfall, and they making like a veine; and by little and raids do gow, little congesting and refining themselves, and of halfe white and halfe greene, they goe repening and recouring their perfection. The Captaine Franciscus Pacheco peopled this citie 1535. by and recouring once pasternon and pasternon and pasternon amount of the pasternon order of Don James et Allmagre it hathmany ladany in ware: there is in it a Monatteric of Monatteric of Ton James to gather in Wheat for it rayper the eight moneths in the yeere from O-Moreone frame, they gather in Wheat for it rayper the eight moneths in the yeere from O-Moreone frame. Stober forward, and there are many good flower of gold.

Rober forward, and there are many good flower of gold.

In the coast of this Government are the Ports, Hands and Points following. The a faces of Port & Point In the coast of this Government are the Ports of Hands and Points of Mangles.

So for this shorter the Bay of Saint Mankey, which is fifteen leagues from the Point of Mangles at the South, and then the Bay of Saint Mankey, and after the Cape of Saint Francis; and past to Occidents, bour Ruser's before Princip, which the black Mangues that laude themfolders of co-Points of Port of Indians, where they lay the Equinochtall that differt, have the Manutain of Occasion. A consect a not the Bay of Carts which is before old Port, old Porged from the Equinochtall to the South, and the Bay of Carts which is before old Port, old Porged from the Equinochtall to the South, and the Bay of Carts which is before old Port, old Porged from the Equinochtall to the South, and the Day of Carts which is before old Port.

And Calment Sector the Point of Saint Edinochts, and the Point of Saint Edinochts. The Indian of Saint Patients in two de-Place, and forward the Ports of Calle, and Calange, before the Point of Saint Holes, in two degrees hight; the River of Tumbes in foure degrees, and the Hand of the Tume neer's vato it, and the Hand of Suntia Clara somewhat more to the Sea, and Cabbblance fifteent leagues from Tumbes to the South , and then the Point of Parisa, and to the South the Hand of e Labas , foure e Or white 40 leagues from the Port of Paper about aid, and is side, before the Point del Aguia, and the Port of f Or wookets

The men of this countrie fay, that in old time there tame by Sea in Balfas (which are many. The Girnt of the prices of timber faithened one vpon monther) men so bigg, that this a much from the kinese down the promise of timber faithened one vpon monther) men so bigg, that this a much from the kinese down the promise of timber faithened one vpon monther) men so the season that the promise of timber faithers are the season to the season that the promise of timber faithers are the season to the season that t ward, as an ordinarie man in all his body, and that they made certaine Well's most deepe in a quicke Rocke, which at this day are feene very treft and cold in the Point of Saint Helen, and that because that they wied most abominable sinnes, fire fell from heaven and consumed them all, and now are found in that fituation exceeding great bones of men, and pieces of teeth of fourteene ounces weight, and in New Spaine in the bounds of Tlafcala, are bones found of the like bignelle. There are in this Point of Saint Helen, eyes and veine of Tarre, to perfect that they might calke

50 with it, and it commeth out very hot.

The countrie is commonly rough and very raynic, and therefore they have little Millet, which are the and lefte Wheat, and no store of Cattell, but it is rich of Mynes of gold, and the Townes are their reft of the

The citie of Popagan stands in two degrees and a halfe to the Septentrionall part of the Equinochall, and 78. and a halfe of longitude, one thousand five hundred and eightie leagues from To-60 Inde in it is refident a Lieftenant Gournour, the Cathedrall, and one Monasteric of Mercentric Popper. Friars. The Prefident Sebaftian of Belalcaziar peopled this citie 1537, the people of thele Pro. uinces are farre different from that of Pris, for thefe are of greater vader standing, and lived in more policie: the men of this government lived as in liberties. It was called Popeyan, of the name of

* Or great

The Citie of Cale stands in four degrees, and two and twentie leagues from Ropeyer, and eight and twentie from the South Sea, it was inhabited 1537, by the Captaine Michael Munic. and Sebastian of Belalcarar made it first in the townes which are called the "Gorrouer 3 it bath the seate in a plaine Valley, leaning to the foot of a Hill, the temper is hot, the Governour, the Officers, and the Kings treasure are resident in it; a melting houle, a Monasterie of Meremains, another of Anguffine Friars. The Port of Bonauenture falleth in his jurishiction in three degrees 10 and a halfe of altitude: in it are fome housholds retident for to receive the merchandize. The Inand a native of activation, and good Christians, their old Lord, was called Lipsoff. The village of Saint Fe of Antiochia, is more then an hundred leagues from Poppyarto the ports. eaft, in the borders of the River Canca, of the bounds of the Councell of the New Realme, and Bishopricke of Popagar, rich in Mynes of gold, neere to the Hill of Basitaca famous for the much gold that was in it; it is feated in certaine Plaines. The countrie people are good folkes, well gold that was in 1; it a reason in criains raine. An economic prope are good tokes, well made and white, and the temperature is fuch that they goe to fleepe on the boules, without any offence of the deaw, they breede much Cattell, many fruits, and this in the Rusers and Plathes: the Captaine Gaspar of Rhodes inhabited it by commission of the President Belalcarar, the

The Village of Caramanta is fixthe or seventie leagues from Papayan to the North-east, necre to the great River Canca, of the bounds of the New Kealme, government and B. shopricke of Page naran, plentifull of Miller and other feedes, without Wheat, and with little Cattell, though they haue many Swine, they goe by the River in five for fixe houres to Antischia, though it bee fiftie have many swine, they got by the function mean man notice to summan, though it been title leagues for it runneth very funft; it is the plantation of the Predictor Belalcoco. The village of Sunt James of Arms, which hash many Mynesof gald, is fittigle legues from Pepper to the Production of the Produ North-east, declining to the East, it is of the Council of the new Realme, the government and Diocesse of Popayan; without Wheat or feedes of Gustile, but plentifull of the countrie seedes. The President Belaleacer inhabited this village, and here hee beheaded the Marshall George Re-The remains personal instruction and wings, and the loc officered the magnitude were not before it financials fixene legisles from Jacoppa: the people of the countrie are so butcherly that 30 the quicke are the sipulcitie of the dead, for it hath been seene the shupped of case the weight brother the brother or lifer, the some the father, and having fatned any captine, the day that bround the drawn interaction plans for the part of the day that they are to eate him, they bring him forth which many, fongs, and the Lord commandeth that an Indian doe goe cutting off every member, aggle alive they goe eating him, and after the inhabiting of Arma they have eaten more then eight thousand Indians, and some Spaniards have allo fuffered this martyrdome.

of the Indian e the borders

Carrara

" Or Buffes.

The village of Saint Anne of Ancerma is fiftie leagues from Popayan to the North-east, in the border of Canea, of the Connell of tho, new Kingdome, government and Bilhopricke of Popagan; without Cattell or Wheat, very much annoyed with thunder bolts : the Captaine George Ros bled buile it by order of Laurence of Aldena. Likewise the men of this comitrie are eaters of 40 humane field; they goe naked, they have no Idols, nor any thing to worship : there are in this iurissiction good Mynes of gold; the climate is hot, and many thunder-bolts doe fall. The cithe New Realme, Government and Bishoprick of Popsym, without Whest or any feder of the New Realme, Government and Bishoprick of Popsym, without Whest or any feders of the New Realme, Government and Bishoprick of Popsym, without Whest or any feders of the lite is a temperate and whole fome countrie, of little gold, it rayneth much, they breede no other cattell but Kine, and Mares: they have many Mountaines, in the which breede many Lions, Tigres, Beares, and Dantas, and wilde Boares : they have a Monasterie of Franciscan Friers: the Captaine George Robledo inhabited it, and it was called Cartaga, because all the inhabiters were of Cartagena. The village of Timona is fortie leagues from Popayan to the South-east, and fixtie from Santa Fe of Bogota; and thirtie from the Provinces of Dorado ; here is a Lieftenant of 50 the Gouernour, which also hath at his charge Saint Sebaffian de la Plata: the Indians of their borders doe decay, for they are fo inhumane that in many places they have publike shambles of men which they take captine. They have their feare in the beginning of the Valley of Negua, the temper is most hot : in their bounds is a Mountaine where they digge the Load-stone, and the Indian Paezes are neere, and the Pixaos, which also are " Caribes.

Where the Load flone is

The Citie of Guadalmara of Buga, is lifteene leagues from Poparan to the North-east, is of the bounds of the Councell of Onico, and Diocesse of Popayan. The Citie of Saint Sebastian of the Plate, in the confines of this Government is thirtie five leagues from Popayan, and thirtie to the South, welf from Santa Fe, Diocelle of Popayan, where are many Mynes of filuer, and in her borders'twentie foure repartitions : it is three leagues from the Port of Onda , in the great River of 60 Magdalen, where those that come vp from Carragena doe land: it is built in a Plaine, neere to the River Guala: there are many Eirthquikes, and in Winter it is more but then gold. The Countryc Or cambals. Men goe to decay; because the . Caribes which they call del Rincon do eate them and have pub-

like hambles of them, without any remedie for it : and the Prelident Belalenzar built this Citie.

CHAP.I. Vulcans described. Government of Pacamoros and Gualfango.

The Citie of Almaguer is twentie leagues from Popajan to the South-east; it is intentiful of Almaguer. Wheate and Millet, and other feeds, and cattle, and it hath Gold : the Captaine Alonso of Fuemajo, by order of the Licentiate Brizenjo Guuernour, and d Indge of Accounts, of Poparan d Hip ludge of peopled it, heing feated in a Hill of Zahana, and the climate is fresh, and the people dbe weare Residentia.

S. lobn of Truxillo, and by another name Ticauce is thirtie leagues from Popayan to the South. Truxillo. eath. The Citie of Madrigall, or Chapanchica, thirtie five from Popayan about the South, a rough Countrey, where they neither reape Wheate, nor breed cattell, though they gather Millet twices yesteintheir jurisdiction: and for the roughnesse of the Country, the men are suilt to to pacifie, and in this Citie, and in the Citie of Agreda, and Almagner, are Mynes of Gold. Agreda, Agreda

and by another name Malga, flands forcie flue leagues from Popayan to the South-west. The Citie of Saint lobn of the Passare, focalled because it is a Countrey of many Pattires, it flands Saint lobn de fiftie leagues from Popayan, about the South-well, and as many from Quito about the North-call, Poffer. and in the degree from the Equinocial Dioceffe of Quite, in a good toyle, of a good timite, and plantiful of Millet, and other prouisions, with Mynes of Gold; In her borders are 24000, change and present fee, which are not Cariball, but of euill vilages, filthy, and fimple : they had no Idols mention in the time of their Paganisme, they beletued that after death they should goe to Rue in more joyfull places. The Riner which they call Whoate, is betweene Pasta, and Popayan, it is of a very delicate water, and passed this River is the Mountayne whither Gongalo Picarro did follow 20 the Vice-roy Blasco Nunsez Vela, and vnto the River Angasmayo, which is in this Province came

the King Guaynacapa. Beyond the River Caliente or hor River in a Mountayne, is a firie month, that casteth store of (moake, and it brake forth in ancient times, as the Countreymen doe fay. The Philosophers being willing to declare what their firie mouthes or Etnaer are, doe fay, that as in the Earth are What the Etplaces that have vertue to attract a vaporie fubftance, and to convert it into water, whereof the mass are, and places that have save made: there are also places that doeattract to themselves dry and hote exhalations, which are connerted into fire and smoake, and with the force of them they cast also another groffe substance which is diffolued into ashes, or into stones, and these are the fierie another groun concease without to months a months, without topics, and there are the steries and months. Saint John de Pagho hath Monafteries of Diaminete, Prantifica, and Martenarit Friess sain as it is a cold Country, with abundance of victuals, it hath Sugar Mills, and many Fruits of the 121.58

Country and of Caftile : when the Capteine Laurence of Aldona built it, het called it . Villa e Griberanie viciofs de Pafto, i: ftands fortie leagues from the South Sea, towards the Iland Gorgona. There hath beene difinhabited, or daninished in this Protince, the Citie of Antischia, the

Village of Negua in the Valley of Negua, twentie leagues from Tamana, and it was through the Negua. rigour of the Indian Paczes, and Pixass, and for the Manipes, in the Villey of Saldanda, and the Citie of Saint Vincent of the Parzes, fixtie leagues from Saint lobe of the Plaints, in the confines Saint Discont of Popular, which Dominger Lozane built, and the Citie of los Angeles, twentiet we leagues The Angels, or rougher, which the government of the coaff which this government extendeth Rivers Gaves on the South Sea, from the Capref Corriences, that stands in fine degrees Septentrional from the and Robbusof 40 Line, the River of Solman, betweene the Caps of Cerrièmes and the Iland of the Palmel' in fourt she Gasti of the green one third pure, and in the Coaft that lyeth vino Corgona, the River of Saint This arising this agencies.

many other which make the Country boggie, and right against the mouth, the lland of Gorge ment. ma, two leagues compafie, where Dou Frantifens Picarro was forfaken of all his men, with his threeene companions. The River of Saint Linear, and the River of Nicardo, before the River of f Zedros, in two degrees from the Line, in which flands the He del Gallo, and after the Pott of the f Or Cedars. Croffe, and the point of Manglares, where beginneth the Coaft of Quite.

Of the government of the Quizor, and Camela, there is no more notice, but that it falls to the East of the Province of Quito, and parcof the South, toward the government of John of Saloras; there are in it three Spanish Townes, with a Gouerdour which the Vice-roy of Pira prouideth, and in spirituall respect it is of the Behopricke of Quite : the Countrey is rough and 10 Mountaymous, without Wheate, and little Miller, with certayne Trees which feeme of Cina-

mon. The full Towne is Barra, eighteerie leagues from Banit Francis of Thiro, toward the South eaft, where the Gonemon HReident : the Citie of Archidona'is twentie leagues beyond Barga. the Citie of Anila Stands to the North of Archidona.

The government and Province of Pacameres and Gualfaires or of Jahr of Salites which bounds garagestant.

The government and Province of Pacameres and Gualfaires or of Jahr of Salites which we are affined thin to the East, from twiching Tagings Salites and an interest one hundred leagues, which were affigued thin to the East, from twiching Tagings Salites are before the Circi of Zamora, in the Rome of the Ander, and as many invite North and Solith, it Gold where they have pieces of great bigneffe : there are in refoure Townes of clie Billiopricke and entire

60 of Quito, for the Captaine John of Salinas did build theirs. The Civie of Valladolld is in telen degrees height, twent: e leagues from Long to the South east, having fall the Rong of Find, the Citie of Londa, or Cumbruania is fixteene Pearies with Eaft fith Valladid the Otie of Saint Lames of the Mountaynes, fittie leagues from Logola, roward the East, and in her botders much gold, and very high in touch, and as touching the gold we need not intreat of his excellencies,

In how many being holden for the Supreame power in the World. It is gotten in these Mynes in three manners: The first is in Poppers, which are whole pieces without mixture of any other Metall, the need not to be purified by fire, and these graines commonly are like a Pompeon Seed, and some times bigger : of this gold is found but litle, in respect of the rest. The second fort is in flowe, which is avaine that groweth in the stone it selfe, and these stones are found in the government of selfe. of Salinas very great, all passed through with gold, and some which are halfe Gold, the which is found in Pits and Mynes, and it is hard to worke. The third, is gotten in powder, and is the greatest quantitie, and this is found in Rivers, or in places where some streame of water hath passed test quantitie, and this is to the control of the control of the Rivers of the Courte, New Realine 10 and the Rivers of the Courte, New Realine 10 f Granada, and in the beginning of the Discourries, there were many in the 8 Weather L. Jands. The highest in touch is that of Carabaya in the Pirm, and that of Valdinia in Chile, for it reacheth to twentie three Charracts and an halfe, and vet it paffeth.

Mountaines

Hat which is called Prus, is proper and particularly the bounds of the Councell of Us Reys, and is comprehended North and South, from fixe voto feuen Southerne degrees of altitude. Of the Councel Which are two hundred and twentie leagues, though in Voyage they put three hundred from the of medicance of point del Aguia, beyond Parta, whereby it is not with the Councell of Quito, till passing the The Kings, or Citie and Port of Areguipa, where beginneth the Councell of the Chareas, Eaft and West. The inhabited part of this Councell hath about one hundred leagues from the Coaft of the South Sea toward the East, whereby her bounds remayne open vnto the Prouinces of the River of Plate, and 20 of Brafil, that which is from the Rome, where, as hath beene faid, it rayneth continually, vnto the Sea, they call the Plaines of Pirm, in the which it neither rayneth nor thundreth, became raymeth not in the great height of the Mountain doth shelter the Plaines in such fort, that it permitteth nowind from the Earth to blow, whereby the Sea wind reigneth, which having no contrary doth not represse the vapours that doe atise to make raine, in fort that the shelter of the Hill hindereth the thickning of the vapours : and this want of matter caufeth that in that Coast the vapours are fo thinne, that they make no more then a moy ft or dankish mist, which is profitable for their lowh Some are of ings, which have not without the h mift fo much vertue, be they never fo much watered. The apinion that Countrey is all fandie grounds, except the Valleyes which are made by courses of the Rivers. opinion that all plants and that defeend from the Mountayne, where much Corne is gathered by the waterings, Wine, 30 trees are nou- Oyle, Sugar, and the other Seeds, and Fruits, of Calide, and of the Countrey. In the skirts and either day yes. Dyte, Jougan, and the other Secon, and returned to Country and on the Country. In the skirts and pourty-either his fides of the Mountayne, are great Pathures and breedings of cattell, and the temper variable, the vapours of and as would be defired; for the height is cold, and the low hot, and the middlemoff partakers of the blood now the extreames, as they are more or left neere them. The government of this Councell, and of rithlining Quite, and of the Charcas, is in the charge of the Vice-roy, and there are the Townes following.

Creatures. So in the circuit of this Council. Ges. 2 miff in in the circuit of this Councell. The Citie of the Kings (or of Lima, because the Valley is so called, which was the name of

the Cazique, and it is the greatest and broadest Valley, of all those that are from Tambez vnto

it) flands neere the South Sea, in twelue degrees of Southerne altitude, and eightie two from the

greater circle : it hath aboue three thousand housholds : the Marques Don Franciscus Picarro

buile it, in the beginning of the yeere 1533. because suspecting that the President Den Peter of

Aluarado would come downe to the Sea coast, when her went with an Host from Gnatemale

meanewhile that Don lames of Aluarado went to reful him to the Proninces of Quito, hee went

to intercept him the paffages of the Sea. Neere this citie, on the Eaft fide, paffeth a River from

whence all the houses doetake water, and their gardens, wherein are excellent fruits of Castile

Meridian of Toledo, distant from it about one thousand, eight hundred and twentie leagues by a 40

Paradife,&c. The Sunne as Head of the Harr as Sunne in the Body, rithment by

The Citie of

and of the Countrie, and it is one of the best Climates, of the World, seeing there is neither famine nor peftilence; nor doth it rayne or thunder, nor fall there any thunder-bolts or lightnings, but the Heaven is alwayes cleere and very faire. In this Citie is refident the Vice-roy, the Royall Councell, an affembly of chiefe Iuftices, the 50 Officers of the Kings Rents, and treaturie Royall, the Tribunall of the holy and generall Inqui-Fittion, which was founded when the Inquilition of New Spaine was. The Inquilitor general in these Kingdomes was then the Cardinall Don Iames of Estimosa Bushop of Signers, it having proceeded with mature deliberation, for the augmenting of our holy Catholike Faith, and Chriilian Religion, There is also in this Citie an Universitie, where very learnedly the Sciences are Such hadinette read. and Schooles of divers languages of the Indians, in the which the Fathers of the Companie of Ielus are very diligent, to reape fruit in the preaching of the Gospell. In this Citie is the Archmeanesto e. fablish is force episcopall refident, whose Suffraganes are the Bishops of Chile, Charcas, Carco, Quito, Panama, gluing lips and Nicaragua, and the Riner of Plate. There are three Parilhes, and fine Monasteries of the foure gluing lus and Arearagems, and the Companie of Iclus, and two of Nunnes. Casso which is not run, and of the Companie of Iclus, and two of Nunnes. Casso which is not run, and the companie of Iclus, and two of Nunnes. Casso which is great, capable, and very good, where are flore of houses, one of Indice, a cultome leagues from it, great, capable, and very good, where are flore of houses, one of Indice, a cultome Orders, and of the Companie of Iefus, and two of Nunnes. Callee which is her Port, is two 60 and the Water fet to coole in the Sea in flaggons, whence it is inferred that the Ocean hath the vertue to temper and refresh the ouer-much heate. Many doe affirme that in this Citie are

twelve thousand Women of all Nations, and twentie thousand blacke-Moores. The Village of Arnedo in the Valley of Chancas, is ten leagues from The Kings, and halfe a Negros. I-ague from the Sea, with a Monafterie of Dominiche Friars, rich of Vines : the Earle of Numa hult it. The Village of the * Parrilla, or Santa, is by the Valley where it flands, fiftie five leagues * Or Gridinate from The Kings, and fifteene from Truxillo neere the Sea, neere to a great and faire River, with a good Hauen, in nine degrees, where the ships that faile by the coast of Pris doe touch. The Cia good many, in the Valley of Chime, which Don lames of Almagre plotted fult, and after Trustile, ward the Marques Don Franciscus Picarro built it in the yeere 1533. It hath many Vines and fruits of Castile, and Wheat : it is all watered ground, and a wholesome Countrie, and there bea To great Orchards of Oranges, and breeding of Poultrie, It stands in seven degrees and a halfe, eigh-

tie leagues from Lime neere the Sea, with Monasteries of Saint Dominiche, Saint Francis, and Saint Angustine, and another of the Mercenaries, and Officers Royall, prouided by the Vice-roy: and in her bounds about fiftie thouland tributarie Indiane, in two and fortie repartitions. The Port is two leagues off in an open Bay, eaill, and of little fecuritie. The Village of Mirafores is Mirafores in the Valley of Zana, ninetic five leagues from the Citie of The Kings to the North fide. and neere to the Sea. The Citie of Chachaperas, or Saint lebe of the Frontier, is about one hundred charbaneau and twentie leagues from the Citie of The Kings to the North-eaft, it hath one Monafterie of the Mercenaries, and another of the Franciscans: in her bounds are Wheat, Millet, and Flaxe, many Mynes of gold, and more then twentie thousand tributarie Indians, which held out valorously 20 a long time against the Ingu, but in the end they were ouer-come, and for greater quietnesse of

the Countrie they carried many of them vnto (nzco, and they inhabited in a Hill which is calthe Countries and These are the whitest and best favoured Indians of all the Indies, and the Women Faire Indians. very faire. The Marthall Alfonfos of Alumado, entred in this Prouince the yeere 1526, by order of the Marques Don Francisco Picarro, and pacified it, and built the faid Citie in a throng fituation called Lenanto, and afterward he passed to the Prouince of the Guancas.

The Citie of Saint Lames of the Valleys, or Meyohamba, more then one hundred leagues from Saint Lames of The Kings North-eastward, and fine and twentie from Saint lebs of the Frontier, stands in a ve- the Valleys. ry rayme foile, and plentifull of Cattell. The Citie of Lion of the Guernece, fiftie leagues from Lion of Guethe Citie of The Kings to the North, neere the high-way of the Ingas, formwhat diffant towards were 30 the East, hath Monatteries of Dominicans, Franciscans, and Mercenaries, and in her bounds thirtie

thousand tributarie Indians, Anno 1539. for the warre that the Tyrant Thotops made to this Prouince, the Marques Don Franciscus Picarro sent Captaine Gomes of Alaarado which built it, and afterward it was difinhabited, and Peter Borrofo reedified it, and after the battell of Chapes the Licentiate Vaca de Cafro, fent Captaine Pedro de Puelles to make an end of the plantation. It flands in a good and wholesome situation, abundant of victuals and Cattell: it hath Mynes of filter, and the people is of good capacitie. They reape much Wheat, for the Indians have learned to be good husbandmen: for as before in their Indias there was no Wheat, nor Barley, nor Millet, nor Panick, nor any feede of the bread of Caffile of Europe, and they knew other kindes of the Labora has Countries have feed on the breath of Large and they knew other kindes of the Labora has considered and Rootes, only of the which May 2 or Millet was the principall, being found in all the Labora has considered have been considered as the Countries have Countries have feed to the Labora has considered as the Countries have feed to the Labora have the Indies; the Countrimen have fince delighted much in it, and have received it well in those Qualities of places where it is gathered, because the Mayz is not so strong nor of so much substance as the the Miller, Wheat: it is fatter, and hot, and engendreth bloud, it groweth in Canes, and beareth one or two

bunches, and some Spaniards doe eate it where they have no other shift, The Citie of Guamanga, or Saint Iman of the Victorie, fixtie leagues from Lima to the South- Guamanga. eaft, in the way of the Ingas, Bishoprick of Cuzco, hath Monasteries of Dominicans , Franciscans, and Mercenaries, and one of Nunnes, and in her bounds more then thirtie thousand tributarie Indians : it is plentifull of Wheate and Wine , and rich of filter Mynes, The Marques Don Francifem Picarro built this Citie 1539, and placed it the first time in a towne of Indians called Guamanga, necre to the great Row of the Andes, and left for his Lieftenant the Captaine Francisco de 50 Cardengas. Afterward it was removed to the Playne where now it is, neere to certaine small

Hills on the South fide, and nigh to a Brooke of good water. In this Citie are the best boules in Pirm, of stone and bricke; the seate is healthfull, without offence of the Sunne, the Aire, the Deaw, or the Moisture, or the Heare. There are found in her borders certaine great buildings Great boil-(which the Indians fay certaine white men with beards, which came thither before the Ingas, dings, did build) much differing from the building of the Ingas ; the most of the Countrimen of this Countrie are Mitmaes, which is to fay, Transplanted, for the Ingas did vie for the greater fecu-Transplanting rite of the Empire, to take from one Prounce the people they did not truft, and lend them to as of Egyptians

Guamanga is fixtie leagues from Cuzco, and in the way are the Hills and Playne of Chupas, Ificulter, 2 Reg. where Vaca de Cafro, and Don lames de Almagro the yonger did fight; and forward are the buil-60 dings of Vilcaf, in the high way in Andabaylas, eleven leagues from Gnamanga, which was the centre of the Ingut; and here was the great Temple of the Sunne. The Promince of the Anda- Temple of the baylar is long and hath much time Cattell, and victualls; from thence they come to the River of Sunsc. Abancay, nine leagues neerer Cazco, where the President Don lames of Almagro the elder over-

Women and

threw and apprehended Alfonfo of Aluarado, Generall of the Marques Don Francisco Pigarro. There followeth the River of Apurima, eight leagues from Paffado, or the Paffage, which is very great; and then the Hill of Vilcaconga, where the faid Prefident Almagro ouer-came a great batrell of the Indians, before he won Cuzzo, and the Valley of Xaanixaana is neere betweene two rowes of Hills, not broad nor long, where the Prefident Pedro la Gafca, by the vertue of those yaliant and faithfull Captaines Trojofa , Peter of Valdibia, Gabriel of Rojas , Alfonfus of Aluarado. and others (of the which in their place shall be made mention parcicularly) did ouer-throw Gome galo Pigarro, and tooke him : and from this Valley to the Citie of Cazco are fine leagues : and in this Valley they gather great store of Wheat, and have great store of Cattell,

remayneth of the Councell of the Kings.

TIght or ten leagues from the Citie of Guamanga, fome what North-westward, are the Mynes of Guancabelica, which they call El Affiento de Oropefa, where ordinarily are refident more then three hundred Spaniards. The Indians did worke in them to take out the red Oaker, to paint themselves when in the time of their Paganisme they went to warre, which is the Vermillion : and the Licenciate Lope Garcia of Caffro, governing in Pirs in the yeere 1566. a Ports. gall called Henrie Garces, considering that of the Vermillion the quick-filter is gotten, went to make a triall, and found it to be fo. This metall the Romanes carried from Castile in stone, and out of it they got quick-filter, and held it for great riches. The Indians knew it not, nor minded any more then the vermilion. The greatest profit it yeeldeth, is to purifie the filter from the earth. Profit of quick Lead, and Copper, wherewith it groweth : it eateth all the other metals, and pierceth them as 20 the Tin, Iron, and Lead, and therefore they carry it in leather, or veffels of earth. Quck-filuer

feruethalfo for other effects, and medicinall matters.

Spring turning k lling. Hot and cold Barbes.

In this feat of Guania Velica is a fpring , that as it fpringeth it congealeth in a foft ftone: of the which they make their houses, and the Men or Beafts that doe drinke it, die: for within the body it converteth into a stone. In the Bathes that are called of Inga neere the Cuzco, are two fromts of water the one neere the other, the first is hot, and the second cold, that it feemeth God did place them there for to temper themselves. In the same bounds is a Spring, that as it fpringeth it becomes good and white falt : in this place the two great Rowes doe begin to fenarate themselves, and make in the middest a great Champaine ground, which is called the rowes divided. Province of Collao, where are very many Rivers, and there is the great Lake of Titicaca, and 30 great pafture grounds. Though it be a plaine Countrie, it hath the same height and distemperature of the Hills; it hath no Trees, nor Wood; the bread that is eaten are rootes that are called Papas, which grow also in all Pirm; it is a healthfull Countrie, and much inhabited, and multiplieth enery day; it hath flore of Cattell of all forts.

The Lake of Titicaca compaffeth eightie leagues, and in some places it hath eightie fathom deepe, and in this, and in the waves are rayled when there is any winde, fo that it feemeth as a Bay of the Sea, from which it stands about fixtie leagues, twelve or thirteene Rivers enter into it, and many Brookes, and from it goeth a River into another Lake, which they call the Anlagas, which hath no voyding place, though because some Eyes of water have beene scene that vnder ground goe into the Sea, it is judged that it might bee the water of 40 these Lakes did goe, opening a way through the entrailes of the Earth vnto the Sea. Round about the great Lake are many Townes, and in it great Ilands, with great Tillage in them , and there were the Indians wont to keepe their most precious things for greater fecuri tie. The great Citie of Cazco, Seate Royall of the Ingas, and Head of their Empire (and now

of the Kingdomes of Pirm, by a Title which it hath of it from the Kings of Caffile and Lion) flands in thirteene degrees and a halfe height, feuentie eight of longitude, one hundred and fine and twentie leagues from the Citie of The Kings to the South-east, of more then one thoufand Spanifb houtholde; the Marques Don Franciscue Picarro founded it. It hath eight Parithes, and foure Monasteries of the foure Orders, of Saint Dominiche, Saint Francis, Saint Augustine, 50 the Mercenaries, and the Companie of Iefus, and one of Nunnes. Heere is resident the Cathedrall, Suffragane to the Archbishopricke of The Kings. There goe from this Citie fince the time of the Ingas from the Market place foure high wayes towards the foure parts of the world; one called Chinchafaye to the North, toward the Playnes and Province of Quito : another Condefago , to the West toward the Sea : the third called Collaofuyo , to the South and Chile: and the fourth to the East, which they call Andeluje, which goeth to the Andes and skirts of the Mountaine. It stands in a foile of a good temper, moderately fresh and healthfull, free No rememous from all venemous wormes, and plentiful of all things, with a thousand kindes of fruits of wormes.

Castile, and smelling herbes and slowres at all times which are of great delight. In her icrifdiction is the Valley of Torma : there is great trafficke of Coca, and showes of Gold, Silver, 60 and Quick-filuer; and there may bee in her borders about an hundred thousand tributarie Indians. It all the parts of these Indies the Indians have a great delight in carrying ordinarily in the mouth Rootes, Boughes, or Herbes, and that which they most vie in all Pra, is the Coca, for as they fay, they feele little hunger, and finde themselves with great vigour

Foure high wayes most admired.

chewing it alwaies, though it rather feemeth a custome inherited, or a vice. This is planted, and groweth to small trees, which are cultimated and cherified, and yeeld a leafe like myrtle, and dried they carry it in baskets to fell, and much mony is gotten by it. In the Valley of Valcabamba, stands Saint Francis of the victorie in Andefuyo, between the Row Saint Francis

of the Ander, about twentieleagues from Cazes to the Eath file, with a Governour prouided by the Vice-roy: it is of the Bilhapricke of Cuece, in a rough ground, and of great Mountaines.

The village of Saint Laborato Ore, is in the Province of Carabaya eightic leagues from Caree to Saint Labor of the East South-east, and thirtie to the East from the Like of Collas, and it is called del Oro, of the the Gold. Gold for the great store that is in her borders. The Citie of Arequipa is in fixteen degrees some- Arequipa to what more, one hundred and thirtie leagues from the Citie of The Kings , almost to the South-

saft as eine Coult runnetth, and fixite from the Citie of Cazes, of the Bilhopricke of Cazes it hath Monatheries of Deministry, Prantyfans, and Merchanie; it hath fittle thouland tributarie judiens; and is of most pleasant compensate to line in of all places in Pros. They gather in her borders great flore of Wine, and Whete: The Port is at the entrie of the River Chile, which palfeth neereche Chie where the merchandine is vnladen

Arequipe Gands in the Valley of Quiles, fogrecene leagues from the Sea. In her iurifdi ction is the Product of Condeling, the Townselof the Hubina, Gollagua; Chiquiquanita, and Quimiflaca; the Marques Don Francisco Picarro built it 1534. it is very lubitet to earth-quakes as all these Indies, especially the Sea coasts. In the year 1582, there was an earth-quake that almost Earth-quaket ao minated this Citie, and fince there hath beene another, and a breaking out of a ferie mouth, in the ladies

whereof they tell ftrange things, in the yeere 1 586. There was another in the Citie of the Kings very terrible the ninth of July, which ran one hundred and feuentie leagues in length by the Sea fide, and fittle and frange. within the Land; it spoyled the Citte, indangered few people, because they went out into the fields, and a little after the earth-quake was pait, the Sea went out of her bounds, and entred a great way within the Land fourteene fathom deepe. Such another earth-quake was in Quito the next yeare, in the Cities & Paz in the yeare 1981 a great high Rocke fell which tooke vnder it a great many Indian witch trees, and the earth which fell did run one league and a halfe. In Chile was another great earth-quake that oner-threw Mountaines and Valleys, stopped the Current of the Riners, brought the Sea out of her limits the space of some leagues, cast downe whole rent of the Anten, storage that so a beautiful so a superior some regions and the many men. The Bhalobean fay that the earth-quake proceeds from the From whence heate of the Sunne, and of other celeficial Bodies, which not onely doe draw the exhibition to the earth-

themselves, and the vapour of the superficies of the earth, but that also which is in the bowels of quakes doe it, which comming out engendreth winker and rayner; and if it happen that the earth is fo close proceeds. that the exhalation cannot come out any way, then it moment from one part to another through the pores of the earth, with greatwiolence breaking forth, as the powder in a Myne', tearing with fisch a furious rage, that tegenheth the earth where it is, and openeth it felled way with ereat furie, and so much more furiousitive how mach more the exhalation inclosed is creater.

The Village of Saint Michael de la Ribera is fixe leagues from the Sea , in the Valley of Cas Saint Michael 1 ne v mag or same Control of the state of t Tos, five and thirtie leagues from the Citie of The Kings, ven from the Port of Sangallis, is of the inrildiction of The Kings, and of the Archbilhopricke; herborders are plantifull of Wheat, Mila

let, and Fruits, and of much Wine. The Village of Casyste, or of Gueres, by the Valley where it flightly is diffant from The Kings Gueris, fine and twentie leggues to the South, one leggue and a hille from the Search her bounds are plentifull of bread the best of this Kingdome, whence is carried great quantitie of meale to Terra firme. Before the comming to this Valley, are the Valleys of Chilca, and Male; in the first it neuer rayneth, neither, paffeth any Fountaine nor Brooke through it; and they drinke of the Wells, and it is full of arable grounds, and fraits, which grow onely by elsevenw of the Heaven. Fertilisis with 50 They catch many Pilcherds in the Sea, and with every graine of atthet they not into the hole outraine.

where it is fowen one or two of the heads, and with that moy flure to proweth well. In the Pikhards Valley of Mala , Don lames of Almagro, and Don Franciscon Picture being in quartell, the father Bonadella of the Merced or Mercenarie Order , as an Arbitrator resolved their differences; through this Valley paffeth a great River, which does them great pleasure. Fine leagues for-ward is the River of Guarco in a Valley most plentifull in all things, where the Countrimen maintagned the warre foure yeeres against the Lingut , and to preferue it they cansed to build 'a Citie, and called it Cuzco, and erected for the triumphof the victorie a great Fortrelle an a Hill, that the waves of the Sea doe beare vpon the ftayres, Sixe leagues from Gaares is the Valley of Chineba, famous, pleatant, and very plentifull; where a Monafterie of Dominiote Pelars was 60 built in flead of the Temple of the Sunne which the Indans had , with the Monatterie of the

Virgins. Then followeth the Valley of Tea, which is no leffe, nor leffe plentifull & going out of the Valleys, and Rivers of the Nafea, and the principall is called Caramales, where excellent Wines are made. They goe from these Valleys to that of Hacari, where thinds Ocama; Camaria, Ocam and Quilea, which is the Port of the Citie of Arequips, and forward are the Valleys of Edwar and Leee Tambo-

Tambopalls, and the Deylo, and them of Tarapace, Rivers and pleatifully, with good Myrnes of 6th-uer, and necre the Sea : the Indusers of the Hands of The Seales doctory great fiore of Fowles dung for their grounds, wherewith of a barren, they make a plentiful ground.

of The Kings.

There are in the coast of this Councel from the Point del Agma, of the Needle, where'st involved with that of Queto, in fixe degrees of Southerne alsignde, the Hands and Ports following two llands which they call de Labor in feuen degrees, the one foure largues from the Couft, and the other more to the Sea; and forward another called of Saint Reste to the South waft, piere to Pazcamayo, and forward Puerto de Mai Abrigo, ton leagues beforeshe Port of Travilla, in feuen degrees and a halte, and feuen leagues from the Port of Guanque; and of Santhe impine de grees, and five leagues from this to the South, Porte Farnel; and fixt from it that of Contact and afterward eight leagues the Port of Guarmey at the mouth of a River ; and the Barrisca twentie leagues to the South; and the Port of Gaure where is a very great Sale pit; and after this the Hand of Lines, at the entrie of the Port of Coller; and swentie leagues, to the South the Point of Guerco, and one Hand de Lobes Marines, or Seale fiftes necrettris, and the Point of Chica in fitteene degrees, and neere to the Nafes; and forward the Point of Saint Lawrence, in the Valley of Quiles, and neere the River of Arequipa a and the Creftee of Challen; and after-ward the River of Nombre de Dies, where the limits does loyate by the Coaft of the Coaftles of The Kings, and of Charcas.

Chap. 21. The bounds of the Counfell of Charcas (which parteth limits with that of The Kings, stands of the Bounds in twentie degrees and a halfe of Southerne altitude, by the Ruser of Nambre de Diss. and or the Goundel the beginning of the Lake of (ollso) hath in length three hundred largues vinto the Valley of or Audience of Copiago, beginning of the Prouince of Chile in eight and twentir degrees of height, though in voyage they are reckoned neere foure hundred leagues East and West, that which is betweene of the South Sea vnto the North Sea, or South which answereth to the Provinces of the River of Place, which though it is not altogether discoursed it is understood that by placing all the Comtrie of this Counfell in much altitude, it is more cold then hot.

The Government of this Countell, is at the charge of the Vice-roy of Pirs, as that of the Countell of Quito, and of The Kings: there are two Governours, and two Bilhopricks, thatof Chareas and Tacumen. The Prouince of the Chareas (which commonly is named that which is to from the bounds of the Counfell of The Kenge; cillinking paste Poses) bath in length North and South about one hundred and fiftie leagues, and as many East and West; a Countrie not very plentifull, though abundant of Cattell, especially in Calles, that is from the Lake of Taicees ynto Charcas, where the Winter and Summer are constant to Europe: it is a plentifull Countrie of all Cattell, especially of sheepe, which are many; and of a very fine wooll.

In this Prouince are foure Townes of Spanish of One: Bifnopricke, which are the Cirie of the Plate, which the Captaine Persuance inhabited, in the yeomogh 3. by order of the Marques Des Franciscus Picarro. It stands in seventie two degrees of longitude from the Meridian of Toledo, from whence it may be diffant by a greater circle one chousand fener hundred and eightie leagues, and in mineteene degrees of latitude, one hundred feventie fine leagues from Carca to the South, or to Antartick Pole within the Tropicks, in the extermost of the Torrid Zone. There are in the ber ders of this Citie in Chauses (which are manured grounds) eight hundred Spanish houshelds. It is a Countrie extreme cold, whereas it should be temperate or bot, according to the height of the Pole it frands in : the Counfell and the Cathedrall is refident in this Citie; and there are Monasteries of Dominicke, Franciscan, Anguffines, and Mercenarie Friars, and in her inrisdiction fix tie thousand tributarie Indians, duided in nine and twentie repartitions, and the feedes of Caffile doe grow well, and there are many rich mynes of falues.

Our Lady of

Chicuita Orepefa.

The Citie of our Lady of the Peace , by another name the New Towns , and Chuquiabe , in the middeft of the Collas, one hundred leagues from Carces, and eightig from the Plate, bath Monafleries of Franciscane, Augustines, and Mercenaries, with flore of Wines and Cattell. Captaine et Alfonfau of Mandoca built it 1949, when was Prefident the Governour of Pira, the Licenciate Pedro de la Gafea, attenward Bishon of Signança. The Prominer of Chicaito in Callad, formewhat North-east from the Prominee of Plata, more then an hundred leagues from it, inhabited by Indians, with a Spanish Gonernour, of the Bishopricke of Charcas, and one Monaiterie of Dominicks. hath much Carrell, and it flands at the bottler of Titicaes. Orepefat, is a plantation of the Vice-roy, Dan Francisco de Toleda, in the Valley of Cechahamba, twentie leagues from the Citic of le Place: their husbandrie is crops of Whese, Millet, and Cattell.

The Imperial Towns of Petof is in mineteene degrees of altitude, eighteene leagues from the Citie of the Plate, and about eight from the Lake of the Anlager to the East, in the skirt of the Hell of Potofi, that looketh to the North-east ; it hath five hundred housholds of Spaniards 60 which doe attend the mysits; and of Merchants, and about 10000. Indian of ordinarie goers and comments the trafficke of the filter. And though it be a Towne of it felfe, it hath no Ruler, but State of the citie de la Plana. There refide the Officers, and Royall treasurie of this Protince, for the mynes of the Hill of Petofi, which a Gastillane discounted 3 445 called Villared, by meaning of cer-

taine Indians; and it is called Posofi, because the Indians doe fo call Hills and high places; and the filter was fo much that they got at the beginning in the yeere 1549, every Saturday, that when they cast it, there came to the Kings fifts from fine and twentie to thirtie thouland Pefos. The Hill is flat and bare, their habitation drie and cold , unpleafant , and altogether barren. It bringeth forth no fruit, graine or herbe, and because of the filter it is the greatest inhabiting of the Indies, which hath about two leagues in circuit, and where all kinde of dainties are found. and plentie, though brought thither by carriages. The colour of the ground of the Hill draweth towards red, darke. The forme is like a Sugar loafe, that ouer-peareth all the other Hills that are necre it: the going vp is rough, and yet they goe vp on horle-backe; it extended to a league, and from his top to the foote is about a quarter of a league. It hath on all fides rich veines of liker, from the top to the foote, and the Port of Arica whereby the merchan. Arica

dize come, and the filter of this Hill is carried, is from it about ninetic leagues, almost West. Sixe leagues from the aforefaid Hill in the way of the Port of Arica, is the Hill of Porce, an Porce, ancient feate of Mynes of filuer : whence it is affirmed the Ingas got the greatest part of the filuer that was in the Temple of the Sunne of Curionche, whence yet is and will much filter be gotten.

Santa Craz de la Sierra frands one hundred leagues from the Charcas to the East, in the way The holycroffe whereby they goe from the Charcas to the Affumption, in the Provinces of the River of Plate, of the Hill. whicherto they make three hundred leagues sourney, with a Gouernour prouided by the Viceroy, of the Diocesse of the Charen, and one Monasterie of Mercenaries, in a Countrie scarce

of water, though plentifull of Wheat, Wine, and Miller. This Prouince hath neighbour-to how with many Nations of Infidel Indicate, and many of them are alreadic baptized, and the first that strooke a denotion in the Countrimen , was a Spanish Souldier, " that was among them, " This Apostle fied for faults; which for a great anguilh they were in for water made them a great Croffe, after his miraand perfuaded them to worthip with great denotion that fame Crofic, and to aske water; cles, many was and God for his mercy heard them, and fent them much raine in the yeere 1560. The Capand God for his mercy neard them, and ient them much rame in the years 1906. The Caphanged at Petrans Numbs of Change went out of the Citie of the Afternion in the River of Plate, to discower, and comming to Santta Cruz of the Hill, having made great discourries, the people came 6.27.

whto him, and ferming to him that hee was neere to Pirm, went to the Citie of The Kings, where the Marques of Campte was Vice-roy, and with his order, and for Lieftenant of his 30 fonne Don Garcia of Mendoça, the Captaine Nufle of Chanes went againe to inhabit this Citie, though he came out of the River of Plate, with purpose to discover the Provinces of the Dorade.

In the Coast of this Councell, which beginneth in seuenteene degrees and a halfe in the Ri. Ports & Points uer of Nombre de Dist, or Tambopalle ; is the Port of Hilo neere to a River, in eighteene de fell. grees and a halfe, and more to the South, El Morro de los Diables, and the Port of Arica in nimeteene degrees one third part, and that of Tacama in one and twentie, and the Point of Taremare to the South, and more forward the River of Pies, and that de la Hois, or of the Leafe. and of Mentele, the Port of Medillows, and more to the South the Point of the Beacenes, or La Farallemen. Morto Morens, before the Bay And River of Santia Clara, and more to the South the Breach. and the White point , and the Deepe breach , and the River of Santa Clara ; about thirtie Panta Blonca. 40 leagues from the River of Copiago, where the Coast of Chile beginneth, and the Coast of the Quetrala House Charges from the Rant of The Province and Government of Tuchman, is all Mediterrane; her bound Province of begins from the Countrie of the Chichas, which are of the surification of the Imperial Village of Taxanas. Potefi: it flands in the fame Line of the Citie of the Affamption of the River of Plate , about

an hundred leagues from the South Sea coaft; it doth confine with the Province of Chile, it is a Countrie of a good temper, reasonably plentifull, and wntill now without Mynes of filuer. or gold. There is in it fome Spanish Townes in one Bishopricke, which are of the Citie of Saint Laro del Estero, which at the beginning they named del Varco, or of the Boate, in eight and Saint lames of twentie degrees of altitude, one hundred eightie fine leagues from Potofi to the South, declining the Marth. fomewhat to the East : the Governour and the Officers of the goods, and treaturie Royall, and 50 the Bishop, and the Cathedrall are resident here.

The Citie of Saint Marie of Talauera, is five and fortie leagues from Saint Lames to the North, Saint Michael. and fortie from Potof in fixe and twentie degrees. The Citie of Saint Michael of Tucuman New Lon eight and twentie leagues from Saint lames to the Welt, in the way of the Charcas in feuen and h Hiff. Nuesa twentie degrees. There were inhabited in this Gouernment in the time of Don Garcia of Mena Cuidina. doga, his father the Marques of Cangete berng Vice-roy, the New London, and Calebaque, Thinke that which they called a New wifedome, in the Prouince of the laries, and Draguita, which after ward were dishabited within a few yeeres. The people of this Countrie gooth clothed in wool-femme four len, and in wrought leather, made by arte like the guilt or wrought leather of Spaine : they breed inches fruite, much Cartell of the Countrie, by reason of the profit of their wooll : they have the Townes ve- and as high as ty neere the one to the other, and the Townes are fmall, because there is but one kindred in eue backe, and ta-

ry one, they are compassed round about with I Cardones, and thornic trees for the warres that keth much they had among themselves. They are great husbandmen, and it is a people that is not dranke, ground, hat for they are not given to dranke, as other Nations of the Indias. There are in the Province feven there grow mayne Rivers, and more then eightie Brookes of good waters, and great passures ! the Winter many out of

and the Summer are at fuch times as in Spaine; it is a healthfull Countrie and of a good temper.

and the first that entred in it, were the Captaines Diego de Roju , Philip Gutterres , and Nicolas

de Heredia; they discouered on this side the River of Plate vnto the Fortresse of Gabeta.

Chap. 22.

On Diego de Almagro was provided the yeere 1534, in Toledo for Gouernour of two hunof the bounds

Of the bounds

On Practice Pieuro, toof the King-dome of Chile. ward the Streight of Magellan, intituling this part, The new government of Toledo. Hee went to pacific this Countrie, and because he forlooke it, it was given in charge to the Marques Dow Franesseo Picarro 1537. and he commended it 1540. to the Captaine Peter of Valdinia; who were thither with one hundred and fiftie Spaniards. All the Countries of this Kingdome lye to the to South of the Equinoctiall, in a more Southerne altitude then the Kingdome of Pirm, and her Prouinces within the Torride, from the Equinoctiall vinto the Tropicke of Capricone, which paffeed 2 Defart, which they call of Aracama, which is from twentie three to twentie fixe degrees and then beginneth the Kingdome of Chile, which the Indians call Chille, and before the inhabited Countrie is the River of The Salt, in three and twentie degrees and three quarters, which from the East fide of the Row of Mountaines, runneth to the West into the Sea, through a very deepe Valley, and though it hath the water very cleere; all that the Horfes are wet with it when they drinke, is congealed with the heate of the Sunne; and it is so meere talt that it cannot bee drunke, and in the borders it is congealed : the River is before the enering in the first Province of Chile two and twentie leagues where the Xagueres are, which are Wells of water, for there is an no other in the two and twentie leagues, and all the Kingdome stands within the Zone, which

> This Government taken largely unto the Streight, bath in length North and South, from the Valley of Copuspo where it beginneth in feuen and twentie degrees, fine hundred leagues, and in breadth East and West, from the South Sea to the North Sea, from foure hundred to fine hundred of ground to be pacified, which doeb ftraighter it felfe, till it remayneth by the Streight in ninerie or in an hundred leagues. That which is inhabited of this Government, may bee three hundred along the North Sea coast, and the breadth of it twentie leagues and leffe, vnto the Rose 30 of the Andes, which doe end neere the Streight, and it passeth through this Kingdome very high, and almost covered at all times with snow, All the Countrie is plaine, at the least there is mo great roughnesse, except where the Rose of Pira doth reach, and doth end within two or three leagues of the Coast.

the ancient men called Deferte, which is inhabited with white Indians, and it is fituated on the

borders of the South Sea, which is Mare Magnum, which is included betweene her Coast and

The temper and qualitie of it (though it bee not without some difference for the varieties of the heights it standeth in altogether) is of the best, and most inhabitable that is in the Indies, in temperature like vnto Castile, in whose opposite altitude is salletti almost all, and in abundance and goodnesse of victuals, and plentie of all things, riches of Mynes and Metals, and force and vi gour of the Countrimen, which for being so great warriors have alwayes beene cuill to pacific, and there bee many out in the Mountaines, and Breaches of the end of the Rowe, the Prouinces of 40 Aranco, Tucapel, and the Valley of Paren, the bounds and borders betweene the Citic of the Conception, and los Confines, and la Imperial,

In this Government are eleven Spanish Townes, with a Governous placed in the matters of the Government to the Vice-roy, and Councell of Pirm, after the Councell that was in the Countrie was taken away; and thereisin it two Bilhopricks Suffraganes to the Archbilhoprick of the Kings. In the Bilhopricke of Saint James are foure Townes. The Citie of Saint James in the time of the first inhabiting of Chile, founded by Captaine Peter of Valdinia, it stands in thirtie foure degrees and a quarter of aktitude, feuentie feuen of longitude, one thouland nine hundred and eightie leagues from Toledo by a direct Line, fifteene from the Sea, and ten beyond the Valley of Chile, which they named at the first New Extreame. In it is the Cathedrall refident 50 with Monasteries of Dominicke, Franciscan, and Mercenarie Friars, in a plentifull foile of wheat, Wine, and other things, and of very rich Mynes of gold, and in her jurisdiction more then eightie thousand Indians in fixe and twentie repartitions. This Citie is served of the Port of Valparayle at the mouth of the River Topocalma, which paffeth neere vnto it.

Captaine Valdinia peopled also la Serena in the yeare 1944 neere to a good Hauen; it is the first Towne of Spaniards, at the entite of Chile fixtie leagues from the Citie of Saint James, somewhat North-weil neere to the Sea in the Valley of Coquimbe , with Monasteries of Franciscan , and Mercenarie Friars. It raymeth in it but three or foure times a yeere, and in the Countries before it is sever savneth. The Port which they call of Commed, flands in two and thirtie degrees, it is a good Nooke where the this of Pira doe make a stay. In the Prouince of Chucuite, 60 which is on the other side of the Rose of the Andes, in a cold and barren Countrie, doe ftand the Citie of Mendece, and of Saint lebe of the Frontier; for Den Garcia of Mendece peopled them both. The Citie of Mendoga is of the fame height with Saint Lamer, about tortie leagues from it, of a difficult way, for the inow that is in the Andre. The Citie of Saint lobe of the Frontier flands to the South of the Citie of Mendosa

In the Bistiopricke of the Imperiall are leven Spanife Townes, Which are and Citie of the Conception in feuen and thirtie degrees of height, feuentie leagues to the South of the Citie of Saint James, necre to the Sea, Peter Valdinia inhabited it in the yeere 1550. The Gouernours apprecident in it, fingesthe Comment, (thus were those from the years 150 to 15 Infantes, or la Confinet; Don Garcia of Mendogs peopled it and the Confinet; Don Garcia of Mendogs peopled it and the Confinet Regent Nonvillaged commanded it to be called the lay Confined. It stands fixteened legists from the Concoming to the the Infantal fide of the Streight, eight leagues from the Row of the Ander, and four from that which goeth & 10 along the Coaft. It hath one Monatterie of Dominicans, another of Franciscan Friest. The warlike Indian come to the bounds of this Citie, and the mayne River Bishioly them, and others which doe enter into it, and the River Ninequeten.

which doe enter into it, and the futer the funeral 13 to which is in nine and thirtie he. The lapoint grees of height, nine and thirtie lagues from the Companion toward the Streights feld futer legges from the Sea, where the Cathedral is resident whether the Monthletin of Francisco fig., and ther of Mercenarie Friars; and in her bounds are more then eightie thousand Indians; with many other that in her bounds are in armes. The River Canten paffeth neere it , which is nauigable to the Sea, though the Hauen bee not good nor secure. Captaine Valdinia peopled rie of Franciscans, another of Mercenaries, in a Countrey cold and barren of Bread and d Cordifina

The Citie of Valdente two leagues off the Sea, and fiftie from the Conception to the Valdinia, Streight ward: peopled alto by Captaine Valdinia, with Monasteries of Dominicans, Francifcant, and Mercenaries, in a plentifull Countrie of Wheat, and Seedes, and in places of essential and neutronous and partition of the properties of the pr the Conception to the port of the Streight , feuen leagues from the Sea. It hath one Monasterie 30 of Dominicans, another of Franciscans, with another of Nunnes, in a cold Countrie, scarce of victuals, but of much gold, and in her bounds two hundred thousand Indians of repartition. The Citie of Castro, which was inhabited by the Licenciate Lope Garcia de Castro, being Go- Castro uernour of the Kingdomes of Pirm, the which is called in the Indian tongue Chilae, which is the last of the inhabited in Chile, in an Iland of those that are in the Lake of Anend, or Chilne, and the Archipelagus stands in three and fortie degrees of altitude, one and fortie leagues to the South of Oferno, with a Monasterie of Franciscans, with twelve thousand Indians of repartition in her bounds, for it is an Iland of fiftie leagues in length, and from two vntill nine in breadth, which the Sea made with other great ones, tearing the Land vnto the Row of the Andes. It is a mountaynous Countrey, and close, plentifull of Wheate, and 40 of Millet . and Mynes of flying & Gold , on the Strand a thing fewe times , or fel- g Ore helador

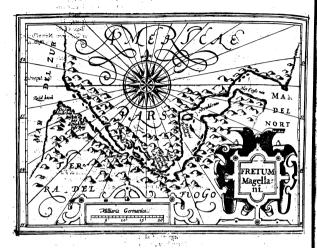

The Governour Villagran tooke away the name of the Citie which was Canyete, that Don Pormand Ri-Garcia of Mendoga inhabited, and commanded to call it Tucapel, and afterward difinhabited uers of this goit. There are in this Gouernment which beginneth in two and twentie degrees, the Port and uernment. River of Copeano, and to the South of it, the Port of Guafcoin another River, and the River of Coquimbo in two and thirtie degrees ; and past this the Port of the Cigua in the River, and the Port of Ominters at the mouth of the River of Concagua, before the Port of Saint Lames, or Valpararso, and the Port of Topocalma in the River of Maya: and past the River of Maule the Port of the . Herradura, at the mouth of the River Itata, before the Port of the Conception e Or Horles 50 in the great River of Biobie to the North, the Hand of Saint Marie right against the State of theore.

Arance, and the Port of Campete, and the Hand of Mecha more to the South, and the Port of Canten, which is that of the Imperial, and to the South the landing place and the River of Tolten before the Port of Valdinia, and past this the Point of the Galley, and more to the South the great Bay or Port of Oforno in the River de las Canoas , and to the South of it about thirtie leagues to the Lake de les Coronades the broadest River of this Realme, and at the end of this Realme the Lake of Ancud.

En doe call the Streight of Magellanes, that which is past the River of Plate by the South Chap. 24. Men doe can the Streight of Phile, vnto the Streight two hundred leagues before it, from two Of the Pro and fortie or three and fortie degrees of altitude, vato two and fiftie and more, for although ces of the 60 men haue fayled through both the Seas divers times, and feene people in them vnto the Streight Streight. it felfe, it hath not beene pacified, nor made inhabiting, but that which the fleete that Diego Flores de Valdes carried to the Streight left in the mouth of the Streight on the North fide, in the yeere 1 582. Which was called the Citie of Saint Philip, which for being in fo much altitude could

not be preserved for the great cold, and therefore that navigation is difficult and dangerous for the continual tempetts, and great stormes of windes that are at all times. The Ports, Capes, and Points of the Coast of the one and the other Sea vnto the Streighr, al-

Ports , Capes, and Points of

though they be many, and some are not pointed in the Cardes of Nauigation, it appeareth not wholly, neither is there any certaine relation of all. And the most knowne of the Coast from Chile vnto the Streight, which runneth from Valdinia about an hundred leagues to the West South-west are, the Cape of Saint Andrew in seuen and fortie degrees, from whence the Coast turneth directly to the South vnto the Streight, by the Cape of Saint Roman in eight and fortie degrees, and neere vnto it the Iland of Saint Catalina, neere to the great Bay which they call if. Alear & Hartichoked, and within it the Bay of our Lady, and the Hand of Santa Barbara, and more forby of the ward the Ports of Hernan Gallego in eight and fortie degrees two third parts, and the Bay of The Kings eighteene leagues from the Port of Hernan Gallego, and the Bay of Saint John in hitiede to grees one third part, the Cape of Saint Francisco in one and fiftie, whereby some Channels doe enter into the Land, and the Iland de la Campana, or of the Bell, eleven leagues from Saint Franes : also with some Channels which have not beene navigated within the Land, and the Bay of Saint Lazara in two and fiftie degrees, with Channels on the fides, which enter very broad and long to the one and the other parts, which have not beene navigated, and a great Sea of le lands which alwayes was faid to bee at the South fide neere to the mouth of the Streight, the which Sir Richard Hawkins denyeth; for hee faith, That at this mouth of the Streight on the South fide, he found no more then foure imall Ilands, and one in the middelt like a Sugar loofe, and that at the least they are distant from the mouth of the Streight fixe leagues, and the great Sea is on the one fide, and he holdeth for certaine it is that which they fay is the firme Land of 60 the South fide of the Streight, and that there is no firme land. The Streight though they have past it from the South to the North fide, by order of the Vice-roy Don Franciscus of Toledo, Pt ter Sarmiemo , and Antonie Pablo Corfo , and it is knowne it stands from 52. to 52. degrees of

altitude, where it draweth most to the South, and that in length it hath one hundred and ten

CHAP. I. Herreras description of the Magillane Straits, and the River of Plate. 901

eagues, or one hundred and fifteene, little more or leffe, and in breadth from one to tenne: it hard never beene navigated to an end from the South Sea to the North Sea, nor the Pyrats that This is not have past it from the North to the South, are videritood to have returned by it. The above faid true: for Caphave past it from the Notes to the South, are vincined by the The about Ind.

Sir Richard Hawkins faith, that he failed many dayes by the Straight, and affirmeth that all the others have Countrie on the South fide is no firme Land, but many Hands which reach to 56.degrees; the done it which which he might know, because he sayled to the same 56. degrees through the middest of those howseuer he Hands, and feeing he found nothing but Sea, hee followed his course against through by the cals Pliats, yet Straight, and that this cannot be so tarre, the differences of Seas, which the many entrings doe they have been Straight, and that this tather the habiting of them is of people on the North fide, ter descouered these that are among those llands, and that the habiting of them is of people on the North fide, these Straights which doe passe to those llands to sustaine themselves of fishings, and in their seasons returne to then the Straights their Countries; and that he comprehended this of many things especially of not having seene ads. any feated inhabitating, but some Cabbins which the Indians doe make for a time. The same said Sir Prancis Drate, that it hapned him when he paffed the Straight, the yeare 1 979, who after his comming our into the South Sea, he ran along with tempests compassing this Sea, vato the mouth of the North Sea, and by the fame way he had runne, he made fure his nauigation to the

The parts most famous of the Straight at the entring of the South are the Cape Descado, or Defired, in 53 degrees, and the Channell of all Saints, two and twentie leagues from the mouth, very broad, and large, and path it the port of the Treason, and afterward another great large Chanan nell which runneth to the North-west, and Rowlands Bell, a great Rocke in the middest at the beginning of a Channell. They gaue it this name of one of Magellanes tellowes called Romland. who went to reacknowledge it, which was a Gunner: the point of possession which is foure wno went concatation with the state of the s ledge the Straight, for it had beene commanded long before for to feeif it were amore eafie naugation to the South Sea, then that of Panama: they viewed the two narrow places, that at the entrie of the North, and it feemed to Peter Sarmiente, that the one was fo narrow, that with Artillerie it might be kept, and so much he perswided it, that although the Duke of Alua Orordinance. affirmed it was impossible, the Armie which James Flower tarried vastruitfully was l'ent about it. and in the end was knowne that that natingation is dangerous, and the flowing of two Seas which come to meete in the middeft of the Straight, doe withdraw themselves with such furie, ebbing in fome places more then fixtie fathoms, that when the Shippes did carry nothing but Cables to preferue themselves from looking that which they had sayled, they would goefull

In foure hundred leagues, there is of Coast from the mouth of the Straight, vnto the River of Plate, which runneth altogether North-eaft and South-weft, there is the River of Saint Hefonius twelve leagues from the Cape of the Virgenes, the a Gallician River, and the Bay of Saint lames, "Hift rio Galle. foureteene leagues from the River of Santia Cruz, in 50. degrees, and at the mouth an Iland called to of the Lyons, and the Port of Saint Intian in 49 degrees, and the River of Iohn Serrana to the South 40 of the Hands of Ducker, in 47, degrees, the River of Cananor in 45, degrees, the Cape of Saint Dominicke, before the Cape of three Points, and the Land de les Hamse or of the Smaler, in 33 degrees, the Point of Smale Hellem, and of Saint Apallonia, in 37 degrees before the White Cape, at the entrie of the River of Plate on the South fide.

Of the Prount Of the Prount Of Plate 1515, and Sebastian Gaboe an English-man, going ces of the Riwith an Armie by order of the Emperour, in purluit of the Fleete which Frier Garcia de Lo- uer of Plate & of a Commander, had carried to the Hands of the Malners, and conceiuing hee could not ouer of Brafile. take them, he thought good to busie himselse in something that might be profitable; and entred Schaffun Gabothe yeare 29. discouring the River of Plate, where he was almost three yeares; and being not the River of the Years 29, alreading the River of to Castile, having gone many said, which is leagues vp the River, he found Plate or Silver among the Indians of those Countries, for in the called of the warres which these Indians had with those of the Kingdomes of Pirm they tooke it, and from Plats. He was hence it is called the River of Plate, for before it was called the River of Solis. These Provinces an English mass are joyned with those of Brafil: by the line of the markes they have no determined bounds, but borne a Deneby the Coast of the Sea that falleth to the North, and entrance of the Riner of Plate, of the which tim, but spenthe Countrie hath taken the name, and the mouth of this River may Rand fixteene hundred ding most pare leagues from the Bay of Saint Lucar of Barrameda.

All these Provinces are very plentifull of Wheate, Wine, and Sugar, and all other seedes and fruites of Cattle doe grow well : they have great Pastures for all forts of Cattle, which have ments. 60 multiplied infinitely, especially the Horses, and though they have beene many yeares without See the former thinking there were any Minesof Gold, or of Silver, they have already found a showe of them, Booke. and of Copper, and Iron, and one of very perfect Amathifts. All these Provinces are of one Go. Plentifulnesse uernment, with title Royall, subordained for nearenesse to the Vice-roy of Pira, with one Bi-Shopricke wherein are three Spanish Townes, and a great multitude of the Countrie men, of big ner of Plate.

bodies, and well conditioned. And the Townes are; the Citie of our Lady of the Affumption, the The Assumpt first inhabiting, and the head-of this Prounce, it stands in 25. degrees and a halfe of attitude; the Captaine John of Salazar huilt it by order of the Gouernour Don Peter Mendoga, The territory thereof was first called Gurambare: it hath Brasil at the right hand two hundred and eightie leagues, and in this compasse it hath the Citie Royall at eightie leagues, which the Indians call Guayra. And on the fide of Piru, which is East and West, it hath at foure hundred and cightie His Isagues, the Citie of la Plata, and at two hundred and eightie, the Citie of Santa Cruzdela Sierra or of the Hill, which Nuflo of Chanes built. To the South fide which is toward the Straight of Marelane, it hath very great and rich Countries, and this Citie stands, three hundred leagues from the mouth of the Ruer of Plate, built neere to the River Paraguage, on the East fide 1. with four hundred Spanish Housholds, and more then three thousand children of those that were botne to them in the Countrie (which they call Meffizer) in it are refident the Governour, and Officers Royall, and the Cathedrall which is called the Bishopricke of the Plate, suffragan to the Archbishoprick of the Kings, and in her jurisdiction more then 400000. Indians, which

Cirded real.

Note.

Citie Royall was called by another name Ontineros, built by Ruidias de Melgareio; it stande eightie leagues from the Affamption North-east, toward the Land of Brafil, neere to the River Parana; it stands in a good soyle of Victuals, and Vines, and much good Copper, and great number of Indians, which also doe much increase. In this River Parana, neere the Citie Fallor Gata- Royall, there is a great fall, that no man dare come neere it by Land within two bundred rack very terri- paces, for the great noyle, and mittof the water, and by the Riner no Canoe, nor Boatedine 0 come neere by a league; for the furie of the water doth carry it to the fall, which is about two hundred fadomes off a fteep Rock, and it is to narrow, and the water goeth to close, that it feems

ve may throw ouer it with a dart.

* Buenos ayres is a Towne which in old time was difinhabited neere the place where now it is *Or Good open . Guenos sper 15 a 1 www. return to the Morocotes, in the borders of the River of Plate, in a plential foyle, where all things of Castile doe grow very well; the Gouernor Den Peter of Mendocabuilt it 1535, which caused all that which Gabete for soke to be discourred. All this Countrie is commonly plaine: for except the Cordilleres or Rowes (which are on the Sea coast, and may be twentie leagues toward Brasil, afterwards compassing all the Countrie toward the River Maranyon) and 30 the Rower of the Kingdomes of Prw, all is plaine, except some small hils.

There are knowne in the Coast of these Provinces from the Land of Brafil, vnto the River of Plate five or fix reasonable Ports; the Port of Saint Vincent, in 33.degrees height, right against Buenabrigo, an Iland where the line of the repartition paffeth; and fix leagues to the South the Riuer Vbay, and the Port, and the Hand de la Cananea in 35 degrees; and forward the River de la Barca, before the Port of Babia or River of Saint Francis, and the Hand of Santa Catalina, by another name the Port of Vera, or Port of the Duckes (de Peres) and the Port of Don Roderigo, twen-Hill, P. enter. tie leagues to the South from South Catalina, an lland 29 degrees and more to the South, fine rate, Republish, leagues, Clofe Hauen, and fifteene the b Inhabited River, and as much the Dope-Bay from this, and the River Teraqueri, in 32 degrees and a halfe, before the Cape of Saint Marie, which is in 35. 40 degrees at the entrie of the River of Plate,

This River is called in the Indian language Paranaguage, and commonly Parana, bath his entrie and mouth in the South Sea, from thirtie five voto thirtie fix degrees of altitude, between the Capes of Saint Marie, and Cape Blanke, which is from the one to the other about thirtie leagues of mouth, and from thence inward other tenne leagues in breadth, with many Ilands in the middest, and many very great maine Rivers, which enter into it by the East and West side, vnto the Port of the Kings, which is a great Lake called of the Xarages, little leffe then three hundred leagues from the River of Plate, where enter many Rivers that come from the skirts of the Andes and they may be of those Rivers that proceede in the Provinces of the Charcas and Cuzeo, which runne toward the North, whereby entreth another maine arme into the faid Lake, which hath guen occasion to thinke that this River doth communicate with the River of Saint Iebs of the Amazoner; others say that it commeth from the Lake of the Dorado, which is fifteene journies from the Lake of the Xarages, though there be opinions that there is no Darado.

The chance of the Captaine the yeare 1545. a Spaniard being in his bed and his wife by him on the out fide, in the night

there came a Tigre and gaue the man a blow that he killed him, and carried him away, and betweene certaine Caues he did denoure him: in the morning the Captaine Salaz ar went forth with fiftie Souldiours to feeke the Tigre, and going through a wood, hee went alone by a path, and as foone as hee discoured the Tigre, hee being flesh fet vpon him, and at the time hee lifted up the pawe for to ftrike him, the Captaine let flee the Shaft out of his Croffebowe, and itrooke him to the heart, and it fell downe dead: an exploit of great courage, 60 heede and dexteritie.

The Captaine Salar ar governing in these Provinces by the death of Don Peter Mendoga,in

He Provinces and Countrie of Brafil in the Coast of the North Sea, and Terra firme, is called all that which falleth to the East from the line of the repartition, from twentie nine de- Of the Proting grees of longitude from the Meridian of Toledo, vnto thirtie nine, which are two hundred cos and Counleagues from East to West, and foure hundred and fiftie North and South, from two degrees of tricof Brasil. Southerne altitude, by the Cape de Humos or of Smaakes, vnto hue and twenty, by the lland of Vicent Times Buenabrigo or Good-harbour. And from the first inhabiting, vnto the last of Brafil, there are Pinzon borne three hundred and fiftie leagues. Vincent Tanes Pinzon discouered first this Countrie by comman-in the Village dement of the Kings Catholike, and presently after him lames of Lepe, in the yeare 1500, and of Palus difco. 10 fix moneths after Poraluarez Cabral, going with a Portugall armie to India, which to avoide veredthe safet the Coast of Guinea did put to much to the Sea that he found this Countrie, and called it Santia de Lepe. Cruz, because on that day he discouered it. All of it is very hot in Winter and Summer, and very rainie, and compafied with Woods and Mifts, vnhealthfull, and full of venemous Wormes.

plentifull in Pastures for Cattle, and not for Wheate, nor Millet; there are in it great showes of Silver and Gold, but as the Portugals, have no stocke to make any profit of the Mines, they leave The principall foode of this Countrie is the Cazabi which they make of the Tuca , and the greateil trafficke is Sugar, and Cotten Bumbath, and Bratil Wood, which was it that gaue it

the name. There are in all the Prouince nine Gouernments, which are called Captainthips, and 2) in them seuenteene Portugal Townes: init may be about three and thirtie hundred housholds, and great multitude of warlike Indians, which have not fuffered the Portugals to build but on the Coaft, in which are many Rivers, Landings, and many Ports, and very fate, where any Ships may

come in be they never to bigge.

The Colonie of the first Captainship, and the most auncient is Tamaraca, the second Pernam- Inhabitings of buce, fine leagues from Tamaraca to the South, in eight degrees of altitude, and there is a house the Coast of of the Fathers of the Companie of Lefus : the other is, that of all Saints, one hundred leagues Brafil, from Pernambuce in thirteene degrees, and there the Gournour, the Billion, and the Auditour generall of all the Coalts are refident, and it hath a Colledge of the Company: the fourth Captain- Many lesistes Thip of the Ilands is thirtie leagues from the Bay of All Saints, in foureteen degrees & two shird Colledges. 20 parts, it hath a House of the Fathers of the Companie. In this Captainship is found a Tree where

out they take a precious Balme. The Captainship of the Sure-hanen is thirtie leagues from the I. Puntofegio. lands in fixteene degrees and a halfe: it hath three Inhabitings, and a House of the Fathers of the Companie. The Captaineship of the Holy-Ghost fiftie leagues from Puerto leguro, in twentie degrees, where they gasher much Brafil, and there is one house of the Company. The Captainthis of the River of Genero is fixtic leagues from the Haly-Ghoft, in twentie three degrees and one third part, with a house of the Fathers of the Company, and they cut in their insidiction much Brasil Wood; the River is very faire, with fine and profitable borders. The last Captainethip is Saint Unicest, fixtie leagues from the River of Genera, in foure and twenthe degrees, it hath a tor-trelle in an Iland for a defence against the Indian; and Pirates, and a house of the faid Fathers,

40 which have done great profit in the inhabiting of this Comerie, and conversion of the Indians, and their libertie. The Cattle that are in the e Promites are many and great breeding of Swine, and Hens, they gather much Amber which the Sea cafteelivo with Hormes at the foring tides, Ambar. and many persons have inriched themselves with it. Then Summer's from September to February, and the Winter from March vnto August; the dayes are almost as long as the nights, they increase and diminish onely an houre, in the winter the winders alwaies at South and South eaft.in Summer North-east and East North-east.

There are in this Coast eight or tenne Ports more principali then the rest, which are the River The principalof Saint Dominicke and de las Untudes to the North-east of Pernambuco, and Tamaraca, which this Cooft. is an Iland, and as it is faid, the first Plantation, and before the Cape of Saint Aufline, which stands in nine degrees, the River of Saint Francis in ten degrees and a halte, which is great and 50 mightie : the Bay of All Saints three leagues broad, and thirteene into the Land vato Saint Sa-

mions, the River and Port Trenado, where the Ships doe couch that goe this Voyage, and the River of Canamum in thirteene degrees and a lafte, the River of the Beater or of Saint Auftine is foureteen degrees and a halfe; and the River of the Virgenes in fixteene. Porte fictive in feventeen degrees: the River of Perayua in ewentie degrees, neere to Sandts fromas: the Biner of Gos Cabe Frie. nevel neere, to Saint Sebastian, and Gold Cape in three and twentie degrees beyond Saine Vincent .

Notes of the West, are all the Hands and firme Land comprehended within the markes of the Octobershitt of Crowne of Cafile and of Lyon, a the Occidentall end of the faid bounds; whole line as is indices in the said of the faid bounds; whole line as is indices in the said of the faid bounds; whole line as is indices in the said of the faid bounds; whole line as is indices in the said of the faid bounds; who is the faid bounds; where fa faid palleth on the other side the world, through the Citie of Malaca from whence toward well, which are the East, and New Spaine, is a great Gulfe of infinite Hands great and small, and marry pieces of the Hands Phi Goalts, and firme Land, which are divided into the Ilands of the Spicerie, or of the Malnes, I. lippmas, conft of lands Philipmas, the Coast of China, Ilands of the Lequint and Impensis, Coast of themew Guinea, the Lequint.

Ilands of Salomon, and of Ladrones or the Theenes: the temper of all these Ilands and Lands in senerall is moilt, and temperately hot, plentifull of Victuals, and Beafts, with some Gold, but base no Silver, flore of Wax, and the people of fundry colours, and the ordinary colour like Indiana and tome white among them, and some cole-blacke. The Ilands of the Spicerie (which properly are called fo, because all the Pepper, Cloues, Sinza

mon, Ginger, Nutmegs, and Masticke that is spent in Europe, is brought from them) are ma. ny, though the molt famous of that Gulfeare fine small Hands vnder the Equinochiall in one hundred nintie foure degrees from the Meridian of Toledo, included in the morgage which the Emperor Charles the fitt made of them to the King of Poringall for three hundred and fiftie thous Of these tee L sand Duckets, which are Terrenate of eight ornine leagues compasse, with a Port called Tales. In Of their tee L. act, and other game, and in it raigned Corala, which yeelded himselfe for subject to the King of Castile, when Action of one of the Shippes that remained of Magelanes fleete found their llands. The Iland of Tidore flands one league from Terrenate to the South, it hath tenne leagues compasse. The Hand of Mail, or Mutier is of four leagues compasse, and is vnder the Equinoctiall, and Maquin three leagues See Magistres
Voyage. Tom, to the South, of feuen in compaffe, and tenne leagues to the South. Batan or Bagnian is twentie leagues in compasse. In the Iland of Tidore raigned Almanzor, which also gave himselfe for Certaine Tree subsect of the King of Castile, the which, and Carala did write and Iohn Sebastian of the Case. bearing a kind borne in the Village of Guitarea, in the Province of Guipuzcea brought their Letters; the which departing from Tidere in the years 1522 touched in the Hand of Zamatia, and going up to al-

departing from I tume in the Antarticke Pole, he arrived at the Iland of Saint I most fortie two degrees toward the Antarticke Pole, he arrived at the Iland of Saint I may of 20 the Greene Cape or Cabo Verde, and from thence to Simil with the Shippe called the Viting. having fpent leven moneths time little leffe in comming from the Iland of Tidore. Patien is the fift Iland like the other; Moores inhabited in it, and Gentiles alfo, which knew not the immortalitie of the foule. And when the Shippe of the fleete of Fryer Garcia of Loayfa came. Retame raigned in Tidore of thirteene yeares of age, and againe acknowledged the King of Cafile. and also the King of Gilolo called Sultan Abdertameniani, and confirmed it with an oath, Gilolo is an lland under the line foure leagues distant from those rehearsed; it is of two hundred leaves compasse, without Spicerie; the Iland of Ambon in three degrees and a halfe to the South, from the Iland of Gilolo without Spicerie. The Ilands of Bandan are in foure degrees of Southerneal titule, where the Nutmegge is gathered, and Mace; and the Burro, which is to the Westof Ambon, and Timor, another Hand to the South-west from Bandan, almost one hundred leagues, without Spicery, but richtof Sandalo, Zeinda, fiftie leagues from Timor, to the North-west of forty leagues compasse, plentiful of Pepper, and the Iland of Celebes, which is very great, & Borner great ter, neere the straight of Malaca, which is made in the firme Land; & Zamatia, which in old-time they called Taprobana. There be other manie great Hands, and small, which remains to the South fide, neere lana Maior & Misor, and to the North toward the coaft of Chyna : the Portneals have a fortreffe in Terrenate, and other in the Citie of Malaca at the entrie of the Archivelanus.

The Ilands Philippinas are a Sea of thirtie or fortie great Ilands, besides many other small ones which are together in leffe then two hundred leagues in length North and South, and one hundred in breadth betweene New Spaine, and the Gulfe of Bangala, and they are about feuenteene fa hundred leagues from the Port of the Natinatie in New Spaine, from fix to fifteene or fixteene degrees of Septentrional altitude, of a reasonable temperature; and plentiful of victuals, specially Cinamon and of Rice, and some base Gold in some places, and in some llands are Cinamon trees, and long long Pepper. The Countriemen are of a good shape, and in some Hands they are blacke, and those which line in the center of the Countrie are whiter then those that line in the Sea coasts. There are good Ports, and Timber for Shipping, the names of the principalleit Ilands are Mondow, which is the greateft, and most Southward, of a hundred leagues in length, and three hundred in compasse, a rough Countrie, but plentifull of Millet, Waxe, Rice, Ginger, and some Cinamon, and Mires of Gold, with good Hauens, and Rodes : the Hand of Good tokens, and Saint lobuleaning to Mundanas, on the East fide; of twenty leagues in length North and South; Bebol, ten leagues more to to Mindanas on the North fide, nineteene leagues in length.

The lland of Buglas or of Negros, by reason of those that are init, is in the middest of that Sea to the West, of fortie leagues in length North and South, and source een in breadth, and in her coast are some Pearles: the Hand of Zubs in the middest of all, of thirtie leagues in length North and South, and in it a Spanish Towne, called the Village of Iefus, on the East fide, with one good Hauen, beides other that are in the Hand, the Captaine Perdmando Magellanes discouered this !land, in the yeare 1520, the King yeelded then himfelfe for jubice to the Crowne of Cathe, and before he discouered the Ilands, which he called de las Velas Latinas, because they failed in In Mates it was their Shippes with fayles of Mats made of Palme tree leaves after the Latine fashion; and from where of them. Zubu Magellous went with the King, to warre against the King of Maran, in a little Hand close 60 to that of Zubuon the South fide, where being too valiant and confident he was flaine; and the Spaniards following their Voyage in demaild of the Hands of the Spicerie, they discovered Quepinds, Pubsen, and Burney, which is a great, rich, and plentifull Iland of Rice, Sugar; Goates, Swme, Cammels : it wants Whate, Affen, and Sheepe; it hath Ginger, Camphire, Mirabolans,

and other Drugges. Aluaro of Sannedra discovered also the Philippines, and tooke possession of them in the yeare 1527, for the Crowne of Caftile, which by order of the Marqueffe of the Val- Alaroof Scane them in the yeare 1527, for the Crowne or Lagrie, which by order of the Marquete of the Oale era took pol-ler went from the Port of Guitlaneio in New Spaine, in demand of the Hands of the Spicerie, and fellion of the particularly he was in Mindanao : and this digrettion hath not bin out of purpose,

Returning to the order of the Phillippines, there followeth the about fand Abayo, or Babay thirtie the Crowne of leagues in length North and South, and tenne in breadth, in which are good Mines, and Pearles. Cality, in the in her coast : Tandayala most famous of all, which for being first discoursed, is called Phillipine, years 1517. of which all take the name, in memory of the intincible King Don Philip the fecond. the Pradent. It hath fortie leagues on the North fide, and of the East North North-east, and South South-

west, and twelue leagues in breadth where most, with good Hauens and Roades : Marhat a meane Hand to the West of Tandaya, of seventeene leagues in length, and fifteene in breadth, with one Hauen: Mindore of fine and twentie leagues in length North and South, and halfein breadth: there is Pepper in it, and Mines of Gold the Hand of Luzan, called the New Caffele, as great or greater then Mindanao, the most Septentrionall of the Phillipines, in the which is built Manila, 2 The Cities Citie of Spaniards, with title of Famons, where the Gouernour, Officers of the goods, and cheft Manille Royall, and the Cathedrall are refident; it is a plentifell foyle of Victuals, with many Mines of Gold: the Hauen of this Citie is bad, and for all that there is great trafficke with the Chynas. which bring Porcelane Veilell, Tinfels, coloured filkes, and other Merchandize : Lucon hath in length two hundred leagues, and it is very narrow.

In all these Hands are many Mahometanes, wither they came by the East India, and could ea-20 fily plant their fall hood among it those blinde Gentiles. Captaine Magellanes as aboue faid disconered their Hands, the yeare 1 720, going with an Armie of the Crowne of Caffile, in fearch of the Hands of the Malucoes, and tooke possession of them, and afterward Michael Lopez of Legazaji made an end of discouering them, the yeare 1564. with an Armie which hee tooke from hauebeiore.

New Space, by order of the Vice-roy, Don Lewis of Uelasco: it is in ged that those Ilands 11000.llands. doe amount to eleauen thousand great and small. There are pacified about fortie of them, and converted more then a Million of men vnto the Catholike Faith, with fo many expences of the Growne Royall, not having had vntill now any profit from those Countries; for every Religious man of those that are sent thither, doth cost to set there one thousand Duckets. Those which hitherto have laboured in that Vineyard, with most great fruite of the soules, are

30 the Religious Dominicans, Franciscans, Barefooted, and Austine Fryers, and the Company of lefus; and from these Hands hath beene begun to bridle the Mahometans, which from the Coast of Afra went by little and little extending through these, and other Hands, and also to the (bi- Since, the Holnes and lapones, and the Portugals had already loft the Hands of the Malacos, if the Spaniards landers have of the Prominces of the Philippines had not holpen and fuocoured them divers times and ma-

There is already a plainer notice had of the Chynas, by the commerce of the Philippines, and China: fee our their riches and plency is knowne: it is of the richeft and mightieft Kingdomes of the World , former Relaand from Manila may be to the coast of China three hundred leagues, of eight dayes fayling, and tion,

the coast of that Countrie goeth running as to the North-east, more then seuen hundred leagues, from twentie one to twenty two degrees of Septentrional latitude, and vpward, and it is known that croffe over the Countrie in ward is a Voyage of five or fixe moneths, to the confines of Tar. taria; being a Countrie of great Cities, with many Townes, and the people politicke, and prepared for their defence, but not warlike, and the Coast much inhabited with maine Riuers, and good Hauens: it extends from feuenteene vnto fiftie degrees North and South, and East and West it occupieth two and twentie: the Citie of Paquin, where the King bath his Court, stands in fortie eight degrees of our Pole, it is diuided in fifteene Prounces, fixe Maritime, and nine Medicerrane; and the one are desided from the other with certaine Mountaines like the Pirineis, and there are but two passages whereby they doe communicate.

Thomas Perez Ambaffadour of the King of Portugal, was from Cantan to Nanghi four The Provinces Moneths, travelling alwayes to the North : and to the largenesse of this Kingdome is joyned the and Kingdoms plentie of the Countrie, which is great; for the which the multitude of the nauigable Rivers of thems. that do water it, are a help, where with it feemes a pleasant Forrelt or Girden, and the abundance is doubled by many wayes, for the Kings spare no cost to make the Countrie watered in enery place, outting great hile and making great Valleys plaine; and the heate not wanting in any place, for all the Countrie almost is contained in the bounds of the temperate Zone, nor the moiflure by the clemencie of tractire, and by the industrie of men it is incredibly all multiplied, and all being compelled to busis externs elius in femething, there is not one foote of ground left vn. profitable. In Canton among other notable things they fay there are a great number of blinde

omen that doel about in formerhing, every one as he is able, and being forbidden the going out of the Kingdome without litence, the which's never granted, but for a limited time it is necessary that the propagation increasing continually, the number of the people be without end. elbecially that they hold for a certaine, that for flue persons that doe dye, there are seven borne . and the purenesse of the ayre is so much, that they doe not remember, there hath beene any vni-

verfall plague, and with all these good things they have their troubles also, for there are earth. quakes that destroy whole Cities, disinhabit the Countrie, and suppresse the auncient Rivers and raife others, and doe make great Mountaines plaine, with a miferable misfortune of

The yeare 1555, there burst out of the intrailes of the earth such abundance of water, that is ouer-flowed the space of fixtie leagues, and destroyed seven Cities with their surifications. And this as touching the continent of China. There is through all the Coaff a multitude of !land: the greater part are voto vs vnknowne. Not farre from Nanqui, is the Cape of Lampo, the lland of Aluming, Abarda, Sumbar, Lanqui, and the Hand of Horfes, of the which no particular ne-tice is had. Paffing the Citie of Chincheo, stands Lamao, and a great number of Hands are about Cantan, and thefe are the most celebrated, Lantao, Macao, Veniaga, where is the Port of Tamo Lampacao, Sancoan, in all the which the King of China hath Garrifons on Sea and Land except in Lampacao which is not inhabited.

In Macao, by another name Macan, the Portugals have a Towne, and the Chinas knowing the valour of the Portugals, and the fauour they have of the Castillans of the Phillipines . Infler it with an eurll will, but the Portugals feeke to preferue themselues, for their profitable commerce in China. Sancon is thirtie leagues from Cantan, where foractimes the Portugali have touched, and no Iland of China is of greater importance then Anian in the mouth of the Gulfe of Cauchinchina, fine leagues from the Firme Land, and one hundred and eightie from the Phills. Ortera firme pines, and it is so bigge, that they affirme it to have thirtie Fortrefles; in it is a filing 20 for imall Pearles. It is aboundant of Victuals, and of many Fruits : vinder the Government of Cantan, the principall Port of China, and the Countrie men are große and rude people.

Japan is many Ilands divided with small armes of the Sea, in three and thirtie Kingdomes whose head is the Citie of Meace, distant variable from China, and they count from the Iland of Goto in Iapon to Liampo in China fixtie leagues, which is the neerest. The Laponer doe greatly moleft the Chinas, more with piracies, and thefts, then with just war, because lapan being divided in fundry Ilands, and divers Princes, they can make no warre against the Chinas, but with weake forces. They are more warlike and valiant then the Chinas: it is a temperate Countrie, plentifull of Seedes, Cattle and Fowle of Europe, it hath Mines of Iron and Steele: the Countrie men are firong, valuant, and for much labour : those Hands stand in thirtie five degrees of the Pole, little more or leffe, according to the diffance of every Hand. The Impones doe not understand the Chinas but by writing, because of the Characters, or Letters being one for them all, and though they

the figures of Arithmeticke, that if a 9, be fet, the French, the Castillan, and the English man doe understand it, that it signifieth 9. but every one doe name it after their owne fashion. By another fide the Lapones doe confine with the Phillipines, from whence there is commerce with them, and a great incouragement is given to the Fathers of the Company, for to labour in the concertion of the people of those Kingdomes, where notable fruite thath beene getten, for it the which these Ilands are much celebrated in the world, and by the comming of the Ambasiadours of the new Christendome to the Pope, and to the King Philip the second, the Prudent: and fo as nature placed them in a scituation separated from the rest of the Land, the men of that Region are differing in customes from other people. In the yeare 1592. Nobumanga which caufed himselfe to be called Emperour of Imper,interprised with eightie Vessels, and 20000, men, certaine Prouinces tributarie vnto China, and wan it.

fignifie the fame, they have not the fame name, for they are to declare things, and not words, a

From the lland of Simo, which is among them of I man the greateft is extended a row of small Ilands, called the Lequies, and doe prolong themselues toward the Coast of China; the two greater, which is enery one of fifteene or twentie leagues, neere the Coalt of Tapan, are called the greater Leguna, and other two also great, though not so much, which are at the end of the Rowe, they call Legma the leffer : some are inhabited of well shapen people, white, politicke, well apparel. 50 led, warlike, and of good reason, they abound in Gold more then others of that Sea, and not leffe in Victuals, Fruits, and good Waters. Neere vnto the lefter Leguio flands Hermo [a,or the beautiful Hand, which hath the same qualitie, and say it is as big as Sicilie.

Chap. 27. "He Coast of new Guiena beginneth one hundred leagues to the Bast of the Hand of Gilolo, in Of the new little more then one degree altitude, on the other fide of the Equinociall, from whence it is Guinea Hande of salaman, and prolonged toward the East three hundred leagues, till it come to five or fix degrees. It hathbeene doubted vitill now, whether it be an Hand or firme Land, because et doth enlarge it selte in fo great a Voyage from being able to loyne with the Countries of the Hands of Salomen, or Provinces of the Straight of Magellanes by the South fide; but this doubt is refolued with that which to those do afterne that failed out the South fide of the Straight of Magelanes, that that is not a 500-1 The Loga or. tinent, but Ilands, and that prefently followeth a spacious Sea, and among those that decaffement: Sit K. Hawen, is Sir Rubard Hawkins, an English Knight, which was fine and forcise dayes among the fame Hands. station of what only in the re-

From the Sea the Land of this doubt of Guiness feemeth good, and the men that have been feene are cole black, and in the coast are many llands with good roads, and ports whereof is no particu- llands and larnotice; for having failed it few times, those which are found in some earls are Agnada or the coaff of Guing watering to the East thirty fine leagues from the first Land, with one degree of Southern altitude : and eighteene forward the port of Saint lames, and the Hand of the (refper of fixteene leagues long neere the coaft, right against the Port of Saint Modrey, and neere to it the River of Saint Peter and Saint Paul, before the Port of Saint therem, and a finali Iland never the athruft out Point, a Or could 40. leagues from S. Austin, which they call of Good perco, and more forward from it, the Shelter, built Puntifeand Enill people, two little Hands, and the Bay of Samt Nicholas, fiftie leagues from Proce afalida, lida and among other lands one of white men, and the Mother of Godbefore Good Baye, and of the Burna per Nativitie of our Lade, the left of that which is discontred, and as to the North from it the Care

mana, an Hand without in the Sea among others which have no name. The Meridionall coaft is not wet known the first that discovered the new Guine was Aluare of Samedra being loft with many flormes from his course, returning to new Spain, when in the year 1 c27, the Marques of the Valley tent him that on that fide he frould feek the llands of the Spicerie. The Hands of Salomon are eight hundred leagues from Pra, & the opinion that is weld of their Hands of Sale riches, gave them this name, the which properly are called of the Well, because they fal to the West mon from the Prouinces of Pira, from the place that Almere of Mendoga made discourry of them by order of the Licentiate Lope Garcia de Caftro his Vnckle, Gouernor of the Kingdomes of Pira, in the

20 years 1567, the first that saw the Land of these Hands was a yong man, called Tree, in the top of Ship: they are from feuen degrees of altitude on the other fide of the Equinoctiall about 1 500. leagues from the Citie of the Kings, they are many in quantity & greatnes, and eighteen the most famous, some of 300. leagues in compasse, and two of 200. and of 100. and of 50. and thence downward, befides many which are not yet made an end of coaffing, and they fay that they might beaconfinent with the coalt of the new Guiney, and the Countries to be discovered toward the West of the itraight; the Countrie of these Hands feemeth of a good temper, and habitable, plentifull of victuals, and Cattell: there were found in them fome fruits like those of Caltele. Swine & Hens in great number; the Countrie men tome of a brown colour like Indians, others white & ruddie, and fome cole blacke, which is an assument of continuance with the Countries of the new Guinie whereby there may fo many differences of memple be maingled of those which refort to the Hands of the Spicery.

The great of and most renowned are Santha Tfabel, from eight to nine degrees of altitude, of more then 150 leagues in length, and eighteene in breadth, and one good port called of the Star : Saint George or Borbi to the South of S. I Jabel one leagun and whalfe, of thirty leagues compalle Saint Marcos, or Saint Niebolas of one hundred leagues compate to the South-east of Saint Ifabel: 1de Arreifes the Hand of the Shelnes as great as the former to the South of Saint I fabel and Saint I erome to the West of 100 leagues compalie; and Guadalcanal to the South-west greater then all: and to the East of Saint I abel, the Hand of Buenauista, and Saint Dimes, and the Hand of Florida of twenty d Or Good Bibs. leagues circuit every one; and to the East of it, the Hand of Ramos of 200. leagues compasse, and Qr Boughes. necre to it Malayta, and f Arregueda of thirty, and the three Maries, certaine little Hands, & the for Francice. Hand of Saint lobs of twelve leagues compaffe betweene the Arreguads and the Hand of S. lames to the South. Malata of 100. leagues circuit, and to the South-eaft of 1t, the Iland of Saint Christopher as bigge as it : and Saint Anne, and Saint Catherine, two small Hands fall by it : the Name of God a small Hand diffiant from the other fiftie leagues, in fewen degrees of altitude, and in the same "Hift

Rumbe to the North of Saint Ifabel, the Shelmes, which they call of & Candeloria. There is in the voiage that as made from Pine to the Hands of Salomon, an Hand called of S. Paul. in fifreen degrees of altitude, 700. leagues from Pun, nineteen degrees, 200 leagues of Land, others which may be those that they called of Salomon, and they say also that they might be others which this little while have beene discourred in the same Rombe of Chit.

The llands of the Theenes are a row of 16, smal Hands together which runne North and South, with the middelt of the coast of Guiney, from twelve degrees of altitude vitto feventeene Septentrionall or more, not farre from the Phillippines to the East. They are all barren ground, and miferable, without Cattle, or Mettals, fcarce of Victuals, inhabited with poore people, well flupen, naked, and much inclined to steale, even to the nayles of the Shippes that came there, whereby Magelene named them of the Themes, in the yeare 1 520. when he came to them going in demand of the Spicerie. Their names are, the English, the most North, and after it Ora Ladwige. M.10. Chemechoa Gregua, Agan, ot Pagan, Oramagan, Gugman, Chareguan, Natan, Saepan, Bo- La inelefa. ta. Volia. There are among their Hands Philipmes, other eighteene or twenty, called of the The Kngs. 60 Kings, Archipelagus, or llands of the Corrall and the Gardens, another quantity of little llands, llands of teral and Pialogo, Saint Vilan, another little lland, the Gardens, and the Iland of the Matalores, and that of the Spelues, and of Saint lohn, or of Palmes, neere the Maluces, and on the North fife of the hor Enill bane Theenes, fine or in little Hands together, called the h Volcanes, where is store of Cochittilla; and "A Tree fo i Maloelo another small Iland, where are "Cinaloes very fine, and on the East fide of the Theener, called.

toward new Spaine, the Shelnes, Look bow thon goeft, Take away fleep, or See thou fleep not; & neere in toward new Spaint, the Spaint, and Saint Paul, another small Hand with shelues, and the imbabited the Marin them the same of same of Samedra was also in the lland of the Threner, in the yeare 1527 returning from the Hand of Spicerie to new Spaine.

Chap. 28. the fpirituall tronage. Counfell of

"He Catholike King of Castile, and of Lyon continuing in their auncient, and Christian piete. pretently after these new Countries were discourred, and toyned with this faire Monarchie Of the uprem A preturn y area to clearly and fettle the Catholike Religion in them, and temporall pollicie, with 10 mash procured to plant and settle the cannot these Kingdomes. For as the discoveries did increase the care and adure of the wifelt men of these aninguouses, for as the unconclus and uncrease the butineffes, they formed a particular Counfell with Prefident and Councellours, that buffing is commenter, and the state of the tained to the lettuce of our sous sous, and from the beginning have laboured, and ferred in mention main be made of the Indies, which hath carried fo great a waight vinto this prefent house, the upresume Country of the spiritual and temporal government, and the rest worth the knowing. that the order of that Monarchie may be understood, with all breuitie, The first thing that these godly Kings did charge and command the first Discouerer, and from

the first thing that there goals a line sourcers and Governours of that new World with very firaight orders, was that they should procure that the people which they carried, with the Chrifleaght orders, was true truey incomes, should give such example to the Indians, that they might a be glad to insitate them, and should binde them vnto it; entring first according to the Eusnetis call Law, the religious men preaching it, that fo rather with the iweetness of it, then with the force and noy fe of Armes it should be admitted, and that justice should be administred with sigh equalitie to all men, that it might be much respected & esteemed. All went forward, the towns went augmenting in fuch manner, that with the zeale of the feruice of God, and good of the men's hath come to fuch a point, that at this day there are found built and effablished in all that Orie of this Crowne postessed, as before hathbeene scene, fine Archishopricks, swentis fenen Biloprick, two famous Vninerfires, where with great learning and doctrine al the Sciences are read, more than fence bundred Monasteries of religious Dominicks, Franciscans, Augustines, Mercenaries, and the feet concern secondary and the secondary secon Converts, and Heremites, and Chappels in the high-way erelled on pillars, baning Crucifixes in them, without number. All the which was begun at the charge of the Crowne, and at this day it goeth forward where there is no maintenance for it. In effe A, this Catholike pietie by the clemency of God goeth from good to better, augmenting with to much reverence and honour of God, that in no place of Christendome it is done with more order or care, by the care of the supreme translator had, Councell of the Indee. Of the which is inferred, that the Concession of the Apostolike Roman Set sine bath Pa- made to the frome of Cafile, and of Lim, of the Patronage Ecclesiaficall of that new World was a very great remedie, in the which our Lord God (as Hee which onely is Hee that feeth, and presentethall things to come) did a thing worthy of His greatnesse, seeing Hee hathshewed the 40 experience that if this had beene governed otherwise, it had beene impeffible to have proceeded with the harmonie, and even concent as it hath, of Religion, Juffice, and Government, with fo much obedience and quietneffe.

How the Ec-Patronage is

fteries, and

The Eccletiasticall Patronage is gonerned in the same manner that in the Kingdome of Graneda, the Kings Cath-like prefenting to the chiefe Bishop onely the Archbishops, and Bishops, that from his holy hand they may receive these Prelacies, and may dispatch their Bulls, procuring alway that they be persons of a religious life, and great learning. All the other Dignities and Benefices are prouided by the King, and confultation of the supreme Council of the ludies, and they go not to Rome for Buls : and their rents confift in turnes and first fruits which arise of the Speni inhabiters. For in the most places of thele ladies the Countrie men paie not, and where the tithe 10 are wanting, it is supplied out of the goods royall: and touching the tithes and first fruits that are to be paied, many ordinances and rates are made according to the stile of these Kingdomes, that the men of each Colony, it is just it Gould follow her customes. And though the Kings of Castile, and of Lymare Lords of the tithes by Apostolike concession, & might take them to himselfe, supplying where it wanteth with that which in other places doth exceede, he leaueth them to the relates & Chusches, progiding of his own goods Royall with the liberality of fo Catholik Pris ces, to all the necessities of the poore Churches, giving to every one that is built anew the greatest part of that which is spent in the building, with a Chaliz, a Bell, and a painted Table.

Of langes

That the diffribution of that which proceedeth of the titles, and of that which is bestowed out of the goods Royall in maintenance of the Prelates, Dignities, and Or that which is Delicated 65 Churches, and Benefices, Cures, and persons that are occupied in the divine Service, and instructing of the Indian, may be fruitfully imploied according to the holy intention of the Kings; the fupreme Counsell hath made good ordinances. First, that all the faid persons be of an approved life and customes, & especially those that doe med. He in the Dastrines, being first examined touching

CH AP. I. Ecclesiasticall Government and spiritual provisions in and for the Indies. 900

learning, and after in the language of the Indians; for it would little auaile, that the Disciples thould not understand the Maister : and that these do continually reside : and that no Gurate, or Teacher may have two Benefices; and that those which shall from these parts passe to the Indies be more appround, it is commanded that no Priest doe passe without licence of his Prelate and of the King, and that if any be there found without it prefently they should fend him to Spaine.

And that the manner how she Royall Fatronage is gouerned may better be understood, feeing. He con inuch it appertaineth to this Crowne, because that it hath discovered and acquired that New World; and the governehath also built and endowed, out of the goods Royall, so many Churches, & Monasteries, as by the Eccles in the Apostolike concession, that for no cause the said patronage, nor any part of it, either by custome, or Patronage. 10 prescription, or other title may be separated from iteit is ordained what care the Vice-roies. Counfels, Gouernors, & Rulers, are to have in it, and what penalties the transgressors should incur. First. that no Cathedrall or Parish Church, Monasterie, Hotpitall, nor votice Church, should be founded

without confent of the King. That when in the Cathedrall Churches there are not foure Bene- Or Pentiment fixed me, refulent, prouided by royall presentation, & canonicall provision of the Prelate, because the other Prebends be voide, or absent for more then eight moneths (though for a lawfull cause.) The Gid Prelate, till such time as the King doth present, may chuse to the accomplishing of the foure Clarks (besides those that are prouided and resident) of the most sufficient of those that shall offer themselves, without that the faid provision be in Titule (to be removeable at pleasure) & that they have no feate in the Quire, not voice in Countell. That no Prelate may make canonicall in-

of fitution, nor give possession of any Prebend, or Benefice, without presentation Royall, & in such a case that without delay they make the prouision, and command to refort with the fruits. That in all the dignities, & Prebends, the learned be preferred before the vulcarned, and those which have ferued in the Cathedral Churches of Cafile, and have more exercise of the service of the Quire, before them that have not ferued in them. That at the least there be presented for every Cathedrall Church a graduate Lawyer, & a Dinine for the Pulpet, with the obligation that in the feKingdoms the doctoral Canons, & Magistrates haue; & another learned Dinine to read the facred Scripture: and another Lawyer or Dinine for the Cannonship of Pennance, according to the facred Counfell of Trent. That all the other Benefices, Cures, and timples, fecular, and regulars, and the Ecclefialticall Offices that shall be voide, or prouided anew. That they may be made with leffe delay, and the 30 Royall patronage may be preferred, it is commanded that they be made in the forme following.

That any of the abouefaid Benefices, or Offices being voide, the Prelate shall command to make edicts with a competent tearme, and of those that shall offer themselves having examined them, and being informed of their behaulor, shall name of the best; and the Vice-roy or Gouernor of the Province, that chuse one and remit the election to the Prelate, that he make the provision, Collation and Cannonicall inflitution by way of recommendation, and not in a perpetuall title, fo that when the King doth make the presentation, and in it shal be expressed that the collation be made in a perpetual title, the Canonical Inflitution shall be in title, and not in recommendation : and the presented by the King be alwayes presented before the presented by his Ministers.

That in the repartitions, and Towns of the Indians, and other places where they have no bene- Provision of 40 fice to elect, or means to place one to administer the Sacraments, the Prelates shall procure there the Prebends be one to teach the Dollrine, making an edich, and having informed himselfe of his sufficiency and and Benefices goodnes, he shall lend the nomination to the Ministers Royal, that they do present him one of the two nominated, and if there be but one, that, and in the vertue of such a presentation the Prelate shall make the provision, giving him the instruction how he is to teach, and commanding him to give notice of the fruits. That in the presentations of all the dignities, offices, and benefices, the helt deferring, and that most exercised in the conversion of the Indians, and the administration of the Sacraments shall be prouided; which, & those that best speak the language of the Indians, shall

be preferred before the other. That he which shall come or fend to request his Maieflie to present him to some dignitie, office, or benefice, shall appeare before the Ministers of the Pronince, and de-50 claring his petition, he shall give information of his kindred, learning, customes & sufficiency, and the Minister shall make another of his office, and with his opinion to fend it, and that the pretendant do bring also an approbation from his Prelate; for without these diligences those that come shall not be admitted. That none may obtaine two Benefices, or dignities in one, or in fundry Churches. That the presented not appearing before the time contained in the presentation before Chap. 29. the Prelate, it shall be voide, and they may not make him a Cannonicall institution.

BEfides that which is rehearfed, it is prouided that they doe not permit any Prebendary in the of Mendacea.

One of Mendacea.

Cathedrall Churches, to emby the rents of it, except it be feruing & being refident; and that id-of the the Benefices of the Indians be Cures, and not imples and that in the new discoueries, and plan-matried; and 60 tations that shall be made, there be presently an Hospitall built for the poore, and sicke persons, of of the boy of fickneffee that are not contagious, which shall be placed neere the Temple, and for a Cloyfter fee of she holy of the same; that for the ficke of contagious diseases, the Hospitall shall be set that no hurtfull winde passing by it doe strike in the other inhabiting, and if it be built on a high place it will Buiking of an be better. And because the King being informed that goods of the descassed in those parts do not Hospitall.

come fo wholly as they might, nor to foone to the hands of the heyres, by will of the faid deces fed, for many causes, whereby the heires received great damage, and the testaments were not ner Orders for the formed; for a femedy, it was provided, that what foeuer Spaniard shall come to any Vallage, of Fowne of their parts, he shall prefent himselfe before the Clarke of the Countell, where he shall Regifter the name, and furname of fuch a one, with the place of his aboad or birth, that his design happening it may be knowne where those that are to be his heires may be found. That the ordinate nary fustice; with the most auncient Ruler, and the Clark of the Counsell shall take charge of the goods of the persons that shall dye, and shall set them in an Inventorie, before a Scrivener and Wir. helfest and the debts that he did owe, and were owing him, and that which is in Gold & Silier. nemer and uter things finall be fold, and put in a Cheft of three Locks, whose Keyes the three persons about aid shall keepe. That the goods be fold in a publike out cry, with the Left to mony of a Scriuener : that if neede be an Atturney shall be constituted. That the faid Justices de take occompt of all those that have charge of dead mens goods, and recover all that they are be hinde hand without any appeale, and doe put it in the Cheft of the three Keyes. That hauling any Will of the deceased where he dyeth, and the Heires or Executors, the luftice fiall not mediled any thing, neither take the goods, taking only notice who be the Heires of the laid deceased The the faid Justices, Rulers, and Scriveners doe fend also to the Contrataction-house of Scuil, all the which they shall recover of the goods of the deceased, declaring the name, surname, and aboad of of enery one deceased, with the Copy of the Inventory of his goods, that they may be given to his Herres, by the order that touching the fame is given. That when they take accompt of those that haus had goods of men deceased, it shall be sent to the supreme Counsell of the Indies, with a very particular relation, and reason of all. That the Instices doe with care enforme themselves carefully of those which have in polletion the goods of men deceated, whether they have done any fraude and prejudice to the goods they have had in possession, & fend to the Counsel notice thereof the they may give accompt with paiment to the Iultices about faid. That accompt be given every veere and the memoriali of the dead that have beene that yeere shall be shewed to the Governor of the Country, & of the goods they had, that they may be fent to Senil, & be given to his heires. and the Teltaments be fulfilled, with good accompt and reason that is behoouefull. For in every Counfell, one of the Justices is Judge of the goods of the deceased, the one succeeding another, from the vongest to the eldest, by their turne, which dothsend his Commissaries through the bounds to take accompt of the houlders, and there be any careleffeheffe, the Iustices are charged therewithin the vilitations which are made of them, and before when there are any Plaintifes.

Those Catholike Kings being informed that in the Indies were many married Spaniards, which Touching marrid men. Incel Separated from their wices, of the which, befoles the offence that was done to our LordGod, there followed a great inconvenience to the Plantation of those Countries, for that such not liting feated in them, were not continued, neither did they attend to build, plant, breed, nor fowing, nor doing other things, which the good inhabiters are wont to doe, whereby the Townes doe not increase, as is behoofefull, and as they would do if there came inhabitors with their wines & childremas true Townsmen; being willing to remedy the abouesaid, commanded that all and every person or persons that should be found to be married, or betrothed in these Kingdomes, should 40 come vnto them for their wives, and not returne to the Indies without them, or with fufficient proof that they are dead. And the fame order was given for all the Kingdomes, of that new world, and fundry times hath beene reiterated, and commanded to be executed upon grieuous penaltus.

The holy Of-

Proceeding from the yeare 1492, when the discouery of this Orbe was begun, in directing and fetling the spirituall gouernment, as hath beene seene, for greater perfection, and enduring of it: The Catholike King Don Phillip the second, called the Prudent, confidering that among the great benefits that the Indians have received, their illumination to receive the Evangelicall Doctrin was the greatest, which hath extended it selfe, and considering also the singular grace which God for his mercy hath vied with them, in giving them knowledge of our holy Catholike Faith; that it was necessary to have a speciall vigilancy in the conseruing of the deuotion, and reputation of the so inhabitors, and Castillane pacifiers, which with so many labours procured the augmenting of the Religion, and exalting of the Catholike Faith (as in those parts like faithful & Catholik Christians, and good naturall and true Castillans they have done) & seeing that those which are out of the holy Catholike & Apostolike Roman Church, obstinate, and stubborne in their errors, and heresies, do alwayes procure to peruert the faithful Christians, labouring to draw them to their falle opinions, feattering certain damned Books, wherof hath followed great hart to our facred Religion; and beuing fo certain experience that the best meanes to preuent these euils, confisteth in the separating the communication of heretical persons, punishing their errors, according to the disposition of the sacred Canons & laws of these Kingdoms (which by this holy means, by the dunine elemency have beene preserved from this wicked contagion, and is hoped they will be preserved hereafter) to the & end that the Orbe doe not receive fo much hurt, where the inhabiters of these Kingdomes have given to good example of Christianity, & the Country-born have not percerted themselves with erronious doctrines of the hereticks: It feemed good to his Maiestie, with the aduice of the Cardinal D. James of Espinosa, Bulhop of Signença, Inquisitor generall in these Kingdoms, a man of great

prudence, and of many rare parts and vertues, for the which he hade election of his person, to help him to beare the burden of to many Kingdomes, and Lordships, and of the Counsels of the holy. and generall Inquisition, and of the supreame Counsell of the Indies (for it behoued to place one Counfell of the holy Office in Mexico, for the Kingdomes of New Spaine, and the reft of the Indies of the North, and another in the Citie of the Kings, for the Kingdomes of Pirm, and the adherents, which are called the Indies of the South) which the authority that the Councels of thefa Kingdomes haue, fo that as yet they should not meddle with the cases of the Indians, but onely of the Castillanes, & other Nations that should be found in the Indies, and so that the appeals should come to the impreame Countell that is relident in this Court, as it is done in Spaine, and in the accomplishing thereof, in the yeare 1570, the King Don Phillip the second, called the Pradent, 22ue 2 generall power to the Towne of Madrid, the 16.0f August, that the Apostolike Inquisicours that should be named for the present, and for hereafter against the hereticall peruersnesse, & Apoltacie : and the Officers and Ministers necessary for this holy Office, which was commanded to be seated in the Cities of Mexico, and of the Kings, should exercise & vie their Offices, and royall warrants, that Don Martin Enriques, and Don Franciscau of Toledo, Viceroyes, and Captains generall in the Kingdomes of New Spaine, and Pirm, and the Counfels, and Iuftices, Gouernours, and other persons

should give all side and faccur to the holy Offices, and the inquisitors, and Officers were nomina-

ted; as in their owne place shall be spoken more at large.

Hele Catholike Kings, most wisely constituted the Supreme Counfell of the Indies, that they Chap. 20. Thinks Camounter rungs, more weary commenced in a supreme compress of one analyst, trace cities (Chap. 3.0.

might helpe chem to better to great a flutton, as is salready the government or that Orthe, and Orthe forms the Countiell constitutes in one or Profident, and eight or more Commission, as necefficiar requireth, with one Atturner, Secretaries, Clerkes of the Chamber, Relators, and other Officers, and an Office of Acone Attuney, Secretaria, Correct of the goods Royall of those parts. And that proceeding might fell of the inbe according to rule and order, they declared first that the Counsell should meet three hours seuery day in the morning, and two in the afternoone, three dayes in the weeke that been o holy Infliction of ry day in the manants, and there the Warrants that should be delinered for these Kingdoms; but the Counsels, that those that were for the dadies, should have the feale Royall: and that in those parts it should and Chanceries that those supreme intriduction, and might make Lawes, and Decrees, to see and examine whatsoener parts. Statutes, Conflictions of Prelates, Senates, Chapters, and Concerts of the Religious, and of the

Vice-royes, Courts, and Counfels; and that in the Indies, and in thele Kingdoms, in matter dependant of them it should bee obeyed: that the government of the ladies should bee like this of thefe Kingdomes, and that more in particular the Counfell doe occupie it felfe in the matters of government. That in Suiters remitted those of the Councell Royall shall come to give their voyces Appealen to that of the Indies, and that two voyces that make a Sentence infinites of 500. 4 Pefos, or vnder. That there be a fecond Supplication in a cafe of 10000. Pefos : that they deale not in the reparti- dWhich is 1000 That there be a tecond supplication in whate or roccifies well peruled in the Courts according to a Pound English tions of the Indians in those pares, but the Processes well peruled in the Courts according to a raking two Ry Law. called of Malinas (for there it was made) they shall come to the Supreme Counfell: touch- als serone shill. ing order to be held in matters of feruices, that the Counfell doe fee them all; and in matters of ling.

40 rewards, that which the greatest part doth determine, shall be done, and that in these there be a Supplication, and that no expedient fuite be feene the third time : and that in the matters they doe resolute with breuitie, that the charges be given to the best deserving, and that they be not giuen to the allied and kinfmen of them of the Counfell; neither may fuch bee Solicitors, nor Atturneys; in the prouidings of the Offices no price shall be admitted: nor that they of the Countries; fell have any Indians of repartition, and they shall assist in their houses, that the Suiters may find them there, when they goe not to Counfel; and that due fettery be kept in all things, and about e Which as we all that the Counfell haue a particular care of the Conversion and good Instruction of the Indians, accompt 441. and of the spiritual government; and that of * 600000. Marmed z yoward the appeale shall come pound § shill to the Countell; that they may appeale from the Sentences in the sue Cases of naturall death, or lings and one; 50 mayming of a member, or other bodily punithment, publike shame, or racking, and the appeales

thall come to the Counfell, with many other laudable orders, which are omitted for breuties fake. That the President being a learned man, shall have a voice in matters of Government, gratuities, He continues and fanours, rifications, and accompts, and not in fuits, because he may be the more free for the the orders of government of the Counfell; and being vulcarmed he shall have no voice, but in matters of grace, the suprement gouernment, and fauour, and that he may affemble the Counfell in his owne house, and have a noate of the businesses, and that the Counsellours doe not accompany with the Suitors. And because it seemed a necessary thing that one Fiscal or Atturney should assist in Counsell, it was commanded he should have the same stipend that the Counsellours, and that they deliver him the dis-60 Patches of the Office, that he have a care to know how that is accomplished which is prouided for the Indies; that necessary Papers be given him for his Office, that he doe fee the visitations before Counfell: that he have a book to register all the capitulations that are taken with the King, another wherein he may fet down the Atturneys Pleas : that he delay not the fults: that his demands, or those that are against him be admitted, if the Counsel think it good: that he keep a book

of that which is concluded for the cafes; that he have a care to know the Officers that doe omit

012 The severall Spanish-Indian Courts, their Residences and iurisdictions. LIB.V

Ir flicution of the Courts royall of the

Having ordained all that which appertaineth to the Counfell, which is the head of this Go. uernment, with many other orders which are not rehearfed for breuitie; they proceeded in ordering all the Prouinces of the Indies, in the matters of inflice, as neede required; and thefe Catholice Kings defiring the common good of that new world, that their fubices that should posselle it, hauing a zeale to the feruice of our Lord God, good, profit, & eafe of the faid Subiects, & to the Peace. and queeneile of the Towns, as the King is bound vnto God, and to them, for to accomplish with the Office that he hath in earth, hee thought good to command to place the Cours and Royali Chanceries, that (as hath beene faid) are in the Indies, with the Statutes, and orders that hath beene given them, that the Ministers may doe their office, and instice be well administred, and the Townes obtained the benefit pretended.

the Hi parro a. Or Ordinary The Court of

Mexico.

The first Court that was established, was in the Citie of Saint Dominicke in the Hand Historie la. with one Prelident a learned man, though now because of the warre he is a Souldiour, with the the of Captaine Generall, and foure lustices that beare rods, like an a Alcalde, and deale in citals and criminall matters, in a degree of apeale, and in the inftance in matter of Court, and the Orie uernment is onely commended to the President (which now is Iri. Don Antonio Office and the limits thereof. The fecond Court was established in the Citie of Mexico, in New Spaine: the first President which was Nunyo of Gueman, had mourthoritie, for he was placed butfur a fee fon: with the fecond Court, the Bishop D Sebailian Ramirez (for he was fo in the Court of His pantola) he had the Gouernment of the Kingdomes, and the supreame authoritie, and hee left that, established that which belonged vinto it, and vinto rustice, as at this prefent it is. The Prefer to dent of clas Court is the Vice-roy (which now is the Earle of Monterney) there are eight lather which doe in gein civil matters, and in the appeale of the cases of government which the Vice. roy ettablilitin. There are three luft.ces of criminal cafes, which bear and deale in criminal cales, and two Atturnies, one of civill, another of Eriminal Caules, and hee prouiderh the Release charges that are not referred to the King, and the other Officers, and helpes of coft in releafes and vacacions in the limits of this Court of Mexico, and in that Countell of new Galicia, The third Court was that of Panama in Terra firme for this name was given to it, because it was

the first place where from the llands the Castillanes went to inhabite, and as their common speech

was to lay that they went and came from the Firme Land, though other Prosinces were found

wherewith the Kings commanded it should be called: and when the affaires of Pers grew gree-

ter, in the yeare 1542. It was thoughe good that this Court should be removed to the Citie of

The Kings, where the Vice-roy (which how is Dor Louis of Velageo) hath at his charge thego-

of the Kings eight luthices, three luthices of Court, and twee Atturneys; in the fame order as in

Mexico: and the Vice-roy is refident in the Citie of the Kings, and is the Prelident of this Court

in the firme land of that Orbe) this Prouince continued this name, loofing that of Castilla del Ore. 3

The Court of

Wherefore it was called Terva firme.

Court of the uernment of their limits, and that of the Courts of the Churcas and Queto. There is in this Court

The Court of

The Court of

and shall be in the other two, when he is prefent in them, and doth dinide all the repartitions of Indians that are voide in the bounds of them. The fourth Court was established in the Province of the Confines; and feeming it was needlesse it was diffulued, and the yeare 1 970. it was established againe in the Citie of Saint lames, of the Kingdome of Gnatemala: in it is one President which is the Doctor Criados Cafile: foure Inflices with rods, and one Attorney. They fit on civil and criminall cases, in appeales, and in the first instance : in matters of Court the President onely hath the Government, and assigneth the Indians, prouideth the Rulerships, and other Offices temporali. The fift Court was established in the Citie of Santa Fe de Bog ata ar the new Kingdoms of Granada, with one Prefident which The Court of now is the Doctor Francisco de Sande) foure Inflices with rods and one Actorney, with the same the new King authority that the former, The fixt was established in the Civie of Guadalaura, of the new King-The Court of dome of Galleria, with one Regent, three chiefe Juftices, which dispatched a great while withthe new King out Seale, and the matters increasing, the Seale was given, and a Register, and a President was pladome of Gricial ced, which now is Doctor Sandrage de Vera: and three Inflices with rods, one Atturney, and the Viceroy of New Spain hath the Government. The federath Court, was placed in the Citie of Sail Francis of Quite, of the Province of Pira, where there was also a Regent, chiefe Iustices without Seale, and afterward the Court was established with a President (which now is the Licentiat Mignel de V warar) with three Inflices with rods, & one Atturny with the fame faculty of Guadelaiara, the government, & the rest remaining to the Vice-roy of Pirm, as about faid. The eight Court was in the Citie of the Plate, in the Prosince of the Chareas, with a Regent and chiefe Inflices:after there was placed a Prefident, foure Inflices with rods, Atturney, Scale, and Register, and now is President the Licentiat Cepeda, with referuation of the prouiding the charges, and the rest to the Sc.a Soldiout. Vice-roy of Pirw. The night Court, is that which was chablished againe in the Citie of Panama, The Court of with a President of Sword and Cloake, because of the matters of warre, which is now Don Alons to che Philipine. de Setomajor, with the title of Captaine Generall of Terra firme : there are three Iustices with roddes, which doe deale in Appeales of civill and criminall cases, and at first instance in matters of Court, and it hath onely the Gouernment. In the Citie of Saint lames, of the Promince of Chile, was placed the tenth Court, and because it feemed needeleste, it was diffolned, and a Gouernour was provided, which dependeth on the Vicerovide Rivs. In the Citie of the Philippinas, called Manila, was a Court, and it was ulfoloed because it tremed needelchie: a few yeares fince it was established againel, with a Cantaine Generall which is Don Peter of Acres a which is President, and foure lutices, and one Acturney, with the fame authorstic that the other Courts. For the Catholico Kings of Caffile, with the adulte of the funreme Councell'of the Indies, doe alwayes proude with a fincere and just minde; that which: is consequent for the preferration and augmenting of the spirituall and temporall things of those parts, without any (pare of expenses, or labor; and every Court hath according to she wie of their Kingdomes, Secretaries, Relators, Sargeants, Porters, and the Officers which are necessaries.

Kingsomes, occretaines, assessories, one general concernant one Officers remainded and the Chap. 27.

The hast opine and agreement of this great Monarchier is sluch, that to enery Minifter hack. Chap. 27.

The hast opine the authoritie that as well by realou of erlare, as for the reputation of inflice. Of the things hath feemed to be conuenient, referring to the supreme Maieste that which hath beene indeed that are prominaturacement, see connection in the first to the Vice-royes and Prefilents, that they may have to preme Counreward the well-deferuing, and they be more respected, there are Offices affigned which they cellof the Inmay produide, and masters wherein they may gratine, under the quounding of the Person Royall des with cold have remayned, wish confidention of the furreme Counsell of the littles the offices following.

For the Kingdome of Chie a Governoor and a learned Justice; with facultie to incommend or Kings. authorifente Indians, anotherior Tucuman, with the fame facultie; another for the Provinces of The Boulen. 20 She River of Place, tor Popayan, Saulta Mariba, Cartagona, and Verague, weth their Governour mens which Rhe River at Plate, for Popayan, Santa Mariba, Cartagona, and Foragene, with their Goulf, one: in every one with the fame power. In the Provinces of Nicaragua, and the Rich Goaff, one: in und thin the the lland of Cuba one Gouemour, and Captaine which is relident in the Citie of Saint Christe- Indian. pher of the Auna ; there are beiidesthe Gouernours of the Hand of Saint John of Porte-rico, Venezuela, Soconusco, Tucatan, Cozumel, and Tabusco, which is all one government with authoritie to commend the Indiana. His Maieftie promiderh allo the governments of Hondaras, the Margarite, Florida , new Bisquie, Darado, those of the new Realme of Lion, and that of Pacamoras, Tquallange, which are for terme of life, and the fame in the Protinces of Choco, Quixos, the Cynamon, Hands of Salotnon, Sanita Cruz of the Hill, and the last is that of the new Andalufia. Likewife there are prouided by his Maieftie the Ruletfhips following. The Cuzco, the Citie ThoRuletfhire

20 of this Plate, and the feate of the mynes of Posefi, and the proutnee of Chicuite, the Ander of Cue-thickins Maicco, the citie of Truxilla, Arrequipa, Saint lames of Guayaquil, Guamanga, the citie of the Peace, flie doth pro-Chiquiabo, Saint lobro of the Frontier, Lion of Guanuco, Old Haven, Zamora, the inhabiting of the uide, mynes of the Zacatecas in new Galiera, Euenca, Loxa, Tunja, the citie of Mexico, the citie of the Kings, the profince of Nicoya. Chiefe Inflicethips, are those of the village of Saint Saniour of the province of Gnatemala, the inward part of Haff aniolis, Nombre de Dios, the village of Challetes, prounce of the Chiana, Zapotlican, the village of Mata, Santia Marie of the victorie in Tabafca. of God. And the chiefe Bayliwickes are, in the citie of Saints Dominiche in Mexico, in Guadalogara, Saint lames of Guatemala, Panama, holy Faith of Bogota, Saint Francis of Quito, the citie of the Kings, the Plata, Inche Cities recited in every one is a chiefe Bayliefe, which hath a voice in Councell 40 as a R. ler, and Deputies named , for the vicof his Office , and in every Court is another chiefe

Bay liefe with facultie to name other two Deputies. For the government of the goods Royall are provided by his Maieflie, with the opinion of the fupreme Councell of the Indies, many Officers, Factors , Treasurers , Tellers , and Ouer-leers, which all doe give affurance in Caffile and in the Indies, of good and faithfull administration : and because this new Commonwealth doth augment so much, it feemed behoofefull to the service of God, and of the King, to ennoble and authorize it more, with placing two Vice-royes, one in New Spaine, another in the Kingdomes of Pinn, that in the Kings name they should governe and provide the things belonging to the service of God, and of the King, and to the conversion and inttraction of the Indians, fultayning, continuing, inhabiting, and ennobling of the faid Kingdomes, which experience hath thewell, chartet hath beene convenient : to the which Vice-royes sinitractions are given very particular of that which is secited, and that they may have in prote-Aion the holy office of the Inquifition, and with their strong arme to defend and protect it, that this conformitie as a fast knot, may be the pure and true preservation of the spiritual and temporall Estate, which is the best and truest estate, and most according to the Euangelical estate.

The Vice-royes are commanded also, and likewise the Judges, not to have houses proper, nor That which is to trafficke, nor contract, nor be ferued of the Indians, neither have any "Grangeries, nor meddle forbidden the in Armies, nor Discoueries; that they receive no guifts nor presents of any person; nor borrow Vice-royes, in Armies, nor Discoueries; that they receive no guitts nor presents of any perion; and ludges, mony, nor any thing to eate; nor pleade, nor receive arbitrements. That no Lawyer may plead "Where here's "Where here's where his father, father in law, brother in law, coufin, or fonne is Iudge. That no Vice-roy, of Cattellare 60 Prefident, Iultice, Judge of the criminall Cafes, Solicitor, nor their children may marry in the /#- bred. dies. That no Gouernours, Rulers, nor their Deputies , may buy Lands , nor build Houses , nor trafficke in their iurildiction. That they may not farme the Bayliwickes, nor laylorships, nor other offices. That no Gouernour, Ruler, nor chiefe Bayliefe, during the time of his office, may marry in the bounds of his jurisdiction. That no Judge be prouided for a Ruler, neither shall the

faid Judges, or Bayliefs, baue any charge in which they are to make any absence from their cotan mages, or saying, each titlice be given to the fonnes, fonne in law, brothers in law, no ses : neturer man any officers, nor Solicitors, nor to the Officers of the Courts, and of the fathers in law of Frenchis, and of the rest and the same is commanded the Vice-roye; goods royan nerves to resource to the about Aid Ministers, doe accept warrant for recoveries nor other things, nor ferue themselves of the Indiens without paying them. That no Advocate, Scrivenes nor R. nor terue tremitted to the house of Iudge, nor Bayliefe, nor the Suiters serve the Iudges. That the ludges of Paname, doe not accompanie themselves with the Dealers, nor give leave to their wives Judges or remems, outcome accompanie to accompanie them. And that no Inflices of all the Courts, shall have much communication to accompanie tuent, and that the surface of the Surface, and Atturneys: neither in body of a Court to goe to Mariages, Fuwith the success, numerate, and accept the avery weighty matter: neither wifite any Neighbour for any cause. That they doe not meddle in matters of the Commonwealth, nor any Justice, nor other minister of the Court, may have two offices in it. And besides these many other Ordinances, and good Lawes, which are all concerning administration of juffice.

Chap. 32. Whiteinhee continuerh the matter of the good gothe Indies.

No because these Catholike Kings have left nothing which most wisely they have not pro-A tradectant there can be so their dutie, the first thing they command the Vice-royes; and all the A Ministers in generall and particular is, the good viage of the Indians, and their preferation, and Ministers in general and particular which are made as touching this, for to punish the Offenders the accomplishing of the Unders without are made as accomplishing policie, and can complishe and the Indians doe learner the Cashidas policie, and can complishe and a second the Indians of the Indians according to the Indians of the Indians according to the Indians of the Indians of the Indians according to the Indians of the Indians know in what things they receive wrong, for their greater eale it is provided, that they give no place that the ordinarie writings be made in the fuites betweene, or with the Indiany, mether place that the dumant of the malice of forme Aduocates, and Atturneys, but that furnmarily they be determined, keeping their vies and customes, not being manifelly in-Interpreters, iuft, and that by all meanes possible, they doe prouide the good and short dispatch of them. And having notice that in the interpretation of the Indian; languages, there were some fraudes, for to preuent all, it was ordayned, that every interpretation be made by two Interpreters, which shall not confer both together about that which is controuerted by the fudian : and that before there be received to the vie of the office, they shall take their oath to administer it faithfully, and that they receive no guifts of the Indians futers, nor of others. That they doe affift at the Agree. ments, Courts, and visitations of the Prisons. That in their houses they heare not the Indian but to carry them to the Court. That the Interpretees be not Solicitors, not Atturneys of the Indians. That they aske them nothing. And for their greater good, it is prouded, that the Atturney of the Supreme Councell of the Indies, bee Protector of the Indians, and defend them in their fuites, and aske in the Councell all thenecessarie things for his infiroction, preferration, and politike life : and now there are appointed Protectors in the Kingdomes of Pins. and Nim Spaine, with new orders for their better viage.

It is also commanded, to fet up Schooles of the Caffidens tongue, that the Indians may learne it, and may doe it from their childhood; and that no vagabond Spaniard doe dwell or temayne in the Townes of the Indians, nor among them, but that the Vice-royes and the Courts, doe put & learne the Spe- all diligence in driving such out of the Land, thipping them for Cafile: and the "Countrie borne be compelled to ferue and to learne Trades. And as well to the Prelates, as to the Vice-royes, Second the Courts, Governours, and Rulers, and other what focuer Rustices, is cordayned, and particular care Gountriwo is had they doe accomplish it, that they doe prouide how the offences that were done to God may ceale, in the Indiana marrying whiles they are children, without having respect of age: the Caziques marrying with more then one woman, though he be an Infidell: in hindering that when some Cazique did die they should kill another to bee buried with him , and other like abominable vies. That it be permitted to the Indians that they may dispose of themselves what they lift, as free men, and exempted from all manner labour, though it shall bee procured that they doe labour and not be idle, and may have libertie to difpose of their goods, the Lands being set to fale by out-cry thirty dayes, and the moueable nine, the Iuftice being prefent. That the Lands remayning of any Indian deceasing without a Will, shall remayne in the Townes where they dwelt. That they make the Markets freely, and fell in them their merchandize. That their good vies and ancient customes be approued. That they may fend to these Kingdomes Indian Atturors neys for three yeeres. That the Refidencies be published in the Indian Townes, to fee if any will of the ludges, demand inflice. That in every Towne of the Indians there bee an Hofpitall with the things

That they be

In this matter of the Indian flaues, there were in the beginning of the Discoueries divers opinions, and orders, governing themselves as the time required and the state of the things : but after the Bishop Don Sebastian Ramirez came for Preident of New Spaine, this vie was absolutely 60 abolished, not with standing the ancient one which the ladians had to make themselves slaves one to another : neither might they buy of them , nor receive them , neither that any person may bring to these Kingdomes any Indian in title of a slave, though he be taken in lawfull warre and for this are fo flraight orders given that they are effectually kept, and fo in no place of the Indies

CHAP. I. Indian Lawes. Contractation house. Councell for the Indies.

are Indian flaues, though they be out of the bounds of Castile and Lion. And to either this inconvenience the more, the bringing Indians to these parts for whatsoever title it bee, is

And the quietnesse for the Commonwealth being about all very necessarie, ficultie is given to About ynquiet the Vice-royes, Prefidents, Gouernours, and other Inflices, that they may drive away, and ba- persons. nish from the Indies all viquiet persons, and fend them to theie Kingdomes, Judging it to to hee convenient for the quietnesse of those, but that it bee not for hatred or passion, nor for an

And that it may be some bridle to the Superiors, they are commanded, that they frindlered man the writing to the King, to his Councell, and to other perform, what they will heigher of nen, nor take any papers, or letters, under great penalties, and that they permit to paffe and renalle through the Countrie them that will, prouiding wayes and beidges in the places where

they are wanting. As touching the matters of Watre, it is also provided with great deliberation, for the Vitel Matters of roves greater authoritie, facultie is given them to have a Guard on foot, and on Horfe-backe to warre. make a cashing place for Ordnance and Bullers, and a shirlding for munitions, to levy men, aime thips, and make fortifications, and prouide all the referencement for the defence of these Kings

domes, and how the excelles of the Souldiers may be eschewed, as well by Land as by Sea; and to them that goe in the fleetes, committing the punishing of them to whom it belongeth, for to excufe competencies of inriduction. It hat halready beene faid how all the Government of this Orbe, depends of the forreme and The house of

Royall Councell of the Indier, that are neere the Perfor Royall. But as it is necessarie that the exe- contration entions of those parts have correspondence in these and here also there be they that may brounde of Smil. in effecting that is behoofefull for the matters there: it was necessarie to place in Sinit, where all the trafficke of the Indies doth come, a House Royall of contrataction of it, that medical not but in the difpatching of those bufineffes, and dependants of them, without any perfor nor luftice doe intermeddle in any thing belonging to the Indian affaires: and it is in tiboftante, a Tribonall of great authoritie, in the which is a President, which now is Don Bernardino Deleadino of Anellaneda, a Teller, a Tresiurer, one Factor, einet learnett hitiges, one Solicitor, one Relator, one

30 Sergeant, Scriueners, Porter, Leylor, and other Officers. In the Hairds of Tenerife and Palma, are placed two learned Judges, called Officers Royall, or Judges of the Registers, to cause Orders to be kept that are ginen for the lading and Registers of thole Hands, and Nauigation of that voy age. The house of the Contrataction hath her instruction and ordinances , how her innition is to be governed and exercised, and the learned sudges have it also for their vie and exercise , keeping in the leeing of the plea, betweene parties, the order that is held in the Courts of Valladolid. and Granada: and because the particular care of the officers of this tiquie, is the dispatch of the Fleetes and Armies, that they may depart in due times, they employ themselves in it with great diligence, and in recoming them that come, and ferting in fafeguard the Gold, Silver, Tewels, and other things that doe come, with a diffinction of the waight and carracts, charging themselves

40 with all, that there may be more account and reason, and for to make the provisions of the Fleetes and Armies. There are fo good orders given, that neither the Ministers doe exceed, nor the Subiects receive wrong, for all passeth very conformable to the intention of these Godly and Catholike Kings, by meanes of the great diligence of the fupreme Councell of the Indies.

And because the busineffes of the Indies have increased so much , that the supreme Councel Instruction of could not dispatch them with the breutie convenient to the good government of that Orbe, and the Councell the benefit of the Suiters, with the aduice of the President and supreme Councell; the King Don of Haushold. Philip the third our Lord, in imitation of his Catholike and Godly Predecefors, for the greater good of his fubicats, hath inflituted a Prime Councell, where all the bufmeffes of spirituall and temporall warrants, fauours and rewards may bee conferred and dispatched : and besides this, there

to are two Halls instituted, where on dayes appointed they may intreat of matters of Warre, with the President and three Counsellors of the Indies, and two or three of the Counsell of warre, and other dayes, of the matters of the goods, by the Prefident and Counfellors of Indies, and two of the Counsell of the goods, Atturney, and Secretarie of the Counsell of the Indies, the President naming those that he first thinke best for it.

And as these Catholike Kings doe alwayes looke to the benefit of the people of that Orbe, That the swige confidering that the propagation of the holy Gospell in no part of it could goe more prosperously shall not bee by any other hands then his, nor bee attended for his preferration, and to have the Conquerous allenated. and Inhabiters of those parts more fatisfied, seeing all were his Subjects, and borne in these Kingdomes, declared by their Royall warrants, dated the yeere 1 (20. in Valladolid, and in the verre 60 1523, in Pamplona, that their Maiesties , nor any of their Heires , in no time shall alienate from the Crowne Royall of Castile and Lion, the Hands and Provinces of the Indies . Towne , or any

part of them, and so they promised it and gaue their Royall word.

484 gadi 614

The Presidents, Counsellors, Secretaries, and Atturneys, which unto this present day bane ferned, and doe ferue in the Supreme Councell of the Indies, from their first Discouerie.

PRESIDENTS.

I Obu Redriguez of Fonseca, brother to the Lord of Coca and Alaejos, Archbishop of Rolano, and Bahop of Burges, being Deane of Simil, governed that which appertayned to the difpatching of the Fleets and Armies of the /ndies, till the Catholike King Don Fernando V. called him, to the end that in his Court hee might take charge of the Indian affaires, and he did it till the Emperor came to reigne, which commanded that the Doctor Mercurine Gatimara his great Chancellor, should be Superintendent of all the Councels, and all the difpatches paffed through his hands, and intermeuled in all the Affemblies that were made,

Friar Garcia of Loan la Generall of the Order of Saint Dommicke, the Emperours Confelfor, Bishop of Ofme, which was Archbishop of Similand Cardinall.

teft quanticie off; and con-

we have made mention. Confidering with my felfe oftentimes, what thould caufe the EquinoCiali to bee fo moift, as reason why the I have faid; to refute the opinion of the Ancients, I finde no other reason, but the great force of Sunne without the Sunne in those parts , whereby it drawes voto it a great abundance of vapours from out of the Ocean, which in those parts is very great and spacious : and having drawne vnto it this great abundance of vapours, doth suddenly dissolute them into raine, and it is approved by many of waters when tried experiences, that the raine and great flormes from Heaven proceed from the violent heave 10 of the Sunne : firft (as we have faid before) it raines in thole Countries , when as the Sunne cafts his beames directly upon the earth, at which time he hath most force ; but when the Sunne retires, the heate is moderate, and then there falls no raine : whereby wee may conclude, that the force and heate of the Sunne is the cause of raine in those Countries. Moreover we observe, both when it is nee- in Perw, new Spains, and in all the burning Zone, that the raine doch vitally fal in the afternoone, reft. La. chep. 7. when as the Sunne beames are in their greatest force, being ftrange to fee it rine in the morning. And therefore Travellers forefeeing it , begin their journeys early , that they may end and rest before noone, for they hold that commonly it raines after noone. Such as have trequented and transfel those Countries, can sufficiently speake thereof. And there are, that (having made some abode there) 14,, that the greatest abundance of raine is, when the Moone is at the full; 60 but to fay the truth , I could never make fusicient proofe thereof , although I have observed it. Moreouer, the dayes, the yeere, and the moueths, thew the truth hereof, that the violent heave of the Sunne cauteth the raine in the burning Zone: experience teacheth vs the like in artificiall things, as in a Limbecke, wherein they draw waters from herbs and flowers; for the veheCHAP.2. Strange effetts in natural caufes. Exceptions to general rules.

mency of the fre forceth and driueth vp an abundance of vapours, which being preffed, and finding no iffue, are concerted into liquor and water. The like wee fee in gold and filuer, which we refine with quick-filter, the fire being small and flow, we draw out almost nothing of the quickrenne war a quas- and violent, it dots greatly cusporate the quick-filter, but if it be quick and violent, it dots greatly cusporate the quick- filter, which encountring the head abone, dots prefently sume into liques, and begins to drop downe: Even fo the violent the head abone, dots prefently sume into liques, and begins to drop downe: heate of the Sunne produceth these two effects, when it findes matter disposed, that is, to draw we the vapours on high, and to dissolve them prefently, and turne them into raine, when there up the vapours on mgn, and to make the management ty, and turns came into faine, when there is any oblitale to confume them. And although their things feeme constraire, that one Sunne within the burning Zone, being nerre, should saide raine, and without the Zone starre off should within the burning Zone, being nerre, should saide raine, and without the Zone starre off should within the property of the contract within the burning Lone, being meric, mount quies raine, and without the Lone started Hould breed the like effect; for it, that all well configured, there is no contrartie. A thouland ef-fects in naturall cause proceed of contrarie things by diutes meanes; we drie linnen by the fire,

and in the aire, and yet the one heats and the other cooles; Passures are dried and hardened by and in the airs, and profession moderate, exergife proposes fleepe, being too violent, it hindereth if you lay no wood on the fire, is dyech; if you lay no wood on the fire, is dyech; if you lay on too much, it likewife quencheth; for the onely proportion entertaines and makes it to continue. To well discerne a thing, it must not be too neere the eye, nor too farre off, but in a tealogable diffance proportionable; being too farre off from any thing we lose the fight, and too neere likewise we cannot see it. If the Sunne beams on from any change we also to make the man continues that the restriction refers if the sudne beams be weake, they draw up no fogge from the Bluers, if they be violent, hailing drawne up the vapours, they prefently disolute and confume them; but if the heat be moderate, it drawes up and 20 preferres it : for this reason the vapours rise not commonly in the night, nor at noone, but in the

morning, when as the Sunne begins to enter into his force. There are a thouland examples of naturall causes vpon this subject, which wee see doe often grow from contrarie things: whereby we must not wonder, if the Sunne being neers, engenders raine, and being farre off, works the like effect : but being of a moderate and proportionable diffance, causeth none at all. Yet there remaines one doubt, why the neernesse of the Sonne causeth the raine under the burning Zone, and without when it is farthest off. In my opinion the reason is, that in Winter without the Tropicks, the Sunne hath not force I ficient to conlume the vapours which rife from the Land and Sea; for these vapours grow in great abundance in the cold Region of the aire, where they are congealed and thickned by the extremitie of the cold; and after being prefled, they diffolia 30 and turne into water. Therefore in Winter when the Sunne is fartheft off, the dayes thort, and

and turne into any his heat hath small force; but when the Sunne approachet, which is in the Summer time, his force is such as it drawes up the vapoors, and suddenly consumes and dispersions. feth them; for the heat and the length of the dayes grow through the neernelle of the Sunne-But within the Tropicks vnder the burning Zone, the farre diffrance of the Sunne workes the fame effects that the neernesse doth without the Tropicks; by reason whereof, it raines no more under the burning Zone when the Sunne is farre off, then without the Tropicks when it is necreft, for that in this approching and retyring, the Sunne remayns alwayes in one diffance whence proceedes this effect of clearneffe. But when the Sunne is in the period of his force in the burning Zone, and that he cast his beames directly upon the Inhabitants heads, there is neither cle er-40 neffe nor dryneffe, as it ieemes there should be, but rather great and strange showers : for that by

this violent heat, he drawes up fuddenly a great abundance of vapours from the Earth and Ocean, which are so thicke, as the winde, not able easily to disperse them, they melt into water, which breedeth the cold raine in fo great abundance : for the excessive heat may soone draw vp many vapours, the which are not fo toone diffolied; and being gathered together through their great abundance, they melt and diffolue into water. The which wee may early differne by this familiar example : roaft a piece of Porke, Mutton, or Veale, if the fire be violent, and the meate neere, wee see the fat melts suddenly and drops away, the reason is, that the violent heat drawes forth the humour and fat from the meat, and being in great abundance cannot diffolue it, and fo it diftils more away : But when the fire is moderate, and the meat in an equall distance, wee fee 50 that it roafts handfornly, and the fat drops not too fuddenly, for that the moderate heat drawes

out the moistnesse which it consumes suddenly. And therefore Cookes make a moderate fire, and lay not their meate too neere nor too farre off, lest it melt away. The like may bee seene in anoother experience in candles of tallow or waxe, if the wike bee great, it melts the tallow or the waxe, for that the heat cannot consume the moultnesse which rifeth, but if the flame bee proportionable, the wax melts nor drops not, for that the flame doth wafte it by little and little

But this is not to hinder the exceptions which Nature hath given to this Rule, making some Exceptions to Regions of the burning Zone extremely drie. The which is reported of Ethiopia, and wee have generall rates.

feene it in a great part of Pers. , where all that Land or Coast , which they call Playnes , wants 60 raine, vea, land waters, except some Vallies where Riners fall from the Mountaines; the rest is a fandie and barren foile, where you shall hardly finde any Springs, but some deepe Wells. But with the helpe of God, we will shew the reason why it rayneth not in these Playnes (the which many demand;) for now I onely pretend to shew, that there are many exceptions to naturall Rules, whereby it may happen, that in some part of the burning Zone it raines not when the

Sunne is neerest, but being farthest off, although wmo this day I have neither seene nor heard of it : but if it be fo, we must attribute it to the particular qualitie of the Earth cand also, if sometimes the contrarie doth chance, we must have regard that in narrall things there happens many contrarieties and lets, whereby they change and diffolue one another. For example, it may be the Sunne will cause raine, and that the winder will hinder it; or else cause more abundance then hath beene viuall.

The Authors

When I passed to the Indies, I will tell what chanced vato mee: having read what Poets and Philosophers write of the burning Zone, I perfereded my felle, that comming to the Equinochiall. I should not indure the violent heate, but it fell out otherwise; for when I passed, which was when the Sunne was there for Zemith, being effected into Aries, in the moneth of March, I 10 felt to great cold, as I was forced to goe into the Simhe to warne me, what could I elfedoe then, but laugh at Ariffeiles Meteors and his philosophie, seeing that in that place, and at that season, when as all (hould be footched with heat, according to his rules, I, and all my companions were a cold ! In truth there is no Region in the world more pleasant and temperate then under the Equiportiall, although it be not in all parts of air equal temperature, but have great divertities. The burning Zone in tome parts is very temperate, as in Quitte, and on the playnes of Perm; in discribitd fome parts very cold, as at Potozi, and in some very hot, as in Ethiopia, Breil, and the Molincipues, compers of the This discriptic being knowne and certaine vnto vs., wee must of force seeke out another cause of cold and hear then the Sunne beames, seeing that in one feafon of the yeere, and in places of one height and distance from the Pole and Equinoctiall we finde so great diversitie, that some are in- 20 uironed with heat, fome with cold, and others tempered with a moderate heat.

Confidering this matter generally, I finde two generall causes, which maketh this Region

temperate: the one is that before mentioned, for that this Region is very moist and subject to under the Line raine, and there is no doubt but the raine doth refresh it, for that the water is by nature cold; and within the and although by the force of the fire it be made hot, yet doth it temper this heat proceeding one-Tropicks. In from the Sunne beams. The which wee fee by experience in the inner Arabia, the which is burnt with the Sunne, having no showres to temper the violence thereof. The cloudes and mists are the cause that the Sunne offends not so much, and the showres that fall from them. refresh both the Aire and the Earth, and moisten likewise how hot soener it be. They drinke raine water, and it quencheth the thirft, as our men have well tried, having no other to drinke. So as 20 realon and experience doth teach vs, that raine of it felfe doth temper the heat; and having by this meanes shewed, that the burning Zone's much subject vato rame, it appeares that there is Second cau'e, matter in it, to temper the violence of the hear: To this I will adde an other reason, which deferues to be knowne, not onely for this matter, but for many others; for although the Sunne be very hot and burning under the Equinostiall, yet is it not long, fo as the heat of the day being there shorter and of lesse continuance; it causeth not so violent a heate; the which it behooses to specific more particularly. Such as are practifed in the knowledge of the Spheare teach very well, that the more the Zodiake is oblique and trauefing our Hemisphere, the more vnequall are the dayes and nights; and contrariwife, where the Spheare is ftraight, and the fignes mount directly, there the dayes and nights are equall. And therefore in all that Region 40 which is betweene the two Tropicks, there is leffe inequalitie then without them, and the more wee approch the Line the leffe inequalitie we finde, the which wee have tried in those parts. Those of Quitto, for that they are vnder the Line, have not throughout the whole veere the dayes and nights more short at one season then at an other, but are continually equall. Those of Lima being distant almost twelve degrees, finde some difference betwixt the dayes and the nights, but very little, for that in December and Ianuarie the dayes increase an houre or little leffe. Those of Poroze finde much more difference both in Winter and in Summer, being almost vnder the Tropicke. But those that line without the Tropicks finde the dayes in Winter shorter and in Summer longer : the more remote they are from the EquinoCtiall and come neere the Pole, as wee fee in Germanie and in England, the dayes are longer in Sum- 50 mer then in Italie and in Spaine. It is a thing which the Spheare doth teach, and experience doth plainly shew vs. Wee must adde an other Proposition, which is likewise true and very considerable for all the effects of Nature to understand the persenerance and continuation of the efficient cause to worke and mooue. This presupposed, it any one demand of me, why under the Equinoctiall Line the heat is not so violent in Summer, as in some other Regions (as in Ande-Therethere bee loufis in the moneths of July and August) I will answere, that in Andeloufis the dayes are lonomerreatons besides the forcer; and as the day being hot, inflames and causeth heat; so the nights being cold and moift, give a refreshing. According to the which, at Pers, there is no such great heat, for that the dayes in Summer are not long, nor the nights short; so as the heat of the thew, that the day is much tempered by the freshnesse of the night.

burning Zone

Being a thing concluded, that the two fore-named properties are common and valueriall to is temperate, especially a lithe Region of the burning Zone: and yet in the same there are found some places very hot, longif the O. and other exceeding cold: Also, that the temperature is not there equall in all places, but winder gean, Chap, 11. one climate, one part is hot, another cold, and the third temperate, all at one leafon; wee are

forced to feeke out other reasons, whence this great divertitie should proceede in the burning Zone. Discoursing therefore you this question, I doe finde three apparant and certaine causes, and a fourth more obscute and darke. The apparane and sertaine causes bee : The first is the O cean ; the second, the struction of the Land , and the third, the nature and propertie of many and fundrie windes. Befides there three which I hold for manifest, I believe there is a fourth hidden and leffe apparant, which is the propertie of the fame Land inhabited, and the particular influence of the Heatens. Among the special causes and reasons, I have first placed the Sea. for without doubt, the neernelle thereof doth helpe to temper and coole the heat : for although the Water be falt, yet is it alwayes water, whose nature is cold.

But is wee thall yet fearch more particularly; when that not finde in all this Land an equall temperature of heave, although it bee in equall different from the Sea, and in the fame degree. feeing thapin fome pared there is great beite; and in fome very little. Doubtleffe , the cause thereof in that the one is lower, and the other higher | Which canfeth that the one is hot . and theother cold, Leismofticeruine, that the tops of the Mountaines are colder then in the bottome of the Vallies, the which processes; not onely for that the Stittne beames have greater repercusions your lower places, although it be a great reason; yer there is another, which is, that the Region of the aire is colder when it is farthest from the ground. The cause why the middle Region of the aire is more cold, buth beone shewed before : for that the Region of the aire next to the fierie exhalation, the which (according to Ariffele) is vpon the Spheare of the aire, repells and thrusts backe all thoughd, the which retires it selfe into the middle Region 30 of the aire, by Autiparist afe, as the Philosophers speaker Now, if any one should question with

me in this manner; If it be fa that the size is hot and moult , as Arifold holds, and as we commonly fay; whence then proceedes the cold which is congealed in the middle Region of the aire, feeing it cannot come from the fierie Spheare? For if it come from the Water, or the Earth, by wift Me.
this realog the lower Region of the aire floudd be colder then the middle.

To answere truly what I shinke, I will confess, that this Argument and Obiection is so difficult, as I am almost readie to follow the opinion of furless reproue the qualities , seteements and difagreements, which a Areflotle ginds vinto the Elements, laying they are but imaginations, who for this occasion hold the aire to bee dold by natures. And to this end they vie many arguments and realons, whereas we will proposed one very familiar and well knowne, leaving the 30 reft apart. In the Caniculandayes we are accultomed to beset the aire with a fan , and wee finde that it dort refresh ve; so abahese Authors, affirme, that heate is no private propertie of any other Element, but of fire andly, which is disperfed and mingled with all things (as the great De- Bionflets. ais doth teach vs.) But whether it be fo, or other wife (for I will not contradic Aristotle, but in cal bere that which is most certaine) in the end they agree all, that the middle Region of the aire is colder then the lowest next to the Earth, as experience doth shew vs; seeing that in this middle Region are congested, Snow, Haile, Frosts, and other signes of extreme cold. The middle Region

then which they call the burning Zone, having on the one fide the Sea, and on the other the Mountaines, we must hold them for sufficient causes to temper and coole the heate.

The temperature of this Region ought chiefly to be attributed to the propertie of the winde That the cold Ane temperature of this arguatourate them who have the providence of the great God windsabee the that blowes in that Country, the which is pleasure mid-fresh, The providence of the great God windsabee the Creator of all things hath better such, as he hath ordayined fresh and coole windes in that Region to make the

where the Sunne makes his course (which seemes should be burnt up) that by their coolenesse burning Zone the excessive heate of the Sunne might be qualified. Wee see in one climate, some Regions and temp Cities hotter then others, onely for that they feele leffe winde to refresh them. The like is in Chaptaother Countries where no winde blowes, the which are all on fire like vnto a furnace. If we shall It is dotted by other Countries where no winde blowes, the which are all on fire like vitto a turnace. 11 we mail transfers that neerly looke into the confideration of the winde, whereof we have spoken, we may resolute ma- there is a hot. ny doubts which some object, and which seeme strange and wonderfull : wherefore the Sunne winde some of cafting his beamer vpon the burning Zone; and particularly at Perus, and that more violently inner neare to, then in Spaine in the Canicular dayes, yetchey defend the heat with a light conering, fo as with Bellew and Gr.

a flender couering of matsor thraw, they are better preferred from the heate, then in Spains will will all and of the course of the spains of as hot and trouble some as in Spaine? Wherefore on the highest tops of Mountaines, even amongst and understy, the heaper of showe, you shall sometimes facle great and insupportable heat? Wherefore in all his them, has the Pronince of Colas, when yee come into the shade, now little locuer, you feele cold : Bue lobeles phlerus the Promine of Colas, when yee come into the shade, how lattle joeuer, you recrecion : Due a Court wind comming into the Sunne beames, you presently finde the heate excellent. Euery morning the to blow updue winde from the Sea doth ceale, and the Simne begins to east his beames; and for this region they boures from feele the greatest heat in the morning, vntill the returns of the same windes, which deherwise the Sen, and they call the tyde or winde of the Sea, which makes them first to feele cold. Wee have tries all other twelve 6c this , whileft wee were at the Hands of Birlanente , where in the mornings wee did sweat for conflant heat, and at noone we felta tresh aire; for that then, a North Easterly winde which is fresh and

coole, doth commonly blow. Confidering with my felfe, the pleafing temperature of many Countries at the Indet, where Temper of the they know not what Winter is , which by his cold doth freeze them , nor Summer which Joth Indies.

trouble them with heat, but that with a Mat they preserve themselves from the inninies of all weather, and where they fearce have any neede to change their garments throughout the vere-I fay, that often confidering of this, I find that if men at this day would vanquish their passions. and free themselines from he inares of constouineds, leauing many fruitless and pernicious de-fignes, without doubt they might line at the Indian very pleasant and happily: for that which other Poets fing of the Elifam fields & of the famous Tampe, or that which Plans reports or feigure of his Atlantice Iland; men should finde in these Lands, if with a generous spirit they would

choose rather to command their filter and their defires then to remayine to it flaues as they are. Haung difcourfed in the two former Bookes of that which concernes the Heautre, and the habitation of the Indies in generall, it behoops we now to treat of the three elements, Aire, and Water, and Land, and their compounds, which be metals, plants and beafts; for, as for the fire, I fee no speciall matter at the Indias which is not in other Regions; whiefe some will say, that the manner to firike fire in rubbing two ftones one against another, as fome Indian etc. or to We have ab-bresisted and boile any thing in gourds, casting a burning stone into it, & other such like things, are remarkable to preuent te- whereof I have written what might bee poken. But of those which are in the Valence and uneffe cut Mouthes of fire at the Indias, worthy doubtleffe to be observed, I will fpeake in their order, treaof a great part ting of the discritice of grounds, whereas they finde these fires or Falcans. Therefore to begin of Acasas ob with the windes, I say, that with good reasons, Saloman in the great indigement which God had forusions in with the winners, 1875 state with programming the winners and their properties being very admit the two former giuten him, effectives much the knowledge of the winners, and their properties being very admit booker, asha- rable; for that fome are moift, others drie; fome wawhollome, others found; fome hoe, others ag with infinite other differences. There are some windes which blow in certaine Regions and are rimage Las. as it were, Lords thereof, not admitting any entrie or communication of their contraries. In thewedwhence fome parts they blow in that fort, as fometimes they are Conquerors, fomtimes conquered : of men and beafts ten there are divers and contrarie windes, which dec minne together at one inftant, dividing the way betwixt them, fomtimes one blowing about of one fort, and another below of an other fort. fomtimes they incounter violently one with another, which puts them at Sea in great danger : there are fome windes which helpe to the generation of Creatures, and others that hinder and on of the worlds valuabi- are opposite. There is a certaine winde, of such a qualitie, as when it blowes in some Countrie. rablenefie be- it caufeth it to raine Fleas, and in fo great abundance, as they trouble and darken the aire, and co. 39 swint the Iro- uer all the Sea-shoare : and in other places it raines Frogs. These diversities and others which are fufficiently knowne, are commonly attributed to the place by the which thefe winder paffe. For they fay, that from thefe places they take their qualities to be cold, hoe, drie, or moift . fickly or found, and fo of the reft, the which is parely true, and cannot be denyed; for that in a small diflance you shall see in one winde many diversities. For example, the Solome or Easterne winde is commonly hot and troublefome in Spaine; and in Marria it is the cooleft and healthfulleft that is, for that it passeth by the Orchards , and that large champaine which wee fee very fresh. In Carthagene which is not farre from thence, the same winde is troublefome and viewhollome. The Meridionall (which they of the Ocean call South , and those of the Mediterranean Sea . Meze giorno) commonly is raynie and boy flerous, and in the fame Citie whereof I fpeake, it is whole. 40 tome and pleatant. Plane reports that in Africke it raines with a Northerne winde, and that the Southerne winde is cleere. He then that thall well confider what I have spoken of these windes. he may conceine, that in a small diffance of Land or Sea, one winds hath many and divers qualities, yea fometimes quite contraries, whereby weemay inferre, chachee draweth his propertie from the place where it passets, the which is in sightfort travelathough we may not say infallibly) as it is the onely and principall cause of the discrines of the winder. It is a thing we easily find, there and force that in a River contaying fiftie leagues in circuit (I put thus for an example) that the winde for many life; which blowes of the one part, is hot and moift; and that which blowes on the other, is cold and which makes me rather to say, that the windes bring these doubties with shem, whereby they give vnto them the names of their qualities. For example, we attribute to the Northerne winde other. wile called Cierco, the propertie to be cold and drie, and to diffolue mife; to the Southerne winde his contrarie, called Lessfebe, we attribute the contrarie qualitie, which is moift and hot, and ingenders milts. But it is needfull to feeke further, to know the true and originall cause of these so itranse differences which we fee in the windes. I cannot conceine any other, but that the fime efficient cause which bringeth forth and maketh the winds to grow, doth withall gine them this original qualitie: for in truth, the matter whereon the winds are made, which is no other thing (according to Arifold) but the exhelation of the interior Elements, may well cante in effect a (accepting to driftens 1940 tole Camerana of the marked line of the said more most. But yet this is popetainen reason, seeing einer greate eit ein one stegion, where the vapours and exhalations of the said was the said of the said was the said of TRACE and fort and qualitie, that there sife windes and effects quite contrarie. We must therefore

der to the Author himieste. Occasionally our poreschall clucidate those things also, which are in the Tent omitted. * Polent; as the Medical Real Res. Sulphurous earth whence are illustic. "Concrall winder, Montons, Winder receive their qualities from the places by which they palle.

referre the cause to the higher and celestiall Efficient, which must be the Sunne, and to the motion and influence of the Heauens, the which by their contraffe motions, give and caufe divers influences. But the beginnings of these motions and influences are so oblique and hidden from men, and on the other part, io mightie and of io great force, as the holy Prophet Desid in his propheticall Spirit, and the Prophet Lerenie auntiring the greatnesse or the Lord, speake thus. propue una profes ventes de the faurie fuie. Hee that drawes the windes out of his Treasures. In truth Pfaine 134. these principles and beginnings are rich and hidden treasures: for the Author of all things holds to the principles and beginnings are rich and hidden treasures: them in his hand, and in his power; and when it pleafeth him, fendeth them forth for the good or chaftilement of men, and fends forth such windes as he pleateth : not as that Eoles whom the 10 Poets doe foolishly feigne to have charge of the windes, keeping them in a Caue like vnto wilde beafts. We see not the beginning of these windes, neither doe we know how long they shall con-

tinue, or whither they shall goe. But wee see and know well the discrife effects and operations they have, even as the supreme Truth, the Author of all things hath taught vs , saying , Spriim whi walt first, & vocem eim andis, & neseie unde venst, ant quò vadit. It is true, that the Northerne winde is not viually cold and cleere there as here. In some parts

of Pern, as at Lima, and on the Playnes, they finde the Northerne windes troublefome and vnwhollome, and all along the Coast which runnes about fue hundred leagues, they hold the Southerne windes for healthfull and coole, and (which is more) most cleere and pleasant; yea it neuer raines, contrarie to that wee fee in Europe, and of this fide the Line. Yet that which chan- Heerabath 20 ceth vpon the coaft of Pers is no generall rule, but rather an exception, and a wonder of Nature, the wed the neuer to raine vpon that coaft, and ouer to have one winde, without gluing place to his contraneuer to rame voor the Hills to beet rie, whereof we will hereafter speake our minde. It is no generall rule there, that the Northerne cause of the winde is neither hot nor raynie there, as the South winde is on this fide; but contrariwife, it windes conminue is meaning to minde blowes there, as wee fee in all the Sierre or mountaine of Pers, flace, and in Chile, and in the Countrie of Cange, which is on the other fide of the Line, and farre advanced raines range. into the Sea. And in Posoza likewile, the winde which they call Tomahani (which is our North) if my memorie faile me not, is extremely cold, drie, and unpleafant, as it is here with vs. Yet

doth not the Northerne winde difperfe the cloudes viually there, as it doth here : but contrari-

wife, if I be not deceived, it doth often cause raine. There is no doubt, but the windes doe bor-30 row this great disertitie of contrarie effects, from the places by which they paste, and the neere Regions where they are bred, as wee fee by daily experience in a thousand places. But speaking in generall of the qualitie of the windes, we multrather looke to the cossts or parts of the World from whence they proceede, then to observe, whether they be on this side or beyond the Line, as it feemes the Philosopher held opinion. These capitall windes, which be the East and West, haue no fuch vanuerfall qualities, nor io common in this Continents, nor in the other, as the two for-mers. The Solum or Easterne winds, is commonly here trouble some and wawholsome, and the Westerne or Zephirm, is more milde and healthfull. At the Indies, and in all the burning Zone, the Easterne winde which they call Brife, is contrariwise very healthfull and pleasant. Of the West, I cannot speake any thing certaine or generall, for that it blowes not at all, or very seldom 40 in the burning Zone, for in all the naugation betwixt the two Tropicks, the Easterne winde is

mene ourning a contract and for that it is one of the admirable workes of Nature, it shall bee good to vinder twinthe Trofland the cause and the beginning thereof. The wayes at Sea are not as at Land, to returne the same way they passe. It is all one way That the bar-

The wayer at her are not to at Land, to returne use time way have passed at the noneway and (faith the Philosopher) from Athers to Tables, and from Tables to Athers; but it is not for a ming Zone, the for the recome way and returne have noteen. The first which discoursed the Fast and West. Only the form of the recommendation of Sea, for wee goe one way and returne by another. The first which discoursed the East and West feely windes, Indies, laboured much with great difficultie to finde out their course, wntill that Experience (the doc continual Mistrelle of these secrets) had taught them, that to faile through the Ocean, is not like the pas- ly blow, and Miftrelle of their tecrets; not tauget them, that to have through the Court, is not not use the parties of fige in helder, through the Mediterranean Sea, where in their teruter, chey obleme the lame Ports. Zone & Wegner and Capes they had fight of in their pallage, attending fill the benefit of the winde, which chan-firms, and that the court of the winde, which chan-firms, and that the court of the winde, which chan-firms, and that the court of the winde, which chan-firms, and that the court of the winde, which chan-firms, and that the court of the winde, which chan-firms, and that the court of the winde, which chan-firms, and the winder winder winder with the winder winde 50 geth infantly, and when that failes, they have recourie to their Oares; and to the Gallies goe the Essery and come daily, osafting along the shoare. In some parts of the Ocean, they may not looke for areordinarie any other winde then that which blowes, for that commonly it continues long. To conclude, alwayes there. that which is good to goe by, is not fit to returne with : for in the Sea beyond the Tropicke, and cospa that which is good to good, the Eafterly windes raine continually, not fuffering their contraries. in Decade 1. In the which Region there are two strange things, the one is, that in that Zone (being the great like, caps. teft of the fue, into the which the World is divided) the Eafterly windes (which they call Bri. They goe one (et) doe reigne, not fuffering the Welterne or Southerne (which they call lower winds) to have way to the intheir courfe at any feating the vertex the or southerne (winds they can nower winds) to have their courfe at any feating their courfe at any feating their courfe at their cou

60 should be more frequent, being a part of the World, most fubiest to the heat of the Sunne, but it is contrarie, for you shall hardly finde any Calmes there, and the winde is cold and continues longer, which hath beene found true in all the Nauigations of the Indies. This is the reason, why the voyage they make from Spaine to the West Indies is shorter, more easie, and more affured, then the returne to Spaine.

Gggg 3

The

The Fleetes parting from Simil, have more difficultie to passe the Canaries, for that the guite of Tegues or of Mares, is variable, being beaten with divers windes, but having passed the Care. ries, they faile with a Westerne winde vntill they come to the burning Zone, where presently they finde an Easterly winde, and so they faile on with full windes, so as they have scant any need to touch their failes in the whole voyage; for this reason they called this great gulfe, the gulfe of Dames, for the calmnesse and pleasantnesse thereof. Then following their course, they come to the llands of Gundelupe Dominique, Defired, (Marigualants, and the rest, which in that place, be as it were, the Suburbs of the Indies. There the Fleetes separate and divide themselves, whereof fome (which goe to new Spanse) take to the right hand towards Hilpaniela; and ha uing discouered Cape Saint Antony, they passe vnto Saint lobs Delus, alwayes vsing the same 10 Easterly windes. Those for the mayne Land, take the left hand, discouering the high mountaine of Tayrone, then having touched at Carthagene, they paffe ento Nombre de Dies, from whence they goe by Land to Panama, and from thence, by the South Sea to Peru. But when the fleetes returne to Spaine, they make their voyage in this fort : The fleete of Pern discouers Cape Saint Anthony, then they enter into the Hanana, which is a goodly Port in the Iland of Cuba. The fleet of new Spaine doth likewise touch at the Hanana, being parted from Vera Crist, or from the Iland of Saint Iohn Delma, the which is not without difficultie, for that commonly Easterly windes blow there, which is a contrarie winde to goe to the Hanana. These fleetes being joyned together for Spaine, they feeke their height without the Tropicks, where presently they finde Westerly windes, which serue them vntill they some in view of the Acores, or Terceres, and 20 from thence to Simil. So as their voyage in going, is of a small height, not about twentic degrees from the Line, which is within the Tropicks. But the returne is without the Tropicks, in eight and twentie or thirrie degrees of height at the leaft, for that within the Tropicks, the Easterna windes continually blow, the which are fitteft to goe from Spaine to the West Indies, for that their course is from East to West; and without the Tropicks (which is in three and twentie degrees of height) they finde Westerly windes, the which are the more certaine and ordinarie, the farther you are from the Line, and more fit to returne from the Indies; for that they are winder blowing from the South and West, which serve to runne into the East and North,

The like discourse is of the Naugation made into the South Sea, going from new Spaine or Tens, to the Philippines or China, and returning from the Philippines or China to new Spains, the 30 which is easie, for that they faile alwayes from East to West, neere the Line, where they finde the Easterly windes to blow in their Poope. In the yeere 1584, there went a thip from Calloa in Lima to the Philippines, which fayled two thousand and seven hundred leagues without fight of Land, and the first it discourred, was the Hand of Luffon, where they tooke Port, having performed their voyage in two moneths, without want of winde or any torment, and their course was almost continually under the Line; for that from Line (which is twelue degrees to the South) he came to Manilla, which is as much to the North. The like good fortune had Aluaro de Mandana, when as he went to discouer the Hands of Solomon, for that he had alwayes a full gale, vntill he came within view of these Ilands, the which must bee distant from that place of Pers, from whence hee parted, about a thousand leagues, having runne their course alwayes in one 40 height to the South. The returne is like vnto the voyage from the Indies vnto Spaine : for those which returne from the Philippines or Ching to Mexico, to the end they may recouer the western windes, they mount a great height, vntill they come right against the Ilands of Iapon, and discouering the Caliphornes, they returne by the coast of new Spaine to the Port of Acapulce, from whence they parted. So as it is proued likewise by this Nauigation, that they faile easily from East to Welt, within the Tropicks, for that their Basterly windes doe raine : but returning from West to East, they must feeke the Westerne windes without the Tropicks, in the height of feuen and twentie degrees. The Portugals proue the like in their Nauigations to the East Indies, although it be in a contrarie courfe.

Cause of the

Let vs now speake of that which toucheth the Question propounded, what should be the rea- 50 fon why voder the burning Zone we faile eafily from East to West, and not contrarie : wherein we must presuppose two certaine grounds. The one is, that the motion of the first Moouer, which they call Dinmall, not onely drawes and moones with him the celeftiall Spheares, which are inferiour vitto him , as wee fee daily in the Sunne, the Moone , and the Starres ; but also the Elements doe participate of this motion, insomuch as they are not hindered. The Earth is not mooued, by reason of her heauinesse, which makes it immoueable, being farre from this first motor. The Element of water moones not likewife with this Diurnall motion, for that it is united to the Earth and make one fpheare, fo as the Earth keeps it from all circular motion. But the other two Elements of Fire and Aire, are more subtill and neerer the heavenly Regions, to as the other two exements of the arrival of the participate of their motion, and are driven about encularly, as the fame celeftial bodies. As for the Fire, without doubt it hath his spheare (as Aristotle and other Philosophers have held) but for the Aire (which is no point of our fubiect) it is most certaine that it moones with a motion Diarnall, which is from East to Welt, which wee see plainly in Comets that moone from the East vnto the West, mounting, descending, and finally turning in the hemispheare in the

fime fort as the Starres move in the firmament; for otherwise these Comets being in the region and sphere of the ayre, whereas they ingender, appeares consum'd. It should be impossible for them to moue circularly, as they doe, if the element of the aire doth not moue with the same motion that the first motor doth. For theie elements being of a burning substance, by reason they fhould be fixt, without mouing circularly, if the fphere where they are did not moue; if it be not as we faine, that some Angell or intellectuall Spirit doth walke with the Comet, guiding it circularly. In the years 1577 appeared that wonderfull Comet (in forme like vnto a teather) from The Comet the horizon almost to the middest of heaven, and continued from the first of November, vntill 1577. seene the eight of December: I say from the first of Nouember, for although in Spaine it was noated eight dayer but the ninth of November (according to the testimonie of Writers of that time) yet at Pern, where I was then, I remember well, we did fee it, and observe it eight dayes before, and all the time after. Touching the cause of this divertitie, some may delate vpon it particularly: I will onely flew, that during those fortie dayes which it continued, wee all observed (both such as were in Spaine, and we that lived then at the Indies) that it moved daily with an vniverfall motion, from East to West, as the Moone and other Planets, whereby it appeares that the sphere of the aire, being its Region, the element it selfe must of necessitie moue after the same fort. We noted alfo, that besides this vniueriall motion, it had another particular, by which it moued with the planets from West to East, for every night it turned more Eastward, like voto the Moone, Sunne, and Planets of Venus. We did also observe a third particular motion, whereby it moued 20 from the Zodiacke towards the North; for after some nights it was found never vito the Seprentrionall fignes. And it may be this was the reason why the great Comet was sooner feene by those that were Southerly, as at Pern, and later discovered by them of Enrope: for by this third motion (as I haue faid)it approached neerer the Northerne Regions. Yet every one may well obferue the differences of this motion, lo as we may well perceive, that many and fundry celefish hodies, give their impressions to the sphere of the ayre. In like fort it is most certaine, that the avre moues with the circular motion of the heaven, from East to West, which is the first ground before mentioned. The second is no lesse certaine, which is, that the motion of the avre in those

20 parts that are vnder the Line, or neere vnto it, is very swift and light, the more it approacheth to the Equinochiall; but the farther off it is from the Line, approaching neers the Poles, the more flow and heavis this motion is. The reason hereof is manifest, for that the mouing of the celeftiall bodies, being the efficient cause of the mouing of the ayre, it must of necessitie be mote quicke and light, where the celeftiall bodies have their fwiftest motion.

Alongo Sanches was of opinion that this motion of the ayre was not a winde, but the ayre moued by the Sunne. This is learnedly fpoken, yet san wee not deny it to be a winde, feeting the Brize for there are vapours and extalations of the Sea; and that we forcetimes fee the Brife, or Eafterly motion of the windes itronger, fometimes more weake, and placed in that fort, as fometimes shey can hardly air minite carry all their layles. We must then know (and it isters) that the agree moved, drawten vnto it heavens) is a the vapours it findes, for that the force is great, and findes no refiftance, by reafon whereof the winde. Eafterne and Westerne windes are continual, and in a manner alwayes alike, in those parts which 40 are neere the Line, and almost vader all the burning Zone, which is the course the Sun followes

betwixt the two circles of Cancer and Capricorne. who fo would neerely looke into what hath bin spoken, may likewife whiderstand, that going why without the come in a from the West to the East, in altitude beyond the Tropikes, we shall finde Westerne windes. for from the West to the East, in attitude beyond the Tropines, we man-ninde Westerne windes, for granter alti-that the motion of the Equinoctiall being so swift, it is a cause that the ayre moueth whiler it made we find according to this motion, which is from the East to West, drawing after it the vapours and alequies Weexhalations that rife of either fide the EquinoCtiall or burning Zone, incountring the course and first winders motion of the Zone, are forced by the repercusion to returne almost to the contrary, whence grow the South-west windes so ordinary in those parts. Euen as we see in the course of waters, the which if they be incountred by others of more force) returne in a manner backe: So it feemes to be like in vapours and exhalations, whereby it growes that the windes doe turne and fepa-

rate themselues from one part to another. These Westerly windes doe commonly raine in a meane altitude, which is from twenty and leuen to thirty and feuen degrees, though they be not fo certaine nor foregular as the Brifes that are in a leffe altitude. The reason is, for that the South-west winds are no causes of this proper and equal motion of the heaven, as the Brifes are, being neere to the Line. But (as I have faid) they are more ordinary, and often more furious and tempeftuous. But paffing into a greater altitude, as of fortie degrees, there is as small affurance of Ofthe excepwindes at Sea as at Land; for sometimes the East or North winde blowes, and sometimes the tions to the South, or Welt: whereby it happeneth their nauigations are more vacertaine, and more forefaid Rules

That which we have spoken of windes, which blow ordinarily within and without the Zone, and calmes both at Land must be understood of the maine Sea, and in the great gulphes; for at land it is otherwise, where and at Sea. we finde all forts of windes, by reason of the inequalitie which is betwixt the Mountaines and Chap. 8. the vallies; the great number of Rivers and Lakes, and the divers frituations of Countries, Caulcof the the vallies; the great number of Rivers and Lakes, and the unters letter lines of Countries,
whence the groffe and chick vapours arife, which are moved from the one part or the other, acwinders.

cording to the diversitie of their beginnings, which cause these divers windes the motion of the

ayre, caused by the heauen, hauing not power enough to draw and moue them with it. And

this varietie of windes is not onely found at land, but also youn the Sea coast, which is under the burning Zone, for that there be forraine or land windes which come from the land, and many which blow from the Sea; the which windes from the Sea, are commonly more wholesome and more pleafant then those of the land, which are contrariwise troublesome and vnwholesome. although it be the difference of the coast that causeth this diversitie : commonly the land winder blow from mid-night to the Sunne rifing, and the Sea windes votill Sunne fetting. The reason perhaps may be, that the earth, as a groffe substance, fumes more when as the Sunne shines not vpon it, euen as greene wood, or scarfe dry, smoakes most when the slame is quenched. But the Sea, which is compounded of more subtile parts, engenders no sumes, but when it is hot, euen as straw or haie, being moist and in small quantitie, breedes smoake when it is burnt, and when the flame failes, the fume fuddenly cealeth, Whatfoeuer it be, it is certaine that the Land winde blowes by night, and that of the Sea by day. So that even as there are often contrary, violent, and tempethous windes vpon the Sea coaft, fo doe we fee very great calmes. Some men of great experience report, that having failed many great passages at Sea under the Line, yet did they never fee any calmes, but that they alwayes make way little or much, the ayre being moued by the celefiall motion, which is sufficient to guide a Shippe, blowing in poope, as it doth. I have already said, that a Shippe of Limagoing to Marilla, sailed two thousand seven hundred leagues, alwayes vnder the Line, or not about twelue degrees from it, and that in the moneths of February and March, when as the Sunne is there for Zenith, and in all this space they 20 found no calmes, but alwayes a fresh gale, so as in two moneths they performed this great voyage. But in the burning Zone and without it, you shall viually see great calmes voon the coasts. where the vapours come from the Ilands, or maine land. And therefore stormes and tempests. and the fudden motions of the ayre, are more certaine and ordinary upon the coasts, whereas the vapours come from the Land, then in full Sea, I meane vnder the burning Zone, for without it and at Sea, there are both calmes and whirlewindes. Notwithstanding, sometimes betwixt the two Tropickes, yea, under the Line, you shall have great raine and sudden showers, yea farre into the Sea; for the working whereof, the vapours and exhalations of the Sea, are fufficient, which moving fometimeshaftily in the ayre, cause thunder and whirlewindes, but 30 this is more ordinary neere to the Land and vpon the Land. When I failed from Pers to new Spaine, I observed, that all the time we were voon the coast of Peru, our voyage was (as it was ordinary) very calme and easie, by reason of the Southerne winde that blowes, having alwayes a fore winde, returning from Spaine and new Spaine. As we passed the gulph, lanching farther

into the Sea, almost wader the Line, wee found the featon coole, quiet, and pleafant, with a full winds, but comming neere to Niteragua, and to all that cost, wee had contary winds, with great flore of raine and fogges. All this Naiigation was vader the burning Zone: for from twellow degrees to the South, which a Lima, we failed to the featurenth, which is Can-

takeo, a port of new Spaine; and I believe, that fuch as have observed their navigations, made vnder the burning Zone, shall finde what I have faid, which may suffice for the windes which raigne 40

nellous effects of the winder, which are in (bap.9. Silkewormes killed wich Zeb 17. Ofte 12. Dan.3. The like Linfueth in the

at Sea, vnder the burning Zone.

Sea fickneffe

It were a very difficult matter, to report particularly the admirable effects which some windes cause in divers regions of the world, and to give a reason thereof. There are windes, which naturally trouble the water of the Sea, and makes it greene and blacke, others cleere as Christall, fome comfort and make glad, others trouble and breede heauinesse. Such as nourish Silke-wormes, have great care to flut their windowes, when as the South-west windes doe blow, and to open them to the contrary : having found by certaine experience, that their wormes diminish and dye with the one, and fatten and become better with the other ; and who so will neerely obferue it, shall finde in himselfe, that the diversities of windes, cause notable impressions and changes in the body, principally in ficke parts and ill disposed, when they are most tender and 50 Exac. 10.0 14. weake. The holy Scripture calleth one aburning winde, another, a winde full of dewe and fweetneffe. And it is no wonder if we lee fuch norable effects of the winde, in Plants, Beafts, and Men, feeing that we fee it visibly in Iron, which is the hardest of all mettals. I have feene Grates of Iron in some parts of the Indies , so rusted and consumed , that pressing it betwixt your fingers, it dissolved into powder, as if it had beene hay or parched itraw, the which proceedes onely from the winde which doth corrupt it, having no meanes to withstand it, But leauing apart many other great and notable effects, I will onely make mention of two. The one, although it caufeth pangs greater then death it felfe, yet doth it not breede any further inconuenience. The other takes away life without feeling of it. The ficknesse of the Sea, wherewith fuch are troubled as first begin to goe to Sea, is a matter very ordinary; and yet if the nature 60 thereof were vnknowne to men, we should take it for the pangs of death, seeing how it afflicts and torments while it doth last, by the casting of the stomacke, paine of the head, and other Agitation and troublefone accidents. But in truth this fekneffe fo common and ordinary happens vinto menby the change of the second sec the change of the ayre and Sea. For although it be true that the motion of the Ship helprs much,

in that it mous more or lefte and likewife the infections and ill favours of things in the Shiptvet the proper and naturall cause, is the agree and the vapours of the Sea, the which doth to weaken and trouble she body and the fromacke, which are not accultomed thereunto, that they are wonand trouved and changed : for the ayre is the Element, by which we line and breath, drawing it into our entrailes, sho which we bathe therewithall. And therefore there is nothing that fo fuddenly, and with fo great force doth alter vs, as the change of the ayre we breathe, as we fo luddenty, and with a great rores upon a nervy, as the stange of the syste we breath, as we fee in their which shy so if the plages. It is approaced by many expertences, that the syre of the see, is the chiefe cause of this frames indisposition; the one is, that which there blowes from see, is the chiefe cause of this frames indisposition; the one is, that when there blowes from Sea, is the control cause of thus strange mon pointion; one one is, that when there blowes from the Sea saftening breath; we fee them at the Land as it wire Sea-Ricke; as I my (lifte hade often to found. Another is, the farther wee goe into the Sea; and frety is from Liand., the labels were ate tound, answere in the state of motion and agitation may case this fick neffe, feeing that we fee Tome are rates there with passing mount management on the fore going in Coucher and Carolches, according to the dustre complexions of the Scenarius as conference in the fore going in Couche and Carolches, according to the dustre complexions of the Scenarius as conference in the complexions of the Scenarius as conference in the part and trouble lines. focurt the Sta be, doe neuer feele it. Wherefore it is a matter certaine, and tried, that the ayre of the Sea, doth commonly table this effect in fach as newly goe to Sea, I thought good to speake or the sea, soon common which happens in the many goe to sea, a congress to speak this, to thew a frange effect, which happens in fome prixed to it fallow; where the syste and the this, to thew a frange effect, which happens in fome prixed to it fallow; where the syste and the this, to thew a frange grant maker arm dazle, not leffe, but more then at Sea. Some holdie for a fable, co-wind that many maker arm dazle, not leffe, but more then at Sea. Some holdie for a fable, co-wind that the state of the state o

wante trase earge managements of the management of the state of the st alteration itbred, I were as well prepared as I could, according to the influctions which was on at Perisaga atteration scores, a west as were prepared as exonon according to the introduction works was a strending guerne, by fuch as they call Veguiness, for expert men; but nowing thinking all my promise you are one, when I aim so mountain degrees, as they called them; which is the top of this mountaine, there, on, when I came to mount me seryers, as early caused users, which is the top or can mentionate I was fulfield by furracted with 10 mortals and to firring a pang, that I was ready to fall from the top to the ground: and alchough we were many in company, yet carry one made hafte (without any tarrying for his companion), to free friendlife speedily from this ill passage, Being then alone any tarrying for his companion, no feet himlesse specially from this ill passage. Being then alone with one land an, whom I increased to shelpe to say she; I was surprized with such passage is straight in a case of the passage of the ining ard catting, as I change to cast why she being too so the passage of the ining ard catting, as I change to cast why she being to consider the same of the straight of the straight of the same of the

ooth not more act harmo, enery this, paine and troubletions diffialls while it endures? And not only the passage of Partners hat this propertie, but side if this ridge of the Monitariate, which only the passage of the Monitariate, which have been seen to be made of the count of the Monitariate of the Monitariate of the more than the passage of the more passage of the Monitarian passage of the Monitarian passage of the Monitarian passage of the more passage of the Monitarian passage ming, and alwayes in this passage I have felt this alteration, although in no place to strongly, as at the first in Fariacaca, which hath beene tried by all such as have passed it. And no doubt but the winde is the cause of this intemperature and firange alteration, or the ayre that raignes there. winde is the cause of this intemperature and tringge interaction, or the systems raighter torter. For the best remedy (and all they findle) is to froppe their softs, their earre, and that mounter, so much as much as may be, and to couer themselves with distinct, especially the stomacke, for that the

ayre is fubtile and piercing; going mee the entraites, and not onely men feele this alteration, but ayre is subtile and piercess; Bong into us clustering and the property under ever under extending you go also beafts that sometimes thay there, so a there is no spurre can pake them go for overal. For my go also beafts that sometimes that there is no spurre can pake them go for overal. For my go also beafts that sometimes are not a sound in my do into the sound in that space and many houses, in regard of hie Towers. I cherefere personale my felfe, that the save working Halis, are as ordinary houses, in regars or me a owers: I uncrease personance any tents, and the house of chains became of the syric in these for identiciand delicated, as it is not proportionable with the house of what became of the syric in the form of the syric in the form of the syric in the syric i thing of man, which requires a more grow and emphase ayer, and a better a boundary that the shows that do to be made, and other of Emph, which I have read growing already parties of the more the water with since Nomade, and other of Emph, which I have read growing already in the year of the more than the same of the beines (Venues, and octor) or Lawrey, which a rule retent, among neaver or count, igness, and their fence of doth front men to wear-front electric solds doth nor tike away the appeting, from make is made meate, but contravius it is prounter; pittifier doth it can any calling of the frontacks, but copy, gotter of the contravius it is prounter; pittifier doth it can be not called the contravius of the contr

the enerales within : and that which is more admirable, when the Sunne is hot, which maketh me imagine, that the griefe wee feele comes from the qualitie of the ayre. Which wee breathe : Therefore that is most subtile and delicate, whose cold is not fo sensible, as pieroing. All this

ridge of mountaines is, for the most part, defart, without any Villages or habitations for men. for as you hall karce finde any small Corrages to lodge such as doe pass by night : there are no Beafts, good or bad, but fome Vicuses, which are their Countrie Muctons; and haue a firange and wonderfull property, as I thall thew in his place. The Graffe is often burne, and all blacks with Great Defirte the ayre, and this Defare runs five and twenty or thirty leagues overthwart, and in length above

Punas avre kil.ing.

There are other Defarts or places inhabited, which at Peru they call Puna (Speaking of the second point we promised) where the qualitie of the ayre cutteth off mans life without feeling. In former time the Spaniards went from Pern, to the Realme of Chile by this Mountaine. but at this day, they doe passe commonly by Sea, and sometimes along it the fide of it. And though of that way he laborious and troublefome, yet is there not fo great danger as by the Mountaine, where there are Plaines, on the which many men has perified and dyrd, and formitimes hast scaped by great hap, whereof some have remained lame. There runs a small breath, which is not very firong por violent, but proceeds in fach fort, that men fall downedead, in a manner without feeling, or at the least, they toofe their feete and bands : the which may feeme fabulous , vet Strange Story, is it most true. I have knowne and frequente d long the Generall Iarme Coffile, the auricient peopler of Unfee, which had loft if ree or foure toes, which fell off in pating the Defart of Chile, being perilbed with this agre, and when he came to looke on them, they were dead, and fell off without any paine, euen as a rotten Apple falleth from she tree. This Captaine reported , that of a good armie which he had conducted by that place, in the former yeares, fince the difcoueof a good arms which he had conducted by that place, 10, the former yeares, fince the discounyeares, of this Kingdome by Almagre, a greet part of the more remained deather; whose bodies
he found lying in the Defart, without any limits or corruptions adding thereunco one thing year
a day by throngs, that they found a yong Boye alms, and being examined how the had lined in the
place; her fail, that he lay hidden in a king flows, whence her came to cut the felth of a dead
Horie with a little Knife, and thus find he nounthed himslelfe a long time, with I know not how incre with a little Knife, and thus had he acquired high close the came to cut the field of a deal little with a little Knife, and thus had he acquired highest along time, with know not how many groups among the third of the control of the contro

mong all waters the Ocean is the principall, by which the lader have beene discous-ted, and are injureded therewith, for either they be Hands of the Ocean Segor maine Lind, the which wherelocust it ends, is bounded with this Ocean. To this day they Haue not discouered at the Indees any Mediterranean Sea, as in Europe, Afia, and Affrica, names from the recommendation and applications of the state of the sta ters alone into the Indian Ocean; and the Caspian Sealoynes not with any other: to that at the latter we finde not any other Sea then this Ocean, which they divide into two, the one 60 they call the North Sea, and the other the South; for that the Indies which were first discovered

by the Ocean, and reacheth vinco Spaine, lies all to the North, and by that Land thereafter difcourred a Sea on the other lide, the which they called the South Sea , for that they decline vntill they have passed the Line : and having loft the North, or Pole-articke, they called it South. CHAP.2. S.2 Supposed Streights to the South Sea. Ebbing and flowing of the Sea. 020

For this cause they have called all that Ocean the South Sea, which lyeth on the other lide of the East Indies, although a great part of it be feated to the North, as all the coast of new Source. Newsanns, Guatumala and Panama. They fay! that he that first discourred this Sea. was called Billionness of Bills, the which hedd by this part which we now call Maine Land, where it Tora pine, growes narrow, and the two Seds approach is never the one to the other, that there is but femel leagues of distance from Kindingh they misk the the way Seds approach is never the one to the other, that there is but femel leagues of distance from Kindingh they misk the the way eighteene from Nowber de Duit to Pas Smightofland nen reagues of durance rior archough they make the way tighteen the way but drawing a direct line, the but cight leage one Sea thall not be found more diffant from the other. Some have discourfed and propounded & South Seasto cut through this peffage of fluen leagues, and to inyne one Sea to the other, to make the paf-

To fage from Pers more commodious and eafle, for that thefe eighteene leagues of Land betwiret Numbre de Disc and Poissess, in more paintefull and chargeable then 2300; by Sea, whereupon fome would fav. it were a meaner to drowne the Land, one Sea being lower then another. As Hendelm in times past we finde it written, that for the fame confideration, they gave over the enterprize to winne the red Sea into Nile, in the time of King Seloffre, and fince, in the Empire of the Oshousers. But for my part, I hold fuch diffcouries and proportions for vaine, although this mccin-lenism, uninence should not happen, the which I will not hold for affored. I believe there is no huministic powerable to beate, and breake downe those strong and impenetrable Mountaines, which God hath placed betwire the two Seas, and hath made them most hard Rockes, to withstand the furie of two Seas. And although it were possible to men, yet in my opinion they should feare 22 punishment from heaven, in feeking to correct the workes, which the Creator by his great pro-

uidence hath ordained and disposed in the framing of this vinuerfall world.

Leauing this discourse of opening the Land, and ionning both Seas together, there is yet another less rain, but very dissent and dangerous to search out. Whether these two great gulfes doe joyne in any other part of the world, which was the enterprize of Fernando Magellan a Portugall Gentleman, whole great courage and constancie in the research of this subject, and happy fuccesse in the finding thereof, gave the name of eternall memory to this straight, which builty they call by the name of the disconerer Magellan, of which straight we will intreate a little, asof one of the greatest wonders of the world. Some have believed, that this Straight which Marellan had discoursed in the South Sea, was none, or that it was straightned, as Don 20 Alonfo d'Arfile writes in his Amacane: and at this day there are some that fay, there is no such Experience for

Straight, but that they are llands betwint the Sea and Land, for that the maine Land ends Drakes and straight, dut the end whereof are all flands, beyond the which the one Sea loynes fully with the Maint voyage there, at the end whereof are all flands, beyond the which the one Sea loynes fully with the Maint voyage other, or to speake better, it is all one Sea. But in truth it is most certaine, there is a straight them no. and a long and ftretched out Land on either fide, although it hath not yet beene knowne how ftraights but farre it stretcheth of the one side of the straight towards the South. After Magellan, a Shippe of broken Hands the Bilhop of Plaisance passed the Straight, Don Guitteres Carnaial (whose Maste they say is yet to the South, at Lima, at the entrie of the Pallace) they went afterwards coasting along the South, to dilco. contrary to uer the Straight, by the commandement of Don Garcia of Mendoca, then Gouernor of Chille, here, according to that which Captaine Ladrillero found it and passed it. I have read the discourse and 40 report he made, where he faieth, that he did not hazard himselfe to land in the Straight . but

haning discourred the North Sea, he returned backe, for the roughnesse of the time, winter being now come, which caused the waves comming from the North, to grow great and swelling, Secos this Sir and the Sea continually forming with rage. In our time, Francis Drake an Englishman , passed Francis Drakes his Straight. After him, Captaine Samiente paffed it on the South fide. And laftly, in the yeere Voyage. 1s. 1887. other Englishmen paffed it, by the instruction of Drake, which at this time run along all ted Saminates the coast of Pers.

Euen as Magellan found out this Straight vpon the South, fo fome have pretended to difco- The supposed uer another Straight, which they say is in the North, and suppose it to be in Florida, whose coast Straight in runnes in such fort, as they know no end thereof. Peter Melendez the Adelantade, a man very Florida.

expert at Sea, affirmeth for certaine, that there is a Straight, and that the King had commanded him to discouer it, where in he shewed a great defire: he propounded his reasons to proue his and flowing of opinion, faying, that they have feene fome remainders of Ships in the North Sea, like vitto those the Indian O. the which the Chinois vie, which had beene impossible, if there were no passage from one Sea cean. Chap. 14. vnto another. Moreouer, hee reported, that in a certaine great Bay in Florida (the which runs The Philoso-300. leagues within the Land) they see Whales in some season of the yeare, which come from ing the cause

One of the most admirable secrets of Nature is the ebbing and flowing of the Sea, not onely for flowing haue this strange property of rising and falling, but much more for the difference there is thereof in easily erred. this strange property of ribing and rating, but much more for the united to the diuers Seas, year in diuers coasts of one and the same Sea. There are some Seas that have no daily following the diuers Seas, year in diuers coasts of one and the same Seas. 60 flowing norebbing, as we fee in the inner Mediterranean, which is the Thyrene Sea, and vet it flowes and ebbes every day in the vpper Mediterranean Sea, which is that of Venice, and inftly knew not the giveth cause of admiration, that these two Seas being Mediterranean, and that of Venice being Ocean, and no greater then the other, yet hath it his ebbing and flowing as the Ocean, and that other Sea could not therof Italie none at all. There are some Mediterranean Seas, that apparantly rise and fall enery fore know the

moneth, and others that neither rife in the day, nor in the moneth. There are other Seas at the Spanife Ocean, that have their flux and reflux every day; and besides that, they have it more nethly, which commeth twice, that is to fay, at the change, and at the full of enery Moone, which they call Spring-tides. To fay that any Sea hath this daily ebbing and flowing, and not monethly, I know not any. It is strange, the difference we finde of this subject at the Indian for there are some places whereas the Sea doth daily rise and fall two leagues, as at Personal and at a high water it rifeth much more. There are other places where it doth rife and fallefo little, that hardly can you finde the difference. It is ordinary in the Ocean Sea to have a daily flowing and ebbing, and that was twice in a naturall day, and ever it fals three quarters of an houre fooner one day then another, according to the course of the Moone : so as the tide fals not 19 alwaies in one houre of the day. Some would fay, that this flux and reflux proceeded from the locall motion of the water of the Sea; to as the water that rifeth on the one fide, fals on the other that is opposite vinto it : fo that it is full Sea on the one fide when it is a low water on the opposite, as we see in a Kettle full of water, when we mooue it, when it leanes to the one side the water increaseth, and on the other it diminisheth. Others affirme, that the Sea riseth in all parts at one time, and decreaseth at one instant : as the boyling of a Pot, comming our of the centre it extendeth it felfe on all parts, and when it ceafeth, it fals likewife on This second opinion is true, and in my judgement, certains and tried, not so much for the

reasons which the Philosophers give in their Meteors, as for the certaint experience wee may

He answered that it was not so, but they might see plainely, that the tides of the North and

South Seas rife at one instant, so as the waves of one Sea incountred with the other, and at one

instant likewise they began to retire, every one into his Sea, saying, that the rising and falling

was daily feene, and that the incounter of the tides (as I have faid) was at threefcore and tenne

waters really rife and increase at one instant, and in others, they diminish, as the boyling of a Pot, whereof I have spoken. It were impossible to comprehend this point by experience, if it were

make. For to fatisfie my felfe vpon this point and question, I demanded particularly of the 20

* Hernands A. faid Pilot, how he found the tides in the straight, and if the tides of the South Sea did fall lone which when as those of the North did rife. And contrariwise (this queffion being true) why the inwith Sarmiente crease of the Sea in one place, is the decrease thereof in another, as the first opinion holdeth. had cone to the Straights to feeke Captaine Drage.

At the Downes leagues to the North Sea, and thirtie to the South. Whereby we may plainely gather, that the ebbing and flowing of the Ocean is no pure locall motion, but rather an alteration : whereby all 20 not in the Straight, where all the Ocean both on th'one fide, and on th'other iownes together: other from the for none but Angels can fee it, and judge of the opposite parts: for that man hath not so long a fight, nor so nimble and swift footing as were needefull, to transport his eyes from much varietie.

Of fundry F thers, and -beir manner of fifthing at the

The Manatia ftrange fift. The Whales alfobring farre leffe then foode is also

one part to another, in fo short a time, as a tide will giue him respite, which are onely fix houres. There are in the Indian Ocean, an infinite number of fishes, the kindes and properties whereof the Creator onely can declare. There are many fuch as we have in the Sea of Europe, as Shads, and Alofes which come from the Sea into the Rivers; Dorads, Pilchards, and many other, There 40 are others, the like I doe not thinke to have feene in these parts, as those which they doe call Cabrillas, which doe somewhat refemble the Trowt, and in new Spaine they call them Bobos, they mount from the Sea into the Rivers. I have not feene any Befugues there, nor Trowts, although fome fay there are in Chille. There are Tonins in some parts upon the coast of Peru, but they are rare, and some are of opinion, that at a certaine time they doe cast their spawne in the Straight of Magellan, as they doe in Spaine at the Straight of Gibraltar, and for this reason they finde more voon the coalt of (bille, although those I have seene there, are not like to them in Spaine. At the Ilands (which they call Barlonente) which are Cuba, Saint Dominicke, Port rique, and Ismaique, they finde a fish which they call Manati, a strange kinde of fish, if we may call it fift, a creature which ingenders her yong ones aline, and hath teates, and doth nourish 50 them with milke, feeding of graffe in the fields, but in effect it lines continually in the water, yong alue, and and therefore they eate it as fish; yet when I did eate of it at Saint Dominique on a friday, I had some scruple, not for that which is spoken, but for that in colour and taste it was like vnto morfels of Veale, so is it greene, and like vnto a Cowe on the hinder parts. I did wonder at the that huge creating creating of the Tiburons, or sharkes, when as I did see drawne from one (that was taken in the Port) out of his gullet, a Butchers great Knife, a great Iron hooke, and a piece of a Cowes head with one whole horne, neither doe I know if both were there, or no. I did fee in a creeke made with that Sea, a quareer of a horse for pleasure hanging vpon a stake, whither presently came a company of these Tiburens, at the smell thereof: and for the more plealure, this Horse-flesh was hung in the ayre, I know not how many hand breadth from the wa-60 women. Their ter; this company of fifth flocke about it, leaping vp, and with a strange nimble nesse cut off both fleth and bone off the Horse legge, as if it had beene the stalke of a lettuce; their teeth being 28 sharpe as a rasour. There are certaine small fishesthey call Ramber, which cleave to these Tiber ross, neither can they drive them away, and they are fed with that which falles from the

C. H. A. P. 2. S. 2. Flying fishes. Crocodiles. Whale how taken. Indian fishing.

Thursens. There are other small fishes, which they call flying fishes, the which are found within They have the tropickes, and in no other place, as I thinke: they are purfued by the Ducader; and to escape the tropicaes, and in flowers process a good way in the ayre, and for this reason they are called whereby they flying Fifter : they have wings as it were of linnen cloath, or of parchment, which doe support cleave and fixing Fifter: they have wings as it were of interferences of the Ship wherein I went, the which ficke faft to the Ship wherein I went, the which the ship was the ship wherein I went, the ship was the ship wherein I went, the ship wherein I went, the ship was the I did fee, and observe the fashion of his wings.

In the Indian Histories there is often mention made of Lezards or Caymans (as they call them) and they are the very fame which Plinie and the Auncients call Crocodiles, they finde them on them with their the Sea fide, and in hot Rivers, for in cold Rivers there are none to be found. And therefore they fwift motion to finde none voon all the coasts of Pers unto Payra, but forward they are commonly seene in the of whose offall finde none vpon all the coalts of Peru vnto Peru, but forward they are commonly tente in and allo they live.
Rivers, It is a most fierce and cruel beast, although it be flow and heavie. Hee goes hunting and Crocodiles. feekes his prey on the Land, and what he takes aline, he drownes it in the water, yet dothlie not *Yerfo as ener ete it, but out of the water, for that his throate is of fuch a fashion, as if there entred any was and anon hee ter, he should easily be drowned. It is a wonderfull thing to see a combat betwixt a Caymant dipsit in the and a Tigre, whereof there are most cruell at the Indies. A religious man of our company told water his and a Tigre, whereof there are most cruelt at the indies. A rengious man or our company tool on successful me that he had seene these beafts fight most cruelly one against the other; whom the Sea shoare the so short the sea shoare the season of the seaso me mar ne man seme unen o cana ngenoment cuary our egant un originary, postume seme la face, that Caymant with his taile gaue great blower voto the Tygre, firtuing with his great force to cattry o heavisk behin into the water; and the Tigre with his pawei refulted the Caymant, drawing him to Land, could not feel him into the water; and the Tigre with his pawei refulted the Caymant, drawing him to Land, In the end the Tigre vanquished, and opened the Lezard, it seemes by the belly, the which is most lowit. 20 tender and penetrable, for in every other part he is so hard, that no Lance, and scarce a harquebuze Tigre hils a can pierce it. The victory which an Indian had of a Caymant was yet more rare : the Caymant had carried away his yong childe, and sodainely plunged into the Sea, the Indian moved with choller, cast himselfe after him, with a knife in his hand, and as they are excellent swimmers and divers, and the Caymant swimmeth alwayes on the toppe of the water, hee hurt him in

and cluers, and the Caymant feeling himselfe wounded, went to the shoare, leaon a Ctocodile
on a Ctocodile uing the little infant dead. But the combat which the Indians have with Whales is yet more admirable, wherein appeares

the power and greatnesse of the Creator, to give so base a Nation (as be the Indiana) the industrie and courage to incounter the most fierce and deformed beaft in the world, and not onely to fight 30 with him, but also to vanquish him, and not to triumph ouer him! Confidering this, I have often with numbur and to vandamin min, and as one of the While, Drawife quem formali ad illuden-remembred that place of the Palmes, freaking of the While, Drawife quem formali ad illuden-damenms. What greater mockerie can there be, then to fee in Indian leade a Whale as bigge as a Whale killed Mountaine, vanquished with a cord . The manner the Tabiliar of Flivida vie (as some expert men by the Sauges have told me) to take these Whales (whereof there is great flore) is, they put themselves into a Cance, which is like a barke of a tree, and in fivinming approach neere the Whales fide, "then with great dexteritie they leape to his necke, and there they ride as on horfe-back expecting his time, then he thrufts a sharpe and stong flake (which he carries with him) into the Whales noftrill, for fo they call the hole or vent by which they breathe, prefently he beates it in with another stake as forcibly as he can; in the meane space the Whale doth furiously beate the Sea, and ment for this trouble, hee beates another flake into the other vent or nofthrill, fo as he stoppeth him quite, and takes away his breathing, then he betakes him to his Canoe, which he holds tied with a cord to the Whales fide, and goes to Land, having first tied his cord to the Whale, the

40 raifeth Mountaines of water, running into the deepe with great violence, and sprefently rifeth agains, not knowing what to doe for pains: the Indian fill firs firme, and to give him full paints. which he lets run with the Whale, who leapes from place to place, whileft he finds water enough; being troubled with paine, in the end he comes neere the Land, and remaines on ground by the hugenesse of his body, viable any more to moue; then a great number of Indians come vito the Conquerour, to gather his spoiles, they kill him, and cut his flesh in peeces, the which is bad enough : this doe they dry and beate into powder, vling it for meate, it doth last them long : wherein is fulfilled, that which is spoken in another Plalme of the Whale, Dedifti eum efcam pos pulis Athiopum, Peter Mendez the Adelantade did often ipeake of this kinde of fishing. Whereof Monardes makes mention in his Booke.

There is another fishing which the Indians doe commonly vie in the Sea, the which, although it beleffe, yet is it worthy the report. They make as it were faggots of bul-rushes or dry fedges well bound together, which they call Balfas: having carried them voon their shoulders to the Sea, they cast them in, and presently leape vpon them: being so set, they lanch out into the deepe, rowing vp and downe with small reedes of either tide : they goe a league or two into the Searco fish, carrying with them their cords and nets vpon these faggots, and beare themselues thereon. They calt out their nets, and doethere remaine fishing the greatest part of the day 60 and night, vntill they have filled vp their measure, with the which they returne well satisfied. Truely it was delightfull to fee them fish at Callas of Lima, for that they were many in number, and enery one fet on horie-backe, cutting the waves of the Sea, which in their place of filhing are great and furious, refembling the Truons or Neptunes, which they paint voon the water, and being come to Land, they draw their barke out of the water v pon their backes, the which they

which shoe are forced to carry

presently vindoe, and lay abroad on the shoare to drie. There were other Indians of the Vallies of Toa. which were accustomed to goe to fish in leather, or skins of Sea-wolues, blowne vp with winde, and from time to time they did blow them like bals of winde, left they flould finke, Inthe vale of Canete , which in old time they called Guaron, there were a great number of Indian filhers ; but because they relifted the Ingua, when he came to conquer that Land , hee made thew or peace with them, and therefore to reaft him, they appointed a folemne fishing of many thoufano Indians, which went to Sea in their veffels of reeds : at whose returne, the Inona (who had laid many Souldiers in ambush) made a cruell butcherie of them, so as afterward this Land remained unpeopled, although it be aboundant and fertile. I did fee another manner of fifthing, whereunto Don Francis of Toledo the Viceroy did leade me, yet was it not in the Sea, but in a River fo which they call great in the Prouince of Charcas, where the Indians Chiraquanas plunged into the water, and iwimming with an admirable swiftnesse, followed the fish, where with darts and hookes (which they vie to carry in their right hand, onely fwimming with the left) they wound the fifth, and fo hurt they brought them forth, feeming in this more like vnto fithes then men of the Land. But now that we have left the Sea, let vs come to other kinde of waters that remaine to be spoken of. In place of the Mediterranean Sea, which is in the old world, the Creator hath furnished this

Of Lakes and Pooles that be at the Indies. Ch42.16.

ing the Scripture calleth that of Palestina fo, which is not so great as some of these. The most famous is that of Titicaca, which is at Pern, in the Province of Callao, the which as I have faid in 20 the former booke, containes neere fourescore leagues in compasse, into the which there runs ten or twelue great Riners. A while fince, they began to faile in it with Barkes and Ships, wherein they proceeded fo ill, that the first Ship was split with a tempest that did rife in the Lake. The

new with many Lakes, whereof there are some so great, as they may be properly called Seas see-

water is not altogether fower nor falt, as that of the Sea, but it is fo thicke, as it cannot be drunke. There are two kindes of fiftes breede in this Lake in great abundance, the one they call Suches, which is great and fauorous, but phlegmaticke and vn wholefome : and the other Bogos, which is more healthfull, although it be ! He and fuller of bones : there are great numbers of wilde-ducks and Wigens. When as the Indiana will feast it, or shew delight to any one that paf-

feth along the two bankes, which they call Chuento and Omajugo, they affemble a great number of Canoes, making a circle and injuroning the fowle, vntill they take with their hands what 30 they please; and they call this manner of filling Chace. On the one and the other banke of this Lake, arothe best habitations of Pers. From the issue thereof there growes a lefter Lake, although it be great, which they call Paris, wpon, the bankes whereof, there are great numbers of cattell, especially Swine, which grow exceeding fat with the graffe vpon those bankes. There are many other Lakes in the high Mountaines, whence proceede Brookes and Rivers, which after become great flouis. Vpon the way from Arequippa to Cellas, there are two Lakes, vpon the Mountaines of the one and other fide the way, from the one flowes a brooke, which growes to a floud, and fals into the South Sea; from the other, they fay the famous River of Aporima takes her beginning from the which fome hold that the renowned River of Amazons, other wife called Maragnen proceedes, with so great an affembly and abundance of waters, which iowne in these 40 Mountaines. It is a question may be often asked, why there is to many Lakes in the tops of these Mountaines, into the which no river enters, but contrariwile, many great freames iffue forth, and yet doe we fearce fee these Lakes to dim inish any thing at any season of the yeare. To imagine that thele Lakes grow by the Snow that melts, or raine from heaven, that doth not wholly fatisfie me : for there are many that have not this abundance of Snow, nor raine, and yet wee fee

no degreafe in them, which makes me to beleeve they are Springs which rife there naturally, although it be not against reason, to thinke that the Snow and raine helpe somewhat in some leafons. These Lakes are so common in the highest tops of the Mountaines, that you shall hardly Great frivers finde any famous river that takes not his beginning from one of them. Their water is very pleare and breedes little flore of fish, and that little is very small, by reason of the cold which is there so

flow from

Notwithstanding, some of these Lakes be very hot, which is another wonder. At the end of Hot Lake, and the Vallie of Tarapaya neere to Potezi, there is a Lake in forme round, which feemes to have many wonders beene made by compafe, whose water is extreamely hot, and yet the Land is very cold; they are accustomed to bathe themselves neere the banke, for elfe they cannot endure the heate being farther in. In the midit of this Lake, there is a boiling of about twentie foote square, which is the very Spring, and yet (notwithstanding the greatnesse of this Spring) it is neuer seene to increase in any fort : it seemes that it exhals of it felse, or that it hath some hidden and vnknowneillie, neither doe they fee it decreafe; which is another wonder, although they have drawne from it a great streame, to make certaine engines grinde for metrall, considering the great quantitie of water that iffueth forth, by reason whereof, it should decrease.

Likes of Mexico falt and

Butleauing Pers, and paifing to new Spaine, the Lakes there, are no leffe tobe observed; especially that most famous of Mexico, where we finde two forts of waters, one salt Lakelike to that of the Sea, and the other cleere and sweete, by reason of the Rivers that enter into it.

In the midft of this Lake, is a rocke very delightfull and pleafant, where there are bathes of hot water that iffue forth, the which they greatly efteeme for their health. There are Gardens in the middett of this Lake, framed and fleeting upon the water, where you may see plots full of a thouland forts of hearbes and flowers, & they are in fuch fort as a man cannot well conceine them without fight. The Citie of Mexico is feated in the fame Lake, although the Spaniards have filled up the place of the feituation with earth, leaving onely fome currents of water, great and finall, which enter into the Citie, to carrie fuch things as they have neede of, as wood, hearbs. fone, fruites of the Countrie, and all other things. When Cortex conquered Mexico, hee caufed Brigandins to bemade, yet afterwards he thought it more fafe not to vie them : therefore they vie Canner, whereof there igreat flore. There is great flore of fifth in this Lake, yet have to I not feene any of price: notwithstanding, they say the reuenue of this Lake, is worth threehundred thousand Duckets a yeere. There are many other Lakes, not farre from this, whence numeres chousen by the Mexico. The Prouince of Mechonacas is so called, for that it aboundeth Reh Lakes

greatly with fish. There are goodly and great Lakes, in the which there is much fish, and this Promince is coole and healthfull. There are many other Lakes, whereof it is not possible to make mention, nor to know them in particular, onely wee may note by that which hath beene discourfed in the former Booke, that vader the burning Zone there is greater abundance of Lakes, then in any other part of the world. ten in any other part of the world, great diversitie of Springs, Fountaines, Ofmany and There is at the Indies as in other parts of the world, great diversitie of Springs, Fountaines,

There is at the indies as in other pairs of the working great another to prings, a Mines of duers springs and Rivers, and some have strange properties. In Guancaniles of Pern (where the Mines of and Fountains and Fountains and Kiners, and tomorgan and Four Quick-filter be,) there is a Fountaine that easts forth hot water, and in running, the water Chapter. turnes to rocke, of which rocke or flone; they build in a manner all the houles of the Village. Hor Spring This flone is 10ft, and easie to cut, for they cut it as easily with Iron as if it were wood, it a nis itone is ion, and take on beafts drinke thereof, they dye, for that it congeales in the Scone. very entrailes, and turnes into stone, and for that cause some Horses haue died. As this water turnes into stone, the which flowes, stoppes the passage to the rest; so as of neceffitie it changeth the courie, and for this reason it runnes in divers places, as the rocke increaseth. At the point of Cape Saint Helaine, there is a Spring or Fountaine of Pitch, which Fountaine of at Pers, they call Copper. This should be like to that which the Scripture speakes of the sauge Pach. Valley, where they did finde pits of Pitch. The Marriners vie their Fountaines of Pitch or 30 Coppey, to pitch their ropes and tackling, for that it serues them as Pitch and Tarre in Spaine,

When I failed into new Spaine by the coast of Peru, the Pilot shewed me an Iland, which they call the Ile of Wolses, where there is another Fountaine or Pit of Coppey or Pitch, with the which they anoint their tackling. There are other Fountaines and Springs of Goultranrozen, which the Pilot (an excellent man in his charge) told me he had feene, and that fometimes failing that waies, being to farre into the Sea, as he had loft the fight of Land, yet did he know by the smell of the Coppey, where he was, as well as if he had knowne the Land; fuch is the fauour that iffues conti-

nually from that Fountaine.

At the Bathes, which they call the Bathes of Ingua, there is a course of water, which Cold and hot 40 comes forth all hot and boiling; and ioyning vaco it, there is another whole water is as cold Springs togeas Ice. The Ingua was accustomed to temper the one with the other; and it is a wonderfull then thing to fee Springs of fo contrarie qualities, fo neere one to the other. There are an infinite number of other hot Springs, specially in the Province of Charcas, in the water whereof, you cannot indute to hold your hand the space of an Ane Maria, as I haue seene tried by wager. In a Farme neere to Cufco, fprings a Fountaine of Salt, which as it runnes turnes Salt Soring into Salt, very white and exceeding good, the which (if it were in another Countrie) were which yieldes no fmall riches, yet they make very small account thereof, for the store they have there. The Sal without waters which rune in Gusyaquel, which is in Prus, almost vader the Quintocal Line; are boiling, held to be heldsfull for the French discase, and other such like, so as they come from many 50 places farre off to be cured. And they fay the cause thereof is, for that in that Countrie there is great aboundance of rootes, which they call Salepareille, the vertue and operation whereof is Pockes pringe

to knowne, that it communicates her propertie to the waters wherein it is put to cure this difeafe. Bilcanota is a Mountaine the which (according to common opinion) is in the highest part of Peru, the top whereof is all couered with Snow, and in some places is blacke like coale. There Mueth forth of it, two Springs in contrary places, which prefently grow to be very great brooks, and fo by little and little become great flouds, the one goes to Calloa, into the great Lake Tincaca; the other goes to the Lands, and is that which they call Tucay, which icyning with another runnes into the North Sea, with a violent and furious courfe. This Spring, when it comes out of Smoak Springs the rocke Bilcanota, as I haue faid, is of the colour of lie, having an affire colour, and cafts a fame as a 60 thing burnt, the which runs far in this fort, vntil the multitude of waters that run into it, quench Index, 800

this smoak and fire which it drawes from the Spring. In new Spain I have feene a Spring as it were Ink, Comewhat blew, in Pers another, of color red like blood, where vpon they cal it the red River. Of Rivers. Amongst all Rivers, not onely at the Indies, but generally through the world, the River Ma- Chapas.

ragnon, or of Amazons, is the chiefe, whereof we have spoken in the former Booke. The Spa. Marguer or

niards. Amazans

miards have often failed it, pretending to discouer the Lands, which by report are very rich especially those they call Dorado and Paytini, Ican de Salnies, the Adelantade, made a memorable entrie, though of small effect. There is a passage which they call Ponge, one of the most dance. rous in all the world; for the River being there straightned, and forced betwixt two high steepe Rocks : the water fals directly downe with fo great a violence, that comming fleepe downe, is caufeth fuch a boyling, as it feemeth impossible to passe it without drowning : yet the courage of men durft attempt to paffe it, for the defire of this renowmed Dorado: they slipe downer from the top to the bottome, thrust on with the violence and currant of the floud, holding themselves fast in their Canoes or barkes : and although in falling they were turned topfie turnie, and both they and their Canoes plunged into the deepe, yet by their care and industrie they recovered to themselues againe; and in this fort the whole armie escaped, except some few that were drown Golden thirst. ned. And that which is more admirable, they carried themselves so cunningly, that they neither loft their Powder nor Munition. In their returne (hauing fuffered many troubles and dangers) they were forced, in the end, to passe backe that same way) mounting by one of those high Rocks.

flicking their Ponyards in the Rocke,

other parts of the Indies.

Cantaine Peter d'Orsus made another entrie by the same River, who being dead in the same Voyage, and the Souldiers mutinied; other Captaines followed the enterprile, by an arme that comes into the North Sea. A religious man of our company told vs, that being then a fecular man, he was present in a manner at all that enterprise, and that the tides did flow almost a hundred leagues vp the River, and whereas it enters into the Sea (the which is vnder the Line, or 20 very neare) it hath feuenty leagues breadth at the mouth of it, a matter incredible; and which exceeds the breadth of the Mediterranean Sea, though there be fome others, who in their descripti-

ons give it but twenty five or thirty leagues breadth at the mouth,

Next to this River that of Plata, or of Silver holds the fecond place, which is otherwise called increasing as Paragnay, which runs from the Mountains of Perm, into the Sea, in thirty fine degrees of altitude to the South : it rifeth (as they fay)like to the River of Nile, but much more without companion, and makes the fields it ouerflowes like vnto a Sea, for the space of three moneths, and after returneth againe to his course, in the which Shippes doe faile many leagues against the streame. There are many other Rivers that are not of that greatnesse, and yet are equall: yea they surpasse the greatest of Europe, as that of Magdalaine, neere to Saint Maribe, called the great Riner, and 30 that of Almarado in new Spaine, and an infinite number of others. Of the South fide, on the Mountaines of Perm, the Rivers are not vivally fo great, for that their current is not long, and that many waters cannot loyne together, but they are very fwift, descending from the Mountaines. and have fodaine fals, by reason whereof they are very dangerous, and many men have perished there. They increase and overflow most in the time of heate. I have gone over twenty and feuen Riuers vpon that coaft, yet did I neuer passe any one by a foord. How they passe The Indians vie a thousand denises to passe their Rivers. In some places they have a long cord

that runnes from one fide to th'other, and thereon hangs a basket, into the which he puts him felfe

that meanes to passe; and then they draw it from the banke with another cord, so as he passeth

in this basket. In other places the Indian paffeth, as it were on Horfe-backe, vpon a bottle of 40 Arraw, and behinde him he that defires to paffe; and so rowing with a peece of a boord, carries him ouer. In other places they make a floste of gourds or pompions, vpou which they fet men with their fluffe to carry ouer, and the Indian haung cords fathend to them, goe furnisming before, and draw this floate of pompions after them, all Hofes does a Coach: other gee behinde thrulting it forward. Hauing passed, they take their barke of pompions vpon their backe, and returne swimming: this they doe in the River of Saint at Pern, We passed that of Almarado in new Spain wpon a table, which the Indians carried vpon their shoulders, and when they lost their footing, they fwamme. These denises, with a thousand other wherewith they vie to passe their Rivers. breede a terrour in the beholders, helping themselves' with such weake and vissure meanes; and Haire and yet they are very confident. They doe vieno other bridges but of haire or of straw. There are 50 Straw Bridges, now yoon some Rivers bridges of Stone, built by the diligence of some Gouernours, but many fewer then were needefull in fuch a Countrie, where so many men are drowned by default thereof, and the which yeeldes so much Silver, as not onely Spaine, but also other strange Countries make fumptuous buildings therewith. The Indians doe draw from these flouds that runne from the Mountaines to the Vallies and Plaines, many and great Brookes to water their Land, which they viually doe with fuch industrie, as there are no better in Murcia, nor at Millan it felfe, the which is also the greatest and onely wealth of the Plaines of Peru, and of many

of the qualitie of the Land at the Indies in generall. Properties of Peru, and of new Spaine, and other parts : Of Vulcanes and Earthquakes.

C. HAP. 1. S. 3. Indians wasted. Pastures and mines in bils. Coast-commerce and wine, 025

E may know the qualitie of the Land at the *Indies*, for the greatest part (seeing it is 1.3.6.19). The fait of the three Elements, whereof we have propounded to treate in this Rooke 1. by the discourse we have made in the former Booke of the burning Zone, seeing that the greatest part of the Indies doth lye vnder it. But to make it knowne the more particularly, I have observed three kindes of Lands, as I have passed through those Regions: particularly, I have concrued times at manager Lamus, as a mate paned enrough above Accidents whereof there is one very low, another very high, and the third which holds the middle of their two extreames. The lower is that which lyeth by the Sea coasts, whereof there is in all their two extreames. parts of the Indees, and it is commonly very hot and moift, fo as it is not fo healthfull; and at this day we fee it leffe peopled, although in former times it hath beene greatly inhabited with Indians, as it appeareth by the histories of new Spanne and Peru, and where they kept and lived, for that the folle was naturall vnto them being bred there. They lived of fishing at Sea, and of feeds, drawing brooks from the Rivers, which they vied for want of raine, for that it raines little there, and in some places not at all. This low Countrie hath many places vinhabitable, as well by 20 reason of the Sands which are dangerous (for there are whole Mountaines of these Sands) as also for the Marishes which grow by reason of the waters that fall from the Mountaines, which finding no slice in these flat and low Lands, drowne them, and make them vnprofitable.

one no sine in the greatest part of all the Indian Sea coast as of this fort, chiefly you the South Decay of pead And in truth the greatest part of all the Indian Sea coast of this fort, chiefly you the South Decay of pead And in truth the greatest part of the South Decay of pead And in truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of pead And In truth the greatest part of the South Decay of the Sout parts of the people that inhabited it, there wants twenty nine; and it is likely the reft of the by the Spesi-Indians will in short time decay. Many, according to the varietie of their opinions, attribute

this to divers causes: some to the great labour which hath beene imposed vpon these Indians; others, ynto the change and varietie of meates and drinkes they yie, fince their commerce with the Spaniards: others, to their great excesse and drinking, and to other vices they have : for my 30 part. I hold this diforder to be the greatest cause of their decay, whereof it is not now time to difcourse any more. In this low Countrie (which I say generally is vnhealthfull, and vnfit for mans habitation) there is exception in some places which are temperate and fertile, as the greatest part of the Plaines of Pers, where there are coole vallies and very fertile. The greatest part of the habitation of the coast encertains all the traffike of Spain by Sea: whereon all the estate of the Indies dependeth. Vpon this coast there are some Towns well peopled, as Linus and Truxillo in Poru, Panama and Carthagena vpon the maine Land, and in the Hands Saint Dominique, Port Ricco, and Hanana, with many other Towns which are leffe then thefe, as the True Croffe in new Spain, Tos, Arigus and others in Pers: the Ports are commonly inhabited, although but flenderly. The

to fecond fort of Land is contrary, very high, and by confequent, cold and dry, as all the Mountainer are commonly. This Land is neither fertile nor pleasant, but very healthfull, which makes it to be peopled and inhabited. There are Pastures and great store of Cattle, the which, for the most part, entertaines life, and by their Cattell, they looply the want they have of Corne and Graine, by trucking and exchange. But that which makes their Lands more inhabited and peopled, is the riches of the Mines that are found there, for that all obeys to Gold and Siluer, By reason of the Mines there are some dwellings of Spaniards and Indians, which are increased and multiplied, as Potoci and Gancaselicque in Peru, and Cacatecae in new Spaise. There are also through all these Mountaines great dwellings of the Indians, which to this day are maintained: yea some will say they increase, but that the labour of the Mines doth consume many, 50 and some generall diseates haue destroyed a great part, as the Cecoliste in new Spaine: yet they finde no great diminution. In this extremitie of high ground they finde two commodities, as

I have faid, of Paftures and Mines, which doe well countervaile the two other that are in the lower grounds along it the Sea coast, that is, the commerce of the Sea, and the abundance of Wine which groweth not but in the hot Lands. Betwixt these two extreames there is ground Corngresands of a meane height, the which, although it be in some parts higher or lower one then other, yet doth it not approach neither to the heate of the Sea coast, nor the intemperature of the Mountaines. In this fort of foyle there groweth many kindes of Graine, as Wheate, Barley, and Mays, which growes not at all in the high Countries, but well in the lower; there is likewife flore of Patture, Cattell, Fruits, and greene Forrests. This part is the best habitation of the three, 60 for health and recreation; and therefore it is best peopled of any part of the Indies, the which I

haue curiously observed in many Voyages that I haue undertaken, and have alwayes found it true, that the Province best peopled at the Indies be in this scituation. Let vs looke neerely into new Spaine (the which without doubt is the best Province the Sunne doth circle) by what part Soeuer you doe enter, you mount vp; and when you have mounted a good height, you begin to

Hhhh 3

whereof we will now proceede to fpeake.

descend, yet very little : and that Land is alwayes much higher then that along the Sea

All the Land about Mexico is of this nature and scituation; and that which is about the Val can, which is the best foile of the Indies, as also in Peru, Arequipa, Guamangua and Cusco, although more in one then in the other. But in the end, all is high ground, although they descend into deepe Vallies, and clime vp to bigh Mountaines: the like is spoken of Quitte, Saint For, and of the best of the New Kingdome. To conclude, I doe believe that the wiledome and providence of the Creator would have it so, that the greatest part of this Countrie of the Indies should be hillie, that it might be of a better temperature : for being low, it had beene very hot ynder the burning Zone, especially being farre from the Sea. Also all the Land I have seene at the Indier, 10 is neere to the Mountaines on the one fide or the other, and sometimes of all parts : So as I have oftentimes faid there, that I would gladly see any place, from whence the horizon did fashion it felfe and end by the heauen, and a Countrie stretched out and euen, as we see in Spaine in a thousand champaine fields; yet doe I not remember that I have ever seene such sights at the Indies, were it in the Ilands, or vponthe maine Land, although I have travelled above feven hundred leagues in length. But as I haue faid, the necreneffe of the Mountaines is very commodious in this region, to temper the heate of the Sunne. To conclude, the best inhabited parts of the Indies are as I haue faid : and generally, all that Countrie abounds in Graffe, Paffures, and Forrefts, contrary vnto that which Ariffork and the ancients did hold. So as when we go out of Esrepe to the Indies we wonder to fee the Land fo pleafant, greene and fresh. Yet this rule hath some an exceptions, and chiefly in the Land of Pers, which is of a strange nature among stall others.

We meane by Pers, not that great part of the world which they call America, feeing that

of Outto. which is vnder the Line, and runs in length to the Realme of Chille, the which is

without the Tropickes, which were fix hundred leagues in length, and in breadth it containes

no more then the Mountaines, which is fiftie common leagues, although in fome places, as at

Indies. The first is, that vpon all the coast it blowes continually with one onely winde, which

is South and South-west, contrary to that which doth viually blow under the burning Zone.

The fecond is, that this winde being by nature the most violent, tempestuous, and vahealth-

full of all others, yet in this Region it is maruellous pleafing, healthfull, and agreeable : fo as we may attribute the habitation of that part thereunto, without the which it would be trou-

blesome and inhabitable, by reason of the heate, if it were not refreshed with the winde. The

third propertiess, that it never raines, thunders, snowes, nor hailes in all this coast, which is a matter worthy of admiration. Fourthly, that a little distance from the coast it raines & snowes

terribly. Fiftly, that there are two ridges of Mountaines which runne the one as the other, and

part of the yeare, being very hot; and the other is all naked and bare, and very cold : fo as win-

ter and immmer are divided on those two Mountaines, and raine, and cleereneffe it selfe. For the

better understanding hereof, we must consider that Permis divided as it were into three parts long and narrow, which they call Lanes, Surras, and Andes; the Lanes runs along ft the Sea coaft; the

Sierras be all hils, with some vallies; and the Andes be steepe and craggie Mountaines. The La-

nos or Sea coast, haue some ten leagues in breadth, in some parts leffe, and in some parts a little

more. The Sterra containes some twenty leagues in breadth : and the Andes as much, sometimes

more, sometimes lesse. They run in length from North to South, and in breadth from East to

West. It is a strange thing, that in sosmall a distance as fiftie leagues, equally distant from the

place, and neuer in the other. It neuer raines vpon the coaft or Lanes, although there fals fome-

times a small dew, which they call Guarna, and in Castill Molling, the which sometimes thick-

ens, and fals in certaine drops of water, yet is it not troublefome, nor fuch as they neede any co-

uering. Their couerings are of mats with a little earth vpon them which is sufficient, Vpon the Andes it raines in a manner continually, although it be sometimes more cleere then other.

In the Sierra which lies betwixt both the extreames, it raineth in the fame feafon as it doth in Spaine, which is from September voto Aprill, but in the other feating, the time is more cleere.

Line and Pole, there should be so great a contrarietie, as to raine almost continually in one so

in one altitude, notwithstanding on the one there are great Forrests, and it raines the greatest 40

Charbapayas, it be broader. This part of the world which wee call Pers, is very remarkeable, and containes in it strange properties, which serueth as an exception to the general rule of the 30

of Principanio Kingdomes is Pern, but onely that part which lies to the South, beginning at the Kingdome

Of the proper-ties of the land therein is contained Bresil, the Kingdome of Chille, and that of Grenade, and yet none of these

and thereby

The Plaines (up.inHerera.

Raine almost euer, and al-most neuer.

which is when the Sunne is farthest off, and the contrary when it is neerest. That which they call Ander, and Sierra, are two ridges of most high Mountaines, which runne about a thoufand leagues, the one in view of the other, and almost equally. There are an infinite number 60 of Vicagnes, which breede in the Sierres, and are properly like vnto wilde Goates, very nim-Diuers Beafts. ble and swift. There are also of those beafts which they call Guanacos and Pacos, which are sheepe, which we may well tearme the Alles of that Countrie; whereof we small speake in their place. And vpon the Ander they finde Apes, very gentle and delightfull, and Parrots in great

CH AP.2. \$2. Fruitfull Vallies, Indian bread. Caufe of raine. Peru wine. numbers. There also they finde the herbe or tree which they call Coca, that is so greatly effecmed by the Indians, and the trafficke they make of it, is worth much mony.

That which they call Sierre, canfeth Vallies, where as it opens, which are the best dwellings of Pern, as is the Valley of Xauxa of Andaguaplas, and Tucay. In these Valles there growes
Wheat. Mays, and other forts of fruits, but lelle in one then in the other. Beyond the Citie of Cufee (the ancient Court of the Lords of those Realmes) the two ridges of Mountaines feparate themselues one from the other, and in the midst leave a Playne and large Champaigne, which they call the Prouince of Calles , where there are many Riners and great store of fertile Pastures: there is also that great Lake of Titicaca. And although it bee a full soile, and in the to fame height and intemperature, that the Sierre, having no more Trees nor Forrefts, yet the want they have of bread is countervailed with the rootes they fow, the which they call Paper and they grow in the earth. This roote is the Indians foode; for drying it and making it cleane. Their bread

they make that which they call Chappes, which is the bread and nourillment of those Prouinces. There are other rootes and small herbes which they eate. It is a healthfull fole, best peopled, and the richeft of all the Indies, for the abundance of Cattell they feede, as well of those that are in Europe, as Sheepe, Neat, and Goates, as of those of the Country, which they call Guanacor and Paces , and there are flore of Partridges. Next to the Prouince of Callas, is that of Charcas, where there are hot Vallies very fertile, and very high Rocks; the which are very rich in mynes, so as in no part of the World shall you finde better nor fairer.

For that it is rare and extraordinarie to fee'a Country where it neuer raines nor thunders : The reason men defire naturally to know the cause of this drangenesse. The reason which some give that why traines haue neerly looked into it, is, that vpon that Coait there rife no vapours, fufficient to engender raine for want of matter; but onely that there bee small and light vapours, which cannot coast, chepat. breede any other then mifts and deawes, as wee fee in Emope, oftentimes vapours doe rife in the morning, which are not turned into raine, but into milts onely : the which growes from the substance, which is not groffe and sufficient enough to turne to raine. They say, the reafor why that which happens but some times in Europe, falls out continually upon the Coaft of Peru, is, for that this Region is very drie, and yeelds no groffe vapours. The drinesse is knowne by the great abundance of Sands, having neither Wells nor Fountaines, but of fifteene Stades 30 deepe (which is the height of a man or more) and that is neere wnto Rivers, the water where-

of, piercing into the Land, gives them meants to make Wells. So as it hath beene found by experience, that the course of Risers being turned, the Wells have beene dried up, writil they returned to their ordinarie courfe : and they give this reason for a materiall cause of this effect; but they have another efficient; which is no leffe confiderable, and that is the great height of the Sierre, which comming along the Coalt, thatlowes the Limer; fo as it fuffers no winde to blow from the Land, but aboue the tops of their Mountaines. By meanes whereof, there reignes no winde, but that from the Sea, which finding no oppofire, doth not prefie nor firsine forth the vapours which rife to engender raine; so as the shadow of the Mountaines keepes the vapours from thickning , and converts them all into mifts. There are some experiences agree

40 with this discourse; for that it raines vpon some small Hills along the Coast, which are least fladowed, as the Rocks of Asico and Arequips. It bath rained in some yeeres when as the Northerne or Easterly windes have blowne : yea, all the time they have continued, as it happened in seuentie eight, vpon the Lanes of Tragille, where it rained abundantly, the which they had not feene in many ages before. Moreouer, it raines vpon the fame Coast in places, where as the Easterly or Northerne windes be ordinarie, as in Gueyaquit, and in places where as the Land rifeth much , and turnes from the shadow of the Mountaines, as in those that are beyond Ariqua. Some discourse in this manner, but let every one thinke as he please. It is most certaine, that comming from the Mountaines to the Vallies, they doe viually fee as it were two Heauens, one cleere and bright aboue, and the other obicure, and as it were a gray vaile spread So ynderneath, which couers all the Coaft : and although it raine not, yet this mift is wonderfull

profitable to bring forth graffe, and to raife vp and nourish the feed : for although they have plentie of water, which they draw from the Pooles and Lakes, yet this moisture from Heauen hath such a vertue, that ceasing to fall upon the Earth, it breedes a great discommoditie and defect of graine and feedes. And that which is more worthy of admiration, the drie and barren Sands are by this deaw to beautified with graffe and flowers, as it is a pleafing and agreeable fight, and very profitable for the feeding of Cattell, as we fee in the Mountaine called Sandie, neere to the Ci-

New Spaine paffeth all other Prouinces in paffur's, which breedes infinite troopes of Horfe, Of the proper-Kine, Sheepe, and other Cattell. It abounds in fruit and all kinde of graine. To conclude, it is a tie of new 60 Country the best furnished and most accomplished at the Indies. Yet Pers doth surpasse it in one Spaine, of the thing, which is Wine, for that there growes store and good; and they daily multiply and in- other Lands. creafe, the which doth grow in very hot Vallies, where there are waterings. And although there chap.22be Vines in new Spaine, yet the grape comes not to his maturitie, fit to make Wine. The reason Peru wine. is, for that it raines there in July and August, when as the grape ripens : and therefore it comes

not to his perfection. And if any one through curiofitie would take the paines to make wine in

should be like to that of Genna and Lombardie, which is very small and sharpe, having a taste like vnto Verjuyce. The Ilands which they call Barlouente, which bee Hiff aniela, Cuba, Port Ricco. and others thereabouts, are beautified with many greene pastures, and abound in Cattell, as Neat,
Sugar workes and Swine, which are become wilde. The wealth of these llands, bee their Sugar-workes and Hides. There is much Cassia fistula and Ginger. It is a thing incredible, to fee the multitude of these merchandizes brought in one fleete, being in a manner impossible that all Europe should waste so much. They likewise bring wood of an excellent qualitie and colour, as Ebone, and que thers, which ferue for buildings and loyners. There is much of that wood which they call Lienum fantium or Guage, fit to cure the pox. All thefe llands and others thereabouts, which are 10 many, haue a goodly and pleafant aspect, for that throughout the yeere, they are beautified with graffe and greene trees, fo as they cannot discerne when it is Autumne or Summer , by reason of continuall moisture ioyned to the heat of the burning Zone. And although this Land bee of a great circuit, yet are there few dwellings, for that of it felfe it engenders great Arcabstos, as they call them, which be Groues or very thicke Coppies: and on the Playnes there are many ma-rishes and bogs. They give yet another notable reason, why they are so smally peopled, for that Indians wasted, there have remayned few naturall Indians, through the inconsideratnesse and disorder of the first Conquerors that peopled it ; and therefore, for the most part, they vie Negros, but they cost deare, being very fit to till the Land. There growes neither bread nor wine in thefe llands . for that the too great fertilitie and the vice of the foile, fuffers them not to feede, but casts all forth in graffe, very vnequally. There are no Olive trees, at the leaft, they beare no Olives, but many greene leaves pleafant to the view; which beare no fruit. The bread they vie is of Capane, whereof we thall hereafter speake. There is gold in the Rivers of these llands, which some draw forth, but in small quantitie. I was little lesse then a yeere in these Ilands, and as it hath beene told me of the mayne Land of the Indies, where I have not beene, as in Florida, Nicaragua, Guatimala, and others, it is in a manner of this temper, as I have described : yet have I not let downe euery particular of Nature in these Prouinces of the firme Land, having no perfect knowledge thereof. The Country which doth most refemble Spaine and the Regions of Europe, in all the West Indies, is the Realme of Chille, which is without the generall rule of these other Provinces. being feated without the burning Zone, and the Tropicke of Capicorne. This Land of it felfe is coole and fertile, and brings forth all kindes of fruits that bee in Spaine; it yeelds great abundance of bread and wine, and abounds in Pastures and Cattell. The aire is wholfome and cleere, temperate betwixt heat and cold, Winter and Summer are very diffinet, and there they finde great store of very fine gold. Yet this Land is poore and smally peopled, by reason of their continuall warre with the Amicanes, and their Affociates, being a rough people and friends

West.Chap-23.

There are great conjectures, that in the temperate Zone at the Antarike Pole, there are great and fertile Lands : but to this day they are not discovered, neither doe they know any other Land knows Land, and the diner. in this Zone, but that of Chille, and some part of that Land which runnes from Ethiopia to the sitted a whole Cape of Good Hope, as hath beene said in the first Booke; neither is it knowns if there bee any 40 habitations in the other two Zones of the Poles, and whether the Land continues and firetcheth to that which is towards the Antertike or South Pole. Neither doe we know the Land that lyes beyond the Straight of Magellan, for that the greatest height yet discoursed, is in fifthe fixe degrees, as bath beene formerly faid; and toward the Artike or Northerne Pole, it is not known how farre the Land extends, which runnes beyond the Cape of Mendoçin and the Calipbornes, nor the bounds and end of Florida, neither yet how farre it extends to the West. Of late they have discovered a new Land, which they call New Mexico, where they say is much people that speake the Mexican tongue. The Philippines and the following Ilands, as some report that know it by experience, ranne aboue nine hundred leagues. But to intreat of China, Cochinchina, Sians, and other Regions which are of the East Indies, were contrarie to my purpose, which is onely to 50 discourse of the West: nay, they are ignorant of the greatest part of America, which lyes betwixt Pers and Brefil, although the bounds be knowne of all fides, wherein there is diversitie of opinions; some fay it is a drowned Land, full of Lakes and waterie places; others affirme there are great and flourishing Kingdomes, imagining there be the Paytin, the Dorado, and the Calast, where they fay are wonderfull things. I have heard one of our companie fay, a man worthy of credit, that he had feene great dwellings there, and the wayes as much beaten as those betwixt Salamanca and Villadellis, the which he did fee, when as Peter d'Orfua, and after, those that incceeded him, made their entrie and discouerie by the great River of Amazons, who beleeving that the Dorado which they fought, was farther off, cared not to inhabit there, and after went both without the Dorade, which they could not finde, and this great Prouince which they left. 60 To speake the truth, the biabitations of America are to this day vnknowne, except the extremities, which are Peru, Brefil, and that part where the Land begins to ftraighten, which is the Riuer of Silner, then Tuennan, which makes the round to Chille and Charcas. Of late we have vnderstood by Letters from some of ours which goe to Saint Croix in the Sierre, that they goe dif-

couring of great Prouinces and dwellings, betwixt Brefil and Pers. Time will reueile them, for as at this day the care and courage of men is great , to compaffe the World from one part to another; fo we may beleeve, that as they have discovered that which is now knowne, they may likewife lay open that which remaynes, to the end the Gospell may bee preached to the whole World, feeing the two Crownes of Portugal and Caffile have met by the East and West, toyning their discourries together, which in truth is a matter to be observed, that the one is come to Chime and lapan by the East, and the other to the Philippines, which are neighbours, and almost ioyning vnto (bine, by the West : for from the Hands of Luffen, which is the chiefe of the Philippia ner, in the which is the Citie of Manille, vnto Macas, which is in the Ile of Camon, are but foure

to fore or a hundred leagues, and yet we finde it strange, that notwithstanding this small distance from the one to the other, yet according to their account, there is a dayes difference betwixe them; foasit is Sunday at Macae, when as it is but Saturday at Manille, and foof the reft. Those of Macao and of China have one day advanced before the Philippines. It happened to father Alons Sauches, of whom mention is made before, that parting from the Philippines, hee arriaed at Macae the fecond day of May, according to their computation, and going to day the Malie of Saint & Liberafim, he found they did celebrate the feath of the Investion of the body Croffe, for that they did then reckon the third of May. The like happened vnto him in another voyage

ocyona tt.
Some haue found this alteration and diuerfitie strange, supposing that the fault proceedes from 20 theore or the other, the which is not so: but it is a true and well observed computation, for according to the difference of wayes where they have beene, we must necessarily (ay, that when they meet, there must be difference of a day; the reason is, for that fayling from West to East, they alwayer gaine of the day, finding the Sunne rifing fooner : and contrariwife, those that faile from East to West, doe alwayes lose of the day, for that the Sunne rifeth later vnto them; and as they approach necret the East or the West, they have the day longer or shorter. In Pers, which is Westward in respect of Spaine, they are aboue fixe houres behinde ; so as when it is noone in Spaine , it is morning at Perm; and when it is morning here , it is mid-night there. I haue made certaine proofe thereof, by the computation of Eclipses of the Sunne and Moone. Now that the Portugals have made their navigations from West to East, and the Castillans from 20 East to West, when they came to loyne and meet at the Philippines and Macao, the one hatte gayned twelve houres, and the other hath loft as much ; fo as at one instant, and in one time , they

finde the difference of foure and twentie houres, which is a whole day. Although we finde vents of fire in other places, as Mount Acres and Vefenie, which now Of the Unices they call Mount Some, yet is that notable which is found at the Indees. Ordinarily these Venus of Venus of be Rocks or Pikes of most high Mountaines , which raise themselves about the tops of all other fire. (hep. 240 Mountaines; woon their tops they have a Playne, and in the midft thereof a pit of great mouth, which descends even vnto the foote thereof; a thing very terrible to behold. Out of these

mouthes there issues smoake, and sometimes fire : some cast little smoake, and have in a manner no force of Volcoms, as that of Arequipa, which is of an vnmeafurable height, and almost all land. 40 It cannot be mounted up in leffe then two dayes, yet they have not found any flew of fire, but onely the reliques of fome facrifices which the Indians made while they were Gentiles, and fometimes it doth cause a little smoake. The Volcas of Mexico which is neere to the Village of Angels, is likewise of an admirable height, whereas they mount thirtie leagues in turning : from this Volcas issues to not continually, but sometimes, almost energy day, a great exhalation or whirle-winde of smoake; which ascends directly up like to the shot of a Crosse-bow, and growes after like to a great plume of feathers, vntill it ceafeth quite, and is prefently converted into an obfoure and darke cloude. Most commonly it rifeth in the morning after the Sunne rifing, and at night when it fetteth, although I have feene it breake out at other times. Sometimes it doth cast forth great store of ashes after this smoake. They have not yet seene any fire come from it;

50 yet they feare it will iffue forth and burne all the Land round about, which is the best of all the Kingdome : And they hold it for certaine, that there is some correspondencie betwixt this Undcan and the Surre of Tlaxcala, which is neere vnto it, that caufeth the great thunders and lightnings they doe commonly heare and fee in those parts.

Some Spaniards have mounted vp to this Volcan, and given notice of the myne of fulphur to make powlder thereof. Correct reports the care he had to discover what was in this Volcan. The Volcans of Guatimala are more renowmed, as well for their greatnesse and height: which those that faile in the South Sea discouer afarre off, as for the violence and terrour of the fire it casts. The three and twentieth day of December, in the yeere 1586, almost all the Citie of Gnatimala Terrible earthfell with an Earthquake, and some people slaine. This Volcan had then fixe moneths together, quake at Gua-60 day and night cast out from the top, and vomited as it were, a floud of fire, the substance falling timals. vpon the fides of the Volcan, was turned into affees like vnto burnt earth (a thing paffing mans judgement, to conceive how it could cast so much matter from its centre during fixe moneths.

being accustomed to cast smoake alone, and that sometimes with small flashes,) This was writ-

ten vnto me being at Mexico, by a Secretarie of the Audience of Guatimala, a man worthy of

Courtous

940

credit, and at that time it had not cealed to cast out fire. This yeere past, being in Quitte in the Citie of Kings, the Volcan which is neere thereunto, cast such abundance of ashes, that in many leagues compasse thereabout it darkned the light of the day : and there fell such store in Quinto, as they were not able to goe in the ftreets. There have beene other Volcons feene which cast netther imoake, flame, nor yet alhes, but in the bottome they are feene to burne with a quicke fire without dying : fuch a one was that which in our time a couetous and greedie Prieft feeing, perfwaded himfelfe that they were heapes of gold he did fee burning, imagining it could be no other matter or substance, which had burnt to many yeeres, and not consumed. And in this conceit he made certaine kettles with chaines, and an inftrument, to gather and draw up the gold out of this Pit or Volcan: but the fire scorned him, for no sooner did his Iron chaine and Caldron ap- 10 proach neere the fire, but fuddenly they were broken in pieces. Yet fome told me, that this man was still obstinate, seeking other inventions for to draw out this gold as he imagined.

Some haue held opinion, that these Volcans confume the inner substance they have of Nature: and for this reason they believe, that naturally they shall end, when as they have consumed the fuell (as a man may fay) that is within them. According to which opinion wee fee at this day, some Mountaines and Rocks, from whence they draw a burnt stone which is light, but yery hard, and is excellent to build with, as that which is carried to Mexico. And in effect there are some shewes of that which hath beene spoken, that these Mountaines or Rocks had somtimes a natural fire, which hath died after the matter was confumed; and fo these stone semay. ned burnt and pierced with the fire as wee fee. For my part, I will not contradict it, that in those places there hath not beene fire sometimes, or Volcans. But there is some difficultie to be. 20 leege it should be so in all Volcans, considering the matter they cast out is almost infinite; and that being gathered together, it could not bee contayned in the same concavitie from whence it goes. Moreover, there are some Volcans, that in hundreds, yea thousands of yeeres are alwayes of one falhion, casting out continually smoake, fire, and ashes. Plinie the historiographer of naturall things (as the other Plinie his nephew reports) fearthing out the fecret how this should paffe : and approaching too neere the exhalation of fire of one of these Volcans, died; and thinking by his diligence to find an end thereof, had an end of his life, For my part, youn this confideration I thinke, that as there are places in the earth, whose vertue is to draw vaporous matter, and to convert it into water, which bee the Fountaines that alwayes runne, and have alwayes 20 matter to make them runne, for that they draw vnto them the jubstance of water. In like fort there are places that have the propertie to draw vnto them hot exhalations, and to convert them into fire and smoake which by their force and violence cast out other thicke matter which diffolues into alhes, into pumice ftone, or fuch like substance; and for a sufficient argument to prove it to be fo in these Volcans, they fometimes cast smoake, and not alwayes, and sometimes fire, and not alwayes, which is according to that it can draw vnto it, and digeft, as the Fountaines which in Winter abound, and in Summer decrease; yea some are quite dried up, according to the force and vigour they have, and the matter that is presented : even so it is of these Volcans, which cast fire more or leffe at certaine seasons. Others say, that it is Hell fire, which issueth there, to ferue as a warning, thereby to confider what is in the other life : but if Hell (as Diuines 40 hold) bee in the centre of the Earth, the which containes in diameter aboue two thousand Baffi.Pal. 18. . leagues, we cannot judge that this fire is from the centre: for that Hell fire (as Saint Bafil and others teach) is very different from this which wee fee, for that it is without light, and burneth without comparison much more then ours.

Some have held, that from these Volcans which are at the Indies, the Earthquakes proceede, quakes. Capade. being very common there : but for that they ordinarily chance in places farre from thote Volcans, it cannot be the totall cause. It is true they have a certaine simpathy one with another, for that the hot exhalations which engender in the inner concauities of the Earth, feeme to be the materiall substance of fire in the Volcans, whereby there kindleth another more groffe matter, and makes these shewes of flame and smoake that come forth. And these exhalations (finding no ea- 50 fie iffue in the Earth) moue it, to iffue forth with great violence, whereby wee heare that horrible noise under the Earth, and likewise the shaking of the Earth, being stirred with this burning exhalation; Euen as Gun-powlder in mynes, hauing fire put to it breaks Rocks and Walls: and as the Chefnut laid into the fire, leapes and breakes with a noise, when as it casts forth the aire (which is contayned within the buske) by the force of the fire : Euen fo these Earth quakes doe most commonly happen in places neere the water or Sea. As wee see in Europe , and at the Indies , that Townes and Cities fartheft from the Sea and waters are least afflicted therewith ; and contrariwife, those that are seated upon Ports of the Sea, upon Rivers, the Sea coast, and places neere vnto them, feele most this calamitie. There hath happened in Peru (the which is wonderfull, and worthy to be noted) Earthquakes which have runne from Chille vnto Quito, 60 and that is aboue a hundred leagues, I fay the greatest that ever I heard speake of, for lesser be more common there. Vpon the coast of Chille (I remember not well in what yeere) there was so terrible an Earthquake, as it ouer-turned whole Mountaines, and thereby itopped the courie of Rivers which it converted into Lakes, it beat downe Townes, and flue a great number of people.

confine the Sea to leaue her place forme leagues, fo as the ships remayned on drie ground; farre from the ordinate Roade, with many other heatie and horrible things. And as I well remember, they fay this trouble and motion, caused by the Earthquake, ranne three hundred leagues a. long ft the Coaft. Soone after, which was in the yeere eightie two, happened that earthquake of Arequips, which in a manner over-threw the whole Citie. Since in the yeere eightie fixe, the ninth of July, fell another earthquake in the Citie of Kings, the which as the Vice-roy did write, had runne one hundred threefcore and ten leagues alongft the Coaft, and ouerthwart in the Sterre fiftie leagues. The mercy of the Lord was great in this Earthquake, to forewarne the Novichefore people by a great noile which they heard a little before the Earthquake, who taught by former the earthquake, to experiences, preferrly put thenickies in fafetie, leaving their Houles, Streets, and Gardens, to goe inte the fields ; fo as although it ruined a great part of the Citie, and of the chiefeft buildings, yet there died not about fifteene or twentie persons of all the Inhabitants. It caused the like trouble and motion at Sea, as it had done at Chille, which happened prefently after the nee trouve and motion at Jer, is a to made one of the young a suppersed presently after the Earthquake, fo sathly might feethe Sea throught office or of her bounds, and to minit neers two leagues into the Land, trifing aboue fourteene fathom: it counted all that Playne, fo as the Ditches and pieces of wood that were there; fwam in the water. There was veranother earthquake in the Realme and Citie of Quitto; and it feemes all these notable Earthquakes upon that Coaft, have succeeded one another by order, as in truth it is subject to these inconveniences. And therefore although woon the coast of Pers, there be no torments from Heaten, as chunder and so lightning, yet are they not without feare vpon the Land; and so every one hath before his eyes, the Heralds of dinine luttice, to moone him to feare God. For as the Scripture faith, Freit hae ve imedium. Returning then to our purpole, I fay the Sea coult is most subject to these earthquakes, Why the Sea the reason is, in my judgement, for that the water doth slop the conduits and passages of the coast is subject entreariouss, in my morganism, for that the water authority size conduits and patiages or the coarse, and the horexhalations should pale, which are engendered there. And allo the human and the fundamental the formula of the coarse, and the exhalations for good the formula of the fundamental the fundamental the fundamental of the fundamental the fun elofe together and encounter violently in the bowels of the earth, which doeafterwards breake Some haue obferded, that fuch Earthquakes haue vitalischapned, when as a ravinciealon falle after fomedrie vertes. Whereupon they fry, that the Barthquakes are moft fare, where are 30 most Wells, the which is appround by experience. Those of the Citie of Mante (hold enlarge mot vecus, me winter a approach of a sparinter. A most of the Lake whitecon its feated, is the carlot of the lake dukes that happen shirts? Afficient the Lake whitecon its feated, is the carlot of the lake dukes that happen shirts? Afficient they be not very vioient: and it is most extaine, that the Towner and Premires, "fare within they be not very vioient and it is most extaine, that the Towner and Premires, "fare within

they be not very violent; and it is note certains, that the Townes and Products, "farth within the Land, and satisfied from the Sex, receive formerines greate lottes by these Exactionables is each collice of Chechopyas at the Anger, and in Italic that of Forms , whitely propositive shabile it Lambounke at Chine of Chechopyas at the Anger, and in Italic that of Forms , whitely propositive shabile it Lambounke at Chine of the Chechopyas at the Anger, and in Italic that of Forms , whitely shad the Chechopyas at the Anger, and the Chechopyas and the Chechopyas at the Anger and the Chechopyas at the Chechopyas at the Anger and the Chechopyas at the Chechopy cilled Angeles (White many Thems dwelt that were Sorcerers and Idolaters) fell fuddenly to in amount ruine, fo as a great part thereof was rayled up and carried away , and many of the Indiani find- som . 40 thered, and that which feemes incredible (yet testified by men of credit) the earth that was ruinet and to beaten thowne, did runne and flide voon the Land for the space of a league and a halfe asit had beene water or wate holten, foas it stopt and filled vp a Lake and remayned to spread agential ouer the whole Countrie.

edyan si Walandi Deriva

è. I I I I. Of Metals in the Indies and especially of the Gold and Silver, and Quick silver.

Ecals are (as Plants) hidden and buried in the bowels of the Earth, which have fome Meals grow as conformitie in themselves, in the forme and manner of their production; for that we plants, see and diffeouer even in them, branches, and as it were a bodie, from whence they grow and proceede, which are the greater veines and the leffe, fo as they have a knitting in and proceeds, which are the greated vertices and, the telle, as as trey make a metring in themselves; and it feemes properly that their Minerals grow like vertor Plants, not that they have any involved regenties, the being only proper to Plants; but they are engendered in the bowels of the tarth, by the vertue and force of the Sunne and other Plants, and in long contimance of time, they increase and multiply after the manner of Plants. And even as metals bee plants hidden in the earth, fo wee may lay, that plants bee high Creatures fixed in one place, 60 whose life is maintayned by the nourishment which Nature furnisheth from their first beginning. But lining Creatures furpsile Plants, in that they have a more perfect being; and therefore Animalis. haue neede of a more perfect foode and nourishment; for the search whereof, Nature hath given them a mooning and reeling to discouer and discerne it. So as the rough and barren earth is as a Subflance and nutriment for metals; and that which is fertile and better featoned a nourithment

for Plants. The same plants serve as a nourishment for living creatures, and the plants and living creatures together as a nourishment for men, the inferiour nature alwayes serning for the mainte. nance and fuftentation of the superiour, and the lesse perfect yeelding vnto the more perfect. whereby wee may fre how much it wants, that gold and filter and other things which men fo much efteeme by their couetouinesse, should bee the happinesse of man, whereunto hee should tend, feeing they bee fo many degrees in qualitie inferior to man, who hath beene created and made onely to be a lubiect to ferue the universall Creator of all things, as his proper end and perfeet reft; and to which man, all other things in this world, were not propounded or left, but to

The divertitie of metals, which the Creator hath that up in the closets and concavities of the earth, is fuch, and fo great, that man drawes profit and commoditie from every one of them, Some serve for curing of diseases, others for armes and for defence against the enemies, some are for ornament and beautifying of our persons and houses, and others are fit to make vessels and L. ron-workes, with divers famions of inftruments, which the industrie of man hath found out and put in practice. But about all the vies of metals, which be simple and naturall the communication and commerce of men hath found out one, which is the vie of money, the which (as the Philosopher (aith) is the measure of all things. And although naturally, and of it selfe, it beebut one onely thing, yet in value and estimation we may fay, that it is all things. Money is vnto vs as it were, meate, clothing, house, horse, and generally whatsoever man hath need of. By this meanes all obeyes to money, and as the Wifeman faith, to finde an invention that one thing to should be all. Men guided or thrust forward by a naturall instinct, choose the thing most durable and most maniable, which is metall, and amongst metals, gave them the preheminence in this invention of money, which of their nature were most durable and incorruptible, which is filter and gold. A Wifeman faid, that what a father doth to marry his daughter well, is to give hera great portion in marriage; the like hath God done for this Land fo rough and labourfome, giuing it great riches in mynes, that by this meanes it might be the more fought after. At the west Indies then there are great store of mynes of all forts of metals, as Copper, Iron , Lead, Tinne, Quick-filter, Silver, and Gold: and among ft all the Regions and Parts of the Indies, the Realmes or Permabound most in these metals, especially with Gold, Silver, Quick-silver, or Mercurie, whereof they have found great flore, and daily discouer new mynes. And without doubt, ac. 20 cording to the qualitie of the earth, those which are to discover, are without comparison, farre more in number then those which are yet discovered; yea, it seemes that all the Land is fowed

with these metals, more then any other in the world that is yet known vnto vs. or that ancient

Writers have made mention of.

are not imployed at the fed them. 64. Chap.3. Plin.lib.5. de Eufeb. lib.8. de prepar. esane.

Of the qualities The reason why there is to great abundance of metals as the Isaber (effectally at the well of and manered for James 1, and the well of the Centeror, who had imparted his girts as it pleated him the controller of the actual that the center of the cente writes, faying, that gold, filter, and metals, grow naturally in land that is most barren and vnall these metals fruitfull. And wee fee, that in Lands of good temperature, the which are fertile with graffe and fruits, there are feldome found any mynes; for that Nature is contented to give them yigour to 40 bring forth fruits more necessarie for the preservation and maintenance of the life of beatts and men. And contrariwise to lands that are very rough, drie, and barren (as in the highest Mountaines and inacceffible Rocks of a rough temper) they finde mynes of filuer, of quick-filuer, and of gold, and all those riches (which are come into Spaine fince the West Indies were discovered) have beene drawne out of fuch places which are rough and full, bare and fruitleffe : yet the tafte of this money, makes these places pleasing and agreeable, yea, well inhabited with numbers of people. And although there be, as I have faid, many mynes of all kindes of metals as at the Indies, yet they wie none but those of gold and filter, and as much quick filter as is necessarie to refine their gold and filuer. They carry Iron thither from Spaine and China. As for Copper, the Indians have drawne of it, and vied it for their armes, the which were not viually of Iron, but so of Copper. Since the Spaniards possessed the Indies, they have drawne-very little, neither doe they take the paines to feeke out these mynes, although there bee many bufying them selues in the fearch of richer and more precious metals, wherein they spend their time and labour. They we no other metals, as Copper, and Iron, but onely that which is sent them from Spaine, or that which remaines of the refining of gold and filter. Wee finde not that the Indians in former times vied gold, filter, or any other metall for money, and for the price of things, but onely for ornament, as hath beene faid, whereof there was great quantitie in their Temples, Palaces, and Tombes, with a thouland kindes of veffels of gold and filuer, which they had. They vied no gold nor filuer to trafficke or buy withall, but did change and trucke one thing for another, as Plin. lib. 33.63. Homer and Plinie report of the Ancients. They had some other things of greater effeeme, which 60

went currant among it them for price, and in stead of coine : and vnto this day this custome con-

times amongst the Indians, as in the Prouinces of Mexico, in stead of money they vie Cacao,

(which is a small fruit) and there with buy what they will. In Pers they vie Cocs, to the same end (the which is a leafe the Indians effectme much) as in Paraguay, they have stamps of Iron for

No money of

60 Now we will shew how they discouer the mynes of Silver, their veines, rootes , and begin- Of the Silver brightnesse, beautie, and lound, the which is cleere, and agreeable, for the colour is more confor-

coine , and cotton wough in Saint Groot, of the Sierre. Pinally, the manner of the Listine trafficke, and their buying and telling, was to exchange, and give things for things; and although there were great Marts and famous Faires, yet had they no neede of money, not of Brokers, for that every one had trained what he was to give in exchange for every kinde of interchandife. Since the Spaniards entred, the Indians have vied gold and filter to buy withall and in the beginning there was no coine; but filuer by weight was their price and money; as they report of gining success. Since, for a greater benefit, they have forged coloress Mexico and Pers, yet Plin, lib. 33.4.4. was this day they have not in the West Lastes coyned any money of Copper or other metalt but onely of filter and gold : for the richnelle of that Countrie bath not admitted nos received to fuch money as they call bullion, nor other kindes of alloy, which they vie in Italia, and in other

Prouinces of Europe; Although in fome llands of the Indies, as Saint Dominique, and Pers Ricce, they vie coine of leather, which is fquare, the which are current onely in those llands ; haming Coine of lea little filuer or gold. I fay little, although there be much; for that no man digges it and refines in there. But for that the riches of the Indies, and their manner to labour in the mynes, confifts of gold, fitpur, and quick-filter, I will speake something of thele three metals, beating the rest for bustime. r, and quica-much, a was a sath been alwayes held the most excellent; and wish reason, Of gold which

being the most durable and incorruptible of all others; for fire which confluines and disminisher they digge and the reft, amends it, and brings it to perfection. Gold which hath often passed through the fire, refine at the keepes his colour, and is most fine and pure; which peoperly is called (as Plinie faith ? Obrife, 20 whereof the Scripture makes to often mention and vie, which confirmeth all other metals if as whereor the scripture mans to white gold, nor yet built it, neither is it eater, nor grow- Plin, lib. 33. 6.16 ethold, And although his flibstance and body bee firme sad fold; yet doth it yeeld and bow wonderfully; the Beaters and Drawers of gold know well the force it hath tobee drawne one without breaking. All which things well confidered, with other excellent properties, will give men of judgement to vnderstand, wherefore the holy Scripture doth compare Charitie to gold,

To conclude, there is little neede to relate the excellencies thereof to make it more definable. For Cant. 2. the greatest excellencie it hath, is to be knowne (as it is) among it men, for the supreme power Pfal. 67. and greatnesse of the World. Comming therefore to our fubiet; at the falles there as great a. 3. Reg. 6. bundance of this metall, and it is well knowne by appround Histories, that the highest of Pers did 30 not content themselves with great and small vessels of gold, as Pots, Cups, Goblets, and Flagons; yea with Kowles or great Veffels, but they had Chaires alfo, and Litters of maffie gold; and in their Temples they had fet vp mayine Images of pure gold, whereof they finde there yet at Mexico, but not fuch those as when the fift Conquient came into the operand the other King-dome, who found great treasure, and without doubt strett-wis mark incre hidden in the earth

by the Indians. It would feeme ridiculous to report that they have made their horseshoots of filter for want of Iron, and that they have pand store bundred cross nei for a bottle of same; and other flarage things; and yet in truth this hatti compete pafe; yea and greater matteria: They See before in draw gold in thoic parts after three fores; or at the least; I have freme all there, yieds flowers. I, des Sones, erla levit. di elenv va v and in Herre 4 ther they finde gold in graines, in powlder, or in Rone. 40 The most famous gold is that of Caranana in Peru, and of Paldinia in Chille, for that is tifeth

with his alloy and perfection, which is twentie three Carrats and a halfe, and fometimes more. They make account likewife of the gold of Verague to be very fine. They bring much gold to Moster from the Philippine; and China, but commonly its weake and of bate alloy: Gold's commonly found mixt with Silar or with Copper; but that which is mixed with Silar or with Copper; but that which is mixed with Silar or commonly of every Carrast then that which is mixed with opport; If there a fift part of silar or commonly of every Carrast then that which is mixed with opport; If there a fift part of silar or commonly of every Carrast then that which is mixed with opport; If there a fift part of silar or commonly of every carrast the silar of silar or commonly of every carrast the silar of silar or commonly of every carrast the silar of silar or commonly of every carrast the silar of silar or commonly of every carrast the silar of silar or commonly of the silar of silar or commonly or com the light of the fire, then fine gold or fine filter. That which is incorporate with copper its commonly of a higher value. They refine powldred gold in basons, washing it in many waters, vne till the Sand falls from it, and the gold as most heavie remayneth in the bottome. They refine it 50 likewife with quick-filuer and ftrong water, for that the allum whereof they make this water

hath the vertue to leparate gold from droffe, or from other metals. After it is purified and motten, they make Bricks or small Barres to carry it vnto Spaine; for being in powlder, they cannot transport it from the Indies, for they can neither custome it, marke it, nor take fay, wntill it bee molten. In the fleet where I came, which was in the yeere 1585, the declaration of the firme Land was of twelue Caffons or Chelts of gold, every Caffon at the leaft weighed foure Arobes, that is a hundred weight; and a thouland fiftie and fixe Mates from new Spaine, which was for the King onely, belides that which came for Merchants and private men being regulared; and much that came vnregistred. This may suffice touching the gold of the Indies, and now wee will

nings whereof lob speakes. And first I will fay, that the reason why they give silver the fecond at the ladies. place among all other metals, is, for that it approacheth neerer to gold then any other, being more Chap. 5. durable and leffe indamaged by the fire, and more mallable then any other: yea it pateth gold in

mable and refembling the light, and the found more piercing, more linely, and more delicate. The mynes of faluer are commonly found in Mountaines and high Rocks very defart, although they have fornetimes beene found in Playnes and Champaines. There are two different kindes, the one they call fireging, the other fixed and feeled. The fireging, are pieces of metall found in creraine places, the which drawne away, there is no more found. But the fixed veines, are those which have a continuance in depth and length, like to great branches and armes of Trees; and when they finde any one of them, they commonly finde many in the fame place. The manner to purge and refine filter which the Indiana have vied, was by melting, in diffolining this made of me. tall by fire, which casts the earthly droffe apart, and by his force separates Siker from Lead. Tin from Copper, and other metals mixt. To this end they did build fmall Furnaces in places where as the winde did commonly blow, and with Wood and Cole made their refining, the which Furnaces in Peru they call Guayras . Since the Spaniards entred, befides this manner of refining which they wie to this day, they like wife refine filter with quick-filter, and draw more by this meanes then in refining it by fire. For there is some kind of filter metall found which can by no meanes be purged and refined by fire, but onely with quick-filter. But this kinde of metall is common-ly poore and weake, the which viually they finde in greatest abundance. They call that poore which yeelds leaft filter, and great quantitie of other metall, and that rich which yeelds most file uer. It is ftrange to foe, not onely the difference betwixt the refining of metall by fire, and without it by quick-filter, but also that some of these merals, which are refined by the fire, cannot well be molten with any artificiall winde, as with bellowes; but when it is kindled and blowne with the naturall aire, or naturall winde. The metall of the mynes of Porce is easily refined with bellowes, and that of the mynes of Potesi cannot bee molten with bellowes, but onely by the breath of their Guerras , which are finall Furnaces upon the fides of the Mountaines , built exprefly where the winde lies, within the which they melt this metall; and though it be hard to yeeld a reason for this difference, yet is it most certaine and approved by long experience : so as the greedie defire of this metall to much valued amongst men, hath made them seeke out a thoufand gentle inventions and devices, whereof we will hereafter make mention. The chiefe places of the Indies from whence they draw filter, are new Spaine and Pern; but the mynes of Pern

farre furnifie the reft : and amone it all others of the World, those of Potent.

Different effects of prificial and natural winds Potoris described .: Lany

Of the Mount The Mountaine or Hill of Potozi fo famous, is lituate in the Province of Chareas, in the King-

taine or Hill of dome of Perm, diffrant from the Equinochiall towards the South, or Pole Antartike, one and Potent, and the twentie degrees and two thirds : 10 as it falls under the Tropicke , bordering upon the burning difference and yet this Region is extremely cold, yea, more then old Caftie in the Kingdome of thereof, the cold space, and more then Flanders it selfe, although by reason it should be not or temperate, in regard of the height and elevation of the Pole where it is feated. The reason of this so cold a temperature, is the height of the Mountaine, whereas cold and intemperate winds continually blow, especially that which they call Thomakani, which is boistrous and most cold. It raines most commonly in June, July, and August. The ground and soile of this Mountaine is drie, cold, and very vnpleafant, yea altogether barren, which neither engenders nor brings forth any fruit, graffe, por graine ; it is naturally vnhabitable, for the intemperature of the Heaven, and the barrennesse of the Barth. But the force of filter, which drawes voto it the defire of all things, bath peopled this Monstaine more then any other place in all these Kingdomes, making it so fruitfull of all kindes of meaces, as there wants nothing that can be defired, yea, in great abundance; and although there be nothing but what is brought by carriage, yet enery place abounds fo with Fruit, Conferues, exquifite Wines, Silkes, and all other delicates, as it is not inferiour to any other part. This Mountaine is of colour darke red, and is in forme pleating at the first fight, resembling perfeetly the fashion of a Paulion, or of a Sugar-loafe. It exceeds all other Hills and Mountaines about it in height. The way whereby they afcend, is very rough and vneuen, and yet they goe vp on horle-back. It is round at the top, and at the foot it hath a league in circuit. It containes from the top to the bottom 1680, common yards, the which reduced to the measure of Spanish leagues, 50 makes a quarter of a league. At the foot of this Mountaine there is another small Hill that rifeth out of it, in the which there hath beene fomtimes mynes of metall dispersed, which were found as it were in puries, and not in fixed or continued veines; yet were they very rich, though few in number. This fmall Rock was called by the Indians, Guayna Potozi, which is yong Potozi; at the foot wherof begins the dwellings of the Spaniards and Indians, which are come to the riches and worke of Potaz, which dwelling may containe fome two lesgues in circuit, and the greatest traffick and comerce of all Perm is in this place. The mynes of this Mountaine were not digged not discovered in the time of their Ingua, which were the Lords of Peru, before the Spaniards entred, although they had digged and opened the mynes of Porco, neer to Potozi, diffant only fix leagues. An Indian called Gualpa, of the Nation of Chumbibilea, which is a Province of Cusco, going 60

one day comme for Venifon, passing towards the West whither the beast was fled, hee began to runne vp against the Rocke, which at that time was covered and planted with certaine Trees they call Quinns, and with thicke bushes, and as he strived to get vp a way which was somewhat rough and vnease, hee was forced to lay hold upon a branch, which issued from a veine of a

filter myne (which fince they have called Rich) which hee pulled vp , perceiuing in the hole or roote thereof, metall, the which he knew to be very good, by the experience hee had of the mynes of Pores: and after finding vpon the ground certaine pieces of metall, which lay broken and dispersed neere to this veine, being scarse well able to sudge thereof, for that the colour was fpoyled and changed by the Sunne and raine; he carried it to Porce to trie by the Guaran (which is the triall of metall by fire) and having thereby found the great riches and his happy fortune, he fecretly digged and drew merall out of this weine, not imparting it to any man, vatall that an Indian called Guarca, of the Valley of Xaura, which is voon the borders of the Citie of Kings. who remayning at Porce neere wheo Gualpa of Chumbibiled; perceived one day that hee made a To refining, and that his Wedges and Bricks were greater then fuch as were vitally made in chose

places : and alfo increating in his expence of apparell, having till then lived but bafely. For this resion, and for that the metall his Neighbour refined was different from that of Parce, hee thought to different this feeret; and wroughe fo, that although the other kept it as feeret as hee could, yet through importunitie hee was forced to carry him unto the Rocke of Potozi , haning enjoyed this rich treature full two moneths, And then Gridpa the Indian willed Guesca for his part to take a veine, which he had discourred neere to the rich veine; which at this day is cal-led the veine of Diego Contento, that was not lesse rich, but more hard to digge and to draw forth; and fo by agreement they divided betweene them the richest Rocke in the world. It chanced after; the Indian Guanoa finding fome difficultie to digge and draw forth his metall

20 being most hard, and the other Gualpa refusing to impart any of his myne vnto him , they fell at debate; fo as Guanca of Xaura grieued therewith, and with some other discontents, difcovered this fecret voto his Master called Villared a Spaniard, who then remayned at Porco. This Fillared defirous to vinderstand the truth , went to Posses , and finding the riches his Tanacona or feruant had discovered voto him, caused the Indian Guanca to be inrolled, vodertaking with him the faid veine, which was called Gentene, they call it Vadertaking, that is as much as to note and marke the myne, and so much ground in circuit for him, which the Law graunts vnto thole that discouer any myne, or vnto thole that digge them : by meanes whereof hauing discourred them to the luttice, they remayned Lords of the myne, to digge and draw forth the filter, as being their owne, paying onely their duties vato: the King; which is 30 a fife part. So as the first discouerie and inregistring of the mynes of Petasi, was the one and

twentieth of Aprill, in the yeere of our Lord 1545. in the Territorie of Porce, by the faid Fallarged a Spaniard, and Guaves an Indian. Prefently after they discovered another veine, which they called the Forme of Time, the which is very rich , although it be rough and very painfull to works in, the metall being as hard as fiint. Since the thirtie day of August in the lame yeere
1545, the veine called Mondiers was inrolled, and these are the soure principall veines of Poroce. They fay of the rich veine, the first that was discourred, that the metall layaboue the ground the height of a Lance, like vato Rocks, rayling the superficies of the Earth, like vato a crest of three nundred foot long , and thirteene foot broad , and that this remayned bare and vncouered by the deluge, this veine having refifted the violence and force of the water, as 40 the hardest part. The metall was forich as it was halfe filter, and this veine continued in his

bountie fiftie or threescore Stades (which is the height of a man) and then it fayled. Bresently after that the discouerie of Petozi was knowne in Pero; many Spaniards; and the most part of the Bourgeois of the Silver Citie, which is eighteene leagues from Potozi, came thither to take mynes : yea, there came many Indians from dinets Provinces, especially the Guayanderes of Porce, fo as within a short space it was the best peopled habitation of all the Kingdome. When as the Licenciate Pollo gouerned that Province, the which was many yeeres after the

discouerie of this Mountaine, they did euery Saturday enter a hundred and fiftie and two hundred thousand pieces, whereof the Kings fift amounted to thirtie and fortie thousand pieces; and for enery yeere a million and a halfe, or little leffe. So as according to that computation they did draw every day from this myne thirtie thouland pieces, whereof there came to the King for Every piece 50 his fift, fixe thousand pieces a day.

There is yet another thing to bee spoken of, to shew the riches of Potozi, that the account ttene Rials which hath beene made, was onely of filuer that was marked and customed. And it is well knowne in Peru, that they have long vied filuer in thefe Realmes , which they call Currant, which was neither marked nor customed. And they hold it for certaine which know these mynes, that in these dayes, the greatest part of filuer drawne at Potozi, was not customed, and this had course amongst the Indians, and much amongst the Spaniards, as I have seene continued to my time; fo as it may appeare, the third part of the riches of Potozi, yea the one halfecame not to light, neither was it customed. There is yet a more notable consideration, in that which 60 Plinie faith, they had digged a fifteene hundred pases in the myne of Bebelle; and that continu- Plin. lib. 23: c.f.

ally they found water, which is the greatest hinderance they have to draw forth their metall. But in this of Potozi, although they have digged two hundred stades or heights of a man in depth; yet did they neuer finde any water, which is the greatest happinesse of this Mountaine. But the mynes of Porce, whose metall is good and very rich , are at this day left for the discomliii 2

moditie of water, which they have found in their worke; for they are two insupportable las bours in fearching of the metall; first, to digge and breake the Rocks, and then to draw out the wrater all together. The first of them, that is, to cut through the Rocks, is paine enough; yea very hard and excessive. Finally, at this day the King receives for his fift yeerly, from the mynes of Peress, a million of filter, befides the wealth that growes by quick-filter, and other Royall prerogatures, which is a great treasure. Some men of judgement having cast up the accounts. fay, that what hath beene brought into the custome House of Possai, vnto the years of our Lord 1586, amounteth vinco a bundred shouland millions of pieces of Effay, whereof every piece is worth thirteene Rials and a fourth part, not reckoning the filter which hath beene carried a war without custome, or that hath beene entred in other Royall custome houses, or the filest that In hath beene wrought in the Countrie, which is not entred, the which is innumerable, although the first Registers of Entries are not so exactly kept as at this day; for that in the beginning and first difcoueries, they made their receit by Romans, so great was their abundance.

But by the instructions and remembrances of Don Francisco de Toledo the Vice-roy . in the yeere of our Samour Christ 1574, they finde seventie and fixe millions to that yeere : and from that veete to eightie five inclusive, it appeares by the Royall Registers, there were thirtie five millions more entred. They fent this accompt to the Vice-ray from Paret, in the yeere I have mentioned, being then in Perm; and fince the wealth that hath come from Perm by thip, hach amounted to much more. In that fleet where I came in the yeere 1, 87, there were eleuen millions transported in the two fleetes of Perw and Mexico, whereof two thirds were in that 20

of Pers, and almost the one halfe for the King.

This Rocke of Potozs, containes as I haue faid, foure principall veines, that is, the Rub veine, that of Comene, that of Time, and that of Mendieta, All thefe veines are of the Eaft part of the Mountaine, as looking to the Sunne rifing, for on the West part there is not any. The foresaid veines runne from North to South, which is from Pole to Pole. In the largest place they have fixe foot, and in the narrowest a span breadth. There are others of diners fashions that runne out of the faid veines; like as out of the great armes of Trees, there commonly forout forth lefe. Every veine hath divers mynes which are parts and portions of the same, distinct and diuided betwire diners Masters, by whose names they are commonly called. The great myne containes four corresponding to the least containes for containe foure. All these mynes are at this day very deepe. In the Rich myne they reckon seventie eight mynes, which are eightie yards deepe, or a hundred stades or height of a man; and in some places two hundred. In the veine of Comieno are source and twentie mynes, whereof some are seuentie or eightie stades deepe, and so of the other veines of this Mountaine. For a remedie to this great profunditie, they have invented mynes, which they call Seccabones, which are causs or vents made at the foote of the Mountaine, the which goe croffing till they incounter with the veines : for we must understand, that although the veines runne North to South, as hath beene faid, yet is it in declining from the top to the foote of the Mountaine, which may be as they believe by coniecture, about twelve hundred stades. And by this account, although the mynes extend in fuch a profunditie, yet there remaines fixe times as much space vnto the bot- 40 tome of roote, the which they fay, are most rich and aboundant, as the body and spring of all veines. Although vnto this day we have feene the contrarie by experience, for the higher the veine is to the superficies of the earth, the more rich they finde it : and the deeper it goes, the poorer it is, and of the bafer aloy. They then invented the Soccabons, by which they enter to worke in the mynes very eafily, with leffe charge, paine, and danger. They have eight foot in breadth, and a stade in height, the which they shut with doores. By them they drawe forth their metall very easily, paying to the proprietarie of the Secreben, the fift part of all Preinsa person the metall they draw forth. There are nine alreadie made, and others are begun. They were nine and twentie yeeres in making of one Soccabon, as they call it, of the venome that flowes from the rich veine. It was begun in the yeere 1550, the eleventh yeere of the discoverie, and 50 was ended in the yeere 1585, the eleventh of August. This Soccabon croffed the rich veine thirtie fine flades from the roote or fpring, and from thence where it met to the mouth of the myne, were a hundred thirtie five stades. So as they must descend all this depth to labour in the myne. This Soccation containes from his mouth vnto the veine of Crufero as they call it , two hundred and fiftie yards, in which worke were fpent nine and twentie yeeres, whereby wee may fee what great paines men take to draw filuer out of the bowels of the earth. They labour in thele mynes in continuall darknesse and obscuritie, without knowledge of day or night. And foralmuch as those places are neuer visited with the Sunne; there is not only continual darknesse, but alioan extreme cold, with fo groffe an aire contrarie to the disposition of man, so as, such as newly enter, are ficke as they at Sea. The which happened to me in one of their mynes, where 60 I felt a paineat the heart, and beating of the stomacke. Those that labour therein, vie candles to light them, dividing their worke in tuch fort, as they that worke in the day, rest by the night, and to they change. The metall is commonly hard, and therefore they breake it with hammers, fplitting and hewing it by force, as if they were flints. After they carry up this metall

Intolerable paines and darknelle in the Mynes, and if in the Mindes farte more intolerable remay-

upon their shoulders, by Ladders of three branches, made of Neats leather twisted like vicces of wood, which are croffed with states of wood; so as by every one of these Ladders they mount and descend together. They are ten stades long a piece : and at the end of one beginnes another of the fame length, every Ladder beginning and ending at plat-formes of wood, where there are feates to reft them, like vnto galleries, for that there are many of these Ladders to mount by one at the end of another. A man carries ordinarily the weight of two Arrabes of Euery Atabe is metall vpon his shoulders, tied together in a cloth in manner of a skip, and so mount they three 25, pound, and three. He that goes before carries a candle tied to his thumbe: for (as it is faid) they have no light from Heauen, and so goe they up the Ladder holding it with both their hands, to nount so great a height, which commonly is aboue a hundred and fiftie flades : a fearfull thing, and which breedes an amazement to thinke voon it, fo great is the defire of Silver, that for the game thereof, men endure any paines. And truly, it is not without reason, that Plinie treating of this fabriect, exclaimes and layes thus, Wee enter even into the bowels of the Earth, Plin in comm and goe busing after riches, even to the place of the dammed. And after in the same Booke her ib 33, 19.6. faith : Those ibat feeke for metals , performe workes more then Gients , making boles and caues in the taitin : Louis sons seeze for mesaus, performe workes more some sons; making overs and causes in the depth of the Earth, pareting Mountainst so deepe by the light of Cardles; whereas the day and the night are able; and an many mount is they see no day. So as often the walls of their mynes fall, sons. night are able, and as many moments toey jee no any. So as a given toe wall of them mynes jall. I most stering many of them that labour therms. And afterwards hee addes, They piere the bard Rective with bammers of Iron maighing one hundred and fiftie passed, and draw out the metall upon their with bammers of Iron maighing one hundred and fiftie passed, and draw out the metall upon their polantials, thereing has and night, one delinering his charge to another, and all in dark welfs, onely the last fees the light: with bredges and Hammers they breaks the Einst, how hard and firong former, for the bunger of gold is yet more fharpe and firong. The veines as I have faid, where they finde filter, runne betwixt two Rocks, which they call How they re-

The Chafe, whereof the one is commonly as hard as fline, and the other foft and easie to breake. fine the metall This metall is not always equall, and of the fame bountie, for you shall find in one and the fame of filter.

This metall is not always equall, and of the fame bountie, for you shall find in one and the fame of filter, which they call Carilla, or Tacana, from which they draw [hap-amuch filter : and another is poore, from whence they draw little. The most rich metall of this Mountaine, is of the colour of Amber, and the next is that which inclines to blacke. There is other fomewhat red, and other of the colour of alkes; finally, of divers and fundrie colours, which

30 feeme to fuch as know them not, to bee finnes of no value. But the myners doe prefently know his qualitie and perfection, by certaine fignes and small raines they finde in them. They carry all this metall they draw out of these myses, you fasting sheeps, which force them as Asset to array it to the Mills; the reinfest metall is refused by melting in those small Furnaces, which they carry it to the Mills; the reinfest metall is refused by melting in those small Furnaces, which they call Guerras, for that is most leadie; by reason whereof ; it is most subject to melt, and for the better melting thereof, the Isdians calt in a matter, they call Soroche, which is a metall full of Lead. The metall being in their Furnaces, the filth and earthie droffe, through the force of the fire, remaints in the bottome, and the Silner and Lead mele 3 to as the Silner feeinmings you the Lead, vntill it bee purified; then after they refine the filter many times, after this manner of melting. They have viually drawne out of one Quintall of metall, thirtie fortie and fiftie bieces 40 of filter, and yet I have feene fome most excellent that have beene shewne me, where they have

drawne in the melting two hundred, yea two hundred and fiftin pleses of filter of a Quincall of metall; a rare wealth, and almost incredible, if we had not seene the triall thereof by fire, but metall; a tare wented, and among accounts in that which yields two, three, fine, or fixe pieces, or little more. This metall hart commonly little Lead; box is drie, said therefore they cannot refine it with fire. And for this reason in Proces, there was great flose of these poore metals, whereof they made no great account, but were rejected like flraw, and at the skinn of the good metall, vntill they found meanes to refine it by quick-filter , whereby the skim they called Ometan, vicin tray como menassa remiera oy quice-moter; wineteey, nor-samm rany cance oy quiebe was of great profit, for the quick-faller by a frange and wonderfaller propertie, parifies the filter, and is app for their metals which are drie and poore, wherein they confume left quick-fil-titure, and is app for their metals which are drie and poore, wherein they confume left quick-fil-So uer then in the richer : for the richer they are, the more need of quick-filter they have. At this

day the most vivall manner of refining in Potoni, is by quick-filter, as alfoin the mynes of Cacasecus, and others of new Spains. There were in old time upon the fides and tops of Pasaza, aboue fixe thousand Guerra, which are small Furnaces where they melt their metall, the which were nxe tnomano oseysus, which are the should by nighty carfing a light afaire off like a flam of placed like lights (a pleafant fight to behold by nighty carfing a light afaire off like a flam of free. But at this day there are not about two thouland, for that (as I haus faid) they will likely melting, but refine it by quick-filter, the which is the greatest profit. And for that the properties of quick-filuer are admirable; and that this manner of refining of filuer is remarkable, I will discourte of Quick-filuer, of the Mynes and Worke, and what is requisite for that subject.

Quek-filuer, fo called by the Lainer, for that it runnes and flides fuddenly from place to place, 60 among it all other metals hath great and wonderfull vertues. The first is, although it bee a true metall, yet is it not hard, neither hath it any certaine forme nor fubfillance like to other metals, but is liquid, not like vntogold and filter molten, but of his owne proper nature; and although it be a liquor, yet is it more heavie then any other metall : and therefore all others fix im about and finke not to the bottome, being more light. I have feene two pounds of Iron put into a

Sympathic with gold.

barrell of quick-filter, the which did fwimme about like vnto Wood or Corke vpon the Wa-Plm. 1.33. c.6. ter. Plonie giues an exception hereunto, faying, That gold alone doth finke and not fwimme aboue it. I haue not feene the experience; but it may bee this growes, by reason that quickfilter by nature doth intiron gold, and couers it, which is one of the most important properties it bath; for it joynes with gold in a strange manner, it seekes it where it lyes, and innirons it in such fort, as it doth diftinguish and separate it from any other body or metall wherewith it is mixt; for this reason such take gold as will preserve themselves from the dangers and discommodities of quick-filuer. They have vsed a remedie to those (in whose eares they had out quick filuer, to cause them to die secretly) to put little plates of gold into their eares (for put quick thurr, to came to the party of the control and after they drew out thefe plates all white to with the quick-filter, it did flicke vnto them. Being one day at Madril, I went to fee the with the quick-iner, it on make vince time. Doing one way a conserve, a went to let the exquirite workes which Learne de Trees, (a rate worke-man of Miller) made for Saint Learne rence the Royal, it was my hap to be there one day, when as they gilded certaine pieces of a countertable of braffe; which is done with quick-filuer; and for that the fume of Mercurie is mortall, he told me that the worke-men preserved themselves from this venome, by swallowing a double Duckat of gold rolled vp; the which being in the stomacke, drawes vnto it all the quick-filter that enters in fume by the Eares, Eyes, Nostrils, and Mouth, and by this meanes freed themselves from the danger of quick-silver, which the gold gathered in the stomacke, and after cast out by the excrements: a thing truly worthy of admiration. After the make, and are purified and purged gold from all other metals and mixtures, hee is likewife 20 feparated from the gold his friend by the heate of the fire, the which purifies it from all quick-Plin.1.33.6.6, filuer. Plinie layes, that by a certaine arte and invention they did separate gold from quickfilter. It seemes to me the Ancients had no knowledge to refine filter by quick-filter, which at this day is the greatest vie, and chiefe profit of quick-filter; for that he sayes plainly, that mick-filter iownes with no other metall but with gold; and when hee makes mention of refining of filuer, hee speakes onely but of the manner of melting; whereby wee may inferre that the Ancients had no knowledge of this fecret. In truth, though there be a league and fimpathy betwixt gold and quick-filuer, yet where as the Mercurie findes no gold, it ioynes with filuer, though not in the like manner as with gold; but in the end, it doth clenie and purge it ther, stough not in the intermental as with gous; out in the time, it contactent and purge it from Earth, Copper, and Lead, among fifthe which the filter growes, without any neede of fireto melt it; yet must they wis fire to sparate it from the filter, as I will then therefore. Quick-filter holds no account of other metals, but of Gold and Silver; but contrariwite, it doth corrupt them, force and confume them, and flyeth from them as much as may bec. The which is likewife admirable, and for this carefe they pat it in earthen veffels, or in beafts skins, For if it bee put in veffels of Copper , of Iron , or other metall , it prefently pierceth and corrupts them. And therefore Plinie calletivit the poyfon of all things, for that it confirmes and spoiles all. Wee finds chick-silver in the graves of dead men, which after it hath confirmed the bodies, comes forth pure and whole. There hath beene likewise found in the bones and marbodies, comes form pure and winute, a pretriant neural meets at the control of th What comman percent our wife were comperfilles gother mortall a creature. It his want the propertie, which is, to runne and make a humoried boulind (mall disps.) wheredone one is loft, bee they never for little, bot they returne
curry ways to him lugars. It is almost incorposible; haung nothing in a manner that may
continue at. And therefore Plinic about the exemplifiers. It hash yet another propertie, that althougher doch leparate Gold from Copper, and sill other metals; yet they that will gild Copper, Braffe, or Silver, wie quickefilmerate the meanes of this vinion; for with the helpe thereof ther ellaborates. Amongst all the wonders of this drange liquor that feemes to mee most worthy oblemation, that although it bes the weightieft thing in the world, yet is it connected into the lightest of the world, which is imouke, and fuddenly the fame imouke which is fo light ashing, turnes againe into so heanica substance, si is the proper house of quick-siher, where into it is dissoluted; for this simulte encountring the install on high, being a solid body, or comming into a cold Region, fuddenty it thickens and is converted into quick-filter, and if you fer bim once againe to the fire, he doth likewise returne into smozke; to be refolled againe m-

Of the place filuer, and how they discouemynes in Gu-Chap.II.

Dick-filter is found in a kinde of flone, which doth likewise yeeld Vermillion, which the Ancienta called Musiam, and at this day they call the Images of crystall Miniades, which are painted with quick-filter. The Ancients made great account of this Ministra or Vermillion. holding ic for a facred colour, as Plinie reports, faying, That the Romans were accustomed to paint the face of Inpuer, and the bodies of shofe that triumphed in Ethiopia: yea, their Idols and their Gravernours likewife had their faces coloured with this Minimi. And this Vermillion was 60 so effected at Rome (which they brought onely from Spaine, where they had many pits and mynes of quick-filuer, which continue there to this day) that the Romans fuffered it not to be refined in Spaine; left they should steale some of it, but they carried it to Rome, sealed up in a masse as they drew it out of the myne, and after refined it. They did yearly bring from Spaine, especially

from Andalufie, about ten thousand pound weight, which the Romans valued as an infinite treasure, I have reported all this out of that Author, to the end that those which doe see what passeth at this day in Pers, may have the content to know what chanced in former ages, among the mighrieft Lords of the world. Ispeake for the Inguas Kings of Pers, and for the natural Indians thereof, which have laboured and digged long in these Mines of Quick-filter, not knowing what Onck-filter was, feeking onely for Cinabrium or Vermillion, which they call Limps, the which they efteeme much, for that fame effect that Plinie reports of the Romans and Ethiopians, that is, ropaint the face and bodies of themselves and their Idols : the like hath beene much practifed by the Indians, especially when they went to the warres, and wie it at this day in their feafts no and dancing, which they call slubbering, supposing that their faces and visages so slubbered, did much terrifie, and at this day they shold it for an ornament and beautifying; for this cause there were strange workes of Mines in the Mountaines of Guancavilca, which are in Peru. neere to the Citie of Guamangua, out of the which they drew this Mettall it is of such a manner, that Labininthe

if at this day they enter by the caues or Soccabones, which the Indians made in those dayes, they loole themselves, finding no passage out : but they regarded not Quick-filter, which naturally is in the same substance or mettall of Vermillion, neither had they knowledge of any űch matter. The Indians were not alone for folong a time without the knowledge of this treasure, but

likewife the Spaniards, Who vntill the yeare 1566, and 1567. (at fuch time as the licentiate Ca-Hre governed in Peru) discourred not the Mines of Quick-filter, which happened in this manner. Her governed in Persymptoserre in our the Anties of Concessioner, which nappened in this mainter.

Of A man of indepenent called Menrique Guerre, a Portugal borne, hairing a piece of this coloured Mercall, as I have faid, which the Indianic call Limpi, with which they paint their faces, as he found, beheld it well, found it to be the fame which they call Vermillion in Cafide : and for that hee

knew well that Vermillion was drawne out of the fame mettall that Quick-filmer was, he coniectured theie Mines to be of Quick-filuer, went to the place whence they drew this Mettall. to make triall thereof. The which he found true, and in this fort the Mines of Paless. in the territorie of Guamanena, being discouered, great numbers of men went thither to draw out Quick-filuer, and to to carry it to Mexico, where they refine Silver by the meanes of Quick-filper, wherewith many are inriched. This Countrie of, Mines which they call Guarcanilea, was then peopled with Spaniards and Indians that came thicker, and come full to worke in thefe

then peoples with a passaged and summer can came uniter; and very plentiful! but of all their Mines of Qick-filler, which are in great mumbers, and very plentiful! but of all their Mines that which they call designed be Competed, or of Sairtis, it goodly and notable, it is a Rocket of most hard Stone, interfaced all with Qick-filler; and of the greatifie, that it is greated about fourescore Vares or yards in length, and fortie in breadth : in which Mine they have many pits, and ditches, of threefcore and tenne flades deepe, fo as three hundred men may well worke together; such is the capacitie thereof. This Mine was discoursed by an Indian of Amater of the brees, called Names and the Village of Acoria, the which Amader of Cabrers caused to be registred in his name. He was in finte spainst the Procurer fifcall, but the viulinite was adjude ed to him by fentence as the diffouerer. Since he fold his interest to another, for two hundred

40 and fiftie thouland Duraces; and afterwards chinking he had bindeceived in the lafe. he seem-menced an action against the buyer, being worth, at they lay, abote field industred thou-find Ducates; yea, lone helds to be worth a Milition of Gold, a are thing to fee a Mine of that wealth.

When as Don Francisco of Toledo governed in Pern, there was one which had bin in Mexico and observed how they refined Silver with Mercury, called Pero Fernandes de Valefco, who offree to refine Silver at Paseza, with Mercury : and having made triall thereof in the yeare 1571-performed it with credit; then began they to refine Silier at Potozi with Quick-filger, which they transported from Guancanelicque, which was a goodly helpe for the Mines; for by, the meanes of Qick-filuer they drew an infinite quantitie of mettall from thele Mines, whereof they made o no accompt, the which they called Scrapings. For asit hath beene faid, the Quick-filmer purifies the Silver, although it be drie, poore, and of base alloy, which cannot be done by melting in the

fire. The Catholike King drawes from it Quick-filger mines, without any charge or hazard, almost foure hundred thousand pieces of a Mine, the which are foureteene rials a peece, or little leffe, befides the rights that rife in Potozi, where it is imployed, the which is a great riches. They doe yearely one with another, draw from these Mines of Guancanilea, eight thousand quintals of

Let vs now ipeake how they draw out Quick-filuer, and how they refine Siluer therewith. The manner They take the flone or mettall where they finde the Quick-filter, the which they put into the how to draw fire in pots of earth well luted, being well beaten, fo as this mertall or stone comming to melt out Quick sil-6c by the heate of the fire, the Quick-filter feparates it felfe, and goes forth in exhalation, and they teline fometimes even with the smoake of the fire, vntill it incounters some body where it stairs and Siur. congeales, and if it paffe up higher, without meeting of any hard jubifance, it meunes up until chap.12. it be cold, and then congested, it tale downe againe. When the melting is fulfilled, they yet flon the nots and draw forth the mettall, fometimes flaving untill it he very cold, for it there

were in danger of death, or to be benummed of their limbes, or at the least to loofe their reeth. And for that they found an infinitie quantitie of wood, in the melting of these mettals, a Miller called Rodrigo de Tores found out a profitable invention, which was, to gather certaine fram which growes throughout all those Mountaines of Pern, the which they call Tebe, it is like vnto a hard reede wherewith they make their fire. It is a strange thing to see the force which this ftraw hath to melt and diffolue these mettals, the which fals out, as Plinie fales, that there is gold which melts more easily with the flame of straw, then with hot burning coales. They put the Onick-filuer thus molten into skinnes, for that it keepesbest in leather, and in this fort they lay it into the Kings fore-house, foom whence they carrie it by Sea to Arigna, and so to Potezi 10 by Land vpon their sheepe. There is yeerely spent in Posses for the refining of Mettals, about fix or feuen thousand quintals of Quick-filter, besides that they draw from the Plates (which is Force of Straw the earth or droffe of the first walkings of these Mettals, which are made in caldrons.) The Pinl33.c4 which plates they burne in their furnaces, to draw out the Quick-filter which remaines in them and there are aboue fiftie of these Furnaces in the Citie of Potoxi, and in Tarpara. The quantitie of mettals which they refine, (as some men of experience haue made the account) doth amount vearely to about three hundred thousand quintals; from the earth and droffe whereof being molt and refined, they may draw yearely about two thousand quintals of Quick-filter. We must vinderstand there are divers forts of mettals, for some yeelde much Silver, and waste little Orick-filuer: others confume much Quick-filuer, and yeelde little Siluer: and there are others which confume much Quick-filuer, and yeeldes much Siluer; and others that confume little 20 Quick-filbier, and also yeelde little Silver: and as men incounter in these mettals, so they grow rich or poore in their trafficke. Although tommonly the rich mettall yeeldes much Silver, and confumes much Quick-filuer; and likewise that which is poore, yeeldes little Siluer, and confumes as little Mercurie. They first beate and grinde the mettall very small, with hammers and

other inftruments, which beate this Stone like vnto tanne Mils, and being well beaten, they

fearce it in a copper fearce, making the poulder as small and fine, as if it were horse haire ; these

featces being well fitted, doe fift thirtie quintals in a day and a night; then they put the poulder

of the mettall into the veffels vpon furnaces, whereas they anoint it and mortifie it with brine,

Salt seperates the earth and filth, to the end the Quick-silver may the more easily draw the Sil-

putting to every fifthe quintals of poulder, fine quintals of Salt. And this they doe for that the 30

remained any fume or vapour, which should incounter them that should vnstop the pots, they

ner vnto it. After they put Quick-filter into a peece of Holland and preffe it out vpon the mettall, which goes forth like a dewe, alwaies turning and thuring the mettall, to the end it may

Before the invention of these furnaces of fire, they did often mingle their mettall with Ouick. Tiluer, in great troughes, letting it fettle fome daies, and did then mixe it, and ftir it againe, vntill they thought all the Quick-tiluer were well incorporate with the Siluer, the which contihued twentie daies and more, and at the leaft nine daies. Since they discouered (as the defire to get is diligent;) that to shorten the time are did much helpe: to incorporate Siluer the sooner with Quick-filter, they invented their furnaces, whereon they fet veffels to put in their mettall, 40 with Salt and Quick-filuer, and underneath they put fire by little and little, in furnaces made for the nonce vinderneath; fo as in five or fix daies the Quick-filter is incorporate with the Siluer. And when they finde that the Riercuin hath one in part, and affembled all the Shier, lea-uing pothing behinde, but is well imbured, as Spange dockwater, disusing it from the Earth, Lead, and Copper, with the which it is engendered. Then sizes they freper the illewise from the Quick-filner, the which they doe in this lore; they put the Metrall in Galdrons, and veffels full of water, where with certains wheeles they turns the mettall round about, as if they should make Multard, and to the earth and droffe goes from the Mettall with the water that runnes away : The Silver and Quick-filter as most ponderous remaining in the bottome : the Mettall which remaines, is like vuto Sand : then they take it out and wash it agains in great platters of 50 wood, or keelers full of water, still drawing the earth from it, vntill they leave the Silver and Quick-filter well clenfed. There flippes away also some small portion of Silver and Quick-filter with the earth and droffe, which they call malbings, the which they after wash againe and draw out the remainder. When the Silver and Quick-filver are clenfed and begin to fine and that there remaines no earth, they put all the Mettall into a cloth, which they ffraine out very forcibly. fors'all the Quick-filter paffeth out, being not incorporate with the Silter, and the reft remaines as a loafe of Silver, like to a marke of Almonds prefled to draw oyle. And being thus preffed, the remainder containes but the fixt part in Silver, and five in Mercurie. So as if there remaines a marke of threefcore pounds, ten are of Siluer, and fiftie of Mercurie. Of these markes they make pinnes (as they call them) like pine apples, or fugar loanes, hollow within, the which 60 they commonly make of a hundred pound weight; then to separate the Silver from the Quickfilter, they put it into a violent fire, which they couer with an earthen veffell, like to the mold of a Sugar-loafe, or vnto a capuchon or hood, the which they couer with coales, and fet fire vntoir; whereby the Quick-filuer exhals in smoake, the which striking against the capuchon of

parth, it thickens and diffils, like vnto the smoake of a pot couered; and by a pipe like vnto a limbecke, they receive the Quick-filter which diffils, the Silter remaining without changing the forme, but in weight it is diminished fine parts of that it was, and is spungious, the which is worthy the observation. Of two of these loaues they make one barre of Siluer, in weight fixtie five or fixtie fix markes: and in this fort they carrie it to the touch, cuftome, and marke. Silver drawne with Mercurie, is so fine, that it neuer abates of two thousand three hundred and foure- Fine Silver for fore of alloy, and ic is fo excellent, that the worke-men are enforced to alayit, putting fome worke mult be mixture to it, as they doe likewife in their Mints, whereas their monie is frampt. Siluer indures mixture to 11, 40 they do the may to call it) to be refined, the which if we consider well, it is a to hody framed where they grinde, fift;kneade, lay the leuen, and bake the Silver : befides all this.

they wash it and wash it againe; they bake it and bake it againe, induring the pettels, slices, they want to and want to again to a said finally, by the water and fire. I speake this, for that Mar 4. freing this art in Potors, I did confider what the Scripture speakes of the jult, Colabit confi per Eccles gabit quasi argentum: And that which they speake in another part. Since argentum pargamm Pilit. terra, purgatum feptuphum. So as to purific Silver, to refine and cloufe it from the earth and stone where it engenders, they purge and purifie it fouentimes; for in effect it passed their hands feuen times, yea oftner, vntill it remaines pure and fine; fo is it in the word of God, where the

uen times, yea ottner, which it remembes pure same, a contrast to write a close, writer the fooles must be purified, that fills linioy the beauenly perfection.

To conclude this fubiect of Silver and of Mettals, there remaines yet two things to fpeake of, To conclude this subject of singer and or naverally, an action and yet two tamps to appear of, gint to grade the one is of their Engins and Mils, the other of their elay or triall ! I have faid before, how the Mettall. they grinde their Mettall: for the receiuing of the Quick-filter, which is done with divers in- and of their ftruments and Engins, fome with Hories like vnto hand-mils, others like Water-mils; of which mill of Shaets two forts there are great numbers. But for that the water they doe vie commonly, is but of Chap. 13. raine, whereof they have not sufficient but three months in the yeare, December, Ianuary, and February: for this reason they have made Lakes and standing Pooles, which contains in circuite

about a thousand and fix hundred rods, and in depth three stades; there are seuen with their fluces: fo as when they have neede of any water, they raife vp a fluce, from whence sunnes a little streame of water, the which they stop voon holy-dayes. And when the Lakes and Pooles doe fill, and that the yeare abounds with raine, their grinding doth then continue fix or feuen 30 moneths: so as even for Silver sake mendenre a good year of raine in Potozi, as they doe in other places for bread. There are some other Engine in Tarapage, which is a valley three or source leagues diffant from Potozi, whereas there runnes a Riner as in other parts. The difference of thefe Engins is, that some goe with fix pestels, some with twelve, and others with sourceene. They grinde and beate the Mettall in Morters, labouring day and night; and from thence they

carry it to be fitted, vpon the bankes of the brooke of Potozi. There are fortie eight Watermils, of eight, ten, and twelue peffels, and foure on the other fide, which they call Tanacoeungno; in the Citie of Taranga, there are two and twentie Engins all vpon the water; befides there are thirtie goe with Horfes in Potozi, and many others in diners parts, fo great the delire of man

is to get Silver, which is tried by deputies appointed by the King.

40 To give the alloy to enerie piece, they carrier the pars of Sultury unto the Affay Mafter, who give to sury one his number, for that they earlie many at once, hee cuts a small peece of enerie give to sury one his number, for that they earlie many at once, hee cuts a small peece of enerie one, the which he weighs juffly, and puts them into a Crafes, which is a small vessell made of burnt bones beaten; after he placeth euery crufible in his order in the furnace, giuing them a violent fire, then the Mettall melteth, and that which is lead, goes into Imoake, and the copper and tinne diffolues, the Silver remaining most fine, of the colour of fire. It is a strange thing, that being thus refined, although it be liquid and molten, yet it neuer spils, were the mouth of the crushole turned downewards; but it remaineth fixed, without the losse of a droppe. The Affay Mafter knoweth by the colour and other figures, when it is refined, then doth he draw the anny matter knowcet by the toward and other types, when it is retined, then does no draw the first method in the first and weighes enery poece curiously, obseruing what enery one wants of 50 his weight; for that which is of high alloy, waftes but little, and that which is baker, diminisheth much; and according to the waste, he sees what alloy he beares, according to the which

he markes every bar punctually. Their ballance and weights are so delicate, and their graines so fmall, as they cannot take them vp with the hand, but with a small paire of pincers : and this triall they make by candle-light, that no ayre might mooue the ballance. For of this little the price of the whole barre dependeth. In trueth it is a very delicate thing, and requires a great

Of Emeralds. Pearles, Indian Bread, Trees, Fruites, Flowers naturall, and carried thither from Spaine.

T shall not be from the purpose, to speake something of Emeralds, both for that it is a precious thing, as Gold and Silver, as also that they take their beginning from Mines and Mettals, as Plinie reports. The Emerald hath bin in old time in great effectne, as the same Author writes, giuing it the third place amongst all Iewels and precious to

flones, that is , next to the Diamond and Peaule. At this day they doe not so much esteeme the Emerald, nor the Pearle, for the great abundance brought of these two forts from the Indiesone. ly the Diamond holds the principalitie, the which cannot be taken from it, Next, the Rubies come in price and other Stones, which they hold more precious then the Emerald. Men are for delirous of fingularities and rare things, that what they fee to be common, they doe not effeeme. They report of a Spaniard, who being in Italie when the Indies were first discourred, she wed an

A presty florie Emerald to a Lapidary, who asking him the value thereof, after he had well viewed it, being of an excellent luftre and forme, he prized it at a hundred Duckets; he then shewed him another greater then it, which he valued at three hundred Duckats. The Spaniard drunke with this difcourse, carried him to his lodging, shewing him a Casket full. The Italian seeing so great a num- 20 ber of Emeralds, faid vnto him, Sir, these are well worth a crowne a peace. The Kines of Mexia

co did much esteeme them; fome did vie to pierce their nostrils, and hang therein an excellent Emerald: they have them on the vilages of their Idols. The greatest store is found in the new Kingdome of Grenado, and Peru, neere vnto Manta and Port Vieil. There is towards that place How Emeralds a foile which they call, the Land of Emeralds, for the knowledge that they have of abundance to be t here : and yet vnto this day they have not conquered that Land. The Emeralds grow in stones like vnto Christall; I have seene them in the same stone, fashioned like a veine, and they freme by little and little to thicken and refine. I have feene fome that were halfe white, and halfe greene; others all white, and some greene and very perfit. I have seene some of the big-

nesse of a Nut, and there have bin some greater found : but I have not knowne that in our time 30 they have found any of the forme and bigneffe of the plat or Iewell they have at Genes . the which they effeeme (and with reason) to be a lewell of great price, and no relique; yet without comparison, the Emerald which Theophrasis speakes of, which the King of Babylon presented to the King of Egypt, surpasser that of Genes; it was four cubits long, and three broad, and they fay, that in Inpiters Temple, there was a needle or pyramide, made of foure Emeralds

fromes of fortie cubits long, and in some places foure broad, and in others two: and that in his time there was in Tirus in Hercules Temple, a Pillar of an Emerald. It may be (as Plinie faieth) it was of some greene stone, somewhat like the Emerald, and they called it a false Emerald. Church of cor. As some will say, that in the Cathedrall Church of Cordone there are certaine Pillars of Eme-

rakls which temaine fince it was a Mesquite for the Kings Miramamolins Moores, which reig- 40 ned there. In the fleete, the yeare one thousand five hundred eightie and seven, in the which I came from the Indies, they brought two chefts of Emeralds, every one weighing at the least foure Arobes, whereby we may fee the abundance they have.

Now that we intreate of the great riches that comes from the Indies, it were no reason to Of Pearles. forget the Pearle, which the Ancients called Marguerites, and at the first were in so great estimation, as none but royall persons were suffered to weare them : but at this day there is such

abundance as the Negres themselves doe weare chaines thereof; they grow in shels or Oysters, in eating whereof I have found Pearles in the middeft of them. Thele Oysters within are of the colour of heaven, very lively. In some places they make Spoones, the which they call Mother of Pearle. The Pearles doe differ much in forme, in bigneffe, figure, colour and polithing; so so likewise in their price they differ much. Some they call Aue Marace, being like the small grains of beades: others are Pater nosters, being bigger. Seldome fliall you finde two of one greatneffe, Plu lib 3, ea. 35. forme, and colour. For this reason the Komans (as Plinie writeth) called them Unions. When as they doe finde two that are alike in all points, they raise the price much, especially for eare-rings.

I have feene some paires valued at thousands of Ducats, although they were not like to Cleopatraes two Pearles, whereof Pluie reports, either of them being worth a hundred thousand Ducates, with the which this foolish Queene wonne a wager she had made against Marc Antony, to spend in one Supper aboue an hundred thousand Ducates, so at the last course sheedilfolued one of these Pearles in strong Vinegar, and dranke it vp. They say the other Pearle was cut in two, and placed in the Pantheon at Rome, at theares of the Image 62

They fish for Pearles in divers parts of the Indies, the greatest abundance is in the South Seas, Pearle filhings. neere vnto Panama, where the Ilands of Pearles be, as they call them. But at this day they finde greatest store, and the best, in the North Seas, the which is neere to the River of Hache.

C. H. A.P. 2. S. 5. Pettle-divers long-breathed Mays described, divers roles thereof. 052

did fee them make their filling, the which is done with great charge and labour of the poore flues, which dine fix, nine, yea twelne fadomest into the Sea, to feeke for Oyfters, the which commonly are fathened to the rockes and gravell in the Sea: they pull them vp, and bring them Manner there shone the water to their canoes, where they open them, drawing forth the treasure they have of, within them. The water of the Sea in this part is very cold, but yet the labour and toile is greatell in holding of their breath, fometimes a quarter, yea halfe an houre together, being under Long winded the water at their filling, and to the end these poore flaues may the better continue and hold flaues, their breaths, they feede them with drie meates, and that in Small quantitie, to as concrouncife makes them abitaine and fast thus against their wils. They imploy their Pearles to divers works. and they pierce them to make chaines whereof there is great flore in enery place. In the yeare of

10 our Lord 1881: I did fee the note of what came from the Inder for the King : there were eighteene Maces of Pearle, beisdes three caskets; and for particulars, there were twelue hundred threefore and foure Marks, and besides them the measures me pierced, which heretofore we would

They have (as we have hert) a proper name, whereby they note and fignific bread, which at Bread, and of Pers, they call Tanta, and in other places by another name. But the qualitie and fubfiance of the bread the Indians vie differs much from ours : for we finde nor they had any kinde of Wheat or Barley, nor any other kinde of graine which they vie in Emope to make Bread withall ! inflead whereof they vied other kindes of graines and rootes, among the which Mays holds the We call it alis first place, and with realon, in Castile they call it Indian Wheat; and in Italie they call it Turkey Vogitambeat

20 graine. And euen as W heate is the most common graine for the vie of man, in the regions of the old world, which are Europe, Afia, and Affrica: So in the new found world, the most common graine is Mays, the which is found almost in all the Kingdomes of the West Indies, as at Pern, new Spaine, in the new Kingdome of Granado, in Gantimalla, in Chille, and woon the maine Land. I doe not finde that in old time, in the Hands of Barlomente, as Cuba, Saint Dominique, lamaique, and Saint lean, that they vied Mays: at this day they vie much Tuca and Cacami, whereof we will presently intreate. I doe not thinke that this Mays is any thing inferiour to our Wheate, in frength nor fubitance, but it is more bot and groffe, and engenders more bloud, whereupon they that have not beene accultomed thereunto, if they extetoo much, they swell and become scab- How it growell bed. It growes vpon Canes or Reedes; enerie one beares one or two branches, to the which the

30 graine is faltened, and although the graine be bigge, yet finde they great flore thereof ; fo as in forme clusters I have told feuen hundred graines. They must plant it with the hand one by one, and not verie thicke ; it defires a hot and a moift ground; and growes in great abundance in ma- I have had it ny places of the Index. It is not firange in those Countries to gather three hundred Fassgair, or ripen reasons measures for one sowen. There is difference of Maylas there is of Wheate, one is great and by in my Gate very nourithing, another small and drieg which they call Moreche; the greene leanes and canes dea in Ifen. of Man, is a good foods for their Males and Horfes, and it forces them for flraw when it is dried : the graine is of more nourishment for Horses then Barley ; and therefore in those Countries, they vie to water their Hories before they eate, for if they frould drinke after, they would fwell as when they cate Wheate. Mays is the Indians bread, the which they commonly cate

40 boiled in the graine hot, and they call it More, as the Chinos and Ispanis care their Rice fodden with the hot water : fometimes they cate it baked, There is force Mars round and bigge as that of Lucaras, which the Spaniards care rofted as a delicate meat, and harh a better tafte then Buarbenfer, or rofted peafon. There is another kinde of eating it more pleafant, which is, to grinde the Mays, and to make small cakes of the flower, the which they put in the fire, and then bring them hot to the Table. In some places they call them Areps. They make also round bowles of this paste, and so trimme them that they continue long, eating it as a daintie dish.

They have invented at the Indies (for friandise and pleasure) a certaine kinde of paste, they doe make of this flower-mixt with Sugar, which they call Biscuits and mellinders. This May ferues the Indians, not onely for bread, but also for wine : for they doe make their drinke there-50 of, wherewith they are sooner drunke then with wine of Grapes. They make this wine of

Mays in divers forts and manners, calling it in Peru, Acua, and by the most common name of the Indies, Chiche. And the strongest is made like vnto Beere, steeping the graine vntill it breaks. Male & ftrong After they boile it in such fort, that it growes fo strong, as a little ouerthrowes a man. In Perm drinke made of they call this Sore, it is defended by the Law, for the great inconveniences that grow thereby, it, making men drunke. But this Law is ill observed, for that they vie it still; yea they spend whole daies and nights in drinking carowfes.

There is another mamier of making this Acres or Chiebs, which is to champe the Mays, and make a leuen thereof, and then boile it : yea the Indians hold opinion, that to make good leuen, ti must be champed by old withered women, which makes a man sicke to heare, and yet they doe drinke it. The cleridiest manner, the most wholesome, and that which least harmeth, is to roalt the Mays, which the most civill Indians doe vie, and some Spaniards, yea for physicke: chica good a For in effect they finds it a very whole tome drinke for the reines, to as you shall hardly finde gainst the any one at the Indies complaine of paine in the backe, for that they doe drinke of this Chicha. Stone.

The Spaniards and Indians, care this Mays boyled and roafted for daintineffe, when it is tender in the grape like milke, they put it into the pot, and make fauces that are good to eate. The buds of Mays are very fat, and ferue inftead of Butter and oyle : for as this Mays at the Indies terues both for men and beafts, for bread, wine, and ovle.

O'Tucas, cora- In forme parts of the Indies they wie a kinde of Bread they call Cagani, which is made of a cer-O Transpage Chart tains roote they call Trace. This Trace is a great and groffe roote, which they cut in small morand Sac Charts (els, they grate or scrape it, and then post it in a preffe to straine, making a thinne and broad cake thereof, almost like voto a Moores Target or Buckler; then dee they drie it : and this is the Bread they eate. It hath no taffe, but is healthfull and of good nourshment. For this reason we faid, being at Saint Dominicke, that it was the proper foode for great eaters, for that they to might eate much, without any feare of furfetting. They must of necessitie water this Cacase before they eate it; it is flarpe, and eafely watered with water or broath, wherein it is very good, for that it (wels much, and so they make Capirotades, but it is hardly steeped in Milke. Hony of Canes, or in Wine, for that these liquors cannot pierce it, as it doth Bread made of Wheate. Of this Cagani there is one kinde more delicate then any other, which is that they make of the flower called Xauxau, which they doe much efteeme in those parts. For my Juice of Casani part, I efteeme more a morfell of Bread, how hard and blacke foener. It is a ftrange thing that the invce or water that commeth from this roote when they firaine it, which makes the Cacani, is a deadly poifon, and kils any that drinkes thereof : but the fubflance that remaineth, is a very wholesome Bread and nourishment, as we have said,

There is another kinde of Taca, which they call Sweet, and hath not this poifor in the juyce:

those parts,

this is eaten in the roote boiled or roafted, and is good meate. Cagani will keepe long, and therefore they carrie it to Sea instead of Biscuit. The place where they vie most of this Bread, is at Wheat, why it the Handspot Barlowente, which are Saint Dominicke, Cuba, Port Ricco, lamaique, and some ogoweihnorin thers thereabouts; for that the foile of thefe Hands will neither beare Wheate, nor Mans; for when as they sowe Wheate, it comes up well, and is presently greene, but so vinequally, as they cannot gather it; for of the feede fowen, at one instant some is ipindled, some is in the eare, and fome doth but bud, one is great and another little, one is in the graffe and another in the graine : and although they have carried labourers thither, to fee if there were any tillage or Art to be yfed, yet could they finde no remedy for the qualitie of the earth. They carry Meale from new 30 Spaine or the Canaries, which is so mouth, that hardly can they make any profitable Bread . or of good taffe. The Wafer-cakes wherewith they fay Maffe, did bend like to wet paper by reafon of the extreame humiditie and beate which are joyntly in that Countrie. There is another extreame contrarie to this, which hinders the growing of Mays or Wheate in some parts of the Indies, as on the height of the Sierre of Peru, and the Provinces which they call of Colag. which is the greatest part of this Realme, where the climate is so cold and dry, as it will not fuffer any of these seedes to grow : instead thereof the Indians vie another kinde of roote, which they call Papas : these rootes are like to ground Nuts, they are small rootes, which castout many leaues. They gather this Papas, and dry it well in the Sunne, then beating it, they make that which they call Chano, which keepes many daies, and ferues for bread. In this Realme 40 there is great trafficke of Chano, the which they carry to the Mines of Potozi: they likewife eate of thele Papas boiled or roalted : there is one sweete of thele kindes, which growes in hot places, whereof they doe make certaine fawces and minced meate, which they call Lacro. To conclude, these rootes are the bread of that Land; so as when the years is good, they reioyce. much, for that oftentimes they freeze in the earth, fo great is the cold of that Region : they carrie Mays from the Valley or Sea-coast, and the Spaniards which are daintie, carrie likewise from the same places Wheate-meale, whereof they doe make good Bread, because that the Land

Belides Papas, which is the principall, there is Ocas, Tanococas, Camotes, Vatas, Xiquimas, Tuca, Cochacha, Cam, Totora, Mani, and an infinite number of other kindes, as the Patatres, which 50 grow at the in they care as a delicate and toothsome meate. They have likewise carried fruites to the Indies from these parts, the which prosper better there, then the Indian Plants doe, brought into Eurepe. There are other rootes that lerue them for dainties, as the Cochucho: it is a small sweete roote, which some proudle for more delight. There are other rootes fit to coole, as the Piquima. which is the qualitie very cold and moift, and in Summer it refresheth and quencheth the thirth; but the Papas and Ocas, be the chiefe for nourshment and substance. The Indians efteeme Garlike Of divers forus about all the rootes of Europe, and hold it for a fruite of great force.

call Concombres.Pines.oc

Seeing we have begunne with the leffer Plants, I might in few words, touch that which conand Pulles, and cernes Flowers and Pot-hearbes, and that which the Latines call Arbusta, without any mention of Trees. There are some kindes of these shrubbes at the Indier, which are of verie 60 good tafte. The first Spaniards named many things at the Indies with fuch Spanish names, as they did most resemble, as Pines, Concombrer, and Primes, although they be very different fruites to small fruits of thosewhich are so called in Spaine. The Pines, or Pine-aples, are of the same fashion and forme ontwardly to those of Castile but within they wholly differ, for that they have neither Apples,

nor scales, but are all one flesh, which may be eaten when the skin is off. It is a fruite that hath an excellent imell, and is very pleafant and delightfull in tafte, it is full of inyce, and of a fweete Pines, and flarpe tafte, they eate it being cut in moriels, and fleeped a while in water and falt. They grow one by one like a cane or stalke, which rifeth amongst many leaues, like to the Lillie, but fomewhat bigger. The Apple is on the top of euerie cane, it growes in het and moift erounds. and the best are those of the Ilands of Barlomente. I have seene in new Spaine, consernes of these Pines, which was very good. Those which they call Concombres, are no trees, but shrubbes. continuing but one yeare. They give it this name, for that some of this fruite, and the most part, is in length, and roundnesse like to the Concombres of Spaine: but for the rest they differ 10 much, for they are not greene, but violet, yellow, or white, neither are they thornie or rough, but pollished and euen, having a verie different tafte, and farre better then that of Spaine. for they have a sharpe sweete talte, very pleasant when it is ripe, yet is it not so sharpe as the Pine. They are very coole, full of liquor and of easie digestion, and in time of heate fit to refresh. They take away the rinde which is white, and all that remaines is meate. They grow ina temperate foile, and require watering. And although for the refemblance they call them Concombres, yet are there many of them round, and others of a different fashion : so as they have not the figure of Concombres. I doe not remember to have feene this kinde of fruite in new Spaine, nor at the lands, but vpon the Lanes of Pers. That which they call the little fruite of Chille, is of the fame fort, verie pleafant to eate, and comes neere the tafte of Cherries,

20 but in all other things it differs much; for that it is no tree, but an hearbe, which growes little and ipreads upon the earth, casting forth this little fruite, the which in colour and graines, resembles almost the Mulberie, when it is white and notripe, yet is it more rough and bigger then the Mulberie. They say this little fruite is naturally found in the fields of Chill, where I have seen of them. They fee it vpou Plants and branches, and it growes like any other shrub. Those which they call Pranes, are verily the fruits of trees, and have more refemblance then the reft to our Plumbs, But to returne to Pot-hearbs, I finde not that the Indians had any Gardens of divers Hearbes and Plants, but did onely till the Land in some parts for pulses, which they vie, as those which they call Frifeles and Palares, which serue them as our Lentils, Beanes, or Tares: neither haue I knowne that these Pulles, or any other kindes that be in Europe, were there be-30 fore the Spaniards entred, who carried Plants and Pulles from Spaine thither, where they now grow and increase wonderfully, and in some places exceede greatly the fertilitie of these parts. As if we speak of Mellons which grow in the Vallie of Tues, in Pers, whole roote becomes a stalk Palies, Melons

that continues many yeares carrying Mellons yearely, and they trimme it like vnco a tree; a carried out of thing which I doe not know to be may part of Spains. But that is more monitous of the Cat Hunger out thing which I doe not know to be may part of Spains. But that is more monitous of the Cat Hunger and their or I said to Pompions, and the greatness they have as they grow, especially those which channing better are proper to the Countrie, which they call Capalles, the which they care most commonly in these. Lent, boiled and trimmed with some other sawce. There are a thousand kindes of Calibas- These calibastes fer, some are so deformed in their bignesse, that of the midde cut in the middest and clen- feemeth. Gainfed, they make as it were baskets to put in all their meate for their dinner. Of the sp Genral care 40 leffer they make Vellels to eate and drinke in, and doe trimme them handlomely for ma. itid from the

They have not found at the West Indies an ickinds of Spices, proper or peculiar to them, as Of Airor Indies. Pepper, Clours, Cinamon, Nutmegs or Ginger, although one of our companie, who had transport. uelled much, and in diuers parts, told vs , that in the Defarts of the Hand of Iamaigne he had Chapao. found trees where Pepper grew. But they are not yet affured thereof, neither is there anie trade of these spices at the Indus. The Ginger was carried from the Indies to Hispaniela, and it hath multiplied fo, as at this day they know not what to doe with the great abundance they have. In the fleete the, yeare 1987, they brought 22073, quintals of Ginger to Senille: but the natural fpice that God hath given to the Welf Indice; is that we in Coffill call Indice Popper, and at so the lindies, Axi, as a generall word taken from the first Land of the Ilande, which they conquered. In the language of Cufco, it is called Vobs, and in that of Mexico, Chili. This plant in well knowne, and therefore I will speake a little, onely we must winderstand, that in old time it was much eftermed amongst the Indians: that they carried into places where it grew not, as a Mar-

chandise of consequence. It growes not voon cold grounds, as on the Sierre of Perm, but in hot Vallies, where it is often watered. There is of this Axi of divers colours, some is greene, some red, some yellow, and some of a burning colour, which they call Caribe, the which is extreamely sharpe and biting; there is another fort not so sharpe, but is so sweete, as they may eate it alone as any other fruit. There is some of it verie small and pleasing in the mouth, almost like to the smell of Muske, and is verie good. That which is sharpe and biting in this Axi, be the veines 60 and the grain onely; the reft is not : for that they eate it greene & dry, whole and beaten, in the pot, and in fawces, being the chiefe fawce, & all the spice they have at the Indies. When this Ani is taken moderately, it helps and comforts the stomack for digestion; but if they take too much, it hath bad effects, for of it felfe it is verie hot, fuming, & pierceth greatly, fo as the vis thereof is presudiciall to the health of yong folkes, chiefely to the foule, for that it prouokes to luft, They

vie Salt to temper this Axi, having great force to correct it, and so they moderate one with the other by the contrarietie that is in them. They vie also Tomaters which are cold and very wholesome. It is a kinde of graine great and full of inyce, the which gines a good tafte to fawce. and they are good to eate. They have generally throughout the Indies of this Indian Pepper, at the Hands, new Spaine, Paris, and all the reft that is discourred. And as Mays is the generall graine for Bread, fo Axi is the most common spice for sawces. The thing wherein was most resemblance, in my opinion, betwirt the Planes at the Indies.

trce.Cbap.21.

and those which the Ancients did celebrate, is the greatnesse of the leaves, for that these have them very great and coole. But in truth there is no more comparison not relemblance of the one with the other, then there is (as the Prouerbe faith) betwixt an Egge and a Chefnut. For first, the ancient plane carries no fruite, at the leaft, they made no account thereof, but the chiefest reason why they effeemed it, was, for the shadow, for that there was no more Sunne under a Plane than under a roofe. And contrariwife, the reason why they should regard it at the Indies , yea make great accompt thereof, is by reason of this fruite, which is very good; for they have little shade. Moreouer, the ancient Plane had the body so bigge, and the boughs so spread, that Plinie Plin. lib. a. cap. 1: reporteth of one Licinius a Romane Captaine, who with eighteene of his companions dined at ease in th'hollow of one of these Planes: and of the Emperour Caine Caligula, who with eleven of his ghefts feasted vpon the top of another Plane, where he made them a sumptuous banquet. The Indian Planes have neither fo great nor hollow bodies, not fo broad bouchs.

Pillib, 11. ca. 16. The leaves of the Indian Plane, are of a wonderfull bigneffe, and are, in a manner, fufficient to couer a man from the foote to the head. It is a Plant that makes a stocke within the earth, out 20 of the which forings many and fundry fiens and fprigges, divided, and not toyned together. These sprigges grow bigge, every one making a small tree apart, and in growing they cast forth these leaues, which are of a fine, greene, smooth, and great as I have faid. When it is growne to the height of a stade and a halfe, or two, it puts forth one onely bough of fruite, whereon sometimes there are great numbers of this fruite, and sometimes lesse. I have told vpon some of these boughs three hundred, whereof every one was a spanne long more or lesse, and two or three singers bigge; yet is there much difference herein, betwixt fome and others, they take away the rinde, and all the rest is a firme kernell and tender, good to eare, and nourishing. This fruite inclines more to cold then heate. They are accustomed to gather the boughes or clusters, as I have faid, to being greene, and put them into veffels, where they ripen, being well coursed, especially when there is a certaine hearbe mingled with it, which ferues for this effect, If they fuffer them to ripen on the tree, they have a better tafte, and a very good fmell, like to Campiffes or fweete Apples. They last almost all the yeare, for that there are atwaies your ones that grow out of this stocke; fo as when one ends, another beginnes to yeelde his fruite, the one is halfe ripe, and the other begins to bud answ, fo as one foogedes another, and the fruite continues the whole yeare. In gathering the cluster, they cut the forigge or stalke, for that it beares but one; and never but once but as I have said, the stalke remaines, and casts forth new sienes or stalkes, with it growes old and dies. This Plane continues many yeares, and requires much moniture, and a very hot ground. They put after at the foote of it, for the better entertaining thereof, and they make to imall groues and very thicke: the leafe is as broad as a sheete of Paper, or little lesse, and foure Section 1819 Although the Plane be the most profitable, yet that Cacao is most esteemed at Mexico, and the

Of Cacas and

then Almonds, yet more fat, the which being roufted hath no ill taffe. It is fo much effeemed amongfi the Indian (yes and among the Spaniards) that it is one of the richeft and the greatest traffickes of new Spaine: for being a drie fruite, and that keepes long without corruption, they carrie whole Ships loaden from the Bronince of Granting Mar. The last years an Eng & Pirat did burne in the Port of Guatules in never Spains, about a hundred thousand charges of Cacao. They vieit inflead of money, for with fine Cacaos they buy one thing, with thirtie another, and with so a hundred another, without any contradiction; and they wie to give it to the poore that beg for almes. The chiefe vierof this Cooto, is an adrinke which they call Chocholate, whereof they make great accompt in that Country, foolibly, and without reason; for it is loathsome to such as are not acquainted with it, having a skum or froth that is very upplealant to tafte, if they be not very well conceited thereof. Yet it is a drinke very much effeemed among the Indians, wherewith they feaft Noble men as they paffe through their Countrie. The tree whereon this fruite prowes, is of reasonable biguesse; and well fashioned, it is so tender, that to keepe it from the burning of the Stannt, they plant neere vnto it, a great tree, which feroes onely to shadowit, and they call it the minter of Cacao. There are places where they are like to the Vines and Oliuc trees of Spaine. The Promince where there is greatest abundance for the trafficke of Marchandis, 63 is Guatimalla. There growes none in Pers, but Cocal wherein they hold another great superfittion, which feemes to be fabulous. It is a kinde of Marchandife, by the which all their Markets and Faires are stade with great expedition. This Coca whereof they make fuch account is a small greene leafe, which groweth vpon small trees about a fadome high, and in hot and mostly grounds;

Coca in Perm, in which two trees they have great superstition. The Game is a fruite little lesse

eury foure moneths it caffs forth this leafe, which they call Trefmitte or Trement it requires ereat care in planting, being very tender, and much more to keepe it, when it is gathered. They lay it in order in long and narrow baskets, and fo lade their sheepe of the Gountry, which goe in troopes, with one, two, or three thousand baskets of this marchandise.

They bring it commonly from the Ander and vallies, where there is an extreame heate. and where it raines continually the most part of the yeare : wherein the Indians endure much lawhere it raines continuously the most party die; for that they goe from the Sierre and cold Of Marine The places to till and gather them in the Ander. Their vie is to carry it in their mouthes, chaw- nel Carreille. ing it, and fucking out the inice, but they fivallow it not. They lay it gives them great con- Anti- and conto rage, and is very pleafing vinto them. They willingly imploy their money therein, and vie it as ton Chap. 13.

Marney is a tree of wonders, whereof the Notaries or Chapetons (at the Indians call them) are Marney.

wont to write miracles, in that it yeeldeth Water, Wine, Oyle, Vinegar, Honie, Sirripe, Thred. Needles and a thouland other things. It is a tree which the Indians effective much in new Spaine. and have commonly in their dwellings fome one of them for the maintenance of life; it growes in the fields, and hath great and large leanes, at the end whereof is a ftrong and fharpe point, which ferres to fasten little pins, or to few as a needle: and they draw out of this leafe as it were which terues to taited in the print, or the body which is bigge, when it is tender, wherein Manifold coma series of times which the fub flance mounts from the roote, and is a liquor which they modifies of the 20 drinke like water, being fweeteand fresh. This liquor being sodden, turnes like Wine, which Mayer.

growes to Vinegar, fuffring it to foure, and boiling it more, it becomes as home, and boiling it halfe, it ferues as firrope: which is healthfull enough, and of good tafte; in my judgement it is better then the firrope of Raisons. Thus do they boile this liquor, and whe it in divers forts, whereof they draw a good quantitie, for that in some season they draw daily some pots of this liquor. There are also of these trees in Peru, but they are not so profitable as in new Spaine. The wood of this tree is hollow and foft, and ferues to keepe fire, like to the match of a harquebuze, and preferues it long : I have feene the Indians vie it to that end. The Tunallis another famous tree in new Spaine: if wee may call a tree a heape of leanes ga- Tunall tree.

thered together one vpon another, it is the ftrangelt fashiond tree of all other: for fift there 30 growes one leafe out of the ground, then another vpon it, and so one vpon one, till it commeth to his perfection; but as the leaves grow vp, and on the fides, those vnderneath doe become great. and loofe in a manner the forme of leaues, making a body and branches, which are fharpe, pricking, and deformed, to as in fome places they doe call it a Thiftle. There are Thiftles or wilde Tamall, the which doe carrie no fruite, or elfe iois very pricking without any profit. There are likemans, the winch control which they will planted Timalls which they will planted Timalls which yeelde fruite much effected amongst the Indians, the which they call Timas, and they are much greater then Plennbes, and long. They open the shell which is far, and within it is meate and finall graines, like to chose of figges, which be very sweeter, they have a good talke, especially the white, which have a pleating finell, but the red are not visually so ood. There is another fort of Tunalle, which they efteeme much more, although it yeeldes no 40 fruit, yet it beares another commoditie and profit, which is of the graine, for that certaine small

wormes breede in the leaves of this tree, when it is well husbanded, and are thereunto fastned. couered with a certaine small fine web, which doth compasse them in daintily; and this is that /ndien Cochenille, lo famous, and wherewith they die in graine. They let it drie, and being dried, carrie it into Spane, which is a great and rich marchandife. The arobe of this Cochenille or graine is worth many ducats. In the fleete, the yeare 1587, they did bring fine thousand fix hundred feuentie feuen arobes, which amounted to two hundred fourescore three thousand feuen hundred and fiftie peeces, and commonly there comes every yeare as great a wealth.

These Tunally grow in temperate grounds inclining to cold. In Peru there growes none to this day. I have feene some Plants in Spaine, but they deserve not estimation, I will speake some. I thinke hee 50 thing likewise of the stars, although it comes not from a tree, but from an hearbe, for that it or indice of ferreth for the dying of cloth, and is a marchandife which agrees with the graine; it groweth which fee To I, in great abundance in new Spaine, from whence there came in the fleete I mentioned \$263.aro- I ain Fliebel bes, or there abouts, which amounted to fo many precess. Cotten likewife growes vpon small townall. shrubs, and great trees like to little apples, which doe open and yeelde forth this webbe, which cours, being gathered, they ipinne to make stuffes : and the yeare that I spake of, there came 64000. arobes.

These Plants we have spoken of, are the most profitable of the Indies, and the most necessarie of Maners. for the life of man : yet there are many other that are good to eate, among the which the Ma- Guandates, and

mers are efteemed, being in fashion like to great Peaches, and bigger, they have one or two stones Paison Chap. 14. 60 within them, and their meate is somewhat hard. There are some sweete, and others some what fowre, and haue the rinde hard. They make conferues of the meate of this fruite. which is like to Marmelade. The vie of this fruite is reasonable good, but the conferues they make thereof, are better. They grow in Ilands. I have not feene any in Pers. It is a great tree, well fashioned, and a reasonable faire leafe. The Guanyanos be other trees which commonly

carrie an ill truite, full of fowre kernels, and are like to tittle Apples. It is a tree Hede effermed woon the firme Land and at the Hands, for they tay it finels like to the Pannifes. The taffe and fauour of this fruite is verie groffe, and the substance visiolesome. In Saint Domingue and other Hands, there are whole Mountaines full of these Guspaner, and they fay, there was no fuch kindes of trees before the Spaniards came there, but that they brought them they know no from whence. This tree bath multiplied infinitely, for that there is no Beaft that will eate the kernels or the graine, fo asbeing thus feattered on the earth, being het and moift, it including in this fort. In Peru, the Guapane differs from others, for that the fruite is not red, bet white, net-ther lath at any ill finell, but is of a very good take; and of what fort of Guapanes focure is be. the fruite is as good as the best of Spaine, especially of those which they call Grayanes de Mars, and of other little white Guagnilles. It is a fruite reasonably holesome, and agrees with the str. mack, being of a ftrong digeftion, and cold. The Palias commonly are hore and delicare. The Palias is a great tree, and carries a faire leafe, which hath a fruit like to great Peares : within it hath's great flone, and all the reft is foft meate, fo as when they are full ripe, they are as it were Bus. ter, and hape a delicate tafte. In Perm the Palias are great, and have a verse hard skale, which may be taken off whole. This fruite is most vivall in Mexico, having a thinne skinne, which may be pulled like an Apple; they hold it for a very holefome meate, and as I have faid, it declines a little from heate. Their Mamayes, Guayanos, and Palios, be the Indians Peaches, Apples, and Peares; and yet would I rather choose them of Europe.

Chicopotes.

The Marmalad is that which they call Capter, or Chice capter, which have a sweete taste, and neere vnto the colour of Marmalade. Some Crolles (for io they talled the Spaniards borne at the Indus) fay that this fruite paffeth all the fruites of Spaine in excellencie : yet am I not of that opinion. Those Chicocapetes or Capetes, wherein there is little difference, grow in the hotest parts of new Spaine, neither haue I knowledge of any such fruite in the firme Land of Pern. As for the Blanckemanger, it is that Annena or Guanamena, which growes in the firme Land, which is fallitoned like vinto a Peare, a little tharpe and opened, within it is white, tender and foft like Butter, iweete and of a pleafing tafte : It is no white meate , though they call it Blancke. There are some groffe Fruites, as those which they call Lucumes (of which fruite they soeake

Of many forts in a Prourte, that it is a counterfet price, The Guanes, Pacayes, Hubes, and the Note Which they call Imprised; which fruites feeme to many, to be the fame kinde of Nuts we have in Spaine, monds of the doe not thinke it good to palle away vnder filence the Coces or Indian Palmes, by reason of a verie Ander, and Al- notable propertie it hath. I call them Palmes, not properly, or that it beares Dates, but that they monds of Cha- are trees like to other Palmes. They are high and ftrong, and the higher they grow, the broader they firetch out their branches. These Coon yould a fruite which they likewise call Coon, whereof they commonly make veffels to drinke in, and fome they fay have a vertue against poison, and to cure the paine in the fide. The nutte and meate being dried, is good to eate, and comes neere in take to greene Chefnuts. When the Coce is tender voon the tree, the fubffance within it, is as it were Milke, which they drinke for daintinesse, and to refresh them in time of heate. I have seene of these trees in Saint Iean de Port Ricco, and other parts of the Indies, and they report a wonderfull thing, that every moneth or Moone, this tree casts forth a new branch of this Cocor; fo as it yeeldes truite twelue times in the yeare, as it is written in the Apocalips: and in truth this feemes like vato it, for that all the branches are of different ages, some beginning, others being ripe, and fome halfe ripe. These Cocor are commonly of the forme and bignesse of a small Melon. There is of another kinde, which they call Coquilos, the which is a better fruite, whereof there be some in Chille. They are somewhat leffe then Muts, but more round. There is another kinde of Coces, which have not the kernell fo oylie, but within they have a great number of fmall fruits like Almonds. like voto the graines of a Pomgrapat.

These Almonds are thrice as bigge as those of Castillo, and relemble them in taste, though they be more sharpe, and likewise most and oylie. It is a good meate, they vie it also in feasing, for so lacke of Almonds to make Marchanes, and such other things. They call them Almonds of the Andes, for that these Coces grow abundantly vpon the Andes of Pern; they are so fireng and hard, as to open them, they must beate them with a great stone, when they fall from the tree. If they chance to hit any one on the head, he hath no more neede of any Surgeon. It is an incredible thing, that within the hollow of these Cocos, which are no bigger than the rest, or little more, there are fuch a multitude of these Almonds. But as touching Almonds and other fruits, all trees must yeelde to the Almonds of Chachapeyas, which I cannot otherwise call. It is the most pleafing delicate and wholesome fruite of all that I have feene at the Indies.

divers flowers, The Indians are great louers of flowers, and in new Spains more then in any other part of the world, and therefore they are accustomed to make many kindes of Nofegaies, which there they 60 trees which yeelde onely a call Suebiller, with fuch prettie varietie and art, as nothing can be more pleasing. They have a cu-flower, & how from among & them, that the chiefest man offer their Suebilles or nosegayes in honour to Nothe Indian doe blemen, and to their ghests; and they presented vs with such abundance as wee passed giethem, ch.17. through that Countrey, as wee knew not what to doe with them; and at this day they vie

the principall flowers of Castile, to that end, for that they grow better there than here, as Gilliflowers, Roles, Ialmins, Violets, Orange flowers, and other forts which they have transported nowen, noise, namine, notes, viring nowers, and outer once which they have transported out of Spaine. The Rofe tree growest to fail in 16 mer place; , lo as they better file Rofe. It chanced one day that a Rofe tree was burned; and the fem which forward one, prefemly bare "kickident prosbundance or Rofes, and thereby they learned to principation, and to cut off the litherfulous better dues not are then, to as at this day they yeelde reasonable there of Rofes, But befides these kindes of flowers, which have beene transported from hence, there are many others whole names I doe not know whereof fome are red, blew, yellow, violet and white, with a thousand different colours, which winerot tome are suppressly times and wines with a monator direction country which the Indians did vic to carry on their heads, as feather fit to nomment. The it is, that may of these 10 dowers are onely pleasing to the fight, haung no good lutour, either they are groffe, or elfe they haur none attall; and yet there be fome of an excellent fent. As 'those which grow you won a tree tearmed by them Floripondio or carry flower, which beares no fruite, but onely these flowers, which are greater than the Lillie, and are like to little Bels, all white, which have within them fmall threds, as we fee in the Liffie; it leanes not all the yeare to beare thefe flowers, whose smell is wonderfull sweete and agreeable, especially in the coole of the morning. The winds men is wounded to the forces with King Phillip, as a thing worthy to be planted in royall Gardens. In new Spaine the Indians effecting much of a flower, which they call Dasfacht, which fignifieth flower of the beart, for that it beares the forme of a heart, and is not much left. The flower of Granadille is held for an admitable thing, and they fay, it hath in it 20 the markes of the Passion, and that therein they note the nailes, the piller, the whips, and crowne of thornes, and the wounds, wherein they are not altogether without reason, and yet to find out

and obserue these things, it requires some pietie to cause beleefe : but it is very exquisite and faire to the eye, although it have no fmell, &c. The balme which comes from the West Indies, is not of the same kinde of right Balme which Of Balme, they bring from Alexandria or Caire, and in old time was in Indies, which Indies (as Plinie writeth) did of all the world possesse this greatnesse, vatisl the Emperous Vessasses brought it to pissibita.c.15.
Rome and into Italie. At the Indies I have seene the Tree from whence they draw the Balme, Chap. 32.

which is as big as a Pomgranae tree, and something neere the fashion ; and if my memorie failes me not, it hath nothing common with the Vine, although that Strake writes, that the ancient Strak-lib.16.

20 tree of Balme, was of the bigneffe of a Pomgranae tree. But in their accidents & operations, their Grograp. liquors are alike, as likewise they be in their admirable smels, & in the cure and healing of wounds in colour and substance, seeing they report of other Balmes that there is some white, yermillion, greene and blacke, the which is likewife feene in that of the Indies. And as they drew forth the ancient in cutting and making incisions in the barke, to cause the liquor to distill cut, so doe they with that at the Indies, although it diffils in greater abundance. And as in the ancient there is one kinde which is pure, the which they call Opobalfamum, which be the verie teares that diftill, fo as there is another fort which is not fo exquitite, the which they draw from the barke and leaves strained and boiled on the fire, the which they call Xilobal amount. The like is also in the Indian Balmes; there is one pure that distils from the tree, and others that the Indians draw out 40 by straining and boiling the leaves and wood. The Apostolike Sea hath given libertie to give Creame of Balme at the Indies, and that they should vie it in Confirmation and other ceremonies

Next to Balme, Amber holds the second place; it is another liquor which is likewise sweet Of Amber, and and medicinall, but more thicke, and turnes into a paste of a hot complexion, and a good per-other Oyles, fume. This Amber comes from new Spaine, which hath that advantage aboue other Provinces Gumme in Gummes, Liquors, and juyce of Trees, whereby they have fuch abundance of matter, for per Drugs, which finne and physicke, as is the Asimit, whereof there comes great flore, Loyal or Suebsengal, which they from it another kinde, Storax and Interast, which have excellent operations, and have a very good finell chapter. fit for fumigations, Likewise the Tacamabaca and Carama, which are also very medicinall. They bring likewife from this Prouince oile of Afrike, which the Phylicians and Painters vie much the one for plaifters, the other to vernish their pictures. They bring also for the Phylicians (A)

fin fistula, the which growes plentifully in Saint Dominique. It is a great Tree, which carries thele Caf. Fiftula. Canes as his fruit, They brought in the fleet wherein I came from Saint Dominique fortic eight Sakeparille. Quintals of Cassia fiftula. Salcepareille is not lesse knowne, for a thousand remedies wherein it is vied. There came in the same fleet fiftie Quintals from the same Iland. There is much of this Salcepareille at Peru, and most excellent in the Province of Guayaquil, which is vnder the Line. Many goe to be cured into this Prounce, and it is the opinion of some, that the pure water onely which they drinke, gives them health, for that it passeth by rootes as I have said, from whence it drawes this vertue, fo as there needes no great courring or garments to make a man fweat in

60 that Countrie. The wood of Guayac, which they call Lignum faultum, or Indian wood, growes Lignum vila; abundantly in the same Ilands, and is as heavie as Iron, so as it presently finkes in the water; hereof they brought in the same fleet three hundred and fifeie Quintals, and they might have brought twentre, yea, a hundred thoutand of this wood, if there were vie for it. There came in the fame fleet, and from the same Iland , one hundred and thirtie Q intals of Brefil wood , the which is Kkkki

heav red, Is well knowne, and much vied in dying and other things. There are at the Indies inhere reg. 19 years anowate, anomatical Woods, Gummes, Oiles, and Drugs, loas it is not possible to name them all, neither doth it now much import. I fay onely, that in the time of the Kines In-Auncien Phys. 2 see of Ceffer, and the Mexican Kings, there were many great personages expert an unung of scients.

diteales weith simples, and und goodly cures, having the knowledge of the many vertures and groot perties of Herbs, Rootes, Woods, and Plants, which grow there, and whereof the Ancients of Europe have had no knowledge. There are a thousand of these simples fit to purge, &c.

Woods are to many and great, that it hath beene needfull (passing through some parts of the Indies, especially where they newly entred) to make their way , in cutting downe Trees, and pulling vp Bulhes, fo that (as fome religious men have written that have tried it) they could 10 not fometimes have passed about a league in a day. One of our brothers (a man worthy of credit) reported vnto vs, that being strayed in the Mountaines, not knowing which way hee Strange travil, should palle, he fell among such thicke Bushes, that hee was forced to goe vpon them , without fetting foot to the ground by the space of fifteen whole dayes: and to see the Sunne, or to make fome way in this thicke Forest full of wood, hee was forced to climbe to the top of the highest Trees to discouer. He that shall reade the discourse of his travell, how often he was lost, and the wayes hee paffed, with the strange adventures that happened vnto him, the which I have written briefly, being to worthy the knowledge, and having my telfe travelled a little over the Mountaines at the Indies, were it but the eighteene leagues betwirt Nombre de Doos and Pana Mountaines at the annues, well and great Forests there are. So as having no winter in those parts, to nip them with cold, and the humiditie of the Heanens and Earth being fo great, as the Mountaines bring forth infinite Forests , and the Playnes which they call Samanas , great plentie of graffe;

there is no want of Pasture for feeding, of Timber for building, nor of Wood for fuell. It is impose fible to fet downe the differences and formes of to many wilde Trees, for that the names of the greatest part are vnknowne.

Cedars in old time fo much efteemed, are there very common, both for buildings and fhips and they are of diuers forts, fome white, and fome red, very odoriferant. There are great flore of Bay trees, very pleatant to behold upon the Andes of Perm, upon the Mountaines, in the Handsol Nicaragua, and in new Spaine. There are also infinite numbers of Palmes and Ceiuas, whereof the Indians make their Canoes, which are Boates made of one piece. They bring into Spaine 30 from the Hanana, excellent timber, In the Iland of Cuba, there are infinite numbers of like trees. as Ebene. Caonana, Grenadille, Cedars, and other kindes which I doe not know. There are great Pine trees in new Spaine, though they be not fo strong as those in Spaine; they beare no pignous or kernels, but emptie apples. The Oakes as they call them of Gnaragnil, is an excellent wood and fweet, when they cur it; yea there are Canes or most high Reeds, of whose boughs or small reedes they doe make Bottles and Pitchers to carry water, and doe likewife vie them in their buildings. There is likewise the wood of Mauste or Firre, whereof they make masts for their thips, and they hold them as ftrong as Iron. Walle is a tree of many vertues, which cafteth forth small boughes, whereof the Indians make wine. In Mexico they call it the tree of Peru, for that it came from thence : but it grows also in new Spaine , and better then those in Pers. There are 40 a thousand other Trees, which were a superfluous labour to intreat of, whereof some are of an exceeding greatnesse, I will speake onely of one which is in Tlaco Changa, three leagues from Guaraca in new Spaine: this tree being measured within, being hollow, was found to have nine fadome, and without, neere to the roote, fixteene, and fomewhat higher, twelve. This tree was firooke with lightning from the toppe to the bottome, through the heart, the which caufed this hollownesse: they say that before the thunder fell vpon it, it was able to shaddow a

in giam of

this day there doth remaine some boughes and verdure, but not much. They know not what kinde of tree itis, but they fay it is a kinde of Cadar. Such as shall finde this strange, let them Plin. lib.i2. e.r. reade what Pliniereporteth of the Plaine of Lidia, the hollow whereof contained four escore for and one, and feemed rather a Cabbin or a Houle, then the hollow of a tree, his boughes like a whole wood, the shaddow whereof couered a great part of the field. By that which is written of this Tree, we have no great cause to wonder at the Weaver, who had his dwelling and Loome in the hollow of a Chefnut tree and of another Chefnut tree, if it were not the very fame, into the hollow whereof there entered eighteene men on Horsebacke, and passed out without diffurbing one another. The Indians did commonly vie their Idolatries in their Trees, fo strange and deformed, even as did the auncient Gentiles, as some Writers of our time doe report.

thousand men, and therefore they did assemble there for their dances and superstitions; yet to

Of Plants and Chap.31.

The Indians have received more profit, and have bin better recompensed in Plants that have bin brought from Spaine, then in any other Merchandife, for that those few which are carried from the Indies into Spaine, grow little there, and multiply not, and con trariwise the great num-60 ber that have beene carried from Spaine to the Indies, prosper well and multiply greatly : I know not whether I shall attribute it to the bountie of the Plants that goe from hence, or to the goodnesse of the soyle that is there. Finally, there is at the Indies any good thing that Spaine brings forth ! in some places it is better, in some worse, as Wheate, Barley, Hearbes, and all

CHAP.2. S.4. Spanish-Indian berbs and fraits. Strange fig. tree, Wines. Sugars: 961

kinds of Pulses, also Lettuce, Coleworts, Radishes, Onions, Garlike, Parsley, Turneps, Parsemeps, Becengenes, or Apples of loue, Siccorie, Beetes, Spinage, Peale, Beanes, Fetches : and finally. mens, pressed there of any profit, to as all that have woyaged thither, have been curious to carry Seeder of all forts, and all have growne, although diversity, fome more, fome leffe. As for carry Secure or an notes, and an nate growner, announcing, some unit; some sene, As for shore trees that have most abundantly fructified, be Orenge-trees, Limons, Citrons, and other of that fort. In some parts there are at this day, as it were whole Woods and Forrests of Orange crees: tha which feeming strange vnto me, I asked who had planted the fields with formany O. range trees : shey made me answer, that it did come by chance, for that Oranges being fallen to Natures had the ground, and rotten, their feedes did fpring, and of those which the water had carried away bandrie

into diners parts, these Woods grew to thicke: which feemed to mee a very good reason, I have faid that this fruite hath generally increased most at the Indies, for that I have not beene in any place but I finde Orange trees, for that all their foile is hot and moift, which this tree most defires. There growes not any wpon the Sierre or Mountaine, but they carrie them from the vallies or Sea coaft. The conferue of Oranges which they doe make at the Illands, is the best I have feene any where : Peaches, Preffes, and Apricockes have greatly multiplied, especially in new Spaine. At Pern there growes few of thele kindes of fruites, except Peaches, and much leffe in the Ilands. There growes Apples and Peares, yet but fearcely: there are but few Plumbs, but aboundance of Figges, chiefly in Pers. They finde Quinces in all the Countrie of the Indies, and in new Spaine, in fuch aboundance, as they game vs fittie choice ones for halfe a risk. There is 30 great flore of Pomegranats, but they are all fweete, for the sharpe are not there efter med. There are very good Melons in some parts of Pera, Cherries both wildeand tame have not profipesed well at the Indies, the which I doe not impute to want of temperature for that there is of all forts, but to careleineffe, or that they have not well observed the temperature. To conclude, I doe not finde that in those parts there wants any daintie fraite. As for groffe fruites, they have no Beilbetes nor Chefinuts, neither doe I finde that any baue geowner there to this day. Almonds growthere, but rarely. They carry from Spine, for fuch as are daintie mouthed, both Almonds, Nuts, and Filberds: but I haus not knowns they had any Medlers or Seruices, which im-

There growes no Wine nor Grapes in the Hands, nor firme Land, but in new Spaine, there Of Grapes, are fome Vines which beare Grapes, and yet make no. Wines. The caule is, for that the Grape ri- Vines, Oliues, ners not well, by reason of the raine that fale in the Montals of July and August, which him. Muberies, ders their ripening, fo as they ferue onely to cate. They carry Wine out of Spaine, and from and Canes of the Concres, to all parts of the Indees, except Personnel the Realme of Chile. There are fome Sugar, then it places where the Vinesare not watered, neither from hearth nor earth, and yet they increase in great abundance, as in the Valley of Tea, and in the disches that they call Villacera, in which places they finde dirches, or thearth funke downs among the dead Sands, which are thorowout the yeare of a wonderfull cooleneife, and yet is raises not sheet at any time, neither is there any manner of meanes to water it artificially: the reason is, because the soile is spongious, and fucks up the water of the rivers that fall from the Mountaine, which moisten these Sands, or

succes up the monithess of the Sea, as others suppose, which passing our this Sand, is the cause of the its is the monithess of the Sea, as others suppose, which passing our this Sand, is the cause why it is not harren nor upprofitable, as the Philosopher teaches. The Vines have so increased why it is not harren nor upprofitable, as the Philosopher teaches. there, as for this cause onely the tithes of the Churches are multiplied fine or fix times double there, as for this cauc onesy the titles of the constants are managed one of its titles double within these twentie yeares. And it is strange, that in the Citie of Capies you shall finder programs and the Capies all the Capies yeare long: the tradon is (as they say) for that those Vallies bring forth fruits in years. divers moneths of the yeare, either for that they cut their Vines in divers feafons, or that this varietie proceedes from the qualitie of the foile : but whatfoeuer it be, it is most certaine, there are fome Vallies which carrie fruite all the yeare. If any one wonder at this, it may be he will wonder much more at that which I shall fay, and perchance not beleeve it. There are Trees in Pers, whereof the one part yeeldes fruite one fixe moneths of the yeare, and the other halfe part Strangefrues

To weeldes fruite the other fix moneths. In Malla which is thirteene leagues from the Citic of fying. Kings, there is a Figge tree, whereof the one halfe which is towards the South, is greene, and veeldeth his fruite one feafon of the yeare, that is, when it is summer vpon the Sierre, and the other moitie towards the Lanes or Sea coast, is greene, and yeeldes his fruite in the other contrarie feason, when it is summer vpon the Lanes, which groweth from the divers temperature, and the ayre which commeth from the one part, and the other. The revenue of Wine there is not fmall, but it goeth not out of the Countrie, But the Silke that is made in new Spaine is transported into other Countries, as to Pers. There were no Mulberrie trees in the Indies, but fuch as were brought from Spaine, and they grow well, especially in the Province which they call Miffeeque, where there are Silke-wormes, and they put to worke the Silke they gather, white-60 of they make verie good Taffataes : yet to this day they have made neither Damaske, Sattin, nor Veluet. The Sugar yet is a greater reuenue, for they not onely ipend it at the Indies, but allo they earrie much into Spaine, for the Canes, grow exceeding well in manie parts of the Indies. They have built their engins in the Hands, in Mexico, in Peru, and in other parts, which yeeldeth them

a very great reuenue.

Oliues but

It was told me, that the engine for Sugar in Nafes, was worth yearly about thirtie thousand pieces of reuenue. That of Chicana ioyning to Truesile, was likewife of great reneme, and those of new Spaine are of no leffe; and it is a ftrange thing to fee what flore they confirme at the Indies. They brought from the Hand of Saint Dominique, in the fleet wherein I came, eight hundred ninetie eight chefts of Sugar, which being (as I did fee) thipped at Port Ricco (every cheft (in my opinion) weighed eight Arobes, every Arobe weighing five and twentie pounds, which are two hundred weight of Sugar) is the chiefe revenue of thete Hands, fo much are men givense the define of sweet chings. There are likewise Olives and Olive trees at the Indies, May in Mexic so and in Pers, yet hath there not beene to this day any Mill for Oile, for that they cate all their Olines, and dreife them well : they finde the charge is greater to make Oile then the profit, and to therefore they carry all the Oile they doe fpend from Spaine. And here we will end with plants. and will paffe to fuch beafts as be at the Indies.

ð. VI. Of Beafts and Fowles in the Indica.

ring wooll, and of Kine, Cap. 33.

Of beafts beas Finde there are three kindes of beafts at the linder, whereof some have been sarried from Spaine; others are of the same kinde we have in Europe, and yet not carried by 20 the Spaniards; and others are proper to the Indies, whereof there are none in Spains. Of the first kinde are Sheepe, Kine, Goats, Swine, Horses, Asses, Dogs, Cats, and on

ther fuch beatls, for there are of all these kindes at the Indies. The smaller Cattell have greatly multiplyed, and if they could make profit of their woolls by fending them into Europe, it were one of the greatest riches the Indies had, for there the flocks of sheepe have great pastuers, where Store of theen, as their feeding failes not. In Peru there is fuch flore of pattures and feedings, as no man hath any proper to himfelfe, but every man feedes his troups where he pleafeth. For this reason there is commonly great store of flesh, and very good cheape, and all other things that come from sheepe, as Milke, and Cheese. For a time they loft their woolls; vntill that some began to hulheepe, as mine, as mine bank cloth and courrings, which hath beene a great helpe for the poorer fort of 30 the Countrie, for that the cloth of Countrie, for that the cloth of Countrie, is very deare there. There are many Clothiers in Pera. but more in new Spaine, yet the cloth that comes from Spaine is farre better, whether the wooll bee more fine, or the workmen more expert. In former times there were men that did poffefe three-core and ten, yea a hundred thousand sheepe, and at this day they have not many lesse. If this were in Europe, it were a very great fubliance, but in that Countrie it is but a meane wealth. In many parts of the Indies , and I thinke in the greatest part, fmall Cattell doe not increase and profit well, by reason that the graffe is high , and the foile so vicious , that they cannot feede fo well as great Cattell.

tame and goe in troups, as in the land of Charca, and other Provinces of Pera, as also in all new 40 Spaine: from these tame Kine they draw such profit as they doe in Spaine, that is, the Flesh, Butter, Calues, and Oxen to till the ground. The other kinde is wilde, which live in the Mountains and Forests, and therefore they tame them not, neither have they any master to whom they are proper, both for the roughnesse and thicknesse of the Forest, as also for the great multitude there is, and he that first kills them is the master, as of any wilde beast. These wilde Kine haue so multiplyed in Saint Dominique, and thereabouts, that they troupe together in the fields and woods by thousands, having no master to whom they appertaine. They hunt these beasts onely for their hales, they goe to the field on horse-backe with their weapons to hough them, courfing the Kine: and when they have ftrucken any and ftayed them, they are their owne, they flay them and car-Killed only for ry the hides home, leaving the flesh, which every one neglects for the abundance there is, foat 40 fome have testified in this I land, that in some places the aire hath beene corrupted with the abundance of these stinking carkasses. The hides they bring into Spaine, is one of the best revenues

And therefore there is an infinite number of Kine, whereof there are two kindes. Some are

of the Hands, and of new Spaine. In the fleet the yeere 1 , 87, there came from Saint Dominique 35444. hides, and from new Spaine 64350. which they value at 96532. pieces, so as when they hides trans discharge one of these fleets . it is admirable to behold the River of Senile . and in the Arcenall ported at (where they valade) so many hides, and so much merchandize. There are also great numbers of once. How Goats, whose chiefe profit is their tallow, besides their Kid-milke and other commodities, for rich might that both rich and poore vie this tallow for lights. For as "ere is a great quantitie, fo doe they Virginia bemake very good account of it; yea, more then of oile, but all the tallow they vie is onely of the come, if ! Males. They vie their skins for shooes, yet I hold them not so good, as those which are car-

Horfes,

Horses have multiplyed there, and are very excellent in many places; yea in many parts there are Races found as good as the best in Spaine, as well for passing of a Carrier, and for pompe, as also for trauell : and therefore they vie Hories most commonly , although there bee no want of

CHARIZ. S.6. Dogs wild Indian banting & game. European beaffs bow known. 052

Movies, whereof there are many . especially where they make their carriages by land. There is no great numbers of Affes, having no great vie for them, neither for travell nor feruite. There are Affes tome few Camels ; I have teene tome in Perw, that were brought from the Counter; and have Camels tome two values. A vase the substitute of the su troppes through the fields. Such that kill them are tewarded like to them that kill Wohes in Spaine. At the fielt there were no Dogs to the Indies but fome beafts like vnto little Dogs. the Spanse. At the truther was to Dogston the same which the Indians call Also, and therefore they call all Dogs that goe from Spanse, by the fame name, by realion of the referriblence that is between the Indians doe so love these like Indians Dogs. no Does, that they will spare their meat to feed them, so as when they travell in the Country, they carry them with them pows their shoulders, or in their bofoms, and when they are ticke . they

keepe them with them, without any vie, but onely for companie.

keepe them with them, without any vie, but onely for companie.

It is certain that they have carried/from? James all their beaffs whereof I have fpoken; of Offomebrash which kinder there were mose at the fador? When they were first discoursed about a hundred of Raige; vertes since; for befines that in may be well approached by witnesses at this day luting; It is allow which the fulficient argument to for that the fadors in their totague, have no proper words to figurise they specified beautiful the fulficient argument to for that the fadors in their totague, have no proper words to figurise they specified words. It is not sharply to be falso Spenish words. The form they to correct the vortex of the fadors and the fadors are the fadors of the fadors and the fadors are the fadors of the fadors. It is not sharply cooke the word common to those places from whence they came. I have found this latest and the fadors are the fadors of the fadors are the fadors of the fadors. a good rule, to differine what things the Indians had before the Spannish came there; and what found paffe
go they had not for they gave names to those they had and knew before and have given new names thinker.cap.go. to their that are newly come vnto them which commonly are the same Spanifo names although Note. they pronounce them after their manner, as for a Horse, Wine, and Wheat. They found of some forts of beaths that are in Europe, and write not carried thirther by the Spaniards. There are Lions, Tieres, Beares, Boares, Foxes, and other fierce and wilde beafts, whereby we have treated in the first Booke, so as it was not likely they should passe to the Indus by Sea, being impossible to swim the Ocean : and it were a folly to imagine that men had imbarked them with them. It followes therefore that this world toynes with the new in some part; by which these beasts might paste, But where? and so by little and little multiplyed this world. The Lions which I have seene, are not red, nel- our Nasigati. ther have they fuch haireas they viurily paint them with. They are grey, and not fo furious as on beyond to they forme in pictures. The Indians affemble in troopes to bunt the Lion; and make as it were a so, hase they they feeme in pictures. I he indians attended in troupes to ment the along and make as it were a edopen and circle, which they doe call Chare, wherewith they intain them; and after they kill them with wide Seas beftones, flaues, and other weapons. These Lions vie to climbe trees, where being mounted, the twizz Indians kill them with Lances and Crofic-bowes, but more easily with Harquebuzes. The Tigres Liens are more fierce and cruell, and are more dangerous to meet, because they breake forthand affaile Circles are v. are more herce and crueti, and are more dangerous to meet, pecasis they breake forth and affaite burces are we men in treason. They are sported, as the Hiltoriographers describe them. I have heard some re-by repring port that these Tigres were very force against the Inkiliary, yet would they not advanture as all Tenan, so, vpon the Spaniards, or very little; and that they would choose an Inkiliar in the middest of ma-Tigres.

ny Spaniards, and carry him away. The Beares which in Cufes they call Ossioness, be of the fame kinde that ours are; and keepe Beares, so in the ground. There are tew (warmes of Bees, for that their hony-combs are found in Trees, or Beth vnder the ground, and not in Hines as in Castile. The hony-combs which I have feene in the Prouince of Charces, which they call Chiguests, are of a grey colour, having little juyce, and are more like vnto iweet straw, then to hony combs. They say the Bees are little, like vnto Flies; and that they swarme vnder the earth. The hony is sharpe and blacke, yet in some places these is better, and the combs better fashioned, as in the Province of Tucaman in Chille, and in Carthagene. I have not feene nor heard speake of wilde Boares, but of Foxes and other wilde beatls that Foxes and eate their Cattell and Fowle, there are more then their Shepherds would willingly have. Be- beats of fides these beasts that are furious and hurtfull, there are others that are profitable, and have not spoile. beene transported by the Spanierds, as Stags and Deere, whereof there is great abundance in all to the Forests. But the greatest part is a kinde of Deere without hornes, at the least, I have never Deere without feene nor heard speake of other, and all are without hornes like vnto Corcor. It feemes not hard out hornes.

to believe, but is almost certaine, that all these bearts for their lightnesse, and being naturally wilde, have passed from one World to another, by some parts where they toyne, seeing that in the great I lands farre from the mayne land I have not heard that there are any, though I have made diligent inquirie.

We may more easily believe the fame of birds, and that there are of the fame kindes that wee of Fowles haue, as Partri ges, Turtles, Pidgeons, Stock-doues, Qualles, and many forts of Falcons, which which are they fend from new Spaine and Pern, to the Noblemen of Spaine, for they make great account of bere and are them. There are also Herons and Engles of divers kindes; and there is no doubt but these birds at the Indies, them. I here are also Iterens and Engles of divers kindes; and there is no doubt but their bittle and how they 60 and fuch like, have fooner passed thither then Lions, Tigres, and Stags. There are likewise at the could passe Indies great numbers of Parrots, especially upon the Andes of Pern, and in the llands of Port dinher. cap. 35. Ricco, and Saint Dominique, where they flie by flocks, as Pidgeons doe here. To conclude, birds with their wings may goe where they will; and truly, many kindes might well paffe the Gulfe, feeing it is certaine, as Plinie affirmeth, that there are many that paffe the Sea, and goe into Plinibitos age

heavie, as Effridges, whereof there are many in Pers; which doe vie fometimes to terrifie the Indian theepe as they doe goe with their burthens.

But Igazing these birds that governe themselves without the care of man, but onely for haw-Hennes, king, let vs now speake of tame Fowle. I wondred at Homes, seeing there were some at the Indies before the Spaniards came there, the which is well approued, for they have a proper name of the Countrie, and they call a Hen Gualpa, and the Egge Ponto, and they vie the same prouerbe we doe, to call a Coward, a Hen. Those that were at the discouerie of the Hands of Soloman, doe an report that they have feene Hennes there like vnto ours: wee may conceine that the Hen being fo tame a Fowle, and fo profitable, men might carry them with them when they paffed from one place to another, as we see at this day the Indians in their travell carry their Hen with them, or chicken upon the burthen they have on their thoulders; and likewife they carry them eafily in their Cases of reedes or wood. Finally, there be at the Indies many kindes of beafts and birds.

fuch as wee have in Europe, as I have specified, and other forts which I leave to others todifcourse of.

It were a matter more difficult, to shew, and proue, what beginning many and fundrie forts of be possible, that beafts had, which are found at the Indies, of whose kindes we have none in this Continent. For if the Creator hath made them there, we may not then alleadge nor flie to Noahs Arke . neither 30 be any forts of was it then necessarie to saue all forts of birds and beafts, if others were to bee created anew. beafts, whereof Moreoner, we could not affirme, that the creation of the World was made and finished in fixe the like are no dayes, if there were yet other new kindes to make, and specially perfit beafts, and no less excellent then those that are knowne vnto ws : If we say then that all these kindes of Creatures were

preserved in the Arke by Noab, it followes, that those beafts, of whose kindes wee finde not any but at the Indies, have pasted thither from this Continent , as wee have faid of other beafts that are knowne vnto vs. This supposed, I demand how it is possible that none of their kinde should remayne here ? and how they are found there, being as it were Trauellers and Strangers? Truly

The fame pro-uidence which it is a question that hath long held me in fulpence. I lay for example, if the sheepe of Peru, and those which they call Paces and Guanaces, are not found in any other Regions of the world, 40 beaffs and fowles from all their native divertified refidencies therow who hat irearried them thither or how came they althe word to the Arke (which no neural mindian is not any although the property of the same to the sa

the fune (crush might here made for beath, &c.in other parry the brought forth where 'It may bee God hath made at unper of the Aix, or of the place where the Airectele, nesages—new creation of beaths I'll Tau which If peak of their ing naturally to the Zebrz, Elephant, Ricce-houfe, Crocodile, and Paeer and Gasmacie may be faid of a thouland differency of the Airectele and Airectele and the Airectele and Airectele and the Airectele and A beenesteempted by Ours, a little boat comming homefrom Bermada they found themselves so well, as they would not

bounds of their babitation, Ad. 17.20.

beeneute mpeted your park boat comming nome from seemans of the state of the best open boat comming nome from the state of wites and be carried by a higher converking ouer-ruling proundence not proper and peculiar alone to the Indies, but geto people thin new World, which (it is likely) at disent times and by nerall to many other Nations and Prountees of Addient meaners exceeded in industrients (God with made all men). one blond, alotting roall Adams fonnes their portions and the feuerall fin, Europe, and Affrike, where they fay there are certaine kindes of Creatures, that are not found in

other Regions, at the least if they be any where elfe, they are knowne to be carried from thence. Seeing then these Creatures came out of the Arke, as for example, the Elephant which wee finde onely in the East Indies, and from thence have beene imparted to other Regions, wee may fay as much of these Creatures of Perm, and of others of the Indies, which are not found in any other

We may likewise consider well upon this subject, whether these beasts differ in kinde. and effentially from all others, or if this difference be accidentall, which might grow by divers accidents, as wee fee in the linages of men , fome are white , others blacke , fome Giants , others Dwarfes : and in Apes, some haue no taile, others haue : and in Sheepe, some are bare, others haue to fleeces; fomegreat and strong with a long necke, as those of Pen; others weake and little. having a fhort necke, as those of Castile. But to speake directly, who so would by this Discourse. shewing onely these accidentall differences, preserve the propagation of beasts at the Indies, and reduce them to those of Europe, hee shall vudertake a charge hee will hardly discharge with his honour. For if wee shall judge the kindes of beafts by their properties, those of the ladies are fo divers , as it is to call an Egge a Chefnut , to feeke to reduce them to the knowne kindes

Of Fowles that are proper to the Indies, and Venison.

20 THere are many kindes of notable Fowles at the Indies, either of the same fort that ours be, of of different. They bring certaine birds from (Bina, that have no feete, and all their bodies See Ishian are almost feathers. They sit not voon the ground, but hang voon boughs, by strings or feathers Tom. 1.19, of which they have, and fo reft themselves like Flies or ayrie things. In Perm there are birds which fuch in Guinere they call Tommeios, for small, that often-times I have doubted feeing them flie, whiether they Tommeios. were Bees or Butter-flies; but in truth they are birds. Contrariwife, those which they call Condores, be of an exceeding greatnesse, and of such a force, that not only they will open a sheep Condores and eate it, but also a whole calfe. Those which they call Anna, and others Ponlazer (which in my opinion are of the kinde of Rasens) are of a strange lightnesse, and have a very quitke sight, Rasens. being very fit to clense Cities, for that they leave no Carrion nor dead thing. They passe the short 30 night on Trees or vpon Rocks, and in the morning they come to the Cities and Towners, fitting 22 more on the tops of the highest buildings, where they attend their prey. Their yong hane white fea-

thers, as they report of Rauens, and fochange into blacke. The Guacamayac be birds bigger then Parrets, and refemble them fomething; they are effecmed for the varietie of their feathers, which be very faire and pleafing. In new Spaine there are abundance of birds with excellent feathers, fo as there bee not any found in Empirithe comes neere them, as wee may fee by the Images of feathers they bring from thence, die which are (with great reason) much valued and eftermed, giving cause of admiration, that with the feat Feather plant thers of birds, they should make so excellent a worke, and so perfectly equal , as they seeme properly to be the true colours of a Painter, and haut so lively and pleasing a regard, as the Pain-

40 ter cannot exceede it with his pencill and colours, Some Indians which are good laid expert workmen in this Art, will represent perfectly in feathers, whatfocute they fee drawns with the pencill, to as the Painters of Spaine, have in this point, no advantage over them. Dow Philip the Prince of Spaine his Schoole-mafter, die give vnto him three figures or portraitures made of feathers, as it were to put in a Bremarie. His Highnelle did fhew them to King Philly his father, the which his Maiestie beholding attentionly, laid, that he had never seene in so small a worke, a thing of fo great excellency and perfection. One day as they prefented to Pope Sixtim Quintw., another iquare bigger then it, wherein was the figure of Saint Frantis, and that they had rold him it was made of teathers by the Indians, he defired to make triall thereof, touchling the table with his tingers, to fee if it were of feathers; for that it feemed ftrange, to fee them to properly

50 fitted, that the eye could not judge not differne whether they were naturall colours of feathers, or artificiall done with the pencill. It is a goodly thing to fee the luffre which a greene, an orange cawnie like gold, and other fine colours doe cast, and beholding them another way they feeme dead colours. They make the best and goodlieft figures of feathers in the Province of Ma chongran, and in the village of Pascaro: The manner is with small delicate Pinfors they pull, the feathers from the dead fowles, and with a fine paste they cunningly loyne them together. They take the small and delicate feathers of these birds , which in Pern they call Tomine jor, or others like vnto them, which have the most perfect colours in their feathers. The Indians (besides these Images) did vie feathers in many other most excellent workes, especially for the ornament of

50 Kings and Noblemen, their Temples and Idols. There are also other great birds, which have excellent and fine feathers, whereof they make plumes of fundriecolours, especially when they goe to warre, inriching them with gold and filuer very artificially, which was a matter of great price. They have the fame birds fill, but they are not fo curious, neither doe they make fo many gentill dedices as they were wont. There are other birds at the Indies, contrarie to these of fo rich feathers, the which (besides that they are

A

ill-favoured) ferue to no other vie but for dung, and yet perchance they are of no leffe profit. have considered this, wondering at the providence of the Creator, who hath so appointed that all Creatures (hould ferue Man. In fome Hands or Phares, which are in young to the coast of Pre-The like is in rm, we fee the tops of the Mountaines all white, and to fight, you would take it for Snow, or for The hiers in 7m, we test the tops to the heapes of dung of Sea fowle which goe continually thither; and there is so great abundance, as it rifeth many Elles, yea, many Lances in height, which seemes but a fable. They goe with boates to these Ilands, onely for the dung, for there is no other profit in them. And this dung is fo commodious and profitable, as it makes the earth yeeld great a bundance of fruit. They call this dung Guane, whereof the Valley hath taken the name, which bundance of fruit. 1 Dry can the valleys of Pern, where they vie this dung, and it is the most ferrile 10 of all that Country. The Quinces, Pomegranets, and other fraits there, exceed all other in bonntie and greatnesse; and they say, the reason is, for that the water where with they water it, pas-

like small Hogs, which have this fingular to themselves, to have their Navill vpon the ridge of their backs : these goe by troupes through the Woods, they are cruell and nothing searfull, but contrariwife they affaile, and haue their tallents sharpe as Rasors, wherewith they make dancome presently in troupes, biting the Tree when they cannot hurt the man, and then with

feth by a Land compafied with this dung. Befides the Beafts of Chafe, whereof wee have spoken, There are beafts called Saines, made

gerous wounds and incisions, if such as hunt them put not themselves in safetie. Such as hunt them (for the more fafer killing of them) climbe vp into Trees, whither the Saines or Hogs their Lances they kill what they will. They are very good to eate, but they must of necessitie ent off the round piece where the Nauill growes vpon the backe 3 for otherwise, within a day they corrupt. There is another kinde of little beaft like to fucking Pigges, and they call them Guadatinaias. I am in doubt whether there were any Swine at the Indies, before the Spaniards came thither, like to these in Spaine, for that in the discouerie of the Hands of Soloman, it is * These might faid, they found * Hennes and Swine of Spaine. But howsoeuer it be, it is most certaine, that come from the this Cattell hath greatly multiplyed at the ludies. They eate the fielh fresh, and hold it to bee East parts this as wholesome and as good, as if it were of Mutton; as in Caribagene in some parts, they are there by means of those llands become wilde and cruell, the which they hunt like wilde Boares, as wee fee in Saint Domiof those llands which you see mique, and other llands where the beafts line in the Forests. In some places they seede them an with the graine of Mays, and they grow wonderfully fat, to have the greafe, which they vie for want of Oile; in some places they make Gamons, as in Tollines of new Spaine, and in Paris at Pers. Returning then to such beasts as are peculiar there, even as the Saines are like vnto Swine, though somewhat leffe; even so the Dantes resemble small Kine, but more vnto Mules . hauing no hornes. The Hides of these beasts are much esteemed for jerkins and other couerings, they are so hard as they resist any blow whatsoever. And as the Dantes be defended by the hardnesse of their Hides , so those which they call Armadilles are by the multitude of their feales, which open and thut as they please like to a Curaffe. There bee little beafts which goe through the Woods, called Armadules, by reason of the defence they have hiding themselves within their scales, and opening when they list: I have eaten of them, and doe not hold it 40 for a meate of any great worth; but the fiesh of the Tomoras is a better meate, but more horrible to the eye : for they are like to the very Lizardes of Spaine, although they bee of a doubtfull kinde, for that they goe to the Water, and comming to Land they climbe the Trees woon the bankes; and as they cast themselves from the Trees into the water, the Boates watch underneath to receive them. The Chinchilles is an other kinde of small beafts, like Squirrels, they haue a wonderfull smoothe and fost skin, which they weare as a healthfull thing to comfort the floracke, and those parts that have neede of a moderate heate; they make Coverings and Rugs of the haire of these (binchilles, which are found on the Sierre of Perm, where there is likewile a fmall beaft very common, which they call Copes, and which the Indians hold for a very good meate, and they are accustomed often to offer these Copes in their facrifices. They are like small to Conies, and have their borrowes in the ground, and in some places they have undermined all the Land : fome are grey, fome white, and fome speckled. There are other small Animals which they call Viscachas, and are like to Hares, although they bee bigger, they hunt them and cate the fielh. Of common Hares there are great store in some parts. There are also Conies in the Realme of Onitto . but the good are come from Spame. There is another strange beast, the which for his great heavinefle, and flowneffe in mooning, they call Perso-ligere, or the little light Dogge, hee hath three nailes to every hand, and mooves both hand and feete, as it were by compasse and very heavily : it is in face like to a Monkey, and hath a shrill crie; it climeth Trees,

Throughout all the Mountaines , either of these Ilands of the firme Land , or of the Ander, 63 there are infinite numbers of Mices or Monkeys, which are a kinde of Apes, but very different, in that they have a taile, yea a very long one. And amongst them there are some kindes which are thrice, yea foure times bigger then the ordinarie; some are all blacke, some bay, some grey, and some sported. Their agilitie and manner of doing is admirable, for that they

freme to have reason and discourse to goe voon Trees, wherein they feeme to imitate Birds. Going from Nombre de Dies to Panama . I did fee in Capira , one of thefe Monkeys leane from one Tree to an other, which was on the other fide of a River, making me much to wonder. Luftie leape. They leave where they lift, winding their tailes about a branch to flake it : and when they Swange fight will leane further then they can at once, they vie a pretie dedice, tying themselves by the tailes one of another, and by this meanes make as it were a chaine of many : then doe they lauch themselves forth, and the first holpen by the force of the rest, takes hold where he lift, and fo hangs to a bough, and helpes all the reft, till they be gotten vp. It were long to report the fooleries , tricks , trauerfes , and pleasant sports they make when they are taught, which seeme

not to come from bruit beafts , but from a manlike vnderstanding. I faw one in Caribagene in Monkey lastthe Gouernours house, so taught, as the things he did seemed incredible : they fent him to the ned Tauerne for wine, putting the pot in one hand, and the money in the other; and they could not possibly get the money out of his hand , before he had his por full of wine. If any children met him in the fiseet, and threw any ftones at him, hee would fet his pot downe on the one fide, and caft ftones against the children till hee had affired his way, then would hee returne to carry home his pot. And which is more, although he were a good Bibber of wine (as I haue oftentimes feene him drinke, when his Mafter hath given it him) yet would hee neuer touch it vntill leave was given him. They told me moreover, that if he faw any women painted, he Zealous,

would fall youn them, pull off their attire, and would fecke to bite them. Among ft the most remarkable things at the Indies of Porn; be the Vicugnes, and sheepe of Or vicuents. the Countrie, as they call them, which are tractable beatls and of great profit; the Vicugues and Tarugues of are wilde , and the Sheepe are tame. Some thinke that the Viengenes are those which Ariffotle, Pera Chap 40. are wilde, and the sheepe are tame, some timize that the range is a tense which arrivates, which are wilde Goats, and in trust they have four partitions, which are wilde Goats, and in trust they have four partitions referriblance, for the lightnesses they have in the Woods and Mountaines, but yet they are no faith to the Goates, for the Viengues have no hornes, as those have, whereof Ariffele makes mention; neither are they the Goates of the East Indies, from whom they draw the Bezar stone; for if they be of that kinde, it were a dinerie one, as in the race of Dogs, the Maftife is dinerie from the Grey-hound. The Vicingnes of Perm are not shofe beafts which carry the Bezar stone, in

the Pronince of new Same, which there they call Betaers, for that they are a kinde of Stags 30 and Venison; yet doe I not know in any part of the World there the any of these beafts, but in Porn, and in Chille, which are Countries toyoling brieff another. These Viengues are greater then Goates, and leffe then Calues. Their halle is of the colour of dried Roses, somewhat clearer: they have no hornes like Stags and Goates. They frede youn the highest tops of the Mountaines, which they call Pages. The Snow nor Frost dock not offend them, but contrariwise they seeme to delight in it. They goe in troupes, and runne most lightly; when they meete with any Trauellers or Beafts, they flie away, Teeming very fearefull, and in Sying they drive their yong ones before them. They doe not finde that they multiply much : and therefore the Kings Ingues did defend the hunting of Viengnes; if it were not for their feasts, or by their commandement. Some complaine, that fince the Speriards entred there, they have

40 given too much libereie to hunt the Viewgees, and by this meanes they are much diminished. The manner the Indians vie in their hunting, they affemble many men together, to the num- Indian bunber of a thousand or two thousand, yea more, and insuroning a great circuit of wood, they ting hunt their game vntill they have compafied is in on all parts, and by this meanes they commonly take three or foure hundred, and so chooling what they lift, they let goe the reft, especially the Females for breede. They are accustomed to theere these beasts, and of their steace to make Courrings and Rugges of great value, for that this wooll is like to white filke, which lasts long: and as the colour is naturall and not dyed, so is it perpetuall. The stuffes that are made of this wooll, are very fresh and good in Summer, and they hold them profitable for the inflammation of the reines, and other parts, tempering the excessive heate. This wooll hath

so the like versue when it is made in Quilts, and therefore fome vie it to that end, for the triall they have made thereof. They fay moreover, that this woolf or conerings made thereof, is phylicall for other indifpolitions, as for the gowt : yet doe I not know that they have made any certaine triall thereof. The flesh of thele Victioner is not good, although the Indians eatert, and drie it. For the effects of phylicke, I will lay what I have seene voon the Sierre of Pers, come ming one night into a Tambe or line, being much afflicted with paine in mine eyes, thinking they would fall out (the which doth commonly happen in those parts) for that they palle Experiment through places covered with fnow, which is the cause of this accident. Being troubled with this for the eyes. paine, and out of patience, there came an Indian woman which faid to me, Father , lay this to thine eyes, and thou fhalt bee cored. It was a piece of the field of Victories newly killed and all

60 blondie. I vied this medicine, and prefently the paine ceafed, and foone after went quite awa. Belides thefe Chacos which is the most common manner of hunting at the Fidies , they have ve fed another more private to take them, which is, that comming neere, they doe cast certains lines with plummets of lead, which intangle their legges, fo as they cannot runne, and by this meanes they take the Visugne. The chiefe reason why this beaft is esteemed, is, by reason of

the Bezars from they finde in them, whereof wee will intreate hereafter. There is another kinde of bealts, which they call Taragues, which likewife are wilde, and more numble then the Vicuones. They are greater of body, and more hot. They have fort cares and hanging : they goe not in troupes as the Viengues. I have not feene them but alone, and most commonly in high places. They also draw Bezars stones from these Taragues, which are greater, and have more on peration and vertue.

OF Parm Gua

There is nothing at Pers of greater riches and profit then the Cattell of the Country , which our men call Indian Sheepe, and the Indians in their generall language call them Leme, For all things well confidered, it is a beaft of the greatest profit and least charge of any that I know: from them they draw meate and clothing, as from the theepe of Spaine. Moreover, they have the beater nefit to carry all things they have need of, ving them to beare their burthens : and they have no need either of thooes or faddles, nor yet of oates, but he ferueth his Master for nought, feeding on the graffe he findes in the fields; fo as God hath furnished them of Sheepe and Mares, and all in one beaft. And as it is a poore Nation, so would hee in this point free them from charge, for that there is much pasture ypon the Sierre: and this kinde of Cattell hath no need of any other charge. There are two kindes of these Sheepe or Lamas, the one they call Paces, or sheepe bearing wooll, and the others are bare, and have little wooll, so are they better for burthen; they are bigger then great Sheepe, and leffe then Calues, they have a very long necke, like to a Camel whereof they have good need: for being high of flature, they have need of a long necke, elle should they be deformed. They are of divers colours, some all white, others all blacke, some grey 30

and some spotted, which they call Maromore. The Indians had great superstitions in choosing the beafts for facrifices, of what colour they should bee, according to the diversitie of Seasons and Sacrifices. Their fielh is good, although it be hard, but that of their Lambs is the better. and the most delicate that can be eaten ; yet they eate not many , for that the chiefe fruit and profit they yeeld, is their wooll, to make clothes, and their feruice to carry burdens. The Indians make stuffes of this wooll wherewith they clothe themselves : the one is groffe and common , which they call Hanaca , and the other fine and delicate , which they call Cambs , they make Carpets and Couerings, and other exquiste workes, which last long, and have a very faire luster. like halfe filke: and that which is most rare, is their manner of wearing their workes, being both fides alike, fo as you shall not finde any end in a whole piece. The large 30 King of Pers had many chiefe workmen, to make this worke of Combin and the which, for the most part, were reficient in the Province of Capachica, loyning to the great Lake of Tricaca. They die this wooll into diners fine colours, with fundrie kindes of herbs, whereof they make many forts of workes both course and fine. All the Indians, both men and women, worke in the Siere, and have their Loomes in their houles, having no need to buy any states for their necef-farie vies. Of the fielh of their sheepe they make Cufchargui, or dryed fielh, the which will last

theepe with burthens, and to goe in bands, three hundred, five hundred, yea a thoufand in a companie, with Wine, Mays, Cosa, Chuno, Quick-filuer, and all other kindes of merchandist, and of Silver, which is the best of all. They carry barree of Silver from Petens to Arigna, which 40 is three Core and ten leagues. I have often wondered to fee these troupes of sheepe haden with a thouland or two thouland barres of Silver, and much more, which is about three hundred thoufand ducats, without any other guard or refore then fome Indiane, which sense onely to guide thele fleepe, and to lade and volade them, or at the most, some few Spaniards: and they sleepe all night in the middeft of the fields, without other guard : and yet in fo long 2 way and to weake a guard, they never finde want or loffe of any thing in fo great a treasure of Silver, fo fafe is the way in Pers. The burthen which one of the leftespe doth commonly carry, is of four or fise

very long, whereof they make great account. They are accustomed to drive thouses of these

Sixe Arobes is Arrobes : when their voyage is long they goe not about two, three, or fourt leagues at the most a hundred and on a day. Those that guide those troupes, have their ordinarie lodgings, where they are affired to have water and patture, and there they valade and fet up their Tents, making fire, and dref- sa fing their meates, which is not painfull, although it be a flegmatike and flow manner of travell. When there is but one dayes icurney, one of these sheepe will beare eight Arrobes in weight, or more, and beares this burthen eight or ten leagues in a day, as the poore Souldiers were wont to doe, when they marched through Pers. This kinds of Cattell delights most in a cold aire, and for this cause they line vpon the Sierre, and die in the Laner, by reason of the heate. Sometimes these sheepe are all coursed with Ice and frost, and yet they continue found and wells The bare theepeare pleafant to behold, for they will flay vponthe way, raying vp their necks, and will looke voon any one very willly, and so they remaine a long time, without mooning or any thew of feare, which greeth occasion of laughter, freing them thus to feand. And yet foractimes they doe grow amazed fodeinly, and runne away with their burthens, enen to the 60 higheft Rocks, to as not being able to come vnto them, they are confirmand to kill them with an Harquebuze, left they should lote their barres of Silver, which they sometimes carry. The Paces will grow reaftie under their burthens, lying down, and will endure to be cut in a thouland pieces before they will rife when this humor takes them: wherof the prouerb growes in Perm, to lay that

ie reaftie, to fignifie, he is obitinate; for that when any of these beafts is moodie, it is with exrefle : the remedie they have is, to stay and fit downe by the Pace, making much on him, vntill the fit be past, and that he rife : and sometimes they are forced to stay two or three houres. They hate a difeafe like to fcabs, which they call Carache, whereof they commonly die. The Ancients had a remedie, to burie them quicke that had the Carache, left they should infect the reft. being a very contagious difeafe, and goes from one to another. An Indian that hath one or two of these sheepe, is not reputed poore, for one of them is worth fixe or seuen pieces of allay. and more, according to the time and places.

The Bezauer flone is found in all these beasts before mentioned, which are proper to Pers, Of the Bezaur 10 whereof fome Authors of our time have written whole bookes, which they may reade that de- flone, chanas

fre to haue a more particular knowledge. For the present subject it shall be sufficient to say, that this stone which they call Bezaar, is found in the stomacke and belly of this beast, sometimes one alone, sometimes two, three, and foure. They are very different in forme, greatnesse and colour, for that some are small like Filberds, and lesse; others like Walnuts; some like Pidgeons egges, and others as bigge as a Hens egge : and I have feene some as bigge as an Orange : in forme fome are round, others in fashion like to Lentils, and many other formes. For their colour, fome are blacke, some white, some grey, darke greene, and others, as if they had beene silded. It is no certaine rule to judge the best and most fine by the colour or forme. All these stones are made and fashioned of divers films and skins one vpon another. In the Province of Xaura and 20 other Prouinces of Pers, they finde these stones in divers kindes of beafts, both wilde and tame, other routiness, Paces, Vicugues, and Tarugues, some adde an other kinde, which they say are sain the Guances, Paces, Vicugues, and Tarugues, some adde an other kinde, which the Industrial Known wild Goates, which the Industrial Known in Pers, whereof we have alreadie discoursed. The Guanaces or Countrie sheepe, or Paces, have commonly the leffer flones, and blacke, neither are they fo much approved for the vie of phyficke. They draw the greatest Bezaur stones from the Viengnes, and they are grey, or white, or of a darke greene, which are held for the better. They esteeme those of the Tarngues for the most excellent, whereof there are some reasonable bigge : they are commonly white, inclining

to grey; and they have the filmes commonly bigger and thicker then the reft. They finde the Bezaar stone equally both in Male and Female. All beafts that ingender it, 30 chaw the cuid, and commonly feede voon the Snow and Rocks. The Indians report and teach by tradition from their Fathers and Ancients, that in the Prouince of Xaire, and in other Prounces of Pers, there are many herbs and venemous beafts, which poison the water and the paflures where they eate and drinke, and where they breathe : amiddeft which venemous herbs there is one very well knowne of the Vicagne, by a naturall inftinet, and of other beafts that in-gender the Beam stone, which eate this herbe, and by meanes thereof they presente themselues from the portoned waters and pastures : and they tay, that of this herbe the stone is compounded in the stomacke, whence it drawes all the vertue against poison, and other wonderfull effects. This is the opinion and tradition of the Indians, discourred by men of great experience in the Kingdome of Pern, which agrees with reason, and with that which Plinte reports of the Plin L 10. 1.75

40 Mountaines Goats, which are nourished and fed upon poison without suffering any harme. The Indians being demanded, why the Sheepe, Kine, Goats, and Calues, fuch as are in Caffile, haue not the Bezas ftone, feeing that they feede on the fame Rocks: their answere is, That they believe not, that those beatts of Caffile eate of that herbe, or that they have found the Bezaar stone in Stags and fallow Deere. This seemes to agree with our knowledge, for that in new Spaine they finde the Bezaar stone, although there be no Vicuones, Pacos, Tarnenes, nor Gueraces, but onely Stags, in some of which they finde these stones.

One thing is worthy admiration, that they grow and are fashioned vpon very strange things, as voon the tagge of a Point, voon a Pin, or a piece of Wood, which they finde in the centre of this stone, and yet doe they not hold it falle, for that the beast might swallow 40 it, and the flone thicken vpon it, and growes one vpon another, and fo it increaseth. I did fee in Peru, two stones fashioned vpon Pignons of Castile, which made vs to wonder much, for that in all Pern, wee had not feene any Pines or Pignens of Caftile, if they were not brought from Spaine, which feemes to mee very extraordinarie. This little may fuffice touching the Bezaars frome. They bring other physicall fromes from the Indies, as the frome of Hyiada, or of Rate, the bloud ftone, the stones of Milke, and of the Sea. Those which they call Corneria nas, for the Heart, whereof there is no neede to speake, having nothing common with the fubiect of beafts, whereof wee have intreated : which gives vs to vnderstand how the great Master and Author of all, hath imparted his benefits and wonderfull secrets, to all parts of the World; for the which he is to be glorified for euer.

R Eader, I have here added this worke, for the better and wore particular knowledge of the Naturalli Historic of the West Indies. Thu Authors Gonzalo Ferdinando de Ouicdo did first write a Summarie to Charles the fifth (out of which the most part of this is taken) An. 1525, and after that

writ his Generall Historie, enlarging what be bad written before this Summarie; and in the dividing is writ bit Questian including entaging some se come written wifer come commons; a men to a manage it in which we pertit be frield which containing principally the Dynnikh akit and N a terrila deformation; in the lland, in truevate Beeker, wee house in Ramulion thead Tames of Vongege: the feemed for which he writes of the Contente of New Ognane, and the brind of Pettu and the Southerne America, with about four bundred pittures of the Plants, Beafit, and other Creatures of those parts, were means published; joint amount in the state of the state of the fe parts. As for the Spanish alls we have them sufficient, by written by others. But Acolta and Outcoo have best defenced of the student of Nature, that is, of the knowledge of God in his workes. In which respect I have added many things omitted by Master Eden, and Master Willes in the former publication, both examining this, and translating the rest from

CHAP. III.

Extracts of Gonzalo Ferdinando De Oviedo his Summarie and Generall Historie of the Indies.

Of the mynes of gold, and the manner of working in them.

His particular of the mynes of Gold, is a thing greatly to be noted, and I may much better fpeake hereof then any other man , forasmuch as there are now twelue 20 yeeres pait fince I ferued in the place of the Surueyor of the melting shops, pertayning to the gold mynes of the firme Land, and was the Gouernor of the mynes of the Catholike King Dov Ferdinando, after whole departure from this life, I ferued long in the same roome in the Name of your Maiestie. The myne or veine

Manner of Searching for

Gold in

which ought to be followed, ought to be in a place which may fland to faue much of the charges of the Labourers, and for the administration of other necessarie things, that the charges may bee recompenced with gaynes. The greatest part of the wrought gold which the Indians haue, is base, and holdeth somewhat of Copper: of this they make Bracelets and Chaines, and in the fame they close their Iewels which their Women are accustomed to weare, and esteemed more then all the riches of the World. The manner how gold is gathered, is this, either of fuch as is to found in Zauana, that is to fay; in the Plaines and Rivers of the Champaine country being without Trees, whether the Earth be with graffe or without, or of fuch as is sometimes found on the Land without the Rivers in places where Trees grow, fo that to come by the same, it shall be requilite to cut downe many and great Trees. But after which focuer of thele two manners it be found, either in the Rivers or Breaches of waters, or elfe in the earth, I will shew how it is found in both these places, and how it is separate and purged. Therefore when the myne or veine is discourred, this chanceth by searching and prouing in such places as by certaine signes and to-kens doe appeare to skilfull men apt for the generation of gold, and to hold gold: and when they haue found it, they follow the myne, and labour it, whether it be in the River, or in the Playne as I have faid. And if it be found on the Playne, first they make the place very cleane where they 40 intend to digge, then they digge eight or ten foot in length, and as much in breadth : but they goe no deeper then a fpan or two, or more, as shall seeme best to the Master of the myne, digging equally, then they wash all the earth which they have taken out of the said space, and if herein they finde any gold they follow it, and if not, they digge a fpan deeper, and wash the earth as they did before : and if then also they finde nothing, they continue in digging and washing the earth as before, untill they come to the hard rocke or flone; and if in fine they finde no gold there, they follow no further to feeke gold in that place, but goe to another part. And it is to be understood, that when they have found the myne, they follow it in digging, in the same meafure in levell and depth, vntill they have made an end of all the myne which that place contayneth, if it appeare to be rich. This myne ought to confift of certaine feet or pales in length or to breadth, according to certaine orders determined, and within that compaffe of earth, it is not lawfull for any other to digge for gold: And where as endeth the myne of him that first found the gold, immediatly it is lawfull for any other man that will, with a flaffe to affigne himfelfe a place by the fide of the same, inclosing it with stakes or pales as his owne. These mynes of Zanone (that is, fuch as are found in the Playnes) ought ever to bee fought neere to fome River of Brooke, or Spring of water, or Dike, or standing Poole, to the end that the gold may be washed, for the which purpose they vie the labour of certaine Indians, as they doe other in digging of the myne. And when they have digged out the myne, they fill certaine Trayes with that earth, which other Indians have the charge immediatly to receive at their hands, and to carry those Trayes of earth to the water, where it may be washed : Yet doe not they that bring it wash it, 60 but deliver it to other, putting it out of their owne Trayes into theirs, which they have readie in their hands to receive it. These Walhers for the most part are the Indian women, because this Women gold worke is of leffe paine and trauell then any other. These women when they wash, are accustomed to fit by the water fide, with their legges in the water even up to the knees, or leffe, as the

CHAP.3. Manner of gathering Goldin Mines, Riners, graines Graine great.

place ferueth their purpole : and thus holding the Trayes with earth in their hands by the handes thereof, and putting the same into the water, they mooue them round about after the manner of fifting, with a certaine aptnelle, in fuch fort that there entreth no more water into the Traves then ferueth their turne, and with the felfe fame apt motting of their Traves in the water, they ever avoid the foule water with the earth out of the one fide of the Veffell, and receiue in cleane water on the other lide thereof, fo that by this means by little and little, the water washerh the earth as the lighter frostance of the Trayes, and the Gold as the heavier matter refleth in the bottome of the same, being round and hollow in the middlest like vnto a Barbars Bafen. And when all the earth is avoided, and the Gold gathered together in the bottome of the to Tray, they putita part, and refuthe to take more earth, which they wash continually as before.

Furthermore it is to be noted, that for every two Indians that walh, it is require that two o- Other Labour ther ferue them to bring earth from the Mine, and other two to breake the fame 'Imall', and fill rers, their Trayes therewith. Also beside these Labourers, it is necessare that there be other people in the place where they worke and reft in the nighte: these are such as make their bread, and pronide for victuals, and other necessaries. So that to conclude, there are in all, fine persons ordinarily affigued to every Tray of washers.

There is another manner of working the Mines, in Rivers or Brookes of running waters : and this is, that in auoyding the water of his courfe, after that the beds of the Rivers are dry and vtterly'emptied, they find Gold among the breaches, clifts, and rifts of stones, and among all that 20 is in the bottome of the Channell, and where naturally the River runneth of greatell force 150 Gold in Rivers that it chanceth fometime, that when the bed of the River is good and rich, they find in it great or poulder.

quantitie of Gold. And therefore your Maiestie ought to voderstand for a generall rule, as it a peareth in fact, that all Gold is ingendred in the tops and highest places of the Mountailles; and Goldengen incontinuance of time is by little and little brought downe to the Vales and Plaines by thowres dred on hill of raine, and the fals of Springs, Rivers, and Brookes, having their originall in the Mountaines, tops. and descending from the same, notwithstanding it is oftentimes found in the Plaines farre from the Mountains. But when it chanceth to be found in great quantity, it is for the most part among the Mountaines, and in the Ruers, or their branches, more then in any other part of the Plaine: and in these two manners it is commonly found most abundantly. And for the better proofe

30 that Gold is ingendred on high; and is brought downe into the low places, I have one great token thereof, which causeth me to beleeue it for certaine : and this is, to connder that coles never putrific nor corrupt winder the ground, if they be made of fitrong wood. Whereby it chanceth, that digging the earth by the foulds or indented places of the Mountaines, or on the fides, and His resion, breaking a Mine in the earth, where it had beene broken before, and having now digged one or two or three Poles in measure, the Miners found certaine coles of wood vnder the same levell where they found Gold, and this I fay in the earth which was taken for a Virgin , that is to fay, fuch as had not before beene opened for any Mine : the which coles could not naturally bee ingendred there, or enter in by any meanes, but when the superficiall part of the earth was equall with the levell where the coles were found, it is like that the coles were left there by fome occa-

40 fion of fire, and that they fastened there in time, and that afterward in long continuance of time they were by little and little coursed with the earth, which the often flowles of raine washed from the Mountaines, fo that by the course of yeeres the earth overgrew the coles voto the faid levell and measure, which had before time beene the superficiall part of the earth, where the Some may coles and Gold were found together: whereby it may appeare that the Gold was no more ingendred there then were the coles, but brought thither from the Mountaynes by the falls of waccoles, theis at ters as we have faid, forafmuch as the Mountaines are the Matrices and Bowels of all rich Metals, other laddyrd ters as we have faid, foralmuch as the Mountaines are the Matrices and bowers of all non netural.

Further and befide this, I fay that in how much more the Gold is gone faire from the naturall rally grow place of his generation to the place where it is found, it is fo much the more purified and fined, there. and of a better caract, and the neerer that it is found to his proper Mine or veine where it is ingendred, it is fo much the bafer, fouler, and more crude, and of a bafer alay and caract, and doth

walte fo much the more in melting, and remayneth more Brickle. Sometimes there are found graines of Gold of great quantitie, and of great weight about Gold in the earth, and conctimes also under the earth. And the greatest of all other that was found to generate this day in the Indies, was that which was fold in the Sea about the Indies, was that which was fold in the Sea about the Indies, was that which was fold in the Sea about the Indies, was that which was fold in the Sea about the Indies, was that which was folded. three thousand and two hundred of Caffellans of God, which are in value foure thousand a hundred thirtie and eight Ducats of Gold, which weigh one Arross and Euen pound, of thirtie and two pound; after twelve ounces to the pound, which make threefcore and four Markes of A' Marke is a Gold. And I faw in the yeerer 315. in the hands of Michel Paffamonte Treaturer to your Mass pound of 8.

ieffie, two graines, of the witich one weighed feuen pounds, which are fourteene Markes, and ounces flumma, ieffie, two graines, of the winch one weighed reuen pounds, which are routed and of ten Marks, 16. pound 60 are in value about three fooreand flue Durats of Gold every Marks; the other was of ten Marks, 16. pound which are fine pounds of like value, and of very good Gold of two and twentie caracts, and bet onness, and ter : There are also found many other great graines, although not equall whto thele in bignefic. 12. ouncests And for a function of Gold, I have thought good to declare for what how the In- the pound of diam can very excellently gild fach Vellets of Copper and bale Gold as they make I for they can Indian States.

give them fo faire and flourishing a colour, that all the maffe which they gilt, appeareth as though it were Gold of two and twentie caracts, and better. This colour they give with a certaine hearbe, as though it were wrought by the art of any Gold-fmith of Spaine or Italie, and would of them be efteemed as a thing of great riches and a fecret manner of gilding. For the define that our men haue to Gold, they nothing efteeme the Copper, although there might great commoditie and profit be had thereby, and also by other Metals, which they nothing regard, except Silver, which is found abundantly in that part of the firme Land which is called New Spaine.

Of the manner of fishing for Pearles.

The Indians exercise this kind of filhing for the most part in the Coasts of the North in Ca. 10 bagus and Cumans, and many of them which dwell in the Houles of certaine particular Lords in the Ilands of San Dominico and Saniti Isbannis, refort to, the Iland of Cubagua, for this purpose. Their custome is to goe fine, fixe, or seuen, or more in one of their Canoas or Barkes. earely in the morning to some place in the Sea thereabout, where it appeareth vnto them that there should be great plentie of those shell fishes (which some call Muscles, and some Oysters) wherein Pearles are ingendred, and there they plunge themselves vnder the water, even vnto the bottome, fauing one that remayneth in the Canoa or Boat , which hee keepeth still in one place as necre as he can, looking for sheir returne out of the water : And when one of them hath beene a good while vader the water, he rifeth vp, and commeth swimming to the Boat, entring into the same, and leaving there all the Oysters which he hath taken and brought with him (for an in these are the Pearles found) and when he hath there rested himselfe a while , and eaten part of the Oysters, he returneth against to the water, where hee remayneth as long as hee carrendure, and then rifeth againe, and swimmeth to the Boat with his prey, where hee refleth him as before, and thus continueth course by course, as doe all the other in like manner being all moff expert Swimmers and Diuers : and when the night draweth neere , they returne to the Iland to their houses, and prefent all the Oysters to the Master or Steward of the house of their Lord, who hath the charge of the faid Indians, and when he hath given them fomewhat to este. he laveth vp the Oysters in safe custodie, vntill he haue a great quantitie thereof, then he causeth the layern vp the Oyters in and they find in energy of them Pearles, other great or small, two, or three, or foure, and fometimes fine or fixe, and many small graines, according to theliberalitie of nature. They faue the Pearles both small and great which they have found, and either eate the Oysters if they will, or cast them away, having so great a quantitie thereof, that they in manner abhorre them. These Oytters are of hard fiesh, and not so pleasant in eating as are ours of Spaine. This Hand of [ubagua, where this manner of fishing is exercised, is in the North Coast, and is no bigger then the Hand of Zeland. Oftensimes the Sea increaseth greatly, and much more then the Fishers for Pearles would , because whereas the place is very deepe, a man cannot naturally reft at the bottom, by geafon of the abundance of airie substance which is in him. as I have oftentimes proped. For although he may by violence and force descend to the bottome, yet are his feet lifted wp. 22 aine, for that hee can continue no time there : and therefore where the 40 Sea is very deepe, the fe Indian Fishers whe to tye two great stones about them with a coard, on each fide one, by the weight whereof they descend to the bottome, and remayne there vntill them lifteth to rife againe, at which time they value the Hones, and rife variat their pleafure. But this their aptnesse and agalicie in swimming, is not the thing that causett men most to mar-Men continue uell : but rather to copfider how many of them can fland in the bottome of the water for the space of one whole hours, and some more or leffe, according as one is more app hereunto then an customed to fish for Pearles, being but little and narrow, will not in short time be veterly with-

other. An other thing there is which teemeth to me very firanger and this is + that whereast have oftentimes demanded of some of these Lords of the Indians, if the place where they are acout Oyfters, if they confume them to fast: They all answered mee, that although they be confumed in one part, yet if they goe a fishing in an other part, or an other Coast of the Iland, or at shi 50 other contrary wind, and continue fifthing therealfo votill the Oysters bee like wife confumed; and then returne againe to the first place, or any other place where they fished before, and emptied the same in like manner, they find them agains as full of Oyflers as though they had never beene filhed. Whereby we may judge, that thele Oysters either remove from one place to an ob ther, as doe other filhes, or elle that they are ingendred and increase in certaine ordinarie places. This Iland of Comming and Cabagua, where they fifth for these Pearles, is in the twelfth degreeof the part of the said Coast which inclineth toward the North. Likewise Pearles are found and gathered in the South Sea, called Mare del Sur, and the Pearles of this Sea are very bigge, vet not fo bigge as they of the lland of Pearles, called de las Perlas, or Margarita, which the Indiani call Terarequi, lying in the Gulfe of Saint Michael , where greater Pearles are found , and of 60 greater price, then in any other Coast of the North Sea, in Cumana, or any other part. I speake this as a true tellimonie of fight, having beene long in that South Sea, and making curious inquifition to be certainly informed of all that percaynesh to the filhing of Pearles. From this Iland of Hinge Pearle. Terarequi, there was brought a Pearle of the falbion of a Peare i weighing thirtie and one

Caracts, which Petras Arias had among a thouland and fo many pounds weight of other Pearles, By the compuwhich he had when Captaine Galpar Morales (before Petrus Arias) piffed to the taid Iland in ration of Ver the yeare 1515, which Pearle was of great price. From the faid Iland also, came a great and ve-nice, foure ry round Pearle, which I brought out of the Sea, this was as bigge as a small peller of a Stone- graines make how, and of the weight of twentie and fixe Caracts : I bought it in the Citie of Panama, in the a Caract, Sea of Ser, and paid for it fixehundred and fiftie times the weight thereof of good Gold . and and it three yeeres in my custodie, and after my returne into Spaine, fold it to the Earle of Nanfer Marquefle of Zoneta great Chamberlaine to your Maieftie, who gaue it to the Marquefle his Wife, the Ladie Memia of Mendoza. I thinke verily that this Pearle was the greatest, fairest. to and roundeft that hath beene feene in those parts. For your Maiethe ought to vnderftand, that in the Coast of the Sea of Sir, there are found a hundred great Pearles round after the fashion of Peare-pearles a Peare, to one that is perfectly round and great.

Of the familiaritie which certagne of the Indians have with the Deuill. and how they receive answere of him of things to come, and other Superstitions.

WHen the Indians beginne their battaile, or goe to any combate, or attempt any other great mater, they have certaine elect men, whom they reverently efteeme, and call them Teaming, which in their tongue is as much to fay as Mafters : notwithflanding that they call every man, that is cunning in any Science, by the fame name, as Fishers, Fowlers, Hunters. or makers of Nets. Their Tequinas therefore, they call the Mafters of their Answeres , because they speake with Tuyra, that is, the Denil, and bring them answere what he faith, either as touching fuch things as they have to doe, or shall chance to them the day following, or many dayes sture. to come. For the Deuill, being fo ancient an Aftronomer, knoweth the times of things, and feeth how they are naturally directed and inclined, and maketh them believe that they come fo to nalle by his ordinance, as though he were the Lord and mooner of all that is and shall be and that he giveth the day light, and raine, cauleth ten pelt, and ruleth the stations of times, giving life, ao or taking away life, at his pleafure: By reason whereof, the Indians being deceived of him. and feeing also such effects to come certainly to pase as he hath told them before, believe him in all teeing amount nices to Ouic returnly o pages with Sarrifaces of the Bood and liuse of men, and color firms, and hoosen him in many places with Sarrifaces of the Bood and liuse of men, and colorficrous Spaces; And when God disposite the constant, by which the Devall liasth fooken in Oracle, whether he is proposed a Lyer, because the perfected the proposed to perfect the transfer of the proposed to perfect the transfer of the proposed to perfect the perfect the proposed to perfect the perfect the perfect the proposed to perfect the perfect that the perfect the perfect that the perfect that the perfect the perfect the perfect that the perfect that the perfect the perfect that the perf he hath changed his mind and fentence for some of their sing, or denileth some such lye as liketh him best, being a skilfull Master in fuch subtill and craftin degices, to deceine the simple and ignorant people, which hath small defence against to mightig, and craftis an Aduersarie. And as they call the Deutli Tura, fo doe they in many places call the Christians by the fame name, thinking that they greatly honour them thereby, as indeed it is a name very fit and a greatle to many of them, having laid apart all honefte and vertue, luning more like Dragons then men,

among their fimple people.

Before the Inhabitants of the Iland of Hiftaniols had received the Christian Faith, there was among them a Sect of non, which lived folicarily in the Defarts and Woods, and led their life in Silence and Abstinencemore streightly then ever did the Philosophers of Pythagoras S. Ct, Pythagoras abstaining in like manner to on the eating of all things that line by bloud, contented onely with Piaces, such Fruites, Herbes, and Kness, as the Deserts and Woods ministred vnto them to eate: The inch Frunces, accessed, and the Deterts and Woods ministred visit of them to cate? The Profession of this Seck were can Praces. They gave themselves to the knowledge of natural things, and visid certains force Agicall Operations and Superfitions, whereby they had familiatine with Spirits, which they dived into their owne bodies, as such times as they would take vpon them to rell of things to ome, which they did in manner as followeth. When any of the Kings had occasion t call any of them sucof the Defarts for this purpose, their custome was to fend them a portion of their fine Bread of Cazabi or Mais, and with humble request and fuite to defire them toell them of fuch things as they would demand. After the request granted, and the place as day appointed, the Piaces commeth with two of his Disciples wayting on him, where the one bringeth with him a Veffell of a fecret Water, and the

other on the other, even the presence of the King and certaine of his Nobles (for the common rings or conpeople are not admitte othere Mysteries) and turning his face toward the Delart, he bee sultations. 60 gameth his Inchantatt, and calleth the Spirit with loude voyce by certaine names. which no man underndeth but hee and his Disciples. After hee hath done thus a while. if the Spirit yet dete his comming, hee drinketh of the faid Water, and therewith waxeth hot and furi, and inverteth and turneth his Inchantment, and letteth himfelfe blond with a thorne, maruvully turmoiling himfelfe, as we read of the furious Sybils, not ceasing

other a little Silver Bell. When hee commeth to the place, hee fitteth downe on a round feate made for him of purposewhere having his Disciples the one standing on the one hand, and the

vatill the fairit be come : who at his comming entreth into him, and ouerthroweth him. as it were a Greyhound should ouerturne a Squerell, then for a space, he seemeth to lye as though he were in great paine, or in a rapte, wonderfully tormenting himfelfe; during which agome, the other Disciple shaketh the Silver Bell continually. Thus when the agonie is past; and he liveth quietly(yet without any fence or feeling) the King, or some other in his stead, demandeth of him what he defired to know : and the spirit answered him by the mouth of the rapte Piaces, with a direct and perfect answere to all points: Infomuch that on a time certaine Spaniards being prefent at these mysteries with one of the Kings, and in the Spanish tongue demanding the Piaces of their Ships which they looked for out Spains, the spirit answered in the Indian tongue, and told them what day and houre the Ships departed from Spaine, how many they were, and what to they brought, without failing in any point. If he be also demanded of the eclipse of the Sunne Prognofficati- or Moone (which they greatly feare and abhorre) be giveth a perfect answer, and the like of tem pelts, famine, plencie, warre or peace, and fuch other things. When all the demands are finished, his Disciples call him aloud, ringing the Silver Bell at his eare, and blowing a certaine powder into his nostrils, whereby he is raised as it were from a dead seep, being yet somewhat heavy headed and faint a good while after. Thus being againe rewarded of the King with more bread, he departeth againe to the defarts with his Disciples. But fince the Christian faith hath beene difperfed throughout the lland, thefe diuellish practifes have ceased, and they of the members of the Diuell, are made the members of Christ by Baptisme, forsaking the Diuell and his

works, with the vaine curiofity of defire of knowledge of things to come, whereof for the most

Rea on why men kill themfelues to ferue

part it is better to be ignorant, then with vexation to know that which cannot be avoided. Furthermore, in manie places of the firme Land, when any of the Kings dye, all his houshold feruants, aswell women as men, which have continually served him, kill themselves, beleeving as they are taught by the Diuell Tayra, that they that kill themselues when the King dyeth, goe with him to heaven, and ferue him in the same place and office as they did before on the earth while he lived : and that all that refuie fo to doe, when after they dye by their naturall death or otherwise, their soules to die with their bodies, and to be diffolged into ayre, and become nothing, as doe the foules of Hogges, Birds, Fishes, or other bruite beafts: and that onely the other may enjoy the priviledge of immortalitie for ever, to serve the King in heaven. And of this falle opinion commeth it, that they which lowe come, or fet rootes for the Kings bread, 20 and gather the same, are accustomed to kill themselves, that they may enion this priviledge in heaven, and for the same purpole, caufe a portion of the graine of Mair, and a bundle of Ince (whereof their bread is made) to be buried with them in their graves, that the fame may ferue them in heaven, if perhaps there should lacke feedes to sowe, and therefore they take this with them, to begin withall, vntill Tayra (who maketh them all thefe faire promifes) prouide them of greater quantitie. This have I my leffe feene in the top of the Mountaines of Guaturo, where having in prilon the King of that Prounce (who rebelled from the obedience of your Maieftie) and demanding of him to whom percained those Sepultures or graves which I saw in his house: he answered, that they were of certaine Indians which flew themselves at the Jeath of his Father. And because they are oftentimes accustomed to bury great quantiles of wrought gold 40 with them, I caused two graves to be opened, wherein was nothing found but a vessell full of the grains of Maire, and a bundle of Incea, as I have faid. And demanding the cause hereof, of the King and the other Indians: they answered, that they that were best detree, were the labourers of the ground, and men skilfull in fowing of feedes, and makis of bread, and fernants to the Kings father, and to the end that their forfes should not dye vith their bodies, they flue themselues at the death of the King their Mafter, to line with firm heaven, and to the intent that they might ferue him there in the fame offee, they referre that Mais and laces, to five it in heaven. Whereunto I answered them in this manner, Band how your Type deceiveth you, and how all that he teacheth you is falle. You fee how a follong a time fince they are dead. they have not yet taken away this Mair and Incom which is now purified and worth nothing, to and not like to be fowen in heaven. To this the King replied, faying In that they have not taken it away, nor fowen it in heaven, the cause is, that they chanced a finde enough there, by reason whereof they had no neede of this. To this error many thingwere said, which seemed of it the force to remove him from his falle opinon, and especially anytch as at that age are oc-cupied of the Diuell, whom they paint of the felfe same former and cohe, as he appeared vino them in divers shapes and formes. They make also Images of Gold, Ciper, and Wood, to the fame fimilitudes, in terrible shapes, and so variable, as the Painters are aufformed to paint them at the feete of Saint Miehael the Archangell, or many other place, whethey paint them of moftzorrible portrature. Likewile when the diuell greatly intendeth theare them, he threatneth to fend them great tempests, which they call Furacanas, or Haurahnas, and are so vehement, that they ouerthrow many houses, and great trees. And I have seen Mountaines, still of 60 many and great trees, that for the space of three quarters of a league the luntaine hath beene

Subverted, and the tree overthrowne, and plucked out of the earth with thootes.

The guite of Praba, is diffant from the Equinostiall line, from an handrand twentie, to 2

kundred and thirty leagues, and three quarters of a league, after that accompt of feuenteen leagues and a halfe for entrie degree from Pole to Pole: & thus for a little more or leffe, goeth all the coaft. By reason where f, in the Citie of Santia Maria, Antique, in Dariene, and in all that course of the forciail gulfe of Vraba, at all times of the yeere thedaies and nights are in manner of equall length; and if there be any difference betweene them by reason of this small distance from the Egymoctiall, it is so little, that in source and twentie houres, making a naturall day, it cannot be perceived but by the indgement of speculative men, and such as vnderstand the sphere. From hence the North Starre is feene verie low.

Of diners particular things, as Wormes, Serpents, Beafts, Foules, Trees, &c.

Will first speake of certaine little and troublesome Beasts, which may seeme to be engendred of nature to moleft and vexe men, to flew them and gine them to vnderstand, how small and vile a thing may offend & disquiet them, to the end that they may remember the principall end for the which they were created, that is, to know their maker. In manie parts of the firme, Land, by the which as wel the Christians as the Indians do trauaile, there are such marishes & waters in Small Wormes the way, that they are faine to go without breeches among the heurbes & weeds, by reason when moublelone, of, certain small beatts or wormes (which they call Goraphies) much like vnto Ticks, cleaue fast to or, certain man orans of the state as the pouder of beaten Salt, & cleane fo faft, that they can by their legs. These worms are as little as the pouder of beaten Salt, & cleane fo faft, that they can by 20 no meanes be taken away, except the place be nointed with oyle: & after that the legs be nointed a while with oyle, or the other parts where these little Tickes are fastened, they strape the place with a Knife, & to take them away. But the Indians which have no oyle, smoake them, and pure them with fire, and abide great paines in taking them away by this means. Of other little Beafts which trouble men, and are engendred in their heads or other parts of their bodies, I fay that the Christian men which trauaile into these parts, have them but seldome times, and that say that the Children men which canada incourse parts, sade them out reacometimes, and that not past one or two, and this also very seldome: For passing by the line of the Diameter where the compasse maketh difference of saling by the winde called Green (that is, North-east) and the compane make in unretine or saming by the winne cancel urses (mar. is, North-earl) and
Magilful (that is, South-well) which is in the course of the llands of Lear, they faile but
a little way following our voiage by the West, but that all the Lice which the Christians carrie

30 with them, or are engendred in their heads, or other places of their bodies, die and vtterly conwith them, or are engangered in the first and are not engendred in India, except in the heads of little children Lice forfake in those parts, as well among the children of the Christians which are borne there, as also among them, the natural Indians, who have them commonly in their heads, and fometimes in other parts of their bodies, and especially they of the Pronince of Cuesa, which is a region containing more then a hundred leagues in length, and embrafeth the one and the other coast of the North Sea, and of the East. When these Indians are inteded with this filthinesse, they dresse and cleanse one another: And they that exercise this, are for the most part women, who eate all that they take, and haue herein such dexterity by reason of their exercise, that our men cannot lightly take, and naue never in the description of thing greatly to be confidered : and this is, how the Lice finde

40 Christian men, being there cleane from this filthinesse of India, as well in their heads as the rest them against of their bodies, yet when they returne to come agains into Emps, and begin to arrive in that place of the OceanSea where we faid before that these Lice died and for fookse them, fodainely in their repassing by the same clime (as though these Lice had tarried for them in that place) they can by no meanes avoide them for the space of certaine daies, although they change their thirts two or three times in a day. Thele Lice are at the first as little as Nits, and grow by little and little, vntill they be of the bigneffe that they are in Spaine. This have I oftentimes proued, hating now foure times passed the Ocean Sea by this voiage. Beside these wormes and vermin wherof we have spoken, there is another little mischieuousworm, which we may number among whereor we have sponsor, the Peftilence the Indians call Nigua, and is much leffe then a Flea: it pear- Nigua,

50 ceth the flesh of a man, and so lancheth or cutteth the same (while in the meane time it can neither be seene nor taken) that from some it hath cut off their hands, and from other their feete, untill the remedy was found to annoint the place with Oyle and scrape it with a Raior, feete, vntill the remeny was the or Beragua, there are many Vipers like onto them of Spaine's Vipers, In the firme Land in golden Castile or Beragua, there are many Vipers like onto them of Spaine's Vipers, they that are bitten of them, dye in short space, for few line to the fourth day, except present remedy. Of thele, some are of lesse kinde then other, and have their taile somewhat round, and leape in the aire to assaule men; and for this cause, some call this kinde of Vipers Tyrotheir biting is most venomoust, and for the most part incurable. One of them chanced to bite an Indian Maide which ferued me in my houfe, to whom I caufed the Surgians to minister their ordinary Answer which revocall doe her no good, nor yet get one drop of blood out of her, but onely a yel to water, for that the due the third day for lacke of remedie, as the like hath chanced to divers to low water, for that the due the third day for lacke of remedie, as the like hath chanced to divers

others. This Maide was of the age of fourereene yeares, and toake the Spanish tongue as if the had beene borne in Caffile: the faid that the Viper which bit her, on the foot, was two spans long, or little leffe : and that to bite her, the leapt in the aire for the spaces more then fix paces, as I have heard the like of other credible persons. I haue

Adders.

I have also seene in the firme Land a kinde of Adders, very small, and of seven or eight foos long: thefe are fo red, that in the night they appeare like burning coles, and in the day feeme as red as blood, these are also venemous, but not so much as the Vipers. There are other much lesse and shorter, and blacker a these come out of the Rivers, and wander sometimes farre on the Land. and are likewise venemous. There are also other Adders of a ruset colour : these are somewhat bigger then the Viper, and are hurtfull and venemous. There are likewise another fort of man ny colours, and very long : of thefel law one in the yeare of Christ 1515 in the lland of History nola. neere vnto the Sea coasts, at the foote of the Monntaines called Pedernales. When this Adder was flain. I meafured her, & found her to be more then twenty foot long, and somewhat more then a mans fift in bigneffe : and although the had three or foure deadly wounds with a Sword, yet dyed fhe not, nor ftunke the fame day, in so much that her blood continued warme all that time. There are also in the Marishes and defarts of the firme Land many other kindes of Lylarte.

Dragons, and divers other kindes of Serpents, whereof I intend not here to fpeak much because I haue more particularly entreated of these things in my generall historie of the West Indies. There are the Spiders of maruellous bignesse, and I have seene some with bodie and legges bigger then a mans hand extended every way, and I once faw one of fuch bigneffe, that onely her body was as bisse as a Sparrow, and tull of that Laune whereof they make their webbes : this was of a darke ruffet colour, with eyes greater then the eyes of a Sparrow, they are venemous, and of

Toades.

terrible shape to behold. There are also Scorpions, and divers other such venomous wormes. Furthermore in the firme Land, there are many Toades, being verie noious and hurtfull by reason 20 of their great multitude, they are not venemous, they are seene in great abundance in Darrens where they are so big that when they die in the time of drought, the bones of some of them (and especially the ribs) are of such greatnesse, that they appeare to be the bones of Cats or of some on Their renging, ther bearts of the same bignesse. But as the waters diminish, &the moissure consumeth in the time

of drought (as I haue faid) they also contume therewith, vntill the yeare next following when the raine and moisture encrease, at which time they are seene againe. Neuerthelesse, at this prefent there is no fuch quantitie of them, as was wont to be, by reason that as the Land is better cultured by the Christians, as well by the felling of Woods and Shrubs, as also by the Pasture of Kine. Horses, and other beasts, so is it apparant that this poison diminisheth daily, whereby that region becommeth more holesome and pleasant. These Toades sing after three or source 20 fort for some of them sing pleasantly, other like ours of Spaine, some also whistle, and other some make another manner of noise: they are likewise of divers colours, as some greene, some suffer or gray, and some almost blacke, but of all forts they are great and filthie, and noious by reason of

their great multitude, yet are they not venemous as I have faid,

Singing.

There are also a strange kinde of Crabbes, which come forth of certaine holes of the earth, ther Tortoifes, that they themfelues make : the head and bodie of these make one round thing, much like to the hood of a Faulcon, having foure feete comming out of the one fide, and as manie out of the other : they have also two mouthes, like vnto a paire of small Pincers, the one bigger then the other, wherewith they bite, but doe no great hurt, because they are not venemous: their skin and bodie is smooth, and thinne, as is the rkinne of a man, fauing that it is somewhat harder; their 40 colour is ruflet, or white, or blew, and walke fidelong, they are verie good to be eaten, in so much that the Christians travailing by the firme Land, have beene greatly nourished by them, because they are found in manner euerie where : in shape and forme they are much like vnto the Crabbe which we paint for the figne Cancer, and like vnto those which are found in Spaine in Andalufia in the River Guadalchiber, where it entreth into the Sea, and in the Sea coasts there about, fauing that these are of the water, and the other of the land : they are sometimes hurtfull, so that they that cate of them dye, but this chanceth onely when they have eaten any venomous thing, or of the venemous apples wherewith the Caniball archers poilon their arrowes, whereof I will ipeake hereafter, and for this cause the Christians take heede how they eate of these Crabbes, if they finde them neere vnto the faid apple trees. Furthermore in thefe Indies, as well 50 in the firme land, as in the Ilands, there is found a kinde of Serpents, which they call Tuanat, which some call Inannas, these are terrible and fearefull to fight, and yet not hurtfull, they are verie delicate to be eaten, and it is not yet knowne whether they be beafts of the land, or files, because they live in the water, and wander in the woods, and on the land : they have foure feet. and are commonly bigger then Connies, and in some places bigger then Otters, with tailes like Lyfarts or Eutes: their skinne is spotted, and of the fame kinde of smoothnesse or barenesse. although of divers colours : vpon the ridge of their backes, they have manie long prickes, their teeth are very sharpe, and especially their fangs or dogge teeth, their throates are 1 ng and large, reaching from their beards to their brefts, of the like skinne to the refidue of their bodies : they

are dumbe, and haue no voice, or make any noile, or crie, although they be kept tied to the foote 60 of a chelt, or any other thing, for the space of twentie or fine and twentie daies, without any thing to eate or drinke, except they give them now and then a little of the bread of Cazabi, or some such other thing : they have foure feete, and their fore-feete as long as a mans hinger, with clawes like the clawes of a bird, but weaker, and tuch as cannot grafple or take hold of any

thing : they are much better to be eaten then to behold, for few that fee them, will have defire thing; they are much occurred to be eaten then burboness, the new man we them, by realon of their horrible (hape, except fuch as have beene accultomed to the bealts of their regions, which are more horrible and fearefull, as this is not, but onely in apparatus pears of their fielh is of much better tafte then the fielh of Connies, and more holesome, for it Nete. harreth none but onely fuch as have had the French poxe, in fo much, that if they have beene touched of that infirmitie, although they have beenewhole of long time, neuertheleffe they feele burr, and complaine of the eating of these Issuesses, as hath beene oftentimes proued by

There are found in the arme land certaine birds, so little, that the whole bodie of one of them Small Birds.

to is no bigger then the top of the biggeft finger of a mans hand, and yet is the bare body without Tameses. the feathers not halfs fo bigge: This Bird, befide her littleneffe, is of fach velofitie and fwiftneffe in flying, that who fo feeth her flying in the aire, cannot fee her flap or beate her wings after any other fore then doe the Dorres, or humble Bees, or Beetels : for that there is no man that feeth her flye, that would thinke her to be any other then a Dore : they make their nefts according to the proportion of their biguesse, and I have feene that one of these Birds with her neft pat in a paire of gold weights altogether, hath waide no more then 2. Tomini, which are in polic 24 graines, with the feathers, without the which the should have waied somewhat lesses And doubtleffe, when I confider the fineneffe of the tlawes and feete of these Birds, I know not whereunto I may better liken them, then to the little birds which the lymners of bookes are 20 accustomed to paint on the margent of Church Bookes, and other Bookes of Dinne Seruice,

Their Feathers are of manie faire colours, as golden, yellow, and greene, befide other variable Inter products any unaquine take colours, any sames, yearow, and greene, ceince other variable colours: their beake is verie long for the proportion of their bodies, and as fine and inbtile as a fowing needle: they are verie hardy, so that when they fee a man clime the tree where they have their nefts, they flye at his face, and firike him in the eyes, comming, going, and returning with fuch fwiftnele, that no man would lightly belease it, that hath not seene it: and certainly thele birds are foliatle, that I durit not have made mention hereof, if it were not that divers others which haus feene them as well as I, can beare witnesse of my saying : they make them oches, which have copie, cannot be venues 1, can ocate venues my myng; they make they notice flocks and cotten, whereof there is great pleated in these regions, and ferrests well for their purpose. But as specifying the Barla, Fosler, and Beafts of these Jahra; because they are 30 innumerable, both little and great, i intend not to i peaks much here, becaste I have floken more

largely hereof in my generall Hiftorie of the Indies. There is another hinde of Brafts feens in the firme Land, which feemeth very firange and manutilous to the Christian men to behold, and much differing from all other Brafts which have beene in other parts of the world : theile Beafin are called Borderigand are foure footest, having sherr taile and all the reft of their bodies to-Details are valued or immediate the coperture of a barbes horse, for the checkered shift of a Lifart of mailler; a Crocodile of colour betweene white and rufer; inchming issuewhet store to white: This Beaft kinde of Moke is of forme and hape much time too barbed derie, with his bisbes and fantees twill points, and from under that which is the barbe and coperture, the taile commeth forth, and the feere in their

place, the necke alfoand the cares in their parts, and in fine all things in like fore as in a barbed 40 courfer : they are of the bignesse of one of these common Dogges, they are not hastfull, they are filthie, and have their habitation in certaine hillockes of the earth, where digging with their feete, they make their dens verie deepe, and the holes theseof, as like manser as doe Connies: they are very excellent to be eaten, and are taken with nets, and foine also killed with Crofs bowes : they are likewise taken of continues when the Husbandmen burne the Rubble in sowing time, or to renew the herbage for Kine and other Bearls. I have oftentimes eaten of their fieth which feemeth to me of better tafte then Kidder fielh, and holefome to be eaten. And if their Beafts had ener beene feene in thefe pares of the world, where the first barbed Horfes had their originall, no man would isage but that the forme and fathion of the copertuse of Horkes formitted

od for the warres, was first deured by the fight of these Beafts. There is also in the firme Land another beaft, called Orfe Promitimes, that is, the Ame bear e. Bearth This beaft in haire and colour, is much like so the Beate of Spation ; and in minner of the lame making, faue that he hath a much longer fromt, and is of entiting to they are oftentimes taken only with itaues, without any other we apon, and are not knowled, they are also taken write Dogges, because they are not naturally armed, although they bite for swhat, they are found for the milt par about and mere to the hillockes where are gener abundanced where. For the the best part and the milt par about and mere to the hillockes where are gener abundanced where. For the the Regions is inguisted a cereains kind of Antos, very kinds and blacks; in the Fields kind Antos Plaines whereas grows no Trees, where by the inflingt of Nature blade Antes feparate them. felues to insender harse from the Woods for feree of thefe Bearsty due which became they are fearefull, vile, and marmed (as I have faid) they harpe ever in places full of Trees; with very

60 famine and necessitie, or the great delite that they have to feedle on these Kartas, Sanfe theil to come cut of the Woods to hunt for them : thefe Antes make a hillsthe of earther the heigh co a man, or somewhat more or leffe, and as bigge as a great Cheft, and sometimes as bigge and But or a Hoghead, and as hand as a flone, so that they seeme as though shey week shoes; ite-yfte mint the reals and confuses of certaine Lands. Within these hillockes, made at most hard earth;

are innumerable and infinite little Ants, the which may be gathered by bushels when the hillow is broken : the which when it is fometimes moy fled by raine, and then dried againe by the here of the Sunne, it breaketh, and hath certaine small rifts, as little and subtill as the edge of a Knife, and it feemeth that Nature hath given fenfe to these Antes to find such a matter of earth, wherelessementions with they may make the faid hillocke of fuch hardnesse, that it may feeme a firong pattement logismentions when the lime and ftone; and whereas I have prooted and caused some of them to be broken, I haue found them of fuch hardnesse, as if I had not seene, I could not have beleeved, informach

that they could featily be broken with Pikes of Iron, so strong Fortresses doe these hittle beats make for their fafegard against their aduersarie the Beare, who is chiefly nourished by them, and make for them satisface according to the common Properbe which faith, None alimin perform 19 guen them as an enemie, according to the common Properbe which faith, None alimin perform 19 filibera, a chimanchi il fue Bargelle, that is, There is no man fo free, that hath not his Perfection Grentwonders or prime Enemie. And here when I confider the manuellous providence which Nature hath gi in leaft creamon to printe Business of Plinie, where speaking of uen to their little bodies, I call to remembrance the writte Sentence of Plinie, where speaking of the hit led beaths, he saith thus, Why do we merved in the Town-bearing shoulders of Elephans, and not rather where Nature hash placed so many souls and such suddyry in such the bades! Where in the Horing, Smelling, Seeing, and keeting, you, where are the Veines and Arteries (without whole beats can sure or move) to these so the subject some are so small that their whole behing can said so so the sure some so the subject is such so that so so the said can sure the said can sure so the said can sure so the said to said the said the said the said to said the said to said the sa But to returne to the Historie. This Enemy which nature hath given to these little Beasts.

wheth this manner to affaile them : When he reforteth to the Hillocke where the Antes lychid as in their fortreffe, he putteth his tongue to one of the rifts whereof we have spoken, beeing as fubrill as the edge of a Sword, and therewith continual licking, maketh the place most, the foame and frosh of his mouth being of such propertie, that by continual licking the place, it inlargeth the rift in such fost by little and little, that at the length he easily putteth in his tongue, which he hath very long and thinne, and much difproportionate to his bodie, and when he hat the shure of the bodie, and when he hat the shure made free passage for his tongne in the hillocke, to put it cassly in and out at ship leasure. then he thrusteth it into the hole as farre as he can reach, and so letteth it rest a good space, vntill agreat quantitie of the Antes (whose nature reioyceth in heat and moysture) have laden his 30 tongue, and as many as he can containe in the hollownesse thereof, at which time hee suddenly draweth it into his mouth , and eateth them, and returneth againe to the fame practice in mediarly, vntill hee haue cateo as many as him litteth, or as long as hee can reach any with his tongue. The flesh of this Beast, is fifthy and valanourie, but by reason of the extreame shifts and necessitie that the Christian men were put to at their first comming into these parts, they were inforced to prooue all things, and fo fell to the eating of these Beasts : but when they had found more delicate meates, they fell into hatred with this. These Antes have the appearance of the place of their entrance into the hillocke; wnder the ground, and this at folittle a hole, that it could hardly bee found, if certaine of them were not feene to passe in and out : but by this way the Beares could have no fach power to hurt them as about at the faid rifts; as I

There is anoother strange beast, which by a name of contrary effect, the Spaniards call Cagmole leggiere, that is, The Light Dogge, whereas it is one of the floweft beaits in the World, akind of Ca. and to heating and dull in mooning, that it can fearly goe fiftie pales in a whole day : their bealts are in the firms Land, and are very strange to behold for the disproportion that they have to all other beafts: they are about two fpans in length when they are growne to their full bigneffe, but when they are very young, they are lome what more groffe then long; they have foure fubill feet, and in energy of them foure clawes like vnto Birds, and loyned together, yet are neither their clawes or their feet able to fufteine their bodies from the ground, by reason whereof, and by the heatinesse of their bodies, they draw their bellies on the ground their neckes are high and 50 fireight, and all equall like the petile of a Morter, which is altogether equal even vnto the top, without making any proportion or fimilitude of a head, or any difference except in the noddle. and in the tops of their neckes takey have very round faces much like vnto Owles, and have a marke of their owne haire after the manner of a Circle, which maketh their faces feeme fomewhat more long then large they have small eyes and round, & nostrils like wato Monkeyes they have little mouther, and moone their neckes from one fide to another, as though they were aftomilhed : their chiefe defire and delight is to cleave and sticke fast vnto Trees, or some other thing whereby they may climbs alofs, and therefore for the most part, these beasts are found voon Trees, whereupaccleaung saft, shey mount up by little and little, flaying themselves by their long clayers; the colour of their saire is betweene ruffet and white, and of the proper colour of 60 Le hairpof h Wofell : they hatteno tayles, and their voice is much differing from other beafts, fra her lang oned a in the night, and that continually from time to time, finging ever fixe notes one higher then other for higher than the other fixe notes one higher than the other fixe notes is the highert, and the other an abaler tune, wif a man thould lay, La, fol, fa, mi,re, at, to this beat faith, Ha,baba,ba,ba,ba,ba

And doubtlesse, it feemeth to me, that as I have faid in the Chapter of the beast called Bardati. that those bealts might be the original and document to imbarbe Horses: even so, the first inmention of Musicke might seeme by the hearing of this beast, to have the first principles of that Science, rather then by any other thing in the World. But now to returne to the Hiltorie. If av charin a fhort space after this Beath hath sing, and hath pauled a while, shee returneth agains to the felfe-fame Song, and doth this onely in the night, and not in the day: By reason whereof. and also because of her euill sight, I thinke her to be a night Beast, and the friend of darknesse. Sometimes the Christian men find these Beasts, and bring them home to their houses, where alfo they creepe all about with their naturall flownesse, mismuch that neither for threatning or to pricking they will moone any fafter then their naturall and accustomed pace. And if they finde any Trees, they creepe thither immediately, and mount to the top of the highest branch thereof. where they remayne continually for the space of eight, or ten, or twentie dayes, without eating of any thing, as farre as any man can judge. And whereas I my felfe have kept them in my houte, I could never perceive other but that they live onely of Aire; and of the same opinion, are noute, a could never personal receive the plane never feene them eate any thing, but ever in manner all men of those Regions, because they have never feene them eate any thing, but ever turne their heads and mouthes roward that part where the wind bloweth most, whereby may he confidered that they take most pleasure in the Ayre. They bite not, nor yet can bite, having very little mouthes; they are not venemous or noyous any way, but alrogether brutish, and veterly unprofitable, and without commoditie yet knowne to men, fauing onely to mooue their 20 minds to contemplate the infinite power of God, who delighteth in the varietie of creatures, whereby appeareth the power of his incomprehensible wisdome and maiestie, so farre to exceed

the capacitie of mans understanding.

ne capacitie of mans voucertaining.

In these Regions there are likewise found certaine Fowles or Birds, which the Indians call Foules and In these regions there are much bigger then Geese, the greatest part of their feathers are of russet co-Birds. Alcarrat. Pure are much 1956. Birds. lour, and in fome parts yellow, their bils or beakes are of two fpannes in length, and very large Alcarrat. neere to the head, and growing small toward the point, they have great and large throates, and are much like to a Fowle which I faw in Flanders, in Bruffels in your Maiesties Palace, which the Flemmings call Haina: And I remember that when your Maieftie dined one day in your great Hall, there was brought to your Maiesties presence a Caldron of water with certaine fishes a-30 line, which the faid fowle did eat vp whole, and I think verily that that fowle was a fowle of the Sca. because she had feet like fowles of the water, as haue also these Alcatrazi, which are likewise fowles of the Sea, and of such greatnesse, that I have seen a whole coate of a man put into the throats of one of them in Panama, in the yeere 1521. And foraf much as in that Coast of Pama, there paffeth and flyeth a great multitude of thele Alestrand, being a thing very notable, I Panema. will declare the manner hereof, as not onely I, but also divers other now present in your Maie-Ries Court have oftentimes feene. Your Maiestie shall therefore understand, that in this place (as Ihaue faid before) the Sea of Sur rifeth and falleth two leagues and more from fixe houres to fixe houre so that when it increafeth, the water of the Sea arriveth fo neere to the houses of Parama, as doth our Sca (called Mare Mediterraneum) in Barzalona, or in Naples: and when

40 the faid increasing of the Sea commeth, there commethalfo therewith such a multitude of small fiftes called Sardones, that it is fo maruellous a thing to behold, that no man would beleeve it that Pilchards hath not seene it. Insomuch that the Cacique (that is) the King of that Land, at such time as I dwelt there, was bound daily, as he was commanded by your Maiesties Gouernour, to bring ordinarily three Canoas or Barkes full of the faid Sardines, and to valade the fame in the Market place, which were afterward by the Ruler of the Citie divided among the Christian men, withplace, which were accessed by the Albert of the three under annual the Albert out any coff or charge to any of them: I flowings that if the people had been a much greater multitude then they were, and as many as are at this prefent in Taledo, or more, and had none o. ther thing to line by, they might have beene sufficiently susteined by these Sardines, beside the ouerplus which should have remayned. But to returne to the fowles, whereof wee have spo-50 ken. As the Sea commeth , and the Sardines with the fame, euen foslikewise come the said Alcatrazzi therewith, and flye continually ouer it in fuch a multitule, that they appeare to

couer the vpper part or floore of the water, and thus continue in mounting and falling from the ayre to the water, and from the water to the ayre, during all the time of their fishing wand af-Some as they have taken any of these Sardines, they flye about the waters, and eate them incontinently, and fuldenly returne againe to the water for more, continuing thus course by course without ceasing : in like manner when the Sea falleth , they follow their fishing as I haue faid. There goeth allo in the company of these fowles another kind of fowles, called Cada inforcata, (that is) the forked tayle, whereof I have made mention before, and alloone as the Aleatrate moun-60 teth from the water with her prey of the Sardines, folderly this Code inforcats giveth her fo many strokes, and so periecuteth her, that shee causeth her to let fall the Sardones which shee hath in her mouth : the which affoone as they are fallen, and before they yet touch the water, the Coda inforcata catcheth them even in the fall, in fuch fort, that it is a great pleasure to behold the combat betweene them all the day long. The number of these Alcatrazza is such, that the Christian men are accustomed to send to certaine Hands and Rockes which are neere about Pa-

CH AP.3, Pintadellis preuention against Monkeyes, Song-birds. Coco-wonders, 981 There are other Birds called Pintadelli, which are like vnto certaine greene Birds, which the Pintadelli.

Itelians call Fringuelli, and are of feuen colours: thefe Birds for feare of the Monkeyes, are ever

wont to make their Nests ouer the bankes of Rivers, or the Sea, where the branches of Trees so

nama, with their Boates or Barkes to take their Alcatrazzi, while they are yet young, and cannot flie, and kill as many of them with flaues as they will, varill they have therewith laden their Barkes or Canoas : thefe young ones are fo fat and well fed, that they cannot bee eaten, and are taken for none other intent, but onely to make Greafe for Candles to burne in the night, for the which purpose it serueth very well, and giueth a cleere light, and burneth easily. Aiter this manner and for this purpole, innumerable of them are killed : and yet it feemeth that the number of them that fish for Sardines doe daily increase. There are other fowles called Paffere sempie, that is, simple Sparowes: these are somewhat lesse then Seamewes, and have their feet like voto great Malards, and stand in the water sometimes, and when the ships faile fiftie or a hundred leagues about the Ilands, these fowles beholding the ships comming toward them, to breake their flight, and fall downe vpon the Saile yards, Mafts, and Cables thereof, and are for imple and foolish, that they tarrie vntill they may easily bee taken with mens hands, and

were therefore called of the Mariners simple Sparrowes : they are blacke, and vpon their blacke. have their head and shoulders of feathers of a darke russet colour : they are not good to bee eaten, although the Mariners have fometimes beene inforced to eate them. There is another kind Picuti, Birds of Birds in the firme Land, which the Christians call Pscuti, because they have very great beakes. in respect of the littlenesse of their bodies, for their beakes are very heavie, and weigh more then their whole bodies beside : these Birds are no bigger then Quailes, but haue a much greater bulhment of feathers infomuch that their feathers are more then their bodies; their feathers are very faire, and of many variable colours; their beakes are a quar-toter of a vard in length or more, and bending downe toward the Earth, and three fingers broad neere vnto the head : their tongues are very quils, wherewith they make a great hiffing; they make holes in Trees with their beakes, in the which they make their Nefts. And furely these Birds are maruellous to behold, for the great difference which they have from all other Birds that I have feene, aswell for their tongues (which are quils as I have faid) as also for the ftrangenesse of their fight and disproportion of their great beakes, in respect of the rest of their bodies. There are no Birds found that prouide better for the safegard of their young in the time of their breeding, to be without danger of wilde Cats, that they enter not into their Nests to destroy their Egges or young, and this aswell by the strange manner of building their Nests, as also by their owne defence : and therefore when they perceive that the Cats approach toward 30 them, they enter into their Nests, and holding their beakes toward the entrance of the same. stand at their defence, and so vexe the Cats, that they cause them to leave their enterprize. There are also other Birds or Sparrowes, which the Christians by contrary effect call Matti.

Foolish Spa-

that is Fooles: Whereas neuertheleffethere is no Bird that sheweth more wit and craft in defending her young from perill. These Birds are little, and in manner blacke, and somewhat bigger then our Thrushes; they have certaine white feathers in their neckes, and the like fagacitie or sharpnesse of sense as have the Birds or Pyes called Gazzanle: they seldome times light vpon the earth : they make their Nelts in Trees separated from other, because the Monkeyes are accustomed to leape from Tree to Tree, not descending to the ground for seare of other beasts, except when they are enforced by thirst to come downe to drinke, at such times as they are sure 40 not to be molefted, and for this cause doe not these Birds make their Nests but in Trees farre diuided from other, they make them of a Cubit in length, or more, after the manner of bagges or little fackes, large at the bottome, and growing narrower and narrower toward the mouth, whereby they are fastened, having the hole whereat they enter into the facke, of such bignesse as may onely fuffice to receive them. And to the end that the Monkeyes may not devoure their young, if they chance to mount upon the Trees where they have their Nefts, they vie another craft, which is, to make their Netts in thicke branches of Trees, and to defend the same with sharpe and strong thornes, implicate and set in such order, that no man is able to make the like. fo that the Monkeyes can by no meanes put their legges into the hole of the Neit to take out the young Birds, aswell for the sharpnesse of the thornes, as also for the depth of the Nests, in the so bottome whereof, the young Birds reft without danger of their enemie : for some of their Nests being three or foure spans in length, the leg of the Monkey cannot reach to the bottome thereof. They vie also another policie, which is, to make many of their Nests in one Tree, the which they doe for one of these two causes: that is, that either of their owne naturall disposition they are accustomed to goe in great multitudes, and reioyce in the company of their owne generation , as doe the Birds which we call Stares, or elfe to the intent that if it should so chance that the Monkeyes should climbe the Trees where they make their Nests, they might bee a greater company to relift and molest the Monkeyes, at whose approach they make a fearefull and terrible cry, whereby the Monkeyes are put to flight, Furthermore, in the firme Land, and in the llands, there are certaine Birds called Piche, or Gazzuole, somewhat like 60 wato those which we call Wood-wals, or Wood-peckes, being lesse then ours of Spaine : these are altogether blacke, and goe hopping and leaping, their beakes are alto blacke, and of the fame falhion as are the Popingiayes beakes, they have long tayles, and are somewhat bigger

reach ouer the water, that with a little weight they may bow downe to the water : their Refts are made so neere the tops of the branches, that when the Monkeyes come thereon, the branches hend roward the water, and the Monkeyes turne backe againe for feare of falling: For although no beaft in the World be more malicious then this, yet whereas the most part of beasts are naturally inclined to fwimme, this Monkey hath no manner of aptnesse thereunto, and is therefore foone drowned or strangled in the water, and by a prime fense of Nature feareth the danger which he cannot escape. These Birds make their Netts in such fort, that although they bee wet and filled with water, yet doe they fo fuddenly rife vp againe, that the young Birds are not thereby hurt or drowned. There are also many Nightingales, and other Birds which fing maruellous ly with great melodie and difference in finging t these Birds are of maruellors divers colours the one from the other, some are altogether yellow, and some other of so excellent, delectable, and high a colour, asit were a Rubie, other are also of divers and variable colours, some of few conigh a colour, asterwise nume, butter are allows stuces and various colours, some of rew co-lours, and other formeall of one colour, being all fo faire and beautifull, that in brightness and finding they excell all that are in Spaine, or Italia; or other Protunces of Europe. Many of these things they excell all that are in Spaine, or Italia; or other Protunces of Europe. Many of these are taken with Nets, lime-twigs, and Springes of divers forts. Divers other forts of great fowles Great Fowles are taken with News, inter-ewigs, and springes or micra sources order source forces or great rowled to the winto Engles, and fush other as line of persy, are found in the firme Land, of fush district, 100 that it is in manner impossible to describe them all particularly; and forafmuch as I haue more largely intreated hereof in my generall Historie of the Indies, I thinke it not requisite heere to make any further mention of the fame. Of Trees, Fruits, and Plants. Here is both in the firme Land and the Ilands a certaine Tree called Coco, being a kind of coco. There is both in the firme Land and the Italias a certain greatnesse, as have the Date Trees

Date Trees, and basing their leaves of the selfesame greatnesse, as have the Date Trees which beare Dates, but differ much in their growing, for the leaves of this Coco grow out of the trunkes of the Tree, as doe the fingers out of the hand , wreathing themselues one within ano-30 ther, and fofpreading abroad : these Trees are high, and are found in great plentie in the Coast of the Sea of Sur, in the Province of Cacique Chiman, These Date Trees bring forth a Fruit after this fort; being altogether wintes as it growth on the Tree, it is of greater circumference then the head of a man, and from the fuperficiall part to the middelt, which is the fruit, it is involved. and coured with many Webs much like vant too like induced, wants the rinar, is a mounted and coured with many Webs much like vant too like linds of Towe which they vie in Andalafie.

Of this Towe or Web, the East Indians make a certaine kind of Cloth, of three or foure forts, and Cordes for the Sayles of Ships: but in thefe Indies of your Maieftie, they paffe not for thefe Coards, or this Cloth that may be made of the Fruit of Coco, by reason of the great plentie that they have of the Bombage or Cotton of Godampine Trees, The Fruit which is in the middeft of the faid Tow, is (as I have faid) as bigge as a mans fift, and fometimes twice as bigge, and more : 40 It in forme like vnto a Walnut os some other round thing, fomewhat more long then large, and very hard, the rinde or burke hereof, is as thicke as the circle of Letters of a Riall of Plate, and

ly offend the tafte, as to be cast away. While this Cocas is yet fresh and newly taken from the Tree, they vie not to eate of the faid carnofitie and Fruit, but first beating it very much, and then 50 ftrayning it, they draw a Milkethereof, much better and sweeter then is the Milke of Beafts, and of much substance, the which the Christian men of those Regions put in the Tartes or Cakes which they make of the grain of Maiz whereof they make their Bread, or in other Bread I have fease Cakes which they make of the grain of Mana whereof they make their bread, of in other bread one of thele as we put Bread in Portage: fo that by reason of the said Milke of Com, the Tartes are more ex- Fruits opened. as we pur Dieau in cottegs. Johns of Jeans of the American Barbana of the India opens cellent to be exten without offence to the fromacks: they are fo pleafant to the tale, and leaue it the which as wield fastisfed as though it had beene delighted with many delicate Difhes. But to proceed when it was afwell farished as though it had been designed with many desicate Diness. But proceed with further, your Maieltie shall vinderstand, that in the place of the stone or cornell, there is in the whole, if it middelt of the said carnolities a void place, which neuertheless is full of a most cleers and excellent the water was the water was lent water, in fuch quantitie as may fill a great Egge fhell, or more, or leffe, according to the big - hardshogge nesse of the Cacas, the which water surely, is the most substantiall, excellent and precious to bee therein as it 60 drunke, that may be found in the World; infomuch that in the moment when it passet the pa, were in a Borlate of the mouth, and beginneth to goe downe the throate, it feemeth that from the fole of the tle, but in time

within, there cleaueth fast to the rinde of the Nut a carnolitie or fubstance of coornell, of the

thicknesse of halfe a finger, or of the least finger of the hand, and is very white like vnto a faire

Almond, and of better tafte and more pleasant. When this Fruit is chewed, there remayne cer-

taine crummes, as doe the like of Almonds : Yet if it be swallowed downe, it is not unpleasant.

For although that after the suyce or moyfture be gone downe the throat before the faid crummes

be swallowed, the rest which is eaten, seeme somewhat sharpe or sowre, yet doth it not so great-

foot, to the crowne of the head, there is no part of the bodie but that feeleth great comfort was partly thereby : as it is doubtleffe one of the most excellent things that may bee tasted upon the earth, congested into and fuch as I am not able by writing or tongue to expresse. And to proceed yet further, I say that a file substance Mmmm 2

when the meate of this fruit is taken from the Veffell thereof, the veffell remayneth as faire and Good against neate as though it were polished, and is without of colour inclining toward black, and thineth or gliftereth very faire, and is within of no leffe delicatenesse. Such as have accustomed to drinke in flone Collick. rhefe Veffels, and have beene troubled with the Difease called the fretting of the guts, say that they have by experience found it a maruellous remedie against that Disease, and that it breaketh the stone, and prouoketh vrine. This fruit was called Coca, for this cause, that when it is taken from the place where it cleaueth fast to the Tree, there are seene two holes, and aboue them two other naturall holes, which altogether doe represent the gesture and figure of the Cattes called Mammons. that is, Monkeyes, when they cry, which cry the Indians call Coca, but in very deed, this Tree is a kind of Date Tree, and hath the same effect to heale fretting of the 10 guts, that Plinis describethall kinde of Date trees to have. There are furthermore in the firme Land. Trees of fuch bigneffe that I dare not speake thereof, but in place where I have so many witnesses which have feene the same as well as I. I say therefore, that a league from Dariene or

the Gitie of Santa Maria Antiqua, there paffetha River very large and deepe, which is called Cut, ouer the which the Indians laid a great Tree, to traverfing the tame, that it was in the flead of a bridge, the which I my felfe with divers other that are at this prefent in your Majeffies Court, haue oftentimes paffed over. And forafmuch as the faid Tree had lyen long there, and by the great weight thereof was fo fhrunke downeward, and partly coursed with water, that none could paffe ouer it, but were wet to the knee, I being then in the yeere 1523, the officiall or luflice in that Citie at your Maiesties appointment, caused another great Tree to beelaid in that to place, which in like manner trauerfed the Riuer, and reached more then fiftie foote oper the further fide : This Tree was exceeding great, and rested about the water more then two Cubits. in the fall, it cast downe all such other Trees as were within the reach thereof, and discovered certaine bynes, which were to laden with blacke Grapes of pleafant tafte, that they fatisfied more then fiftie persons which ate their fill thereof. This Tree, in the thickest part thereof, was more then fixteene spannes thicke, and was neuerthelesse but little in respect of many other trees which are found in this Prouince. For the Indians of the Coast and Prouince of Cartagenia. make Barkes or Boates thereof (which they call Canous) of fuch bigneffe, beeing all one whole Great Canoas Tree, that fome contains a hundred men, fome a hundred and thirtie, and fome more, having neuerthelesse such void space within the same, that there is left sufficient roome to passe to and fro to throughout all the Canons. Some of thefe are fo large, befide the length, that they conteine

more then tenne or twelve spannes in breadth, and faile with two failes, as with the Master faile

and the trincket, which they make of very good Cotton. The greatest Trees that I have seene in these parts, or in any other Regions, was in the Proumee of Gusture, the King whereof rebel-ling from the obedience of your Maiestie, was pursued by me, and taken Prisoner: at which time I with my company, passed ouer a very high Mountaine, full of great Trees, in the top whereof, we found one Tree, which had three roots, or rather divisions of the roote about the Earth, in forme of a Triangle, or Treuet, fo that betweene every foot of this Triangle or three feet, there was a space of twentie foot betweene every foot, and this of such height about the Earth, that a laden Cart of those wherewith they are accustomed to bring home Corne in time of Haruest in 40 the Kingdome of Toledo in Spaine, might early have passed through enery of those partitions or windoores which were betweene the three feet of the faid Tree. From the Earth vpward to the trunke of the Tree, the open places of the divisions betweene these three feete, were of such height from the ground, that a Footman with a lauelin was not able to reach the place where the faid feet toyned together in the trunke or bodie of the Tree, which grew of great height in one piece, and one whole bodie, or ever it spread in branches, which it did not before it exceeded in height the Towre of Saint Romane in the Citie of Toledo: from which height and vpward, it spread very great and strong branches. Among certaine Spaniards which climbed this Tree, I my felfe was one, and when I was afcended to the place where it begunne to ipread the branches, it was a maruellous thing to behold a great Countrey of fuch Trees toward the Pro- 40 uince of Abrame. This Tree was easie to climbe, by reason of certaine Besuchi, (whereof I haue spoken before) which grew wreathed about the Tree, in such fort that they seemed to make a scaling Ladder. Euery of the foresaid three feet which bore the bodie of the Tree, was twentie spannes in thicknesse, and where they joyned altogether about the Trunke or bodie of the Tree, the principall Trunke was more then fortie and fine ipannes in circuite. I named the Mountaine where these Trees grow, the Mountaine of three footed Trees. And this which I have now declared, was seene of all the company that was there with mee when (as I have faid before)I took King Guaturo Prisoner in the yeere 1522. Many things more might here be spoken as touching this matter, as also how there are many other excellent Trees found of divers forts and difference, as sweet Cedar Trees, blacke Date Trees, and many other, of the which some are 60 to heavie that they cannot float about the water, but finke immediately to the bottome, and other againe as light as a Corke. As touching all which things I have written more largely in my generall Hiltorie of the Indies.

And for as much as at this prefent I have entred to entreate of Trees, before I paffe any fur-

ther to other things. I will declare the manner how the Indians kindle fire, onely with Wood Kindling of and without fire, the manner whereof is this. They take a peece of wood, of two fpannes in fire withou length, as biggeas the leaft finger of a mans hand, or as an arrow well pullished, and of a strong fire. kinde of wood which they keepe onely for this purpose : and where they intend to kindle any tire, they take two other peeces of wood, of the drieft and lighteft that they can finde, and binde rhem fait together one with another, asclose as two fingers joyned : in the middeft or between theie, they put the point of the first little staffe made of hard and strong wood, which they hold in their hands by the top thereof, and turne or rubbe it round about continually in one place betweene the two peeces of wood which lye bound together upon the earth, which by that vn-10 cellant rubbing and chafing, are in short space kindled, and take fire. I have also thought good Purified word

here to foeake formewhat of such things as come to my remembrance of certaine Trees which night. are found in this Land, and iometime also the like have beene seene in Speine. These are certaine putrified trunkes, which have been follong rotting on the earth, that they are very white, and thine in the night like burning firebrands, and when the Spaniards finde any of this wood,

and intend privily in the night to make warre and inuade any Province, when case so requireth that it shall be necessarie to goe in the night, in such places where they know not the way, the formoft Christian man which guideth the way, affociate with an Indian to direct him therein, taketh a little starre of the said wood, which he putteth in his cap, hanging behinde on his shoulders, by the light whereof he that followeth next to him, directeth his journey, who also 20 in like manner beareth another starre behinde him, by the shining whereof the third followeth the same way, and in like manner doe all the rest, so that by this meanes none are lost or stragle

out of the way. And for as much as this light is not seene very farre, it is the better policie for the Christians, because they are not thereby disclosed before they inuade their enemies, Furthermore, as touching the natures of Trees, one particular thing feemeth worthy to be noted, whereof Plinie maketh mention in his naturall Historie, where he faith that there are certaine Trees which continue euer greene and neuer loofe their leaues, as the Bay-tree, the Cedar, the Orangetree, and the Olive-tree, with fuch other, of the which in altogether he nameth not paft five or fix. To this purpofe, I fay, that in the Hands of their Indier, and also in the firme land, it is a Almost illisfix. To this purpole, I say, that in the Hands of their leaves, and and in the little land, it is a thing of much difficultie to finde two Trees that lofe or caft their leaves at any time for although inner two

30 I have diligently fearched to know the truth hereof, yet have I not feene any that lofe their greene. leaues, either of them which we have brought out of Spaine into thefe regions, as Orange-trees, Limons, Cedars, Palmes, or Date-trees, and Pomegranate-trees, or of any other in thefe regi- Caffic. Limons, Cedars, ed. Miles, or Date-freet, and rome-granten areas, year a submounting appropriate to it. Each host loss, ons, except one of Coffee, which lofeth his leaves, and hard a greater thing appropriate to it. Each host loss, fellicoper in the control of further into the ground, by reason of the great heate which is found beneath that depth, yet reason doth Casses pearle further into the ground, vntill it finde water: which by the Philosophers o- flux. pinion should be the cause of a thinneand watery radicall mostlure to such things as draw their

nourithment thereof, as fat and vnctuous grounds with tempetate heate, yeelde a faft and firme to moisture to such things as grow in them, which is the cause that such Trees lose not their leaves, as the faid thinne and waterish moisture is cause of the contrarie, as appeareth by the faid effect which is teene onely in Caffia, and none other Tree or Plant in all these

Of Reedes or Canes. 'N the firme land there are many forts of Reedes, fothat in many places they make their hou-

les thereof, couring them with the tops of the same, and making their wals of them in like manner, as I have faid before : and among thele kindes of Reedes, there is one fo great, that the Canes thereof are as bigge as a mans legge in the knee, and three spans in length from ioynt to 50 ioynt, or more, in io much that every of them is of capacitie to containe a little bucket of water. In this kinde, there are found some greater, and some lesse, of the which some they wie to make quivers for arrowes. There is found another kinde, which furely is marueilous, being lit- Reed-springs tlebigger then a lauelin, the Canes whereof are longer then two ipannes : these Reedes grow or fountain. one faire from another, as fometimes twenty or thirty paces, and fometimes allo two or three of water-leagues: they grow in manner in all Prounces in the Indust, and grow nerre to very high Trees, whereunto they leane, and creepe up to the top of their branches, which they imbrace, and descend againe downe to the earth. Their Canes are full of most cleare water, without any manner of tafte or fauour, either of the Canes, or of any other thing, and fuch as if it were taken out of the freshest Spring in the world, nor yet is it knowne that ever it hurt any that 60 drunke thereof. For it hath oftentimes to chanced, that as the Christian men have transited in

thefe regions in defolate waies, where for lacke of water they have beene in great danger to dye with thirst, they have escaped that perill by reason that they found the sand Reedes, of the water of whole Canes they have drunke a great quantity, without any hurt thereof enfuing. Therefore when they finde thele in any place, they make water veliels of the Canes thereof, and carry

Plavani, or

Figges.

There are also certaine Plants, which the Christians call Platani. They are as high as trees. and become as bigge in the trunke as the knee of a man, or more. From the foote to the top, they beare certaine long and large leaues, being more then three spans in largenesse, and about ten or twelue in length : the which when they are broken of the winde, the stalke remaineth whole in the middett. In the middett of this Plant, in the highest part thereof, there groweth a cluster with fortie or fiftie Plantans about it, every of chem being a span and a halfe inlength. and as bigge as a mans arme in the imall, or more, or leffe, according to the goodnesse of the toile to where they grow: they have a rinde not very thicke, and easie to be broken, being within altogether full of a substance like vinto the marie of the bone of an Oxe, as it appeareth when the rinde or barke is taken from the fame. This clufter ought to be taken from the Plant, when any one of the Plantans begin to appeare yellow, at which time they take it, and hang it in their houses, where all the cluster waxeth ripe, with all his Plantans. This cluster is a very good fruite, and when it is opened, and the rinde taken off, there are found within it many good drie Figges, which being rofted, or flewed in an Ouen, in a close pot, or fome such other thing, are of pleafant tafte, much like to the conferue of Hony: they putrifie not on the Sea fo foone as fome other fruites doe, but continue fifteene daies and more, if they be gathered fomewhat greene : they feeme more delicate on the Sea then on the Land, not for that they any thing encrease in goodnes on the Sea, but because that wheras on the Sea other things are lacking, whereof is plencie on the Land, those meates seeme of best tatte, which satisfie present necessitie. This trunke or forig which bringeth forth the faid clufter, is a whole yeare in growing and bringing forth fruite, in which time it hath put forth round about in ten or twelue fprigges, as bigge as the first or principal, and multiplieth no leste then the principall in bringing forth of clusters with fruits likewise at their time, and also in bringing forth other and many sprigges, as is said before. From the which iprigges or trunkes, as foone as the cluster of the fruite is taken away. the Plant beginneth to drie and wither, which then they take out of the ground, because it doth none other then occupie it in vaine, and without profit. They are fo many, and doe fo marueiloufly encrease and multiplie, that it is a thing in manner incredible. They are excee. 30 ding moilt, in so much that when they are plucked vp from the place where they grow, there iffueth forth a great quantity of water, as well out of the Plant, as out of the place where it grew, in such fort, that all the moisture of the earth farre about , might feeme to be gathered together about the trunke or blocke of the faid Plant, with the truites whereof, the Antes are fo farre in loue, that they are feene in great multitudes in the branches of the Plants : fo that for the multitude thereof, it fometime fo chanceth, that men are enforced to take away the Plants from their policifion : these fruites are found at all times of the yeere. There is also another kinde of wilde Plants that groweth in the fieldes, which I have not feene but in the Iland of Hilpaniels, although they be found in other Ilands of the Indies: thefe they call Tunas. They grow of a Thiftle full of thornes, and bring forth a fruite much 40 like vnto great Figges, which have a crowne like Medlers, and are within of a high colour, with graines and the rinde like vnto a Figge; they are of good tafte, and grobe abundantly in the fields in many places : They worke a strange effect in such as eate them, for if a man eate two, or three, or more, they cause his wrine to be of the very colour of bloud, whith thing chanced once to my felfe. For on a time as I made water, and faw the colour of my Vrine, I entred into a great suspition of my life, being so assonished for feare, that I thought the same had chansed to me vpon some other cause, in so much that surely my imagination might have done me hurt, but that they which were with me did comfort me immediately, declaring the cause thereof, as they knew by experience, being auncient inhabitours in those regions. There groweth also another Plant, which the people of the so Countrie call Bibaor: this putteth forth certaine ftraight branches, and very broade leaues, which the Indians vie for divers purposes: for in some places they cover their houses with the leaves thereof, couched and laid after the manner of thatch, whereunto it serveth very well : Sometimes also when it raineth, they cast these ouer their heads, to defend them from the water. They make also certaine chefts, which they call Hance, weamed after a strange fort, and intermixt with the leaves of this Bibaos. These Chests are wrought in fuch fort, that although it raine vpon them, or they chance to fall into the water, yet are not fuch things wet as are within them : they are made of the branches of the faid Bihast, with the leaves weared together therewith. In these they keepe salt, and other subtile things. They vie them also for another purpose, which is this : that finding them in the fields at such time as 60 they have scarfenesse of victuals, they digge up the rootes of these Plants while they are yet yong, or eate the Plant it felfe, in that part where it is most tender, which is from a foote vnder the ground, where it is as tender and white as a Reede or Bulruth. And for as much as we are now come to the end of this narration, it commeth to my remembrance to make mention

CH AP.3. Venemous Apples. Camibals. Gulfe Vraba. Tree Xagua.

of another thing, which is not farre from my purpole ; and this is how the Indians doe flaine or dye cloath of bombage cotton, or any other thing which they intend to dye, of diuers colours, Dying of 25 Blacke, Tawny, Greene, Blew, Yellow, and Red, which they doe with the Barkes, or Rindes. and Leaues of certaine Trees, which they know by experience to be good for this oractife: and by this are they make colours in such perfection and excellency, that no better can be de- A firange mied. But this seemeth a strange thing, that they doe all this in one selfe same Vessell: so that things when they have caused the said Rindes and Leaues to boile together, they make in the same Veffell without any change (as I have fail) as many colours as them lifteth. Which thing I suppose to come to passe, by the disposition of the colour which they have first given to the to thing that they intend to dye or colour, whether it be Thred, Web, or Cloth, or any thing that they intend to colour.

Of venemons Apples, wherewith they posson their Arrowes.

He Apples wherewith the Indian Canibals invenome their arrowes, grow on certaine Trees couered with many Branches and Leaues, being very greene, and growing thicke. They are laden with abundance of these euill fruites, and have their Leaues like the Leaues of a Peare-tree, but that they are leffe and rounder e the fruite is much like the muscadell Peares 20 of the lland of Sicilie or Naples in forme and bigueffe, and are in some parts stained with red foots, and of very liveet lauour : these trees for the most part, grow ever by the Sea Coasts, and neere vnto the water, and are so faire and of pleasant fauour, that there is no man that feeth them, but will defire to eate thereof, infomuch that if it may bee spoken of any fruit yet growing on the earth, I would say that this was the wnhappy fruit whereof our first parents " Adams and Ene rafted, whereby they both loft their felicitie, and procured death to " It was not a them and their posteritie. Of these truits, and of the great Ants whole byting cauteth venemousiace fivelling (whereof I have spoken elsewhere) and of the Emes, or Liferts, and Vipers, of the stumbate fwelling (whereof I haue spoken estewaere) and or one Emis; or Espans and purch other venomous things, the Canibals which are the chiefe Archers among the India bedience in and then could be poylon their Arrowes, wherewith they kill all that they wound : earing contra-20 These venomes they mingle together, and make thereof ablacke Masse or composition, which is 10 Gods. appeareth like vnto very blacks Puch. Of this poylon I canled a great quantitie to ber burnt; commince in Saulta Maria Antiqua, in a place two leagues and more within the Land, with a great mul ment, which in Santa Charles Antique, in a parce two reagues aim more white also the house wherein they possessed at titude of their innenomed Arrowes and other minitions, with also the house wherein they possessed at titude of their innenomed Arrowes and other minitions, with also the house wherein they were reserved : This was in the yeere 1514 at sucht time at the Armie arrived there enthune, the with Captaine Pedreras de Villa, at the commandement of the Catholike King Des wages shreef with Captaine remember de Londo, as one commandemento une bestiones auto ever seger succes. Ferdinendo. But to returne to the Hildrice, Ehref Apples 7 as I haus-space 3, provin eners it d. alb., vivot the Sex tech Christians which facut year Maiofite in these patries, suppose that there Cassishi monther. write the Seattne Unrittians watern terue your anaugute in meet pattiet, suppore timet such nome their is no remedie fo profitable for fuch as are wounded with these Arrowse; as is die wa- Arrows. ter of the Sea, if the wound bee much waited therewith , by which meanes form haue perma dries. 40 escaped, although but few : yet to say the truth, albeit the water of the Sea, have a certaine caustike qualitie against poylon, it is not sufficient remedie in this case, nor yet The water of

to this day have the Christians perceived that of fiftee that have beene wranded, three the Sea, haue recourred. But that your Maiestie may the better consider the force of the venome of these trees, you shall further understand, that if a mandoe but repose himselfe to sleepe a little while under the shadow of the same, he hath his head; and eyes so swoke when he reseth, that the eye lids are inyned with the cheekes, and if it chance one drop or more of the deaw of the fail tree to fail into the eye, it vittely destroyeth the fight. The pestilent nature of this tree is fail tree to fail into the eye, it vittely destroyeth the fight. fuch, that it cannot be declared in few words. Of thefe, there groweth great plentie in the gulfe of Praba, toward the North coalt, on the Wesk and East fide. The wood of these trees when it The gulfa of 50 burneth, maketh fo great a flinke, that no man is able to abide it, by reason it causeth so great a Praise.

paine in the head. Among other trees which are in these Indies, as well in the Ilands, as in the firme land, there is another kind which they call Xagua, whereof there is great plentie: they are very high, and Xagua, ffreight, and faire to behold. Of these they wie to make Rikes, and I agelins of divers lengths and bignefic : they are of a faire colour , betweene ruffet and white : this tree bringeth forth a great fruit as big as Papaner or Poppis, and much like thereunto, Strie very good to be eaten when it is ripe. Out of this they get a very cleare water, where with they wash, their legs, and sometimes all their bodies, when they feele their fich weary, faine; oc loofe : the which water, beilde chat it hach a binding qualitie, it hach all of the properties, that whatfour it of the country, it has the country of the country, it has the country of cannot bee taken away in leffe space then tenne or twelme dayes : And if the nayle bee but

touched therewith, it is fo stained, that it can by no meanes be taken away, vntill it either fall of, or growout, and be clipped away by little and little, as I my felfe have ofteneimes feene by experience...

There

There is another kinde of Trees which they call Hobi: these are very great and faire, and confe wholesome aire where they grow, and a pleasant shadow, and are found in great abundance their fruit is very good, and of good tafte and fauour, and much like vnto certaine Damfons of Prunes being little and yellow, but their stone is very great, by reason whereof they have been little meate : their Barke or Rinde boyled in water, maketh a wholesome Bathe for the legges, because it bindeth and stayeth the looienesse of the fiesh, so sensibly that it is a martiell to entite der. It is surely a wholesome and excellent Bathe against such faintnesse, and is the best Tree that may be found in those parts to sleepe under: For it causeth no heavinesse of the head, as ide divers other Trees, which thing I speake, because the Christians are much accustomed in those Regions to lie in the fields. It is therefore a common practice among them, that wherefoeuer in they finde these Trees, there they spreade their Mattresses and Beds wherein they sleepe.

Dare rrees.

The Inhahi tan s of the Sea of Sur.

There are also a kinde of high Date trees, and full of thornes: the wood of these is most excellent, being very blacke and thining, and to heavie that no part thereof can fwim about the water, but finketh immediatly to the bottom. Of this wood they make their Arrowes and Darts. also Iauelins, Speares, and Pikes: and I say Pikes, because that in the coasts of the Sea of Sur. beyond Esquegue and Vrache, the Indians vie great and long Pikes, made of the wood of their Date trees. Of the same likewise they make Clubs, and Swords, and divers other weapons; Also vessels and houshold stuffe of divers fores, very faire and commodious. Furthermore, of this wood the Christians vie to make divers musicall instruments, as Claricymbals, Lutes, Gitterns. and such other, the which beside their faire shining colour like vnto jeat, are also of a good found. and very durable, by reason of the hardnesse of the wood.

An herbe that

After that I have faid thus much of Trees and Planes, I have thought good also to speake somewhat of Herbs. You shall therefore vnderstand, that in these Indies there is an herbe much like vnto a yellow Lilly, about whose leaves there grow and creepe certaine Cordes or Laces, as the like is partly feene in the herbe which we call Laced favory, but thefe of the Indies are much bigger, and longer, and in ftrong that they tie their hanging beds thereby, which they cell Hama-Cabaia and He. cas, whereof we have spoken elsewhere : these Cordes they call Cabaia, and Henequen, which are all one thing, fauing that Henequen is lefte and of a finer substance, as it were Line, and theother is groffer, like the wike or twift of Hempe, and is imperfect in comparison to the other: they are of colour betweene white and yellow, like vnto abarne, and some also white. With Henequen, which is the most subtile and fine threed, the Indiens faw in funder Fetters, Chaines.

A ftrange

or barres of Iron, in this manner: They moone the threed of Henequen vpon the Iron which they intend to faw or cut, drawing the one hand after the other as doe they that faw, putting cut now and then a portion of fine Sand spon the threed, or on the place or part of the Iron, where they continue rubbing the faid threed, to that if the threed be worne, they take another, and continue in their worke as before, vntill they have cut in funder the Iron, although it bee never fo bigge, and cut it as if it were a tender thing, and eafie to be fawen. And forasmuch as the leaves of Trees may be counted among Herbs, I will here speake some-

Leanes

what of the qualitie of the leanes of certaine Trees which are found in the lland of Hispaniela. These trees are so full of thornes, that there is no trees or plant that seemeth more wilde and de- 40 formed: fo that I cannot well determine whether they bee Trees or Plants : they have certaine branches full of large and deformed leaves, which branches were first leaves like vnto the other, As the branches made of these leaves grow forth in length, there commeth other leaves of them: so that in fine it is a difficult thing to describe the forme of these trees, except the same should be done by a Painter, whereby the Eye might conceine that wherein the Tongue faileth in this be-Aleafe of great halfe. The leaves of this tree are of such vertue, that being well beaten and spred vpon a cloth, after the manner of a plaister, and so laid to a legge or arme that is broken in many pieces, it healeth it in fifteene dayes, and maketh it as whole as though it had never beene broken: During the time of this operation, it cleaveth to fast to the field, that it cannot without much difficultie be taken away, but afficone as it hath healed the fore, and wroughe his operation, it loofeth it felfe to

from the place where it was laid, as I my felfe, and diners other which have proued it, know by Of Fishes, and of the manner of fishing.

IN the Sea coasts of the firme Land, there are divers and fundrie kindes of fishes, much diffe-I ring in shape and forme. And although it be impossible to speake of all, yet will I make mention of some. And first to begin at Sardines, you shall understand that there is found a kinde of these fishes very large and with red tailes, being a very delicate fish. The best kindes of other filhes are thele, Moxere, Diabate, Brettes, Dabaos , Thornbacks , and Salmons : All thele , and 60 diversother which I doe not now remember, are taken in great quantitie in Rivers. There are likewife taken very good Crenifies. There are also found in the Sea, certaine other fishes, as Soles, Mackerels, Turbuts, Palamite, Lanze, Polpi, Chieppe, Xaibas , Locusts , Oisters , exceeding great Torsoifes, and Tiburoni of maruellous bigneffe : alto Manates, and Murene, and many other fifthes,

CHAP.3. Tortoifes and Sharkes bow taken. Defeription of them and the Manate. 087

which have no names in our language, and thefe of such diversitie and quantitie, as cannot bee exorefied without large writing and long time. But to let pife to intreate particularly of the multitude of fishes, I intend to ipeake chiefly, and somewhat largely, of three forts of most nomanufactor ames, a the first is, the great Tortoifes, the second is called Tiberon, and the third Great Tortois Manate, And to begin at the firft, I fay that in the lland of Gube, are found great Torsofes fet. (which are certaine shell fishes) of such bignefie that ten or fifteene men are scarlly able to life one of them out of the water, as I have beene informed of credible persons dwelling in the same Hand. But of that which I my felfe haue frene, I can teftifie, that in the firme Land , in the village of Aela , there are of this fort some taken and killed of such bignesse, that sixe men with 10 much difficultie could fearfly draw them out of the water, and commonly the leaft fort of them are as much as two men may carry at a burden : that which I w lifted up by fixe men, had hef shell a yard and a quarter in length , and in breadth more then hue yards. The manner of taking them, is this : It fometimes chanceth that in their great nets (which they call shoote nets) there are found certaine Terteiles of the common fort, in great quantities, and when they come out of the Sea, and bring forth their egges, and goe together by companies from the Sea, to feede on the Land, the Christians or Indians tollow their steps which they finde in the Sand, and some ourtake them, because they are very heatie and flow in going, although they make all the hafte they can to returne to the Sea, affoone as they elpy any body. When they that puriue them have ouertaken them, they put a stake or staffe under their legs, and ouerturne them on their backs as they are yet running, to that they can goe no further, nor yee rife againe or turne, and thus they fuffer them to lye fill while they follow after the sell, which they ouerturne in like manner; and by this meanes take very many, at fuch times as they come forth of the Sea, as I haue faid : This

fish is very excellent and wholesome to be eaten, and of good tafte. nn is very excesses, and wantesome of the second of the three files whereof i have footen, it the Thomas this is a very great file, Tahmas of and very quick and i write in the water, and a cruell Desourer: these are often times taken, siwell Sharks. when the ships are under faile in the Ocean, as also when they lye at anker, or at any other time, and especially the least kinde of these fishes. When the ships are under size, the bigget fort are and especially the season and when the Tiberen feeth the ship sayling, hee followeth it swimming

behind, the which things the Mariners leeing, catt forth all the filth of the ship into the Sea for 20 the fift to eate, who neverthelesse followeth them with equall pase, although they make never such haste with full winde and sales, and walloweth on cuery lide and about the ship; and thus followeth it sometime for the space of a hundred and fiftie leagues, and more, and when the Mariners are disposed to take them, they cast downe by the sterne of the ship a hooke of Iton, as biege as the biegeft finger of a mans hand, of three spans in length, and crooked like a fifth-hooke, with beards according to the bigueffe thereof, and faitned to an Iron chaine of five or fixe linkes neere vnto the end, and from thence tyed with a great rope; faitning also on the hooke for a bait, a piece of fome fifth, or hogs flefth, or fome other flefth, or the bowels and intrals of another Tibus ron which they have taken before, which may rafily bedone, for I have feene nine taken in one day, and if they would have taken more, they might alfo. Thus when the Townson hath pleafant-

40 ly followed the ship a long voyage, at the length he swalloweth the bait with the hooke, and aswell by his thriting to flee or cicape, as also by the swift passage of the ship, the hooke overthwarteth and catcheth hold of his chaps: the which fift when it is taken, it is of fuch huge bigneffe, that twelve or fifteene men are carfly able to draw it out of the water, and lift it into the ship, where one of the Mariners gueth it many knocks on the head with a club or beetle, vitill he have flaine it: they are fometimes found of ten or twelve foote long, and of five, fixe, or feuen spans in breadth, where they are broadest : they have very great and wide mouthes, to the proportion of the reft of their bodies, and have two rowes of teeth, the one somewhat separate from the other, of cruell shape, and standing very thicke. When they have slame this fish, they cut the body thereof in small pieces, and put it to drie, hanging it three or foure dayer at the 50 Cordes of the salle clothes to drie in the winde, and then eate it: It is doubtlesse a good fift, and

of great commoditie to serve the ships for victualls for many dayes: the least of these fishes are most wholesome and tender, it hath a skin much like to the skin of a Sole whereunto the faid Ti- Plinice buron is like in shape : Which I say , because Plinie hath made mention of none of these three fifthes, among the number of them whereof he writeth in his Naturall historie. Thele Tiburous come forth of the Sea, and enter into the Rivers, where they are no leffe perillous then great Lizards or Crocodies, whereof I have spoken largely before : For they dewoure Men, Kine, and Hor- crocodies. fes, even as doe the Cracodiles: they are very dangerous in certaine walking places or Pooles by the Rivers fides, and where they have denoured at other times. Divers other fifthes both great and small, of fundrie forts and kindes, are accustomed to follow the ships going under faile, of the

60 which I will speake somewhat when I have written of Manue, which is the third of the three Manates. whereof I have promifed to entreat. Manate therefore, is a fish of the Sea, of the biggeft fort, and much greater then the Tiburon in length and breadth, and is very brutish and vile, so that it appeareth in forme like vnto one of those great vestels made of Goats skins, wherein they vie to sarry new wine in Medina de Campo, or in Arenalo : the head of this beaft is like the head of an

Oxe, with also like eyes, and hath in the place of armes, two great stumps wherewith he swimmeth : It is a very gentle and tame beaft, and commeth oftentimes out of the water to the next thoure, where if he finde any herbes or graffe, he feedeth thereof. Our men are accustomed to kill many of these, and divers other good fishes, with their Crosse bowes, pursuing them in Barkes on Canoas, because they fwim in manner about the water : the which thing when they fee, the draw them with a hooke tyed at a small corde, but somewhat strong: As the fish sleeth away, the Archer letteth goe, and prolongeth the corde by little and little, vntill he haue let it goe many fathoms: at the end of the corde, there is tyed a corke, or a piece of light wood, and when the fifth is gone a little way, and hath coloured the water with his bloud, and feeleth himselfe to faint and draw toward the end of his life, he reforteth to the shoare, and the Archer followeth, gathe- to ring up his corde, whereof while there yet remaine fixe or eight fathoms, or fomewhat more or leffe, he draweth it toward the Land, and draweth the fifth therewith by little and little, as the waves of the Sea helpe him to doe it the more easily : then, with the helpe of the rest of his companie, he lifteth this great beaft out of the Water to the Land , being of fach bigneffe, that to conner it from thence to the Citie, it shall be requisite to have a Cart with a good yoke of Oxen. and sometimes more, according as these fishes are of bignesse, some being much greater thenother some in the same kinde, as is seene of other beafts: Sometimes they litt these fishes into the Canoa or Barke, without drawing them to the Land as before, for as foone as they are flaine, they flote about the water: And I believe verily that this fifth is one of the best in the world to the tafte, and the likeft vnto fielh, especially so like vnto beefe, that who so hath not feene it whele an can judge it to be none other when bee feeth it in pieces then very Beefe or Veale, and is certainly to like vnto fieth, that all the men in the world may herein be deceived: the tafte likewife. is like vnto the tafte of very good Veale, and lasteth long, if it be powdred : so that in fine, the Beefe of these parts, is by no meanes like vnto this. This Manate hath a certaine flone, orrather bone in his head within the braine, which is of qualitie greatly appropriate against the difeale of the stone, if it be burnt and ground into small powder, and taken fasting in the morning when the paine is felt, in such quantitie as may lye vpon a peny, with a draught or good white wine : For being thus taken three or foure mornings, it acquieteth the griefe, as divers have told me which have proved it true, and I my felfe by testimonie of sight, doe witnesse that I have seen 30 this stone fought of divers for this effect.

The Sword

The fift Ma-

A remedie a-

Flying fishes.

There are also divers other fishes as bigge as this Manate, among the which there is one called Vibrella. This fifth beareth in the top of his head a fword, being on every fide full of many flato teeth; this (word is naturally very hard and strong, of foure or fine spans in length, and of proportion according to the same bignesse: and for this cause is this fish called Spade, that is, the Sword fifb. Of this kinde fome are found as little as Sardines, and other so great, that two yokes of Oxen are fearfly able to draw them on a Cart. But whereas before I have promifed to speake of other fishes, which are taken in these Seas while the ships are under faile, I will not forget to Speake of the Tunny, which is a great and good fish, and is oftentimes taken and kild with Trout ipeares, and hookes, caft in the water; when they play and fwim about the ships. In like manner also are taken many Turbuts, which are very good fishes as are lightly in all the Sea. And here is to be noted, that in the great Ocean Sea, there is a strange thing to be considered, which all that Note. have beene in the Indies affirme to bee true: And this is, that like as on the Land there are some The Sea some Provinces sertile and fruitfull, and some barren, even so doth the like chance in the Sea: So that at some windes the ships faile fiftie, or a hundred, or two hundred leagues and more; without taking or feeing of one fish; and againe, in the felfe fame Ocean in some places, all the water is feen tremble by the mooning of the fishes, where they are taken abundantly. It commeth further to my remembrance to speake somewhat of the flying of fishes, which is doubtlesse a strange thing to behold, and is after this manner. When the thips faile by the great Ocean, following their viage, there rifeth fometimes on the one fide or on the other, many companies of certaine little filhes, of the which the biggelt is no greater then a Sardine, and so diminish leffe and leffe from @ that quantitie, that fome of them are very little : these are called Volutori, that is , flying filbes: they rife by great companies and flocks, in such multitudes that it is an aftonishment to behold them : Sometimes they rife but little from the water, and (as it chanceth) continue one flight for the frace of an hundred paces, and fometimes more, or leffe, before they fall agame into the Sea, formetimes also they fall into the thips. And I remember, that on an evening when all the companie in the ship were on their knees, singing Salue Regina, in the highest part of the Castle of the poope, and failed with a full winde, there passed by vs a flocke of these flying fishes, and came for neere vs, that many of them fell into the ship, among the which, two or three fell hard by mee, which I tooke aline in my hand, so that I might well perceives hat they were as higgers Sardines, and of the lame quantitie, having two wings or quils growing out of their finnes, like vnto thoir 60 wherewith all fishes swim in Rivers; these wings are as long as the fishes themselves. As long as their wings are moift, they beare them up in the aire, but alloone as they are drie, they can continue their flight no further then as I have faid before, but fall immediatly into the Sca, and fo rife againe, and the as before from place to place. In the yeere 1515, when I came first to enforme

your Maiestie of the state of the things in India, and was the yeere following in Flanders in the time of your most fortunate successe in these your Kingdomes of Arragon and Castile, whereas at that voyage I fayled about the Iland Bermuda, otherwise called Garza, being the furthest of all The Iland of the llands that are found at this day in the world, and arriving there at the depth of eight yards Bermuda. of water, and diftant from the Land as farre as the thot of a piece of Ordinance, I determined to fend some of the thip to Land, as well to make fearch of such things as were there, as also to leave in the lland certaine Hogs for increase. But the time not seruing my parpose by reason of con-trarie winde, I could bring my ship no necree the Iland, being twelve leagues in length, and sixe in breadth, and about thirtie in circuit, lying in the three and thirtieth degree of the North fide. To While I remay ned here, I saw a strife and combat betweene these stying fishes, and the fishes mamed Gilt heads, and the fowles called Sea-meines, and Cormorants, which furely feemed vnto me a thing of as great pleafure and solace as could be deuised, while the Gilt beads swam on the brim of the water, and sometimes lifted their shoulders about the same, to raise the flying fisher out of the water to drive them to flight, and follow them fwimming to the place where they fall , to take and eate them fuddenly. Againe on the other fide, the Sea-mewer and Cormorants, take many of these flying fishes, so that by this meanes they are neither fafe in the Aire, nor in the Wa- Nottoo hie ny of thele flying fines, to that by this means they are littled and in the third, in a no certaine for the Pie, ter. In the felfe fame perill and danger doe men line in this mortall life, wherein is no certaine Nor too low fecuritie, neither in high estate, nor in lowe. Which thing furely ought to put vs in remembrance of that bleffed and fafe refting place which God hath prepared for fuch as love him, who 20 fhill acquiet and finish the trauailes of this troublesome world, wherein are so many dangers, and bring them to that eternall life where they shall finde eternall securitie and rest.

Of the increase and decrease (that is) rising and falling of our Ocean Sea, and South Sea, called the Sea of Sur.

Will now speake of certaine things which are seene in the Prouince, or at the least in the Citie of Golden Castile, otherwise called Beragna, and in the coasts of the North Sea, and of the Beragna. South Sea, called the Sea of Sea, not omitting to note one fingular and marnellous thing which I have considered of the Ocean Sea, whereof hitherto no Cosmographer, Pilot, or Mariner, or any 20 other, haue satisfied me. I say therefore, as it is well knowne to your Maiestie, and all such as have knowledge of the Ocean Sea, that this great Ocean casteth from it selfe the Sea Mediterraneum by the mouth of the Straight of Gibralterra, in the which the water, from the end and The West furthell part of that Sea, even voto the mouth of the faid Straight, either in the East toward the Ocean coast commonly called Lenante, or in any other part of the faid Sea Mediterraneum, the Sea doth The Sea Medit not fo fall nor increase, as reason would judge for so great a Sea, but increaseth very little, and a small space ; Neuerthelesse, without the mouth of the Straight in the mayne Ocean, it increaseth and falleth very much, and a great space of ground, from fixe houres to fixe boures, as in all the coafts of Spaine, Britaine, Flanders, Germanie, and England. The felfe fame Ocean Sea in the firme Land newly found, in the coasts of the same lying toward the North, doth neither rise nor fall, 40 nor likewife in the Ilands of Hiff aniels and Cubs , and all the other Ilands of the famelying to. Hiffaniels. ward the North, for the space of three thousand leagues, but onely in like manner as doth the Ocean without wast Menorm, one in let pace or in ere nonunarisegues, prespect to that increase and decrease being and the summer of the pace of the control of the pace of the Citie of Panama, and also in the coast of that Land which lyeth toward the East and West from The ebbe at that Citie, as in the Hand of Pewles or Margarita, which the Indians call Tarrarequi, and also in Pazama falleth Taboga and Otoque, and in all other Ilands of the South Sea of Sur, the water rifeth and falleth fixe miles fo much, that when it falleth, it goeth in manner out of fight, which thing I my felfe haue feene

oftentimes. And here your Maieftie may note another thing, that from the North Sea to the The South South Sea, being of fuch difference the one from the other in rifing and falling, yet is the Land Sea. 50 that divideth them not past eighteene or twentie leagues in breadth from Coast to Coast : So that both the faid Seas, being all one Ocean, this strange effect is a thing worthy greatly to bee confidered of all fuch as have inclination and defire to know the fecret workes of Nature, wherein the infinite power and wisedome of God is seene to be such, as may allure all good Natures to renerence and lone to dinine a Majestic.

Of the straight or narrow passage of the Land lying betweene the North and South Sea, by the which Spices may much sooner and easilier be brought from the Ilands of Molucca into Spaine by the West Ocean, then by that way whereby the Portugals faile into the East India.

The firme Land in fome parts thereof is fo ftraight and narrow, that the *Indians* fay, that from the Mountaines of the Province of Efquegua or Viriaca (which are betweene the one Efqueguand Sea and the other) if a man ascend to the top of the Mountaines, and looke toward the North, Vriata.

he may fee the Water of the North Sea of the Prouince of Berague : and againe looking the contrarie way, may on the other fide (towards the South) fee the Sea of Ser, and the Propins ces which confine with it, as doe the Territories of the two Lords or Kings swithe faid Proting ces of Frace and Efguegus. Some measure this way in this part, to bee from Sea to Sea eight teene leagues, which I suppose to bee rather twentie, not for that it is any more by measure. but because it is rough and difficult, as I have faid, and as I have found it by experience; ha uing now twile paffed that way by foote, counting from the Port and Village of Nombre the Dies, vnto the Dominion of the Cacique of luanaga, otherwise called Capira, eight leagues,
The River of and from thence to the River of Chagre, other eight leagues. So that at this River, being fixreene leagues from the faid Port, endeth the roughnesse of the way : then from hence to the

maruellous Bridge are two leagues, and beyond that, other two, vnto the Port of Panana. So that all together, in my judgement, make twentie leagues. It is a marvellous facilitie to brine Spices by this way which I will now declare. From Panama to the River of Chagre, are foure leagues of good and faire way, by the which Carts may passe at pleasure, by reason that the Mountaines are but few and little, and that the greatest part of these foure leagues is a plaine ground void of Trees; and when the Carts are come to the faid River, the Spices may be carried in Barkes and Pinales. For this River entreth into the North Sea five or fixe leagues lower then The Hand Ba- the Port of Nomen Dei, and emptieth it felfe in the Sea neere vnto an Hand called Balliments. where is a very good and fafe Port. Your Maiestie may now therefore consider, how great a thing, and what commoditie it may be to convey Spices this way, foralmuch as the River of 20

Chapre, having his original onely two leagues from the South Sea, continueth his course, and emprieth it felte into the other North Sea. This River runneth fast, and is very great, and in commodious for this purpose as may bee thought or defired : the marnellow Bridge made by the worke of Nature, being two leagues beyond the faid River, and other two leagues on this fide the Port of Panama, fo lying in the mid way betweene them both, as framed naturally in fuch fort, that none which palle by this voyage doth fee any fuch Bridge, or thinke that there is any fuch building in that place, vntill they be in the top thereof, in the way toward Panama: But affoone as they are on the Bridge, looking toward the right hand, they fee a little Riuer under them, which hath his Channell distant from the feete of them that walke outrit. the space of two speares length or more. The water of this River is very shallow, not passing the 30 depth of a mans legge to the knee, and is in breadth betweene thirtie and fortie paces, and falleth into the River of Chagre. Toward the right hand, standing on this Bridge, there is no-Naturall flone thing feene but great Trees. The largenesse of the Bridge contayneth fifteene paces, and the length thereof about threescore or fourscore paces : The Arch is so made of most hard stone, that

no man can behold it without admiration, being made by the High and Omnipotent Creator How things that are of one kinde, differ in forme and qualitic, according to the nature of the place where they are engendred or grow, and of

the beafts called Tigres.

And in this forme may fo many things be faid, that time shall not suffice to write, whereas my

intent is onely to produe that this bealt may be a Tigre, or of the kinde of Tigres, although it

IN the firme Land are found many terrible beafts, which some thinke to be Tigres. Which thing neuerthelesse I dare not affirme, confidering what Authors doe write of the lightnesse and agilitie of the Tigre, whereas this beaft, being otherwise in shape very like vnto a Tigre, is notwithstanding very slow. Yet true it is, that according to the maruailes of the World, and differences which naturall things have in divers Regions under Heaven, and divers conftellations of the same, under the which they are created, wee see that some such Plants and Herbes Plants and as are hurtfull in one Countrie, are harmelesse and wholesome in other Regions. And Birds which in one Prouince are of good taile, are in other fo vnfauourie that they may not bee eaten. Men likewise which in some Countries are blacke, are in other places white : and yet are both 50 Men. these and they, men. Euen so may it be, that Tigres are light in some Region, as they write, and may neuerthelesse be flow and heavie in these Indies of your Maiestie, whereof wee speake. The Sheepe of Arabie draw their tailes long and bigge on the ground, and the Bulls of Egypt have their haire growing toward their heads: yet are those Sheepe, and these Bulls. Men in fome Countries are hardie and of good courage, and in other naturally fearfull and bruirish. All these things, and many more, which may be said to this purpose, are easie to bee prooued, and worthy to bee beleeved, of such as have read of the like in Authors, or travelled the World, whereby their owne fight may teach them the experience of these things whereof I speake, It is also manifest that Iucca, whereof they make their bread in the Iland of Hispaniela, is deadly poison if it be eaten greene with the juyce : and yet hath it no such propertie in the firme Land, 60 where I have eaten it many times, and found it to be a good fruit. The Bats of Spaine, although Bats. they bite, yet are they not venemous : but in the firme Land, many die that are bitten of them.

bee not of fuch lightnesse and swiftnesse, as are they whereof Plinie and other authors speake, Plinie. describing it to bee one of the swiftest beafts of the Land, and that the River of Tyeris for the fwift course thereof was called by hat name. The first Spaniards, which faw this Tyger in the The Tiere. firme land, did fo name st. Of the kind of thefe, was that which Don Diego Columbe, the Admiral fent your Maietty out of New Spaine to Toledo. Their heads are like to the heads of Lions, or Lioneffes, but greater: the reft of all their bodies, and their legs, are full of black fpors one neere vnto another, & divided with a circumference, or fringe of red colour, flewing (as it were)a faire work and correspondent picture, about their croopes or hinder parts, they have these spots biggest and leffe & leffe coward their bellies, legs, & heads. I have teen fome of three spans in height, and more then five in length. They are beafts of great force, with strong legs, and well armed with navles and fanges, which we call Dog-teeth : they are to fierce, that in my judgement; no reall Lyon of the biggeft fort is to firong or fierce. Of these, there are many found in the firme Land, which denoure many of the Indians, and doe much hurt otherwise : but fince the comming of the Christiest, many haue beene killed with Croffe-bowes after this manner. Affoone as the Archer hath The hunding knowledge of the haunt of any of these Tygers, hee goeth searching their trace, with his Croffe. of Tigres, bow, and with a little Hound or Begle, & not with a grey-hound; because this Beast would soon kill any Dozee that would venter on him : When the Hound hath found the Tigre, he runneth about him baying continually, and approacheth so neere him, snapping and grinning, with so quicke flying and returning, that he hereby so molesteth this fierce Beatt, that hee driueth him no to take the next Tree, at the foot whereof he remayneth fill baying, and the Tigre grinning and the wing his teeth, while in the meane time the Archer commeth neere, and twelue or fourteene paces off, ftriketh him with the querell of his Croffe-brow in the breft, and flyeth incontinent, leaving the Tigre in histrauell for life and death, byting the Tree and eating earth for fierceneffe : then within the space of two or three hours, or the day following , the Archer returneth thither, and with his Dogge findeth the place where hee lyeth dead. The Indians (and especially they of the firme Land in the Prouince which the Catholike King Don Ferdinando

20 only with a small coard, and plaid with her so familiarly, that I maruelled greatly to see it, yet not without certaine beliefe that this friendshipwill not last long, without danger of life to the Keeper, forasmuch as furely these Beasts are not meet to be among men, for their sercenesse and cruell nature that cannot be tamed.

Of the manners and customes of the Indians of the Firme Land, and of their women.

commanded to bee called Golden Castele) call this Beaft Ochi. This thing is strange that chan-

his keeper that then kept him in a Cage, was in few daies after made fo tame, that he led her tyed tam

ced of late : that whereas the Tigre whereof we have made mention before, would have killed A Tigre made

He manners and customes of these Indians, are diners in diners Prominces. Some of them I take as many Wives as them lift, and other live with one Wife, whom they for lake not 40 without confent of both parties, which chanceth especially when they have no children. The Nobilitie aswel men as women, repute it infamous to joyne with any of base Parentage or Stran- The Indian gers, except Christians, whom they count Noblemen, by reason of their valiantnesse, although women-they put a difference betweene the common fort and the other to whom they shew obedience, counting it for a great matter and an honorable thing, if they bee beloned of any of them; infomuch that if they know any Christian man carnally , they keepe their faith to him, so that hee be not long absent farre from them, for their intent is not to be Widdowes, or to live chafte like religious women. Many of them have this custome, that when they perceive that they are with childe, they take an Hearbe wherewith they deflroy that is conceined : for they fay that Vanaturall abo only well aged women should be are children, and that they will not forbeare their pleasures, Large breasts and deforme their bodies with bearing of children, whereby their Teates become loofe and Child-birth hanging, which thing they greatly dispraise. When they are delivered of their children, they goe to the River and wash them, which done, their bloud and purgation ceasieth immediately: And when after this they have a few dayes absteined from the company of men, they become so Areight, as they say which have had carnal familiaritie with them, that fuch as vie them, cannot without much difficultie fatisfie their appetite : They also which neuer had children, are euer as Virgins. In some parts they weare certaine little Aprons round about them before and behind, as low as to their knees and hammes, wherewith they couer their pring parts, and are naked all their bodie beside. The principall men beare their Prinities in a hollow Pipe of Gold, but the common fort have them inclosed in the shells of certaine great Welkes, and are be-fide veterly naked: For they thinke it no more shame to have their Cods seene, then any other part of their bodies: and in many Provinces both the menand women goe veterly naked, without any fuch concerture at all. In the Province of Cuena they call a man Chuy, and a woman Ira,

which name is not greatly disagreeable to many both of their women and of ours. Thele Indians give great honor and reverence to their Casiques (that is) their Kings and Ru-Nana

The King is lers. The principal Carique shath twelve of his most strong Indians appointed to beare him, when borne on mens he removeth to any place, or goeth abread for his pleasure. Two of them carrie him fitting vpon a long peece of wood, which is naturally as light as they candinde, the other ten follow next wired him as footenen; they keepe continually a trotting pase with him on their shoulders. When the two that carrie him are wearie, other two come in their places, without any diffurbance or flavi And thus if the way be plaine, they carry him in this manner for the space of fifteene or twente leagues in one day. The Indians that are affigued to this office, are for the most part flates, or Na.

Letting of bloud.

borits, that is such as are bound to continual feruice. I have also noted that when the Indians perceive themselves to be troubled with too much bloud, they let themickies bloud in the raife of their legges, and brawnes of their armes : this doe they with a very tharpe stone, and sometimes with the small tooth of a Viper, or with a sharpe reede or thorne. All the Indians are commonly without Beards, in so much that it is in Thry have no a manner a maruell to fee any of them either men or women to have any downe or hairs on their faces, or other parts of their bodies: Albeit I faw the Cacique of the Prouince of Cata-

their bodies.

rapa, who had haire on his face and other parts of his body, as had also his wife in fuch places as women are accustomed to have. This Cacique had a great part of his body painted with a blacke colour, which neuer fadeth, and is much like vnto that wherewith the Moores paint themselves in Barbarie in token of Nobilitie. But the Moores are painted specially on their visage and throate, and certaine other parts. Likewise the principall Indians vie these paintings on their armes and breafts, but not on their visiges, because among them the sauss are to marked. When the Indians of certaine Provinces goe to the battaile (especially the Canibal 10

The Canibals Archers) they carrie certaine shels of great welkes of the Sea, which they blow, and make therewith great found, much like the noise of Hornes: they carrie also certaine Timbrels. which they vie in the stead of Drummes: also very faire Plumes of Feathers', and certains A:mor of gold, armour of gold, especially great and round peeces on their breasts, and splints on their armes. Likewife other peeces, which they put on their heads and other parts of their bodies : For Their gallant- they effecme nothing fo much as to appeare gallant in the warres, and to goe in most comely

order that they can deuise, gliftering with precious Stones, Iewels, Gold, and Feathers. Of the least of these welkes or perewincles, they make certaine little Beades, of divers forts and colours: they make also little Bracelets, which they mingle with gandes of Gold, these they roule about their arms from the cloow to the wrest of the hand. The like also doe they on their legges from the knees to the foles of their feete, in token of Nobilitie, efpecially their Noble Women in divers Provinces are accostomed to weare such Iewels, and have their neckes in manner laden therewith: these Beades and Iewels, and such other trinkets, they call Caguiras. Befide thefe alfo, they wearecertaine Rings of Gold at their eares and noffrels, which they bore full of holes on both fides, fo that the Rings hang vpon their lippes. Some of these Indians are poulde and rounded; albeit commonly both the Men and Women take it for adecent thing to weare long haire, which the women weare to the middeft of their shoulders, and cut it equally, especially about their browes : this doe they with certaine hard Stones, which they keepe for the same purpole. The principall Women, when their teates fall, 40 or become loofe, beare them wp with barres of Gold, of the length of a spanne and a halfe, well wrought, and of fuch bigneffe that some of them weigh more then two hundred Castelans or Ducades of Gold: these barres have holes at both the ends, whereat they tye two fmall cords made of Cotton at every end of the barres: one of these cords goeth over the shoulder, and the other under the arme holes, where they tye both together, so that by this

meanes the barre beareth vp their teates. Some of these chiefe Women goe to the battaile with

their Husbands, or when they themselves are regents in any Provinces, in the which they have

all things at commandement, and execute the office of generall Captaines, and cause themselves

How the women beare va their toates

The Iland of

to be carried on mens backs, in like manner as doe the Cariques, of whom I have fooken before. The flaure & lands : they are for the most part of the colour of an Olive : if there be any other difference, it 30 colour of the is more in bigneffe then otherwise, and especially they that are called Coronati, are fironger and bigger then any other that I have feene in thefe parts, except those of the Iland of Giants, and mains and the south fide of the Hand of Hifpaniola, neere vnto the coasts of the firme Land, called Corenais. which are on the South fide of the Hand of Hifpaniola, neere vnto the coasts of the firme Land, and likewife certain other which they call Incares, which are on the North fide. All which chiefly, although they be no Giants, yet are they doubtlesse the biggest of the Indiansthat are known to this day, and commonly bigger then the Flemings; and especially many of them, as well women as men, are of very high stature, and are all archers both men and women.! These Coronati inhabit thirtic leagues in length by these coasts, from the point of Canea to the great river which they call Guadalchiber, necre vnto Santa Maria de gratia. As I traversed by those coasts, I filled 2 60 butt of fresh water of that river, fix leagues in the Sea from the mouth thereof where it falleth into the Sea. They are called Coronats (that is Crowned) because their haire is cut round by their eares, and poulde lower a great compaffe about the Crowne, much like the Friers of Saint Angustines Order. And because I have spoken of their manner of wearing

CHAPIZ. Hard Sculs. Rarities of Hilpaniola, Beafts, Foules, erc.

wheir haire, bere commeth to my remembrance a thing which I have oftentimes noted in these Indians : and this is, than they have the bones of the feets of their heads foure times thicker, and The feet's of much stronger then ours, to that in comming to handbroakes with them, it shall be requisite not indistributed to firike them on the heads with fwords, for fo have many fwords beene broken on their heads, with little bart done.

of the chiefe Hands, Hifpaniola and Cuba.

He Indians which at this present inhabit the Hand of Hisperiola, are but few in number. and the Christians mitto many as they ought to be, for as much as many of them that were in this lland, are gone to other Hands, and to the firme Land. For being for the most Men are defin part yong men vnmarried, and defirous daily to fee new things, wherein mans nature delightpart yong men vimination, amountments of the continue long in one place, they were not willing to continue long in one place, they extend of all other white, Lands discourted, where they thought they might former fill their Purfer, by being prefent at the first spoile: Wherein neaerthelesse their hope deceined many of them, and especially such as had houses and habitations in this Iland : For I certainely believe, confirming my selfe herein with the judgement of many other, that if any one Frince had no more feignories then onely The common this Iland, it should in hort time be fuch, as not to give place either to Sicilie or England, dites of Historic whereas even at this present there is nothing wherefore it would malice their prosperity, not be- midd and and

20 ing inferiour to them in any felicity, that an manner the Heavens can grant to any Land : being ing interiors to them in any observation to the control of the con quantitie, In this Iland, nature of her felfe bringeth forth fuch abundance of Cotton, that if it Cotton were wrought and maintained, there should be more and better then in any part of the world. There is fo great plentie of excellent Caffia, that a great quantitie is brought from thence into Caffia Spaine, from whencee it is carried to divers parts of the world, &c.

In this lland furthermore are many Sheepe, and a great mumber of Hogges, of the which (as Sheepe and allo of the Kine) many are become wilde, and likewife many Dogger and Cats, of those which Hogs. were brought out of Spaine: These (and especially the Dogs) doe much burt among the Cattell, Dogs and Cast were brought out or opames a treat can be presently the real of the many Horses, Mares, and Mules, become wilde, 30 by reason of the negligence of the Heard-men. There are also many Horses, Mares, and Mules, become wilde. and such other Beaits as serue the vie of men in Spaine, and are much greater then they of the

first broode brought thither out of Spaine. Saint Deminge was built by line and rule: the Houses of Stone very faire, There is also a Ca- A Cathedrall thedrall Church builded of late, where as well the Billiop according to his dignity, as also the Church and theoran Canons are well endowed. This Church is well builded of Scone and Lime, and of good work-in Hiffenista. manship. There are furthermore three Monasteries, bearing the name of S. Dominket, S. Francis, and S. Marie of Mercedes, the which are al wel builded, although not focuriously as they of Spain. There is allo a very good Hospital for the aid & succor of poore people, which was found by Mi- An Hospitall. chael Paffemont, treasurer to your Maiestie. The people of this Iland are commonly of somewhat 40 leffe fraure then are the Spanisrds, & of a shining or cleare brown color: they have Wines of their The people, own, and abstaine from their Daughters, Sitters & Mothers: they have large foreheads, long black

haire, and no beards or haire in any other parts of their bodies, as well Men as Women, except very few, as perhaps scarsly one among a thousand. They goe as naked as they were borne, except that on the parts which may not with honestie be feene, they weare a certaine leafe as broad as a mans hand, which neuertheleffe is not kept close with such diligence, but that sometimes a man may fee that they thinke sufficiently hid. In this Iland are certaine Glowormes, that Ciesas a kinde of Glowormes thine in the night as doe ours, but are much bigger, and give a greater light: In so much that when the men of the lland goe any journies in the night, they beare some of these wormes made fast about their seete and head, in such for that he that should see them a farre, and ignorant of 50 the thing, would be greatly aftonished thereat. By the light of these also, the women worke in their houses in the night. These wormes they call Conas. Their light lasteth for the space of three dayes, and diminisheth as they begin to drie vp. There is also a kinde of Crowes, Crowes slinkwhole breath stinkethin the morning, and is sweete in the afternoone : the excrement which ing and week.

they avoide, is a living worme. ey aurone, is a numing wormer.

In Cuba, is a certaine kinde of Partridges, being very little, with their feathers much of the partridges, colour of Turtle Doues, but are of much better taite to be eaten: they are taken in great number, and being brought wilde into the houses, they become as tame within the space of three or foure dayes as though they had beene hatched there: they become exceeding fat in short space, and are doubtlesse the most delicate and pleasant meate that euer I have eaten. But 60 to let passe many other things that might be here said, and to speake of two marueilous

things which are in this Hand of Cuba: whereof the one is, that a Valley containing two or three leagues in length betweene two Mountaines, is full of a kinde of very hard Stones, Bullets for of fuch perfect roundnelle, and like vnto Pellets of Gunnes, that no art can make bet. Guns wrought ter or more exactly polished. Of theie, some are as small as Pellets for Handgunnes, and by nature. Nnnn 2

Artillerie, although they be of big nelle to receive one or two or more Quintales of powder. Aftilities, attnough they been nighten to recent cuts a troot more equatures or powder, enter Quantale containing one hundred weight, or of what other quantitie fower they be, Their Pellets are found throughout all the Valley within the earth, as in a Mine, which they digge, and take out fuch as they neede of all forts. The other manufolds thing of A Fountaine of the Flich of this Iland is this: That farre from the Sea, there issueth out of a Mountaine a certaine liquor, much like the Clay of Babylon, called Bitmen, or like vnto Pitch, in great quantitie, and fuch as is very commodious for the calking of Shippes : this falleth continually from the Rocke and runneth into Sea, in such abundance that it is feene floting about the water on every fide and fundern into yea, in their abundance of the place by the winde, or course of the water. Quintus Curtiss Quintes Curtiss writeth in his Historie, that great Alexander came to the Citie of Menti. where is a great Caue or Denne, in the which is a Spring or Fountaine that continually auri-

Pitch-fountaine, Reverso and wilde voole chase Indian Arcitos I . . . W.

other fo encreasing bigger and bigger from that quantitie, that they may serue for all fores of

Bitumen of Ba. deth a great quantitie of Brismen, in fuch fort, that it is an easie thing to beleeve that the flones of the wals of Babylon might be laid therewith, according as the faid Author writteh. I have feene chis Mine of Bitumen, not onely in the lland of Cuba, but also such another in new Spaine, in

Thus farre I have given you from Master Eden his Edition; wherein bosause many things necessary to the natural History of the Indias are in the Authors Summarie, and in his 20, Books of a larger Historie. I bane added bitber fuch things as I thought fitteft. The Visu are like great Rats, and the Cories like Conies, of which the people in Hispaniola

eate. as also of the Tuends. Chemi and Mohni are lirde creatures also in that Hand ; which and their little mute Dogges were all the foure footed Beafts they had, faue that of Rats there is some question. The Indians of Immeica and Cuba vie to catch fish with the fish Ronerso, as ftrange fith to Huntimen or Falconers vie Hounds or Haukes in their game. The Indians take it former imes in their Nets, of which I have eaten : and when they will bring up one of them they feede it in the Sea and carrie it tied to their Canar by a strong line, which when they fee a fish fit for pray, they loofen and vie words to excite courage and valour in this fift; which prefently flies like an arrow at that fifh and fastens thereon, and the Indian lets the line runne out at length (being oiled, of many fadomes, and having a peece of wood at the end to buoy it,) till the fifth be weati-Rauer's is the ed: this little fifth (little aboue a spanne long, vnsightly to looke on) full bolding fait, till the sociates one lands was gathering in his cord, prepares to shoure to take the greater fish, with much commendation that the sociates of th Sharke and is tion and words of encouragement to this chafe-fish, perswading him to let goe his hold, which by him carried otherwise should sooner by violence breake in peeces this Huntsman, then force him to vinfain all his Cha- ften. Thus will he fasten on the belly of a Tortrase so great that two Indians and sometimes fes, feeding on fixe have enough to doe to carrie the fame to their houses. This fish Romerfo hath scalles Staire fashioned, or like the roofe of a mans mouth, and on them certain prickles very sharpe and strong. whereby he fattens himselfe to what fift him pleafeth : and their prickly scales he hath on the most pare of his body.

They have likewise a cunning wild-goose-chase, in a great Lake cashing in certaine great emptie Pompons in the feafon when Geefe refort thither, wherewith they being accustomed grow out of feare and will be on them to bee carried. Being thus acquainted, the Indian puts one of these emptie Pompons on his head, and with much dexteritie of swimming enters amonest the Geese, and when one hath made him his Porter, no part of his body being seene. he swimmes from the rest, and then with his hand pulls her in, and hangs her thus strangled at

his girdle, and begins a fresh game.

Houles of

When their Caciques are dead they lay them on a piece of wood or stone, and make a fireabout the fame which may not burne them, but by degrees draw forth all the movifure in fweat, leaving onely the skin and bones, and then in a place separate repose the same with the Anceftors which before had beene so dealt with; this being their best Booke of Heraldrie to recount the Names and severall Descents in that Pedegree, If any die in battell, or so that they cannot to recover his body, they compose Songs which the Children learne touching him, and the manner of his death, to supply that memoriall. These Songs they call Areytor. As for Letters they were fo ignorant, that iceing the intercourse of Spaniards by Letters, they thought that Letters could speake, and were very cautelous in their carriage of them, lest the Letters might accuse them of ill demeanor by the way. When they will disport themselves, the Men and Women meet and take each other by the hand, and one goeth before which is called Tegnine or their Mafter, with certaine paces measured to his singing in a low voice what commeth in his minde, and after him all the multitude answereth in a higher voice with like measures proportioned to the tune, and fo continue they three or foure houres, with Chiche or Mayz-wine among : fometimes also changing the Tequina and taking another with a new tune and long. Their Houses are com- 60 monly round like a Tent, and sometimes with a double water passage (which they call Bubio) of good Timber, thatched with Straw or long Graffe, the Walls of Reed pitched into the ground In the Prouince of Abrayne in Golden Caffile and thereabouts, there are many Villages of Indians which dwell on the tops of Trees in Houses or Roomes there made, to which they ascend

by certaine staires of Beface, which growes about * Trees, and is vied to binde their Walls and . Befaces scemes by certaine name. A Difference before mentioned. Beneath, the ground is fenny and covered with wa- to be as bindto be as bind-ter not fo high as a man : and where it is deeper, they vie Canoas, and therewith passe to drie weed or luie, Land to low their Mays and Incea, Battates and Aies. In those houses they are secured from wild but fronger Reafts. Enemies and Fire. They are not Archers, and vie Clubs. In the Gulfe of Vraba where and more Dearts, Line Pales and Land Palme trees in the middest of the River growing neere together, on the tops whereof are houles made as the former and much bigger, in which many Inhabitants dwell together, and haue their beds tyed to the lower parts of the faid Palme trees: Thefe beds they call Hamacas, being couerlets of Cotten of good threed and well wouen, of two or three braces long, but narrower, with cordes at the ends. The cordes are of Cotton, or of Henequen or Cabuya, this the courser threed, that the finer and able to cut Iron; made of the leafe of a certaine herbe. These Indians fight also with Clubs, and did much harme to Captaine Vasco Names di Balboa his men, which returned with losse not able to ouer-come them. I haue allo observed that these Indians have the bones of their skulls foure times as thicke as those of the Christians , so that to strike them with a Sword must be warily done, the Swords being thereby

Befides the Tigre and other beafts before mentioned, in the firme Land are the Beeri (the The beafts of Chriftians call them Dants, not that they are fuch, but for some resemblance, as is also said of the those parts. Tiere) of the bignesse of a meane Mule, without hornes, ash-coloured : they know not to dresse

20 and tanne their hides. They take them with Dogs, but if they take water, they are fierce and cruell. The Gatto Ceruiere is as bigge as the Tigre and very fierce, more dreadfull to the Christie. Gatto Ceruiere. ans, the (wifteit beaft yet found in those parts. The Lions are a little leffe then those of Barbarie and not fo full of courage, but fearfull and fugitive, and hurt none but such as affault them. The Leopards are like those of Barbarie, and are swift and fierce, but neither these nor the Lions have Leopards. vet done Christians any harme, nordor they eate the Indians as the Tigres doe. The Foxes are Foxes like those of Spaine, but in colour blacker then blacke veloet, and somewhat lesse then of Spaine. The Red Deere are as those of Spaine, but not so I wift. Their Fallow Deere are like those of Spaine, Red and falbut both Red and Fallow exceed the Spanish in tafte. Their Conins or Hares are somewhat like low Decre ours, but liker Hares then Comies, yet leffe then the Conies of Spaine. The Masterns are like to Materis. 30 thole of Spaine in bigneffe , biting and otherwife : fome of them are kept tame and are as full of Sport and lesse filthy then the Monkeys. The Monkeys are of innumerable forts and shapes: Monkeys.

fome of them to futtle as they imitate the actions of men, as breaking of Pine-apples and Almonds with stones : iome will throw stones at passengers, or breake boughs to fall on them as they passe by to breake their heads, and retort the arrowes shot at them, and doe other things incredible. Some are as little or leffer then a mans hand, and some as great as a meane Mastiffe. The Indian Dog: are little and barke not, some hayrie and some bare, but wagge the taile and leape on Dog. those which feede them, and are not so tame as ours. The Churchia is as bigge as a small Conie, churchia tawnie, sharpe-snowted, dog-toothed, long-tayled and eared like a Rat. They doe great harme to their Hennes, killing sometimes twentie or more at once to sucke their bloud : And if they 40 then have young, thee carrieth them with her in a bagge of skin vnder her belly, tunning along the the fame like a Satchell, which thee opens and thut at pleafure to let them in and out : and if a-

ny come with light when the Damme and young are at their Hen-bloud dainties, thee receives them into this bagge, and runneth away with them : and if thee finde the way Ropped, thee climbeth vp aboue the Hen-rooft, and is fometimes taken aliue or dead in this manner; as I have feene. Her Teats are within her bagge. It is a stinking creature. Of Fowles, they have Eagles, Hambes, Buzzands, Rauens, &c. as in Spaine. Other differing Fowles.

forts they have so many that they need rather a Painter then Relator to describe them. Of Par. Parest, ross I carried ten or twelve fores at once to King Ferdinand. They flie by couples, a Male and Female together: and doe much harme to their Corne grounds. There are Night-framewer which Night-framewit of file by night onely, and strike at the Bass, holding a pleasant puriote after them. They are big-

ger and swifter then Swallowes, having a row of white feathers overthwart the wing, The Bats Bats, draw much bloud by their bitings; and if they bite one man among ft an hundred persons, the fame Bat will in the nights following fill fingle the fame person. They flanch the bloud with hot aftes, or water as hot as may be endured, and fo I have been cured. There are Peacecks, ome yellow, some blacke, with tailes like those of Spaine: they are better meat: some are wilde, and fome tame, which are brought home young. Other Peacocks they have, of which the Hens are Peacocks and ill shaped, the Males have not so great a taile as ours : their necke also is bare of feathers, but Turign. coursed with a skin which they change after their phantasie into divers colours. They have a 60 horne as it were on their front, and haires on the breait (the last forme Turkeys.)

The Sea-Crowes are so many which on the coast of Panama follow the Pilchards or Sardines Sea-crowes. (as is before (aid of the Alestranzi) that lighting or houering on the Sex, they feeme to couer the same with a blacke carpet of cloth or veluet, going and comming with the Sea. There are Wilde Heer as great as Peacocks, blacke, the head part of the necke gray skins, and not feathe- wilde Homes. red : they eate Carrion and are of vnsauourie taste to be eaten; smell like muske whiles they are

Nnnn 3

triches are gray, as fauourie as those of Spaine, and as great as the Spanish Hens: they have their brawnes or fielh double, one ouer the other. Their egges are as bigge as Hens egges, but rounder. and coloured like a fine Turkesse stone. The Indians making a found like theirs, draw them to theirs nets. There are alfo a leffe kinde. The Pheafants are not in feathers like those of Spaine Pheafatta. nor so goodly, but very sauourie meate like the great Partriches, but are not so great; they are gray, haue long legs and railes, make a loud whittling noise, and are easily shot.

Flies, and Waffes, Flies are not there so many as in these parts of Europe. Their Waspes are greater and sine Fire, and Wife, I are all too the to the state of the sta and Combes which hold foure times as much Honie as ours : their Honie is white. Anti are great, many, and doe much damage to the Trees, Sugars, and other provisions. There are of many ny forts, fome little and black (of which and the Ant-beare is spoken before) some called Conixen halfe Ant, halfe Worme, very hurtfull; they carry earth on their heads, and therewith on trees, walls, or where they please build their nests, three or foure spans large, and are as hurtfull to houses as Moths to clothes. There are others greater of divers forts, some as bigge as Bees with vs, fo poyfonfull that herewith the Indians infect their arrowes fo remedileffe, that not foure of Mil.G. lis.c.t. Hornets or Horfe-flies (Tafani) are many forts, tedious to expresse. There are also Scorpions in 10

an hundred which are wounded escape: and if this Ant bite a Man he presently falls into a grienous feauer, and the place swelleth much. There are others red, yellow, and some winged. Of the firme Land. An. 1519. and two yeeres after the Ants destroyed in Hispaniola their Canna-Historia Gen. fistola. Oranges, and fruit Trees, neither in their houses could they keepe victualls for their mula titudes, detroying all like the African Graffe-hoppers, in fo much that Saint Domingo was nigh difpeopled by them.

They laugh in India to heare the difeafe called French by the Italians, and Neapolitan by the Beginnings of the fouledis- French, which may indeed be called Indian, where the best remedie Lignum Sanct um, and Gnaiacan grow; God to in judgement remembring mercy, that where our finnes produce a punishment, he also lends a remedie. I had acquaintance with divers which went in the first and second voyages of Columbia : of which was Peter Margarite Commendator in the second voyage, of most respect with the King and Queene, who complay ned of those paines. Soone after, in the yeere 30 1496. began the disease to arrest some Courtiers; but in those beginnings, it was onely amongst bater persons of small authoritie : and it was thought that they got it with having to doe with common women. But afterwards it extended to principall Persons, and the Physicians could not tell what to thinke of it, fo that many dyed. When after this Gonz alo Fernandes de Cordons

was sent with a great Armie by the Catholike Kings, in behalfe of Ferdinand the second King of Naples , against Charles the French King, some diseased persons went with that Armie , and by dealing with the women , and by conversing , spread the disease to the Italians and French-men, which thence got the names aforesaid, but indeed came from Hispaniela: where it is ordinarie, and the remedie also. Our Author 1. 17, c.4, and Ramusio in his Preface to his third Tome so, That the Souldiers of Pamislo de Nauaz having the small pocks infested the Indians, which never before 40 bad beardof that difede: in f much that of 1600000, fouls in that Iland there are for the fit, of and by you foul beare. The Niguas allo, creatures left then Fless, which eate in the fich very dangerously, are rife in that Iland. The people of that Iland when first they were dissided amongst the Spanjo Planters, were deemed a Million or more (fone by 1600000, of which

and of their posteritie in the yeere 1535, were not aboue fine hundred left, little and great, the rest which then were there being Slaues brought thither from other parts. The conetournesse of the Myne-workers, neglect of Diet, change of Gouernours growing worfe and worfe, caufed them to poyfon, kill, and hang themselves, besides those which were consumed by instatious * Those before or pestilentiall pocks * and other diseases : Their owne vices, also Sodomitrie, Idolatrie, &c. mantioned out prouoked dinine Inflice against them. No provision could hinder their consumption. The King so tent Religious men of divers Orders , but this I know that the Dominicans and Franciscans contradicted each other, and what one approved the other difallowed, although after the other had

not absolue them except they franchised the Indians, and the other absolued them neverthelesse. Lib.4. c.2. Much diffrutation hath beene about the Indians teruice amongst the Thomists, Canonills, and famous Lawyers and Diuines, but their differences have done little good to the Indians or the plantation; and in a short time both this Iland and the three adiopning, Saint Iohn, Jamaica, and (wha, remayned defolate, being by the Friars meanes (which I thinke, meant well) disperied nion that if a Christian Prince had this Iland of Hispaniola onely, hee might make it as good as either England or Sicily: fuch is the store of Gold, the prosperous successe of things carried from

left that opinion, the Contradictors would embrace it, still agreeing in disagreeing : which cau-

fed much danger not onely to new Converts, but also to old Christians : whiles one Order would

thorow the Hand, to leffen their labours, which the Gentlemen imposed on them. I am of opi-Spaine, the Beenes (which I knew first carried thither from Spaine) being alreadie so multiplyed that they kill them for the Hides, leaving the field in the fields of fine hundred at once :

C H A P.2. Strange Huracans, Spout, Monster, Hawk. Great burts by least Dermin. 997

and Roderigo di Baffidas Bifhop of Venefuels hath therein 16000. Beeues, and the Treasurer Paf-Comonte as many ; others 8000. or more, likewile in other Beafts, Seeds, Oranges, Limons Figs. Pomegranets, &c.

Of their Zemes, Idols, Sepulchres, and other things concerning their Religion, the Reader may fee Outdos 66 enough in the minth Booke and fourteenth Chapter of my Pilgrimage; and of the Spanish first voyages this their in the beginning of this worke, which Ouicedo handleth in his former Bookes.

Their Huracans (to they call tempetts of winde and raine together) are very excelline. An. 1508, on the third of August, all the thatched houses in Saint Domingo were throwne to the Lib.6.63. ground, and some also of stone; all the houses also in the Towne Bonanentura, which might thence be named Malauentura: in the Hauen were funke twentie Ships and Caruels, a North-

wind first and after a South-wind playing their furious prizes, one carrying out the Vessels in despight of all prouisions to Sea, and the other as terribly forcing them agains to the Hauen (it the loffe of thips and men may permit that name) yea on Land many men were carried in the ftreets and fields divers bow-shots before they could stay themselves. Hell feemed to have Superfictions beene opened, and the Deuils to have carried things to and fro, Yet in Iuly following was a conceit the worse, which now are allayed and not so violent have the Blessed Sacrament hath beene placed Sacrament, worse, which now are allayed and not so violent times the bletted sacrament nath been placed in Churches. I have seene the space of a Crosse-bow shot or two, all the ground courted ned against with Trees plucked up by the Windes from the Rootes, and ours have sometime by dangers of the Hardings the way beene forced to climbe from tree to tree ouer fuch a passage, with rents and perills of the conscion enough.

The Cocks in Spaine crow at mid-night and towards day: but here in the shutting in of the e- Libr. 610. uening, or two houres within night, and two houres before day, and not at all at mid-night: Cocks & Cars fome crow in the first watch and not elie all night. Their Cats also vie their lusts all the yeere differing from and without walling noile, which in Spaine, France, Sicily, and other places in Europe and the Spains Afrike which I have teene goe on Catter-walling onely about Februarie. In the Ile of Nanaza Entill dee Wellward from Hilbaniola in the way thence to lamaica, the Rocks are seene under the water: much agree and amongst them a fathome and five foote under the falt water there ariseth a spring of good with the ladies fresh water vpon the Sea, spowting vp bigger then a mans arme, higher then the salt water Strange water that it may easily be taken in. I have not feene it, but Stephen Rocca a person of credit teftifieth four,

30 this of his owne fight and tafte. But I have feene in the Iland Dommica at the River Acquata, twentie paces wide, and not deeper then the arme pits, there is a hot spring, that if one take vp the Sands they feeme like embers in his fift, and to is the water a fpan deepe about the Sands, which on the top is fresh and like other water.

Ouiedos 8, 9, 10, and 11. Booker are of Plants and Trees in those parts. The 12. of Creatures Uh. 13, e.s. before mentioned: the 13, of Fishes, in which he telleth that An. 1529, going from the Gulfe of O. rotigua to Panama two hundred leagues Eastward , neere the mouth of the Gulfe , wee faw a Filhor great Water-monfter, which at times lifted it felfe right vp aboue the Water fo farre Sea Monfter that the head and both the armes might bee feene, which feemed higher then our Carauell and flupendious: all her Mafts. Thus did fhee rife and fall divers times beating the water firongly, not caffing

40 any water out of the mouth. A younger or less of the same kinde did likewise, swimme a little distant from the greater. Some judged it to bee a Whale with her young one, which co thers denyed, faying, a Whale had no armes. To my judgement each arme might be five and twentie foote long, and as bigge as a Butt or Pipe: the head fourteene or fifteene foote high and much more in breadth; and the rest of the body larger. That of her which appeared about water, was aboue five times the height of a meane man, which make five and twentie paces." Loren- " 25, 1915, 20 Marino Canon of the Church of Golden Cassile, Sancio di Tudola, &c. were with me : and we whichiome were all afraid when the came neere our final Carulel. Shee fermed to disporte fisher a special approching, which fuddenly arose much to our purpose, from the West, and brought vs in fadous.

In Hispaniola and the neighbouring Hands is a strange bird of prey, as bigge as a great " Gania Lib.14.67. and much like it : fhee preyeth on the Land on birds , &c. and on fish in the Water , fhee is An Italian footed like water-fowles and goeth like a Goofe, but hath talons like Hawkes, and fastens fowle. therewith on the fifthes which thee eates (fo taken) either in the Water or on the Rocks , or Water hawkes. as thee flyeth in the Aire holding it betweene her feete. The Christians call them Affori

What feath the Ants did in Hispaniola, is before mentioned, in the yeere 1519. and the next L.tf.c.t. following, and the Citie of Saint Domingo, was almost dishabited by this great Armie of little Greatestharme creatures, as in Spaine a Citie was dispeopled by Conies, and which lately happened to the Ile by least crea-Porto Santo; in Theffalia (which almost tell out to the English Colonie in Bermuda) to another tures. 60 Citie by Rats, to the Acarinta by Frogges, to the Minnimes by Fleas, to Amuele in Italie by

Serpents, and to another part thereof by Sparrowes; to divers places of Africa often by Locusts: to can the Great God arme the least creatures to the destruction of proud vainglorious men. And this milerie fo perplexed the Spaniards, that they fought as strange a remedie as was the difeafe,

Vocertainty of which was to chuse some Saint for their Patron against the Antes. Alexander Giraldine, the Bi-Superfluon. Shop having sung a solemne and Pontificall Masse, after the Confectation and Elevation of the Sacrament, and demout Prayers made by him and the people, opened a Booke in which was a Catalogue of the Saints, by lot to chuse some he or the Saint, whom God should please to appoint their Aduocate against that Calamitie. And the Lot fell vpon Saint Saturnine whose Feath is on the nine and twentieth of Nouember : after which the Ant-damage became more tolersble and by little and little diminished, by Gods mercie and intercession of that Saint : I note in the rather, because the Bishop and that Saint were both Romanes, and as that Martyr had made mute the Idols in Toledo, (as is written in the Hillorie of his Martyrdome) so now was Idolatry (and I pray what was this?) destroyed in Hispaniola? Hee might have faid exchanged ! a piti. full case that when God bath sont bis owne Sonne made of a woman, made under the Law, Gre. Who hath dred for our (yea, that Martyrs) finnes, rifen for our Instification, ascended on high to gine gifts to mens and is there, and therefore, fet downe at Gods right hand to make intercession for vs summers, to take possession for vs mortals, to accomplish, as our Amen, all the promises of this life, and that which is to come, whether against Ants or Deuils; and in him it hath pleased the Father that all falnesse Should dwell; yea (beyond and it pleased) in him dwelletb the fulnesse of the Godbead bodily, and we are compleate in him, and he is all in all, rofterday, to day, the fame for ever; which bath loved vs, and ein men himselfe for us, which is lone, which hath inuited vs, Come to me all ye that labour, which hath incited vs by all attractives : that after all this, men, Christian men should goe cast Lots for an Interceffor, and neglecting Christ, dreame of Romane carnall phancies, or runne mad with Romails 20 superstitious phrenies; wherein if the bodie be delinered, as happened to the Insting I fractices. with their Quaile-flore, the burthen is made double to the foule, when God heareth in his anger. Such Cifternes doe they digge which forfake the Fountaine of lining waters, enen broken Cisternes which can hold no waters: the belt of Saints like the wife Virgins, having no more Oile then will fuffice their owne Lampes, and that also received out of anothers fulnesse, of whose fulnesse wee all base receined grace for grace; faid a principall Saint,

There are Caterpillers, which shine in the night fiftie or a hundred paces off, only from that part of the bodie whence the legges iffue; others only have their head shining, I have seene iome a spanne long very fearefull, but for any thing I have heard, harmeleffe. Flies are leffe, but more hurtfull then in Spaine : but these in kindes and colours are so diversified that it is impossi- 20 ble to write them : and fo may be faid of other small creatures in those parts.

L.16.c.15.

Lawyers dan-Spanifo Indies.

In his fixteenth Booke he declareth the Conquest of the Ile Borichen, or Saint John and the quarrels betwixt the Spaniards, the learning of some breeding such differtions, that not without cause (faith our Author) in Golden Castile and in other parts, the King forbad Law-learned men and Proctors should passe thither, as men infectious by sowing strife where they ought not. In this Ile , the people and other things are at before is faid of Hifpaniola ; there are more Birds in Saint lobe , rich Mineralls of Gold , certaine Battes which the people eate; and Lignum Santhum groweth there . more excellent then the Guaiacan for the French Difease and others.

L-17-6-4-Filchy Mar-

In his feuenteenth Booke he writeth of Cuba. The people and other things are much like to 40 Hiftaniola, Intheir Mariages, all the guells of the Bridegroomes ranke (as Caciques, if hee bee a Cacique or Principall, or Plebeians as he is) lye with the Spoule before he himfelfe may doe it: after which the with her fift bent comes crying with a loud voyce, Manicato, Manicato, that is forced and full of force, as glorying in her thame. They are in vices like those of Hill aniela, and will be no better Christians then other Indians, whatforuer Peter Martyr writeth from Encifes Relations. For I have feene more Indians then they both, and by experience of those Nations know, that none or very few of them are Christians of their owne will and accord : and when any are baptized being of age, he doth it more for some by-purpose then for zeale of the faith: He thinkes it a for there remaines to him nothing but the name, which also soone after he forgets. Perhaps there are some faithfull, but I beleeve they are very rare.

Fable that is cold of Groffes found in I wea-

The Creatures and Plants of Spaine profper well there, as doe the natural which are the fame which are in Hifpaniola. The people were exhaufted when they first went into New Spaine, and with the fecond Armie of Grigialus, and with the third of Cortefe, and with the fourth of Pamphilo di Narbaez, all by order of Lieutenant Velasco: whereby Cuba was in manner dispeopled, and by the former causes mentioned of Hispaniela, and by the contagion of the small Pockes which was vinuerfall in all thefe Ilands : So that the Great God hath in manner wholly extinguished them for their (not without others) sinnes. They have much Gold and Brasse: vie to fifth much with the Roser so before mentioned, as also that Wild-goole chase. There are innumerable Cranes, fuch as are in Spaine; the Boyes take infinite Egges and young ones. There ges of Fowks are Turtles greater then in Spaine. Euery yeare there paffe from the end of Cuba infinite numbers 60 of divers forts of Birds, which come from the North of the firme Land, and croffe over the Alacrain Hands and Cuba, and flye oue: the Gulfe Southwards. I have feene them paffe over Darien and Nombre de dios and Panama in divers yeeres, in the Firme Land; so many that they co-

ner the Skie : and this paffage or march continueth a moneth or more about the moneth of March, I thinke they flie round about the World; for they never are feene to returne toward Linears. the West or North : and we see them not every yeers one after another; from morning to night the aire is coursed, and fome flie fo high that they cannot bee feene, others lower yet higher then the Mountaines tops. They come from the North-west and North to the Southwards, and then turne South-weft, occupying in length more then the eye can different, and a great space in breadth, The lowest are Eaglets and Eagles, and all seems Birds of prey of many kinds and plumes : The higher cannot bee discerned in their plumes, but in manner of flying and q antitie appeare of divers forts.

There have beene Serpents killed in Cuba, as bigge as a mans thigh, and five and twentie, or thirtie foot long and more. They are tame, and the ledient cate them, and find sometimes it their bellies fixe or feuen creatures bigger then Conies, which they swallow whole.

I am loth to lead you with this Author along with Grigialua, in his long Expedicion from Lize 18. hence to Incatan and other parts. Neere to Porto de termini, he found two Trees feering let by hand, standing alone, and sittene paces off discret look of Chalke. They saw two Images made Abomin ble of the wood Copes, in manner of Sodomitical villenie joyaed together; and another of Chalke deue long. with his circumcifed member betwixt his hands.

Immics was in people, vices, creatures and other things like the former: they were the In. Lises, unnors of the reserfs-fifting and Goofe-catching with Gourds or Pompions aforefaid, which 20 fometimes they practifed allo with leaves and greene boughes on their heads, and vied that Garland, as is before faid of the Pompions. Of Cubagua the Pearle Hand, and of the Pearle-silhing L 19 c.s. is spoken before. In Cabagua is a bituminous Fountayne, having otherwise no water to drinke, Pi ch Found nor Hearbes, nor Trees but a few of Guaiacan, nor any liming creatures , though at first comming taine. of the Christians there were a few Conies. At the East point is the Fountayne running into the Sea with an Oily substance floating on it, profitable for Medicine there called Desils Dang.
They that live there, fetch their water seven leagues off from Commans, on the firms Land, and wood from Margarita. The Kings fifth of the Pearle-fishing hath yeelded 1,000. Duckets yeerly : a thing not knowne that so many Pearles have beene taken from so small a space, the

Hand of Conseques not compating about three leagues. In the Gulfe of Ornigues, and the Hands Legislation of the Province of Nieurgas on the South Seagues many the definite of a long former, Two though the Consequence of th pened they have a fishie substance within them , and thing within as the Pearle-oysters doe, Pearles. halfe their length, thence by degrees loofing that hining toward the broader end. The Pearles within them are not fo fine as the other. The Indiana via the their too digge their loofe ground,

faitning the shell to a handle of wood, binding it fast and making a kind of Spade thereof faithing the lifeti to a name of wood, bunding treat and manning a nine or space to trees.

In the yeare 1517. An Englishman * videt colour, of Dictourry came with a great hip to roube with a wind a faith of the Wards Braillon the Firme Land, and thence transfet the Hipminia, and came neere the Hauen saint, A.1517. of Saint Dominge, and fent his Boat full of people on thosre, and defired Trade. But the Cap-Livelly taine of the Fort thot from the Caftle at the Boate, because thee came directly to the Port 3 and " He cale him

taine of the Fort mortion the cantes at the same of the same at the cantes at the same at ded victuals and prouitions for their thip, complaining of the wrong done them at Saint Domingo, comming thither for Trade, to buy with their Mony, and to barter Commodities. There they Penet. got some victuals for which they paid in wrought pieces of Pewter and other things: and so returned towards Europe, where it is likely they came not; for thete was neuer any more heard

The next years a French Pirat guided by a Spanish Pilot, came to trade in the Iland of Pearles L.20, and a Portugall Carauell which he had taken on the Coaft of Brafil, and would have landed his Boats full of men, but was relifted, and a Battel betwixt both parcs followed, in which thirteene 50 Frenchmen were flaine, and two of ours. Three or foure Nanarreis and Biskainers field from them and faid the French were Theeues and came to take the Iland: whereupon they went with all

their firength, and tooke her Boat, and the fhip fled out of fight, &c. Omicdes twentieth Booke is of shipwrackes and disaduentures which have happened to the Spanards in those parts. One which happened 1514, is admirable, the thip finking and fine and twentie persons escaping in the Boat, hast forbidding prouision of Card, Compasse or vi-Quall, to faue their lines. Thus lived they twelve dayes at Sea ; neither had they any thing to eate or drinke : only a young man had faued two pounds of Bisket, which beeing divided amongit them, he which had most had not aboue an ounce and halfe. Vrine, or the Sea was their drinke. In this case they made Vowes to our L die of Antica in Simil: and on the twelfth day 60 having made a Saile of their fhirts, they came to Silner-port in Hifpaniola. Their Pilot Anto Calno told me the Storie. The same yeare in the Pleet of Pedrarias de Anilla a Portugal youth, being scoffed at, and flooted by the Spaniards, leaped into the Sea in a fresh gale, and not without the wonder of all men was taken up by another ship aline, whom after I saw vaunting of this folly, and faying that no Cathlian durit have done it; which I easily believe, as having more wit then this

Ouiedo writ o:her Bookes Land, which are not extant

Foole. Yet will I imitate alittle this foolish Portugall, and leape out of Oniedos Spanifo (fre who will not feare such dreadfull shipwrackes as this Booke, the last which hath come "to other hands, is full of?) and fwim alhoare, or feeke other passage with scotta, in a new or rather an old Voyage for Discouerie of the Mexican Antiquities.

CHAP. IIII.

Mexican Antiquities gathered out of the Writings of Ios H-PHYS ACOSTA a learned lefuite.

Very Historie well written is profitable to the Reader: For at the Wifeman faith, That which hash beene, is, and that which thall been, is that which hash. which hath beene, is, and that which hall bee, is that which hath bene: Haman et his pe have made refemblemen in hemificus, and fome grow wife p his which happened to others. There is no Nation, how harbarous found, that have no found they in them, good, and worthy of commendation; is in Common-weste found in dear the refer to the product of the second to the second the

mon utilitie, to be a Relation or Historie of things, the which in the effect of truth have happened, it 10 most vitalite, we make the defense of the profitable thing, neither ough it to bee reicited, for that it concerns the Indians. As wee fee that those Authors that treate of naturall things, write not onely of generous Beasts, notable and rare Plants, and of Precious Stones, but also of wilde Beasts, common rous Bestit, restance are remain; army excession counce, on any of muse destre, common Hearber, and hafe and only ar Stoner, for that there is almayer in them fome properties worthy obser-uation. If therefore there were nothing else in this Discourse, but that it is a Historie, and no fables nor sixthms, it were no unmorthy Subject to be written, or read. There is yet another more particular. reason, which is, that we ought berein to esteeme that which is worthy of memorie, both for that it is a Nation little effermed, and also a Subsett different from that of our Europe, as these Nations he, wherein wee should take most pleasure and content, to understand the ground of their beginning, then 10 wherein wee founds take most pleafure and content, to underfland the ground of their beginning, then 38 measures of fift, with their happies and voltappies. Admentates. And their factorist is not easily pleafast and agreeable, but also profitable, especially we facto as base the charge to rate and queerne them; for the knowledge of their Adix unites vs 10 gives credit, and also partly teach bow they ought to be intreased, real to the content of the content of the content of the content of the profits of the most possible that the Adix unites vs 10 gives for the most possible them, fopping that the Adix and the most pleafure of the foreign that the foreign the content of the content that we cannot clear this cream better, then by the transport of the Atix and Adix and the traffic of the content of the cont the glorie of his Dinine greatnesse, and some profit to these people, to whom he hath imparted the Law an of bis boly Gofbell.

ð. I

Of the ancient Inhabitants of New Spaine, and of the fixe Linages of the Nauatlacas, of the Mexican Exodus, and Adventures by the way : the foundation of Mexico, their first King and Tribute.

Chichimecas.

He ancient and first Inhabitants of those Prouinces, which wee call New Spaine, were men very barbarous and fauage, which lived onely by hunting, for this reason they were called Chichimecas. They did neither fow nor till the ground, neither lued they together; for all their exercise was to hunt, wherein they were very expert. They Their furge together; for all their extends was beaft-like, without any policie, and they went all course of life, lived in theroughest parts of the Monntaynes beaft-like, without any policie, and they went all naked. They hunted wilde Beafts, Hares, Conies, Weezels, Mowles, wild Cats, and Birds, yea vicleane beafts, as Snakes, Lizards, Locusts and Wormes, whereon they fed, with some hearbs and roots. They flept in the Mountaynes, in caues and in bulhes, and the wives likewife went a hunting with their husbands, leauing their young children in a little panier of Reeds, tyed to the boughes of a Tree, which defired not to fucke vntill they were returned from hunting. They 60 had no Superiours, nor did acknowledge or worthip any gods, neither had any manner of Cere-

There is yet to this day in New Spaine of this kind of people, which line by their Bowes and Arrowes, the which are very hurtfull, for that they gather together in troopes to doe mil-

phiefe, and to rob : neither can the Spaniards by force or cunning reduce them to any policie or obediende: for having no Townes nor places of relidence, to fight with them, were properly to mint after fauage beatts, which featter and hide themselues in the most rough and courted places of the Mountaynes. Such is their manner of living even to this day, in many Provinces of the Indies. Thole in New Spaine, which they call Octomies, were of this fort, beeing commonly Octomies. poore Indians, inhabiting a rough and barren Land, and yet they are in good numbers, and liue sogether wich some order, and firch as doe know them, find them no lesse apt and capeable of matters of Christian Religion, then others which are held to be more rich and better gouerned. Comming therefore to our librech, the Chichimeca and Ottomies which were the first Inhabito rants of New Spaine, for that they did neither till not fowe the Land, left the belt and most fertile of the Countrey vnpeopled, which, Nations that came from farre did possess, whom they called Nanatalcas, for that it was a more civil and politicke Nation; this word fignifies a people that footer well, in respect of other barbarous Nations without reason. These second peoplers Neueralens, came from other farre Countreyes, which lye toward the North , where now they have discovered a Kingdome they call New Mexico.

There are two Prounces in this Countrey, the one called Azelai, which is to lay a place of Artlan. Herme: the other Tuculbuacas, which fignifies a Land of fuch, whose Grandfathers were dinine. Tuubmean, The Inhabitants of these Provinces have their houses, their Lands tilled, Gods, Customes, and Ceremonies, with like order and government to the Nanatalcas, and are divided into Jenen Tribes 20 or Nations rand for that they have a custome in this Province, that every one of these Linages

hath his place and private Territorie, the Namaraleas paint their beginning and first Territorie in foure of a Caue, and fay that they came forth of fewer Cause to come and people the Land of Mexico, whereof they make mention in their Hiftoric, where they paint feuen Caues and men comming forth of them. By the supputation of their Bookes , it is about eight bundred yeares Their beginfince these Namadeas came forth of their Country, reducing which to our accompt, was a nings 900, bout the years of our Lord 720. When they left their Countrey to come to Mexico, they haved years ages, four efeore yeares when the ways and the cause of this their long flay in their Voyage, was, that their Gods (which without doubt were Denils, and space visibly wnto them) had persuaded them to feeke new Lands that had certaine figures. And therefore they came discourring the

30 whole Land, to fearch for these tokens which their Idols had given them; and in places where whole Land, to learn to the course which they had first peopled; and before the Land, and as they discoured better Country's, they left those which they had first peopled; leaning full some, especially better Country's, they left those which they had first peopled; leaning full some, especially better countreyes, they set those winto also had not peopled; reating this more je peculity the agod, ficke folkes, and the wearie; yes, they did plant and build there, whereof wee fee the remainders at this day. In the way where they polito, they foint four-clore yeeres in this manner of leifurely trauell, the which they might have done in a moneth. By this meanes they entred the Land of Mexico, in the yeere 902, after our computation.

tred the Land of Mexico, in the yeare 902, after our computation.

These seven Linages I have spoken of, came not forth allogether: the first were the Sochimil. How the fax
or, which signise a Nation of the feeds of slowers. Those peopled the bankes of the great Lake of
Mexico towards the South, and did build a Citic of their name, and many Villages. Long time
Mexico towards the South, and did build a Citic of their name, and many Villages. Long time
positive towards the South, and did build a Citic of their name, and many Villages. Long time
specially so five the south of the second to the second the Lake towards the vect, and they include any, an Ants Noft, and they continued long time Accopatales, which is to fay, an Ants Noft, and they continued long time Accopatales. mightie. After them came those that peopled Tescueo, which be those of Culbus, which is to say, Tesc a crooked people : for that in their Countrey there was a Mountaine much bending. And in this Cuibaa. fort this Lake was enuironed with these foure Nations, these inhabiting on the East, and the Tepanecas on the North. These of Tesones, were held for great Courtiers, for their tongue and pronunciation is very sweet and pleasant. Then arrived the Tlalluicans, which signifies men of

so the Sierre or Mountaine. Those were the most rude and grosse of all the rest, who finding all Tlasuicente the Plaines about the Lake postessed even vnto the Sierre, they passed to the other side of the Mountaine, where they found a very fertile, spacious and warme Countrey, where they built many great Villages, calling the Metropolitane of their Pronince Quahunachua, which is as Quahunathua much to fay, as a place that founds the voice of an Eagle, which our common people call by corruption , Quernamaca, and at this day they call this Province, the Marquifate. Those of the fixt Generation, which are the Tlafcaltecans, which is to fay, Men of bread, paffed the Moun-Tlafcaltecans taine towards the East, croffing all the Sierre, or Mountaine of Menade, where that famous Uniem is betwixt Mexico and the Citie of Augels, where they did find a good Countrey, making many buildings. They built many Townes and Cities, whereof the Metropolitane was called

60 by their name Tlascala. This is the Nation which fauoured the Spaniards at their entrie, by whose helpe they did winne this Countrey, and therefore to this day they pay no Tribute, but enioy a generall exemption. When all their Nations peopled their Countreyes, the Ebinchimecans being the ancient Inhabitants, made no resistance, but fled, and as people amazed, they hid themselves in the most obscure of the Rockes. But those that inhabited on the other side of the

Mountaine where the Tlascallecans had planted themselues, did not suffer them in quiet, as the Mountaine where the stagestones and part themselves in defence to preserve their Country, and being Giants as the Histories report, they lought to expell the last Commers, but they were vanquisht by the policy of the Tiascatteeans, who counterfeiting a peace with them, inuited them to a great banquet, and when they were buileft in their drunkennesse, there were some laid in ambush, who secretly stole away their weapons, which were great Clubs, Targets, Swords of wood, and other fuch armes. Then did they fuddenly fet vpon them , and the Chichimecon fee. king to defend themselues, they did want their armes, so as they fled to the Mountaines and Ro. refts adjoyning, where they pulled downe Trees, as if they had beene stalkes of Lettuces. But in the end, the Tiascalteeans being armed, and marching in order, they defeated all the Giants, no. 18 leauing one aliue. We must not hold this of the Giants to be strange, or a fable; for at this day we finde dead mens bones of an incredible bigneffe,

When I was in Mexico, in the yeere 1586, they found one of those Giants buried in one of our Farmes, which we call Jefu du Mont, of whom they brought a tooth to bee feene, which (without augmenting) was as bigge as the fift of a man, and according to this, all the reft was proportionable, which I faw and admired at his deformed greatnesse. The Tlascaltecans by this victorie remayned peaceable, and so did the rest of the Linages. These sixe Linages did always victoris remayared peaceasis, and conductor to the samples a note that allowed the samples and always entertrains amitte together, marrying their children one with another, and disuding their limit quietly then they studied with an emulation to encrease and beautife their Commonwests. The barbarous Chichimecans, seeing what passed, began to vie some government, and to apparell to Beginnings of themselues, being ashamed of what had passed; for till then they had no shame. And having a

bandoned feare by their communication with these other people, they began to learne many things of them, building small Cottages, having some policy and government. They did also choole Lords, whom they did acknowledge for their Superiors, by meanes whereof they did in a manner quite abandon this bruitish life, yet did they al wayes continue in the Mountaines dinded from the reft. Three hundred and two yeeres after the former two Linages had left their Country, toinha-

chouse as the and gouerned this Nation easily. This Idoll commanded them to leave their Country, promising to make them Princes and Lords over all the Provinces which the other fixe Nations did pol Deuills emula: feffe, that he would give them a Land abounding with gold, filter, precious stones, feathers, and rich mantels : whereupon they went forth, carrying their Idoll with them in a Coffer of Reedes, supported by foure of their principall Priests, with whom he did talke and reueale vnto them in fecret, the successe of their way and voyage, adusting them of what should happen. He likewise gaue them Lawes, and taught them the customes, ceremonies, and saerifices they should observe. They did not advance nor mooue without commandement from this Idoll. He gave them notice when to march; and when to stay in any place, wherein they wholly obeyed him. The first thing 40 they did wherefoeuer they came, was to build a House or Tabernacle for their false god, which they fet alwayes in the middeft of their Campe, and there placed the Arke vpon an Altar, in the fame manner as they have vied in the holy Christian Church. This done, they fowed their land for bread and pulses, which they vied : and they were to addicted to the obedience of their god, that if he commanded them to gather, they gathered, but if he commanded them to raise their Campe, all was left there for the nourishment of the aged, ficke, and wearie, which they left purposely from place to place, that they might people it, pretending by this meanes, that all the

Land should remaine inhabited by their Nation.

tion of that works of God in bringing the defert to Tabernacle.

> We may well judge what this Vuzlipuzli was, for that there was never feene nor heard speake of customes more superstitious, nor sacrifices more cruell and inhumane, then those which hee taught them. To conclude, they were invented by the enemie of mankinde. The Chiefe and Captaine whom they followed, was called Mexi, whence came the name of Mexico, and of the Mexican Nation. This people marching thus at leifure, as the other fixe Nations had done peopling and tilling the Land in divers parts, whereof there is yet some shewes and ruines : and after they had endured many trauels and dangers, in the end they came to the Prouince of Mechonacan, which is as much to fay, as a land of fish, for there is great abundance in goodly great Lakes, where contenting themselves with the situation and temperature of the ground, they refolued to flay there. Yet having consulted with their Idoll vpon this point, and finding him vnwilling, they demanded license to leave some of their men to people so good a Land, the which he granted, teaching them the meanes how to doe it, which was, that when the Men and Wo-62 men should be entred iuto a goodly Lake called Pascnare, to bathe themselves, those which remayned on Land, should steale away all their clothes, and then secretly raise their Campe, and depart without any bruit, the which was effected, and the rest which dreamt not of this deceit (for the pleasure they tooke in bathing) comming forth and finding themselves spoyled of their

CHAP.4. S.2. Details Oracles, Apifb emulations, Murtberous infructions.

garments, and thus mocked and left by their Companions, they remayned discontented and vexed therewith : fo as to make shew of the hatred they had conceiued against them , they fay that they changed their manner of life and their language, At the least it is most certaine, that the Mechanicans have beene al wayes enemies to the Mexicans, and therefore they came to congratulate the Marqueffe De Valle, after his victorie obtayned when he had conquered Mexico.

From Mechonacan to Mexico, are aboue fittie leagues, and vpon the way is Malinalco, where Of that which it happened, that complaying to their Idoll of a woman that was a notable witch, which came happened in in their company carrying the name of their fifter to their god, for that with her wicked artes Malmale Tale thee did them much harme, pretending by certaine meanes to bee worshipped of them as their tener, Chep. 5. 10 goddeffe : the Idoll spake in a dreame to one of those old men that carried the Arke, commanding

gooten: rate footh gaste in average to one or amore a man since and that they floodd leave this him to comfort the people, making them new and great promiles, and that they floodd leave this his fifter with her family, being cruell and bad, raying their Campe at mid-night in great falence, leaning on thew what way they paffed, So they did, and the Witch remaying alone with Wich for falence, leaning on thew what way they paffed, So they did, and the Witch remaying alone with Wich for falence, the same of the work of the work of the same of the work of t her family in this fort, peopled a Towne which they call Malmales, the Inhabitants whereof, ken. are held for great Sorcerers, being issued from such a mother. The Mexicans for that they were greatly diminished by these divisions, and by the number of sicke and wearied persons, which they had left behinde, meant to repayre themselues, and to stay in a place called Tula. which figuifies a place of Reedes. There their Idoll commanded them to flop a great River, that it might couer a great Playne, and by the meanes he taught them, they did inuiron a little Hill called 20 Costepes, making a great Lake, the which they did plant round about with Willowes, Elmes,

Sapines, and other Trees. There began to breede much fish, and many birds came thither : fo as to became a very pleafant place. The fituation of this place, feeming pleafant voto them, and being wearied with trauell, many talked of peopling there, and to patie no farther: wherewith the Deuill was much displeased, threatning the Priests with death, commanding them to returne the River to her courfe, faying, that hee would that night chaftile those which had beene Deui's proud turne the River to her courte, laying, that nee would mist night charter under white measurement of the dilute delibedient as they had deferted. And as to doe ill is proper to the Devill, and that the dilute, equation in Inflice doth often fuffer fuch to be delivered into the hands of fuch a Tormentor, that choole punishing dilutered to the following Campe, and in the morning going thither, they found those dead that had talked of staying therous facti-20 there. The manner of their death, was, that their fromacks were opened, and their hearts pul- fices,

led out. And by that means, this good god dupth thele poor militable Creatures, the kinder of facrifices that pleafed him, which was, to opening the flowards, to pull out the board, as they have finee practiced in their horrible facrifices. Seeing this punishment, and that the Playare was dryed, the Lake being emptied, they asked counfell of their god what to doe, who commanded them to paffe on, the which they did by little and little, vntill they came to Chapattopee, a league Chapattepee. from Mexice, famous for the pleafantneffe thereof. They did fortifie themselves in these Moun-From Macros, manus to the plantature current. In my out touch temperate in the mean rate in the states, feering the Nations which inhabited that Country, the which were opposite vinto them, especially for that one named [*pst.] finne to this Sorteredli, left in *Malinako*, had blamed and fooken ill of the *Macross* for this *Total by the commandement of his mother; awhile after

40 followed the Mexicans course, labouring to incense the Tapaneens, and other neighbours against them, even vnto the Chalcus: is as they came with a strong Armie to destroy the Maxicans. Capil in the meane space stood vpon a little Hill in the middest of a Lake, called Acopiles, attending the destruction of his Enemies, and they by the aduice of their Idoll, went against him, tooke him fuddenly, and flue him, carrying his heart to their god, who commanded them to cast Metamorphos it into the Lake, fayning that thereof did grow a plant called Tamal, where fince Mexico was fish built. They came to fight with the Chalcas, and other Nations, having chofen for their Captaine, a valiant man, called Vitzilonilti, who in an encounter, was taken and flaine by the Enemies. But for all this, they were not discouraged, but fought valiantly; and in despisht of their Enemies they brake the fquadrons, and carrying their Aged, their Women, and young Children in the midit of their battaile, they passed on to Atlaces among, a Towns of the Culbums, whom they Atlaces among, found solemnising of a Feast, in which place they fortified. The Chalcus, nor the other Nations

did not follow them, but grieued to be defeated by fo small a number of men; they being in so great multitudes retyred to their Townes. The Mexicans, by the aduice of their Idoll, fent their Meffengers to the Lord of Culbuacan, Of the warres

to demand a place to dwell in, who after hee had imparted it to his people, granted them the black in place of Treaspon, which fignifies white waters, to the end they should all perish there, being full the most call. of Vipers, Snakes, and other venemous beafts which bred in a Hill neere adiopning. But being buscen, Change perswaded and taught by their Deuill, they accepted willingly what was offered, and by their Treasen. deuillisharte, tamed these beasts, so as they did them no harme; yea, they vied them as meate, 60 eating them with delight and appetite. The which the Lord of Culhuacan feeing, and that they had tilled and fowed the Land, he refolued to receive them into the Citie, and to contract ami-

tie with them. But the god whom the Mexicans did worship (as he is accustomed to do no good. but ill) faid vnto his Priefts, that this was not the place where hee would have them flay, and that they must go forth making warres. Therefore they must seeke forth a Woman, and name her

I occy.

Queene of the Goddeffe of Difcord. Whereupon they refolued to fend to the King of Culhuatan : to demand Licord made his daughter to be Queene of the Mexicans, and mother to their god, who received this ambaffage be the King of willingly, lending his daughter presently gorgeoutly attired and well accompanied. The fame night thee arrived, by order of the murtherer whom they worthipped, they killed her critello and having flayed her artificially as they could doe, they did clothe a young man with her strik and theraupon her apparell, placing him neere their Idoll, dedicating him for a Goddeffe and the mother of their god, and ever after did worthip it, making an Idoll which they called Toter, which is to fay, our grand mother. Not content with this crueltie, they did maliciously innite the Kine of Culbuacan, the father of the young Maid, to come and worship his daughter, who was now confecrated a goddesse, who comming with great Presents, and well accompanied with his prople, he was led into a very darke Chappell where their Idoll was, that he might offer facrifice to his daughter that was in that place. But it chanced that the Incense that was woon the harth. according to their cultome, kindled in such fort, as he might differne his daughters fraire, and hauing by this meanes discouered the crueltie and deceit, he went forth crying aloud, and with all his men he fell voon the Mexicans, forcing them to retyre to the Lake , foas they were almost drowned. The Mexicans defended themselves, casting certaine little darts; which they yied in the warres, wherewith they much galled their enemies. But in the end they got Land, and leauing that place, they coafted along the Lake, very weary and wet; the Women and little Children crying and making great exclamations against them and their god that had brought them into this dustrelle. They were inforced to passe a River that could not bee waded thorow, and 20 therefore they aduised to make small Boates of their Targets and of Reedes, wherein they passed, Then afterwards, having left Culbuacan, they arrived at Iztacalco, and finally to the place where the Hermitage of Saint Anthony now is, at the entrie of Mexico, and to that quarter which they now call Saint Paul. During which time their Idoll did comfort them in their trauels . and incouraged them, promiting great matters.

Of the four-

The time being now come, that the Father of lyes should accomplish his promise made to his dation of Mex- people, who could no longer fuffer fo many turnings, travels, and dangers, it happened that some old Priefls or Sorcerers, being entred into a place full of water-lillies, they met with a very faire and cleere current of water, which feemed to be filter, and looking about, they found the Trees, Meadowes, Fifth, and all that they beheld to be very white: wondering hereat, they remembred a prophesie of their god, whereby he had given them that for a token of their place of rest, and to make them Lords of other Nations. Then weeping for ioy, they returned to the people with these good newes. The pight following, Uitzliputzli appeared in a dreame to an ancient Priett, faying, that they should feeke out a Timal in the Lake, which grew out of a stone (which as hee told them. was the same place where by his commandement they had cast the heart of Copil, Sonne to the Sorcereffe their enemie) and woon this Timal they should see a goodly Eagle, which fed on certaine small birds. When they should fee this, they should believe it was the place where their Citie should be built, the which should surmount all others, and be famous throughout the World. Morning being come, the old man affembled the whole people, from the greatest to the least, making a long speech vnto them, how much they were bound vnto their god; 40 and of the reuelation, which (although vnworthy) he had received that night, coincluding that all muit feeke out that happy place which was promifed them; which bred fuch denotion and ioy in them all, that prefently they undertooke the enterprise, and dividing themselves into Bands, they began to learch, following the fignes of the reuelation of the defired place. Amiddelt the thickest of these water-lillies in the Lake, they met with the same course of water they had seene the day before, but much differing, being not white, but red, like bloud, the which diuided it felie into two streames, whereof the one was of a very obscure azure, the which bred admiration in them, noting some great mysterie, as they faid. After much fearch here and there, the Tunal appeared growing on a stone, whereon was a Royall Eagle, with the wings display-Eagle glorious ed towards the Sunne, receiuing his heat. About this Eagle were many rich feathers, white, red, 50 yellow, blue, and greene, of the same fort as they make their Images, which Eagle held in his tallants a goodly bird. Those which saw it and knew it to bee the place foretold by the Oracle, fell on their knees, doing great worship to the Eagle, which bowed the head looking on every fide. Then was there great cryes, demonstrations, and thankes unto the Creator, and to their great god Vitzliputzli, who was their father, and had alwayes told them truth. For this reason they called the Citie which they founded where, Tenexistran, which fignifies Tunat on a flone, and to this day they carry in their Armes, an Eagle vpon a Tunal, with a bird in his tallant, and standing with the other vpon the Tunal. The day following, by common content they made an Hermitage adiopning to the Tunal of the Eagle, that the Arke of their god might reit there, till they might have meanes to build him a sumptuous Temple : and so they made this Hermi- 60 tage of Flagges and Turfes couered with straw. Then having confolted with their god, they refolued to buy of their Neighbours, Stone, Timber, Lime, in exchange of Fish, Frogs, and young Kids, and for Ducks, Water-hens, Courlieus, and divers other kindes of Sea fowles. All which things they did fifth and hunt for in this Lake, whereof there is great abundance. They were

CHAPASI. Mexican Oracle, Oration, election of their first K. Acamapixtli. 1005

swith these things to the Markets of the Townes and Cities of the Tapanecans, and of them of Telenco their neighbours, and with policy they gathered together by little and little, what was neceffarie for the building of their Citie: so as they built a better Chappell for their Idoll of lime Stone Chapter and thone, and laboured to fill up a great part of the Lake with rubbish. This done, the Idoll pell. inake one night to one of his Priests, in these termes; Say unto the Mexicans , that the Noble - Oracle men divide themselves every one with their Kinsfelts and Friends, and that they divide themselves into foure principall quarters, about the house which you have built for my rest, and let every quarter build in his quarter at his pleasure. The which was put in execution : and those be the foure principall quarters of Maxico, which are called at this day Saint Iean , Saint Mary the round, Szint Pani, to and Saint Sebaftian. After this , the Mexicans being thus divided into thele foure quarters, their god commanded them to divide amongst them the gods he should name to them, and that they should give notice to every quarter, principall of the other foure particall quarters, where their gods should bee worshipped. So as under enery one of these foure principall quarters, there yeere many leffe comprehended, according to the number of the Idols which their god commanded them to worship, which they called Calputetco, which is as much to fay as God of the quarters. In this manner the Citie of Matrice Tenoxillion was founded, and God of the

grew great. ew great. This diuftion being made as aforefaid, fome old Men and Ancients held opinion, that in Ofthe sedition the diufion, they had not respected them as they deferred : for this cause, they and their of those of Tilethe diulion, they nad not respected them as they describe not this came, they and their relates and of the first kines of the first kines Lake, they found a small piece of Ground or Terrasse, which they call Tlotelon, where they the Mexicon inhabited, calling it Tlatellules, which fignifies Place of a Terraffe. This was the third diuffon did shoote.

of the Mexicans, fince they left their Country. That of Mechonacan being the first, and that change of Malinalco the fecond. Those which separated themselves and wene to Tlatellulco, were tamous men, but of bad disposition : and therefore they practifed against the Mexicans their neighbours, all the ill neighbourhood they could. They had alwayes quarrels against them . and to this day continues their hatred and old leagues. They of Tenoxtilian, feering them of and to this day contained white them, and that they multiplyed, feared that in time they might furnount them : hereupon they affembled in countell, where they thought it good to choose a 30 King, whom they should obey, and strike terrour into their Enemies, that by this meanes

they should bee more vnited and stronger among themselues, and their Enemies not prefume roo much against them. Being thus resolued to choose a King, they tooke another adunce very profitable and affured, to choose none among themselves, for the anoyding of differtions, and to gayne (by their new King) some other neighbour Nitions, by whom they were inuitoned, being destitute of all luccours. All well confidered, both to pacifie the King of Culbancan, whom they had greatly offended, having flaine and flayed the daughter of his predeceffor. and done him to great a fcorne, as also to have a King of the Mexican blond, of which generation there were many in Culbnacan, which continued there fince the time they lived in peace amongst them; they resolved to choose for their King, a young man called Acamapixil, Acamapixil, on to a great Mexican Prince, and of a Lady; daughter to the King of Calbiacian. Pre-first King of

fently they fent Ambassadors with a great Present to demand this man, who delittered their Ambassage in these termes; Great Lord, wee your Vassals - 4 Servants, placed and sout op in the Weeder and Reedes of the Lake, alone, and abandoned of six the Nations of the World, led onely and guided by our god to the place where wee are, which falls in the impribition of your limits of A(caputalco, and of Tescuco: Although you have suffered visto line and remains there; jet will weens, neither is it reason to line without a Head and Lord to command, correct, and gowerne vis. mee me, newest is required to the control of the co gine bine us for Lord, wee will esteeme him as bee desernes, seeing bee is of the Linage of the Lords of

Mexico, and the Kings of Culhuacan.

The King having confulted upon this point, and finding it nothing inconvenient to be allied to the Mexicans, who were valiant men, made them answere, That they should take his grand-child in good time, adding thereunto, that if he had beene a woman, hee would not have given her, noting the foule fact before fpoken of , ending his discourse with these wordes . Let my grand-child goe to scrue your god, and be his Lieutenant, to rule and gouerne his Creatures, by whom we line, who is the Lord of Night. Day, and Windes: Leshim gee and be Lord of the Water and Land, and possesses the Mexican Nation, take him in good time, and ose him as my some and grand-

60 child. The Maxicans gave him thankes, all inyntly deliring him to marry him with his owne hand, so as hee gaue him to wife, one of the noblest Ladies amongst them. They conducted the new King and Queene with all honor possible, and made him a solemne reception, going all in generall forth to fee the King, whom they led into Palaces which were then but meane, and having feated them in Royall Thrones, prefently one of the Ancients and an Orator

water, and great abundance of munition. He raigned in peace and rest fortie yeeres, having beene alwayes zealous for the good and increase of the Commonweale. As he drew neere his end, he did one memorable thing, that having lawfull children to whom

he might leave the succession of the Realme, yet would be not doe it, but contrariwise hee spake freely to the Common-weale, that as they had made a free Election of him, fo they should shoole him that should seeme sittest for their good Government , aduling them therein to have a care to the good of the Common-weale, and feeming grieved that he left them not freed from Tribute and lubicction, he dyed, having recommended his wife and children vnto them, he lefe all his people forrowfull for his death.

firme to gratifie, and give them contentment, seeing thou knowest we live upon their Lands, and within their limits. And ending, he repeated their wordes; Thou art welcome, Thou and the Queene our How Orations Miftris, to this your Realme. This was the speech of the old man, which with other Orations (which the Mexican Hittories doe celebrate) the Children did vie to learne by heart, and so they were kept by Tradition, some of them deserue well to bee reported in their proper termes. The King aniwering, thanked them, and offered them his care and diligence in their defence and aide in all he could. After they gave him the Oath, and after their manner fet the Royall Crowne voon his head, the which is like to the Crowne of the Dukes of Venice: the name of Acamapixels their first King signifies a handfull of Reedes, and therefore they carry in their Armouries a hand holding many arrowes of Reedes,

much estremed amongst them, did rise up, speaking in this manner, My sonne, our Lord and King, thou art welcome to this poore House and Citie, amongst these weeds and mud, where thy poore is.

thers, Grand-fathers, and Kinsfolks, endure what it pleaseto the Lord of things created. Remember

Lord thou commest bither to be the defence and support of the Mexican Nation, and to be the referen

blance of our god Vitzliputzli, whereupon the charge and government is given thee. Thou knowest wee

are not in our Country, seeing the Landwe possesse as this day is anothers, neither know we what stall become of us to morrow, or another day : Consider therefore that thou commest not to rest or recreate the

felfe, but rather to indure a new charge under so beany a burden: wherein thou must continually labour.

being flame to this multitude, which is fallen to thy lot, and to all this neighbour people, whom them must

coronation. Of the ftrange mi ure the Mex calls nave ed to them of Azcapuzalca.

The Mexicans hapned to well in the ekction of their new King, that in fhort time they grew 10 to have fome forme of a Commonweale, and to bee famous among strangers; whereupon their neighbours moved with feare, practifed to fubdue them, especially the Tapanecans, who had Azcapuzalco for their Metropolitane Citie, to whom the Mexicans payed tribute, as frangers dwelling in their Land. For the King of Azcapuzalco fearing their power which increased, fought to oppresse the Mexicans, and having consulted with his subjects, he sent to tell King Acamapixili.

that the ordinarie tribute they payed was too little, and that from thenceforth they should bring Firre trees, Sapines, and Willowes for the building of the Citie; and moreouer, they should make Garden in the him a Garden in the water, planted with divers kindes of Herbes and Pulfes, which they should bring vnto him yeerly by water, dreffed in this manner, without fayling; which if they did not. he declared them his enemies, and would roote them out. The Mexicans were much troubled at this commandement, holding it impossible: and that this demand was to no other end, but to feeke occasion to ruine them. But their god Vitzliputzli comforted them, appearing that night to an old man, comanding him to say to the King his sonne in his name, that he should make no dif-ficultie to accept of this tribute, he would helpe them and make the meanes easie, which after happened: for the time of tribute being come, the Mexicans carried the Trees that were required, and moreouer, a Garden made and floating in the water, and in it much Mays (which is their Corne) alreadie gravned and in the eare : there was also Indian Pepper, Beetes, Tomates, which is a great fappy and fauourie graine, French Peafe, Figs, Gourds, and many other things, all ripe, and in their featon. Such as have not ieene the Gardens in the Lake of Mexico, in the middeft of the water, will not beleeue it, but will say it is an inchantment of the Deuill whom they wor- 40 thip: But in tryth it is a matter to bee done, and there hath beene of the seene of these Gardens floating in the water; for they cast earth upon Reeds and Grasse, in such fort as it neuer wastes in the water; they fow and plant this ground, so as the graine growes and ripens very well, and then they remoue it from place to place. But it is true, that to make this great Garden easily, and

to have the fruits grow well, is a thing that makes men judge there was the worke of Vitzliputz-

li, whom otherwise they call Patellas, specially having never made nor seene the like. The King of Azcapuzalco wondred much when he faw that accomplished which he held impossible faying vnto his fubiects, that this people had a great god that made all easie vnto them, and he faid vnto the Mexicans, that feeing their god gave them all things perfect, he would the yeere follow-New Pharamining, at the time of tribute, they should bring in their Garden a milde Ducke, and a Heron, string sold was:

on their egget, in such fort, that they should hatch their young ones as they should arrive, without fayling of a minute, vpon paine of his indignation. The Mexicans were much troubled and heauie with this proud and strict command : but their god, as he was accustomed, comforted them in the night, by one of his Priests, saying, that he would take all that charge voon him, willing them not to feare, but beleeve that the day would come, when as the Azcapuzalcos should pay with their lives this define of new Tributes. The time being come, as the Mexicans carried all that was demanded of their Gardens, among the Reedes and Weedes of the Garden, they found a Ducke and a Heron hatching their egges, and at the same instant when they arrived at Acce-putation their young ones were disclosed. Whereat the King of Azcapuzation wondring beyond measure, hee faid againe to his people, that these were more then humane things, and that the 63 Mexicans began as if they would make themselues Lords over all those Provinces, Yet did hee not diminish the order of this tribute, and the Mexicans finding not themselves mightie enough,

ð. II.

Of the second King VITZILOVITLI, and of his Successours and their Acts watill the Reigne of Motezva

He Obsequies of the dead King performed, the Ancients, the chiefe of the Realme, and some part of the people assembled together, to choose a King, where the propounded the necessitie wherein the chiefe of the Realme, and tome part or the propure aucunoscu organics, ou move a hung, where the anti-entity propounded the necessite wherein they were, and that it was undeful to choose for propounded the necessary of the propulse of the common meale; for in very dead they found by the fauthers of his vings, the syn-former there of the Common meale; for in very dead they found by fauthers of his vings, the syn-former roor of 100 Common water; for in very generatory promains to see granters of our wrongs, the eye-browst of bit 1904, and the best of the large that it was needfully like the very tailant, being needfull flowerly to their frest, as their God boad prophylifed. Their resolution in the end was to choose a sonne of the Predectsfor, wing the like good office in accepting his soone for Successor, as hee had done to the Common-weale, relying thereon.

This young man was called Fitzslouitli, which fignifieth a rich feather. They fet the Royall virginais of Growne vpon his head, and anointed him as they have been accustomed to do to all their Kings, left a King. with an Ointment they call Dissore , being the lame vocation wherewith they did anoint their

written Ommen sery and Jermen, being use land years wherever usery una mone ther Idoll. Prefently an Orator made an eloquent speech, extherring him to a mee bandify suite bear, one fire them from the translet, learnir and missive they, suffered, being approfes by the Academy, which done, all did him homage. This King was not married, and his Countell held opinion, that it was good to marry him with the Daughter of the King of Acceptates, to him a friend by this alliance, and to obtains fome diminution of their heavie burthen of Tributes imposed upon them, and yet they feared left he should diffaine to give them his Daughter . by reason they were his Vasials ; yet the King of Ascaparates yeelded thereunto, having humbly required him, who with courteons words gaue them his Daughter, called Asancheras, whom they led with great pompe and toy to Mexico, and performed the Ceremonie and Solemnitie of 40 Matriage, which was to tie a corner of the mans Cloake to a part of the womans Veile, in figure

of the band of Marriage. This Queene brought forth a sonne, of whose name they demanded Marriage to aduice of the King of Acceptuales, and calling Lots as they had accustomed theing greatly given remones to Southflyings, especially upon the names of their children) hee would have his Grandschilde Los and to Southlyings, especially yous use names a coeff callustratures would name and Strand-called Chesalpopes, which fignifies A Target caffing finder. The Queten his Daughter feing the Southlying contentment to King of Acapacades had of his Grand-childe, tooke occasion to intreate him to relieue the Mexican, of the heatile burthen of their Tributes, feeing hee had now a Grandchilde Mexican, the which the King willingly yeelded vnto, by the aduice of his Counfell, granting (for the Tribute which they paid) to bring yeerely a couple of Duckes and fome fifth, in ligne of tubicction, and that they dwelt in his Land. The Maxicaus by this meanes remained

50 much eased and concent, but it lafted little, For the Queene their Protectrix died foone after: and the yeere following like wife Varidentili the King of Mexico died | leaning his some (b) Kings death malpopaca tenne yeeres old; he reigned shirteene yeeres, and died thirtie yeeres old, or little more. He was held for a good King, and carefull in the feruice of his Gods, whole Images hee held Kings to be; and that the honour done to their God , wasdone to the King who was his Image. For this cause the Kings haue been so affectionate to the service of their Gods. This King was carefull to winne the loue of his neighbours, and to trafficke with them, whereby hee augmented his Citie, exercifing his men in Warrelike actions in the Lake, disposing them to that

which he pretended, as you shall fee prefently. thich he pretended, as you that tee pretentity.

Of Chimelogo
The Mexicans for fuccessor to their deceased King did choose his sonne Chimalpopoca, by comcathe third mon confent, although he were a child of ten yeeres old, being of opinion that it was alwayes King, and his necessary to keepe the favour of the King of Azeapurales, making his Grand-childe King, cruelldesth,& They then let him in his Throne, giving him the Enlignes of warre, with a Bow and Arrowes in the occasion They then let him in his Throne, guing him the Enignes of waits, with a Dow and Arrows in one hand, and a Swerd with Rafers (which they commonly vie) in the right, 'ligalifying thereby the Mexicans O000 3

endured this fubication and flauerie the space of fiftie yeeres. In this time the King Acamapanis

died, having beautified the Citie of Mexico with many goodly buildings, threets, Conduits of

CHAP. L. C. Inauguration of Mexican Kings. Tlacacilees wildome & Valour, 1011

(as they doe fay) that they pretended by Armes to fed them felucrat libertie. The Mexicon but great want of water, that of the Lake being very thicke and muddie, and therefore ill to drink. so as they caused their infarrt King to define of his Grand father the King of Azenmanies , the water of the Mountaine of Chapalteper, which is from Maxico a league, as is faid before, which they basidy obtained, and by their industrie made an Aquaduct of faggoes, weeds and flagges by the which they brought water to their Citie. But because the City was built within the Loke. and the Aunaduct did croffe it, it did breake forth in many places, to as they could not enjoy the water, as they defired, and had great (carcitie: whereupon, whether they did expresty feeke it toquarrel with the Tapanecans, or that they were moved vpon small occasion, in the end they fent a reloute Ambassage to the King Azcapuzalco, laying, they could not vie the water which he had grac toofly granted them, and therefore they required him to provide them wood . lime. and flone, and to lend his Workmen, that by their meanes they might make a Pipe of flone and lime that should not breake. This message nothing pleased the King, and much lesse his subiects. feeming to be too prelumptuous a message, and purposely insolent, for Vasals to their Lord. The chiefe of the Counfell distayning thereat, said it was too bold, that not contest with permission to line in anothers Land, and to have water given them, but they would have them goe to ferme them : what a matter was that? And whereon presumed this fugitime Nation, Sout up in the mud? They would let themknow, bow fit they were to worke, and to abate their pride, in taking from them their Land

In these tearmes and choller they left the King, whom they did somewhat suspect, by season of his Grand-childe, and confulted agains anew, what they were to doe, where they retolued to make a generall Proclamation, that no Tapanetar should have any commerce or traffique with any Mexican, that they should not goe to their Citie, nor receive any into theirs, vpon paine of death. Whereby we may understand that the King did not absolutely command ouer his people, and that hee gouerned more like a Confull, or a Duke, then a King; although fince with their power, the command of Kings increased, growing absolute Tyrants, as you shall fee in

cans, intreated them first to steale away the young King his Grand-childe, and afterwards doe

the lait Kings. The King of Acceptuales feeing the refolution of his fubicets, which was to kill the Mexi-

what they pleafed to the Mexicans. All in a manner yeelded hereunto, to give the King con- 20 tentiment, and for pittie they had of the childer but two of the chiefest were much opposite inferring, that it was bad counfell; for that Chamaipepeca, although hee were of their bloud, yet was it but by the Mothers fide, and that the Fathers was to be preferred, and therefore they concluded that the first they must kill was Christalpopees King of Maxico, protesting so to doe. The King of Azcapuzates was so troubled with this contradiction, and the resolution they had taken, shat soone after for very griefe he fell sicke, and dyed. By whose death the Tapanecanti. nifling their confultation committed a notable Treason: for one night the young King of Maxi-King murthe co fleeping without guard, or feare of any thing, they of Azcapuzaleo entred his Palace, and flue him fuddenly, returning vuseene. The morning being come, when the Nobles went to falute the King, as they were accustomed, they found him slaine with great and craell wounds; then go they cryed out and filled all their Citie with teares : and transported with choller, they presently fell to Armes, with an intent to revenge their Kings death. As they ranne up and downe full of fixed and diorder, one of their chiefel Kinglish flep forts, ladouring to appeale them, with a grave admonition: White gave yee (fail he) O yee Maxicans? quier year felters, confider that things done without employation are use well guided are come to good water 1 faporely may right, confideration of the confideration o survey assessment of the property of the prope farther, but flayed to make the Obseques of their King, whereunto they immed the Lords of Tefence, and Culbuaces, reporting vnto them this foule and cruell fact, which the Tapanerans had committed, moouling them to have pittie on them, and incensing them against their enemies, concluding that their resolution was to die, opto bee revenged of so great an indignitie, intreating them not to favour lo vnjuka fact of their enemies; and that for their part, they defired not sheir aule of armes or men, but onely to be lookers on of what should passe, and that for their maintenance, they would not flop nor hinder the commerce, as the Tapanecans had done. At thereforeeches they of Tessue and Culbracan made them great shewes of good will, and that they were well fartafied, offering them their Cities, and all the Commerce they defired, that they defired, the they defired the they defined they defined the they defined the they defined the they defined they defined the they defined the they defined the they defined they defined the they defined the they defined the they defined they defined the they defined the they defined the they defined they defined the they defined the they defined the they defined they defined the they defined the they defined the they defined they water. After this, the Mexicon intreated them to flay with them, and affift at the election of their King, the which they likewife granted, to give them contentment.

Vetering many other words upon this tabletic, the which, (all them take) they derate by heart, or the exercise of their children, and after dud beach them as a Leffon to those that began to hearns the faintie.

In the meane time, the Tapanicans were refolute to deftroy the Mexicans, and to this end 20 they had made great preparations. And therefore the new King tooke counted for the proclamine of Warre, and to fight with those that had so much wronged them. But the common people, items their Aduer ferries to exceed them faire in numbers and muniforn for the warre, they came amazed to their King, prefing him not to vuldertike fo dangerous a warre, which they came amazou to their house, preming into the contracts to the process when would defrey their poors Citizand Nation: whitercupon being demanded what admice were fitted to take, they stude ashwerd that the King of Accompanies was very pittifull; that they should demand beads, and offer to force him; dawing their forth, those Marthey, and fills her faculd gove them besifes and lands among his fabjects, that by this meanes they might depend all voos one Lord. And for the obtaining hereof , they frould carrie their God in his Little for an Intercellor. The criese fish people were of their force thating fome Nobies that approximed their opinions preferring the Litter and their Opinions preferring the Litter and their Code, to performe the Voyage. As this was preparing, and curry one yielded to this treatie of peace; and

to fubject themistics to the Topicseen, a galline young man, and of good fort, first our among the people, who with a refoluce countenance spake this vinco them, What means; this O mong ene peope, who were a resource consecurity and the analysis of the people of the man was called Timeslee, Nephew to the King, he was the most valiant Captaine and greatest Counsellor that ever the Mexicans had, as you shall see hereafter. Izevals encouraged by that his Nephew had is wifely spoken; retained the people, faying they should first fuffer him torry another better meanes. Then turning towards his Nobilitie, he faid wate them, Tou are all beere

my Kinsmen, and the best of Mexico, he that birth the courage to carrie a message to the Tapanecins, in him referent. They looked one woon another; but no main stirred nor offered himselfer to the word. Then this young man Tlacaellee rifing, offered himselfe to goe, saying, that seeing hee mult die, it did import little whether it were to day or to morrow : for what reason should hee fo carefully preferte himfelfe? he was therefore readie, let him command what he pleafed. And although all held this for a rath attempt, yet the King refolued to fend him, that he might thereon waderfand the will and disportion of the Ring of Assentiales and of his people; holding it better to halten his Nephewed death, then to hazard the honour of his Common-weale. The 60 caellee being readie, tooke his way, and being come to the Guards, who had commandement to

kill any Mericans that came towards them, by cumning or otherwise : hee perswaded them to fuffer him to path to the King, who wondred to fee him, and hearing his Ambaffage, which was to demand peace of him under honest conditions, answered, that he would impart it to his subjects, willing him to returne the next day for his answere. Then Thecaellec demanded a

Ceremonies of defiance. rurned to Mexico, gluing his words to the guards to returne. And although the King of Acceptuallo defired peace, being of a milde disposition, yet his Subjects did to intensishim, as his answer was open warre. The which being heard by the Messenger, he did all his King commanded him, declaring by this ceremony, to give armes, and annointing the King with the vnction of the dead, that in his Kings behalfe he did defiehim. Hauing ended all, the King of Azeanazalco fuffering himfelfe to be anointed and crowned with Feathers, giving goodly armes in recompence to the Meffenger, wishing him not to returne by the Pallace gate, whereas meny attended to cut him in peeces, but to goe out fecretly by a little false Posterne that washpen in one of the Courts of the Pallace. This yong man did fo, and turning by fecret waies, got le pen in one of the Courts of the Painte. I ms young man unau, and utming by letter wates, or away in fafetie in fight of the Guards, and there defied them, faying, Tapanecans and Azerpuzaleans, you dae your office it, ouder fland you fload all dys, and not one Tapanecan float remains a dim. In the meane time the Guards fell youn him, where he behaved himstelfe so valiantly, that he flew fome of them : and feeing many more of them come running, he retired himfelie gallant. ly to the Citie, where he brought newes, that warre was proclaimed with the Tabarcant, and that he had defied their King. The defie being knowne to the Commons of Mexico, they came to the King, according to

their accustomed cowardise, demanding leave to depart the Citie, holding their ruine certaine.

The King did comfort and incourage them, promiting to give them libertie if they vanquished gaue to the Tae King end contrort and incourage thems, promising to gue them liberts if they vanquished Trapsecaniam their caemies, willing them not to tear. The people replied. And if who he vanapuble, what flaul of the videric their observable, while the same the value of the videric theory obtained.

Chip. 13.

Chip. 13.

The King end contrort and incourage thems, promising to gue them liberts if they vanquished, what flaul in their control their caemies, and if you are the same and because they if you hade to farfier death, east only flow in your flow and he reassigned you. It shall be a favor (19) when they if you hade to be professed on the variety of the videric to be your Transactive, to taken in you thought, to flow your ground, to carrie your arms and hargenge when you go so the warret for east, we can do not defendant after us. Their accords made between the control the control that the control the control that the c the People and the Nobilitie (which they did after fully performe, either willingly or by conftraint, as they had promised) the King named for his Captaine. Generall Tlacaeller: the whole Campe was put in order, and into fquadrons, giving the places of Captaines to the most valiant Campe was put in closer, and most changing in pastes of appraises or the most valuant of his kinsfolks and friends; then did he make them a goodly speech, whereby he did greatly incourage them, being now well prepared, clusging all men to obey the commandment of the Generall whom he had appointed; he distuided his men into two parts, commanding; the most valiant and hardie, to give the first charge with him, and that all the rest should remaine with the King Izcoals, vntill they should see the first affaile their enemies. Marching ther in order, they were discouered by them of Azcapazalco, who presently came furlously forth the Citie, carrying great riches of Gold, Silver, and Armes of great value, as those which had the Empire of all that Countrie. Izecalt gave the figuall to battaile, with a little Drumme be carred on his floulders, and prefencly they raifed a general flower, crying, Mexics, Mexics, Mexics, they charged the Toposcosus, and although they were farre more in number, yet did they defeate them, and force them to retire into their Cities, then adamosed they which smained behinde, crying Taucoslos Victorio Victorio Victorio all Iodainly entred the Cities where they he kings commands. ment) they pardoned not any man, no not old men, women, nor children, for they flew them all, and spailed the Citie being very rich. And not content herewith they followed them that fled, and were retired into the craggie rockes of the Sierres or neers Mountaines, striking and making a great flaughter of them. The Tapanerans, being retired to a Mountaine east downe their Armes, demanding their lives, and offering to ferue the Mexicans, to give them Lands and Gardens, Stone, Lime and Timber, and to hold them alwayes for their Lords. Youn this condition Tlacaelles setired his men and ceased the battaile, granting them their lives vpon the former conditions, which they did folemnely fweare. Then they returned to Azeamataleo, and fo with their rich and victorious spoiles to the Citie of Mexice. The day following the King affembled the Nobilitie and the People, to whom hee laid open the accord the Commons had go made, demanding of them, if they were content to perfift therein : the Commons made answer,

that they had promised, and they had well deferred it, and therefore they were content to

This done, Izcoals returned to Azcapuzalco (by the aduife of his Counfell) he divided all the Lands and Goods of the conquered among the conquerours, the chiefest part fell to the King, then to Tlacaelles, and after to the reft of the Nobles, as they best deserved in the Battaile. They also gave Land to some Plebeans, having behaved them selves valiantly; to others they distributed the Pillage, making small account of them as of cowards. They appointed Lands in common for the quarters of Mexico, to every one his part, for the Service and Sacrifices of their 60 Gods. This was the order which afterwards they alwayes kept, in the diufion of the Lands and spoiles of those they had vanquished and subdued. By this meanes they of Azcapuzales remained fo poore, as they had no Lands left them to labour, and (which was worfe) they tooks their King from them, and all power to choose any other then him of Mexico.

Although

ferue them perpetually. Whereupon they tooke an oath, which fince they have kept without

Dinifion of

Although the chiefe Citie of the Tapanecanes, was that of Azcapuzalco, yet had they others with their private Lords, as Tuenba and Cayoacan. These seeing thestorme passed, would Of the warre gladly that they of Azespazako had renewed the warre against the Mexicans, and seeing Mexicans had them danted, as a Nation wholly broken and defeated, they of Curoacan resolued to make against the Ciwarre by them felues; to the which they laboured to draw the other neighbour Nations, who tie of Caponan would not ftirre nor quartell with the Mexicans. In the meane time the hatred and malice in_ Chap. 14. creating, they of Curocan began to ill intreate the women that went to their Markets, mocking at them, and doing the like to the men over whom they had power: for which cause the

King of Mexico defended, that none of his should goe to Cuyoacan, and that they should receive To none of them into Mexico, the which made them of Euroacan reiolue wholly to warre : but first they would prouoke them by some shamefull scorne, which was, that having inuited them to one of their tolemne Feasts, after they had made them a goodly Banquet, and feasted them with a great daunce after their manner, they fent them for their fruite, womens apparell, forcing them to put it on, and fo to returne home like women to their Citie, reproaching them, that they were cowards and effeminate, and that they durft not take armes being fufficiently prouoked. Those of Mexico say, that for revenge they did vnto them a foule scorne, laying at the gates of their Citie of Cayoacan certaine things which smoaked, by meanes whereof many women were deliuered before their time, and many fell ficke. In the end, all came to open war, and there was a battaile fought, wherein they imploied all their forces, in the which Tlacaelice,

20 by his courage and policie in warre, obtained the victorie. For having left King Izcoalt in fight with them of Cnyoacan, he put himfelfe in ambush with some of the most valiant Souldiers, and fo turning about, charged them behinde, and forced them to retire into their Citie. But Temple, feeing their intent was to flie into a Temple which was very itrong, he with three other valiant Soul liors, pursued them eagarly, and got before them, seifing on the Temple and firing it. fo as he forced them to flie to the fields, where he made a great flaughter of the vanquished, purfaine them two leagues into the Countrie, vnto a little hill, where the vanquished casting away their weapons, and their armes a croffe, yeelded to the Mexicans, and with many teares craued pardon of their ouerweening folly, in ving them like women, offering to be their flaues: fo as in the end the Mexicanes did pardon them. Of this victory the Mexicans did carry away 30 very rich spoiles of Garments, Armes, Gold, Silver, Iewels, and rich feathers, with a great number of Captiues. In this Battaile there were three of the principals of Culbuacan that came to

aide the Mexicans, to win honour, the which were remarkeable aboue all. And fince being knowne to Tlacaellee, and having made proofe of their fidelity, he gave them Mexican deuiles. and had them alwayes by his fide, where they fought in all places very valiantly. It was apparant that the whole victory was due to the Generall, and to these three; for among so many captines taken, two third parts were wonne by these foure, which was casily knowne by a policie they vied : for taking a Captine, they prefently cut off a little of his haire, and gaue it to others, lo as it appeared that those which had their haire cut, amounted to that number, whereby they wonne great reputation and fame of valiant men. They were honoured as Con-40 querours, giving them good portions of the spoiles and Lands, as the Mexicans have alwaies vsed

to doe, which gaue occasion to those that did fight, to become famous, and to win reputation

The Nation of the Tapanecans being subdued, the Mexicans had occasion to doe the like to Of the waste the Suchimileos, who (asit hath beene faid) were the first of the feuen Caues or linages that and vide peopled this Land. The Mexicans fought nor the occasion, although they might prefume as which the Mexicans they imagined, fall into it. The Suchimileos held opinion, that the Mexicans, by reason of their victories past, should attempt to subdue them, and consulted hereon among themselues. Some

50 among them thought it good to acknowledge them for superiours, and to applaud their good fortune, but the contrary was allowed, and they went out to give them battaile : which Izcoals the King of Mexico understanding, he sent his Generall Tlacaellec against them, with his armie: the battaile was fought in the same field that divides their limits, which two Armies were equall in men and armes, but very divers in their order and manner of fighting; for that the Suchimileos charged all together on a heape confutedly, and Tlacaellee divided his men into fquadrons with a goodly order, fo as he prefently brake his enemies, forcing them to retire into their Citie, into the which they entred, following them to the Temple whither they fled, which they fired, and forcing them to flye to the Mountaines: in the end they brought them to this point, that they yeelded with their arme acroffe. The Generall Tlacaellec returning in Temple filed,

60 great triumph, the Priests went forth to receive him, with their musicke of Flutes, and giving incense. The chiefe Captaines vsed other Ceremonies and shewes of ioy, as they had beene accustomed to doe, and the King with all the troupe went to the Temple to give thankes to their

The day following, the King Izcoale went vnto the Citie of Suchimiles, causing himselfe to

1014 Tlacaellecs victory by Children. Immane cruelty in humane Sacrifices. LIB, V.

be sworne King of the Suchimiles : and for their comfort he promised to doe them good. In to. ken whereof he commanded them to make a great Cawley fretching from Mexico to Such Caultymade. miles, which is foure leagues, to the end there might be more commerce, and trafficke amount them. Which the Suchimiles performed, and in thore time the Mexican government feeded fo good vnto them, as they held themselves happy to have changed their King and Common weale. Some neighbours pricked forward by enuie, or feare, to their ruines, were not yet made

Cuitlanaca.

Childraga was a Citie within the Lake; which though the name and dwelling be changed. continueth yet. They were ectime to fwim in the Lake, and therefore they thought they might much indomage and annoy the Mexicans by water, which the King vnderstanding, he resol. 10 much maching and among the machine But Therefore it the effecting this warre, holding it dishonorable to lead an Armic against them, made offer to conquer them with the children onely: which he performed in this manner: he went vnto the Temple and drew out of the Couent fuch children as he thought fittelt for the action, from tenne to eighteene yeares of age, who knew how to guide their Boates, or Canoes, teaching them certaine policies. The Children in order they held in this warre, was, that he went to Cuitlanaca with his children, where by the Courne. his pollicie he profled the enemy in fuch fort, that he made them to flye; and as he followed them. the Lord of Cuitlanaca met him and yeekled vnto him, himfelfe, his Citic, and his peo-

Carrines fa-

ple, and by this meanes he stayed the pursuite. The children returned with much spoyle, and many Captiues for their Sacrifices, being folemnely received with a great Procession, Musicke 20 and Perfumes, and they went to worship their gods, in taking of the earth which they did eate, and drawing bloud from the forepart of their legs with the Priefts Lancets, with other fupertitions which they were accustomed to vse in the like folemnities. The children were much honored and encouraged, and the King imbraced and kiffed them, and his kinfmen and allies accompanied them. The bruite of this victory ranne throughout all the Countrie, how that Tlacsellee had fubdued the Citie of Cuitlanaca with children: the news and confideration whereof opened the eyes of those of Tescace, a chiefe and very cunning Nation for their manner of life: So as the King of Tescuce was first of opinion, that they should subject themselves to the King of Mexico, and inuite him thereunto with his Citie. Therefore by the adule of his Counfell, they fent Ambassadours good Orators with honorable presents, to offer themselves vnto 30 the Mexicans, as their Subiects, desiring peace and amity, which was graciously accepted; but by the aduise of Tlacastlee he vied a Ceremony for the effecting thereof, which was, that thole of Tescue should come forth armed against the Mexicans, where they should fight, and presently yeelde, which was an act and ceremony of warre, without any effusion of bloud on either fide. Thus the King of Mexico became foueraigne Lord of Tefeuco, but he tooke not their King from them, but made him of his Privie Counfell; fo as they have alwaies maintained themselues in this manner vntill the time of Moseçuma the second, during whose raigne the Spaniards entred. Hauing subdued the Land and Citie of Toseuco, Mexico remained Lady and Multris of all the Lands and Cities about the Lake, where it is built. Izcoalt having Results death, entoyed this prosperitie, and raigned twelue yeares, dyed, leaving the Realme which had 40 beene given him, much augmented by the valour and counfeil of his Nephew Theselee.

Of the filking For simuch as the election of the new King, belonged to four chiefe Electers, and to the of Masses, cal. King of Telestes, and the King of Telestes, by especiall priviledge: Tlacetic allembled their For a fmuch as the election of the new King, belonged to four chiefe Electors, and to the led Materiors, in perforages, as he that had the fourraigne authority, and having propounded the matter vithe fift of that to them, they made choile of Moreguma, the first of that name, Nephew to the fame Threader. same, chapage. His election was very pleasing vnto them all, by teason whereof, they made most felemme featls, and more flately then the former. Prefently after his election they conducted him to the Temple with a great traine, where before the dimne barth (as they call it) where there is continual is, they let him in his royall throane, putting vpon him his royall ornaments. Being there, the King drew bloud from his eares and legs with a Giffons talons, which was the Sacrifice where- 52

Griffons ta.

in the discill del ghted to be honoured. The Priests, Ancients, and Captaines, made their Orations, all congratuling his election. They were accustomed in their elections to make great Feaths and Dances, where they wasted many lights. In this Kings time the custome was brought Blondy and die in, that the King should goe in person to make warre in some Province, and bring Captines to ualish inflicus folemnize the feath of his Coronation, and for the folemne Sacrifices of that day. For this capit King Motecuma went into the Province of Chalco, who had declared themfelues his enemies: from whence (hauing fought valiantly) he brought a great number of Captines, whereof he did make a notable Sacrifice the day of his Coronation, although at that time he did not fubdue all the Prouince of Chales, being a verie warlike Nation. Manie came to this Coronation from diuers Prouinces, as well neere as taire off, to fee the feaff, at the which all commers were verie 50 bountifully en ertained and clad, especially the poore, to whom they gaue new garments. For this caufe they crought that day into the Cirie, the Kings tributes, with a goodly order, which confitteden Stuffes to make Garments of all fores, in Cacao, Gold, Silver, rich Feathers, great bur-

thens or Cotton, Carumbers, fundrie forts of Paires, many kindes or Sea affr, and of the fresh

CHAP.4. S. 2. Wilde fortitude: Tlascalla. Tlacaellecs great spirit. Deuils Temple, 1015

warer, great flore of Fruits, and Venison without number, not reckoning an infinite number of Prefents which other Kings and Lords fent to the new King. All this Tribute marched in order according to the Prouinces, and before them the Stewards and receivers, with divers markes and Enlignes, in very goodly order: fo as it was one of the goodlieft things of the feath, to fee the entrie of the Pribate. The King being crowned, he implosed himselfe in the conquest of many Promitees, ant For that he was both valiant and vertuous, he still increased more and niore, ving in all his affaires the counfell and industrie of his Generall Tlacaellee, whom he did alwaies lone and effeeme very much, as he had good reaton. The warre wherein he was most troubled and of greatet difficultie, was that of the Prounce of Chalco, wherein there happened great matrers, whereof one was very remarkeable; which was, that they of Chalcas, had taken a brother

10 of Motecumaes in the warres, whom they refolued to choole for their King, asking him verie curteoully, if he would accept of this charge. He answered (after much importunitie, fill perfifting therein) that of they ment planely to choose him for their King, they should plant in the Market-place, a Tree or very high stake, on the top whereof, they should make a little scaffold, and meanes to mount voto it. The Chaleas supposing it had beene some ceremonie to make himfelfe more apparant, presently effected it: then affembling all his Mexicans about the flake, he went to the top with a garland of flowers in his hand, fpeaking to his men in this manner, O valiant Mexicans, thefe men will choose me for their King, but the godi will not permit, Hottible couthat tobe a King I hould commit any treason against my Countrie, but contrarinise, I will that you rage.

learne b) me that it bebooneth v: rather, to indure death, then to aide our enemies Saying these words. he cast himselse downe, and was broken in a thousand peeces, at which spectacle, the Chalcas had fo great horror and despite, that presently they fell upon the Mexican and flew them all with their Lances, as men whom they held too proud and inexorable, faying, they had diuellish hearts. It changed the night following, they heard two Owles making a mournfull cry, which they did interpret as an unfortunate figne, and a prefage of their neere destruction, as it succeedel : for King Motegama went againft them in perfon with all his power, where he vanoutshed them, and ruined all their kingdome : and paffing beyond the Mountaine Menade; he conquered Will even vnto the North Sea. Then returning towards the South Sea, he subdired many Provinces; foras he became a mighty King: all by the helpe and counfell of Tlacaellet, who in a mainer conquered all the Mexican Nation. Fet he held an opinion (the which was confe

firmed) that it was not behoonefull to 'conquer the Prouince of Tiefcelle, that the Merikan Tiefelle 19. might have a frontier chemy, to keepe the youth of Merikan in exercise and allarme " and that Mexico, a con they might hand mambets of Captines to Sacrifice to their Idole, wherein they did wafte (as hath thage to Rome. beene (and) infinite numbers of men, which should be taken by force in the wars. The honor must beginen to Moteçuma, or to fpeak truly, to Tlacaeller his Generall, for the good order and pollicy fetled in the Realme of Mexico as also for the Colinfels and goodly enterprises, which they did execute: and likewise for the mimber of Judges and Magistrates, being as well ordered there , 'as in any Common-weale, yea, were it in the most flourishing of Emope. This King did also great ly increase the Kings house, gruing it great authoritie, and appointing many and fundry Offi-40 cers, which lerued him with great pompe and ceremony. He was no lefte remarkable touching the deution and fertifie of his Idols, increasing the mumber of his Ministers, and instituting new

ceremonies, whereunto he carried & great respect:

Hebuilt that great Temple dedicated to their god Vizziloutill, whereof is fpoken in the o- Great Temple ther Booke. He did Sacrince at the dedication of this Temple, a great number of men, taken in built. fundry victories: finally, inioying his Empire in great prosperitie, he fell ficke, and died, having Deuilish de-raigned twentie eight yeares, volike to his fuce ffor Tiessee, who did not resemble him, neither wortons. in valour, nor in good fortune.

The foure Deputies affembled in counfell, with the Lords of Tefouco and Tacuba, where Tla: How Ilecatiles The foure Deputies attempted in counteil, with the Lords of Tejouco and Tactor, where The refuted to be caelled was Prefidence in the election, where by all their voices Tlacaelled was cholen, as defer- King, and of uing this charge better then any other. Fit smilitude, that represents the personage that imports most. In recompence of his modesty, and for the Ye inect which the Mexican Electors bare him, they demanded of Tlacaellee (that feeing he would not raigne) whom hee thought most fit: Whereupon he gaue his voyce to a Sonne

60 of the deceated King, who was then very young, called Ticocic : but they replied; that his shoulders were very weake to beare to heatile a burthen. Tlacdellee answered that his was there to helpe him to beare the burelien, as he had done to the deceafed ? by meanes whereof, they tooke their resolution, and Tiesere was chosen, to whom were done all the accultomed ceremonies.

No@hrils pier-

They pierced his nofthrils, and for an ornament put an Emerald therein: and for this reason. in the Mexican Bookes, this King is noted by his nofthrils pierced. Hee differed much from his Father and Predecessor, being noted for a coward, and not valiant. He went to make warrefor his Coronation, in a Prouince that had rebelled, where hee loft more of his owne men then hee tooke captines; yet he returned faying, that he brought the number of captines required for the Kingpoyloned Sacrifice of his Coronation, and to hee was crowned with great folemnitie. But the Mexicant discontented to have a King so little disposed to warre, practifed to hasten his death by poison. For this cause he continued not about fourt yeeres in the Kingdome. But this loffe was well re-

Of the death cans. Chap.18.

razed.

parted by a Diother of the detected with a duice of Tlacaellee, wherein hee happened better to Now was Tlacaellec very old, who by reason of his age, was carried in a chaire voon mene shoulders, to affift in countell when businesse required. In the end he fell sicke, when as the King (who was not yet crowned) did visit him often, shedding many teares, seeming to loose in him his Father, and the Father of his Countrey. Tlacaellee did most affectionately recommend his children vnto him, especially the eldest, who had shewed himselfe valiant in the former warres. The King promifed to have regard vnto him, and the more to comfort the old man, in his prefence hee gaue him the charge and enfignes of Captaine Generall, with all the preheminences of his Father; wherewith the old man remained to well fatisfied, as with this content he ended

paired by a Brother of the deceased, who was also sonnerto great Motoguma, called Azaga.

The Mexicans made his Funerall as the Founder of that Empire, more sumptuous and state. 20 ly, then they had done to any of their former Kings. And presently after Axayaca (to appeale the forrow which all the people of Mexico flewed for the death of their Captaine) refolued to make the voyage necessary for his Coronation. He therefore led his Armie with great expedition into the Province of Tequantepec, two hundred leagues from Mexico, where he gaue battell to a mighty Army, and an infinite number of men affembled together, as well out of that Prouince, as from their Neighbours, to oppose themselues against the Mexicane. The first of his Campe that advanced himselfe, to the combate was the King himselfe, defying his enemies, Campe fract assumes numeric, so me compare was use any numeric, so ying use common from whom he made fiew to five when they charged him, writtl hee had drawne them into an Ambufcadoe, where many Souldiers lay hidden under firaw, who findering since forth and they 30 which fied, turned head : fo as they of Tignantepee remayned in the midft of them, whom they charged furiously, making a great slaughter of them : and following their victorie, they razed their Citie and Temple, punishing all their Neighbours rigorously. Then went they on farther, and without any flay, conquered to Guarales, the which is a Port at this day well knowns in the South Sea. Axagaca returned to Mexico with great and rich spoiles, where he was honourably crowned, with fumptuous and stately preparation of Sacrifices, Tributes, and other things, whither many came to see his Coronation. The Kings of Mexico received the Crowne from the hands of the King of Tesence, who had the preleminence. Hee made many other Enterprises, where he obtained great victories, being alwayes the first to leade the Armie, and to charge the enemie; by the which he purchased the name of a most valuar Captaine; and not content to 40 fubdue strangers, he also supported his Subjects which had rebelled, which neuer any of his Pre-

which they called Tlatelules, whereas now Saint lagues is.

These being revolted, held a faction apart, and encreased and multiplyed much, refusing to acknowledge the Kings of Mexico, nor to yeeld them obedience. The King Axayaca fent to aduise them, not to liue divided, but being of one bloud, and one people, to joyne together, and acknowledge the King of Mexico: wherupon the Lord of Tlatelulco made an answer ful of pride and diffaine, defying the King of Mexico, to fingle combate with himfelfe : and prefently muftred his men, commanding some of them to hide themselves in the weeds of the Lake; and the better to deceive the Mexicans, he commanded them to take the shapes of Rauens, Geele, and other Beafts, as Frogges, and fuch like, supposing by this meanes to surprize the Mexicans as they should passe by the wayes and cawfies of the Lake. Having knowledge of this defie, and of his Aduerfaries policie, he divided his Armie, giving a part to his Generall, the fonnne of Thecaellee, commanding him to charge this Ambuscadoe, in the Lake; and hee with the rest of his people, by an unfrequented way, went and incamped before Tlaselules. Presently he called him who had defied him, to performe his promife, and as the two Lords of Mexico, and Tlatelulco advanced, they commanded their Subjects not to mooue, untill they had feene who should bee Conquerour, which was done, and prefently the two Lords encountred valuantly, where having fought long, in the end the Lord of Tlatelulco was forced to turne his backe, being wnable to indure the furious charge of the King of Mexico. Those of Tlatelulco feeing their Captaine flye, fainted, and fled likewise, but the Mexicans following them at the heeles, charged them furiously; yet the Lord of Tlatelules elcaped not the hands of Axayaca; for thinking to faue himselfe, hee

fied to the top of the Temple, but Areyaca followed him fo neere, as hee leized on him with

deceffors euer could doe, or durst attempt. Wee haue alreadie shewed how some seditions of

Mexico had divided themselnes from that Common-weale, and built a Citie neere vnto them,

CHAP.4.S.2. Tlatelulco Frogs. Autzols conquests. Cuyoacon cunning Sorcerer. 1017

great force, and threw him from the top to the bottome, and after fet fire on the Temple, and

Whileft this paffed at Testelules, the Mexican Generall was very hote in the revence of those Thullis that pretended to dereat him by policie, and after hee had forced them to yeeld, and to cry for fired. mercy, the Generall faid he would not pardon them, vntill they had first performed the Offices of those figures they represented, and therefore hee would have them cry like Frogges and Ranens, every one according to the figure which he had undertaken, elfe they had no compolition : which thing he did to mocke them with their owne policie. Feare and Necessitie bee perfect Teachers, fo as they did fing and cry with all the differences of voices that were commanded 10 them, to faue their lives, although they were much grieved at the sport their enemies made at them. They fay that voto this day, the Mexidans vie to jeaft at the Tlatelulcans, which they beare impatiently, when they put them in minde of this finging and crying of bealts. King Acarece tooke pleasurest this toone and difference, and presently after they returned to Mexico with great jay. This King was effectived for one of the best that had commanded in Mexico. Hee

Among the foure Electors that had power suchoofe whom they pleafed to be King, there was Of the deeds one endured with many periections, named Anted. This man was chosen by the reft, and this of Autod the one enducd with many perfections, names exames. I nis man was enoten by the rer, and unselection was very pleasing to all the people of for bodies that he was valiant, all held him courselections and affable to cutry man, which is one of the chiefe qualities required in them that com-20 mand to purchase loue and respect. To celebrate the Featt of his Coronation , hee refolied to flory cale him

make a Voyage, and so punth the pride of those of Quaralation, a very rich and plentifull Pro-Tipetiantinince; and at this day the chiefe of New Spame. They had robbed his Officers and Stewards, that Quaralellane carried the Trib site to Mexico, and therewith all were rebelled. There was great difficultie to reduce this Nation to obedience, lying in fuch fort, as an arms of the Sea Rope the Mexicans palfape: conside the which a fuzel (with a ftrange deuice and industry) caused an Ilani to be made in the water, of faggots, earth, and other matter; by meanes whereof, both hee and his men might paffe to the enemie; where guing them battell, he conquered them, and pumified them at his pleature. Then returned he vnto Mexico in triumph, and with great riches, to bee crowned King , according to their custome . Autzel extended the limits of his Kingdome farre, by many 30 Conque Rs, euror ato Guatimatas, which is three hundred leagues from Mexico. He was no left plortill their salisant from when as the Tributes as the which (as I have faid) came in great

abundance, heaweneforth of his Palace, gathering together all the people into one place, then commanded he cobing all the Tributes, which he dissidil methods that had need. To the poore he gaue Stuffestomake chem apparell, and meate, and what bear they had need of in great ahundance, and shirtes of value, as Gold, Silver, lewels, and Reathers, were divided amone of the the Captaines, Souldiers, and Servants of his House according to every mans meric. This Astzel was likewife a great Politician, hee pulled downe the houser ill buffe, and built others very

It feemed wnto him that the Citie of Mexico had too little water, and that the Lake was 40 very muddie, and therefore heerefolued to let in a great course of water, which they of Capeacas vied. For this cause hee called the chiefe man of the Citie vinto him, beeing a famous Sorcerer, having propounded his meaning vnto him: the Sorcerer willted him to bee well admited what he did, being a matter of great difficultie, and that he understood, if hee drew the River out of her ordinary courte, making it paffe to Mexico, hee would drowne the Citie. The King supposed these excuses were but to frustrate the effect of his Designe, being therefore in choler, he difmiffed him home, and a few dayes after he fent a Prouoft to Cayoadon, to take this Sorcerers who having understanding for what intent the Kings Officers came, he caused them to enter his house, and then he presented himselfe vnto them in the forme of a terrible Eagle, wherewith Famous Sor the Propost and his companions being terrified, they returned without taking him. Auzal in- cres, or Indian cenfed herewith fent others, to whom he presented himselfe in forme of a furious Tigre, so as

they durft not touch him. The third came, and they found him in the forme of a horrible Sergent, whereat they were much afraid. The King mooued the more with these doings, fent to tell them of Caroacan, that if they brought not the Sorcerer bound vnto him , hee would raze their Citie, For feare whereof, or whether it were of his owne free will, or being forced by the peo-ple, he fuffered himselfe to be led to the King, who presently cansed him to bee strangled, and then then did he put his resolution in practice, forcing a channell whereby the water might paffe to Mexico, whereby he brought a great current of water into the Lake, which they brought with great Ceremonies and Superfittions, having Priefts casting Incense along the bankes, o-

thers facrificed Quiles, and with the bloud of them sprinkled the channell bankes, others soun-60 ding of Cornets, accompanied the water with their Muficke. One of the chiefe went attired in a habit like to their Goddeffe of the water, and all faluted her, faying, that the was welcome. All which things are painted in the Annalls of Moxico: which Booke is now at Rome Mexican Ane in the holy Library, or Vatican, where a Father of our Company, that was come from Mexico, nalls in the did feeit, and other Histories, the which he did expound to the Kreper of his Holineffe Library, Varican,

taking great delight to understand this Booke, which before hee could never comprehend Finally, the water was brought to Mexico, but it came in such abundance, that it had welneete drowned the Citie, as was foretold : and in effect it did ruine a great part thereof, but it was presently presented by the industry of admirel, who caused an illus to bee made to draw forth the water : by meanes whereof hee repayred the buildings that were fallen , with an exquifite worke, being before but poore Cottages. Thus he lefe the Citie invironed with water. like another Conice, and very well built : he reigned elegen yeeres, and ended with the last and greatest Successor of all the Mexicans.

dif guieummere, our way guitant patient of the death, without remiffique or refrect, were they Noblemen, or his Kinforen; yea, his owne Brethren. Hee was little connerfame with his people, and feldome feene, retyring himfelfe most commonly to care for the government of his Realme. Bendes that, he was a great lufticier and very Noble; he wasvery valiant and happy, by meanes whereof her obrayined great victories, and came to this greatedle, as in written in the Common Little or after to write what the Books and Hiftories of the Indies make mention of the which the Spewill Writers baue not oblighed, having not fufficiently understood the secrets of this Countries.

the which are things very worthy to be knowne, as we shall see hereafter. the which are things very worthy, to occanowing as we man reconstruct.

It chanded the distrement butting regimed in any versit in great profiperitie, and do put wp in his conceit, such exactly thinkelf to be ferred and feared, year to be worthipped as a God, that he was the confirming of the confir Almighty Lord began to chaftice him, and also to admonth him, suffering even the very Devils whom hetworkspeed, to tell him thefe heavy tydings of the ruine of his Kingdome, and to tor-ment him by Viñons, which had neuer beene feene; wherewith hee remayned to melancholy

and troubled as he was void of judgement.

Querrassall; " The Idolkof those of Chelala, which they called Querzacealt, declared, that a ftrange people came to possesse his Kingdomes. The King of Telente (who was a great Magitian, and had conference with the Denill) came one day at an extraordinary houre to vifit Mosecume, affusing him that his Gods bad toldbim, shabshere were great loffes preparing for him, and for his whole Resime: many Witches and Sorgerers went and declared as much, amongst which there was one, did very particulary forced them what should happen and as hee was with him her told him, that the pulse of his facts eath liked failed him the trouble with their so newes, commanded all thoir Sourcerrane be apprehended; but they wantled prefently in the Prion, wherewith he graw into these args, teacher makes and chalden as defently in the Prion, wherewith he graw into these args, teacher makes not chall them; as he put their wites and chalden to death, defroying hear Hopfen and Tamber. Seeing limited importuned and troubled with these advertisements, hee sought to appeale the anger of his Gods : and for that taufe bee laboured to bring a huge stone, thereon to make great Sactifien: For the effecting whereof hee sent a great number of people with Engine and Instruments to bring it : which they could by no meanes moone, although (being obtlinate) they had broken many Instruments. men to bring them to repen- But as they fix oue fill to raise it, they heard a voyce joyning to the flone, which faid they laboutance: the De ted in vaine, and that they should not raise it, for that the Lord of things created would no more uillo fillthem infer thologhings to be dope there. Morecume understanding this; commanded the Sacrifice withfeates, perfidious and tobe performed in that place, and they say the voyce spake againe; Hame I not told yet, that it is cruell realou. not the pleasure of the Lord of things created, that it should bee done? did but you may well know fies, fiprificous ibas is us fo, 1 will suffer my felfs to becreams ported a lutter; then after yes shall not motion met.

thirty, and to Which happened to indeed, for presently they carried it a small distance with great facilitie,

minimals his. then afterwards they could not moone it, till that after many Prayers, it suffered it felfe to bee credit, by his dining, fee. transported to the entry of the Citie of Mexico, where fuddenly it fell into the Lake, where king to proone feeking for it, they could not find it, but it was afterwards found in the same place from whence

which is beere in enident) in of a Pyramide, which begame to appeared in the Element a great flame of fire, very bright, in the forme to this which begame to appeare at midnight, and went fill mounting until the Sonne Gods inflice rifing in the morning, where it flayed at the South, and then vanished away. It shewed it lets him know felfe in this fort the space of a whole yeers, and euer as it appeared the people cast forth great he will do to cryes as they were accustomed, beleeuing it was a presage of great misfortune. It happened also that fire tooke the Temple, when as no body was within it, nor necre vinto it, neyther did there fall any lightning or thunder; whereupon the Guards erying out, a number of people ranne Prodgie of any lightning occummers was appearant was all confirmed; and they fay the fire feemed Drallin Ms. with water, but nothing could helpe, to a it was all confirmed; and they fay the fire feemed brailin Ms. to come forth of pieces of timber, which kindled more by the water that was caff upon it, There was a Comet seene in the day time, running from the West to the East, casting an infinite number of sparkles, and they say the forme was like to a long tayle, having 60

his dininity(al they had removed it, wherewith they remayned amazed and confounded.

The great Lake betwirt Mazios and Tefenco, without any minde, earthquake, or any other apparant figne, began fudainly to fwell, and the waues green in fuch fore; as all the buildings CHAP.4.S. 2. Prodigious Foule Laborers Difton Spaniards arrival certified by picture 1021

woman in paine, which faid fometimes, Omy children, the time of your destruction is come: and other whiles it laid, O my chicaren, whither feall I carry you that you perift mot strarty? There appeared likewife many Monflers with two heads, which being carried before the King, fudainly Monflers, anished. There were two that exceeded all other Monters, being very frange; the one was, the Fithers of the Lake tooke a Bird as bigge as a Crane; and of the same colour, but of a Prodigious thrange and unfeene forme. They carried it to Morecania, who at that time was in the pallace of teares and mourning, which was all hanged with blacke; for as he had many Pallaces for his recreation, to had he also others for times of affiction, wherewith he was then heavily charged and cornered, by reafon of the threatnings his gods had guiten him by these forrowfull adjust-

tifements. The Filhers came about noond tetting this Bird before him, which had on the top of his head a thing bright and transparent, in forme of a Looking-glaffe, wherein he did behold a warlike Nation comming from the East, armed, figheing, and killing. He called his Diimes and Aftronomers (whereof there was a great number) who having feene thefe things and not able to yeelde any reason of what was demanded of them, the Bird wanished aways, to as it was never more seene : whereupon Motopusas remained very heavy and forrowfull. The other which happened, was a Laborer, who had the report of a very honeft man; he came wnto him? telling him, that being the day before at his works, a great Engloslew towards him ; and tooks him y in his talents, without horting him; carrying him acts acrained case, where it lefe him; The Eagle pronouncing these words, adeas maybritand; I have brought him when their to have commanded me: This Indian Laborer looked above on every side, to whom he spike, but he

faw no man. Then he heard a voyer which faid ware him . Dooft thou not know this man, whom thou feelt lying your the ground hand looking themon, he perceined a mail to lye very heavy afleepe, with royall enfignes, flowers in his hand, and a flaffe of perfumes burning . as they are accustomed to vie in that Country : whom the Labourer behalding, knew it: was the great King Motecoma, and answered presently: Great Land, this resombles our King Motezuma. The voice said againe, Thou fayest true, behold when he wi und how hee sint assesse, carelesse of the oreat unferies and afflictions prepared for him. It is now time that he pay the great number of offences great majertes to God, and hot at he receives the painfilment of five stay manner, and great great, and the first bless consulfile to less him done to God, and hot at he receives the painfilment of five stayment, and great prime field how corrulfile to less him hot how more mijers, and takem may feeling. But to the such thou most how more filed to the best for the fifte of perfuence hot hold however, their heads, and you it to their face; the holds the most head had not been to the face; the holds the holds and may be to the face of the holds the holds and may be to the face of the holds the holds and may be to the face of the holds the holds and may be to the face of the holds the holds and may be to the face of the holds the holds and the holds are holds and the holds are holds and the holds and the holds and the holds and the holds are holds and the holds and the holds and the holds are holds and the holds are holds and the holds and the

post temp past em when perme and power among user they approach terre rum, and does a he was commanded, for the great feare they all had of tileveling. But the work rid, 'Have no feare, for law without companion greater than the Kregistons driven him, and defined him, due there-fore what I command thee. Whereupon the Laboret rooks the filler of performer out of the Kings hand, and put it burning to his nofe, but he moved vior, abolisowerkany feeling. This done; the voice faid voto him, that feeing he had found the King to Steepierthe thousage awate him, and tell him what he had feene. Then the Eagle by the fame commandement, tooke the man in his talents, and fet him in the same place where he found him; and for accomplishment of that which he had spoken, he came to aduertise him. They say, that Motegame looking on his face. 40 found that he was burnt, the which he had not felt till then, wherewith he continued excee-

ding heavie and troubled.

In the foureteenth years of the raigne of Moteguma, which was in the years of our Lord Ofthe news 1517. there appeared in the North Seas, Shippes, and men landing, whereat the Subjects of Metegumare-1517. there appeared in the North Seas, Shipper, and mentalining, whereat the Subjects of Chief Of the Motegama wondred much, and defirous to learne, and to be better fatisfied what they were, Spaniards artithey went abourd in their Canoes, carrying many refreshings of meases and stuffes to make ualinhis Coun apparrell, youn colour to fell them. The Spaniards received them into their Shippes, and in ex- try, and of the change of their victuals and stuffes, which were acceptable vnto them , they gave them chaines Ambassage he of falle Stones, red, blew, greene, and yellow, which the Indians imagined to be precious stones. fine thim, The Spaniards informing themselves, who was their King, and of his great power, dismissed them, willing them to carry those Stones wato their Lord, Gaying, that for that time they could not soe to him, but they would prefently returne and wifite him. Those of the coaft went prefently to Mexico with this meffage, carrying the representation of what they had seene, pain- Relation of ted on a cloath, both of the Shippes, Men, and Stones which they had given them, King Moto- writingby Pie cuma remained very penfine with this medage, commanding them not to reveale it to any one. cures, The day following, he affembled his Counfell, and having thewed them the painted cloathes and the Chaines, he confulted what was to be done; where it was resolved to let good watches

at Sea, in the which was the Marquife of Valle Don Fernande Cortes, with his companions, newes which much troubled Moreguma, and conferring with his Counsell, they all faid; that without doubt, their great and auncient Lord Queztzaleoult was come, who had faid, that he Effects of full would returne from the East, whither he was gone. The Indians held opinion, that a great perfluiousle-Prince had in times past left them, and promised to returne. Of the beginning and ground of gends. which opinion shall be spoken in another place. They therefore sent fine principall Amhaffadors

voonall the Sea coafts, to give prefent addertifement to the King of what they should discover, The yeare following, which was in the beginning of the yeare 1918, they discovered a Flecte

neere vato it fell downe to the ground. They fay at that sime they heard many voices, as of a

shen Christian

exceedingly vexed herewith : some of the people and other Negromanciers adulted him to hide himselfe, offering to place him whereas no creature should ever finde him. This feemed base vnto him, and therefore he resolved to attend them, although it were dying. In the end he left his Houses and royall Prilaces to lodge in others, leaving them for these gods

with rich presents, to congratulate his comming, saying, they knew well that their great Lord Queetraskeast was come, and that his servant Mosecumes sent to visite him for so he accounted himfelfe. The Spaniards understood this meslage by the meanes of Marina, an Indian woman whom they brought with them which understood the Mexican tongue. Fernande de Cartes findivine worthing ding this a good occasion for his entry, commanded to decke his Chamber richly, and being fee. agreeing more in great state and pompe, he caused the Ambassadors to enter, who omitted no shewes of hamilia tie but to worthip him as their god. They delivered their charge, faying, that his fernant Motecume fent to wifit him and that he then Christian religion, which held the Country in his name as his Lieutenant, that he knew well it was the Topicin which had beene promifed them many yeares fince, who should return againe voto them. And therefore they brought him such Garments as he was wont to weare, when he did converte among fi them, befeeching him to accept willingly of them, offering him many prefents of great value.

Corres receiving the presents, answered, that he was the same they spake of, wherewith they

were greatly farisfied, freing themselves to be curteously received and intreated by him. To conclude, the day after this Ambaffage, all the Captaines and Commanders of the Fleete, came vnto the Admirall, where understanding the matter, and that this Realme of Motegama was mighty. and rich in it feemed fit to gaine the reputation of brave and valiant men among this people, and and rich; it termed nevo game the representation and a state of the state of this meanes (although they were few) they should be feared and received into Mexica.

To this each they discharged all their Artillery from their Shippes, which being a thing the Indicate had neutr heard, they were amazed, as if heaven had fallen upon them. Then the Span 19. mards beganne to defiethem to fight with them : but the Indians not daring to hazard themfelues, they did beate them and intreate them ill, shewing their Swords, Lances Pertuifans, and other armes, wherewith they did terrifie them much. The poore Indians were by reason hereof fo fearefull and amazed, as they changed their opinion, faying, that their Lord Topilein came: not in this troupe, but they were fome gods (their enemies) came to destroy them. When as the Ambaffadors returned to Mexico, Moteçuma was in the house of audience; but before he would hear them, this mileable mancommanded a great number of men to be facificed in his prefence, and with their bloud to tprinkle the Ambaffadors (fuppoing by this ceremony) which they were accustomed to do not in folemose Ambaffages) to receive a good andwer. Buswinderstanding the continued to the continued ding the report and information of the manner of their Ships, Men, and Armes, he flood per- 20 plexed and confounded : then taking counfell thereon, he found no better meanes, then to labor to ftop the entry of these strangers, by Consurations and Magicke Arts. They had accustomed often to vie this meanes, having great-sonferente with the Deuill, by whose helpe they sometimes obtained strange effects. They therefore assembled together all the Sorcerers, Magitians, and Inchanters, who being perswested by Morgana, they tooke it in charge to force this peo-Protean faifts, ple to returne vnto their Country, For this confideration, they went to a certaine place which they thought fit for the inuocation of their Douils, and practifing their Arts (a thing worthy of confideration) They wrought all they could; but feeing nothing could prevaile against the Chri-Stians, they went to the King, telling him that they were more then men, for that nothing might hurt them, notwithstanding, all their Conjurations and Inchantments. Then Motecu- AO me aduited him of another policie, that faining to be very well contented with their comming, he commanded all his Countries to serue these celestiall gods that were come into his Land. The whole people was in great heatineffe and amazement, and often newes came that the Spaniards inquired for the King, of his manner of life, of his house and meanes. He was

> I pretend not to intrease of the acts and deedes of the Spaniards, who conquered New Spaine, 50 nor the strange adventures which happened vnto them, nor of the courage and invincible valour of their Captaine Don Fernando Cortes : for that there are many Histories and Relations thereof, as those which Fernande Cortes himselfe did write to the Emperour Charles the fift, although they be in a plaine stile, and farre from arrogancy, the which doe give a sufficient testimony of what did passe, wherein he was worthy of eternall memory, but onely to accomplish my intention : I am to relate what the Indians report of this action, the which hath not to this day beene written in our vulgar tongue. Motecuma therefore, having notice of this Captains victories, that he advanced for his conquest, that he was confederate and joyned with them of Tlafcalle, his capitall enemies, and that he had severely punished them of Cholola his friends, he studie ed how to deceive him, or elfe to try him in fending a principall man vnto him, attyred with the lake ornaments and royall enfignes, the which should take vpon him to be Motecuma, which fiction being discourred to the Marquise by them of Tlascalla (who did accompany him) he tent him backe, after a milde and gentle reprehention, in feeking to deceive him: whereupon Moregame was to confounded, that for the feare thereof he returned to his first imaginations

CHAP.4. \$.2. Cortes entertained at Mexico. Spaniards perfidieufly cruell. 1623

and practiles, to force the Christians to retire, by the inuocation of Conjurers and Witches. And therfore he affembled a greater number then before threatning them, that if they returned without effecting what he had given them in charge, notany one should efcape, whereauto they all promised to obey. And for this cause, all the Deuils officers went to the way of Charles, by the Tecculous a which the Spaniards should passe, when mounting to the top of a hill, Tezcalipnea, one of their Denill god. principall gods, appeared vnto them, as comming from the Spaniards campe, in the liabit of [balest, who had his paps bound about eight fold with a cord of reedes, he came like a man befide himfelfe, out of his wits, and drunke with rage and furie. Being come to this troupe of Witches and Conjurers, he stayed, and spake to them in great choller, Why come you bither? what dorb No

and connectes, he tray to any space to them in great enough, we given you conter most arts No.

10 tectume we tend to due by your meaner? He bad abussed himselfs too late for it is now determined, that his Kingdoma and homore shall be taken from him, with all that he possifies, for pumponent of the great syramuse he hash committed against his Subjects, having generated not like a Lord, but this, a trustoir and tyrant. The Inchanters and Conjurers hearing there words, knew it was their idoll, and humbling themselues before him, they presently built him an Altar of Stone in the same place, consring it with flowers which they gathered thereabouts, but he contrariwife, making no account of these things, began againe to chide them, saying ! What come jou bither to due, O je traitouri ! Resurve presently and behold Mexico, that you may orderstand what shall become thereof. And they fay, that returning towards Mexico to behold it, they did fee it flaming on fire. Then the Des uill vanished away, and they not daring to passe any farther, gave notice thereof to Moteran

20 m4, whereat he remained long without speaking, looking heavily on the ground; then he faid, What hall we doe if ead and our friends tease vs., and contravile, took teles and faiture are comited.

I am now refolute, and we ought all to refolue in this point, that happen what may, wee must not five nor bide our feluer, or foew any figne of cowardife. I onely putie the aged and infants, who bane netther feete nor bands to defend themfelnet . Hauing fpoken this, he held his peace, being transported into an extraine. In the and, the Marquelle approaching to Maxies, Motrasma refolued to make of necessity a vertue, going three or four leagues out of the Cuie to receive him with a great maiefly, catried upon the shoulders of four Noblemen, under a rich Canapy of Gold and Feathers. When they met, Motezams descended, and they fainted one another very curteously. Don Fernando Cortes faid vinco him, that he should not care for any thing, and that he came not 30 to take away his Realme, nor to diminish his authority. Motezama lodged Corter, and his com-

panions in his royall Pallace, the which was very flately, and he himselfe lodged in other priwate houses. This night the Souldiers for ioy discharged their Artillery, wherewith the Indians were much troubled, being vnaccustomed to heare fuch Musicke. The day following, Corres caused Motezame and all the Nobles of his Court to affemble in a great Hall, where being set in a high Chaire, he faid vnto them, that he was seruant to a great Prince, who had fent them into these Countries to doe good workes, and that having found them of Tlascalle to be his friends (who complained of wrongs and greenances done wrote them daily by them of Mexico) he would Good filing vnderstand which of them was in the blame, and reconcile them, that hereafter they might no in troubled more afflict and warre one against another; and in the meane time, he and his brethren (which 40 were the Spaniards) would remaine still there without hurting them : bur contrariwise, they

would helpe them all they could. He laboured to make them all understand this discourse, wing his Interpreters and truchmen. The which being understood by the King and the other Mexican Lords, they were wonderfully well fatisfied, and shewed great signes of lone to Cortes and his company, So it is, that by some occasions, many complaints, griefes, and iealousies grew on ei-ther si le. The which Corses finding, & that the Indians mindes began to be distracted from them, he thought it necessary to assure himselfe, in laying hand vpon King Moteçuma, who was seized on, and his legges fettered. Truely this act was firinge vinto all men, and like vinto that other corte his two of his, to have burnt his Shippes, and thut himfelfe in the midft of his enemies, there to vanquish france ator to dye. The mischiefe was, that by reason of the vnexpected arrivall of Pamphilo Naruaes tempts. at the true croffe, drawing the Country into mutiny, Corter was forced to ablent himfelie from

Mexico, and to leave poore Mateguma in the hands of his companions, who wanted discretion nor had not moderation like vnto him: fo as they grew to that diffention, as there was no meanes to pacific it.

When as Cortes was absent from Mexico, he that remayned his Lieutenant, resolued to pu- Of the death nish the Mexicans severely, causing a great number of the Nobilitie to be staine at a maske, which of Mose una they made in the Palace, the which did fo farre exceed, as all the people mutined , and in a fuz and the Spanithey made in the Palace, the which did to farre exceed, as all the people mutilied, and in a rus departure rious rage, tooke Armes to be reuenged and to kill the Spaniards. They therefore befieged them out of Mexica. in the Palace, preiling them fo neere, that all the burt the Spaniards could doe them with their chapas. Artillerie and Crosse-bowes, might not terrise them, not force them to retyre from their enter-

60 prife, where they continued many dayes, stopping their victuals, not suffering any one to enter or issue forth. They did fight with stones, and cast Darts after their manner, with a kind of Lances like voto Arrowes, in the which there are foure or fixe very sharpe Rasors, the which are fuch (as the Histories report) that in these warres, an Indian with one blow of these Ralors, almost cut off the necke of a Horse, and as they did one day fight with this resolution and suries

Indian armics

the Spaniards to make them ceafe, shewed forth Moregama, with an other of the chiefe Lords of Mexico, vpon the top of a plat-torme of the houle, coursed with the Targets of two Sculdiers that were with them. The Mexicans feeing their Lord Motecuma, flayed with great filence. Then Metergens cauled the Lord to adulte them to pacific themfelues, and not to warre against the Spaniards, feeing that (the being a prifoner) it could little profit him. The which being you deritood by a wong man, called Quienviennee, whom they now refolued to make their King, here foake with a loud vovce to Morecuma, willing him to retyre like a Villaine, that feeing he had beene fuch a Coward, as to futler lumfelfe to bee taken, they were no more bound to obey him. but rather fhould punish him as he descrued, calling him Woman for the more reproach, and then he began to draw his Bowe and to thoot at him, and the people began to cast stones at him, and 10 to continue their combate. Many fay that Motecume was then burt with a flone, whereof hee dved. The Indians of Mexico affirms the contrarie, and that hee dyed as I will flew hereafter. Allnaro, and the reft of the Spaniards feeing themselves thus pressed, game intelligence to Captaine Cortes, of the great danger they were in : who having with an admirable dexteritie and valour, ginen order to Narmaer affaires, and affembled the greatest part of his men, heercurned with all speed to succour them of Mexico, where observing the time the Indians reft (for it was their custome in warre, to rest every fourth day) Hee one day advanced with great policy and courage, fo as both he and his mon entred the Palace, where as the Spaniar de had fortified them. felues: they then shewed great fignes of loy, in discharging their Artillerie. But as the Mexicans fury increased (being out of hope to defend themselves) Cortes refolued to passe away se- 20 cretly in the night without bruit. Haung therefore made Bridges to paffe two great and dange. rous passages, about mid night they issued forth as secretly as they could, the greatest part of his people having passed the first bridge, they were discovered by an Indian woman before they

could passe the second, who cryed out their enemies fled, at the which voyce all the people range together with a horrible furie : fo as in paffing the fecond bridge, they were fo charged and purfiled, as there remayned about three hundred men flaine and hurt in one place; where at this day

there is a small Hermitage, which they unproperly call of Martyrs. Many Spaniards (to pre-

ferue the gold and jewels which they had gotten) perished, and others flaving to carry it away.

were taken by the Mexicans, and cruelly facrificed to their Idols. The Mexicans found King

Emperor, writes the contrary, and that the Mexicans killed him that night with a fonne of Meregeme, which led with him among it other Noblemen, faying, that all the trealizer of gold, ifones, and filnes, fell into the Lake and was never more feene. But how focuer, Metremand yed

miserably, and payed his deserts to the inst judgement of our Lord of Heaven for his pride and

Motecoma dead, and wounded as they fay with Poniards, and they hold opinion that that 20 night the Spiniards flue him with other Noblemen. The Marquesse in his Relation fent to the

whom the Charleians have geterined in those parts incomparable fauours and benefits, &t. And therefore we neight not to condemne all these things of the first Conquerors of the incomparable is the condemne all these things of the first Conquerors of the incomparable is the condemne and these things of the incomparable is the conquerors of the incomparable is the condemne all these things of the first Conquerors of the incomparable is the condemne and the condem religious and seamed men have done, doubt leffe with a good zeale, but too much affected . For although for the most part they were controus men, cruell; and very legional in the course that was robe ublevised with the Infidel, who had never offended the Christian, yet can we not des siege (might nie, but on their part there was much malite against God and our Men, Which forced their to vie America (a) moour and chaftilement.

Euery one may vederstand by the Relation and Discourse I have written in these Bookey at continuelld well at Perm as in New Spanne, when as the Christians first fet footing, that these Kingdomes (Hispane) in-10 and Monarchies were come to the height and period of their power. The lagues of Pera, possel- digres on facefine from the Resime of Chile beyond Queto, which are a thouland leagues, being mot abin restance. dant in gold, filuer, fumptuous feruices, and other things : as alfo in Mexico , Marenand commanded from the North Ocean Sea, vinto the South , being feared and worfhipped not as a man. manage from the forth Ocean See, who the booth high Lord had determined that this fifther of Daniel, which disclosed the Realmest and Knigdomes of the World , should also disclose 'fisher' when this new World. And as the Law of Christ Carm' which is the Robert Monachie with it for example.

this new World. And as the Law of Chrift came when as the Ronky Monarchie was at her reflecting regentifie; by did it happen at the Welf Marky, wherein yet lee the information color of the Welf World and For being then in the World, I mean in Ewise, here one head and teniple all Lod; 24 fit field; Sworks, with Doctors doe notes, whereby the Goffell might more talkly bee impaired to forming Prediction greede soul. 20 Nations: Euen fo hath it happened at the Andre, where having given the knowledge of Chrift den 17 he to the Monarchs of for many Kingdomes, it was a meaning that attenuards the knowledge of Chrift den 17 he to the Monarchs of for many Kingdomes, it was a meaning that attenuards the knowledge of their composed Goffell was impacted to all the people; yea, there is herein a focial their probe of beingal? I had feet me mon as the Lords of Cafes and Universe conquered new Lurds; for they breight in their twice ham collished, it can be able to the condition of the conditi guage: for although there were (as at this day) great diverfitie of tongues, yet the Courtly freech to bee a flaine of Cufco , did and doth at this day runne about a thousand leagues , and that of Mexico day not Lamb, thethe of Cufee, did and doth at this day runne about a thousand leagues, and they of cure and the world might extend farre leffe, which hath not beene of finall importance, but hath much profited in making. World might be fared mottes the preaching case, at such a time, when as the Preachers had not the gift of many tongues, as in slay a world old times. He that would know what a helpe it hath beene for the competion of this people in that himselfe these two great Empires, and the great difficultie they have found to reduce those Indians to mich be a co-30 Chris which acknowledge no Souraigne Lord, lething or offends, Jord, the Addit; and teconomically many other places, where they have not presulted for much by their pretching in fifth years, query, hard as they have done in Para and in two Sparre in lifet; their files. If they will fingure thickedic for the or descated

riches of the Country : I will not alcogether denie it. Yet were it impossible to have lo great had been fitter wealth, and to be able to preferue it, if there had not beene a Monarchie. This is also a worke of Preachers in God in this age, when as the Preachers of the Gospell are to cold and without zeale, and Mer- this kinde then tool in this ge, when is not reversalise or the Conjecture to consider whether the the test of conference or the Conjecture to command, fracth sight discours may be conjectured to the conjecture to the conjectu left : which is (as hee declareth) by hum me and earthly meanes, which they feeke more com" Pizerro follows to monly then Islus Christ. It was also a great proudence of our Lord, that when as the first sign and the Christian flammic of minds arrived there, they found aide from the Indians themselves, by reason of their partiastics those parts and great divisions.

This is well knowne in Perathat the division between the two prothers Mahadas and Guel, the Sword ben ca, the great King Guanacapa their father being newly dead, game entrie to the Marquelle Don the Word, as es, the great King Guanacapa their father being newly dead, gaue entrie to the Marquene Lon Francis Pixarre, and to the Spaniards, for that either of them defited his alliance being builted in bookes de 110. warre one against the other. The like experience hath beene in new Spaine, that the aide of those cwande Ind. of the Prounce of Tlafcalla, by reason of their continual hatred against the Mexicans, gave the fall hath shewvictorie and fiegniorie of Mexico, to the M rquelle Fernando Cortes and his men, and without ed, as is thewthem it had beene impossible to have wonne it, yea, to have maintayned themselves within ed fante. 1.12.

They are much deceived that fo livile effeeme the Indians, and judge that (by the advantage days), ub. 2. de the Spaniards haue ouer them in their Persons, Hories, and Armes, both offensue and defensige) som cum c. 36. they might eafily conquer any Land or Nation of the Indies.

Chille Hands yet, or to lay better, Aranco and Tuecapel, which are two Cities, where our greatest helpe of the Semith Spanierds could not yet win one toot of ground, although they have made warre there about couqued ladi. fine and twentie yeeres, without paring of any coft. For this barbarous Nation , having once on quartels loft the apprehension of horse and thot, and knowing that the Spaniards fall as well as other made that eamen, with the blow of a ftone or of a dart, they hazard themselves desperately, entring the Pikes sie which their vpon any enterprife. How many yeeres have they leuted men in new Spatne, to fend against the gold made de-60 Chrebymeques, which are a small number of naked Indians, armed only with bowes and arrowest Divers Naciyet to this day they could not be vorquified, but contrariwile, from day to day they grow more ons which the definerate and resolute. But what shall we say of the Chines, of the Chinaguanas, of the Pifceco Spanists wes, and all the other people of the Andes? Hath not all the flower of Peru beene there, bringing could neuer with them to great proution of Armes and Merras we have feene? What did they? With what this way.

victories returned they 'Surely , they returned very happy in fauing of their lines; having loft their baggage and almost all their hories. Let no man thinke (speaking of the Indians) that they are men of nothing; but if they thinke fo, let them goe and make triall. Wee must then attribute the glorie to whom it appertaynes, that is, principally to God, and to his admirable die polition : for if Morcouna in Mexico, and the lugua in Peru, had beene refolute to refiff the Somiards, and to ftop their entrie, Corter and Pizarre had prevayled little in their landing, etthough they were excellent Captaines. It hath also beene a great helpe to induce the Indiana to receive the Law of Chrift, the subjection they were in to their Kings and Lords, and also the feruitude and flauerie they were held in by the Deuils tyrannies and insupportable yoke. This Was an excellent disposition of the dimine Wiledome, the which drawes profit from ill to a good end, and receives his good from an others ill, which it hath not fowen. It is most certaine that no people of the West Indies have beene more apt to receive the Gospell, then those which were most subject to their Lords, and which have beene charged with the heaviest burthers, as well of Tributes and Services, as of Customes and bloudie Practifes. All that which the Mexican Kines and those of Pres did possess, is at this day most planted with Christian Religion, and where there is leaft difficultie in the Gouernment and Ecclesiaficall Discipline. The Indiana were the wearied with the heavy and insupportable yoke of Satans lawes, his factifices and ceremonies. whereof wee have formerly spoken, that they consulted among themselves, to seeke out a new Law, and an other God to serue. And therefore the Law of Christ seemed vinto them, and doth

at this day feeme just, sweet, cleane, good, and full of har pineffe, And that which is difficult in our Law to believe so high and sourraigne Mysteries hath beene easie among them, for that the Deuill had made them comprehend things of greater difficultie. and the lefte-fame things which hee had stolen from our Euangelicall Law, as their manner of Communion and Confession, their adoration of Three in One, and such other like, the which against the will of the Enemie, have holpen for the easie receiving of the Truth by those who before had embraced Lyes. God is wife and admirable in all his workes, vanquishing the Adversarie euen with his owne weapon, hee takes him in his owne snare, and kills him with his owne fword. Finally, our God (who had created this People, and who feemed to have thus long forgot them) when the houre was come, hee would have the same Deuils, enemies to mankinde, whom they fally held for gods; should give a testimonie against their will, of the true Law, 30 the power of Christ, and the triumph of the Cresse, as it plainly appeares by the presages, prophelies, fignes, and prodigies, here before mentioned, with many others happened in divers parts, and that the fame ministers of Setan, Sorcerers, Magicians, and other Indians haue confeffed it. And wee cannot denie it (being most enident and knowne to all the World) that the Deuill dareth not hiffe, and that the Practifes, Oracles, Answers, and visible Apparitions, which were fo ordinarie throughout all this Infidelitie, have ceased, whereas the Croffe of Christ hath beene planted, where there are Churches, and where the Name of Christ hath beene confessed, And if there be at this day any curfed minister of his, that doth participate thereof, it is in Caues. and on the tops of Mountaines, and in fecret places, farre from the name and communion of Christians. The Soueraigne Lord be blessed for his great mercies, and for the glorie of his holy 40 Name : And in truth, if they did gouerne this people temporally and spiritually, in such fort as the Law of Iefus Christ hath fet it downe, with a milde yoke and light burthen, and that they would impose no more upon them then they can well beare, as the Letters Patents of the good Emperour of happy memorie doe command, and that they would imploy halfe the care they have to make profit of these poore mens sweats and labours, for the health of their soules, it were the most peaceable and happy Christian part of all the World, &c.

CHAP. V.

They did wording the Garth; which they salled Respections, but of the Anciente with the grant of the salled for the salled mongit the Starres they are interestiners offices to dimers Starres, and choice which had neede of their thipped. 40 fayour did worfing them, as the Shepherd did facrifice to a Scarre, which they called Frembiller. which they hold to be a Sheepe of divers colours, having the care to preferne their Cattell; and they imagine it is that which the Aftronomers call Lynn : Thele Shepherds worthin two other Starres, which walke neers voto them, they call them Camebiller, and Frenchiller; and they

from hurring of them. They afcribe power to another Starre, which they called Chan chay (which is as much as Tigre) over Tigres, Beares, and Lions, and they have generally beleened, that of all the beafts of the earth, there is one slone in heaven like visco them, the which bath care of their procreation and increase. And so they did obserue and working divers Starres, as those care or near processors and the state of the in the fame manner atter the inprome God, worthipped the Same. And therefore they called a tribe and Honando Cortex (as he hath written in a Letter fent vato the Emperor Chortes the fifth) Same fin the Sande of the Sanne, for his care and courage to compaffe the Earth. But they made their greatest adoration to an Ideal; called Vazlipuzi, the which in all this Region they called the most putting. and Lord of all things: for this cause the Missions built him a Temple, the greatest, the hinest, Temple the highest, and the most sumptuous of all other. The situation and beautic thereof, may well be conjectured by the raines which yet remaine in the midft of the Citie of Mexico. But here the

fayne them to be an Ene and a Lambe .: Others worthipped a Starre which they called Mathe-

ener, to which they attribute the charge and power over Serpents, and Snakes; to keepe them

Mexicans Idolatrie hath beene more pernicious and hursfull then that of the laguar, as wee shall 60 fee playner hereafter, for that the greatest part of their adoration and Idolatrie, was imployed to Idols, and not to naturall things, although they did attribute naturall effects to these Idols, as Raine, multiplication of Cattell, Warre, and Generation, even as the Greekes and Latines have forged Idols of Phabus, Mercurie, Inpiter, Minerua, and of Mars. To conclude, who forhall neerly looke into it, shall finde this manner which the Deuill hath wied to deceme the Indians,

rice the fame to all their Idifferent. Lares; as Poof interceffion. h dihen me of ad and os : hand with bowing of the body,&c. See Min Fel.

10b 21. Of the Idola try the Indians vícd o parti-

to be the fame wherewith he hath deceived the Grockes and Romans, and other ancient Grace tiles . giving them to vaderfland that thefe notable creatures, the Sunne, Moure, Starrer, and Enlements had power and authority to doe good or harme to men. Their manner to pray to Virge to all their I towers, that Ports and the Starres, and the reff of their Idols, was to open their hands. and to make a certaine found with their mouthes (like people that killed) and to aske that which every one defired in offering his Sacrifices; yet was there great difference betwist the words they wied in speaking to the great Tiemwiere be, to whom they did attribute the chiefe power and commandement over all things; and those they vied to others, the which every one did worshippe prinately in his house, as Gods or parties. others the wines they were their Interceffors to this great Teccini records. This manner to lor Lords, laying, that every were event intersections to only great incompensate. It is manner of working, opening the hands, and as it were "eigling, bath formething like to that which lad in horrour, as fit for Idolaters, taying, If I have lyfted my bands mit my month, beau bolding the Sume when it for its Mome when it is light, the maints is a great iniquitie, and is about the most great God.

> He Deuill hath not beene contented to make thefe blinde Indiana to worthippe the Summe Moone. Starres, Earth, and Sea, and many other generall things in nature, but he hash na fed on turcher, giving them for God, and making them subject to base and stick things, and for the most part, fishy and infamous : for they worshipped Rivers, Fountaines, the monthes of Rivers, entries of Mountaines, Rockes or great Stones, Hill and the tops of Mountaines, which they 20 call Apachtas, and they hold them for matters of great devotion. To conclude, they did worthin all things in nature, which feemed to them remarkable and different from the rest, as acknowledge. ing some particular deitie.

> Their shewed me in Caxamales of Nascaa little hill or great mount of Sand, which was the chiefe Idoll or Guaca of the Ancients. I demaunded of them what diminity they found in it They answered, that they did worship it for the wonder, being a very high mount of Sand, in the midft of very thicke Mountaines of Stone. We had neede in the Citie of Kings, of great ftore of great wood; for the melting of a Bell, and therefore they cut downe a great deformed Tree. which for the greatnesse and antiquity thereof had beene a long time the Oratorie and Guaca of the Indians. And they beleased there was a certaine Disanity in any thing that was to extraordinary and strange in his kinde, attributing the like vnto small Scones and Mettals; yea vnto rootes and fruites of the earth, as the rootes they call Papas. There is a strange kinde which they call Lallabuss, which they kiffed and worthipped. They did likewife worthip Beates, Lyons, Tygres and Snakes; to thend they flould not hurt them: and such as their gods be, such as the things they offer unto them in their worthip. They have vied as they goe by the way, to caft, in the croffe wayes, on the hils, and toppes of Mountaines, which they call Apachitem; olde floors, Feathers, and Coca chewed, being an hearbe they vie much. And when they have nothing left, they calt a Stone as an offring, that they might palle freely, and have greater force, the which they fay increaseth by this meanes, as it is reported in a provinciall Counfell of Pers. And therefore they finde in the hie-waies great heapes of Stones offred, and fuch other 40 things. They vied another offring no leffe pleasant and ridiculous, pulling the haire from the eyebrowes to offer it to the Sunne, Hils, Apachittas, to the Windes, or to any other thing they feare. Such is the mileries that many Indians have lived in, and doe to this day, whom the Demill doth abufe like very Babes, with any foolish illusion whatforuer.

They report of one of the Kings Ingmis, a man of a fubtile spirit, who feeing that all his predeceffours had worshipped the Sunne) faid, that he did not take the Sunne to be God, neither could it be, for that God was a great Lord, who with great quiet and leafure performed his workes, and that the Stane doth never ceafe his course, saying, that the thing which laboured fo much could not feeme to be God.

kinde of Idola-

They came to the height of Idolatry by, the fame meanes the Scripture maketh mention of : 50 first they had a care to keepe the bodies of their Kings and Noblemen whole, from any ill scent or corruption about two hundred yeeres. In this fort were their Kings Ingues in Cufco, every one in his Chappell and Oratory, loas the Marqueffe of Canene beeing Viceroy, to root out Idolatry, caused three or foure of their Gods to be drawne out and carried to the Citie of Kings. which bred a great admiration, to fee thefe bodies (dead fo many yeeres before) remayne to faire and also whole. Every one of these Kings Inques left all his Treature and Revenues, to entertayne the place of worship where his body was laid, and there were many Ministers with all his Family dedicated to his feruice : for no King Successor did vsurpe the Treasures and Place of his Peedeceffor, but he did gather all new for himfelfe, and his Palace. They were not content with this Idolatry to dead bodies, but also they made their figures and representations: and euery King in his life time caused a figure to be made wherein he was represented, which they called Guangui, which fignifieth Brother, for that they should doe to this Image, during his life and death, as much honour and reuerence as to himfelfe. They carried this Image to the warres, and in procession for raine or faire weather, making fundry Featts and Sacrifices vinco them. There have

CHAP. S. Wily Portugall escapes Indian cruelty. Their Purgatory and Funerals. 1020

beene many of these Idols in Cusco, and in that Territory, but now they say that this Superficion of worthipping of stones hathaltogether ceased, or for the most part, after they had beene discourred by the diligence of the Licentiate Pollo, and the first was that of the Ingines Roche, chiefe of the faction or race of Hanam Cases. And we find that among other Nations they had in great estimation and reuerence the bodies of their Predecessors, and did likewise worthin their Images.

He Indians of Peru beleeved commonly that the Soules lived after this life, and that the OfSuperficial good were in glorie, and the bad in paine; so as there is little difficultie to perswade them to ons they red 10 these Articles. But they are not yet come to the knowledge of that point, that the bodies should to the dead, rife with the Soules. And therefore they did vie a wonderfull care, as it is faid, to preferue the moneralist of bodies which they honoured after death : to this end their Succeffors gaue them Garments, and foules beleemade Sacrifices with them, especially the Kings Ingman; being accompanied at their Funerals, ucules believe with a great number of servants and women for his service in the other life; and therefore on the surection of a with a great number of returnes and with a great number of returnes and Officers, the bodies:
day of his decease, they did put to death the woman he had loued best, his Servants and Officers, the bodies:

as 6.17. that they might ferue him in the other life.

When as the Gasascapa dyed (who was father to Aisqualps, at what time the Spaniards entred) they put to death about a thouland persons of all ages and conditions, for his service to actually one attend one

treo) they put to use a neouse a transmission persons of an agree and continuous, for his terrace to account of the more appointed to death, held themselutes happy. They did factifice many things wato them, effectivity your children, and with the bloud they made a fronke on the dead mans face, from one eare to the other. This superstition and inhumanity, to kill both men and women. to accompany and ferue the dead in the other life, hath beene followed by others, and is at this day wied among it some other barbarous Nations. And as Pollo waites, it hath beene in a manner generall throughout all the ludies. The reverent Beda reports, that before the Englishmen were Superflines connected to the Goipell , they had the same custome , to kill men to accompany and serve of the old and the dead. It is written of a Portugall, who being captive among the Barbarian's hall being his the dead, it is written of a Portugall, who being captive among the Barbarian's hall being his will have factified him to accompany a Paragil will; Nobleman that was dead, he faid votto them, that those that were in the other life, would 30 make small account of the dead, if they gave him a blinde man for a companion; and that it were better to give him an attendant that had both his eyes. This reason being found good by the Barbarians, they let him goe, Besides this superfittion of Sicrificing men to the dead, being wied but to great Personages, there is another fatre more generall and common in all the Indies, which is, to fet meate and drinke vpon the graue of the dead, imagining they did feede thereon: the which hath likewife beene an errour amongst the Americans, as Saint Austine writes, and therefore they gave them meate and drinkes. At this day many Indian Infidels, do fecretly draw their dead out of the Churchyard, and bury them on hils, or upon passages of Mountaines, or elfe in their owne houses. They have also wied to put Gold and Silver in their mouth, hands. and bosome, and to apparell them with new Garments durable, and well lined under the AO herfe. They believe that the foules of the dead wandred up and downe and indure cold, thirft, hunger and trauel, and for this cause they make their anniversaries, carrying them cloathes, with leacnds.

were much folemnifed, and full of notable follies. It was the office of the Priests and religious dead among of Mexico (who lived there with a strange observance, as shall be said hereaster) to interre the and sindry of dindry of dead, and doe their obsequies. The places where they buried them, was in their Gardens, and thet Nations. in the Courts of their owne houses : others carried them to the places of facrifices which were chap. 8. 50 done in the Mountaines : others burnt them, and after buried the afhes in their Temples; and Places of buthey buried them all, with whatfocuer they had, of Apparell, Stones and Iewels. They did riall, put the aftes of fuch as were burnt into pots, and with them, the Iewels, Stones, and Earerings of the dead, how rich and precious foeder. They did fine the Funerall offices, like to ant weres, and did aften life up the dead bodies, doing matry ceremonies. At these mortuaries they did eate and drinke; and if it were a person of quality, they gave apparell to all such as came to the interment. When any one dyed, they laid him open in a chamber, vntill that all his kinffolks and friends were come, who brought preferes witto the dead, and faluted him as if he were lining. And if he were a King or Lord of fome towner, they offered him flanes to be put to death

60 Prieft, or Chaplaine (for every Mobleman had a Prieft which administred these ceremonies with Chapleman in his house) and then they kalled him, that he might execute his office with the dead. They other Officers likewife killed his Cook, his Burter, his Dwarfes, and deformed men, by whom he was most fer- killed. ued:neither did they spare the very brothers, of the dead, who had most ferued them; for it was a greatnesse amongst the Noblemen, to be served by their brethren and the rest. Finally, they

with him, to the end they might ferue him in the other world. They likewife put to death his

Hauing reported what many Nations of Pow have done with their dead, it shall not be from Ofthe munner the purpose, to make particular mention of the Mexicon in this point, whose mortuaries of burying the

put to death all of his traine, for the entertaining of his house in the other world: and left pouerty should oppresse them, they buried with them much wealth, as Gold, Silver, Stones, Curtins of exquifite worke, Bracelets of Gold, and other rich peeces. And if they burned the dead, they vsed the like with all his Servants, and ornaments they gave him for the other world. Then tooke they all the ashes they buried with very great solemnity. The obsequies continued tenne dayes with fongs of plaints and lamentations, and the Prieffs carried away the dead with fo many ceremonies, and in so great number, as they could scarce accompt them. To the Captaines and No. blemen they gaue trophees and markes of honour, according to their enterprifes and valor imployed in the wars and gouernments; for this effect they had armes and particular blafons, They carried these markes or blazons to the place where he defired to be buried or burnt, marching before the body, and accompanying it, as it were in procession, where the Priests and officers of the 10 Temple went with divers furnitures and ornaments, some casting incense, others finging, and fome founding of mournfull Flutes and Drums, which did much increase the forrow of his kinffolkes and subjects. The Priest who did the office was decked with the markes of the Idell which the Nobleman had represented; for all Noblemen did represent Idals, and carried the name of Come one; and for this occasion they were esteemed and honoured. The order of Knighthood did commonly carry these foresaid markes. He that should be burnt, being brought to the place appointed, they inuironed him with wood of Pine trees, and all his baggage, then fet they fire ynto it, increasing it fall with goomie wood, vntill that all were converted into after, then came these forth a Priest attired like a Deuil, having mouthes vpon every joynt of him, and many eyes 20 of elasse, holding a great staffe, with the which he did mingle all the ashes very boldly, and with fo terrible a gefture, as he terrified all the affiftants. Sometimes this Mimiter had other different

mages and Idols.Chap.g. Images the

and matters, which they worshipped for Gods, and in Perm they called them Guacas, being commonly of foule and deformed beafts, at the leaft, fuch as I have feene, were fo. I of goding the commonly of foule and deformed beaffs, at the leaft, finch as I haue feene, were fo. I regarded the beleque verily that the Deutly, in whose honour they made these Idols, was pleased to Abstractatiol and installs to be worthipped in these deformities, and in truth it was found so, that the Denill spake and answered many of these Gnacas or Idols, and his Priests and Ministers came to thefe Oracles of the father of lies, and such as he is, such were his Countels and Prophe- 30 fies. In the Proninces of New Spaine, Maxico, Tefcuco, Tlafcalla, Cholula, and in the neighbour Countries to this Realme, this kinde of Idolatry bath beene more practifed than in any other Relation of the words, And it is a proffigious thingro heare the fuperfittions rehearfed that they have yield in that point, of the which is shall not be vapleafant to speake something. The chiefest Table of the color of szure, in absankerd or little, at every corner was piece of wood like to a man, let wood a fonce of the color of szure, in absankerd or little, at every corner was piece of wood in forme of a Serpents thead. The stoole signified that he was set in heaven : this Idoll had all the forehead Azuge, and had a band of Azure wider the nose from one care to another: vpon his head he had a rich plume of Feathers, like to the beake of a small Bird, the which was coursed on the top with Gold burnished very browne : be had in his left hand a white Target, with the figures 40 of fine pine A pples, made of white Feathers, seeing crosse: and from about issued forth a crest of gold, and at his fides he had fouredarts, which (the Mexicans fay) had beene fent from heaten to doe those acts and proweffes which shall be spoken of: In his right hand he had an Azured staffe, cut in fashion of a waving snake, All these ornaments with the resthe had carried this sence as the Mexicans doe thew the name of Vitziliputzli fignifies the left band of a forming Feather,

I will speake hereafter of the proud Temple, the Sacrifices, Feasts and Ceremonies of this great Idoll, being very notable things. But at this prefene we will onely frew, that this Idoll-thus richly apparelled and decke, was fee vpon an high Altar, in a small peepe or boxe, well covered with linnen cloathes, lewels, Feathers, and ornaments of Gold, with many randles of Feathers, the faireft and most exquisite that could be found : he had alwaies a curtaine before him for the greater veneration. Loyning to the chamber or chappell of this doll, there was a peece of leffe worke, and not fo well beautified, where there was another Idollithey called Walse. These two Idols were alwaies together, for that they held them as companions, and of equal power. There was another Idoll in Mexico much effeemed, which was the god of repentance, and of Inbilies and Panis miary. pardons for their finnes. They called this Idoll Texeallipues, he was made of a blacke fhining front like to layel being attired with some Gentile deuises after their manner; it had earerings of gold and filter, and through the nether lip a small canon of Christall; in length halfe a foote : in the which they fometimes put a greene feather, and fometimes an azured, which made it resemble fometimes an Emerald, and fometimes a Turquois : it had the haire broided and bound vp with a haire-lace of gold burnished, at the end whereof did hang anieste of gold, with two firebrands of smoake painted therein, which did signifie the praiers of the laffic ted and sinners that he heard, when they recommended themselves vnto him. Betwixt the two eares hanged a number of small herons. He had a lewell hanging at his necke, so great that it conered all his stomacke : vpon his armes bracelets of Gold; at his nauill a rich greene ftone; and in his left hand a

habits, according to the quality of the dead. The fourth & There hath been great curiotity at the Indies in making of Idols and Pictures of divers formes CHAP, Indian Nemelis, Indulgences, Mercury, Adonis, Goddeffer, Feafts. 1031

Raine of precious Feathers, of Greene, Azure, and Yellow, which came forth of a Licokingelaffe of Gold, fliming and well burnished, and that signified, that within this Looking elaffe he faw whatfoeuer was done in the world. They called this Glaffe or Chafton of gold Ir his here which fignifies his Glaffe for to looke in. In his right hand he held foure darts, which fignified the chaftsfement he gaue to the wicked for their funes. And therefore they feared this Idoll molt, leaft he should discouer their faults and offences. At his feast they had pardon of their mon, teart ne mound ancourt since yeares, as shall be declared hereafter. They held this I- Their Nemefret doll Tescalipnea for the god of drought, of famine, barrennesse and pestilence: And therefore they painted him in another forme, being fer in great maiethy vpon a stoole compassed in with a red

To Curtin, painted and wrought with the heads and bones of dead men. In the left hand it liad a Current pantees and wronger with five Pines, like vato pine Apples of Cotton: and in the right a little dare with a Paro makes rarget with most rines, and the arms (fretcht out, as if he would cast it; and from the Target this difference came foure darts. It had the countenance of an angry man, and in choller, the body all painted betwin Relicame foure darts. It had the counternance or an angry man, soon to country, our bowy an gamete we mark it is blacker, and the head full of Qualtes feathers. They vied great inperfittion to this blodie forthe global as which is a Commonwealth of Mexico, they worthipt a famous Priffition. Fearer they had o'f. In Chebala which is a Commonwealth of Mexico, they worthipt a famous Priffition. It is a commonwealth of the common the common priffic and the common

led it Quetzaelevalt. This Idoll was in a great place in a Temple very high : it had about it, Gold, Silver, Iewels, vi boften. very rich Feathers, and habits of diners colours. It had the forme of a man, but the vilige of a lit-20 tle Bird, with a red bill; and aboue a combe full of warts, having rankes of ceeth, and the tongue

hanging out. It carried vpon the head, a pointed myter of painted paper, a fithe in the hand, and many toyes of gold on the legges; with a thousand other foolish inventions, whereof al! had their fignifications, and they worthipt it, for that he enriched whom he pleased, as Memnon and Pluties. In truth this name which the Chothanos gaue to their god, was very fit, although they vnderftood it not : they called it Quere saleoale, fignifying colour of a rich Feather, for fuch is the dewill of conetoufnesse. These barbarous people contented not themselves to have gods onely, but they had goddeffer also, as the Fables of Poets have brought in, and the blinde gentility of the Greekes and Romons worthipt them. The chiefe goddeffe they worthipt was called Tozz, which Goddeffes. is to lay, our Grandmother, who as the Histories of Mexico report, was daughter to the King of 20 Culbuccan, who was the first they stayed by the commandement of Vizzipmzli, whom they facri- See former

ficed in this fort, being his fifter; and then they began to flay men in their facrifices, and to clothe Chape need in this tore, being in a interpeat their day began to may men in their sectiones, and to crottee the litting with the skins of the facrificed, having learned that their gods were pleafed therwith-as allo to put the hearts out of them they facrificed, which they learned of their god, who pulled out the hearts of fuch as he punished in Tulla, as shall be faid in his place. One of these goddesses they worthipt had a fon, who was a great hunter, whom they of Tiascalle afterwards tooke for a god, and thole were enemies to the Mexicans, by whole aide the Spaniards won Mexico. The Province of Tlafcalla is very fit for hunting, and the people are much given therunto, They there fore made a great fool vnto this Idoll, whom they painted of fuch a forme, as it is not now needfull to loofe any time in the description thereof. The feast they made was pleasant, and in this 40 fort : They founded a Trumpet at the breake of day, at the found whereof they all affembled with their Bowes, Arrows, Nets, and other inflruments for hunting : then they went in procefwith their Idoll, beingfollowed by a great number of people to a high Montaine, you the top whereof they had made a bower of leases, and in the middeft thereof an Altar richly deckt, where-vpon they placed the Idoll. They marched with a great bruit of Trumpets, Cornets, Flutes & Drums, and being come vnto the place, they inuitoned this Mountain on all fides, putting fire to it on all parts: by meanes whereof many beafts flew forth, as Stags, Conies, Hares, Foxes, and Woolnes, which went to the top flying from the fire. These hunters followed after with great cries and noise of divers instruments, hunting them to the top before the Idoll, whither fled fuch a number of beafts, in fo great a preffe, that they leaped one vpon another, vpon

ther near that a similar or occasion to great a period, shared they appear one vipor another, you for the people and whom the Altar, wherein they took great elight. Then tooks they a great number of thefe beaffs, and facrificed them before the Idoll, as Stagges and other great beafts, pulling out their hearts, as they vie in the facrifice of men, and with the like ceremony: which done, they tooke all then prey vpon their shoulders, and retired with their Idoll in the same manner as they came, and entered the City laden with all these things, very joyfull, with great store of mulick. Trumpets, and Drums, vntill they came to the Temple, where they placed their Idoll with great reuerence and folemnity. They presently went to prepare their venison, wherewith they made a banquet to all the people; and after dinner shey made their playes, representations, and dances a panquet to an ene people, a great number of other Idols, of gods and goddeses; but the chiefe to eate and were of the Mexican Nation, and the neighbour people as is faid.

S we have faid that the Kings Ingus of Pers caused Images to be made to their likenesse, Of a france Awhich they called their Graces or brothers, causing them for to be honored like themselves: manner of ideeven to the Mexican have done of their gods, which was in this fort. They tooke a captine, fuch larry produced even to the Mexican mue done of their good, which was in this like I key coure a capture just a monoft the as they thought good, & afore they did factifice vnto him their Idols; they gave him the name of Mexican this

They fat down drinke and

fentation lasted, which was for a yeare in some Feasts, in others fix moneths, and in others lesses

they reperenced and worshipped him in the same manner, as the proper Idoll; and in the meane

time he did eate, drinke, and was merry. When he went through the streetes, the people came

for the worthin him, and enery one brought him an almes, with children and ficke folkes, that

he might cure them, and bleffe them, fuffering him to doe all things at his pleafure, onely he

was accompanied with ten or twelue men left he should flye. And he (to the end he might be

reservenced as he passed sometimes sounded vpon a small Flute, that the people might prepare to

him, making a folemne facrifice of him. It followes that we treate of their Religion, or rather

worthip him. The feath being come, and he growne fat, they killed him, opened him, and eate Io

Beginning then with their Temples, even as the great God would have a honfe dedicated, 20 where his holy name might be honoured, and that it should be particularly vowed to his

Religion and Sacraments.

1032

Superfittion, which they vie in their Sacrifices, Temples, Ceremonies, and the reft. That which God by his wifedome hath decreed for his honour and feruice, and for the good and health of man, the Deuill striues to imitate and to peruert, to be honored, and to cause man hathlaboured to make him to be damned : for as we see the great God hath Sacrifices, Prieste, Sacraments, Religious Proto make him to be damined to a surface of the new felies quail var phets, and Ministers, dedicated toshis diuine Seniice and holy ceremonies: fo the Deuill hath his to Gou, and to Sacrifices, Priefls, his kindes of Sacraments, his Ministers appointed, his feeluded and fained holiinitite him in neffe, with a thousand forts of false Prophets.

Chap.11. Of the Temples that were

teruice; euen fo the Devill, by his wicked practifes, perswaded Infidels to build him proud Temples, and particular Oratories and Sanctuaries. In every Province of Pers, there was one principall Guica, or house of adoration; and besides it, there was one Generall throughout all India, Chapara. the Kingdome of the Inguas; among the which there hath beene two famous and notable, the one which they called Pachamana, is foure leagues from Lima, where at this day they fee the raines of a most auncient and great building, out of the which Francis Pizarre and his people drew infinite treasure, of vessels and pots of Gold and Siluer, which they brought when they tooke the Ingua Aliaqualpa. There are certaine memories and discourses which say, that in this Temple the Deuill did speake visibly, and gaue answers by his Oracle, and that sometimes 30 they did fee a spotted Snake; and it was a thing very common and approved at the Indies, that the Deuill spake and answered in these sales Sanctuaries deceiuing this miserable people. But where the Gospell is entred, and the Crose of Christ planted, the father of lyes becomes mute, Flu lib. de traff. as Plusarch writes of his time, Cur cuffaverit Pubias fundere or acula : and Infine Marter treates Tuffin apolito amply of the filence which Christimposed to Denils, which spake by Idols, as it had beene before much prophefied of in the holy Scripture. The manner which the Infidell Ministers and Inchanters had to confult with their gods, was as the Deuili had taught them, It was commonly in the night, they entred backward to their Idoll, and to went bending their bodies and head, after an vely manner, and fo they confulted with him. The answere he made, was commonly like vnto a fearefull hiffing, or to a gnashing which did terrifie them; and all that he did adver- 40 tife or command them, was but the way to their perdition and ruine. There are few of these Oracles found now, through the mercy of God, and great power of Jefus Chrift. There hath beene in Peru another Temple and Oratory, most effeemed, which was in the Citie of Cusco, where at this day is the Monastery of Saint Dominicke. We may fee it hath beene a goodly and a stately worke, by the panement and stones of the building, which remaine to this day. This Temple was like to the Pantheon of the Romans, for that it was the house and dwelling of all the gods; for the Kings Inquas did there behold the gods of all the Nations and Provinces they had conquered, euery Idoll having his private place, whither they of that Province came to worship it with an excessive charge of things which they brought for his service, And thereby they supposed to keepe fafely in obedience, those Provinces which they had conquered, holding 50 their gods, as it were in hoftage. In this same house was the Pinebao, which was an Idollof the Sunne, of most fine Gold, wrought with great riches of Stones, the which was placed to the East, with so great Art, as the Sunne at his rising did cast his beames thereon : and as it was of most fine mettall, his beames did reflect with such a brightnesse, that it seemed another Sunne. The Inguas did worthip this for their god, and the Pachayacha, which fignifies the Creator of Heanen. They fay, that at the spoile of this so rich a Temple, a Souldier had for his part this goodly plate of gold of the Sunne. And as play was then in request, he lost it all in one night at play, whence came the prouerbe they have in Peru for great gamefters, faying, that they play the Sunne before it rifeth.

He Superstitions of the Mexicans, have without comparison beene greater then the rest; as well in their ceremonies, as in the greatnesse of their Temples, the which in old time the Spaniards called by this word Cu, which word might by taken from the Handers of Saint Do-Menuo, Cha. 13. minique, or of Cuba, as many other words that are in vie, the which are neither from Spaine,

ner from any other language now viuall among the Indians, as is Mays, Chico, Vagniano, Chapeten, and other like. There was in Mexico, this Cu, the famous Temple of Vitzliputzli, it had a very great circuit, and within a faire Court. It was built of great itones. in falhion of Snakee eved one to another, and the circuit was called Contepantle, which is, a circuit of Snakes : voon the top of every Chamber and Oratorie where the Idols were, was a fine Pillar wrought with fmall Hones, blacke as jeat, fet in goodly order, the ground rayled up with white and red, which below gaues great light. Vpon the top of the Pillar were battlements very artificially made. wrought like Snailes, supported by two Indians of stone, fitting, holding Candle-sticks in their hands, the which were like Croifants garnished and enriched at the ends, with yellow and greene 10 feathers and long fringes of the fame. Within the circuit of this Court, there were many Cham-

bers of religious men, and others that were appointed for the feruice of the Priests and Popes, for Mexican fo they call the fourraigne Priests which serve the Idoll. This Court is so great and spacious, as Popes. eight or ten thousand persons did dance easily in round, holding hands, the which was an vitall

custome in that Realme, although it seeme to many incredible.

There were foure Gates or Entries, at the East, West, North, and South : at every one of these Gates began a faire Cawley of two or three leagues long. There was in the midft of the Lake where the Citie of Mexico is built, foure large Cawleys in croffe , which did much beautifie it; voon every Portall or Entrie, was a God or Idoll, having the vilage turned to the Cawley, right against the Temple gate of Vitaligutzdi. There were thretie steps of thirtie fathome long, and 30 they divided from the circuit of the Court by a fireet that went betwixt them; voon the top

of these stere was a walke of thirtie foot broad, all playstered with chalke, in the midst of which walke was a Pallisado artificially made of very high Trees, planted in order a fathome one from another. Thele Trees were very bigge, and all pierced with small holes from the foote to the top, and there were rods did run from one Tree to another, to the which were chayned of tyed many dead mens heads. Vpon every rod were twentie Sculls, and these rankes of Sculls continue from the foot to the top of the Tree. This Pallifado was full of dead mens Sculls from one end to the other, the which was a wonderfull mournfull fight and full of horror. These were the heads of such as had beene sacrificed; for after they were dead, and had eaten the fielh, the head was delivered to the Manifters of the Temple, which tyed them in this fort untill they

30 fell off by morfels ; and then had they a care to fee Bthers in their places. Voon the top of the Temple were two Stones or Chappels; and in them were the two Idols, which I have fooken of Vizzilipuszli, and his companion Tlabs. These Olimppels were carued and graven very artificially, and so high, that to ascend up to it; there was a flaire of storie of fix score steps. Before these sy, and tongs, tome consensor yet in lower was a Court of the Consensor of Chappels, there was a Court of foresthed Figures; in the middle whereof, was a high flone of faur hand breadth, pointed in fallhori of a Pyrathide, it was placed there for the facrificing of men; for being hairdont their backs, it was placed there for the facrificing of men; for being hairdont their backs, it was a fall for the fairly and for the fairly of th them and pull out their hearts , as I shall shew hereafter. There were in the Citie of Mexico. eight or nine other Temples, the which were joyned one to another within one great circuit, and had their private Stayres, their Courts, their Chambers, and their Dortoires. The entries of

of fome were to the East, fome to the West, others to the South, and some to the North. All these Temples were curiously wrought, and competted in with divers forts of Battlements and Pi-Cures, with many figures of thones, being accompanyed and fortified with great and large Scotter or Plat-former. They were didicated to divers gods : but next to the Temple of Vizapureds, weathar of Tescalipues, which was the god of Penance and of Punishments, very high and well built.

There were four steps to ascend: on the top was a Flat or Table of sixscore foot broad, and ioy. ning wato it was a Hall hanged with Tapittrie and Curtins of diners colours and workes. The Doore thereof being low and large, was alwayes coursed with a vaile, and none but the Priests mighe enterin. All this Temple was beautified with divers Images and Pictures most curiously : so for that thefeward Temples were as the Cathedrall Churches; and the reft in respect of themas

Parifles and Hermitages: they were so spacious, and had so many Chambers, that there were in them places for the Ministerie, Colleges, Schooles, and Houses for Priests, whereof wee will

The Deuil counterfaiting the vie of the Church of God, hath placed in the order of his Priefls, Of the Priefls fome greater or superiors, and some leffe, the one as Acolites, the other as Lenites, and that which and their bath made me most to wonder, was, that the Deuill would viurpe to himselfe the service of offices Ch.14. God; yea, and whe the same name: for the Mexicans in them ancient tongue called their high had his Popes Priests Papas, as they should say Someraigne Bifbops, as it appeares now by their Hastories. The or Vicars at Priests of Vitalipinals succeeded by Linages of certaine quarters of the Citie, deputed for that Mexico for the 60 purpole, and those of other Idels came by election, or being offered to the Temple in their infan- new World, as purpole, and those of other loss came by election, or being offered to the 1 emple in their infanta-cie. The daily exercise of the Priests was to east Incense on the Idols, which was done foure old and now times in the space of a natural day. The first at breake of day, the second at moone, the third at for both, Sunne fetting, and the fourth at mid-night. At mid-night all the chiefe officers of the Temple Mid-night

did rife, and in stead of Bells, they founded a long time upon Trumpets, Cornets, and Flutes Mattins.

Q999 3

very heavily, which being ended, he that did the office that weeke, stept forth, attyred in a white Robe after the Dalmatike manner, with a Cenfor in his hand full of coales, which bee tooke from the harth burning continually before the Altar; in the other hand he had a Purf-fift of Incense, which he cast into the Censor, and as he entred the place where the Idols was, he incented it with great reuerence, then tooke he a cloth, with the which he wiped the Altar and the Curtins. This done, they went all into a Chappell, and there did a certaine kinde of rigorous and auftere penance, beating themfelues, and drawing of bloud, as I shall shew in the Treatis of Penance, which the Deuill hath taught to his Creatures; and hereof they neuer fayled ar these Mattins at mid-night. None other but the Priests might entermeddle with their facritheie Mattins at mid-night. Assessment of the dignitie and degree. They did likewife fices, and euery one did impley himfelfe according to his dignitie and degree. They did likewife preach to the people at some feasts, as I will shew when wee treat thereof. They had Reuenies and great Offerings were made vnto them. I will speake hereafter of their Vnction in conferrating their Priefts. In Peru the Priefts were entertayned of the Reuenues and Inheritance of their god, which they called Chacaras, which were many, and also very rich.

Of the Monas Deuill bath inuented for histeruice. Chap-15.

There were in Peru many Monasteries of Virgins (for there are no other admitted) at the least one in every Province. In these Monasteries there were two forts of women, one ancient, which they called Mamacomas, for the instruction of the young; and the other was of young Maidens. placed there for a certaine time, and after they were orawne forth, either for their gods or for placed there for a certainte time, a manage that the form of the f power to choose whom he pleased, of what qualitie soeuer, being under eight yeeres of age, if they feemed to be of a good stature and constitution.

Thef. Virgins thus that up into thefe Monasteries, were instructed by the Monacomas, in digins, or Nunns pers things needfull for the life of man, and in the customes and ceremonies of their gods; and afterwards they tooke them from thence, being aboue fourteene, fending them to the Court with fure guards, whereof fome were appointed to ferue the Guacas and Sanctuaries, keeping their Virginities for euer : fome others were for the ordinarie facrifices that were made of Maidens, and other extraordinarie facrifices, they made for the health, death, or warres of the Ingua; and the rest ferued for Wines and Concubines to the Ingua and vnto other his Kinsfolks and Captains, 30 vnto whom hee gaue them , which was a great and honorable recompence : This diffribution was vied euery yeere. These Monasteries possessed Rents and Reuenues for the maintenance of these Virgins, which were in great numbers. It was not lawfull for any father to refuse his daughters when the Appopanaca required them for the service of these Monasteries. Yea, many fathers did willingly offer their daughters, supposing it was a great merit to be sacrificed for the Inqua. If any of these Momacomas or Aclassowere found to have trespassed against their honor, it was an ineutable chastisement to burge them alue, or to put them to death by some other kind

The Deuill hach euen in Mexico had some kinde of religious women, although their posses fion was but for one yeere, and it was in this fort; Within this great circuit whereof wee haue Spoken, which was in the principall Temple, there were two Houses like (Topfers, the one oppolice to the other, one of Men, the other of Women: In that of women, they were Virgins onely, of twelve or thirteene yeeres of age, which they called the Maides of Penance: They were as many as the men, and fined chastely and regularly, as Virgins dedicated to the service of their god. Their charge was, to sweep and make cleane the Temple, and enery morning to prepare meat for the Idoll and his Ministers, of the Almes the religious gathered. The foode they pripered for the Idoll were small loaues in the forme of hands and feet, as of March-pane; and with this bread they prepared certaine fawces which they cast daily before the Idoll, and his Priests did eate it, as those of Baal, that Daniel speaketh of. These Virgins had their haire cut, and their they let them grow for a certaine time : they rofe at mid-night to the Idolls Mattins, which they daily celebrated, performing the same exercises the Religious did. They had their Abbiffes 50 who imployed them to make cloth of divers fashions for the ornament of their Idolls and Temples. Their ordinarie habit was all white, without any worke or colour. They did their penance at mid-night, facrificing and wounding themselves, and piercing the top of their eares, they laid the bloud which issued forth vpon their cheekes : and after (to wash off the bloud) they bathed themselues in a Poole which was within their Monasterie. They lived very honestly and difcreetly; and if any were found to have offended, although but lightly, presently they were put to death without remission, saying, she had polluted the House of their god. They held it for an augure and aduertifement, that fome one of the Religious, Man, or Woman, had committed a fault, when they faw a Rat or a Mowse passe, or a Bat in the Chappell of their Idoll, or that they had gnawed any of the vales, for that they fay , a Rat or a Bat would not admenture of commit 60 fuch an indignitie, if some offence had not gone before, and then they began to make fearch of the fact, and having discouered the Offendor or Offendors, of what qualitie somer they pre-

None were received into this Monasterie, but the daughters of one of the fixe quarters, named

for that purpole : and this profession continued, as I have faid, the space of one whole veere : during the which time, their fathers, and they themselves had made a vow to serue the Idoll in this manner, and from thence they went to be married.

I doe not know that in Pers there is any proper houles for men, but for the Priests and Sorce- Of the M-narets, whereof there is an infinite number. But it feemeth, that in Mexico the Deuill hath fet flerics of relirets, whereof there is an immite numer to the retaining th rore man occur and, one of man, one of man, or inserted for eighteen or twentic yeeres of age, which they called religious. They weare shaued crownes, as the superstition. Friers in these parts, their haire a little longer, which tell to the middest of their eare, except the Chip. 16. hinder part of the head, which they let grow the breadth of foure fingers down to their shoulders Indian shauen hander part of the near, which they yet given that ferued in the Temple of First.part.fill. Finss, & their and which they tyed vp in trelles. Their young men that ferued in the Temple of First.part.fill. Finss, & their and which they tyed vp in trelles. The five young men that ferued in the Temple of First.part.fill. Finss, & their and which they have the first part of the profession of the trelles of the tr ned poore and charty, and the first houers they five pt and made cleane the holy places, bringing ty, thattiy, &c. Wood for a continuall fire to the harth of their god, which was like a lampe that fill burnt before the Altar of their Idoll. Besides these young men, there were other little boyes, as novices, that ferued for manuall vies, as to deck the Temple with boughs, rofes, & reeds, give the Priests water to wash with, give them their rasors to facrifice, and goe with such as begged almes to carry it. All these had their superiors, who had the government over them, they lived to honestly, as when they came in publike, where there were any women, they carried their heads very low, with their eyes to the ground, not daring to behold them: they had linnen garments, and it was lawfull for them to goe into the Citie foure or fixe together, to aske Almes in all quarters : and when they gave them none, it was lawfull to goe into the Corne fields, and gather the eares of Corne. or chifters of Mays, which they most needed, the Master not during to speake, nor hinder them. They had this libertie, because they lined poorely, and had no other revenues, but Almes. There might not be aboue fiftie lue in penance, rifing at midnig it to found the Cornets and Trumpets to a-wake the people. Every one watched the Idoll in his turne, left the fire before the Altar thould die : they gaue the Cenfor, with the which the Priest at midnight incensed the Idoll, and alio in the morning at noone, & at night. They were very fubicat and obedient to their superiors, and passed not any one point that was commaunded them. And at midnight after the Priest had an ended his centing, they retired themselves into a secret place, apart, sacrificing, and drawing blood from the calfes of their legs with sharpe bodkins : with this bloud they rubbed their temples, and vader their eares : and this facrifice finished, they presently washt themselves in a little poole appointed to that end. These young men did not annoint their heads and bodies with any Perum as the Priests did their garments were of course white linnen cloth they doe make there. These exercises and strictnesse of penance continued a whole yeere, during which time they lived with great aufteritie and folitarinefie.

It hath beene faid that the Priests and religious of Mexico, rose at midnight, and having cast Of Pesance & Incense before the Idoll, they retired themselves into a large place, where there were many the strickness. Incenie before the Idoll, they retired themishes into a large place, where there were many the interior of the Idoll, they retired themishes into a large place, which is the rota analysis the Indian the Indian Chapter of Indian Ch calfes of their legs necre to the bone, drawing forth much bloud, with the which they anointed waston. 60.17.
their temples, and dipt these bookins or lancers in the rest of the bloud, then set they them vpon the battelements of the Court, flickt in gloabes or bowles of ftraw, that all might see and know the penance they did for the people : they doe wash off the bloud in a lake appointed for

that purpose, which they call Exapangue, which is to say, water of bloud. There were in the Temple a great number of bodkins or lancets, for that they might not vie one twice. Moreouer, these Priests and Religious men, vied great Fastings, of sine or ten dayes Their sucre together, betore any of their great Feafts, and they were vnto them as our foure Ember weekes : Fafts. they were fo fired in continence, that fome of them (not to fall into any fenfualitie) flit their

50 members in the midit, and did a thousand things to make themselues vnable, lest they should Monsters of offend their gods. They drunke no Wine, and flept little, for that the greatest part of their exer- Wil-worthipcifes were by night, committing great cruelties and marryring themselues for the Deuill, and all to bee reputed great fatters and penitents. They did vie to discipline themselues with cords full of knots, and not they onely, but the people also vied this punishment and whipping, in the proceffion and teaft they made to the Idoll Texcalipnes, the which (as I have faid before) is the and of penance; for then they all carried in their hands new cordes of the threed of Manguer a fadome lone, with a knot at the end, and wherewish they whipped themselves, giving great lag thes over their shoulders. The Priests did fatt five dayes before this Featt, eating but once a day. and they hard apart from their wines, not going out of the Temple during those fine dayes, they fodid whip themselves rigorously in the manner atorelaid.

The Perm to folemnize the feath of the Tra, which was great, all the people fasted two daves: during the which, they did not accompanie with their Wives, neither did they eate any meate with Saltor Garleeke, nor drinke Chica. They did much vie this kinde of fafting for some fins, and did penance, whipping themselves with sharpe stinging Netsles, and often they strooke

Of the Sacrifices the Indi-

the Deuill, & where of Chan 18. Sacrifices of things infenfithemselves over the shoulders with certayne stones. This blind Nation, by the persuasion of the Deuill, did transport themselves into craggie Mountaynes, where sometimes they sacrificed themselues, casting themselues downe from tome high Rocke,

Wee may draw all the Sacrifices the Infidels vie into three kindes, one of infentible things; another of beaits, and the third of men. They did vie in Peru to facrifice Geca, which is an hearbe they efterme much, of Mays, which is their Wheate, of coloured feathers, and of Chaquira, which otherwise they call Mollo, of shels or Oysters, and sometime Goldand Silver, being in figures of little beafts. Also of the fine stuffe of Combi, of carved and Iweet wood, and most commonly Tallow burnt. They made these Offerings or Sacrifices for a prosperous winde, and faire weather, or for their health, and to be deliuered from some dangers to and mishaps. Of the second kind, their ordinary Sacrifice was of Cayes, which are small beaft like Rabbets, the which the Indians cate commonly. And in matters of importance, or when they were rich men, they did offer Pacos, or Indian sheepe, bare, or with Wooll, observing curiously the numbers, colours, and times. The manner of killing their Sacrifices, great or fmall which the Indians did vie according to their ancient Ceremonies, is the same the Moores vie as this day, the which they call Alguible, hanging the beaft by the right fore-legge, turning his eves towards the Sunne, speaking certayne words, according to the qualitie of the Sacrifice they flue : for if it were of colour, their words were directed to Conquille , and to the Thunder , that they might want no water: if it were white and smoothe, they did offer it to the Surge with they might want no water the certaine words: if it had a fleece, they did likewise offer it him with some others, that he might to thine vpon them, and fauour their generation: It it were a Gnanaco, which is gray, they dire-Cred their facrifice to Viracecha. In Cufco they did enery yeere kill and facrifice with this Ceremony, a shorne sheepe to the Sunne, and did burne it, clad in a red Waste-coate, and when they did borne it. they cast certayne small baskets of Coca into the fire, which they call Vilcaronce: for which Sacrifice, they have both men and beafts appointed which ferue to no other vie. They did likewife facrifice small Birds, although it were not so visuall in Pers as in Mexico, where the facrificing of Quailes was very ordinary. Those of Pern did facrifice the Birds of Puna, (for fo they call the Defart when they should goe to the Warres, for to weaken the forces of their aduerlaries Guacas.) They called these Sacrifices Cuzconicca, or Contenicca, or Hualanicca, or Sophanica, and they did it in this manner: they tooke many kinds of imell Birds of the Delart, 10 and gathered a great deale of a thorny wood, which they call Tanlli, the which beeing kindled. they gathered together these small Birds. This aftermbly they called Quico, then did they cast them into the fire, about the which the Officers of the Sacrifice went with certayne round fromes carued, whereon were painted many Snakes, Lions, Toades, and Tygres, yttering this word F. fachum, which fignifies, Let the victorie be ginen onto vs, with other words, whereby they fayd

brought certayne blacke Dogges, which they call Apparer, and flue them, cafing them into a Playne, with certayne Ceremonies, causing some kinde of men to eate this field, the which Sa-Fatting in firs appeared, Crifices they did, left the Ingua thould bee hurt by poyfon; and for this cause they fasted from morning untill the startes were up, and then they did glat and defile themselues like to the Moores. This Sacrifice was most fit for them to with stand their enemies Gods : and although at this day a great part of these customes have ceased, the warres being ended, yet remaynes there fome Relikes, by reason of the private or generall quarrels of the Indians, or the Caciques, or in Shel-offerings, their Cities. They did likewife offer and facrifice shels of the Sea, which they call Molle, and they offered them to the Fountaynes and Springs, faying, that these shells were daughters of the Sea, the mother of all waters. They gave vnto their fhels fundry names, according to the colour, and also they wie them to divers ends. They wied them in a manner in all kinde of Sacrifices, and yet to this day they put bestes fhels in their Chies, for a superflition. Finally, they thought it convenient to offer Sacrifices of every thing they did fow or raile vp. There were Indians appointed to doe these Sacrifices to the Fountayne, Springs, and Rivers which passed through the Townes, or by the their Charcas, which are their Farmes, which they did after Seed time, that they might not cease running , but alwayes water their grounds. The Sorcerers did conjure, to know what time the Sacrifi es should be made, which beeing ended, they did gather of the contribution of the people, what should be facrificed, and delivered them to such as had the charge of these Sacrifices. They made them in the beginning of Winter, at such time as the Fountaynes, Springs, and Rivers, did increase by the movifures of the weather, which they did 60 attribute to their Sacrifices. They did not facrifice to the Fountaynes and Springs of the Defarts. To this day continues the respect they had to Fountaynes, Springs, Pooles, Brookes, or Ruers, which paffe by their Cities or Charcas, even vnto the Fountaynes and Rivers of the Defaces. They have a speciall regard and reverence to the meeting of two Rivers, and there

Blacke sheepe, the forces of their enemies Guacas were confounded. And they drew forth certayne blacke

sheepe, which had beene kept close some dayes without meate, the which they called Pres, and in killing them they spake these words; As the hearts of these beasts bee weakened, so let our

enemies be weakned. And if they found in these sheepe that a certay ne piece of siesh behind the

hear were not confumed by falling and close keeping, they then held is for an ill Augure. They 40

they wash themselves for their health, annoynting themselves first with the flower of Mays, or some other things, adding thereunto divers Ceremonies, the which they doe likewife in their Bathes.

The most pittifull disasser of this poore people, is their slavery vato the Devill, sacrificing Of the Sacrific men vato him, which are the Images of God. In many Nations they had vied to kill (to ces they made accompany the dead, as hath beene declared) fuch persons as had beene agreeable vnto him, and whom they imagined might best serue him in the other World. Besides this, they vied in Pars, to facrifice young children of foure or fixe veeres olde vnto ten : and the greatest part of 10 thele Sacrifices were for the affaires that did import the Ingua, as in ficknelle for his health : and when he went to the warres for victory, or when they gave the wreathe to their new Ingua, which is the mark of a King as here the Scepter and the Crowne be. In this Solemnitie they facrificed the number of two hundred children, from foure to ten yeeres of age, which was a ctuell and inhumane spectacle. The manner of the Sacrifice was to drowne them and bury them with certayne representations and ceremonies: sometimes they cut off their heads annoynting them-ficed.

They did like wife facrifice Virgins, fome of them that were brought to the Ingua from the Monaiteries, as hath beene faid. In this case there was a very great and generall abuse : If any Indian qualified, or of the common fort, were ficke, and that the Divine told him confidently 20 that he should dye, they did then facrifice his owne forme to the Sunne, or to Vrachoca, defiring Particide. them to be fatisfied with him, and that they would not deprive the father of life. This crueltie is like to that the holy Scripture speaks of which the King of Most vied in facrificing his first-born Sonne you the wall, in the light of all Ifrael, to whom this act feemed fo mournfull, as they would not prefle him any further, but returned to their houses.

felues with the bloud from one eare to another.

Lthough they of Pers have furp-fled the Mexicans in the flaughter and Sacrifice of their Of the horris

ber of men which they had facrificed, and in the horrible manner thereof. And to the end wee vied. Chap. 20. 20 may feethe great milery wherein the Deuill holds this blind Nation . I will relate particularly the custome and inhumane manner which they have observed : First the men they did facrifice were taken in the warres . neyther did they vie thefe folemne Sacrifices but of Captines : fo as it Captines only feemes therein they have followed the custome of the Ancients. For as some Authors say, they facrificed. called the Sacrifice Veltima, for this reafon, because it was of a conquered thing : they also called Villing & it Hoftig quafi ab hofte, for that it was an Offering made of their enemies, although they have applyed this word to all kinds of Sacrifices. In truth the Mexicians did not facrifice any to their Idols, but Captines, and the ordinary warresthey made, was onely to have Captines for their Sacritices; and therefore when they did fight, they laboured to take their enemies aliue, and not to kill them, to enjoy their Sacrifices. And this was the reason which Moreguma gaue to the 40 Marquise du Val, when he asked of him, why being so mightie, and having conquered so

many Kingdomes. he had not subdued the Prouince of Tlascalla, which was to neere! Motecuma answered him, that for two reasons he had not conquered that Province, although it had bin easie, if he would have undertaken it : the one was for the exercise of the youth of Mexico, lest they should fall into idlenesse and delight : the other and the chiefe cause why hee had referred this Prouince, was, to have Captines for the Sacrifices of their Gods. The manner they yied in Manner of his these Sacrifices, was, they affembled within the Palistadoe of dead mens Sculles (as hath beene mane (immane) facrification faid) fuch as should be sacrificed, vsing a certayne Ceremony at the foot of the Palissadoe, placing cing. a great guard about them. Prefently there flept forth a Prieft, attyred with a thor: Surplice full of taffels beneath, who came from the top of the Temple with an Idoll made of Parle of Wheate and Mays mingled with Honey, which had the eyes made of the graines of greene glaffe, and the teath of the graines of Mays, he descended the steps of the Temple with all the speed he could, and mounted on a great stone planted upon a high Terrasse in the midst of the Court. This stone was called Quanxicalli, which is to fay, the flone of Eagle, whereon he mounted by a little Ladder, which was in the fore-part of the Terraffe, and descended by another staire on the other file,

fill imbracing his Idoll. Then did he mount to the place where those were that should be facrificed, thewing this Idoll to every one in particular, taying vnto them; this is your God. And hauing ended his she w, he descended by the other side of the staires, and all such as should dye, went in procession vato the place where they should bee facrificed, where they found the Minifters ready for that Office. The ordinary manner of facrificing was, to open the ftomake of him Bloudie Rices, 60 that was facrificed, and having pulled out his heart halfe alive, they tumbled the man downe the staires of the Temple, which were all imbrewed and defiled with bloud : And to make it the more plaine, fixe Sacrificers being appointed to this dignitie, came into the place of Sacrifice, foure to hold the hands and feet of him that should be facrificed, the fift to hold his head, and the fixt to open his stomake, and to pull out the heart of the facrificed. They called them Cha-

A Children (for I have not read nor understood that the Mexicans used any such Sacrifices) of men which yet they of Mexico have exceeded them, yea all the Nations of the World, in the great num- the Mexicans

chalmua, which in our Tongue is as much, as the Ministers of boty things. It was a high dignitie. and much efteemed among it them, wherein they did inherit and succeed as in a Fee-simple. The Minister who had the Office to kill, which was the fixt among ft them, was effeemed and honorred as the Sourreigne Priest and Bishop, whose name was different, according to the difference of times and Solemnities. Their habits were likewise divers when they came forth to the Sacrifice, according to the diversitie of times. The name of their chiefe dignitie was Papa and Topilzin, their Habite and Robe was a red Curtayne after the Dalmarike falhion, with tallels below. Crowne of rich Feathers, greene, white, and yellow vpon his head, and at his eares like pendants of Gold, wherein were fet greene stones, and vnder the lip vpon the middest of the beard

he had a Peece like vnto a small Canon of an azured stone. These Sacrificers came with their fa-The other fine ces and hands coloured with a shining blacke. The other fine had their haire much curled, and tyed vp with Laces of Leather, bound about the middest of the head : vpon their forehead they carried small Roundelets of Paper painted with diners colours, and they were attyred in a Dal matike Robe of white, wrought with blacke. With this attyre they represented the very figure of the Deuill, fo as it did itrike feare and terrour into all the people, to see them come forth with so horrible a representation. The Souereigne Priest carried a great Knife in his hand, of a large and sharpe flint : another Prieft carried a coller of wood wrought in forme of a Snake : All fix out themselues in order, soyning to this Pyramidall stone, wheref I have spoken, being directly against the doore of the Chappell of their Idoll. This stone was so pointed, as the man which was to be facrificed, being laid thereon, vpon his backe, did bend in such fort, as letting 20 the Knife but fall vpon his stomack it opened very easily in the middest. When the Sacrificers were thus in order, they drew forth such as had beene taken in warre, which were to bee facrificed at that Feast, and being accompanied with a guard of men all naked, they caused them to mount vp these large staires in ranke, to the place where the Ministers were prepared : and as euery one of them came in their order, the fix Sacrificers tooke the Prisoner, one by one foote, another by theother, and one by one hand, another by the other, casting on his backe vpon this Deuillish dex. pointed stone, where the fift of these Ministers put the coller of wood about his necke, and the High Priest opened his stomack with the Knife, with a strange dexteritie and nimblenesse, polling out his heart with his hands, the which hee shewed smoking vnto the Sunne, to whom hee did offer this heate and fume of the heart, and prefently he turned towards the Idoll and did caft 30 the heart at his face, then did they cast away the body of the sacrificed, tumbling it downe the flaires of the Temple, the stone being fet io neere the staires, as there were not two foote space

betwixt the stone and the first step, so as with one spurne with their foote, they cast the bodie

from the top to the bottome. In this fort one after one they did facrifice all those that were ap-

pointed. Being thus slaine, and their bodies cast downe, their Masters, or such as had taken them,

went to take them up, and carried them away : then having divided them amongst them, they

did eate them , celebrating their Feast and Solemnitie. There were euer fortie or fiftie at the

least thus facrificed, for that they had men very expert in taking them. The neighbour Nati-

one did the like, imitating the Mexicans in the Cultomes and Ceremonies of the Seruice of

their Gods.

Idols-Idol-fa-

Of other kinds Here was another kind of Sacrifice which they made in divers feafts, which they call Recaof Sacrifices of men which a supervitis zii, which is as much as the fiszing of men. They call it fo, for that in some Featls the Mexican they tooke one or more slaues, as they pleased, and after they had flayed him, they with that vi'd. Chap. 11. skinne apparelled a man appointed to that end. This man went dancing and leaping thorow all Flaying Sacri- the houses and Market places of the Citie, every one being forced to offer fomething vinto him: and if any one fayled, he would firike him ouer the face with a corner of the skin, defiling him with the congealed bloud. This invention continued untill the skinne did flinke: during which time, fuch as went, gathered together much almes, which they employed in necessary things for the Seruice of their Gods. In many of thefe Feafts they made a Challenge, betwixt him 50 that did facrifice, and him that should bee facrificed thus : they tyed the slave by one foote to Challenge fa 2 Wheele of stone, giving him 2 Sword and Target in his hands to defend himselse: then presently steps forth hee that sacrificed him; armed with another Sword and Target; if hee that should bee facrificed defends himselfe valiantly against the other, and relisted him, hee then remayned freed from the Sacrifice, winning the name of a famous Captayne, and so was reputed : but if hee were vanquished, they then sacrificed him on the stone whereunto hee was was tyed. It was another kinde of Secrifice, when as they appointed any flaue to bee therepresentation of the Idoll, saying that it was his Picture: They every yeere gave one slave to the Priests, that they might neuer want the lively Image of their Idoll. At his first entry into the Office, after he had beene well washed, they attyred him with all the ornaments of the Idoll, 60 giving him the same name. Hee was that whole yeere reverenced and honoured as the Idoll it felfe, and had alwayes with him twelue men for his Guard, left hee should flye, with which Guard they suffered him to goe freely and where he would : and if by chance he fled, the chiefe of the Guard was put in his place to represent the Idoll, and after to bee facrificed. This Indian

had the most honourable lodging in all the Temple, where hee did eate and drinke, and whither all the chiefe Ministers came to serue and honour him, carrying him meate after the manner of great Perionages. When her went through the streets of the Citie, hee was well accompanied with Noblemen, hee carried a l'atle Flute in his hand, which fometimes hee founded, to give them knowledge when he passed then presently the women came forth with their little children in their armes, which they presented vnto him, saluting him as God. All the rest of the people did the like; at night they put him in a strong Prison or Cage, left he should flye; and when the Feast came, they facrificed him, as hath beene faid.

By these and many other meanes hath the Deuill abused and entertayned these poore wretto ches, and fuch was the multitude of those that had beene facrificed by this infernal crueltie, as ficed. it feemes a matter incredible, for they affirme there were fome dayes fine thousand or more. and that there were aboue twentie thousand sacrificed in diners places. The Deuill to entertaine this murther of men, vied a pleasant and strange invention, which was, when it pleased the Priests of Satan they went to their Kings, telling them how their Gods dyed for hunger, and Deuill hunger that they should remember them. Presently they prepared themselves, and advertised one a- formans fluck nother, that their Gods required meate, and therefore they should command their people to bee readie to goe to the Warres; and thus the people affembled, and the companies appointed went to field, where they mustred their forces; and all their quarrell and fight was to take one another for facrifice, striuing on either fide to take what Captives they could, fo as in these battels they 20 laboured more to take, then to kill, for that all their intention was to take men aliue, to give them to their Idols to eate, for after that manner brought they their Sacrifice voto their Gods.

And wee must vinderstand, that neuer King was crowned vitill he had subdued some Prouince, from the which he brought a great number of Captines for the Sacrifices of their Gods, fo as is was an infinite thing to fee what bloud was fpilt in the honour of the Deuill.

Many of these Barbarians were now wearied and tyred with such an excessive crueltie, in How the 1st.

(Shedding so much bloud, and with so tedious a Tribute, to bee alwayes troubled to get dians grew Captines, for the feeding of their Gods, feeming vnto them a matter insupportable; yet left they weary, and Captines, for the feeding of their Gods, feeming voto them a matter iniupportable; yet left they could not enkept them in, and the cunning wherewith they abuled this poore people. But inwardly they tie of Satan. defired to be freed from so heavie a yoke. And it was a great providence of God; that the first Chap.az. which gaue them knowledge of the Law of Christ, found them in this disposition : for without doubt it feemed to them a good Law, and a good God, to bee ferued in this fort. Heereupon a grave religious man in New Spaine told me, that when he was in that Countrey he had demanded of an ancient Indian, a man of qualitie, for what reason the Indians had so some received the

Law of Iefus Chrift, and left their owne, without making any other proofe, tryall, or diffoute

thereon, for it feemed they had changed their Religion, without any fufficient reason to moous

them. The Indian antwered him, Beleene not Father, that we have embraced the Law of Chrift fo rashly at they say : for I will tell you, that we were alreadie wearie and discontented with such things 40 as the Idols commanded us, and were determined to leave it, and to take another Law. But when as wee found that the Religion that you preached had no cruelites in it, and that it was fit for vs, and but init and good, we understood and believed that it was the true Law, and fo we received it willingly. Which answere of this Indian agrees well with that we reade in the first Discourse, that Fernand Cortes fent to the Emperour Charles the fift, wherein hee reports, that after he had conquered the Citie of Mexico, being in Cuyoacan, there came Ambassadours to him from the Province and Common-wealth of Mechoacan requiring him to fend them his Law, and that hee would teach them to vinderstand it, because they intended to leave their owne, which seemed not good vnto them, which Cortex granted, and at this day they are the best Indians, and the trueft Christians that are in New Spaine. The Spaniards that faw these cruell Sacrifices, refol-

50 used with all their power to abolish so detestable and cursed a butchering of men, and the rather, for that in one night before their eyes they faw threefcore or threefcore and tenne Spa- Spaniards factimarde factificed, which had beene taken in a battaile given at the Conquest of Mexico: and ficed. another time they found written with a Coale in a Chamber in Tezensco these wordes; Heere such a miserable man was Prisoner with his Companions whom they of Tezcusco did

There happened a very strange thing vpon this subiect, and yet true, beeing reported by men worthy of credit, which was that the Spaniards beholding these Sacrifices. baning opened and drawne out the heart of the lufte young man, and cast him from the rop of the stayres (as their custome was) when hee came at the bottome, hee said to the Aman speaker Spannards in his Language, Knights, they have flaine mee, the which did greatly moone our after his heart

men to horrour and pitie. It is no incredible thing, that having his heart pulled out, hee might is out. speake, seeing that Galen reports that it hath often chanced in the Sacrifice of beafts, after the Galen like de heart hath beene drawne out, and cast upon the Altar, the beasts have breathed, yea, they did His & Plates bray and cry out aloude, and fometimes did runne.

placit, cap.a.

will harb la-

In the first moneth, which in Peru they called Rayme, and answereth to our December, they made a most solemne feast, called Capacrayme, wherein they made many facrifices and ceremoboured to imi- nies, which continued many dayes : during the which, no stranger was suffered to becatche tate and coun. Court which was in Cufco. These dayes being past, they then gaue libertie to strangers to enter. terfair the Sathat they might be partakers of the feafts and facrifices, ministring to them in this manner. The comets of the Manacoma of the Sunne, which were a kinde of Nunnes of the Sunne, made little loaues of the flower of Mays, dyed and mingled with the bloud of white Sheepe, which they did factifice that day; then prefently they commanded that all strangers should enter, who set themselves that cay; then pretently they commanded that an analysis model with a principle of the first which were of a certaine Linge, defeending from Linguippapagi, gave to enery one a moriell of their imall loaus, faying voto them, that they gave their pretent to the end they flouid be control and confederate with the lingua, and that they admired them not to finde too! thinke any ill against the Ingua, but alwayes to beare him good affection, for that this piece foodle bee winesse of their intentions and will, and if they did not as they ought, hee would discover them and bee against them. They carried these small loaues, in great Platters of gold and silver appointed for that vie, and all did receive and eate these pieces, thanking the Sunne infinitely for fo great a fathat vie, and at our create and tate there preces, tomaking the South financity for to great a re-tour which he had done them, 'preaking wordes and making fignes of great contentment and deutotion: protesting that during their lives, they would neither doe not thinke any thing against the Sunne nor the Ingua: and with this condition they received this foods of the Samne, the which the same not the square and with the same of their fidelitie which they observed to the Sunne and to the Ingua their King. This manner of deutillish communicating they likewife yield in the tenth moneth, called Cojarajmo, which was September, in the folemne feaft which they called Crius, doing the like ceremonies. And besides this Communion (if it be lawfull to vie this word in so deuilluh a matter) which they imparted to all strangers that came, they did likewise send of these loanes to all their Guacas, Sanctuaries, or Idols of the whole Realme, and at one inflant they found people of all files, which came express to receive them, to whom they faid (indethey touth people at the same bad fort them that, in figure that he would have them at te worth and honer him, and thewife did find them in honer of the Cacipues. Some perhaps will hold this for a fable and a fiction : yet is it most true, that since the Ingua Tupangs (the which is heethat hath made most Lawes, Customes, and Ceremonies, as Nama did in Rome) this manner of Communion hat not there's continued, with that the Goffell of our Lord (fus Christ thruft our all thefe fuper-graphics), guing them the right foode of life, which vnites their foures to God: who fo would intissic himselfe more amply, let him reade the Relation which the Licenciate Pollo did write.

counterfait holy Sacra-

TT is a thing more worthy admiration, to heare fpeake of the Beaft and folemnitie of the Comner the Deuil Amunion which the Deuill himselfe, the Prince of Pride, ordained in Mexice, the which (alhath laboured though it be somewhat long) yet shall it not be from the purpose to relate as it is written by men of credite. The Mexicanes in the moneth of May, made their principall Feaft to their god Vite the reast of the ziliputzdi, and two dayes before this Feast, the Virgins whereof I have spoken (the which were fhut vp and secluded in the same Temple, and were as it were Religious women) did mingle a quantitie of the feede of Beetes with roafted Mays, and then they did mould it with honey, ma- 40 king an Lioll of that pafte, in bigneffe like to that of wood, putting in stead of eyes, graines of greene glasse, of blue, or white; and for teeth, graines of Mays, let forth with all the ornament and furniture that I haue faid. This being finished, all the Noblemen came and brought it an exquilite and rich garment, like vnto that of the Idoll , wherewith they did attyre it. Being thus clad and deckt, they did fet it in an azured Chaire, and in a Litter to carry it on theirshoulders. The morning of this feast being come, an houre before day, all the Maidens came forth attyred in white, with new ornaments, the which that day were called the fifters of their god Vitaliputali, they came crowned with Garlands of Mays reasted and parched, being like vinto Azahar or the flower of Orange, and about their necks they had great chaines of the same, which went bauldrickwife under their left arme. Their cheekes were dyed with Vermillion, their armes 50 from the elbow to the wrift, were couered with red Parrots feathers. And thus attyred, they tooke the Idoll on their shoulders, carrying it into the Court, where all the young men were attyred in garments of an artificiall red, crowned after the fame manner, like vnto the women. When as the Maidens came forth with the Idoll, the young men drew neere with much reuerence, taking the Litter wherein the Idoll was, vpon their shoulders, carrying it to the foote of the staires or the Temple, where all the people did humble themselves, laying earth upon their heads, which was an ordinarie ceremonie which they did observe at the chiefe feast of their gods. This ceremonie being ended, all the people went in Procession with all the diligence and speede they could, going to a Mountayne which was a league from the Citie of Mexico, called Chapulto 60 seper, and there they made facrifices. Presently they went from thence with like diligence, to goe to a place neere vnto it, which they called Atlacuyanaya, where they made their fecond station : and from thence they went to another Burgh or Village a league beyond Caroacen, from whence they parted, returning to the Citie of Mexico, not making any other station. They Went in this fort about foure leagues in three or foure houres, calling this Procession Trayna Vitz-

CHAP.5. Indian Transubstantiation, Communication, Confession et c.

lipstali. Being come to the foot of the flaires, they fee downe the Brancard or Litter with the [doll, tying great Cordes to the armes of the Brancard, then with great objectuance and reutrence. they did draw up the Litter with the Idoll in it to the top of the Temple, fome drawing about, and others helping below, in the meane time there was a great noyle of Flutes, Trumpets, Cornets, and Drummes. They did mount it in this manner, for that the flayres of the Temple were very fleepe and narrow, to as they could not carry up the Litter upon their floulders, while The Deuillisthey mounted up the Idoll, all the people ftood in the Court with much reuerence and feare, king that va-Being mounted to the top, and that they had placed it in a little Lodge of Rofes, which they christian, and held readie. prefently came the young men, which firewed many flowers of fundrie kindes, productous of 10 wherewith they filled the Temple both within and without. This done, all the Virgins came pinion of transout of their Couent; bringing pieces of paste compounded of Beetes, and roasted Mays, sistiffantision, which was of the same paste whereof their Idoll was made and compounded, and they were and the confeof the fashion of great bones. They deliuered them to the young men, who carried them vp tion, adoratiand laid them vp, and laid them at the Idols feece, wherewith they filled the whole place, on refernation that it could receive no more. They called these morfels of paste, the fiesh and bones of Vite- on corpuctoriliputali. Hatting laid abroad thefe bones, prefently came all the Ancients of the Temple, Prieffs, fimad folem-Leuites, and all the reft of the Ministers, according to their Dignities and Antiquities, für latrous proherein there was a ftrict order among ft them, one after another, with their vailes of divers coffiont with colours and workes, every one according to his Dignitie and Office, having Garlands vpon rites beyond 20 their heads, and Chaines of flowers about their necks : after them came their gods and goddeffes any former whom they worshipt, of divers figures, attyred in the same liverie; then putting themselves Paganisme, in whom they worming, or diders inguite, any state of they wied certaine ceremonies with finging true Sicraand dancing. By meanes whereof they were bleffed and confectated for the fielh and bones of ment, failly this Idell.

This ceremonie and bleffing (whereby they were taken for the flesh and bones of the Idoll) be- their Idoll an ing ended, they honored thole pieces in the fame fort as their god. Then came forth the Sacri
fice which ham ficers, who began the facrifice of men, in the manner as hath beene spoken, and that day they coff so many did facrifice a greater number then at any other time, for that it was the most folemne feast thousand they observed. The facrifices being ended, all the young Men and Maides came out of the Tem- their bloud in

30 ple attyred as before, and being placed in order and ranke one directly against another, they fire and other-danced by Drummes the which founded in praise of the Feast, and of the Idolf which they did celebrate. To which fong all the most ancient and greatest noble-men did answere, dancing a disputing of bout them, making a great circle as their vie is, the young Men and Maides remayning alwayes Christsnaus in the middeft. All the Citie came to this goodly spectacle, and there was a commandement ve- rallbody and in the similater. An increment was goody journal to the fact of the Ideal Franklingura, is despiting as they should act on other meate, but this patte with hony, whereof the Ideal War amade. And supplies the should act on other meate, but this patte with hony, whereof the Ideal War amade. And supplies Ideal War and the Ideal War and the Ideal War and the Ideal War and Ideal War after noone : they held it for an ill figne, yea for facrilege, to doe the contrarie; but after the nothing finer after noone: they held it for an ill ligne, year for factinge, to due the contraint of this ceremonie, to transport ceremonies eaded, it was lawfull for them to eate any thing. During the time of this ceremonie, to transport

to drinke any water; which if the widthen, admonthing all such as had the vice of reason, not to drinke any water; which if they did, the anger of God would come vport them, and they contraine to should die, which they did obserue very carrfully and strictly. The ceremonies, dancing, and sense, reasonfacrifice ended, they went to vnclothe theralelues, and the Priefts and Superiors of the Temple religion, hufacrifice ended, they went to violothe themselves, and the Frients and outperiors of the Legislation tooke the Idoll of patte, which they spoyled of all the ornaments it had, and made many pieces, wherein more wherein more as well of the Idoll it felfe as of the Tronchons which were conferrated, and then they gaue to triumpho. them to the Communion, beginning with the greater, and continuing vnto the rest, both Men, uer mankinde Women, and little Children; who received it with fuch teares, feare, and reverence, as it was an in all thefe, admirable thing, faying, that they did one the fleft and bones of God, wherewith they were grie- then this bruued. Such as had any licke folkes demanded thereof for them, and carried it with great reueand blondie 50 rence and veneration.

All fuch as did communicate, were bound to give the tenth of this feede, whereof the Idoll heredeferiwas made. The folemnitie of the Idoll being ended, an old man of great authoritie flept vp into bed. a high place, and with a loud voice preached their Law and Ceremonies.

THe father of Iyes would likewife counterfait the (Romifh) Sacrament of Confession, and in Of Confession.

Of Confession his Idolatries feeke to be honored with ceremonies very like to the manner of Christians. and Confession. In Perm they held opinion, that all difeates and advertities came for the finnes which they had from which the committed : for remedie whereof they vied facrifices : moreouer, they confessed themselves ver- indian vied. bally, almost in all Provinces, and had Confessor appointed by their Superiors to that end, there Referred ea 60 were some sinnes reserved for the Superiors. They received penance, yea somtimes very sharply, ses as in Papall especially when the Offendor was a poore man, and had nothing to give his Confessor. This of penance.

fice of Confessor was likewise exercised by Women. The manner of these Confessor Sorcerers whom they call Tchurs or Tchurs, bath beene most generall in the Provinces of Collasute. They hold opinion, that it is a haynous finne to conceale any thing in confession. The Teburi or Con-

fessors discourred by lots, or by the view of some beast Hides, if any thing were concealed, and punished them with many blowes with a flone vpon the shoulders, vntill they had revealed all. Then after they gaue him penance and did facrifice. They doe likewife whethis confellion, when their children, wines, busbands, or their Caequer be icke, or in any great exploit. And when their Ingua was ficke, all the Prounces confelled themselves, chiefly those of the Province of Collas. The Contessors were bound to hold their Confessors (ecret, but in certaine cases limited. The finnes that they chiefly confest d, was first to kill one another out of warre, then to steele to take another mans wife, to give poylon or forcerie to doe any harmer and they held it to be a gricuous tinne, to be forgetfull in the reverence of their Guncar, or Oratories, not to observe the Fealts, or to speake ill of the Ingua, and to disobey him. They accused not themselves of any fe- 19 cretacts and linnes. But according to the report of tome Priefts, after the Christians came into that Country, they accused themselues of their thoughts. The Ingua confessed himselfe to no man, but onely to the Same, that hee might tell them to Viracheca, and that hee might foreign them. After the Ingua had been confessed, he made a certaine bath to cleanse himselfe in a ninning River, faying thele wordes: I have told my finnes to the Sunne, receive them, O thou River, and carry them to the Sea, where they may never appeare more. Others that confessed, vied likewise these baths, with certaine ceremonies very like to those the Moores vie at this day, which they call Guadoy, and the Indians call them Opacuna, When it chanced that any mans children dyed, hee was held for a great finner, faying, that it was for his finnes that the sonne dyed before the father. And therefore those to whom this had chanced, after they were confessed, were bathed 30 in this bath called Opacuna, as is faid before. Then fome deformed Indian, crooke-backt, and counterfait by nature, came to whip them with certaine Nettles. If the Sorcerers or Inchanters by their lots and diminations, affirmed that any ticke body should die, the ticke man makes no difficultie to kill his owne fonne, though he had no other, hoping by that meanes to escape death. faving, that in bis place he offered his sonne in sacrefice. And this crueltie hath beene practifed in of deuillith di- fome places, euen ince the Christians came into that Country. In truth it is strange, that this cuftome of confessing their fecret finnes, hath continued to long amongst them, and to doe fo first penances, as, to fast, to give apparell, gold and silver, to remaine in the Mountagnes, and to receine many fripes upon the floulders. Our men fay, that in the Province of Chiquito, even at this day they meet with this plague of Confesors or Teburu, where as many sicke persons repaire vn- 30 to them : but now, by the grace of God, this people begins to fee cleerly the effect and great benefit of our Confession, whereunto they come with great deuction.

Penances.

I will report the manner of a strange confession the Deutl hath invented at Ispon, as appeares by a Letter that came from thence, which is th thus : There are in Ocaca very great and high and fleepe Rocks, which have pricks or points on them, above two kundred fathom high. A. mongft these Rocks there is one of these pikes or points to terribly high, that when the Xamabu. fis (which be Pilgrimes) doe but looke vp vnto it, they tremble, and their baire stares, fo fearfull and horrible is the place. Vpon the top of this point there is a great rod of Iron of three fathom long, placed there by a strange denice, at the end of this rod is a billance eyed, whereof the scries are to bigge, as a man may fit in one of them : and the Goguis (which be Devils in humane share) 40 command these Pilgrimes to enter therein one after another, not leaving one of them : then with an engine or instrument which mooueth, by meanes of a wheele, they make this rod of Iron whereon the ballance is hanged, to hang in the aire, one of thele Xamabufir being fet in one of the fcales of the ballance. And as that wherein the man is fet hath no counterpoise on the other fide, it presently hangeth downe, and the other riseth vntill it meets with and toucheth the rod: then the Gogues telleth them from the Rocke, that they must contesse themselves ot all the sinnes they have committed, to their remembrance, and that with a loud voyce, to the end that all the rest may heare him. Then presently hee beginneth to confesse, whilest some of the standers by doe laugh at the finnes they doe heare; and others figh, and at every finne they confesse, the other feale of the ballance falls a little, vntill that having told all his finnes, it remaines equall with the other, wherein the forrowfull penitent fits : then the Goguis turnes the wheele, and drawes the rol and ballance vnto him, and the Pilgrime comes forth; then enters another, vntill all have peffed. A laponois reported this after he was christned, faying, that hee had beene in this pilgrimage, and entred the ballance feuen times, where he had confessed himselfe publikely. Hee faid moreover, that if any one did conceale any finne, the emptie feale yeelded not : and if hee grew obilinate after inflance made to confesse himselfe, refusing to open all his sinnes, the Gogais cast him downe from the top, where in an instant he is broken into a thousand pieces. Yet this Chri-Of the shami nable Viction flian, who was called lokn, told vs, that commonly the feare and terror of this place is so great to all fuch as enter therein, and the danger they fee with their eyes, to fall out of the ballance, and to be broken in pieces, that feldom there is any one but difcouers all his finnes. This place is called by another name Sangenotocore, that is to lay, the place of Confession.

The Priefts of the Idols in Mexico were anointed in this lore; they anointed the body from the roote to the head, and all the haire likewise, which hung like treffes, or a Horie era tachinate, for that they applyed this Vaction wet and moift. Their haire grew to, as in time it

hung downe so their hammes, fo heavily, that it was troublefome for them to beare it, for they Haire-fuperdid neuer cut it, vntill they dyed, or that they were difpenfed with for their great age, or being filicen. employed in gouernments or fome honorable charge in the Commonwealth. They carried their haire in trelles, of fixe fingers breadth, which they dyed blacke with the fume of Sapine, of Fire trees, or Roin; for in all Antiquitie it hath beene an offering they made vnto their Idols, and for this cause it was much esteemed and reuerenced. They were alwayes dyed with this tincture from the foot to the head, so as they were like vnto shining Negroes, and that was their ordinary Vaction : yet when as they went to facrifice and give Incense in the Mountaines, or on the tops thereof, or in any darke and obfcure Caues, where their Idols were, they yied an other kinde of

CHAP.S. Wicked effects of denillift unction; Dininations, Sorcerers.

voction very different, doing certaine ceremonies to take away feare, and to give them courage. This vnction was made with divers little venemous beatts, as Spiders, Scorpions, Palmers, Salamanders and Viners, the which the Boyes in the Colledges tooke and gathered together, wherein they were fo expert, as they were alwayes furnished when the Priests called for them. The chiefe care of these Boyes was, to hunt after these beasts; if they went any other way, and by chance met with any of these beatts, they stayed to take them, with as great paine, as if their lines depended thereon. By the reason whereof the Indians commonly feared not these venemous beafts, making no more account then if they were not fo, having beene all bred in this exercile. To make an ointment of their beafts, they tooke them all together and burnt them voon the harth of the Temple, which was before the Altar, vntill they were confumed to affice ; then and did they put them in Morters with much Tobacco or Peturn (being an herbe that Nation vieth

much, to benum the fielh, that they may not feele their trauell) with the which they mingle the after, making them lofe their force; they did likewife mingle with these after, Scorpions, Spiders, and Palmers aliue, mingling all together, then did they put to it a certaine feede being grownd, which they call Ololuchqui, whereof the Indians make a drinke to fee vitions, for that Vision oints the vertue of this herbe is to deprine man of fenfe. They did likewife grinde with thefe aftes ment. blacke and havrie wormes, whole haire onely is venemous, all which they mingled together with blacke, or the fume of Rolin, putting it in small pots, which they set before their god, fayine it was his meat. And therefore they called it a divine meat. By meanes of this ountment Like line, like they became Witches, and did fee and freake with the Deuill. The Priefts being flibbered with Lettuce.

30 this ointment, loft all feare, putting on a Spirit of crueltie. By reason whereof they did very boldly kill men in their facrifices, going all alone in the night to the Mountaines, and into obscure Caues, contemning all wilde beasts, and holding it for certaine and approved, that both Lions, Tigres, Serpents, and other furious beafts which breed in the Mountaines, and Foreits, fled from them, by the vertue of this Petum of their god.

And in truth, though this Petum had no power to make them flie, yet was the Deuils picture fufficient whereinto they were transformed. This Petum did also ferne to cure the ticke, and for children; and therefore all called it the dinine Phylicke; and fo they came from all parts to the Superiors and Priests, as to their Sauiours, that they might apply this dinine physicke, wherewith they anointed those parts that were grieved. They faid that they felt hereby a notable case.

40 which might be, for that Tobacco and Ololuchqui haue this propertie of themselves, to benum Benuming the fielh, being applyed in manner of an emplay fter, which must bee by a stronger reason being bacco mingled with poylons, and for that it did appeale and benum the paine, they held it for an effect of health, and a diuine vertue. And therefore ran they to these Priests as to hely men, who kept the blinde and ignorant in this error, perswading them what they pleased, and making them runne after their inventions and deuillish ceremonies, their authoritie being such, as their wordes were fufficient to induce beliefe as an article of their Faith. And thus made they a thousand superstitions among the vulgar people, in their manner of offering Incense, in cutting their haire, tying small flowers about their necks, and strings with small bones of Snakes, commanding them to bathe at a certaine time; and that they should watch all night at the harth, left the fire should

50 die, that they should eate no other bread but that which had beene offered to their gods, that they should upon any occasion repayre unto their Witches, who with certaine graines told for- Divinations, tunes, and digined, looking into Keelers and Pailes full of water. The Sorcerers and Ministers of the Deuill vied much to beimeare themielues. There were an infinite number of theie Witches, Dininers, Enchanters, and other falle prophets, There remaynes yet at this day of this infection. although they bee fecret, not daring publikely to exercise their facrileges, deuillish ceremonies and superstitions, but their abuses and wickednesse are discovered more at large and particularly in the confessions made by the Prelates of Pers.

There is a kinde of Sorcerers among it the Indians allowed by the Kings Inguis, which are as Strange Sorit were Sooth-fayers, they take upon them what forme and figure they pleafe, flying far through ceres. 60 the aire in a short time, beholding all that was done. They talke with the Deuill, who answereth them in certaine stones or other things which they reuerence much. They serue as Conjurers. to tell what hath palled in the farthest parts, before any newes can come. As it hath chanced fince the Spannards arrived there, that in the diffance of two or three hundred leagues. they have knowne the Mutinies, Battailes, Rebellions, and Deaths, both of Tyrants, and of

which the Priefte and

those of the Kings partie, and of private men, the which have beene knowne the same day they chanced, or the day after, a thing impossible by the course of nature. To worke this divination. they that themselves into a house, and became drunke vntill they lost their fenses, a day after they answered to that which was demanded. Some affirme they vie certaine Vnctions. The la dians fay, that the old women doe commonly vie this office of witchcraft, and specially those of one Pronince, which they call Coaillo, and of another Towne called Manchey, and of the Prouince of Guarochiri. They likewife shew what is become of things stollen and lost. There are of these kindes of Sorcerers in all parts, to whom commonly doe come the Anaconas, and Cyna, which ferue the Spaniards, and when they have loft any thing of their Mafters, or when they defire to know the fuccifie of things patt or to come, as when they goe to the Spaniards Cities 10 for their private affaires, or for the publike, they demand if their voyage shall bee prosperous. if they shall be sick, if they shall die, or returne sate, if they shall obtaine that which they pretend: and the Witches or Cor jurers answer, Yea, or No, having first spoken with the Deuill, in an obfeure place: so as these Anaconas do well heare the found of the voyce, but they see not to whom thele Conjurers speake, neither doe they understand what they say. They make a thousand ceremonies and facrifices to this effect, with the which they mocke the Deuill and grow exceeding drunke, for the doing whereof, they particularly vie an herb called Villes, the juyce whereof they mingle with their (buca, or take it in some other fort.

the ancient Law of Mefes, and some to those which the Moores vie, and some approched

neere to the Law of the Golpell, as their Bathes or Opacuna, as they call them : they did wash

He Indians had an infinite number of other ceremonies and cultomes, which refembled to Of other Ceremoni sa d Customes of th · Indiane which are like voto curs. Mexican Bap-

themielues in water, to clenie them from their finnes. The Mexicans had also amongst them a kinde of Baptifme, the which they did with ceremonie, cutting the eares and members of young children new borne, counterfaiting in some fort the Circumcision of the lewes, This ceremonie was done principally to the sonnes of Kings and Noblemen : prefently upon their birth the Priefts did wash them, and did put a little Sword in the right hand, and in the left a Target, And to the Children of the vulgar fort, they put the markes of their offices, and to their Daughters inftruments to fpin, knit, and labour. This ceremonie continued four dayes, being made before Marriage co fome Idoll, They contracted marriage after their manner, whereof the Licenciate Pollo hather written a whole Treatife, and i will tpeake fomewhat thereon hereafter. In other things their cultomes and ceremonies have some shew of reason. The Mexicans were married by the hands of their Priefts in this fort, The Bridegroome and the Bride flood together before the Prieft. who tooke them by the hands, asking them if they would marry; then having underflood their wills, he tooke a corner of the vaile where with the woman had her head covered, and a corner of the mans gowne the which he tyed together on a knot, and foled them thus tyed to the Bridegroomes house, where there was a harth kindled, and then he caused the wife to goe senen times about the harth, and to the married couple fate downe together, and thus was the marriage contracted. The Mexicans were very jealous of the integritie of their wives : fo as if they found they were not as they ought to bee (the which they knew either by fignes or dishonest wordes) they 40 prefently gaue notice thereof to their fathers and kinsfolks of their wives . to their great shame and diffionor, for that they had not kept good guard ouer them. When they went to the house they made an Inventorie of all the man and wife brought together, of prouitions for the house, of land, of jewels and ornaments, which Inventories every father kept, for if it chanced they made any divorce (as it was common amonest them when they seree not) they divided their goods according to the portion that every one brought, every one having libertie in fuch a cafe, to marry whom they pleased : and they gave the Daughters to the Wife, and the Sonnes to the Husband. It was defended your paine of death, not to marry againe together, the which they observed year ry ftrictly. And although it feeme that many of their ceremonies agree with ours, yet differ they much for the great abomination they mingle therewithall. It is common and generall to 50 have vivally one of these three things, either Crueltie, Filthinesse, or Slouth : for all their ceremonies were cru: Il and hurrfull, as to kill men and to spill bloud; or filthy and beaftly, as to eate and drinke to the name of their Idols, and also to pille in the honour of them, carrying them vpon their shoulders, to anoint and befineare themselves filthily, and to doe a thousand forts of villanies, which were at the leaft, vaine, ridiculous, and idle, and more like the actions of children, then of men. Whereas the temporall power was greatest, there superstition hath most increafed, as we fee in the Realmes of Mexico and Cufco, where it is incredible to fee the number of Idols they had : for within the Citie of Mexico there were about three hundred. Mango Ingus Tupangui, among it the Kings of Cufco, was he that most augmented the service of their Idols, inuenting a thousand kindes of sacrifices, feasts, and ceremonies. The like did King Iscoalt in 60 Mexico, who was the fourth King. There was also a great number of superstitions and sacrifices in other Nations of the Indians, as in the Province of Guatimala, at the Ilands in the new Kingdome, in the Province of Chille, and others that were like Commonwealths and Comminalties. But it was nothing in respect of Mexico and Cufco, where Satan was as in Rome, or in his

The Inguas Lords of Pera, had two kindes of Feaths. Some were ordinarie, which fellout Bross critical in certayne moneths of the yeere : and others extraordinarie, which were for certayne today them of caules of importance, as when they did crowne a new King, when they Legame Calco man w fome warre of importance, when they had any great need of water or drought, or o- the Duil. ther like things. For the ordinary Feafls, wee must vnderstand, that enery moneth of the would imitate yeere they made Feafts, and divers Sacrifices, and although all of them had this alike, that the holy frome they offered a hundred sheepe: yet in colour, and in forme they are very diners. In the first tin changes, moneth which they call Rayme, which is the moneth of December, they made their first Feath, Rayme teast. which was the principall of all others, and for that cause they called it Capacrayme, which is to 10 fav. A rich and principall Feast. In this Feast they offered a great number of theene and Lambre

in Sacrifice, and they burnt them with fweet wood, then they caused Gold and Silver to bee brought vpon certayne sheepe, setting vpon them three Images of the Sunne, and three of the Thunder, the Father, the Sonne, and the Brother. In these Feats they dedicated the Inques children, putting Guaras, or Enfignes vpon them, and they pierced their eares : then fome old man did whip them with flings, and announted their faces with bloud, all in figure that they should be true Knights to the Ingua. No ftranger might remayne in Cufco during this moneth, and this Feast, but at the end thereof they entred, and they gave vnto them pieces of the paste of Mays with the bloud of the Sacrifice, which they did eate in figure of confederation with the Inquis.

as hath beene faid before. It is strange that the Deuill after his manner hath brought a Trimitie 20 into Idolatry, for the three Images of the Sunne called Apomti, Churunti, and Intiguacqui which Indian Times fignifieth Father and Lord Sunne, the Sonne Sunne, and the Brother Sunne. In the like manner. they named the three Images of Chuquilla, which is the God that rules in the Region of the Avre. where it Thunders, Raines and Snowes. I remember, that beging in Chamface, an honourable Priest shewed me an information, which I had long in my hands, whereit was prooued that there was a certayne Guaca or Oratory, whereas the Indians did worship an Idoll called Tangatanga, which they faid was one in three, and three in one. Comming then to the Feast of the second moneth, which they called Camey, besides the Sacrifices which they made, they Camey-Seastdid cast the ashes into the River, following five or fixe leagues after, praying it to carry them into the Sea, for that the Virochoca should there receive this present. In the third, fourth and

30 fift moneth, they offered a hundred blacke sheepe, speckled, and grey, with many other things. which I omit for being too tedious. The fixt moneth is called Hatunenz qui Armores, which aniwereth to May, in the which they facrificed a hundred sheepe more, of all colours : in this Moone and moneth, which is when they bring May from the fields into the house, they made a Feast, which is yet very vivall among the Indians, and they doe call it Aymore,

This realt is made comming from the Chara or Farme vnto the house, saying certayne Songs, and praying that the Mays may long continue, the which they call Managora. They takes certayne portion of the most fruitfull of the Maysthat growes in their Farmes, the which they put in a certayne Granier which they doe call Pirna, with certayne Ceremonies, watching three nights: they put this Mays in the richeft garments they have, and being thus wrapped and dref-40 fed, they worthip this Pirna, and hold it in great veneration, faying it is the Mother of the Mays of their Inheritances, and that by this meanes the Mays augments and is preferred. In this moneth they make a particular Sacrifice, and the Witches demand of this Pirua, if it hath ftrength sufficient to continue vntill the next yeere : and if it answeres No, then they carry this Mays to the Farme to burne, whence they brought it, according to every mans power; then make they another Pirus, with the same Ceremonies, saying that they renew it to the end the Seed of Mays may not periff, and if it answers that it bath force sufficient to last longer, they leave it untill the next yeere. This foolish vanitie continueth to this day, and it is very common amongft the Indians to have these Piruas , and to make the Feast of Aymorey. The seventh moneth answereth to Iune, and is called Ancaycuzqui Intiraymi, in it they made the Feath that is called Intiraymi, in the which they facrificed a hundred sheepe called Guanacos, and faid it was the Feaft of the Sinne. In this moneth they made many Images of Ouinus wood carried, all Imitemitical

attired with rich garments, and they made their dancings which they doe call Caye. At this Feath they call flowers in the high wayes, and thither the Indians came painted, and their Noblemen had fmall plates of Gold upon their beards, and all did fing; we must understand that this Feath falleth almost at the same time, when as the Christians objecte the Solemnitie of the hote Coreus Christians Sacrament, which doth refemble it in iome fort, as in dancing, finging and reprefentations. And day recembled for this cause there hath beene, and is yet among the Indians (which celebrated a Feast somewhat like to outs of the holy Sacrament) many Superifitions in celebrating this ancient Feaft of Intiraymi. The eight moneth is called Chahua Huarqui, in the which they did burne a hundred theep 60 more, all grey, of the colour of Viscacha, according to the former order, which moneth doth anfwere to our Iuly. The ninth moneth was called Tapaguis, in which they burnt an hundred

sheepe more, or a Chefnut colour; and they doe like wile kill and burne a thouland Cuyes, to the end that neither the Frost, the Ayre, the water nor the Sunne should burt their Farmes; and this moneth doth answere vnto August. The tenth moneth was called Coyarami, in the which

1046 Peruan Drunken Feast Situa; Itu-fast and procession. Mexican Inbilee. LIRV

they burnt a hundred white sheepe that had sleeces. In this moneth which answereth to Sentember, they made the Featt called Situa, in this manner. They affembled together the first day of the Moone before the rifing thereof; and infeeing it they cryed aloude, carrying Torches in their hands, and faying, Let all harme goe away, firiking one another with their Torches, They that did this, were called Panconcos: which being done, they went to the common Bath, to the Rivers and Fountaines, and every one to his owne Bath, fetting themselves to drinke foure dayes together. In this moneth the Mamacomas of the Sunne made a great number of small Loanes with the bloud of the Sacrifices, and gaue a piece to enery firanger; yea, they fent to enery Guaca throughout the Realme, and to many Curacus, in figne of confederation and loyaltie to the Sun and the Inoua, as hath beene faid.

The Bathes, drunkennesse and some Relickes of this Feast Sinna, remayne even unto this day. 10 in some places, with the Ceremonies a little different, but yet very secretly, for that these chife and principall Feasts have ceased. The eleventh moneth Homaraymi Punchaiquis, wherein they factficed a hundred theepe more. And if they wanted water, to procure raine, they fet a blacke theene tyed in the middeft of a Plaine, powring much Chica about it, and giving it nothing to eate wntill it rayned, which is practited at this day in many places, in the time of our October. The twelfth and laft moneth was called Aymara, wherein they did likewife facrifice a hundred sheepe, and made the Feast called Raymicantara Raquis. In this moneth which answered to our November, they prepared what was necessary for the Children that should bee made Novices, the moneth following, the Children with the old men made a certayne flew, with rounds 20 and turnings: and this i east was called Ituraymi, which commonly they make when it raines too much, or too little, or when there is a plague.

Among the extraordinary Feafts which were very many, the most famous was that which they called Ten. This Feath Ten hath no prefixed time nor leafon, but in time of necessities To prepare themselves thereunto, all the people fasted two dayes, during the which they did neither company with their wines , nor eate any meate with Salt or Garlicke , nor drinke any Chica. All old affemble together in one place, where no ftranger was admitted. nor any bealt : they had Garments and Ornaments, which ferued onely for this Feast, They marched very quietly in Proceifion , their heads couered with their Veiles, founding of Drummes, without speaking one to another. This continued a day and a night; then the day 30 following they danced and made good cheere for two dayes and two nights together, faying, that their Prayer was accepted. And although that this Feaft is not yied at this day, with all this ancient Ceremony, yet commonly they make another which is very like, which they call Anna, with Garments that serue onely to that end, and they make this kinde of Procession with their Drummes, hauing fasted before, then after they make good cheere, which they vfually doe in their vegent necessities. And although the Indians forbeare to facrifice bealts, or other things publikely, which cannot be hidden from the Spaniards, yet doe they still vie many Ceremonies that have their beginnings from thele Featls and ancient Superflitions : for at this

day they doe couertly make this Featt of Yin, at the dances of the Featt of the Sacrament, in

making the dances of Lyamallama, and of Guacon, and of others, according to their ancient Ce- 40

the Mexicans

Of the feaft of THe Mexicans have beene no leffe curious in their Feafts and Solemnities, which were of I fmall charge, but of great effusion of mans bloud. We have before spoken of the principall Feaft of Unzaliputzli, after the which the Feaft of Tezcalipuca was most folemnized. This Featt fell in May, and in their Kalender they called it Tozcole: it fell every foure yeere with the feaft of Penance, where there was given full indulgence and remission of tinnes. In this day they did facrifice a Captine which refembled the Holl Texcalipnen, it was the nineteenth day of May: vpon the Euen of this Feaft, the Noblemen came to the Temple, bringing a new Garment like vnto that of the Idell, the which the Priest pnt vpon him , having first taken off his other Ger- so ments, which they kept with as much, or more reuerence then wee doe our Ornaments. There were in the Coffers of the Idoll many Ornaments, Iewels, Earerings, and other Riches, as Bracelets, and precious Feathers which ferued to no other vie, but to be there, and was worshipped as their God it felfe. Belides the Garment wherewith they worthinged the Idoll that day, they put you him certayne enfignes of Feathers, with fannes, shadowes and other things, being thus attired and furnished, they drew the Curtayn or Veile from before the doore, to the end he might be seene of all men; then came forth one of the chiefe of the Temple, attyred like to the Idoll, carrying flowres in his hand, and a Flute of earth, having a very fharpe found, and turning towards the East, he founded it, and then looking to the West, North and South he did the like. And after he had thus founded towards the foure parts of the World (shewing that both they that were prefent and abfent did heare him) he put his finger into the Ai. e, and then gathered vp earth, which hee put in his mouth, and did eate it in figne of adoration. The like did all they that were present, and weeping, they fell flat to the ground, inuocating the dark reffe of the night, and the winds, intreating them not to leave them, nor to forget the n, or elfe to take away

CHAP. S. Rogations for rain. Tezcalipuas Litter-procession. Manguey whippings. 1047

their lines, and free them from the labours they endured therein. Theenes, Adulterers, and Murtherers, and all other offenders had great feare and heavineffe, whilest this Flute sounded; to a some could not diffemble nor hide their offences. By this meanes they all demanded no other thing of their God, but to haue their offences concealed, powring forth many teares, with great repentance and forrow, offering great store of Incense to appeale their Gods. The couragious and valiant men, and all the old Souldiers, that followed the art of Warre, hearing this Flute, demanded with great denotion of God the Creator, of the Lord for whom we line, of the Sun, and of other their Gods, that they would give them victory against their enemies, & strength to take many Captines, therewich to honour their Sacrifices. This Ceremony was done ten dayes beto fore the Featt : During which ten dayes the Priest did found this Flate, to the end that all might doe this worship in eating of earth, and demand of their Idoll what they pleased ; they every day made their Prayers, with their eyes lift vp to Heauen, and with fighs and groanings, as men that were grieued for their finnes and offences. Although this contrition was onely for feare of the corporall punishment that was given them, and not for any feare of the eternall, for they certainly beleeued there was no fuch feuere punishment in the other life. And therefore they offered themselves voluntarily to death, holding opinion that it is to all menan affured reft. The first day of the Feat of this Idoll Texcalpuca beeing come, all they of the Citicassem-

bled together in a Court, to celebrate likewife the Peaft of the Kalender, whereof we have already fooken, which was called Toxcoalib, which fignifies Adry thing : which Feaft was not 20 made to any other end, but to demand raine, in the fame manner that wee folemnize the Rogatione; and this Fealt was alwayes in May, which is the time that they have most need of raine in those Countreves. They beganne to celebrate it the ninth of May, ending the nineteenth. The lait day of the Feast the Pricits drew forth a Litter well furnished with Curtaynes and Pendants of divers falhions. This Litter had so many armes to hold by as there were Ministers to carrie it, All which came forth besmeered with blacke and long haire, halfe in treses with white frings, and attyred in the livery of the Idoll. Vpon this Litter they fet the personage of the Idoll, appointed for this Feast, which they called the refemblance of their God Tezcalipuca, and taking it voon their shoulders, they brought it openly to the foot of the staires: then came forth the young men and Maydens of the Temple, carrying a great coard wreathed of chaines 30 of roafted Mays, with the which they enuironed the Litter, and putting a chaine of the fame about the Idols necke, and a Garland vpon his head. They called the coard Toxcals, fignifying the drought and barrennesse of the time. The young men came wrapped in red Curtaines, with Garlands and chaines of roafted Mays. The Maydes were clothed in new Garments, wearing chaines about theirs neckes of roasted Mays; and voon their heads Mytres made of rods coursed with this Mays, they had their feet covered with feathers, and their armes and cheekes painted. They brought much of this roafted Mays, and the chiefe men put it vpon their heads, and about their neckes, taking flowres in their hands. The Idoll being placed in his Litter, they strewed round about a great quantitie of the boughes of Manguey, the leaves whereof are large and

pricking.

This Litter being fet vpon the religious mens shoulders, they carried it in Procession within the circuit of the Court, two Priests marching before with Cenfors, giving often Incense to the Idoll; and every time they gave Incense, they lifted up their armes as high as they could to the Idoll, and to the Sunne, faying, that they lifted up their Prayers to Heauen, euen as the smoke ascended on high. Then all the people in the Court turned round to the place whither the Idoll went, every one carrying in his hand new coards of the threed of the Manguey. , a fadome long, with a knot at the end, and with them they whipped themselues vpon the shoulders even as they doe here vpon holy Thursday. All the wals of the Court and Battlements were full of boughes and flowres, fo fresh and pleasant, asit did give a great contentment. This Procession being ended, they brought the Idoll to his viuill place of abode. Then came a great multitude of 50 people with flowres, dreffed in divers forts, wherewith they filled the Temple and all the Court,

lo as it feemed the ornament of an Oratory. All this was put in order by the Priests, the young men administring these things vnto them from without. The Chappell or Chamber where the Idoll remay ned was all this day open without any Veile.

This done, every one came and offered Curtines, and pendants of Sandally . precious Stones, Iewels, Incence, sweet wood, Grapes, or eares of Mays, Quailes : and finally, all they were accustomed to offer in fuch folemnities. When as they offered Quailes (which was the poore mans offering) they yied this ceremonie, they defluered them to the Priefts, who taking them, pulled off their heads, and cast them at the foote of the Altar, where they lost their bloud, and fother did of all other things which were offered. Every one did offer meate and fruite accor-

60 ding to their power, the which was laid at the foote of the Altar, and the Ministers gathered them up, and carried them to their Chambers. This folemne offering done, the people went to dinner, every one to his village or house, leaving the feast suspended vntill after dinner. In the meane time, the yong Men and Maidens of the Temple, with their ornaments, were builed to ferue the Idoll, with all that was appointed for him to eate : which meate was prepared by

other women, who had made a vow that day to ferue the Holl. And therefore fuch as had made other women, who had made a von the day, offering themselves to the Deputies of the Temple, that they might command them what they would have done, the which they did carefully performe. They did prepare such variety of meates, as it was admirable. This meatebeing ready, and the houre of dinner come, all these Virgins went out of the Temple in procession, energone carrying a little basket of bread in her hand, and in the other, a dish of these meates; before them marched an old man, like to a steward, with a pleasant habit, he was cloathed in a white Surples downe to the calues of his legges, vpon a doublet without fleenes of red leather, like to a jacket. he carried wings inflicad of fleenes, from the which hung broad ribbands, at the which did have a small Calibaffe or pumpion, which was couered with flowers, by little holes that were made in it, and within it were many inperfittious things. This old man thus attyred, marched very 10 humbly and heavily before the preparation, with his head declining; and comming neere the foote of the staires, he made a great obessance and reuerence. Then going on the one side, the Virgins drew neere with the meate, presenting it in order one after another, with great reuerence. This service presented, the old man returned as before, leading the Virgins into their conuent. This done, the yong men and ministers of the Temple, came forth and gathered vp this meate, the which they carried to the Chambers of the chiefe Priests of the Temple, who had faited fine dayes, eating onely once a day, and they had also abstained from their wines, not once going out of the Temple in these sine dayes. During the which they did whip themselnes once going out or the a compact in the characteristic means (for fo they called it) what they could, was it lawfull for any other to eate thereof. All the people having dined, they affembled againe was it awant to any other to the feath, whither they brought a captine, they attempted agains in the court to fee the end of the feath, whither they brought a captine, which by the space of a whole yeare, had represented the idoll; being attired, decked, and honoured, as the idoll it felfe, and doing all reuerence vinto him, they deliuered him into the hands of the fact ficers, who felte, and doing an extract remodels, taking him by the feete and hands. The Pope did open his from act that inflatan preferred themselues, taking him by the feete and hands. The Pope did open his flomacke, and pull our his heart, then did he lift up his hand as high as he could, flewing it to the Sunne, and to the Idoll, as hath beene faid. Hauing thus facrificed him that reprefented the the same and the represented the Idoll, they went into a hely place appointed for this purpose, whither came the yong Menand Virgins of the Temple, with their ornaments, the which being put in order, they danced and fung with Drummes and other instruments, on the which the chiefe Priests did play and found. Then came all the Noblemen with enfignes and ornaments like to the yong men, who danced round about them. They did no: vfually kill any other men that day, but him that was facrificed, yet every fourth yeare they had others with him, which was in the yeare of Iubile and full pardons. After Sunne set, every one being satisfied with sounding, eating, and drinking, the Virgins went all to their conuent, they tooke great diffes of earth full of bread mixt with hony couered with small panniers, wrought and fashioned with dead mens heads and bones, and they carried the collation to the Lioll, mounting vp to the Court, which was before the doore of the Oratorie: and having fet them downe, they retired in the same order as they came, the fleward going still before. Presently came forth all the yong men in order, with canes or reedes in their hands, twho began to runne as fail as they could to the top of the flares of the Temple, 40 who should come first to the dishes of the collation. The Elders or chiefe Priests observed him that came first, second, third, and fourth, without regarding the rest. This collation was likewife all carried away by the yong men, as great Relicks. This done, the foure that arrived first were placed in the midft of the Ancients of the Temple, bringing them to their chambers with much honour, praising them, and giving them ornaments; and from thence forth they were respected and reuerenced as men of marke. The taking of this collation being ended, and the feast celebrated with much joy and noise, they disinffed all the yong men and maides which had sepued the Idoll; by meanes whereof they went one after another, as they came forth. All the small children of the Colledges and Schooles, were at the gate of the court, with bottomes of rushes and hearbs in their hands, which they cast at them, mocking and laughing, as of them that 50 came from the service of the Idoll: they had liberty then to dispose of themselves at their pleafure, and thus the Feast ended.

Otherent A Lthough I have fpoken fufficiently of the feruce the Greatest was true and of fiches, will I speak formething of the feat they called Generacout, which was the god of riches, of Marchans, A will I speak formething of the feat they called Generacout, which was the god of riches, for the Marchans to the Marchans to bught a fluor Lthough I have fooken fufficiently of the fervice the Mexicans did voto their gols ; yet which those of the which was solemnifed in this manner. Fortie dayes before the Marchants bought a flaue celebrate.cb.30 well proportioned, without any fault or blemifb, either of ficknelle or of hurt, which they did attire with the ornaments of the Idoll, that he might represent it forty dayes. Before his cloathing they did clenfe him, washing him twice in a lake, which they called the lake of the gods; and being purified, they attired him like the Idoll. During these forty dayes, he was much respected for his sake whom he represented. By night they did imprison him (as hath beene faid) left he should flye, and in the morning they tooke him out of prison, setting him vpon an eminent place, where they ferued him, giuing him exquinte meates to cate. After he had eaten, they put a chaine of flowers about his necke, and many nolegates in his hand. He

CHAP.S. Sower fauce to sweet meat. Temple and Drum-bels. Comedies & Masks. 1010

had a well appointed guard, with much people to accompany him. When he went through the Citie, he went dancing and finging through all the streetes, that he might be knowne for the rejemblance of their god, and when he beganne to fing, the women and little children came forth of their houles to falute him, and to offer vnto him as to their god. Two old men of the Ancients of the Temple, came vnto him nine dayes before the feast, and humbling themselues before him, they faid with a low and fubmiffe voyce, Sir, you must understand that nine dayer bence the exercise of dancing and singing doth end, and thou must then dye; and then he must anfwer, In a good houre. They call this ceremony, Nejola Maxiltlextli, which is to fay, the adnertifement : and when they did thus aduertife him, they tooke very carefull heede whither he

to were faid, or if he danced as joyfully as he was accustomed, the which if he did not as cheerefully as they defired, they made a foolish superstition in this manner. They presently tooke the factificing rasors, the which they washed and clented from the bloud of men, which remained of the former facrifices. Of this washing they made a drinke mingled with another liquor made of Cacao giving it him to drinke; they faid that this would make him forget what had beene faid ynto him, and would make him in a manner infentible, returning to his former dancing and mirch. They faid moreouer, that he would offer himselfe cheerefully to death, being inchanted wich this drinke. The cause why they fought to take from him this heaninesse, was, for that they held it for an ill augure, and a fore-telling of some great harme. The day of the Feast being come, after they had done him much honour, fung, and given him incense, the facrificers tooke 10 him about midnight and did facrifice him, as hath beene faid, offering his heart vnio the Moone,

the which they did afterwards cast against the Idoll, letting the body fall to the bottome of the flaires of the Temple, where fuch as had offered him tooke him vp, which were the Marchants, whose feath it was. Then having carried him into the chiefest mans house amongst them, the holy was dreft with divers fawces, to celebrate (at the breake of day) the banquet and dinner of the feast, having first bid the Idoll good morrow, with a small dance, which they made whilst the day did breake, and that they prepared the facrifice. Then did all the Marchants affemble at this banket, especially those which made it a trafficke to buy and fell slaues, who were bound enery vere to offer one, for the refemblance of their god. This Idoll was one of the most hono- Stately Temred in all the Land: and therefore the Temple where he was, was of a great authoritie. There ple.

30 were threescore staires to ascend vp vnto it, and on the top was a Court of an indifferent largeneffe, very finely dreft and plastered, in the midit whereof, was a great round thing like nto an Quen, having the entrie low and narrow : so as they must stoope very low that she enter nito it. This Temple had Chambers and Chappels as the rest, where there were conuents of Priests, yong Men, Maides, and Children, as hath beene said : and there was one Priest alone refident continually, the which they changed weekely : For although there were in enery one of thele Temples, three or foure Curates or Ancients, yet did every one ferue his weeke without parring, His charge that weeke (after he had instructed the children) was to frike vp a Drum Droms vied in every day at the Sunne-ferting, to the same end that we are accustomed to ring to Euensong, stead of Bels, This Drum was fuch as they might heare the house found thereof throughout all the parts of the 40 Citie, then every man that vp his merchandife, and retired vuto his house, and there was so great

a filence, as there feemed to be no living creature in the Towne. In the morning when as the day began to breake, they began to found the Drum, which was afigne of the day beginning, fo as trauellers and firangers attended this fignall to begin their journies, for till that time it was not lawfull to goe out of the Citie. There was in this Temple a Court of reasonable greatnesse, in the which they made great

dances, and pastimes, with games or comedies the day of the Idols feast; for which purpose there was in the middeft of this court a Theatre of thirty foote square very finely decked and trimmed, the which they decked with flowers that day, with all the art and invention that might be, being inuironed round with Arches of dives flowers and feathers, and in some places there 50 were tied many small Birds, Conies, and other tame beafts. After dinner all the people assembled in this place, and the Players presented themselues, and plaied Comedies, some counterfeit Comedies the deafe, and the rheumatike, others the lame, fome the blinde, and without hands, which came to feeke for cure of the Idoll , the deafe answered confusedly, the rheumaticke did cough, the lame halted, telling their miferies and griefes, wherewith they made the people to laugh; others come forth in the forme of little bealts, some were attired like Snailes, others like Toades, and some like Lizards : then meeting together, they told their offices, and every one retyring to his place, they founded on small flutes, which was pleasant to heare. They likewise counterfeited Butterflies and small Birds of divers colours, and the children of the Temple represented thele formes, then they went into a little Forrest planted there for the nonce, where the Priests

60 of the Temple drew them forth with instruments of musicke. In the meane time they yied many pleafant speeches, some in propounding, others in defending, wherewith the affistants were pleafantly intertained. This done, they made a Maske or Mummerie with all these personages, and so the Feast ended : the which were vsually done in their princivall Featls.

Civill Customes and Arts of the INDIANS takenout of ACOSTAS 6. Boooke.

cupied themselves onely in visiting one another, and so spent the time: the secriticers of the Temple did likewise cease their factifices. These sine dayes being past, they began the computa-

tion of the yeare, whereof the first moneth and beginning was in March, when the leaues be-

gan to grow greene, although they tooke three dayes of the moneth of February; for the first

day of their yeare was, as it were, the fix and twentieth day of February, as appeareth by their

tarion of rimes and the Kalende h Meri cans vied.Cha.z.

Mexican yeare

Will first shew in what fort the Mexicans counted and divided their yeere, their moneths, their Kalender, their computations, their worlds and ages. They diuided the yeare into eighteene moneths, to which they gaue twentie dayes. wherein the three hundred and threefcore dayes are accomplished, not compre. Io hending in any of these Moneths the fine daies that remaine, and make the year hending many of these Monorths the man dealed them the dayer of sething:

perfect. But they did reckon them apart, and called them the dayer of sething. Messem years during the which, the people did not any thing, neither went they to their Temples, but oc-

Their Kalen-

Kalender, within the which ours is likewife comprehended and contained with a very ingenious Art, which was made by the ancient Indians that knew the first Spaniards. I have leene to this Kalender, and haue it yet in my custodie, which well deferueth the fight, to understand the difcourse and industrie the Mexican Indians had. Euerie one of these eighteene moneths had his proper name, and his proper picture, the which was commonly taken of the principall Feast that was made in that moneth, or from the diversitie of times, which the yeare caused in that moneth. They had in this Kalender certaine daies marked and diftinguished for their feafts, And they accounted their weekes by thirteene dayes, marking the daies with a Zero or cipher, which they multiplied vnto thirteene, and then began to count, one, two, &c. They did like dans for years.
See this in the wile marke the yeares of these wheeles, with four figures or figures, attributing to eueric yeare Mevican Chro- a peculiar figne, whereof one was of a House, another of a Conie, the third of a Reede, and the nick in their fourth of a Flint. They painted them in this fort, noting by those figures the yeare that did 10 owne figures runne, laying of so many Houses, of so many Florts, of such a Wheele, happened such a thing. For we must understand that their wheele, which was an age, contained source weekes of yeares, eueric weeke containing thirteene yeares, which in all made fiftie two yeares. In the midft of this wheele they painted a Sun, from the which went four beames or lines in crosse to the circumference of the wheele, and they made their course, even as the circumference was divided into four equall parts, euerie one with his line, having a diffinct colour from the reft, and the foure colour were, Greene, Blew, Red, and Yellow: enery portion of these source had thirteene separations

enery figne a yeare, and vpon the head of this figne they painted what had happened that yeare. And therefore I did fee in the Kalender mentioned the yeare when the Spaniards entered 40 Mexico, marked by the picture of a manclad in red, after our manner, for such was the habit of the first Spaniard, whom Fernando Cortes sent, at the end of the two and fiftie yeares, which finished the wheele. They vsed a pleasant ceremonie, which was, the last night they did breake all their veffels and stuffe, and put out their fire, and all the lights, saying, that the world should end at the finishing of one of these wheeles, and it might be at that time: for (laid they) seeing the world must then end, what neede is there to prouide meare to eate, and therefore they had no further neede of Veffels nor fire. Vpon this conceit they passed the night in great feare, saying, it might happen there would be no more day, and they watched verse carefully for the day; when they faw the day begin to breake, they prefently beat many Drums, and founded Corners, Flutes, and other instruments of ioy and gladnesse, saying, that God did yet prolong the to time with another age, which were fiftie two yeares. And then began another wheele. The first day and beginning of this age they tooke new fire, and bought new Veilels to dreffe their meate, and all went to the high Priest for this new fire, having first made a solemne Sacrifice, and given thanks for the comming of the day, and prolongation of another age. This was their manner of

which had all their fignes or particular figures, of a House, a Conie, a Reede, or a Flint, noting by

How the Kings

How the Kings A Lthough this supputation or times practicular mongrature of the Money and decrains, for men that had no learning; yet in my opinion they wanted difcourfe and largest account which the confidence of the Money. Lthough this supputation of times practifed amongst the Mexicans, be ingenious enough confideration, having not grounded their computation according vnto the course of the Moone, nor distributed their months accordingly, wherein those of Pers haue farre surpassed them: for 60 Berter comput they divided their yeare into as manie daies, perfectly accomplished as we doe here, and into eation of times tweltie moneths or Moones, in the which they imploied and confumed the eleuen daies that remaind of the Moone, as Polo writes. To make the computation of their yeare fure and certaine, they yfed this industrie; vpon the Mountaine, which are about the Citie of Cufce (where the

accounting their yeares, moneths, weekes, and ages.

CHAS 6 Suns 12 Pillars Writing by letters, characters pillares Images fooles books TOKI

Kings Inguas held their Court, being the preatest fanchuatie of those Realms, and as we should say another Rome) there were twelve Pillars fet in order , and in foch diffance the one from the other, as severise moneth one of chele Pillars did note the tifing and setting of the Suine. They 1, Pillars of called them Succanga, by meanes whereof they taught and shewed, the Feasts, and the seasons the Sonne. fir to fowe and reape, and to doe other things. They did certaine facrifices to these Pillars of the Sunne. Enery moneth had his proper name, and peculiar Peafts. They began the yeare by ianurie as we doe. But fince, a King Inqua called Pachacato, which fignifies a reformer of the Tomn/e, begantheir yeare by December, by reason (as I confecture) that then the Sunne returneth from the laft point of Capricorne, which is the tropike neerest vinto them. I know not wheno ther the one or the other have observed any Bifexte, although some hold the contrarie. The weekes which the Mexicans did reckon, were not properly weekes, being not of feugn daies : the Inqualikewife made no mention thereof which is no wonder, feeing the count of the

weeke is not grounded upon the course of the Sunne, as that of the yeare, nor of the Moone, as that of the moneth; but among the Hebrewer it is grounded upon the creation of the world. as Morfes reporteth and amongit the Greekes and Latins upon the number of the feuen Planets. of whole riames the daies of the weeke haie taken their denomination ; vet was it much for those Indians, being men without bookes and learning, to have a yeare, seatons, and featis, so well appointed as I have laid.

Exters were invented to fignifie properly the words we doe pronounce, eyen as words (according to the Philosopher) are the fignes and demonstrations of mans thoughts and con- Thatno Naticeptions. And both the one and the other (I jay the letters and words) were ordained to make on of he Indies things knowne. The voice or fuch as are pretent, and letters for the absent, and fuch as are to found to have come. Signes and markes which are not properly to fignific words, but things, cannot be called, bad the vicos neither in truth are they letters, although they be written, for we cannot fay that the picture of Letters, Chap, 4 the Sunne is a writing of the Sunne, but onely a picture; and the like may be faid of other figures and characters, which have no refemblance to the thing, but ferue onely for memorie; for he that invented them, did not ordaine them to fignific words, but onely to noate the thing : neither doe they call those characters, letters, or writings, at indeede they are not, but father ciphers. 30 or remembrances, as those be which the Spheritts of Astronomers doe vie, to fighthe divers tignes

or planets of Mars, Venus, Impiter, &c. Such characters are ciphers, and no letters : for what name focuer Mart may have in Italian. Such charáchers are ciphers, and no letters: for what name focuer CMer may have in statum, France, or Spould, this characher doth advikes fignifie it, the which is not found in letters: too of remem-although they lignifie the thing, yet is it by meaned of words. So as they which know not be brance too pothing, underftand them not : as for example, the Greekes nor the Hebrews, cannot conceine what flerity; letters. this word Sol doth fignifie, although they fee it written; for that they understand not the Las as we have; pie tine word : fo as writing and letters are onely practifed by them , which fignifie words there are onely practifed by them, which fignifie words there. with. For if they fignifie things mediately, they are no more letters not writings, bit ciphers red. ts, as in

40 flories and Antiquities may be preserved by one of these three meanes, either by letters and wri- Such fool said tings, as hath beene vied among it the Latines, Greekes, Hebrewes, and manie other Nations; or that wife counby painting, as hath beene vied almost throughout all the world, for it is said in the second Nie fell make the cone Countell, Painting is a Booke for fooles which cannot reade: or by ciphers and characters, as the indecrecing ! cipher fignifies the number of a hundred, a thouland and others, without noting the word of a mages not onehundred, or a thousand. The other thing we may observe thereby, is that which is pro- ly to be bookes pounded in this Chapter, which is, that no Nation of the Indies discouered in our time, for such accanpounded in this Chapter, which is, but of the other two forts, Images, and figures, obieds of wor The which I observe, not onely of the Indies of Pern, and New Spaine, but also of Inp- ship to karned pon, and China.

It is difficulate vinderstand how the Chineis can write proper names in their tongue, especially of strangers, being things they have never seene, and not able to invent figures proper vnto them. I have made triall thereof being in Mexico with the Chinois, willing them to write this propolition in their language, lofeph Acofta is come from Pors, and fuch like: whereupon the Chinese was long pentiue, but in the end hee did write it, the which other Chinese did after reade, although they did vary a little in the pronuntiation of the proper name. For they vie this deutle to write a proper name : they feeke out some thing in their tongue, that hath refemblance to that name, and fet downe the figure of this thing. And as it is difficult among for many proper names, to finde things to refemble them in the prolation, so is it very difficult and trou-bleiome to write such names. Vpon this purpose, Father Allenso Sanchez told vs, that when he

Cowas in China, being led into divers Tribunal Seates, from Manderin to Manderin, they were long in putting his name in writing in their Capbas, yet in the end they did write it after their manner, and foridiculoutly, that they scarce came neere to the name : and this is the fashion of Letters and Writings which the Chinois vied. That of the Iapponous approached very neere, although they affirme that the Noblemen of lappon that came into Europe , did write all things

and pictures : whereby we may observe two notable things. The one, that the memorie of His chine.

very casily in their Language, were they of our proper names : yee, I have had some of their Writing showed me, whereby it seemes they should have some kinds of Letters, although the greatest part of their Writings, bee by the Characters and figures, as hath beene said of the

An Indian of Peru or Mexico, that hath learned to read & write, knowes more then the wifest Mandarm that is among ft them : for that the Indian with foure and twentie Letters which hee Manager, that is among a than hard in the World; and a Mandarin with his hundred thousand Letters, will be troubled to write some proper name, as of Marsin, or Alongo, and with greater reason he shall bee lesse able to write the names of things hee knowes not. So as the writing in China, is no other thing but a manner of painting or ciphering.

Of the fashion of Letters and writings which the Mexicans vied. Char.7.

VE find among the Nations of New Spaine a great knowledge and memorie of antionititie; and therefore fearthing by what meanes the Indians had preferred their Hillories, and fo many particularities, I learned, that although they were not fo fubrill and curious as the Chinois, and those of Lappon, yethad they some kind of Letters and Bookes amongst them. whereby they preserved (atter their manner) the deeds of their Predecessors. In the Province of Tucatan, where the Bishopricke is, which they call de Hondards, there were Bookes of the leaues of Trees, folded and squared, after their manner, in the which the wife Indians contained the diffribution of their times, the knowledge of the Planets, of beafts and other naturall things, Bookes of the diffinencia of their Antiquities, a thing full of great curiofitie and diligence. It feemed to some Pendant to heere folium that all this was an Inchantment and Magicke Arte, who did obstinately maintayne, that they liber, or codex, from the fine ought to be burnt, fo as they were committed to the fire. Which fince not onely the Indiana found to be ill done, but also the curious Spaniards, who defired to know the secrets of the Coun-

Ancients writ, trey. The like hath happened in other things: for our men thinking that all was but Superflie tion, haue lost many memorials of ancient and holy things, which might haue profited much, This proceedeth of a foolish and ignorant zeale, who not knowing, nor seeking to know what concerned the Indians, fay preindicately, that they are all but Witch-crafts, and that all the Indians are but Drunkards, incapable to know or learne any thing. For fuch as would be curiously informed of them, have found many things worthy of confideration. One of our company of Iesuits, a man very wittie and well experienced, did affemble in the Prouince of Mexico, the 20 Ancients of Tefence, of Talla, and of Mexico, conferring at large with them, who shewed vnto him their Bookes, Histories and Kalenders, things very worthy the fight, because they had their figures and Hierogliphicks, whereby they represented things in this manner : Such as had forme or figure, were represented by their proper Images, and such as had not any, were represented by Characters that fignified them, and by this meanes they figured and writ what they would. And to observe the time when any thing did happen, they had those painted Wheeles, for every one of them contayned an Age, which was two and fiftie yeeres, as hath beene faid; and of the fide of those Wheeles, they did paint with figures and Characters right against the yeers, the memorable things that happened therein. As they noted the yeere when as the Spaniards entred their Countrey, they painted a man with a Hat and a red lerkin, vpon the figne of a Reed, which did 40 rule then, and fo of other accidents. But for that their Writings and Characters were not fufficient as our Letters and Writings be, they could not fo plainly expresse the words, but onely the substance of their conceptions. And foras much as they were accustomed to rehearse Discourses and Dialogues by heart, compounded by their Oratours and ancient Rhethoricians, and many Capbas made by their Poets (which were impossible to learne by their Hierogliphickes and Characters) the Mexicans were very curious to have their Children learne those Dialogues and compositions by heart. For the which cause they had Schooles, and as it were, Colledges or Seminaries, where the Ancients taught Children thefe Orations, and many other things, which they preserved amongst them by tradition from one to another, as perfectly, as if they had beene written; elpecially the most famous Nations had a care to have their children (which had any in- 50 clination to be Rhetoritians, and to practife the Office of Orators) to learne these Orations by heart : So as when the Spaniards came into their Countrey, and had taught them to reade and write our Letters, many of the Indians then wrote these Orations, as some grave men doe witneffe that had read them. Which I fay, for that some which shall happily reade these long and eloquent Discourses in the Mexican History, will easily believe they have beene invented by the Spaniards, and not really taken and reported from the Indians. But having knowne the certains truth, they will give credit (as reason is) to their Histories. They did also write these Discourses after their manner, by Characters and Images ; and I have feene for my better fatisfaction, the Pater noster, Anie Maria, and Symboll, or generall Confession of our Faish, written in this manner by the Indians.

And in truth whosoeuer shall see them, will wonder thereat. For , to signific these words, 1 60 a Sinner doe confesse my felfe, they painted an Indian vpon his knees, at a religious mans feet, 20 one that confesseth himselte : and for this, To God most mightie, they painted three faces with their Crownes, like to the Trinitie, and To the glorious Virgin Marie, they painted the face of

our Lady, and halfe the bodie of a little childe : and for Saint Peter and Saint Paul, heads with crownes, and a Key with a Sword : and whereas Images failed, they did fet Characters . is Wherem I have finned, Ge. whereby we may conceine the quicknelle of spirie of these Indians. feeing this manner of writing of our Prayers and matters of Paith hath not beene taught them by the Spaniards, neither could they have done it, if they had not had an excellent conception of that was raught them. And I have feene in Peru, a confession of sinnes brought by an Indian. written in the fame fort with Pictures and Characters, painting every one of the tenne Commandements , after a certayne manner , where there were certayne markes like Ciphers. which were the finnes hee had committed against the Commandements. I nothing doubt but if 10 any of the most sufficient Spaniards were imployed to make memorials of the like things by

by their Images and markes , they would not attayne vnto it in a whole yeere, no riot

PEfore the Spaniards came to the Indies, they of Perm had no kind of writing, either Let. Of Registers ters, Characters, Ciphers, or Figures, like to those of China and Mexico, yet preferned and the manthey the memory of their Antiquities , and mayntaine an order in all their affaires, of Peace, net of re ko-Warre, and Policie, for that they were carefull observers of Traditions from one to another, and mains of Prin the young ones learned, and carefully kept, as a holy thing, what their Superiors had told them, yied, Chang. and taught it with the like care to their Posteritie. Besides this diligence, they supplied the

20 want of Letters and Writings, partly by painting, as thole of Moxico, (although they of Peru were very groffe and blocks(h) and partly, and most commonly by Quippos. These Quippos are Quippos. Memorials or Registers, made of Bowes, in the which there are divers knots and colours, which doe fignifie divers things, and it is firange to fee what they have expressed and represented by this meanes : for their Quippos ferue them infleed of Bookes of Histories, of Lawes, Ceremonies. and accounts of their affaires. There were Officers appointed to keepe thele Quippos, the which at this day they call Outpocamajos, the which were bound to give an account of every thing, as Notaries and Registers we heere. Therefore they fully beleeved them in all things, for according to the varietie or bulinelle, as Warres, Policies, Tributes, Ceremonies and Lands, there were fundry Quippos or branches, in every one of the which there were fo many knots little and great.

30 and ftrings tyed vnto them, fome Red, fome Greene, fome Blue, fome White; and finally fuch dinerlitie, that even as wee derive an infinite number of words from the four and twentie Letters, applying them in divers forts, so doe they draw innumerable words from their knots, and diversitie of colours. Which thing they doe in such a manner, that if at this day in Pers, any Commissary come at the end of two or three yeeres, to take information vpon the life of any Officer, the Indians come with their small reckonings verified, saying, that in such a Village they given him to many Egges which he hath not payed for, in fuch a house a Henne, in another, two burthens of graffe for his Horse, and that he hath payed but so much mony, and remaineth debtor so much. The proofe being presently made with these numbers of knots and handfuls of coards, it remaynes for a certaine testimonie and register. I did see a handfull of these strings,

40 wherein an Indian woman carried written a generall confeilion of all her life, and thereby confeffed her felfe, as well as I could have done it in written Paper. I asked her what those ftrings meant that differed from the reft : the answered me, they were certaine circumstances which the Writing with finnerequired to be fully confessed. Beside these Quippos of threed, they have another, as it forall stones. were a kind of writing with small stones, by meanes whereof, they learne punctually the words they defire to know by heart. It is a pleasant thing to see the old and the imposent (with a Wheelemade of small stones) learne the Paser nofter, with another the Aue Maria, with another the Creed; and to remember what stone signifies, Which was conceived by the Holy Ghost, and which, Suffered under Pontsus Pilate.

It is a pleafant thing to fee them correct themselves when they doe erre; for all their correction consisteth onely in beholding of their small stones. One of these Wheeles were sufficient to make me forget all that I doe know by heart. There are a great number of these Wheeles in the Church-yards for this purpole. But it feemes a kind of Witch-craft, to fee another kinde of Onippos, which they make of graines of Mays, for to east up a hard account, wherein a good Arithmetician would bee troubled with his Penne to make a diuffion : to fee how much every Accounts by one must contribute: they doedraw formany graines from one fide, and adde formany to ano-graines of ther, with a thousand other inventions. These Indians will take their graines, and place five Mays. of one fide, three of another, and eight of another, and will change one graine of one fide. and three of another : So as they finish a certaine account , without erring in any point : and they sooner submit them selves to reason by these Quippos, what every one ought to pay, 60 then weecan doe with the Penne. Heereby wee may judge if they have any understanding, or bee brutish ; for my part, I thinke they passe vs in those things, whereunto they doe apply

1052 Divers formes of writing and government. Peru and Mexico compared L'1B. V

hold in their Writings. Cb.o.

Diuers man-

T Thall be good to adde hereunto what we have observed, touching the Indians Writings : for their manner was not to write with a continued line, but from the top to the bottome, or in circle-wife. The Latines and Greekes doe write from the left hand vnto the right, which is the vulgar and common manner wee doe vie. The Hebrewer contrarribile beganne at the right to the left, and therefore their Bookes began where ours did end. The Chinois write neither like the Greekes nor like the Hebrewes, but from the top to the bottome, for as they bee no Letters but whole words, and that every figure and Character fignifieth a thing, they have no neede to affemble the parts one with another, and therefore they may well write from the toppe to the bottome. Those of Mexico, for the same cause did not write in line, from one side to another. but contrary to the Chinois, beginning below, they mounted vpward. They vied this manner of 10 writing, in the account of their dayes, and other things which they observed: Yet when they did write in their Wheeles or Signes, they began from the middeft where the Sunne was figurred. and so mounted by their yeeres vnto the round and circumference of the Wheele.

By words. Pictures, and these Memorialls, the Kings were often advertised of that which palled. For this caute there were men of great agilitie, which ferued as Curriers, to goe and come, whom they did nourish in this exercise of Running from their youth, labouring to have them well breathed, that they might runne to the top of a high Hill without wearineffe. And therefore in Mexico they gave the Prize to three or foure that first mounted up the stayres of the Temple, as hath beene faid in the former Booke. And in Cufco, when they made their Solemne Feaft of Capacrayme, the Nouices did runne who could fafteft vp the Rocke of Traceuri, And the exercise of running is generall; much vied among the Indians. When as there chanced any matter of importance, they fent vnto the Lords of Mexico, the thing painted, whereof they would adjustife them, as they did when the first Spanish ships appeared to their fight, and when they tooke Topanchan. In Peru they were very curious of Footmen, and the Inquality them in all parts of the Realme, as ordinary Posts called Chalquis, whereof shall bee spoken in his place.

Diners formes

Many Nations of the Indies have not indured any Kings, or absolute and source ene Lords. but liue in Comminalties, creating and appointing Captaynes and Princes, for certayne occafions onely, to whom they obey during the time of their charge; then after they returne to their former estates. The greatest part of this New World (where there are no setled King- to domes, nor established Common-weales, neither Princes nor succeeding Kings) they governe themselues in this manner, although there bee some Lords and principall men raised about the common fort. In this fort the whole Countrey of Chile is governed, where the Anracanes, those of Tencapell and others, have so many yeeres refisted the Spansards. And in like fort all the new Kingdome of Granado, that of Gnatimalla, the Ilands, all Florida, Brefil, Lufon, and other Countreyes of great circuit : but that in tome places they are yet more barbarous, scarcely acknowledging any head, but all command and gouerne in common, having no other thing, but will, violence, industry and disorder, so as hee that most may most commands.

They have onely found two Kingdomes or fetled Empires, that of the Mexicans in New Spaine, and of the Inquas in Pern. It is not easie to be faid, which of the two was the mightiest 40 Whether the Kingdome, for that Motecuma, exceeded them of Peru, in Buildings, and in the greatnesse of his Mexican or Pe. Court : but the Ingues, did likewise exceed the Mexicans, in treasure, riches, and greatnesse of Provinces. In regard of Antiquitie, the Monarchie of the Inguas, hath the advantage, although it be not much, and in my opinion, they have beene equall in feats of Armes and Victories. It is most certaine, that these two Kingdomes have much exceeded all the Indian Provinces, dilcouered in this New World, as well in good order and government, as in power and wealth, and much more in Superfittion and Service of their Idols, having many things like one to another But in one thing they differed much, for among the Mexicans, the faccession of the Kingdome, wasby election, as the Empire of the Romanes, and that of Pers, was hereditary, and they fucceeded in bloud, as the Kingdomes of France and Spaine.

Of the gouernment of the Kings and /m. guas of Peru. Chap.Tz.

He Ingus which ruled in Poru, being dead, his lawfull Sonne fucceeded him, and fo they held him that was botne of his chiefe Wife, whom they called Coya. The which they have alwayes observed fince the time of an Ingua, called Tapangui, who married his fifter: for these Kings held it an honour to marrie their Sifters. And although they had other Wives and Concubines, yet the succession of the Kingdome appertayned to the Sonne of Coya. It is true, that when the King had a legitimate Brother, he succeeded before the Sonne, and after him his Nephew, and Sonne to the first. The Curacus, and Noblemen , held the fame order of succession in their goods and Offices. And after their manner they made excessive Ceremonies, and obsequies for the dead. Being dead, they prefently held him for a God, making Sacrifices vnto him, Images, and 60 fuch like. By this meanes, there was infinite Treasure in Pern: for every one of the Inguas, had laboured to have his Oratorie and Treasure surpasse that of his Predecessors. The marke or entigne, whereby they tooke posteffion of the Realme, was a red roll of Wool, more then tine filke, the which hung in the middett of his forchead ; and none but the Ingua alone might

CHAP.6. Peruan bolies for their Inga, Inflice, Polity, Tribute, Provinces.

weare it, for that it was as a Crowne and Royall Diademe : yet they might lawfully weare a Roll hanging on the one fide, neere vnto the eare; as fome Noblemen did, but onely the Inoua might carrie it in the middeft of his forehead. At fuch time as they tooke this Roll or Wigathe. they made tolemne Feafts, and many Sacrifices, with a great quantitie of veffell of Gold. and Silver, a great number of small formes or Images of sheepe, made of Gold and Silver, great ahandance of the stuffes of Cumby, well wrought, both fine and courser, many shels of the Sea of all forts, many feathers, and a thonfand sheepe, which must bee of divers colours . Then the chiefe Priest tooke a young Childe in his hands, of the age of fixe or eight yeeres, pronouncing thele words with the other Ministers speaking to the Image of Urracocha, Lord me offer this unto thee, that thou mayest mayntayne vs in quiet, and belpe vs in our warres, mayntaine our Lord the Ingua in his greatnesse and estate, that hee may alwayes increase, giving him much knowledge to go-

There were present at this Ceremonie and Oath, men of all parts of the Realme, and of all Guacas and Sanctuaries. And without doubt, the affection and reuerence which this people bare to their Kings Ingues, was very great, for it is neuer found that any one of his subjects committed Treafon against him, for that they proceeded in their governments, not only with an abiclute power, but also with good order and luttice, suffering no man to bee oppressed: The Ingua placed Gouernours in divers Proninces, amongst the which, some were Superiours, and did ac. Exact suffice; browledge none but himselfe, others were of lesse command, and others more particular, with 20 fo goodly an order, and fuch granitie, as no man durft be drunke, nor take an eare of Mays from his Neighbour. Thefe Inguas held it for a Maxime, that it was necessary to keepe the Indians alwayes in action : and therefore we fee it to this day, long cawfies and workes of great labour, No idleneffe

the which they lay were made to exercise the Indians, left they should remayne idle. When hee permitted. conquered any new Prouince, hee was accustomed presently to fend the greatest part, and the chiere of that Countrey into other Prouinces, or elle to his Court, and they call them at this day Transmigrain Peru, Mitimas, and in their places he fent others of the Nation of Cufco, especially the Oreiones, which were as Knights of an ancient house. They punished faults rigoroully. And therefore fuch as have any understanding hereof, hold opinion, that there can be no better government

for the Indians, nor more affured, then that of the Inguas.

O relate more particularly what I have spoken before, you must vinderstand, that the dis- Of the distrifribution which the Inquisi made of their valids, was so exact and distinct, as hee might bution the gouerne them all with great facilitie, although his Realme were a thousand leagues long: for their Vassals. having conquered a Province, he presently reduced the Indians into Townes and Comminalties, Chap. 12. the which he divided into bands, he appointed one to have the charge over every ten Indians, o- Governours per enery hundred another, over every thousand another, and over ten thousand another, whom they called Humo, the which was one of the greatest charges. Yet about all in enery Province, there was Governour of the house of the Inguas, whom all the rest obeyed, giving vnto him euery yeere particular account of what had pasted, that is, of fuch as were borne, of those that 40 were dead and of their troupes and graine. The Gouernours went energy years out of Culco, where Tribute years they remayned, and returned to the great Feast of Rayme, at the which, they brought the tribute ly paid at Casico.

of the whole Realme to the Court; neither might they enter but with this condition. All the Kingdome was divided into foure parts, which they called Tabuantinfuno, that is, Chinchafuno, Fourefold Collasuro, Andesuro, and Condesuro, according to the foure wayes which went from Cusco, prominerall where the Court was relident, and where the generall affemblies of the Realme were made. These waies and Provinces being answerable vnto them, were towards the foure quarters of the world, Collafuro to the South, Chinchafuro to the North, Condefuro to the West, and Andefuro to the East. In every Towns and Village, there were two forts of people, which were of Hanan aya, and Vrinfaya, which is as much to lay, as those abone, and those below. When they commanded any 50 worke to be done, or to furnish any thing to the Ingua, the Officers knew prefently how much enery Prouince, Towne, and Family, ought to furnish: 10 as the diution was not made by equall portions, but by Cottization, according to the qualities and wealth of the Countrey. Soas for example, if they were to gather a hundred thouland Fanegues of Meys, they knew

presently how much every Province was to contribute, were it a tenth, a seventh, or a fit part. The like was of Townes and Villages, Aillos, or Linages. The Quipocamagos, which were the Officers and Intendants , kept the account of all with their thrings and knottes, without fayling, fetting downe what every one had payed, even to a Henne, or a burthen of wood, and in a moment they did fee by divers Registers what every one ought to pay.

THE E lifices and Buildings which the Inques made in Temples, Fortreffes, wayes, Countrey Of the Edifices He E three and roundings which the argument had to a suppose that the houses, and furth like, were many in number, and of an excelling labour, as doth appeare at and manner of building of the houses, and mentace, were many horh in Cusco, Tyaguanaco, Tambo, and other places, building of the this day by their runnes and remaynders, both in Cusco, Tyaguanaco, Tambo, and other places, liganachap.14. where there are flones of an vnmeaturable greatnelle : as men cannot conceine how they were

1056 Indian skill and stoneworkes, Strawbridges, Tributes. Lands facred. LIB.V

cur, brought and fet in their places. There came great numbers of people from all Prouinces, to worke in these Buildings and Fortresses, which the Ingua caused to bee made in Cusco, or other parts of the Realme. As these Workes were strange, and to amaze the beholders, wherein they yied no Morter nor Ciment, neither any Iron, or Steele, to cut, and fet the stones in works Negative in they had no Engines or other Instruments to carrie them, and yet were they so artificially wrought, that in many places they could not fee the joynts; and many of these stores are jo bigge, that it were an incredible thing, if one should not see them. At Traguanace, I did measure bigge, that it werean increasing and in the wall of the Fortresse of Cusco, which is of Moallon, there are stones of a greater bignesse. And that which is most strange, these slowes being not cut nor squared to joyne, but contrariwise, very vnequall to one with another in forme and greatnesse, yet did they ioyne them together without Ciment. after an incredible manner. All this was done by the force of men, who endured their labour with an innincible patience. For to loyne one ftone with another, they were forced to handle and trie many of them often, being vneuen. The Ingma appointed energy yeere what numbers of and trie many of them orten, being vincient, and right appears appeared to the vincient numbers or people though about in their thousas and buildings, and the thadast made a distinon amongst them, as of other things, so as no man was opportfled. Although their Buildings were great, yet were they commonly ill appointed and vnfit, almost like to the Mosquites or Buildings of the Barbarians. They could make no Arches in their Edifices, nor Morter or Ciment to build them withall-

when they faw Arches of wood built vpon the River of Xanra, the Bridge being finished, and 20

Arches

the wood broken downe, they all began to runne away, supposing that the Bridge which was of stone should presently fallibut when they found it to stand firme, and that the Spaniards went on it, the Cacique faid to his companions; It is reason we should serue these men, who in truth seeme Bridges.

to be the children of the Sunne. The Bridges they made were of Reedes pleited, which they tyed the bankes with great flakes, for that they could not make any Bridges of stone or wood. The Bridge which is at this day vpon the current of the great Lake Chiquitto in Collao is admirable: for the course of that water is to deepe, as they cannot fettle any foundation, and so broad, that it is impossible to make an Arch to passeit: to as it was altogether impossible to make a Bridge Straw Bridge. either of wood or stone. But the wit and industry of the Indians invented a meanes to make a firme and affured Bridge being only of ftraw, which feemeth fabulous, yet is it very true : For as 30 we have faid before, they did binde together certaine bundles of Reeds, and Weeds, which doe grow in the Lake that they call Torora, and being a light matter that finkes not in the water, they cast it vpon a great quantitie of Reeds, then hauing tyed those bundles of Weedes to either fide of the River, both men and beafts goe ouer it with eafe : paffing ouer this Bridge I have wondred, that of so common and easie a thing, they had made a Bridge, better, and more assured then the Bridge of Boates from Sewille to Triane. I have measured the length of this Bridge, and as I remember, it was about three hundred foote; and they say that the depth of this Current is very great: and it feemes aboue, that the water hath no motion, yet they fay, that at the bottome it hath a violent and very furious course. And this shall suffice for Buildings.

Of the Inguas Tributesibes imposed vpon the Indians.

He Inguas riches was incomparable, for although no King did inherit the riches and treafure of his Predecessor, yet had he at command, all the riches of his Realmes, aswell Siluer and Gold, as the stuffe of Cumbi, and cattell, wherein they abounded, and their greatest riches of all, was their innumerable number of vaffals, which were all imployed as it pleased the King. They brought out of every Province what he had chosen for tribute. The Chicas fent him sweet and rich woods; the Lucanas tent Brancars to carry his Litter; The Chumbilbicas, Dincers; and to the other Proumees fent him what they had of abundance, befides their generall Tribute, whereunto every one contributed. The Indians that were noted to that end, laboured in the Mynesof Gold and Silver, which did abound in Pern, whom the Ingua entertained with all 50 they needed for their expences : and what soener they drew of Gold and Silver, was for him. By this meanes there were to great treasures in this Kingdome, as it is the opinion of many, that what fell in the hands of the Spansards, (although it were very much, as wee know) was not the tenth part of that which they hid and buried in the ground, the which they could never difcouer, notwithflanding all the fearch couetoufnesse had taught them. But the greatest wealth of these barbarous people, was, that their valials were all slaves, whose labour they vied at their All flaues and pleature : and that which is admirable, they employed them in fuch fore, as it was no feruitude vito them, but rather a pleasing life. But to vinderstand the order of Tributes which the Indians payed anto their Lord, you must know, that when the Ingua conquered any Cities, he disuded all the Land into three parts, the first was, for Religion and Ceremonies, so as the Pachayachaqui, 60 which is the Creator, and the Sume; the Chuquilla, which is the Thunder, the Pachamana, and Lands facred, the dead, and other Guacas and Sanctuaries, had every one their proper Lands, the fraits whereof were spoyled and confumed in Sacrifices , and in the nourishing of Mini-Alers and Priefts; for there were Indians appointed for every Guaca, and Sanctuarie, and

CHAP.6. Common Lands. Negligence punished. All Peruans were of all Trades. 1057

the greatest part of this revenue was spent in Cusco, where was the universal and general santuarte, and the rest in that Citie, where it was gathered; for that after the imitation of Cusco. there were in euery Citie, Guacus, and Oratories of the same order, and with the same functi- Order in their ons, which were ferued after the fame manner and ceremonies to that of Cufes, which is an ad_ Religion. mirable thing, and they have found it by proofe in about a hundred Townes, fome of them diffant about two hundred leagues from Cufco. That which they fowed or reapt upon their Land, was put into houses, as Granaries or flore-

houses, built for that effect, and this was a great part of the Tribute which the Indians paied. I

cannot fay how much this part amounted vnto, for that it was greater in fome parts then in o-10 ther, and in some places it was in a manner all : and this part was the first they put to profit. The fecond part of thefe Lands and inheritances was for the Ingua, wherewith he and his houl- Royall dea hold were entertained, with his kinsfolks, Noblemen, Garrifons and Souldiers. And there- mefacs. fore it was the greatest portion of these tributes, as it appeareth by the quantity of Gold, Silver, and other Tributes, which were in houses appointed for that purpose, being longer and larger then those where they keepe the reuenues of the Guacas. They brought this Tribute verie carefully to Cuice, or vinto fuch places where it was needefull for the Souldiers, and when there was ftore, they kept it ten or twelue yeares, vntill a time of necessitie. The Indians tilled and put to profit the Inguas Lands, next to those of the Guacas; during which time they lived and were nourished at the charges of the Ingua, of the Sunne, or of the Guacas, 20 according to the Land they laboured. But the old men, women, and ficke folkes were referred and exempt from this Tribute, and although whatfoeuer they gathered upon those Lands were for the Ingua, the Sunne, or the Guacas, yet the propertie appertained vnto the Indians and their fuccessours. The third part of these Lands were given by the Ingua for the Comminaltie, and they have not vet discovered, whither this portion were greater, or leffe, then that of the Ingua or Guacas. It is most certaine they had a care and regard, it might be sufficient for the nourish- in common. ment of the people. No particular man pofferfied any thing proper to himselfe of this third portion , neither did the Indians ever possesse any, if it were not by speciall grace from the Ingua : No proprietie and yet might it not be engaged nor divided amongst his heires. They everic yeare divided these of Lands. Lands of the comminaltie, in giving to every one, that which was needefull for the nourilla-30 ment of their persons and families. And as the familie increased or diminished. so did they encrease or decrease his portion, for there were measures appointed for everie person. The Indians paied no tribute of that which was apportioned vnto them : For all their tribute was to till Their Tribute, and keepe in good order the Lands of the Ingua, and the Guaca; and to lay the fruits thereof in what their store-houses. When the yeare was barren, they gaue of these fruits thus reserved to the needie, for that there is alwaies superabundance. The Ingus did likewise make destribution Cantelldiste of the cattell as of the Lands, which was to number and divide them; then to appoint the paflures and limits, for the cattell belonging to the Guacas, and to the Ingua, and to euerie Town : and therefore one portion of their regenues was for religion, another for the Ingua, and the third for the Indians themselves. The like order was observed among the hunters. being forbidden to

40 take or kill any females. The troupes of the Inguas and Guacas, were in great numbers and ve- Hunter lawes rie fruitfull, for this caule they called them Kapaëllama, but those of the common and publike, were few in number and of small value, and therefore they called them Bacchallama. The Ingua tooke great care for the prefernation of Cattell, for that it hath beene, and is vet, all the wealth of the Countrie, and as it is faid, they did neither facrifice any females, nor kill them, neither did Prouisons for they take them when they hunted. If the mangie or the feuruie which they call Carache take anie beait, they were prefently commanded to burie it quicke, lest it should infect others. They did sheare their cattell in their season, and distributed to everie one to spinne and weave Stuffes for the service of his Family. They had fearobers to examine if they did employ themselves in Negligence these workes, and to punish the negligent. They made Stuffes of the wooll of the Inguas cattell, punished 50 for him and for his family, one fort very fine, which they called Combi, and another groffer, which they likewife called Abasca. There was no certaine number of thele Stuffes and garment, appointed, but what was deliuered to every one. The wooll that remained was put into the Horehouses, whereof the Spaniards found them full, and with all other things necessary for the life of man. There are few men of judgement but doe admire at fo excellent & well fetled

a government, feeing the Indiani (being neither religious nor Christians) maintained after their

manner, this perfection, nor to hold any thing proper, and to provide for all their necessities, en-

tertaining with fuch abudance matters of Religion, & that which concerned their King & Lord.

SILLS

60 The Indians of Peru had one perfection, which was, to teach their children all arts and ocoffers and cupations necessary for the life of man; for that there were no particular Tradef-men, as offices which among ft vs, Taylers, Shoomakers, Weauers, and the reft, but every one learned what was neede- the Indians did full for their persons and houses, and provided for themselves. All could weave and make their exercises to garments, and therefore the Ingua furnishing them with wooll, gaue them cloathes. Every man All menotall could rill the ground, and put it to profit, without livring of any labourers. All built their own trades,

houles, and the women, which vaderflood most were not brought up in delights, but served their Husbands carefully. Other Arts and Trades which were not ordinary and common for the life of man, had their proper Companies and workemen, as Goldsmiths, Painters, Potters, Water or man, and players of Instruments. There were also Weavers and workemen for exquisite workes. which the Noblemen vied: but the common people, as hath beene faid, had in their houses all things necessary, having no neede to buy. This continues to this day, fo as they have no neede one of another for things necessary; touching his person and family, as shooes and garments, and for their houle, to fowe and reape, and to make Iron workes, and necessarie instruments, it is worthy obternation, although the Indians be simple in their manner and habits, yet doe we see great diverfitie amongst the Provinces, especially in the attire of their head, for in some places to they carried a long prece of cloath, which went often about, in some places a large prece of

cloath, which went but once about, in some pares asit were little morters or hats, in some others as it were high and round Bonets, and some like the bottome of sacks, with a thousand Vaiformity of other differences. They had a straight and inviolable law, that no man might change the fashion of the garments of his Prouince, although he went to line in another. This the Ingua held to be of great importance for the order and good government of his Realme, and they doe observe is to this day, though not with fo great a care as they were accustomed.

There were many Posts and couriers which the *Ingus* maintained throughout his Realme, whom they called *Chasquis*, and they carried commandements to the Gouernours, and re-10 the Inaums did turned their adulfes and aduertilements to the Court. Thele Chalquis were placed at energy vic, Chap.17. courie, which was a league and a halfe one from another in two small houles, where were four Indians of enery Country, and they were changed monthly. Having received the packet or meffage, they ranne with all their force vntill they had deliuered it to the other Chafquis, such as were ao runne, being ready and watchfull. They ran fiftie leagnes in a day and night, although the greatest part of that Countrie be very rough. They served also to carry such things as the Ingua defired to have with speede. Therefore they had alwaies Sea-fish in Cusco, of two daies old or little more, although it were aboue a hundred leagues off. Since the Spaniards entred, they haue vied of theie Chafquis, in time of feditions, whereof there was great neede. Don Marin the Viceroy appointed ordinary Posts at every foure leagues, to carry and recarry dispatches, which were very necessary in this Realme, though they run not so swiftly as the ancients did, neither are there so many, yet they are well paied, and serue as the ordinaries of Spaine, to whom they giue Letters which they carry foure or fine leagues.

which the In-

Adultery. Marriage fo-

bishes, and of ther, theft, and adultery, with death, and fuch as committed incest with accendants or descentheir mariages dants in direct line, were likewise punished with death. But they held it no adultery to have so many wives or concubines, neither were the women subiect to the punishment of death, being found with any other, but onely the that was the true and lawfull wife, with whom they contracted marriage; for they had but one whom they did wedde and receive with a particular folemnitie and ceremonie, which was in this manner: The Bridegroome went to the Brides house, and led her from thence with him, having first put an Ottoyavpon her foote. They call the shooe which they vie in those parts Ottoya, being open like the Franciscan Friars, If the Bride were a maide, her Ottora was of Wooll, but if the were not, it was of Reedes. All his other wives and concubines did honour and ferue this as the lawfull wife, who alone after the decease of her husband carried a mourning weede of blacke, for the space of a yeare; neither did she marry vntill that time were past; and commonly she was yonger then her husband. The Ingua 50 himselfe with his owne hand gaue this woman to his Gouernours and Captaines: and the Gouernours or Caciques, assembled all the yong menand maides, in one place of the Citie, where they gaue to euerie one his wife with the aforefaid ceremonie, in putting on the Ottoye, and in this manner they contracted their marriages. If this woman were found with any other then her husband, she was punished with death, and the adulterer likewise : and although the husband pardoned them, yet were they punished, although dispensed withall from death. They inflicted the like punishment on him that did commit incest with his Mother, Grandmother, Daughter, or Grandchilde: for it was not prohibited for them to marrie together, or to have of their other kinsfolke for concubines; onely the first degree was defended, neither did they allow the brother to have the company of his fifter, wherein they of Pers were very much de- 63 ceiued, beleeuing that their Inguas and Noblemen might lawfully contract marriage with their

Te Ven as fuch as had done any good service in warre, or in the government of the Common-Eweale were honoured and recompensed with publike charges, with Lands given them in proper, with armes and titles of honour, and in marrying wives of the Inguas linage: Even fo they gaue seuere punishments to such as were disobedient and offenders. They punished murfitters, yea by father and mother : for in truth it hath beene alwaies held valawfull among the Indians, and defended to contract in the first degree; which continued vntill the time of Topa Ingua Tupangui father to Guaynacapa, and grandfather to Atahualpa, at luch time as the Spaniaras

entred Perm: for that Topa Ingua Yupangui, was the first that brake this custome, marrying with Mamagello, his fifter by the fathers ide, decreeing that the Inques might marrie with their fifters by the fathurs fide, and no other.

This he did, and by that marriage he had Guaynacapa, and a daughter called Cora Cullilliman: finding himselfe at the point of death, he commanded his children by father and mother to marrie together, and gaue permiffion to the Noblemen of his Countrie, to marrie with their fiflers by the fathere fide. And for that this marriage was vulawfull, and against the law of nature. God would bring to an end this Kingdome of the Inguas, during the raigne of Gualcar Inqua, and Atahualpa Inqua, which was the fruite that fprang from this marriage. Who

to fo will more exactly understand the manner of marriages among the Indians in Pern. lee him reade the Treatife Polo hath written at the request of Don Iesonimo Logifa Archbishop of Kings: which Polo made a very curious fearch, as he hath done of divers other things at the Indies.

BY the commandement of Don Phillio the Catholike King, they have made the most diligent Of the Original exact tearch that could be, of the beginning, customes, and pruviledges of the Inguas, mallot the inthe which was not fo perfectly done as was defired : for that the Indians had no written Re- Peru, with their cords : vet the haus recoursed that which I shall write, by meanes of their Quippos and Regis Conquests fters. First there was not in Perwin old time, any King or Lord to whom all obeyed, but they and Victoriese were Comminalties, as at this day there is in the Realme of Chille, and in a manner. in all Chap.19.

20 the Prouinces which the Spaniards have conquered in those Westerne Indies, except the Realme of Mexico. You must therefore understand, that they have found three manner of Gouernements at the Indies. The first and best, was a Monarchie, as that of the Inguas, and of Motecams, although for the most part they were cyrannous. The second was of Comminalties . where they were gouerned by the aduste and authority of many, which are as it were Couniellors. Thele in time of warre, made choise of a Captaine, to whom a whole Nation or Province did obey, and in time of peace, enery Towne or Comminalty did rule and gouerne themselves. having tome chiefe men whom the vulgar did respect, and sometime (though not often) some of them affemble together about matters of importance, to confult what they should thinke neceffary. The third kinde of Gouernment, is altogether barbarous, composed of Indians with-

30 out Law, without King, and without any certaine place of abode, but goe in troopes like fange bealts. As farre as I can conceine, the first Inhabitants of the Indies, were of this kinde. as at this day a great part of the Bresslians, Chinagmanas, Chunchos, Tjeytingas, Pilecount, and the greatest part of the Floridians, and all the Chichimagnas in new Spaines Of this kinde the other fort of government by Comminalties was framed, by the industry and wisdome of some amonest them, in which there is some more order, holding a more staied place, as at this day those of Auracano, and of Tencapell in Chille, and in the new Kingdome of Grenado, the Moscas. and the Ottomittes in new Spaine : and in all thefe there is leffe fierceneffe and incivilitie, & much more quiet then in the reft. Of this kinde, by the valor & knowledg of some excellent men, erew the other government more mighty and potent, which did institute a Kingdome and Monarchy.

40 Ic appeares by their Registers, that their Gouernment hath continued about three hundred Communes yeares, but not fully foure, although their Seigniorie for a long time, was not about five or of their Mo fix leagues compaffe about the Citie of Cufco : their original and beginning was in the valley of narchy. Cufco: where by little and little they conquered the Lands which we call Pers, paffing beyond Quitto, vnto the river of Paffo towards the North, ftretching even vnto Chille, towards the South, which is almost a thousand leagues in length. It extended in breadth vnto the South Sea towards the Welt, and vnto the great champains which are on the other fide of the Ander, where at this day is to be seene the Castell which is called the Pucara of the Ingua, the which is a fortreffe built for the defence of the frontire towards the East. The Inguas advanced no farther on that fide, for the abundance of water, Marshes, Lakes, and Rivers, which runne in those parts. 50 Thefe Inguas paffed all other Nations of America, in pollicie and government, and much more Strife twize

in valour and armes, although the Canaries which were their mortall enemies, and fauoured the Inques and Spaniards, would never contesse it, nor yeelde them this advantage : fo as even at this day, if they canaries. fall into any discourse or comparisons, and that they be a little chased and incensed, they kill one another by thousands vpon this quarrell, which are the most valiant, as it hath happened in Culco. The practife and meanes which the luquas had to make themselves Lords of all this Countrie, was in faining that fince the generall deluge (whereof all the Indians have knowledge) the world had beene preferued, restored, and peopled by these Inquas, and that feuen of them came forth of the Caue of Pacaricambo, by reason whereof, all other men ought them tribute and vaffalage, as their progenitors. Belides they faid and affirmed. 60 that they alone held the true religion, and knew how God should be served and honoured : and for this cause they should instruct all men. It is a strange thing, the ground they give to their

customes and ceremonies. There were in Cusco about foure bundred Oratories, as in a holy 400. Oratories land, and all places were filled with their mifteries. As they continued in the conqueits of Pro- in Cuice.

unces, fo they brought in the like ceremonies and customes. In all this Realme the chiefe Idols

they did worthip, were Firacocha, Pachayachachic, which fignifies the Creator of the World and after him, the Sunne. And therefore they faid, that the Sunne received his vertue and being from the Creator, as the other Idols doe, and that they were interceffors to him.

Of the first Ingua, and his Succeffors. Chat. 20.

 $T^{\rm He}$ first man which the Indians report to be the beginning and first of the Inguas, was $M_{an.}$ gecaps, whom they imagine, after the deluge, to have issued forth of the Caue of Tambs, which is from Cufeo about fue or fixe leagues. They fay that hee gaue beginning to two principall Races or Families of the Inguas , the one was called Hanancufco , and the other Orincufco: of the first came the Lords which subdued and gouerned this Prounce, and the first whom they make the Head and Stemme of this Familie, was called Ingareea, who founded a Familie or 10 Aillo, as they call them, named Vicaquiquirao. This although he were no great Lord, was ferued notwithfla ding in veffell of gold and filter. And dying he appointed that all his treasure should be imployed for the feruice of his Body, and for the feeding of his Familie. His Succeffor did the like : and this grow to a generall custome, as I have said, that no Ingua might inherit the goods and house or his Predecessor, but did build a new Palace. In the time of this Inguaroca, the Indians had images of gold; and to him fucceeded Tagnar guague, a very cld man: they fay, hee was called by this name, which fignifies teares of bland, for that being once var quithed and tag ken by his Enemies, for griefe and fortow hee wept bloud. Hee was butled in a Village called Paullo, which is voon the way to Omasugo: he founded a Familie called Accuillyanaca. To him fucceeded his fonne Vracocha Ingua, who was very rich, and made much veffeil of gold and filuer : he founded the Linege or Familie of Cocopanaca. Gonçales Piçarre fought out his body, for the report of the great treasure buried with him, who after hee had cruelly tormented many Indians, in the end he found it in Xaquixaquana, whereas they faid Picarre was afterwards vanquished, taken, and executed by the President Guasea. Gonçales Piçarre caused the body of Viracocha Ingua to be burnt; the Indians did afterwards take the albes, the which they preferued in a small veffe'il, making great facrifices thereunto, vntill Pollo did reforme it, and other Idolatries which they committed upon the bodies of their other Inguas, the which hee suppressed with an admirable diligence and dexteritie, drawing these bodies out of their hands, being whole, and much imbalmed, whereby hee extinguished a great number of Idolatries which they committed. The Indians tooke it ill, that the Ingua did intitle himfelfe Viracocha, which is the name of their God : and he to excuse himselte, gave them to vinderstand, that the same Viraceoha appeared to him in his dreame, commanding him to take this name. To him succeeded Pachacuti Inqua Tupangui, who raigned seventie yeeres, and conquered many Countries. The beginning of his conquests, was by meanes of his eldest brother, who having held the government in his fathers time, and made warre by his confent, was over-throwne in a battaile against the Changuas, a Nation which inhabites the Valley of Andaguayllas, thirtie or fortie leagues from Cufco, vpon the way to Lima. This elder brother thus defeated, tetyred himfelfe with tew men. The which Ingua Tupangui, his younger brother feeing, deuifed and gaue forth, that being one day alone and melancholy, Vracocha the Creator spake to him, complayning, that shough bee were universall Lord and Creator of all things, and that he had made the Heanen, the Sunne, the World, 40 and Men, and that all was under his command, yet did they not yeeld him the obedience they ought, but contrariouse did equally bonour and worship the Sunne, Thunder, Earth, and other things, which had no vertue but what he imparted vnto them : giving him to vnderfland, that in heaven where hee was, they called him Viracocha Pachayachachie, which fignifieth winer fall Creator; and to the end the Indians might believe it to be true, he doubted not although hee were alone, to raife men under this title, which should give him victorie against the Changnas, although they were then victorious, and in great numbers; and make himfelfe Lord of those Realmes, for that hee would fend hum men to his aide innifibly, whereby he prevayled in fuch fert, that under this colour and conceit, he began to affemble a great number of people, whereof he made a mightie Armie, with the which he obtayned the victorie, making himfelfe Lord of the whole Realme, taking the go- 70 uernment from his father and brother. Then afterwards he conquered and ouer-threw the Changass, and from that time commanded that Unacocha should be held for vniverfall Lord, and that the Images of the Sunne and Thunder, should doe him reuerence and honor: And from that time they began to fet the Image of Viracocha aboue that of the Sunne and Thunder, and the rest of the Guaras. And although this Ingua Tupangui had given Farmes, Lands, and Cattell to the Sunne, Thunder, and other Gnacas, yet did he not dedicate any thing to Viracocha, faying, that he had no neede, being vinuerfall Lord and Creator of all things. Hee informed his Souldiers atter this absolute victorie of the Changuas, that it was not they alone that had conquered them, but certaine bearded men, whom Viracocha had fent him, and that no man might fee them but himfelfe, which were fince converted into itones; it was therefore necessarie to iecke them out, 6 whom he would know well. By this meanes he gathered together a multitude of itones in the Mountaines, whereof he made choice, placing them for Guaca, or Idols, they worthipped and factificed vnto; they called them Pururaucas, and carried them to the watre with great devotion, beleening for certaine, that they had gotten the victorie by their helpe. The imagination

CHAP.6. Ingas worshipped, Guanacapas 300 Sounes Spaniards esteeme Cc. 1061

and fiction of this Ingua was of fuch force, that by the meanes thereof hee obtayned goodly victories : He founded the Familie called Tnacapanaca, and made a great Image of gold, which hee called Indillapa, which he placed in a Brancard of gold, very rich, and of great price, of the which gold the Indians tooke great flore to carry to Xaxamalca, for the libertie and ranfome of Atabalpa, when the Marquelle Francis Pigarre held him prifoner. The Licenciate Polo found in his house in Cufee, his feruants and Mamacomas , which did feruice to his memorie , and found that the body had beene transported from Patallalla to Totocache, where the Spaniards have fince founded the Parish of Saint Blaife. This body was so whole and preferred with a certaine Rosin, that it feemed alive, he had his eyes made of a fine cloth of gold, to artificially fee, as they feemed very 10 naturall eyes, he had a blow with a stone on the head, which he had received in the warres , hee was all grey and hayrie, having loft no more haire then if he had dyed but the fame day, although it were feuentie and eight veeres fince his deceafe. The forefaid Polo fent this body with fome others of the Inquas, to the Citie of Lima, by the Vice-royes command which was the Marquelle of Canerte, and the which was very necessarie to roote out the Idolatrie of Cusco. Many Spanis ards have feene this body with others in the Hofpitall of Saint Andrew, which the Marqueffe built, but they were much decayed. Don Philip Caritopa, who was grand-child or great grandchild to this Ingua, affirmed that the treature hee left to his Familie was great, withich should bee in the power of the Tanaconas, Amaro, Toto, and others, To this Inona Incceeded Topainqua Tupanqui, to whom his fonne of the fame name forceeded, who founded the Familie

TO this latter Ingua succeeded Guaynacapa, which is to say, A young man, rich and valiant, Of the greatest and to was he in truth, more then any of his Predecessors, or Successors. He was very wife, and most faplanting good orders throughout his whole Realme, he was a bold and refolute man, valiant, and called Ganvery happy in warre. He therefore obtayned great victories, and extended his Dominions much agrees, Chas. farther then all his Predecessors had done before him; he dyed in the Realme of Cairto; the which he had conquered, foure hundred leagues diffant from his Court. The Indians opened him after his decease, leaving his heart and entrailes in Quitto, the body was carried to Culco, the which was placed in the renowmed Temple of the Summe. Wee see yet to this day many Caw-

20 called Cupac Aillo.

30 feys, Buildings, Fortreffes , and notable workes of this King Shee founded the Familie of Teme Bamba. This Guaynacapa was worthipped of his subjects for a god, being yet aline, as the old Guaynac men affirme, which was not done to any of his Predeceffors. When hee dyed, they flue a thou- worshipped for fand persons of his houshold, to serve him in the other life, all which dyed willingly for his fer- 2 god. nice. infomuch that many of them offered themselues to death, besides such as were appointed : his riches and treasure was admirable. And Forasmuch as the Spaniards entited foone after his death, the Indians laboured much to conceale all; although a great part thereof was carried to Xaxamalca, for the ranfome of Atabulpa his fonne. Some worthy of credit, affirme that he had His 300, fonnes aboue three hundred ionnes and grand-children in Cufco. His mother called Mamacella was &c. much esteemed amongst them. Polo sent her body with that of Guaynacapa very well imbal-

40 med to Lima, rooting out infinite Idolatries. To Guaynacapa succeeded in Casco a sonne of his called Titocuffiqualpa, who fince was called Guafpar ingua, his body was burned by the Captaines of Atabuaha, who was likewife sonne to Guaynacapa, and rebelled in Canto against his brother, marching against him with a mightie Armie. It happened that Quifquets and Chilleuchi, Captaines to Atabualpa, tooke Gualpar Ingua in the Citie of Cufeo, being received for Lord and King (for that he was the lawfull successor) which caused great forrow throughout all his Kingdome, especially in his Court. And as alwayes in their necessities they had recourse to factifices, finding themselves vnable to set their Lord at libertie, aswell for the great powerthe Captaines had that tooke him, as also, for the great Armie that came with Atahuaspa, they resolved (some fay by the commandement of this Ingua) to make a great and folemne facrifice to Viacocha Pachayachachie, which agnifieth vniner (all Creator, defiring him, that fince they could not deliver 50 their Lord, he would fend men from Heaven to deliver him from prifon. And as they were in this great hope, voon their facrifice, newes came to them, that a certaine people come by Sea,

bualpa in Xaxamalca, as alfo, for that is chanced after their factifice done to Viracocha, and there- firemed men by they began to call the Spaniards Viracochiu, as they doe at this day. And in truth, if we had fent from God, given them good example, and such as we ought, the Indians had well applyed it, in laying they were men fent from God. It is a thing very well worthy of confideration, how the greatnesse and providence of God, disposed of theich rie of our men at Perm, which had beene impossible, Perm could nee

60 were not the differtion of the two Brethren and their Partifans, and the great opinion they had have beene of Christians, as of mentent from Heatien, bound (by the taking of the Indians Country) to la-but by distinsion bour to win foules vnto Almightie God.

was landed, and had taken Atahualpa prisoner. Hereupon they called the Spaniards Viracochus, beleeuing they were men sent from God; as well for the small number they were to take Ata- Spaniards g-

Of the laft Succesiors

The rest of this subject is handled at large by the Spanish Writers in the Histories of the Indies, and for that it is not my purpose, I will speake onely of the succession of the Inguist. Ingam, Chonas. Atahualpa being dead in Xaxamalca, and Guafear in Cufco, and Francis Picatre with his people having feifed on the Realme, Mangocapa fonne to Guannacapa belieged them in Cufco very ftraightly : but in the end he abandoned the whole Country, and retyred himlelfe to Vilca Banba, where he kept himfelfe in the Mountaines , by reason of the rough and diffcult accesse , and there the Successors Inguas remayned, vntill Amaro, who was taken and executed in the market place of Cufco, to the Indians incredible griefe and forrow, feeing inflice done vpon him publiquely whom they held for their Lord. After which time, they imprisoned others of the Lingge of these Inguas. I have knowne Don Charles, grand-child to Guaynacapa, and sonne to Polo. 10 who was baptized, and alwayes favoured the Spaniards against Mangocapa his brother, when the Marquelle of Canette governed in this Country Sarritopaingua, went from Vilcabamba, and came vpon affurance to the Citie of Kings, where there was given to him the Valley of There and other things, to whom increeded a daughter of his. Behold the fucceffion which is knowne at this day of that great and rich Familie of the Inguas , whose raigne continued about three hundred yeeres, wherein they reckon eleuen Successors, vatill it was wholly extinguished. In the other Linage of Vrincusco, which (as we have faid before) had his beginning likewise from the first Mangocapa, they reckon eight Succeffors in this fort : To Mangocapa succeeded Cine characa, to him Capac Tupangui, to him Lluqui Tupangui, to him Mayraca paef Tarcooumam. vnto whom fucceeded his forme, whom they name not, to this forme fucceeded Doulean 20 Tambo. Maytapanaça. This sufficeth for the originall and succession of the Ingua, that governed the Land of Peru, with that that I have spoken of their Lawes, Government, and man-

Of the manner of the Meri cant Com. monweale. 6 bap. 14.

A Lthough you may fee by the Historie written of the Kingdome, succession, and beginning A of the Mexicans, their manner of Commonweale and Government, yet will I ipeake briefly what I shall thinke fit in generall to bee most observed : whereof I will discourse more amply in the Historie. The first point whereby wee may judge the Mexican government to bee very politike, is the order they had and kept muiolable in the election of their King : for fince their firft, called Acamapach , vinto their lait , which was Moteguma, the fecond of that name, 30 there came none to the Crowne by right of succession, but by a lawfull Nomination and Election on. This election in the beginning was by the voice of the Commons, although the chiefe men managed it. Since in the time of Ifeast the fourth King , by the adulfe and order of a wife and valiant man, called Tlacael, there were toure cersaine Electors appointed, which (with two Lords or Kings fubicat to the Mexican, the one of Tefance, and the other of Tuenba) had power to make this election. They did commonly choose young men for their Kings, because they went alwayes to the warres, and this was in a manner the chiefe cause why they defired them to. They had a speciall regard that they should bee fit for the warres , and take delight and glorie therein. Atter the election they made two kindes of feafts, the one in taking possession of the Royall Eflate, for the which they went to the Temple, making great ceremonies and facrifices whon the Harth, called Dinine, where there was a continual! fire before the Altar of the Idoll, and after fome Rhetoricians practifed therein, made many Orations and Speeches. The other feath, and the most solemne, was at his Coronation, for the which hee must first ouercome in battell , and bring a certaine number of Captines, which they must facrifice to their gods; hee entred in triumph with great pompe, making him a folemne reception, aswell they of the Temple, who went all in procession, founding on lundrie forts of instruments, guing Incense, and singing like fecular men , asalio the Courtiers , who came forth with their denites to receine the v croious King. The Crowne or royall Entigne was before like a Myter, and behinde it was cut, fo as it was not round, for the forepart was higher, and did nie like a point. The King of Tescuco had the privilege to crown the King of Mexico. In the beginning when the Mexicans were but poore 50 and weake, the Kings were very moderate in their expenses and in their Court , but as they increased in power, they increased likewise in pompe and state, vntill they came to the greatnesse of Motegama, who if he had had no other thing but his house of Beasts and Birds, it had beene a proud thing, the like whereof bath not beene feene; for there was in this house all fores of fish. birds of Xucamamas, and bealts, as in an other Noabs Arke; for Sea fish, there were Pooles of faltwater; and for River fish . Lakes of fresh-water; birds that doe prey were fed, and likewife wilde beaffs in great abundance: there were very many Indians imployed for the keeping of there beafts : and when he found an impossibilitie to nourish any tort of fish fowle, or wilde beaft, he caused the Image or likenesse to be made, richly cut in precious stones, filter, or gold, in marble, or in itone : and for all forts of entertainments, he had his feverall Houses and Palaces, fome of 60 pleafure, others of forrow and mourning, and others to treat of the affaires of the Realme. There was in this Palace many Chambers, according to the qualitie of the Noble men that ferued him, with a strange order and distinction.

CHAP.6. Indian titles of honour and Knighthood. Diligence of Priests.

He Mexicans have beenevery curious, to divide the degrees and dignities among it the noble Of the Titles men and Lords, that they might diftinguish them to whom they were to give the greatest and Dignities honor. The despite of their foure Electors was the greateft, and most honorable next to the the industry. King, and they were chosen presently after the Kings election. They were commonly brothers, fed. Chap.25. or very neere Kinimen to the King, and were called Tlacobecalcals, which in nifes Prince of darss, Gors. the which they cast, being a kinde of armes they vie much. The next dignitie to this, were thole they doe call Tlacatecasi, which is to fay, Circumcifers or Cutters of men. The third dignitie Meneunters. were of shole which they called Eznabnacals, which lignifies, A fledder of blond, All the which Blond fled. Titles and Dignities were exercised by men of warre. There was another, a fourth intituled, ders,

to Tillancalani, which is as much to lay, as Lord of the blacke bonfe, or of darkneffc, by reason of cer- Lord of darkes tame Inke wherewith the Priests anointed themselves, and did serve in their Idolatries. All these nesses foure Dignities were of the great Countell, without whose adule the King might not doe any thing of importance: and the King being dead, they were to choose another in his place out of one of those foure Dignities. Besides these, there were other Counsels and Audiences, and some Other Office. fay there were as many as in Spaine; and that there were divers Seates and Jurisdictions, with their cers. Counsellors and Judges of the Court, and others that were under them, as Corrigidors, chiefe See the pi

ludges, Captaines of Iustice, Lieutenants, and others, which were yet inferior to these, with a dure histories very goodly order. All which depended on the foure fift Princes that affifted the King. These foure onely had authoritie and power to condemne to death, and the reft ient them inftructions 20 of the Seutences they had given. By meanes whereof they gave the King to vinderstand what had paffed in his Realme.

There was a good order and fettled policie for the Renenues of the Crowne, for there were

Officers divided throughout all the Provinces, as Receivers and Treasurers, which received the Tributes and Royall Reuenues. And they carried the Tribute to the Court, at the leaft enery moneth; which Tribute was of all things that doe grow or ingender on the Land, or in the water, as well of Iewels and Apparell, as of Meat. They were very carefull for the well ordering of that which concerned their Religion, Superstition, and Idolatries; and for this occasion there were a great number of Ministers, to whom charge was given to teach the people the custome Priests and and ceremonies of their Law. Hereupon one day a christian Priest made his complaint that the Teachers of 30 Indians were no good Christians, and did not profit in the Law of God; an old Indian answered the Law. him very well to the purpole, in these termes: Let the Prest (faid he) implor as much care and di-

lisence tomake the Indians Christians, as the Ministers of Idols did to teach them their ceremonies; for with halfe that care they will make vis the best Christians in the world for that the Law of lesus Christ is much better; but the Indians learne it not, for want of men to infruct them. Wherein he toake the very truth, to our great shame and confusion.

He Mexicans gave the first place of honour to the profession of Armes, and therefore the How the Mexi-THe Mexicant gaue the hitt place of nonour to the protein out of them and their valour and cast made war.
Noble-men are their chiefe Souldiers, and others that were not noble, by their valour and cast made war.
and of the Ore

reputation gotten in warres, came to Dignities and Honors, fo as they were held for Noble-men. and of the Or-40 They gave goodly recompences to fuch as had done valiantly, who inioyed priviledges that none hood, Chipade. else might haue, the which did much incourage them. Their Armes were of Rasors of sharpe cutting flints, which they fet on either fide of a staffe, which was fo furious a weapon, as they affir - Their Armete med that with one blow, they would cut off the necke of a Horse. They had strange and heavy Clubs, Lances, fashioned like Pikes, and other manner of Dares to cast, wherein they were very expert: but the greatest part of their combate was performed with stones. For defensive armes they had little Rondaches or Targats, and some kinde of Morions or Head-pieces inuironed with feathers. They were clad in the skinnes of Tigres, Lions, and other fauge beafts. They came presently to hands with the Enemie, and were greatly practised to runne and wrestle, for thir chiefe manner of combate, was not fo much to kill, as to take Captines, the which they yied in 50 their facrifices, as hath beene faid. Motequina fet Knight-hood in his higheft splendor, orday-

ning certaine militarie orders, as Commanders, with certaine markes and enfignes. The most honorable among ft the Knights, were those that carried the crowne of their haire tied with a Eagle-order little red Ribband, having a rich plume of feathers, from the which, did hang branches of feathere you their shoulders, and rolls of the same. They carried so many of their rolls, as they had done worthy deeds in warre. The King himfelfe was of this order, as may be feene in (hap alteper, where Morecuma and his fonnes were attyred with those kindes of feathers, cut in the Rocke, the which is worthy the light. There was another order of Knight-hood, which they called the Lions and the Tigres , the which were commonly the most valiant and most noted in Order of Liwarre, they went alwayes with their Markes and Armories. There were other Knights, as the ons and Ti-

60 Grey Knights, the which were not formuch respected as the rest: they had their haire our round gres, about the care. They went to the warre with markes like to the other Knights, yet they were Gray Knights. not armed, but to the girdle, and the most honorable were armed all ouer. All Knights might carry gold and filter, and weare rich Cotton, vie painted and gilt veffell, and carry shooes after their manner : but the common people might vie none but earthen veifell , neither might they Knights prior-

carry thooes, nor attire themselves but in Nequen, the which is a groffe stuffe. Every order of theie Knights had his lodging in the Pallace noted with their markes; the first was called the Princes lodging, the second of Eagles, the third of Lyons and Tigers, and the fourth of the eres Knights. The other common officers, were lodged vinderneath in meaner lodgings: if any one loiged out of his place, he fuffred death.

Of the ereat

There is nothing that gives me more cause to admire, nor that I finde more worthy of com-mendations and memory, then the order and care the Mexicans had to nowish their youth: gence the Mex for they knew well, that all the good hope of a Common-weale, confilted in the nurture and ingenerins Mex for they knew went, that an one government of this bookes De Legibus: and for this reason to find their youth chapter, they laboured and tooke paines to fequefter their children from delights and liberties (which are the two plagues of this age) imploying them in honeft and profitable exercises. For this cause See the picture there was in their Temples, a private house for children, as Schooles, or Colledges, which was feperate from that of the yong men and maides of the Temple, whereof we have diffcourfed as large. There were in these Schooles a great number of children, whom their fathers did willing. ly bring thither, and which had teachers and mafters to inftruct them in all commendable exercites, to be of good behauiour, to respect their superiours, to serve and obey them, giving them to this end, certaine precepts and infructions. And to the end they might be pleasing to Noblemen, they taught them to fing and dance, and did practife them in the exercise of warre: fome to shoote an Arrow, to cast a dart or a staffe burnr at the end, and to handle well a Target 30 and a Sword. They suffered them not to sleepe much, to the end they might accustome themfelues to labour in their youth, and not be men given to delights. Besides the ordinary number of these children, there were in the same Colledges, other children of Lords and Noblemen, the which were inftructed more privately. They brought them their meate and ordinary from their Their employ- houles, and were recommended to ancients and old men to haue care ouer them, who continually ments and tri- did aduite them to be vertuous and to line chaftely; to be fober in their diet, to fait, and to march grauely, and with measure. They were accustomed to exercise them to trauell, and in laborious exercises: and when they see them instructed in all these things, they did carefully looke into their inclination : if they found any one addicted vnto warre, being of sufficient yeares, they fought all occasions to make triall of them, fending them to the warre, vnder colour to carrie 30 victuals and munition to the Souldiers, to the end they might there fee what paffed, and the labour they fuffered. And that they might abandon all feare, they were laden with heame burthens, that shewing their courage therein, they might more easily be admitted into the company of Souldiers . By this meanes it happened, that many went laden to the Armie, and re-

turned Captaines with markes of honour. Some of them were so desirous to be noted, as they

were either taken, or flaine : and they held it leffe honourable to remaine a prisoner. And there-

fore they fought rather to be cut in peeces, then to fall captines into their enemies hands. See

how Noblemens children that were inclined to the warres were imployed. The others that had

their inclination to matters of the Temple; and to speake after our manner, to be Ecclesiafti-

order of Ecclesiasticall men. There had they Prelates and Masters, to teach them that which concerned their profession, where they should remaine being destined thereunto. Their Mexi-

cans tooke great care to bring up their children : if at this day they would follow this order, in

building of houses & colledges for the instruction of youth , without doubt Christianitie should

call men, having attained to fufficient yeares, they were drawne out of the colledge, and pla- 40 ced in the Temple, in the lodging appointed for religious men, and then they gave them the

expectation of flourish much amongst the Indians. Some godly persons have begunne, and the King with his present and Counsell have favoured it: but for that it is a matter of no profit, they advance little, and pro-

Plains and dances. Military

thens,as their

externallgain. ceede coldly. We have not discovered any Nation at the Indians, that live in comminalties, which have not their recreations, in plates, dances, and exercises of pleasure. At Peru I haue seene plates in man- 50 ner of combats, where the men of both fides were sometimes so chafed, that often their Paella (which was the name of this exercise) fell out dangerous. I have also seene divers forts of dances, wherein they did counterfait and represent certaine trades and offices, as shepheards, labourers, fishers, and hunters, and commonly they made all those dances, with a very grave found and pale: there were other dances and maskes, which they called Guacones, whose actions were pure representations of the deuill. There were also men that dance on the shoulders one of another, as they doe in Portugall, the which they call Paellas. The greatest pars of these dances. Exo.32. athing were superfictions, and kindes of Idolatries: for that they honoured their Idols and Guacas in that manner. For this reason the Prelates have laboured to take from them these dances, all they thens, as their Connecties, &c. could : but yet they fuffer them, for that part of them are but sports of recreation: for alwayes 63 they dance after their manner. In these dances, they vie fundry forts of instruments, whereof, fome are like Flutes, or little Canons, others like Drums, and others like Cornets : but commonly they fing all with the voyce, and first one or two fing the fong, then all the rest answer them. Some of these songs were very wittily composed, containing Histories, and others were full of

superfittions, and some were meere follies. Our men that have conversed among them, have laboured to reduce matters of our holy faith to their tunes, the which hath profited well : for that they employ whole dayes to rehearfe and fing them, for the great pleasure and content they take in their tunes. They have likewife put our compositions of Musicke into their Language, as Octaves, Songs, and Rondels, the which they have very aptly turned, and in truth it is a goodly and very necessary meanes to inftruct the people. In Perm, they commonly call Dances Tagui, in other Provinces, Areittes, and in Mexico, Mittottes. There hath not beene in any other place any fuch curiolitie of Playes and Dances, as in New Spaine, where at this day we see Indians to excellent Dancers, as it is admirable. Some dance vpon a Cord, some vpon a long and streight Carious Date

10 flake, in a thousand fundry forts; others with the foles of their feet and their hammes, do handle, cerecast vp and receine againe a very heavy blocke, which feemes incredible but in feeing it. They doe make many other shewes of their great agilitie, in leaping, vaulting, and tumbling, sometimes bearing a great and heavy burthen, fometimes enduring blowes able to breake a barre of Iron. Great agility.

But the most vitual exercise of recreation among the Mexican is the follower Matotte, and that is a kind of dance they held to brave and to honourable, that the King himfelfe danced, but not ordinarily, as the King Don Pedro of Arragen with the Barber of Valencia. This Dance of Mittette, was commonly made in the Courts of the Temple, and in those of the Kings houses. which were more spacious. They did place in the midit of the Court two Instruments, one like

to a Drumme, and the other like a Barrell made of one piece, and hollow within, which they

20 fet vpon the forme of a man, a beatt, or vpon a Pillar. Their two Inftruments were fo well accorded together, that they made a good harmony and with the'e Instruments they made many kinds of Ayres and Songs. They did all fing and dance to the found and measure of these Instruments, with so goodly an order and accord, both of their feet and voyces, as it was a pleasant thing to behold. In these Dances they made two Circles or Wheeles, the one was in the middeft neere to the Inffruments, wherein the Ancients and Noblemen did fing and dance with a loft and flow motion; and the other was of the reft of the people round about them, but a good diffance from the first, wherein they danced two and two more lightly, making divers kinds of paces, with certayne leaps to the measure. All which together made a very great Circle. They attyred themfelues for thefe Dances with their most pre-20 cious apparell and lewels, enery ene according to his abilitie, holding it for a very honourable thing : for this caute they learned thele Dances from their infancie. And although the greateft part of them were done in honotir of their Idols, yet was it not fo inflittuted, as hath beene faid,

hut only as a recreation and pattime for the people. Therefore it is not convenient to take them quite from the Indians, but they must take good heed they mingle not their superfittions among it them, I have feene this Mutotte, in the Court of the Church of Topetzotlan, a Village feuen leagues from Mexico: and in my opinion, it was a good thing to bufie the Indians voon Festiuall dayes, feeing they have need of some recreation : and becaute it is publike, and without the prejudice of any other, there is leffe inconvenience, then in others which may be done privately by themiclues, if they tooke away their.

To the Reader.

R Eader, I here present unto the the choise, t of my Iewels. My transling fancis but innied min my Readers to many my labours in ftrange births already, Q z regio in terris noftri non plena las boris? Iaponian and China rarities fo remote from our world, are neere to our worke, and their chara-Elers communicated here to the Reader ; not their arts alone, Thou half here also Industran, Arabike, Perfian, Turkish, add other Letters, and not onely the transcript from their languages. CHAP. VII.

The History of the Mexican Nation, described in pittures by the Mexican Author explained in the Mexican language; which exposition translated into Spanish, and thence into English, together with the faid Picture-bistorie, are here presented,

The Mexican Chronicle.

Ere beginneth the Historie and foundation of the Citie of Mexico, founded and inhabited by the Mexicans, who at that time were called Megiti; whose origi-40 nall beginning of being Lords, and their acts and lives are declared briefely in this Historie, according as it is fignified and fet out successively by the pictures and paintings following,

In the yeare 1324. after the comming of our Lord and Saujour Iefus Chrift, the Mexican people first arrived at the place of the Citie of Mexico, and because they liked well the greatnesse and the scituation of that place, afterthat they had trauailed in their Iournies, and wandered many yeares from Country to Countrey, & in some of them had made their abode, for some yeares, being come from far Countries in following their Iournies, and not being contented with the other places where they had made their about, they came and fetled themselves in the place of Mexico. The which place at that time was all drowned with water, and was coursed with great bogs and bankes of moorish shegs and bulrushes, which they call Tuli, and it had Carrizales, and great plats of dry ground couered with shrubbes, bushes, and briars like woods. And through all the space of that place there went a spaing & streame of fair cleere water which was free from all legges and bulhes, which water streams went through it crosswife, in manner of Saint Andrewes croffe, as it is shewed in the picture : and about the middle of that place of that water-fireame, the Megiti found a great rocke of flone, and growing thereon a great Tree or bush called Tunal, wherein a great Eagle Candal had her baunt and abode for her foode, so as all about that place was scattered full of bones and feathers of divers Birds and Foules of divers colours. And they having gone throughout all that place and Countrie thereabout, and finding it very fruitfull and full of wilde beatls, wilde Foules, Birds, and Fishes, and things of the wa- 60 ter, wherewith to fuffaine themfelues and to profit themfelues in their businesse in dealing with the l'owner thereabouts, and finding the water-courses of that place so commodious, and that their Neighbours could not trouble nor hurt them, and for other things and causes to their good liking they determined to pile no further on their journeyes in travelling, but to feetle

themselves and dwell still. And according to their determination, they did settle themselves there effectually. And made themselves a trong Citie of defence with bankes and walles about the waters, and on the plate of ground among the Wegges and Bushes of Tulis and Carriages. And for a beginning of that their feate and habitation, it was determined by them, to give name and title to that place, calling it Tennititian. By reafon and cause of the Tunal growing out of the Rocke (for Tenuchtitlan interpreted in our Callilian Spanish Tongue is Tunal growing upon

The same of the Mericas people had with the same of their dioutinous ten petions named, October, Ourses, Accessis, Accessis, Accessis, Theorem, Theorem, Accessis, Acc chiefe Gouernour and Lord to governe them, sea perion especially cholen thereto and fit for it, having in him all parts and abilities o exercise Lordship. and they appointed the other shiefe Gouernours, that they should be Agents and Captaynes, Gouernours vnder him.

And after some yeeres were past, dost their swelling in that prace, and the people multiplied, the Citie likewise was named Marie, so named and derives of the Mariena, calling it the

place of fething of the Markan copie;
And when the people were one what multiples like following warlike people they took beginning of couragious mindeain premaying over their Ociophons, and to the wed them takes in force of arms, whereby they bublied and nather that are of them two Townes next ad-20 joyning to Mexico, named Colhuacan , and Tenamen; as likewife is fet forth in the pictures: Tenublition. the which doings pasted in the sine of the gouvernment of the chiefe Lord Tenneh, which was Mexican Lords

the frace of fiftie one yeares, at the end whereof he died. Concerning the Pictures of blew in the margents of this Historie, it is to be vader floor that Mexico. every feuerall space or partition doth fignific one years, and they bee the numbring of years a colbuston and it is to be understood that every federall space or partition figurifie the one severall years, and so Tenament tubthey accounted & numbred energy years (neurally, proceeding by, the number of rundles or pricks therein contained, beginning actone, and proceeding to thirteene rundles. And from thence they began againe at the beginning in their accomptroms only begin or nundle, and to accordingly they did proceede in numbering against, till they came to thirteene. And although that in 30 the partitions or spaces severally there be durers severall figures, yet the principall accompt of numbering is that accompt of the pictures or rundles therein contained. And although the names of the yeares that they give to enery partition-from the number of the first point till the thirteenth be to fome purpole, yet for to adscribe the Reader thereof; here is made by at felfe a declaration of the names, with their interpretations,

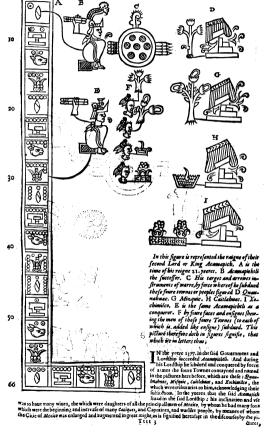

In the order and rule of the partitions which are numbered for yeares, that partition where there is a branch with a foote like a flower, it doth fignifie a bitter and ynfortunate yeare which the Mexicans had, and did feare, saying that their predetellours time out of minde did give them warning that such yeares which befell every two and sistieth yeare, were dangerous, and vnfortunate, and bitter yeares, because that in such yeares there were floods generally, and like-40 wife darkenesse of the eclips of the Sunne, and vniuerfall earthquakes. And likewise in such yeares they made great facrifice and ceremonies to their gods, and gaue themselues to repentance, and did abstaine from all vices against the very day and houre of frich a yeare. In the which day generally they put out all their lights and fires till that day were past; and being pase fed they kindled new lights being had out of a Mountaine by a Priess.

This is a weeke of yeares after the Mexican computation (all coloured blew , the Mexican names written ouer in red) the first of which they call Setuchtli, that is, one Conie: the second Omeacalt, or two Canes: the third Yeytecpath, three Flints: the fourth Macuilituchtli, which fignifieth foure honfes: the fifth Criquacenacatl, that is fine Comes: the fixth, fixe Canes: the fenenth, fenen Flints: the eight, eight Houses : the ninth, nine Conies : the tenth, ten Canes : the elementh, elemen Flints : the twelfth, twelne Honfes: the thirteenth, thirteene Contes.

This Pilline prefess the number of 51 years: that is, the time of Teache reigns: in this whole or spasse (which, as ill the ble representations) were so in the original pilline achieved blev I be prefessed spread up that the Lands of General Sofice measured that a manner attributed in the original Pollines, which he was under the lands on married of origin to a following following following the Achaeuth, B. whereof I can give no interpretation: and fuch is this, except perhaps it significals that in his fewenth year he began his conquestio. For I doe here interpret duers in which the Spansh is siltent, if the conte-stane former, it is known I straightfull. I be before the significant of warre.

IN the yeere 1396. in the faid Lordship succeeded Huicilibuit Sonne of Acomapich, and during the time of his reigne in his Lordship, he conquered by force of armes eight Townes, which are contayned in the pictures here before, which the names of the same Townes intituded, the which were made tributane to the Mexican Lordship acknowledging seruitude. The said Huigilibuit was valiant in warres, and inclined to haue many wiues by whom he had many sons, 10 wherewith the power of the Mexicans was augmented. The time of the Lording and life of the laid Haigilibuil therein was 21. y ceres; at the end whereof he dyed and departed this pre-fent life, according as by the protures of blue are numbered.

A tenne yeeres, B Chimalpupuca, C Target and Darts, to intimite his forcible conquest of D Teguixquiac and E Chalco, F showeth his death. Gi the Towns of Chalco in rebellion, H the foure Canass and 1 the fine men aboutfaud of Mexico, mbitch the Rebell fine. Ton fee this King' and enery other both King and Towne diffingualised by special Armes or Scatchions, with other par-60 ticulars, which here and in all the rest I lease to each Readers owne industrie and fearch.

In the yeere 1470, after the death of Hincilibrial succeeded Chimalpapaca in the fald Lordship of Mexico, some of the said Hincilibrial, and during his time hee subdued by force of arms the Townes of Tequinquiae, and Chalco, which Chalco is a great Towne and acknowledging feruitude: they paid tribute to the Lordship of Mexico, according as the pictures doe shew. And hauing the said Towness thus in subscitcion, at the end of certaine yeeres the said Towne of Chateo, being mighter, exhelded against the Mexicons, and in the rebellion there grew danges to the Checcons, insomuch that they sue since of them, and brake them soure Canoas, according as here is signified by the pictures. The time of the life and Lordship of the said Chimashpusca was ten yeeres, at the end whereof hee dyed, according as is numbred by the blue pictures in the margent. And likewise the said Chimashpusca, in the time of his life had many wines and sons for it was accounted a matter of reputation.

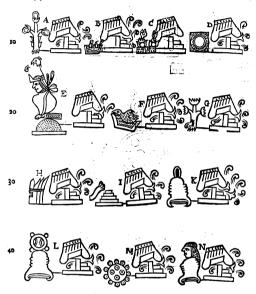

The explanation of the first Table A 13, years. Yecoatci. F by force of Armes (fignifiedby 50 this Tayet and Darts) finddaed the Towner, and Terratives of B Accapicalco, C Coyuccus, D Teocalbucyacan. 1076 Mexican bistorie in pictures. Chronicle without writing. Axayacaçi. LIB.V.

N the yeere 1479. after the death of Gueguemotezuma, succeeded in the Lordship of Mexico Axayacaci tonne of Tegogomoetliquieto, which was the tonne of Yzcoals Lord of Mexico. And during the time that the laid Axaracaci was Lord, he conquered and won by force of armes feuen and thirtie Townes, as hereafter are pictured and named. Amongst which Townes hee fishdued under his Lordship by force of armes the Towne of Thailulco, a thing of great importance. e Mognibus was Lord of Tlatitules at that time, who being a mightie person of great strength and of a proud nature, began to give occasion of diffention and warres to the Lords of Mexico. having heretofore held them for friends : by occasion whereof hee had great incounters and battailes, wherein the faid Montibuix Lord of Tlatifules dyed in throwing himselfe downe from a Cu (or a high Mezeita, or Temple) for he seeing himselse so hard beset in the battaile, being almolt ouercome, entred into a Mizena to faue himielfe, because hee would not be taken pritoner. And an Alfaqui (or Priest) which was in the Mezquito, or Temple, reproung him for it and imputing cowardife vnto him, he threw himfelfe downe as aforelaid. At which time the Merk cans had the victorie. And thenceforth the Towne of Tlavilales was fubicet to the Lord of Mexic co, paying tribute and acknowledging fubication. Axayacaci was very valiant and warlike in armes, and was viciously given to women, having had many wives and fonnes: he was also proud and warlike, whereby all his subjects feared him extremely; hee did maintaine and hold for good all the Lawes and Ordinances that his predecessor Guequemors name had made, according as hath beene mentioned in his Historie; and hee continued the space of twelve yeeres in the faid Lords thip of Mexico, at the end whereof he dyed and departed out of this prefent life.

N the yeers 1482 after the end and death of Axagasaci, succeeded in the Lordship of Mexico, 60 1 Ticocicatzi, forme of the laid Axayacaei , and during the time of his raigne he conquered and Title Ilecatecat! got by force of armes fourteene Townes. The faid Tipogicatzi was very valiant and warlike in armes, and before that he succeeded in the Lordship of Mexico, he had done dangerous feates of valiantnesse in his owne person in the warres, whereby hee obtayined the title of Tlacatecash,

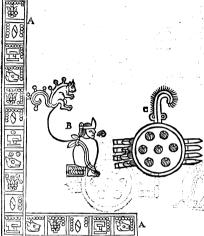

CHAP.Z. St. Mexican historie in pictures. Chronicle without writing.

which they efteemed for a Title of great honour and eftate: and it was a degree whereny that the Lordship of Mexico being vacant, he which had the same degree and title succeeded in the place of the fame Dominion of Mexico, which title in like manner his Predeceffors. Brothers, and Father, and Grand-father had, whereby they came to bee Lords of Mexico. Alfo the faid Ticocicatzi by the effate and authoritie of the faid Lordinip of Mexico, had many Wi ues and Sonnes which hee had by them, and he was a grave and feuere man in commanding and was feared and reverenced of his Subjects, hee was likewife enclined to good and vertuous things, and was good for his Commonwealth. He commanded the Lawes and Statutes to bee kept and appropered for good, that his Predecessors had amplified and kept since the time of Gueto guemotezuma. And he was zealous in punishing and chastning the eull vices and offences that his Subjects committed. And so the Mexican Commonwealth was well ordered and governed the time of his life, which was the space of fine yeeres, at the end whereof he dyed and depar-

F A Fine yeeres. B Ticocieatzi C by armes Subdued these Townes, Tonabymoquezayan, Toxico. Eeatepee, Zilan, Tecane, Tuluca, Tancuitlan, Tlapan, Atezcabuacan, Mazatlan, Xocbi. yetla, Tamapachco, Ecatlyquapochco, Miquetlan.

N the yeere 1485, after the death of Tizizocatzi, succeeded Abaizotin, brother to his Predes ceffor Tizozicatzi, in the Signorie of Mexico. And during the time of his Lordship, he conquered by force of armes fine and fortie Townes, according as hereafter are pictured and named. The faid Abuzozin was like to his Predeceffor and Brother Twizeenzi in valiantneffe and feates of warre, whereby he got the title of Tlacatecatl, which fignifieth a great Captaine, and from the fame title he came to be Lord of Mexico. The faid Abuixazin was by nature of a good inclination, and given to all vertue, and likewise in the course of his life hee had his Commonwealth ru-50 led and gouerned well, and he fulfilled and kept the Lawes and Statutes that his Predeceffors had maintayned fince the time of Gueguemotezuma. And as the flate of the Lordship of Mexico was brought to great Majestie, and had the greatest part of this New Spaine fubitet, acknowledging their service, and by the great and rich tributes which they gave the faid Mexican Lordinip, came to much renowme and mightinesse. And he like a mightie and great minded Prince, gaue great things and preferments to his fergants, and he was temperate of condition and metcifull, whereby his fernants loued him exceedingly, and yeelded him great renerence. And likewife hee had many wives, and children by them, because it was a thing adiogned to the Lordship, and a point of great estate. He was of a morrie condition, whereby his fernants did feast him continually in his life time with great and divors kindes of feafts, and mulick, and longs, and influences, as 60 well in the night as in the day : for in his place the Muficians and Singers neger ceased with many Instruments of mulicke. The course of his life in that Signiorie was fixteene yeares, at the end whereof he dyed and peffed out of this prefent life.

A fixteene yeeres. B A. huizozin. C conquered by armes the townes following, Tziccoac, Tlappan, Molanco, Amaxtlan, Zapotlan, Xaltepec, Chiapan, Totote-pec, Xochtlan, Xolochubylan, 13 Cozaquanbienanco, Cocobuipilecan, Coynacac, Acatepec. Moteruma.

IN the yeere 1,02, after the end and death of Abuiçoçin, succeeded in the Lordhip of Mexi-Les, Motezuma. Mexico was now growne into great Majestie, Renowme, and Authoritie ; and he by his granitie and severitie enlarged exceedingly the State and Dominion of Mexico, vez a great deale more then his Predeceffors. Morezzeuma was the fonne of Angraçaci, which had beene Lord of Mexico, and before hee came to the faid Lordhip hee had the delerts of a worthy Captaine and a valiant man in warres, whereby hee had the title of Tlacatecail, 45 and folice succeeded in the Lordship of Mexico, as is before rehearled, and being in the faid His wesle and Lordship he did greatly increase the Mexican Empire, bearing the rule ouer all the Townes in

this New Spaine, infomuch that they gave and payed him great mibutes of much riches and

Maiestie.

value : He was feared vary much of all his fernants, and likewife of his Captaines and Principals, intomuch that not one when they had any businelle with him, for the great reuerence they had him in, durft for feare looke him in that face, but that they held downs their eyes and their head low and enclined to the ground a said many other extraordinarie sespects and catemonies they did unto him for the Majestie he represented unto them, not mentioned here for anyoyding of tedioufnelle. After Meserane had forceeded in the faid Lordfhip, hee conqueted foure and fortie Townes hereafter named; and bee fubdued them under his Lordhip and Empire, and in their 50 acknowledging of femitude all the continuance of his life, they payed him many and great tri-

butes, as hereafter by their pictures and declarations is made manifeft. Morecuma was by nature wife, and an Afrologor, and a Philosopher, fubtile and skilled generally in all artes, as well of warres as all other matters temporally. And for his granitie and estate he had of his Lordship the beginning of an Empire, according as his feruants did reverence him with great honor and power, that in comparison of him , not one of his predecesfors came to halte to much estate and Majestie.

Lawer.

The Statutes and Lawres of his Predecessors, since the time of Gueguemotecuma untill his time, he commanded to bee kept and wholly fulfilled with great zeale. And because hee was a man to wife, by his good nature he orday ned and made other Statutes and Lawes which he thought de- 60 feeding for the execution of the former, not abrogating any, all which were for the welfare and good government of his Commonwealth and Subjects. Hee was the lined to keepen many houles Many women, and women, which were daughters of the Lords his Subjects and Confederates; and by them he had many children; and to have fo many wives was for to fet forth his Majette the more, for they hold it for a point of great estare. Among which the daughters of the Lords of great au-

thoritie he held for lawfull wines, according to their rights and ceremonies, and them hee kent within his Palaces and dwelling houses; and the children that came of shem were had in renutation as more lawfull children then the others which hee had by the other women. It were a See before in large historie to tell the order he had in keeping of them, and conversation with them. And be- soils, and atcaufe this present historie is but briefe, it is lett vnrehearsed.

The quantitie, value, and number of the tributes and kindes of things that his fubjects did pay ha ions of Ma. for tribute vnto him, shall be seene and vnderstood hereafter, as by the pictures and declarations terama, in a is fignified. And he made a ftraight order that the tributes which they payed him, thould be ful- wilde kinds of filled according as they were levied by him: for the fulfilling whereof he had in all his fulfied. flate and mato townesh its Capitagues and Factors, which were as Gouernors, that ruled, commanded, and go. inflict equally userned them; and hee was for much feared that none durit difform or transgrelle his will and history, in four commandement, but that they were kept and wholly fulfilled because he punished and corrected exceeding

the rebels without remission. And in the fixteenth yeere of the reigne of Motezuma, the Mexicans had knowledge of of the elder certaine Spaniards, which were discouerers of this New Spaine, that at the end of twelve First notice of

moneths there should come a fleet of Spaniards to ouercome and conquer this Country; and the Spaniards the Mexicans kept account thereof, and they found it to bee true, for at the end of the faid twelve moneths was the arrivall of the faid fleet at a Hauen of this New Spaine, in the which fleet came Don Ferdinando Cortes, Marques del Valle, which was the feuenteenth yeere of the reign 20 of Motezuma; and in the eighteenth yeere he made an end of the continuance of his Lordfain and Raigne; in the which yeare he dyed and departed this prefent life. At the time when Mo- Mutetuna texume came to his government, he was fue and thirtie yeeres old little more or leffe, fo that at death, his decease he was three and fiftie yeeres of age. And straight way in the year after his death, this

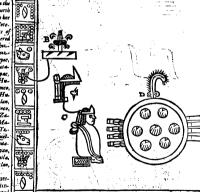

Citie of Mexico, and other Townes adjoyning, were ouercome and pacified by the faid Marques

del Valle, and his Confederates. And to this New Spaine was conquered and pacified. ready, was set in a little pan before the said Boyes, that they might eate it. And after the said bathing or washing, the said Midwife aduertised the said Boyes, that they should with a loud voice give a new name vnto the childe that she had so washed, and the name that they gave it was that which the Midwife would impose.

When the childe was brought forth to wash, if it be a man childe they bring him forth with his figne in his hand, and the figne is the Instrument wherewith his Father did exercise himselfe, as well in the Military art, as other arts, as of a Goldsmith, a Grauer, or any other office whatsoe uer: And after they had done all the aforefaid, the Midwife brings the childe to his Mother. And if it be a woman-childe, the figne wherewith they bring her to wash, is a Distaffe, a Spindel, To a Basket, and a handfull of Broome; which are the things wherewith the should exercise her felfe, being of age thereto.

And the bond of the Manchilde with a Shield and Darts for a figne which he brings with him when they bring him for to wash; they offer it to that part and place where are likely to happen warres with his enemies, where they burie it under ground. And so likewise of the Womanchilde, her bond they buried vnder the Metate, which is a stone to grinde Cakes vpon.

And after the aforesaid, at the end of twenty dayes, the childes Parents went with the childe Presentation to the Temple or Mixquita, which they called Calmecae, and in the prefence of the Priefts in the Temple they presented the childe with his offering of Mantels, and Mastelles and some meate: And after the childe being brought vp by his Parents, and being of age, they committed the childe to 20 the high Priest of the faid Temple, because there he might be taught that hereafter he might be

And if the childes Parents were determined that he (being of age) should ferue in warlike affaires, then straight way they offered him to the Maiter thereof, making him a promite of him (the Master of Boyesand yong men they ealled Tenebeanch or Telpuchilate) which offering was made with his present of meare and other things for the celebrating thereof. And the childe being of age, they committed him to the faid Master.

He declaration of the pictures contained in the deutifion following, wherein is declared at what age, and in what manner the raturall Parents did give countell to their children, how they ought to liue, as facceffuely a pictured in foure partitions, and so the foure partitions of this side are declared in order which are these that follow.

I The first partition, whereit is declared how that the Parents corrected their children, in giuing them good counfell when they were three years of age; and the portion of meate that they gaue them enery meale was halfe a cake of bread.

2 The second partition wherein is pictured in what things the Parents did instruct their children when they were of the age of four yeares, and how they began to exercise them to ferue in small things. And the portion of meate which they gaue them at a meale, was a 40 whole Cake.

2 The third partition, wherein is shewed that the Parents did exercise their children in bodily labour at five yeares of age, in loding their Sonnes with Wood and other things in finall burdens, of small weight, and to carry packes of small weight to the Tyangues, or Market place. And they exercised their Daughters of that age, in shewing them how they should handle the Spindell and Diffaire for to Ipin. And their allowance of meate was a whole Cake of Bread.

4 The fourth partition, wherein is pictured how the Parents instructed their children of fix yeares old, and exercised and occupied them in bodily service, that they might profit their Parents in fome thing, as in the Tyangues, which are Market-places that they might gather from the ground, the cornes of Maiz and Frifeles that were fpile there by him, and other small things that the buyers and others had left and toll there. And this was the Boies worke. But the Gitles were put to fpinne and to doe other profitable feruices, because in time to come, by meanes of the faid feruices and occupations, they should not spend their time idelly, and should avoide cuill vices that are wont to grow through idlenesse. And the allowance of meate that they gave to their children was a Cake and a halfe of Bread.

And fo the Tequichna goe round about the Towne, Houses, Market place, and Church, a
the time that they of the Towne are allepea and at reft, for to finde a place where they may give
the onset with the left touble and resistance.

CH A P.7. S.2. Mexican Spies, Warring, Captaines and Armes pictured.

A dec' ration of the pictures in the fecond partition. The Maxieus that is pictured and at his shoul 's sa Target and Darts, doth signific the Maxieus being moound to delitory a certaine Towne by warres, because they had rebelled against the Lordinp of Maxieu. And the otomether that are pictured and set over against the Maxieus are fermunt of the Grippe. which doe signifies that the whole Towne of the Grippe being affaid of the warres and definication that the Maxieus would bring upon them, they come to Maxieus or current a peace, submitting themselius for servantion of Maxieus, and protecting to acknowledge the Lordinp, by meanes whereof they receive them in friendship and for their feruants, laying adde that which was determined by their comfell.

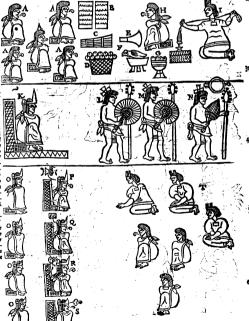

The foure valiant men pictured and intituled, with their Speares in their hands, and made readie for the warres, and the denices of Armour that they have on, doe fignific that they are Captaines of the Captaines armies.

HE that is let and at his backe a woman spinning, signifieth that it is his wife new married, and because he had taken the state of matrimonie vpon him, having been a Messenger with the rest that are pictured before him, which are fine, named Tespuchely, which are Messengers likewise. The married mangin per them a reason why hee leavest the charge of a Mellenger by reason of his marriage, and that hee will reft and leave off his fernice patt. And to please them more, and that they should grant his request, hee maketh them a banquet in guing them well to eate and drinke, and moreover the prefent that hee giveth them is a handfull of perfumes, a copper Hatchet and two Mantels, as by the pictures of these things are intituled. And by this folemnitie the married man is free from the faid Office.

2 In the second partition : Hee that is set downe and intituled, doth signifie the Lord of Mexico. that when any Messenger Telpuchtly pictured in the partition before this had given a good account of his office, and having taken upon them the flate of marriage, the Lords of Mexico from that they were but Meffengers, did promote them to a be ter title and degree, in so much that he made them Teguibna, which is signified by the pictures and titles of Tegubus, with their Speares and Fannes, giuing them authoritie to bee his Ambassadors and Officers in the warres, which they held for an office of great honour.

The Alcaldes doe ignific Iustices, appointed by the Lords of Mexico, that they should heare matters aswell Civill as Criminall. And the pictures of men and women which are before them, are Pleaders and Suitors which doe aske juffice. And the foure pictures that are intituled Teetly, shat are behinde the Alcalas. are principall young men that joyne with the Alealdes in their audience, to learne and infruct themselves in matters of ju gement, and afterwards to succeede in the Offices of the Alcaldes. From these Alcaldes, there was an appellation before the counfell Chamber of Moteguma, as hereafter is pictured.

CHAP. VIII.

Conquest of Mexico and New Spaine by HERNAN-

a Gemarahis third part of dies translated into Englishby

owne large

flockes of them ; and with his Indians he gathered great quantitie of Gold, so that in short time he was able to put in two thousand Castlins for his stocke, with Andres de Duero, a Merchant. At this time Christopher Morante had fent (Anno 1517.) Francis Hernandes de Cordona, Who first discouered Nucasan, whence he brought nothing (except the relation of the Country) but stripes: whereupon Lames Velasques in the yeere 1518. sent his Kinsman Iohn de Grijalna, with b Of this voy. two hundred Spaniards in foure ships: he traded in the River of Tanasco, and for trifles reage. Reade P. turned much Gold, and curious workes of feathers, Idols of Gold, a whole harneffe or furniture age Reade P. turned much Good, and Carlotte Barrys fourth for an armed man of Gold thin beaten, Eagles, Lions, and other pourtratures found in Gold, &c. 20 But while Grisalus deferred his returns, Velasques agreed with Cortes to bee his partner in the Difcouery, which he gladly accepted, and procured licence from the Gouernours in Domineo. & of all which and prepared for the Voyage.

followes in Velafanes afterward vied all meanes to breake off, in fo much that Cortes was forced to engage this Chapter. all his owne stocke, and credit, with his friends in the Expedition, and with five hundred and P. Mart. Des s. Gom, vbi furra. fiftie Spaniards in eleuen thips, fet faile the tenth of February 1519. and arrived at the Hand of and Cortes his Acufamil. The Inhabitants at first fled, but by the kind entertainment of some that were taken. they returned, and received him and his with all kind offices. narration to

They told him of certayne bearded men in Tucatan, whither Cortes fent; and one of them. the Emperour, Geronimo de Aquilar came vnto him, who told him, that by shipwracke at Iamaica, their Caruell 20 being loft, twentie of them wandred in the Boat without fayle, water or bread, thirteene or fourteste dayes, in which space the violence of the current had cast them on shoare in a Prouince called Waise, where, as they trauelled, seiten dyed with famine; and their Captayne Valdmia and other foure were facrificed to be Idols by the Cacite, or Lord of the Courtey, and eaten in a folemne Banquet, and he with fixe other were put into a Coope or Cage, to bee fatned tor another Sacrifice. But breaking Prison, they escaped to another Cacine, enemy to the former, where all the rest dyed, but himselfe, and Gonfalo Guerrer a Mariner. Hee had transformed himfelfe into the Indian cut, boring his riole full of holes, his eares jagged, his face and hands painted; married a Wife, and became a Captaine of name amongst the Indians, and would not returne with this Aguilar.

Cortes with this new Interpreter passed up the River Tanasco, called of the former Discouerer, Grislas; where the Towne that floor thereon, retuing to victual him, was taken and lacked. The Indians herewith inraged, affembled an Armie of fortie thouland, but Cortes by his Horse and Ordnance preuayled; the Indians thinking the Horse and Rider had beene but one creature, whose gaping and swiftnesse was terrible vnto them, whereupon they submitted themselues. When they heard the Horses ney, they had thought the Horses could speake, and demanded what they, faid : the Spaniards aniwered , Thete Horfes are fore affended with you, for fighting with them, and would have you corrected : the simple Indians prefented Roses and Hens to the beafts, detiring them to eate, and to pardon them.

Certes purpoled to discouer further Westward , because hee heard that there were Mines of co Gold, having first received their Vaffallage to the King his Master, to whom (he said) the Monarchie of the Vaiuerfall did appertagne. These were the first Vassals the Emperour had in New Spaine. They named the towne, where these things were done, Villarie, before called Pozonchan, contayning neere fine and twentie thouland houses, which are great, made of Lime, Potentian cal- and Stone, and Bricke, and some of mud-wals and rafters, couered with straw; their dwelling led Villary . - is in the vpper part of the house, for the moylinesse of the soyle. They did eate mans fielh

The Spaniards fayled Westward, and came to Saint Iohn de Vibna, where Tendills the Gouernour of the Countrey, came to him with foure thousand Indians. Hee did his reverence to the Captayne, burning Frankincense (after their custome) and little strawes, touched in the bloud of his owne bodie : and then prefented vnto him victuals and lewels of Gold, and other curious 60 workes of feathers; which Cortes requited with a Collar of Glasse, and other things of imall value. A woman-flaue, giuen him at Potonchan, vnderstood their language, and shee with Agui-Lar, were his Interpreters. Cortes profesied himselfe the servant of a great Emperour, which had

Ernando a Cortes was borne at Medellin in Andulozia, a Province of Spaine, An-

had beene no fuch Prince in the World, as his Master and Soueraigne, the King of Mexico, whole Vafiall he was, named, Mutezuma. To him he feut the reprefentations of these bearded men and their Horses, Apparell, Weapons, Ordnance, and other Rarities, painted in Cotton-clothes. their ships and numbers. These painted Cottons he sent by Posts, which deliuered them from one to another with such celeritie, that in a day and night the mellage came to Mexico, which was two hundred and ten miles diffant. Cortes had demanded, whether Mutezuma had Gold! Tendilli affirmed, and Cortes replyed, That he and his fellowes had a dilease of the heart, whereunto ble ticknesses Gold was the belt remedie.

fent him thither, whose power he so highly extolled, that Tendilli maruelled, thinking there

Mutezuma fent him many Cotton-clothes of divers colours, many tuffes of Feathers, two Wheeles, the one of Silver, with the figne of the Moone, and the other of Gold, made like the Sunne :- which they hold for Gods, and give vnto them the colours of the Metals most like them. Each Wheele was two yards and a halfe broad. These with other parts of the Present were esteemed worth twentie thousand Duckets. Mutezuma also protessed ioy, to heare of so great a Prince, & fo strange people, & promised prouision of all necessaries, but was very vinwilling that Cortes should come to tee him, as he pretended. Yet Cortes persisted in that his defire of seeing Mutezuma, that he might further acquaint himfelfe with the knowledge of those parts. The filly Indiane having neuer feene fuch strange fights, came daily to the Campe to fee them

and when they heard the Ordnance discharged, they fell downe flat, thinking the Heauens had faine : the ships they thought were the God of the Ayre, called Quezalconols, which came with 20 the Temples on his backe, for they daily looked for him. Among it the reft, or rather aloofe off from thereft, were certayne Indians of differing habit, higher then the other, and had the grittles of their Nofes flit, hanging ouer their mouthes, and Rings of Iet and Amber hanging thereat: their neather lips also bored, and in the holes, Rings of Gold and Turkesse-stones, which weighed fo much, that their lips hung ouer their chinnes, leaning their teeth bare. This vglineffe they accounted gallantry, and fuch vacouth deformitie to be the only brauery. And thou Gallant, that on-mongeris readeft and derideft this madnefic of Fashion, if thine eyes were not dazeled with lightnesse (light I cannot call it) of selfe-reflected Vanitie, mightest see as Monster-like fashions at home, and a more fashionly Monster of thy felfe; thy clothes and oathes, thy gestures and vestures, make thy maked Deformicie worfe then their thus deformed nakednoffe ; both in deed feeme to haue re-

30 celued fome hellish Character (if there may bee bodily representation) of that olde Serpent in these new fashions, striuing who shall shape himselfe, neerest to that misse-shapen vglinesse, wherein the Indian-jagges himselfe out of humane lineaments, the other swaggers himselfe further out of all Civill and Chrittian ornaments. But thefe Fashion-mongers haue made mee almost out of my fashion, and to forget my felfe, in remembring their forgetfulnesse.

These Indians of this New-cut, Cortes caused to come to him , and learned that they were of Zempoallan, a Citie distant thence a dayes journey, whom their Lord had sent to see what Gods were come in those Tencalis; that is Temples (fo, it feemeth, they called the ships:) which held no conversation with the other Indians, as being not subject to Matezama, but onely as they were holden in by force. He gaue them certaine toyes; and was glad to heare that the Indians

49 of Zempoallen, and other their Neighbours were not well affe ded to & Matezama, but readie, as farre as they durft, to entertayne all occasions of warre with him. Hee fayled from thence to Pa. Parises. muco, and passed the River farther, till he came to a little Towne, where was a Temple, with a little Towre, and a Chappell on the top ascended by twenty steps, in which they found some Idols, many bloudy Papers, and much mans bloud, of those which had beene facrificed, the blocke also whereon they cut open those Sacrifices, and the Razors made of flint, wherewith they opened their brefts, which strucke the Spaniards with some horrour and feare. They passed a little further, and there having taken poffession, in the Emperours name, of the whole Countrey, they founded the Towne De la vera Crux, Cortes religning his authoritie, and Officers being elected; Vera Crux, and lastly, all with generall confent appointing Cortes their Captaine.

Cortes went forward to Zempoallan, where hee was folemnely received and lodged in a great house of lime and stone, whited with playster, that shined in the Sunne, as if it had beene Silver; fo did the Silver-conceits of the Spaniards imagine, the defire of that Metall having made fuch an impreffon in their imagination, that they told Cortes before hee came at it , they had feene a house with wals of Silver. Here, and at Chianiztlan, Cortes incited thear to rebell against Mnrecuma, and to become feruants to the Spaniards, which they did and he voder-hand to wrought, that Mutezumatooke him for his friend,

All his intent was to fift in troubled waters, and to fet them both by the eares, that hee might watch oportunitie to benefit himicife. His owne people rebelled, fome of whom he chaflied with the halter and the whip for example to the relt : and after caused all his ships to bee 60 funke clotely, that they should not minde any returne. He left 1 50. man for the guard of the new Towne, under Pedro de Honrico, and with 400. Spaniarde, fifteene Horfas, and fixe Peeces of Artillery, and 1300 Indians, they went from Zempoallan, and came to Zactoran, the Lord whereof was Olimler the subject of Mutezama, who to testifie his joy, and to hangur Corres, commanded fifty men to be facrificed, whose bloud they faw, new and fresh. They

They carried the Spaniards on their shoulders, sitting on Beeres, such as whereon they we ro carry dead men. He bragged as much of the power of Mutezuma, as their Spaniards of their Em-Blandy Sacri- perour. He faid he had thirty Vaffals, each of which was able to bring into the field an hundred thouland men of Warre, and facrificed 20000. men yearely to the gods : in this he somewhat exceeded; the other was true, although some yeares, the Sacrifices also were thought to amount to coooo. This Towne was great, and had thirteene Temples, in each of which were many Idols of ftone, of diuers fashions, before whom they facrificed Men, Doues, Quailer, & other things with great perfumes and veneration. Here Mulezums had 5000 Souldiers in Garrison. Cottes passed from thence to Mexico by the Frontiers of Tlaxcallon, which were enemies to Muses ma, whom he might eafily have overcome, but referred, partly for the exercise of his Subiects to the Warre, par ly for the Sacrifices to his gods.

These iowned an hundred and fifty thousand men against Cortes, taking him for Mutezuma's friend : and yet euery day fent him Guinney-cockes and Bread, partly to espie his strength, and partly in a brauery, left their glory should be obscured in the conquest of men already started. But when in many skirmishes and lights they could not prevaile against that handfull of Speniards. they thought they were preserved from harme by inchantments: and sent him three presents with this meffage; That if he were that rigorous god which eareth mans flesh, he should eare those fine flaves which they brought him, and they would bring him more: if he were the meeke and sentle god, behold Frankinsence, and Feathers: if he were a mortall man, take here Fowle. and gentie god, penois Frankintenes, and gentie god, and fubmitted their City tohim. Their and fubmitted their City tohim. Their City Tlaxcallan was great, planted by a Rivers fide, which iffued into the South-Sea. It had foure Streetes, each of which had their Captaine in the time of Warre. The government was an Aria focraty, hating Monarchy no leffe then tyranny. It had eight and twenty Villages, and in them an hundred and fifty thousand Housholds, very poore, but good warriors. They had one Marketplace fo spacious, that thirty thousand persons in a day came thither to buy and fell by exchange:

for money they had none.

Mutezuma had fent before to Cortes, and promifed tribute to the Emperour, whatformer should be imposed; onely he would not have him come to Mexico. And now he fent agains. that he should not trust that new friendship with the beggerly Nation of Tlaxealler; and they againe counselled him not to aduenture himselfe to Matezama. Cortes held his determination 20 for Mexico, and being accompanied with many of the Tlaxcantlexas, he went to Chelella, a little from whence Murezuma had prepared an Army to intrap him in the way; but he finding the trechery, it redounded upon the Cholollois, the fame day they had thought to have executed the fame upon him. For this end they had facrificed ten children, fine males, and as many females. three yearesold, to Quezalconati their god, which was their custome when they began their Wars. He out-going them in their owne art of fubtilty, intrapped their Captains in Counfell, and fent his Army to spoile the City, where were slaine thousands. There were twenty Gentlemen, and many Priefts which ascended up to the high towre of their Temple, which had an hun-

dred and twenty steps, where they were burned, together with their gods and Sanctuary.

This Citie had twenty thousand Housholds within the Wals, and as many in the Suburbs. It 40

Tlayeallan a

ples and deuge hewed outward very faire and full of Towres, for there were as many Temples as dayes in the yeare, and every one had his Towre. The Spaniards counted foure hundred Towers. It was the Citie of most denotion in all India, whither they travelled from many places farre distant in Pile grimage. Their Cathedrall Temple was the best and highest in all New-Spaine, with an hundred and twenty steps up to it. Their chiefe god was Quezalconatl, god of the Ayre, who was (they fay) founder of their Citie being a Virgin, of holy life and great penance. He instituted failing, and drawing of bloud out of their eares and tongues, and left precepts of Sacrifices. Hee neuer ware but one garment of Cotten, white, narrow, and long, and vpon that a Mantle, befet with certaine red crosses. They have certaine greene stones which were his, and are kept for great relikes : one of them is like an Apes head. Eight leagues from Chololla is the hill Papaca- 50 tepec, or imoake-hill, which the Earth seemeth to have erected as a Fort to encounter and affault the Ayre: now with fmoky mifts endeuouring to choake his purer breath, another while with violent flames, and naturall fire-workes threatning to joyne league with his elder and fuperiour brother to difinherit him: fometimes with showers of ashes and embers, as it were, putting out the eyes, and fometimes with terrible and dreadfull thunders, rending the eares of that Airy Element ; alwayes (luch is the event of warre) hurting and wasting it selfe, to indamage the enemy. The Indians thought it a place of Purgatory, whereby tyrannicall and wicked Officers were punished after their death, and after that purgation passed into glory. The Spaniards ad-

uentured to fee it, but two lonely held on their journey, and had there beene confumed, had they not by a Rocke bin shadowed from the violent eruption of the fire which then hapned. It 60

chanced that the Earth, weary it seemeth of the warre, as having spent her store and muniti-

on, agreed on a truce which continued ten yeares : but in the yeare 1540, it brake forth into

more violent hostility then before, quaking and renting it selfe with vibridled passion. and

whereas the Ayre had alwaies a snowie Garrison about her high tops and frontiers, to coole and

CHAP.8. Corteles entertainment. Mutezumas Religion Oration death.

quench her nery showers, yet these did but kindle a greater flame, the ashes whereof came to Huexozince, Quelaxcopon, Tepiacac, Chololla and Tlazcallan, and other places; ten, or as some fav. fifteene leagues distant, and burned their hearbs in their Gardens, their fields of Corne, Tracs and cloathes that they laid a drying. The Unlean, Crater, or mouth whence the fire iffued, is about halte a league in compasse. The Indians killed their garments (an honour done vnto their gods) which had adventured themselves to this dreadfull spectacle.

mici nad aduentated the interior, Musezama feared, faying, Thefe are the people which our Musezamas toands faid should come and inherit this Land. He went to his Oratory, and there shut vphim-ligion. telie alone, abiding eight daies in praier and fasting, with facrifice of many men, to aslake the To fury of his offended detties. The Deuill bids him not to feare, and that he should continue those bloudy Rites, affuring him that he should have the gods Vizziliputzli and Teleaslipuca to preferue him, faying, That Quezalconatt permitted the destruction at Chololla, for want of that bloudy facrifice. Cortes paffed a Hill fix miles in hright, where, by the difficulty of the passage, and of the cold (being alway courted with Snow) the Mexicans might eafily have prevented his passing further. Hence he espied the Lake; whereon Mexico and many other great Townes did Hand. Interest reflective the capital state of tooo housholds, Corecan of fix thousand, Vizilopuchili of five thoufand. Thefe Towns are adorned with many Tymples and Towres, that beautifie the Lake. From

Iztacpalapan to Mexico is two Leagues, all on a faire cauley, with many draw-bridges, thorow which the water pafferh. Musezama received Cortes with all folemnity on the eight of November A (19. into this great Citie, excusing himselfe of former vnkindnesses the best he could. Of his house, and Maiestie, and the diuine sonceit the people had of him, we shall speake after more fully, as also of the Temples. Priefts, Sacrifices and other remarkeable things of Mexico.

Mutezama prouided all things necessary for the Spaniards and Indians that attended them: euen beds of flowers were made, in place of litter for their Horles. But Contes disquieted with thole thoughts which commonly attend Ambition (discontent in the present, hopes and scares of the future) vied the matter fo, that he tooke Mutezame priloner, and detained him in the place appointed for the Spaniards lodging, with a Spanish Guard about him, permitting him otherwise to deale in all private or publike affaires, as before. Hereupon Cacama, Lord of Texas-

30 co, Nephew to Materima, rebelled, but by treachery of his owne people was prefented prilo- a The like ner to Muterma. He, after this fummond a Parliament , where hee made an Oration vnto his speech he had Subjects, faying, * That He and his Predeceffours were not Naturals of the Country, but his made at fift to Subjects, faying, * That He and his redecemous were not granted again and the Country, such as Fore-fathers came from a farre Country; and their King returned agains; and faid, he would fend, fily wrought fuch as should rule them. And he hath now sent these Spannards, faith he. Hereupon he counselled on that aduanthem to yeelde themielues Vassals to the Emperour, which they did at his command, though tage applying with many teares on his part and theirs, at this farewell of their liberty. Matezama prefently this Trackion with many teares on his part and the part and the part quantity of Gold and other Jewels, which amounted to fixteene hundred thousand Castlins of Gold, besides Silver, 5.V/ **

Cortes had hitherto a continuall victory in Mexico without any fight: but news was brought

40 him of Pamphilo de Naruaes, who was fent with eighty Horfe, and some bundreths of Spaniards by Velafquet, to interrupt the proceedings of Cores : who leaving two hundred men in Mexico, with two hundred and fifty other came fuddenly in the night, and tooke Warners priloner, and returned to Mexico with Naruses his Company, now his followers: also, where he found his men exceedingly diffrested by the Cirizens for a murther committed in the great Temple at a folemne Feast, wherein a religious dance they were saine, for the rich garments and Iewels they terms recat, wherein a tengous same oney were same, to two tenting gaments and reversely ware, by the Spaniards. Cortex came in good time for the reliefeof his men: and Materiana Automatical Cauled the Marketan to thoride their rage, which prefently was tenewed; and when Material death.

May was againe by his Guardians, the Spaniards, cauled to fpeake to the people, ablow of a from

on his Temples wounded him, whereof three daies after he died.

Corter had some thousands of the Tlavelieras to helpe him, but was driven to flye from Mexico with all his Spaniards and Indians, which he did closely in the night, but yet an alarme was raifed, and the Bridges being broken, much flaughter of his people was made by the Mexicans, and all his treasure in manner lost. They pursued after him also, and had two hundred thousand in the field : when it was Cortes his good hap to flay the Sandardbearer, whereupon the Indians forfooke the field. This battell was fought at Ocumpan,

At Tlazcallan, he and his were kindely entertained; they had prepared before 50000. men to goe to Mexico for hishelpe, and now they promifed him all offices of loyalty and feruice. With their helpe he subdued Tepeacac; and built certaine Brigandines, or Frigats, which were carried many leagues on the backes of thole Indians, and there failned and finished, without which he

could neuer haue won Mexico. In Tezeneo certaine Spaniards had beene taken, facrificed and eaten, which Cortes now revenged on them. Eight thousand men had carried the loose peeces and timber of this Nauie, guarded with twenty thousand Tlancallans, and a thousand Tamemez, or Porters (which carried victuals) attending. They calked them with Towe, and for want of Tallow and Oyle, they vied

CHAP. IX.

Larger Relations of things most remarkeable observed by the Spaniards at their first comming: Cholollas holies; Popocatepecs ashes. Mutezumas multiforme magnificence and maiestie. Mexican Citie and Temple, with other antiquities gathered out of the Third part of the Historie of Francis

ted and pub-Lopez * de Gomara.

Hololla is a Citie as Tlaxcallan, and hath but one person who is Governour and it by the Itagenerall Captaine, choien by the confent of all the Citizens. It is a Citie of of Applica di twenty thousand housholds within the wals, and in the suburbs as much more, Crewitz : for It sheweth outwards very beautifull, and full of Towers, for there are as many the Samilbori-Temples as dayes in the yeare, and every Temple hath his Tower. Our men ginall have counted foure hundred Towers. The men and women are of good disposition, not,

well fanoured and very wittie. The women are Goldsmiths and also Carners, the men are warriers, and light fellowes, and good Maisters for any purpose : they goe better apparelled then any other Indians yet feene. They weare for their vpper garment cloakes like vnto Morifcos but 20 after another fort. All the Countrey round about them is fruitfull and errable ground well watered, and fo full of people, that there is no walte ground, in respect whereof, there are some poore which begge from doore to doore. The Spaniards had not feene any beggers in that Countrey before they came thither.

Chololla is a Citie of most devotion and religion in all India, it is called the Sanctuary, or holy place among the Indians, and thither they translled from many places farre distant in Pilgrimage, and for this cantle there were fo many Temples. Their Cathedrall Temple was the best and higheft of all the New Spaine, with a hundred and twenty steps up unto it, The greatest I-doll of all their gods was called Quexalconately, God of the Aire, who was (lay they) the founder of their Citie, being a Virgin or holy life, and great penance. He instituted fasting, and 20 drawing of bloud out of their eares and tongues, and left a precept, that they should facrifice but onely Quales, Doues, and other foule. He neuer ware but one garment of Cotten, which was white, narrow, and long, and voon that a mantle befet with cartaine red croffes. They have cer-

taine greene Stones which were his, and those they keepe for relickes. One of them is like an Apes head, Here they abode twenty dayes, and in this meane while there came fo many to buy and fell, that it was a wonder to fee. And one of the things that was to be feene in those faires, was the earthen veiled, which was exceeding curious and fine.

The bill called Popocatepec.

Here is a hill eight leagues from Chololla, called Popocateper, which is to fay, a hill of smoake, for many times it caffeth out imoake and fire. Cortes fent thither ten Speniards, with many Indians, to carry their victuall, and to guide them in the way. The ascending up was very troublesome, and full of craggie rocks. They approached so nigh the top, that they heard such a terrible noise which proceeded from thence, that they durit not goe vnto it, for the ground did tremble and shake, and great quantity of ashes which disturbed the way : but yet two of them who feemed to be most hardie, and defirous to fee strange things, went vp to the top, because they would not returne with a sleeuelesse answer, and that they might not be accounted cowards, leaning their fellowes behinde them, proceeding forwards. The Indians faid, what meane these men? for as yet never mortall man tooke such a journey in hand.

Thefet wo valiant fellowes passed through the Defart of Ashes, and at length came under a great smoake very thicke, and flanding there a while, the darkenesse vanished partly away, and then appeared the vulcan and concauity, which was about halfe a league in compafie, out of the which the avec came abounding, with a great noise, very thrill, and whiftling, in such fort that the whole hill did tremble. It was to be compared vnto an Ouen where Glaffe is made. The fmoake and heate was so great, that they could not abide it, and of force were constrained to returne by the way that they had accended; but they were not gone farre, when the vulcan began to lath out flames of fire, albes, and imbers, yea and at the last, stones of burning fire : and if they had not chanfed to finde a Rocke, where under they shadowed themselves, undoubtedly they had there beene burned. When with good tokens they were returned where they left 60 their fellowes, the other Indians kiffed their garments as an honour due voto gods. They prefen-

ted vnto them fuch things as they had, and wondred much at their fact. The simple Indians thought, that that place was an internal place, where all such as govern Purpstorm ned not well, or vied tyrannie in their offices, were punished when they died, and also believed. that after their purgation, they passed into glory. This Vulcan is like vnto the Vulcan of Sicilia,

Mans Greafe, of fuch as had beene flaine in the Warres. For fo the Indians vied, to take out the Mans Greate, or numes mad occur manner in the hundred Spannarde, of which fourescore and fix were Horle-men, three cast peeces of Iron, sifteene small peeces of Bralle, and a thousand weight of Powder, and 100000. Indian Souldiers on his side. He made a fluce or trench about twelve for broad, and two fathome deepe, half a league long, in which 40000. men wrought fifty foot broad, and two ratioms weeps, many dayes. He lanched his Veffels, and foone ouercame all the Canoas of the Lake, of which were reckoned in all five thousand. The Spaniards brake the Conduits of sweet water, where with the

Onabutimee, now the new King of Mexico, receiving incouragement from the Denillish O. racle, caufed to breake downe the Bridges, and to exercise what focus with or frength could doe 10 racle, cauted to breake downe one prings, and for a six doubtfull chance of warre) conon accence or his Citie, Johnstones ordained a new King, a Christian Indian, of the royall bloud, who quered. Cover man in science. The Spaniards being Lords of the Lake, and of the Cauleyes, by much autree min in this nego. helpe of their Galliots and Ordinance, they fired a great part of the Citie. One day the Mexihelpe of their Gamos and Guantage, and thereupon celebrated a Feaft of Victory. The Priefts went cant had gotten tome addanage, and therefore the performance of five their went vp into the Towers of Tlatelules, their chiefe Temple, and made there perfumes of fiweet Gums, vp into the Lowers or Liestense, the control of the phase the captines, opening their in token of victory, and facrificed forty Spaniards (which they had taken captines, opening their in token or victory, and acrinced loss years breeks, and plucking out their hearts) fprinkling their bloud in the Ayre; their fellowes looking on and not able to reuenge it. They flew likewile many Indiant, & four Spaniards of Alsarade on and not sole to receige in the open fight of the Army The Maxicas danced, drankthem felues 16 company, whom they we in the period of the property of the period of the Didaine, and all the Furies that Paffion or Compassion could coniure vp, had now filled the Spa-Diotains, and an energy and their Indian partakers: and Cortes, that hitherto had hoped to refer to fome part of the Citie, now did the vtmost that Rage and Reuenge could effect, helped no leffe with in with Famine and Peftilence, then with Sword and Fire without. At last Mexico is razed the Earth and Water sharing betwixt them what the Fire had left, and all which had sometime Earth and Water maring feetwate them white the transfer and the state of the an whiten had former the definition of the state of the st build the Citie, if conquered, for them; if conquerors, for the Spaniard: It was re-builded with a hundred thousand houses, fairer and stronger then before. The Siege lasted three Moneths, and 30 had therein two hundred thousand Indiant, nine hundred Spaniards, sourescore Horses, seuenteene Peeces of Ordinance, thirteene Galliots, and fixe thouland Canoas. Fiftie Spaniards were flaine, and fixe Horfes : of the Mexicans, a hundred thousand, besides those which died of Hun-

This was effected Auto 1521, on the thirteenth day of August, which for that cause is kept festivall every yeare. For the Description of the Country wherein Mexico is situate. Cortes in his focund Narration to the Emperour faith, it is entirioned with hils : (He telleth of fome hils his please a Correspond to the Emperous matth, to enhance within in: (the testem of tome and alloin his isomere, wherein discrete his plaine of 70, leagues compaffe, and therein two Lakes which extend the circuit of 70, leagues; the one fit. which ebbeth and flowerh (an argument for Parriston his opinion, that faltnesse sa chiefe caute 40 of that viciffitude of ebbing and flowing, in the Ocean) the other fresh : When the water of the Salt Lake increaseth, it sunneth I'ke a, violent fireame into the fresh Lake, which when it decrea-

feth, is repaired againe by the like iffue of this into the former.

CHAP.

it is high and round, and neuer wanteth fnow about it, and is feene afarre off in the night, it lathe single and tounds, and there is neere about this Hill many Cities, and Huexoxinco is one of the nighest. In tenne yeeres space this strange hill of working did expell no vapour or smoke thus in the years I (40. it began agains to burne, and with the horrible noyie thereof, the Neighbours that dwelt four leagues from thence were terrified, for the especiall firange smoakes that then were seene, the like to their Predecessors had not beene seene. The ashes that proceeded from thence came to Huevozinco, Quelaxcopan, Tepiacae, Quaubquecholla, Chololla, and Tlaxcallan which standeth ten leagues from thence, yea fome fay, it extended fifteene leagues distant, and burned their hearbes in their Gardens, their Fieldes of Corne, Trees, and cloathes that lay

irying. He left the way that the *Mexicans* had perfuaded him to come, for it was both euill and dangerous, as the Spaniard which went to the Vulcan had feene, he went another plainer way. and neerer. He alcended up a Hill conered with inow, which was fixe miles of height, where and neerer, requestion of them, they might easily have taken them, by reason of the great cold : and from the top of that Hill, they discouered the Land of Mexico, and the great Lake, with his Villages round about, which is an excreding goodly fight. But when Cortes faw that beautifull thing, his joy was without comparison.

There came twelve Lords from Mexico, among whom was Cacama, Nephew to Mniezuma who was Lord of Tezence, a young man of fine and twentie yeeres of age, whom the Indians did much honour; he was carried vpon their fhoulders, and when they fet him downe, one went before with a Broome to I weepe the dust out of his way. In this order hee came to Iztacoalanan Euery two houres came meffengers betwixt Cortes and Mutezama: then came Cueilenge Lord of that Towne, with the Lord Culbuacan his Kinfman to receive him, who prefented vnto him flaues, garments, and feathers, and to the value of foure thousand Duckets in Gold, Cuetualse received all the Spaniards into his owne house, which hath very faire Lodgings all of stone, and Carpenters worke, exceeding well wrought, with high and low roomes, with all kind of fernice: The chambers were hanged with cloth of Cotton very rich, after their manner. There were faire Gardens replenished with many sweet flowres, and sweet trees garnished with Networke, made of Canes, and couered with Roses and other fine hearbes, with fundry ponds of fweet water. There was another Garden very beautifull of all forts of fruits and hearbes, with 20 a great pond walled with lime, and stone, and was foure hundred paces square, made with faire fleps to descend voto the bottomen many places, and was full of diners kinds of fishes, and manv kind of water Birds, which formetimes covered the pond, as Guls, and Mewes, and fuch like. Iztaepallapan is a Towne of 10000 housholds, and is planted in a Lake of Sale-water, the one halte of the Towne built on the water, and the other on the Land.

The folemne

From Izzacpallapan to Mexico is two leagues all voon a faire Calley, woon the which eight pompe where. Horsemen may passe on ranke, and so directly straight as though it had beene made by line. And with Cortes was who focuer hath good eye-fight might discerne the gates of Mexico from thence. Coroncan is a receiuedinto Towne of fixe thousand dwellers, Vizilopuchtli is of fine thousand. These Townes are planted in the Lake, and are adorned with many Temples, which have many faire Towres, that doe 40 beautific exceedingly the Lake. There is great contractation of Salt, which is made there, and from thence is carried abroad to Faires and Markets, which thing was a great rent to Mitezus. ma. Vpon this Calley are many drawne Bridges built vpon fairearches, that the waterpaffeth

> Cortes passed this Calley with 400. Spaniards; and 6000. Indians his friends : their passage was with much adoe, by reason of the great multitude of dudiant which came to see him, and comming neere the Citie, there adjoyned another Calley with a broader patage; where frandeth a ftrong Bulwarke of itone, of the heigth of two fachome with two Towers on each fide, and two gates very firong. Here at this Fort came three thouland Courtiers and Citizens to receive him. and every of them touched the ground with his right hand and kiffed it, and paffed forwards in 50 the order as they came. These salutations endured an houre and more. From the Bulwarke the Calfey lyeth directly, and before the entrance into the fireet there is another draw Bridge made of timber ten paces broad, under the which the water paffeth too and from Are this Bridge came Mutezama to receive Cortes under a Canopie of greene feathers and gold, with much Argentery hanging thereat, which Canopie foure Noble-men did carrie: And the two Princes (netlanac and Cacama his Nephewes, did leade him by each arme; all three were rich apparelled and all of one fashion, except Mutezume, which had a paire of sapoes of gold beter with precious Stones, and the foles were tyed to the upper part with latchets, as is painted of the Antikes. His Gentlemen went by two and two, laying downe and taking up Mantles and Couerlets upon the ground, because his feet should not touch the same : then tollowed him as in Procession, 200. 60 Noblemen bare-footed, with garments of a richer Livery then the full three thouland. Mutezama came in the middeft of the freet, and the others came behind him as night he wall as they might, their faces towards the ground, for it was a great offence to looke him in the face. Cortes alighted from his Horle, and according to our vie went to embrace him, but the Princes who led

Muterumas

him by the armes, would not fuffer him to come fo nigh, for they held it for finne to touch him. but yet faluted each one the other.

Cortes put about Matezama his necke a coller of Margarites , Diamonds, and other stones all of glaffe. Mutezuma received it thankfully, and went before with one of the Princes his Nephewes, and commanded the other to leade Cortes by the hand, next after him in the midft of the ffreet; and proceeding forward in this order, then came the Gentlemen in the richeft Liuery to welcome him, one by one, touching the ground with their hands, and after returned to their standing. And if the Citizens had come as they requested, all that day would not have ferued for falutations. The coller of glaffe pleafed well Mutezama, and because hee would not

10 take without giving a better thing, as a great Prince, hee commanded to be brought two collers Spanistagive of red Prawnes, which are there much efteemed, and at enery one of them hanged eight Shrimp's grand galler of gold, of excellent workmanship, and of a singer length enery one, he put these collers with scrool and his owne hands about Cortes his necke, the which was effected a most great favour, yez and the glory. Indians maruelled at it. At this time they were come to the street end, which was almosta mile long, broad, fireight, and very faire, and full of houses on each fide, in whose doores, windowes and tops, was such a multitude of Indians to behold the strangers, that I know not who wondred moit, our men to fee fuch a number of them, or elfe they to fee our men, their Ordnance and Horles, a thing to strange vnto them. They were brought vnto a great Court or house of Pdols, which was the Lodging Axaiaca, at the doore whereof, Mutezuma tooke Cortes by the 20 hand, and brought him into a faire hall, and placed him vpon a rich Carpet, faying vnto him, Sir, now are you in your owns house, eate and take your rest and pleasure, for I will shortly come and visit you againe, Such (as you heare) was the receiving of Hernando Cortes by Mutezuma a most

mightie King, into his great and famous Citie of Mexico, the eight day of November, 1, 19. The houle where the Spaniards were lodged was great and large, with many faire chambers The Otation fufficient for them all: it was neate, cleane matted, and hanged with Cloth of Cotton, and or Muleralina Feathers of many colours, pleafant to behold. When Maiszama was departed from Cortes, niads, hee beganne to let his houle in order and placed the Ordnance at his doore, and having all his things in good fort, he went to a fumptuous Dinner that was prepared for him. Affoone as Mu-

texums had made an end of his Dinner, hearing that the Strangers were rifen from the Table, 30 and reposed a while, then came hee to Cortes; faluting him, and fate downe by him. He gave vnto him divers Iewels of Gold Plate, Peathers, and many Garments of Cotton, both rich, well wouen, and wrought of strange colours, a thing comely, that did manifest his greatneffe, and also confirme their imagination. This gift was deliuered honourably, and then beganne his talke as followeth : Lords and Gentlemen , I doe much reisyce to have in my house such valiant men as yee are, for to use you with courtesse, and intrease you with bonour, according to your desert and my estate. And where heretosore I deserted that you should not come hither, the onely cause was, my people bad a great feare to see you, for your gesture and grimme beards did terrific them, yea, they reported that yee had such heasts as smallowed men, and that your commine was from Heauen, bringing with you Lightning; Thunder, and Thunder-bolts, wherewith 40 you made the Earth to tremble and to Chake, and that yee flue therewith whom yee pleafed. But now I doe fee and know that you are mortall men, and that yee are quiet and burt no man : alfo I have

feene your Horses, which are but your Sermants, and your Gunnes like unto shooting Trunkes. I doe now bold all for Fables and Lyes which have beene reported of you, and I doe also accept you for my metre Kinsman. My Father told mee that hee had heardhis forefathers say, of whom I doe dismy metre conjunction that they beld spinion bow they were not Naturals of this Land, but come hither by chance, in companie of a mightie Lord, who after a while that hee had abode here, they returned to their natural! A ftinge open forle: After many secres expired, they came againe for those whom they had left beere behind them, nions but they would not goe with them, because they had here whahited, and had Wines and Children, and

on tay we make the Land. Now hole mights Lord legis that they were of fulfilled me, and the continues of the for this consideration, wee have alwayes suspected and beleeved, that such a people should come to rule and converse us, and considering from whence you come. I doe thinks that you are they whom, wee looked for, and the notice which the great Emperour Charles had for us, who had now lent you buther. Therefore Lord and Captaine, bee well affored, that wee will obey you, if there bee no ferned or decentual master in your dealings, and will also divide with you and yours all that we have And although this which I have faid were not onely for your vertice, fame, and deeds of valiant Gentlemen. I would yet doe it for your worthinesse in the battailes of Tauaico, Teocazinco, and Chollolla, being fo few, to overcome fo many.

Now againe, if yee imagine that I am a God, and the walls and rooffes of my boules, and all my velfell of feruice, to be of pure Gold, as themen of Zempoallan, Tlaxcallan, and Huexozinco, bane informed you, it is not fo, and I indge you to bee so wise, that you give no credit to such Fables. Tou shall also note, that through your comming onther, many of my substitutes are belied, and are become my

mortall enemies, but yes I purpose to breake their wings. Come feele you my bodie, I am of flesh and mortal exempes, on year your pole or one no God, although as a King I doe esteeme my felfe, of greater dianitie and preheminence then others. My boujes you doe also fee, which are of timber and earth . and the principallest of Masons worke , therefore now you doe both know and see what odious byers those Tale bearers were. But troth it is , that Gold Plate, Feathers, Armour, lewels, and who fort togic tue nearry were, one never no.

Keekes, I have us the Jraching of my Forefathers a long time preferred, as the ofe of Kings is, white
which you and your foul enter as a fumer. And now it may pleafe you to sake your reft, for leave which you are your span entry as an more.
that you are weary of your iourney. Coates with infull countenance humbled himselfe, seeing some that you are weary of your romany. Caring onto him, open the trust I have had in your elemencie, I teares sail from Milleruma bus eyes, young conversion, young non-conversion common young commence, to ensified as commendate to fee, and take with your Highouffe, and now I know that all are speciable to hath before told nece. The like your Highouffe hath beard reported of v., affine your selfe, that the Emperous King of Spainess your natural Lord, whom yes have expected, hee is the onely heire from whence your Linage doth proceed, and at touching the offer of your Highnesse treasure, I do most beartily thanke you.

After all this communication, Musezuma demanded whether the bearded men which came with him; were either his vallels, or his flaues, because hee would enterrayne each one according to his estate. Cartes answered, that they were all his brethren, friends, and fellowes, exsent lome that were his feruants.

Then he departed, and went home to his Palace, and there informed himselfe particularly who were Gentlemen, and who were not, and according thereunto, fent enery one particular to gife or present. To the Gentlemen he sent his reward by his Comptroller, and to the Mariners and other Servitors, by a Page of his houshold.

Mutezamus was a man of a small stature, and leane, his colour tawnie as all the Indiana Muteruma de are. Hee had long haire on his head, fixe little haires vpon him, as though they had beene put in with a Bodkin. His thinne beard was blacke. Hee was a man of a faire condition, and a Joer of Iustice, well spoken, graue and wife, beloued and feared among his subjects. Mutezume Joth fignifie Sadnelle. To the proper names of Kings and Lords, they doe adde this fyllable Cin, which is for courte-

Cin.

fie and dignitie, as we vie Lord. The Turke vieth Zultan. The Moore or Barbarian calleth his Lord Mulley, and to the Indians fay Mutezumazin, His people had him in fuch reuerence, 20 that hee permitted none to fit in his fight , nor yet in his prefence to weare shoots, nor looke him in the face, except very few Princes. Hee was glad of the convertation of the Spaniards, and would not suffer them to stand on foote, for the great estimation bee had of them, and if hee liked any of the Spaniar de garments, hee would exchange his apparell for theirs. He changed his owneapparell foure times enery day, and bee neuer clothed himselfe againe with the Garments which hee had once wome, but all such were kept in his Guardrobe, for to give in Prefents to his Sequents and Ambastadours, and voto valiant Souldiers which had taken any enemy Prifoner, and that was efteemed a great reward, and a title of priviledge. The coftly Mantles whereof had beene diversient to Cortes , were of the His Wardrobe, fame Guardrobe.

Change of

His diet-rites.

Mantezama went al wayes very neate and fine in his attyre. Heebathed him in his Hot-house foure times every day. Hee went feldome out of his Chamber , but when hee went to his meate. Hee eate alwayes alone, but folemnely, and with great abundance. His Table was a Pillow, or elfe a couple of coloured Skinnes. His Chaire was a foure-footed ftoole made of one piece, and hollow in the middeft, well wrought and painted. His Table-clothes , Napkins, and Towels, were made of Cotton-wooll, very white and new, for hee was neuer ferued but once with that Naperie. Foure hundred Pages brought in his meare, all fonnes of great Lords, and Magrificent placed it vpon a Table in his great Hall. The meate being brought in , then came Mutez uma to behold the Diffres, and appointed those Diffres that liked him beft, and Chafing-diffres were prepared to keepe that meate warme, and feldome would be cate of any other Difh, except the 50

Lord Steward or Comptroller should highly commend any other Diff. Before hee fate downe, came twentie of his Wines of the fairest and best esteemed, or else those that served weekly by turne, brought in the Bason and Ewre, with great humblenesse. This done, hee sate him downe, and then came the Lord Steward, and drew a woodden Nette before him , because none should come nigh his Table. And this Noble man alone placed the Diffies , and also tooke them away , for the Pages who brought in the meate , came not neere the Table , nor yet fpake any worde , nor no man elle.

Bare-footfer-

While the Lord Mutezuma was at his meate, except some leaster, they all serued him bare-footed. There affitted alwayes fomewhat a farre off, fixe ancient and Noblemen, vnto 60 whom he vied to give of the Dish that best liked him, who received the same at his hand with great reuerence, and eate it incontinent, without looking in his face, which was the greatest humilitie that they could vie before him. Hee had muficke of Fiddle, Flute, and of a

Snaile-shell, and a Cauldron covered with a skinne, and such other strange Instruments. They had very ruill voyces to fing. Alwayes at dinner time he had Dwarfes, crocke-backes, and other deformed counterfeits, all for majestie and to laugh at , who had their meate in the Hall among the letters and Idiots, which were fed with part of the meate that came from Matezama his lefters. table, all the rest of the meate was given to three thousand of the guard, who attended ordinarily in the yard or Court, and therefore they fay that there was brought for his Table three thousand dishes, and as many pots of wine, such as they vie, and that continually the Buttrey and Pantrey flood open, which was a wonder to fee what was in them. The platters, diffies, and cups, were all of earth, whereof the King was ferued but once, and fo from meale to meale new. He had likewise his sernice of Gold and Plate very rich, but hee vied not to bee serued with it

(they fay) because hee would not bee ferued twice therewith, the which hee thought a base plate. Some affirme, that young children were flaine and dreffed in divers kinde of diffies for Matezume his table, but it was not io, onely of mans fielh facrificed he fed now and then. The table being taken To, then came againe the Gentlewomen to bring water for his hands, with the like

reperence as they yied at the first, and then went they to dinner with the other wives, fo that then the Gentlemen and Pages waited as their course fell.

When his table was taken up, and his Seruitors gone to meate, Matezuma fate ftill : then came in the fuiters that had any affaires to deale with him, have-footed, for all the persons did 20 vie that reverence, except some Princes his Kinsmen, as the Lords of Tesence, and Tlacopan and a few others : and beeing cold weather, they vied to weare olde ragged clothes voon their rich State ceremogarments. All furters vied to make three or foure courtefies, not looking toward his face, and mes. ipeaking vnto him their heads dowwards, and in that order retyred backe againe. Mutezunta answered his futers very granely, with low voyce, and in few words, and not to all futers for others his Secretaries or Counseliers that flood by, answered for him, and having their answere. they returned backwards, not turning their tailes to the Prince. After these bufineffes done . he vied fome recreation, hearing letters or Songs, wherein he delighted much, or elie to looke voon letters and the Players, who play with their feet, as we doe with our hands. Thele haue a cudgell like vn- Players. to a Paillers rowler, which they tolle high and low as it were a ball in the Ayre, ftrange to be-

40 hold. They vie other Playes to paffe the time, in fuel an order, that it feemed manuellous to the Gimes. lookers on. Cortes brought into Spaine tome of thefe Phyers. Allo they vie Matachine s.in fuch fort they doe play, that there fand each voon other flouders, and hee that flandeth highest, the weth many feates. Sometime Mutezama did behold the Players, who played at a game called Pacolizati, which is much like our Tables, and they play with beanes, squared like Dice, which they call Patolli, and throw them out of both their hands upon a matte, or else upon the ground, where are made certain strikes, voon which they fet downe the chance that is throwne: and at this game they play all that they have, and many times they value their owne bodies, and play that into captiuitie, and to remayne a flaue, I meane, fuch as are common Gamesters of

40 Sometimes Mutezuma went to the Tennis Court, Their ball is celled Pillamalizzli, and is The Tennis made of the gumme which commeth from a tree called UB. This tree growth in a hot Coun- play in Mexico. trev. The gumme being kneaded together, and fo made round, is as blacke as pitch, and fomewhat heavie, and very hard for the hand, but yet good and light to rebound, and better then our

wind-bals. They play not at Chafes, but at Bandy, or at Check, that is, if the ball touch the wall it loofeth. They may strike the ball with any pact of their body, but there is alwayes a penaltie if they onely ftrike not with the buttocke or fide, which is the finest play : whereof they yie a skinne upon each buttocke. They play io many to io many for a packe of Mantles, or according to the abilitie of the Players. Also they play for gold and feathers, and sometime for their owne bodies, as they vie at Patolli, which is there permitted and lawfull. The Tennis So Court is called Tlackee, and is a Hall long and narrow, but wider vpwards, then downewards.

and higher on the fides then at the ends, which is an industry for their play. The house is alwayes white and smooth in the side walles they have certaine stones like vnto Milstones, with a little hole in the middeft that paffe; h through the ftone, the hole is fo fmall, that fcarcely the ball may palle through, but he that chanceth to thike the ball into the hole, which feldometh happeneth, winnerth the game, and by an ancient Law and cuftome among Tennis Players, he ought to haut the Cloakes of all those that stand and behold the play, on that side that the ball went in and in fome Tennis Courts, the halfe of the garments of them that fland looking on. The Winner is then bound to make certaine Sacrifice to the God of the Tennis play, and to the ftone where the ball entred. The beholders of the play would fay, that fuch a Winner should be a Thiefe and an Adulterer, or elle that he should die quickly.

They vied in the Temple of the Tennis play, two Images of the God of the Ball, which flood God of the Ball, which flood youn the two lower walles. The Sacrifice was celebrated at mid-night, with many Ceremonies and Witch-crafts, and Songs for that purpole. Then came a Prieft from the Cathedrall Church. with other Religious persons to bleffe the Sacrifice, faying certain denillish Prayers, and throw-

ing the ball foure times in the Tennis Court. In this order was the Tennis play confectated and after this confectation it was lawfull to play, or elie not, for this diligence was first to bee done when any Tennis Court or play was newly built. The owner of the Tennis Court alfe would neuer fuffer any to play, vntill he had first offered something to the Idoll, their Superstition was

His Palace.

Twentie

CMutezuma had many houses as well in Mexico as without, for his recreation and pleasure. as also for his ordinary dwelling. To write of all it should be tedious, but where his continual abilding was, he named Tepac, that is to fay, Palace. And that Palace had twentie doores or pates which had their out-comming into the common streets. It hath three Courts, and in the one Three Courts. standeth a faire Fountaine, many Hals, and a hundred Chambers of twentie three, and thirtie foot long, an hundred Bathes and Hot-houses: and although the building was without nayles. vet very good workmanship. The walles were made of Masons worke, and wrought of Marble. Iafpe, and other blacke stone, with veines of red, like vnto Rubies and other Stones, which sliftered very faire: the roofes were wrought of Timber, and curiously carued: the Timber was Cedar, Cyptesse, and Pine-tree: the Chambers were painted and hung with Cloth of Cotton. and Cloth made of Conies haire and feathers. The beds were poore and of no value, for they

were nothing but Mantles laid vpon Mats, or vpon Hay, or elfe Mats alone : few men lay with in those Houses. Multitude of

There were a thousand women, and some affirme that there were three thousand, accounting Gentlewomen, Seruants and Slaues : the most were Noblemens Daughters, Mateunma tooke of 20 them for his felfe, those that liked him best, and the others he gaue in mariage to Gentlemen his Seruants. The faying was, that hee had at one time a hundred and fiftie women his wines with childe, who through the perswasion of the Deuill, tooke Medicines to cast their creatures, because they knew that they should not inherit the State : these his wines, had many old women for their Guard, for no man was permitted to looke vpon them.

His Armes hee

The shield of Armes that is set in his Palace, and likewise carried to the Warres, is an Eagle Conie was his foaring vpon a Tigre his tallons, bent as taking prey. Some thinke it is a Gryffon and not an armes, but this Eagle. The Griffons in time past, say they, did cause the Vale of Anacatian to bee dispeopled, Eagle was ge- for they were great denourers of men, and that their abiding was in the Mountaines of Teorem: nerallto all the they approue that these Mountaines were called Contachtepelt, of Contachti, which is a Gryffon, 30 Mexicas Kings they approue that these Mountaines were called Cuttachtepelt, of Cuttachtli, which is a Gryffon Gryffon-tale, bigger then a Lion: but the Spaniards did neuer see any of them. The Indians by their old Pictures doe paint those Gryffons to hauea kind of haire and no feathers, and also affirme, that with their tallons and teeth they breake mens bones. They have the courage of a Lion and the countenance of an Eagle : they paint him with foure feet, and teeth, with a kinde of downe, more like wooll then feathers, with his beake, tallons, and wings. There are also other Lords that give the Gry ffon in their Armes, flying with a heart in his tallons.

A house of

Mutezama had another house, with very good lodgings and faire galleries, built vpon Pillars of laspe which extendeth toward a goodly Garden, in the which there are ten ponds or moe, fome of falt-water for Sea-fowle, and other some of fresh water for River-fowle, and Lakefowle, which ponds are deuited with finces to emptie and to fill at their pleafure, for the clean-40 nesse of the feathers. There is such a number of Fowle that scarcely the ponds may hold them, and of fuch divers kindes both in feathers and making, as fure it was an admiration for the Spaniards to behold, for the most of them they knew not, nor yet had at any time seene the like. And to enery kind of Fowle they gave fuch bayte as they were wont to feede of in the Fields or Rivers. There did belong to that house three hundred persons of service some were to clense the ponds: other some did fish for baite; other some served them with meate; other did loofe them and trimme their feathers : others had core to looke to their Egges : others to fet them abrood: others cured them when they were licke : and the principallest Office was to plucke the Feathers : for of them was made rich Mantles , Tapiffary , Targets, tuffes of Feathers, and many other things wrought with Gold and Silver: a most per- 50

their feathers, fit worke. fowlefor haw- Fowle , not because there are more then in the other , but because they bee bigger and king and other to hawke with all, and are Fowle of rapine, wherefore they are effeemed as more nobler

There are in this House many high Hals, in the which are kept men, women and children: in some of them are kept such as are borne white of colour : which doth very seldome happen : in other some are Dwarfes, Crooked-backes, Burstenmen, Counterfeites, and monitrous Perfons, in great number : they fay , that they vied to deforme them when they were Children , to fet forth the Kings greatneffe : euery of thefe perfons were in feuerall Hailes by 60 themselues.

There is another House with large quarters and lodgings, which is called a House for

In the lower Halles were great Cages made of timber : in some of them were Lions, in other Tigres, in other Ounces, in others Wolues : in conclusion , there was no foure-footed beak that wanted there, onely to the effect that the mightie Mutezama might fay that hee had fuch things in his house. They were fed with their ordinary, as Ginea cockes, Deere, Dogges, and

There was also in other Hals great earthen vessels, some with earth, and some with water, wherein were Snakes, as groffe as a mans thigh, Vipers, Crocodiles, which they call Cap- Snakes, &c. manes, or Lizarts of twenty foote long, with fuch Scales and head as a Dragon hath: Alfo or her little Lizarts, and other venemous Beafts and Serpents as well of the water as of the land, a terrible fight for the lookers on .

There were also other Cages for foule of rapine of all forts, as Hawkes, Kites, Boyters, and at Foules of prey the least nine or tenkinde of Haukes. This house of foule had of daily allowance five hundred 10 Gynea cockes, and three hundred men of feruice, besides the Falconers and Hunters. which are

infinite. There were many other forts of Foules that our men knew not, which feemed by their beake and talents good to Hauke withall .

To the Snakes and other venemous Beafts they gave the bloud of men facrificed , to feede them, and some fay, they gave vnto them mans flesh, which the great Lizarts doe eate very well. The Spaniards law the floore couered with bloud like a iellie in a Slaughter-house. it flunke horribly. It wasftrange to fee the Officers in this Houfe, how every one was occupied. Our men tooke great pleasure in beholding such strange things, but they could not away with the roaring of the Lyons, the fearefull hufing of the Snakes and Adders, the dolefull howling and barking of the Wolnes, the forcowfull yelling of the Ownzes

20 and Tigres, when they would have meate. Most certaine, in the night feason it seemed Deuils dena Dingeon of Hell, and a dwelling place of the Deuill, and euen to it was indeede for neere at hand was a Hall of a hundred and fiftie foote long, and thirty foote broad, where was a Chappell with the Roofe of Siluer and Gold in leafe Wainefcotted, and decked with great store of Pearle and Stone, as Agattes, Cornerines, Emeralds, Rubies; and diversother forts, and this was the Oratory where Matezama prayed in the night feafon. and in that Chappell the Deuill did appeare vnto him, and gaue him answere according to

He had other houses like vnto Barnes, onely for the feathers of foules, and for mantels which Store-houses proceeded of his rents and tributes, a thing much to be feene: vpon the doores was fet his armes, 30 which was a Conie. Here dwelled the chiefe Officers of his house, as Treasurer, Controller, Receiners and other officers appertaining to the Kings reienews. Materian had no house wherein Officers

was not an Oratorie for the Deuill, whom they worthipped for the Iewels there. And therefore those houses were great and large.

Mutexume had some houses of Armor, vpon the doores wherof stood a Bowe and Arrows. In these houses was great store of all kinde of Munition which they vie in their wars : as Bowes, of Mutequant Arrowes, Slines, Launces, Darts, Clubbes, Swords and Bucklers, and gallant Targets more trim then strong, Skuls and Splints, but not manie, and all made of wood, gilt or concred with leather. The wood whereof they make their Armour and Targets, is verie hard and ftrong, for Armese they vie to toaif it at the fire, and at their Anow ends they encloie a little peece of Flint fone, 40 or a peece of a Fish bone called Labifa and that is venemous, for if any be burt therewith and the

head remaine in the wound, it so festereth, that it is almost incurable. Their Swords are of wood, and the edge thereof is of flint stone, enclosed or joyned into 2 Wodden flaffe, with a certaine kinde of glew which is made of a roote called Zacole, and Tenxalli, which Swords with is a kinde of strong sand, whereof they make a mixture, and after kneade it with bloud of Bats stone edees. or Rearemice, and other Foule, which doth glew raruellous ftrong, and lightly neuer vncleaueth: of this stuffe, they make nailes, pearcers, and augers, wherewith they bore Timber and

ftone: with their Swords they cut Speares, yea and a Horfe necke at a blow, and made dents in-to Iron, which feemed a thing unpossible and incredible. In the Citie no man may weare weapon, but onely in warres, hunting, and among the Kings Guard.

Befides the forefaid houses, he had manie others for his onely recreation and passime, with ex- The Gardens cellent faire Gardens of medicinall Hearbes, sweete Flowers, and Trees of delectable sauour. of Mulecuma. In that Garden were a thousand personages, made and wrought artificially of leaves and flowers. Mutezuma would not permit that in this Garden should be any kinde of pot Hearies, or Note of a things to be fold, faying, that it did not appertaine to Kings to have things of profit, among magnificent their delights and pleasures, for such things (laid he) did appertaine to Merchants. Yet not minde. withflanding he had Orchards with manie and fundrie fruites, but they flood farre from the Citie, and whither seldome times he went : he had likewise out of Mexico pleasant houses in fure, Woods and Forreits, of great compaffe, enuironed with water, in the which he had Fountaines, Rivers, Ponds with fish, Warrens of Conies, Rockes and covert where were Harts, Bucks, Hares,

62 Foxes, Wolues, and fuch like, with wildernesse for euerie fort. To these places the Lords of Mexico vied to goe and sport themselves, such and so many were the houses of Mutezuma, wherein few Kings were equall with him.

He had daily attending upon him in his private Guard, fixe hundred Noblemen and Gentle-Aaaaa a

The Court and men, and each of them three or foure feruants, and some had twentie fernants or moe, according Guard of Mas- to his estate: and in this manner he had three thousand men attendant in his Court, and some affirme more, all the which were fed in his house of the meate that came from his table. The feruing men alwaies abode below in the Court all the day, and went not from thence till after

apper. It is to be thought that his Guard was the greater, because the strangers were there, although in effect of truth it is most certaine, that all the Lords that are vinder the Mexical Empire (as they fay) are thirtie perions of high efface, who are able to make each of them a hundred thous fand men. There are three thouland Lords of Townes, who have many vastis. These Noble-State-caution, men did abide in Mexico certaine times of the yeare, in the Court of Materama, and could to not depart from thence without especiall licence of the Emperour, leaving each of them a forme or brother behinde them for fecuritie of rebellion, and for this cause they had generally houses in the Citie: fuch and to great was the Court of Mutezuma,

Tribures and

There is not in all the Dominions of Mutezumaany fubiect that paieth not tribute vnto him. The Noblemen pay their tribute in personall service. The Husbandmen called Macenalin with body and goods. In this fort they are either Tenants, or elfe heites to their poffessions. Those which are herres, doe pay one third part of all their fruite and commoditie that they doe reape or bring vp, as Dogges, Hennes, Foule, Conies, Gold, Silver, Stones, Salt, Waxe, Hone. Mantels, Feathers, Cotten, and a certaine fruite called Casas, that ferneth for money, and allo to eate. Allo all kinde of Graine, and Garden Hearbes, and Fruites, whereof they doe main- 10

The Tenants doe pay monethly, or yearely, as they can agree, and because their tribute is great, they are called iliues, for when they may have licence to eate Egges, they thinke it a great fauour. It was reported that they were taxed what they should eate, and all the refishe was taken from them. They went verie poorely cloathed, yea and the most of their treasure was an earthen Pot, wherein they boiled their Hearbes, a couple of Milstones to grinde their Come. and a Mat tolye vpon. They did not onely paie this Rent, and Tribute, but also ferued with their bodies at all times when the great King should command. They were in such great subis Rion to their Prince, that they durft not speake one word although their daughters should be taken from them to bevied at pleasure, All the aforesaid rents they brought to Mexico vpon their to backes, and in Boates, I meane fo much as was necessarie for the promition of the House and Court of Mutexame, all the reft was fpent among Souldiers, and bartred for Gold, Plate, Precious stones, and other rich Iewels, esteemed of Princes, all the which was brought to the Treasurie. In Mexico was large and great Barnes and Houles to receive and keepe the Corne for provis Secompicare fion of the Citie, with Officers, and underofficers, who did receive the fame, and kept account thereof in Bookes of painted figures.

Receivers.'

And in enery Towne was a Receiver, who bare in his hand a rod or a bush of Feathers, and thole gaue up their accounts in Mexico. If any fuch had beene taken with deceit and fallhood, death was his reward, yea and his kinred punished with penalties, as of a linage of a traitour to his Prince. The Husbandmen, if they paid not well their Tribute, were appreliended for the 40 fame, and if they were found to be poore through sicknesse and infirmitie, then they were borne withall, but if they were found to be lazie and floathfull, they should be vied accordingly : but in conclusion, if they paied it not at a day appointed, then they should be fold for slaues to pay their debt, or elfe be facrificed.

There were many other Prouinces, which paid a certaine portion, and reknowledged feroice. but this Tribute was more of honour then profit, In this fort Mutez uma had more then fiffitient to prouide his house and wars, and to heape vp great store in his Treasury Moreover, he spent nothing in the building of his houses, for of long time he had certaine Townes that paid no other Tribute, but onely to worke and repaire continually his Houses at their owne proper coft, menslabours and paid all kinde of workemen carrying vpon their backes, or drawing in fleds, Scone, Lime, 50 Timber, Water, and all other necessaries for the worke. Likewise they were bound to prouide all the firewood that should be spent in the Court , which was a great thing , and did amount to two hundred and thirty weight a day, which was fine hundred mens burdens, and fome dayes in the winter much more. And for the Kings Chimneys they brought the barke of Oake trees, which wes belt esteemed for the light thereof, for they were great Sorcerers. Mutezuma had one hundred Cities with their Prouinces, of whom he received Rents, Tributes, and Vaffalage, where he maintained Garrison of Souldiers, and had Treasurers in each

His dominion did extend from the North fea to the South fea, and fix hundred miles in longitude within the maine Land, although in very deede there were some Townes, as Tlaxeal 63 lon, Mechacan, Panuco, and Teocantepec, which were his enemies, and paid him neither Tribute nor Seruice : but yet the Ransome was much, when any of them was taken Al'o there were other Kings and Noblemen, as of Texento, and Tlacopan, which were not in jubication vnto him, but onely in homage and obedience, for they were of his owne linage, vnto whom Matezuma married his Daughters.

Description of Mexico as it flourished in those times.

Exico at the time when Cortes entred, was a Citie of fixtie thousand houses. The Kings Ment and o her Noblemens houses were great, large, and beautifull, the other were small and meane, without either doores or windowes; and although they were fmall, yet there dwelleth in some of them, two, three, yea and ten persons, by reason whereof, the Citie was wonder-

10 fully replenished with people.

This Citie is built vpon the water, even in the fame order as Venuce is: All the body of the Three forts of Citie flandeth in a great large Lake of water. There are three fores of ftreetes very broad and Streetes faire, the one fore are onely water, with many Bridges : another fore of onely earth: and the third of earth and water : that is to fay, the one halfe earth to walke upon, and the other halfe for Boates to bring promition of all forts. These fireetes are kept alwayes cleane, and the most part of the houses have two doores, the one towards the Cawley, and the other towards the water at the which they take Boate to goe where they lift. And although this Citie is founded ypon water, yet the same water is not good to drinke, whereof there is brought by conduit water from a place called Capaltepec, three miles diffant from the Citie, which fpringeth out of a

20 little hill, at the foote whereof standeth two Statues or couered Images wrought in stone with their Targets and Lances, the one is of Mulezuma, and the other of Axaiaca his Father. The water is brought from thence in two Pipesor Canals in great quantity, and when the one is foule, then all the water is conucied into the other, till the first be made cleane. From this Fountaine all the whole Citie is prouided, fo that they goe felling the fame water from freete

to threete in little Boates, and doe pay a certaine tribute for the same.

This Citie is divided into two threetes, the one was called Timelalco, that is to fav. a little Hand and the other Mexico, where Mutexuma his dwelling and Court was, and is to be interpreted a Spring. This streete is the fairest and most principall, and because of the Kings Pallace there, the Citie was named Mexico, although the old and first name of the Citie was Tenuch-30 sitlan, which doth fignifie Fruite out of stone, for the name is compounded of Tetl, which is.

Stone, and Nuchtle, which is a Fruite in Cuba and Hiffanield, valled Tunat; the Tree (or to ipeake properly, the Thiftle) that beareth this fruite, is named Noval, and is nothing almost but leaves It growth als of a footebroad and round, and three inches thicke, some more, and some leffe, according to the to in Bermidde growth, full of thornes which are venemous; the leafe is greene, and the thorne or pricke ruffer. After that is planted, it encreaseth, growing leafe veto leafe, and the foote thereof commeth to be as the body of a tree, and one leafe doth onely produce another at the point. but at the fixles of the fame leaves proceede other leaves. In some Provinces where water is scant, they vie to drinke the juice of these leaves. The fruite thereof called Nuchili, is like vnto Figges, and even fo hath his little kernels or graines within, but they are fomewhat larger, and crowned 40 like vnto a Medler. There are of them of fundry colours, fome are greene without, and Car-

nationlike within, which have a good taste. Others are yellow, and others white, and some speckled; the best fore are the white : it is a fruite that will last long. Some of them have the tafte of Peares, and othersome of Grapes: it is a cold and a fresh fruite, and best esteemed in the heate of Summer. The Spaniards doe more efteeme them then the Indians. The more the ground is laboured where they grow, the fruite is to much the better. There is yet another kinde of this fruite red, and that is nothing effeemed, although his tafte is not euill, but because it doth colour and dye the eaters mouth, lippes, and apparell, yea, and maketh his vrine looke like pure bloud. Many Spaniards at their first comming into India, and eating this Fruite, were in a maze, and at their wits end, thinking that all the blood in their bodies came out in vrine : yea and 50 many Philitions at their first comming were of the same beliefe; for it hath happened, when

they have bin fent for vnto fuch as have eaten this fruite, they not knowing the cause, and beholding the wrine, by and by they ministred medicine to stanch the bloud: a thing ridiculous, to fee the Philitians fo deceived. Of this fruite Nuchtle and Tetl, which is a Stone, is compounded Tenuchtlatan. When this City was begun to be founded, it was placed neere voto a great Stone that stood in the middeft of the Lake, at the foote whereof grew one of their Nopal crees, and therefore Mexico giveth for armes and deurse the foot of a Nopaltree springing from a flone,

according to the Cities name.

Mexico is as much to Tay, as a Spring or Fountaine, according to the property of the vowell The name of and speech, Others doe affirme, that Mexico hath his name of a more ancient time, whose first Mexico. 60 Founders were called Mexits, for voto this day the Indian dwellers in one ffreete of this City are called of Mexico. The Mexiti tooke name of thir principallel Idoli called Mexitli, who was in as great veneration as Vitzilopuchtli, god of the warre. Mexico is environed with I weet water. and bath three waves to come vnto it by cawfie, the one is from the West, and that cawfie is a mile and a halfe long. Another from the North, and containeth three miles in length, Eastward

Two Lakes, other treft, El bing and winde. Some hance mound. design the cause of the Scar flowing from the faltneffe. Caule of the Glmsfie.

the Citie hath no entrie. But Southward the Cawfey is fixe miles long, which was the way that Cortex entred into the Citie. The Lake that Mexico is planted in, although it feemteh one, vet it is two, for the one is of water faltish, bitter, and pestiferous, and no kinde of fish liveth in it. And the other water is wholesome, good, and sweet, and bringeth forth small fish. The salt water ebbeth and floweth according to the winde that bloweth. The fweet water standeth higher. flowing by the fo that the good water falleth into the cuill, and reverteth not backward, as fome hold opinion, The falt Lake contayneth fifteene miles in breadth, and fifteene in length, and more then five and fortie in circuit, and the Lake of fweet water contayneth even as much, in fuch fort, that the whole Lake contayneth more then thirtie leagues, and hath about fiftie townes fituated round about it, many of which townes doe contayne fire thousand housholds, and some ten thoufand, yea and one towne called Tezenco, is as bigge as Mexico. All this Lake of water springerh out of a Mountaine that flandeth within fight of Mexico. The cause that the one part of the Lake is brackish or ialtish, is, that the bottome or ground is all sale, and of that water great quantitle of falt is daily made.

200000.C2-

In this great Lake are about two hundred thousand little boates, which the Indians call Acalles, and the Spaniards call them Canous, according to the speech of Cuba and Santo Domingo, wrought like a kneading trough : lome are bigger then other fome, according to the greatnelle of the body of the tree whereof they are made. And where I number two hundred thousand of these boats. I speake of the least, for Mexico alone hath aboue fiftie thousand ordinarily to carry and bring vnto the Citie victuall, prouision, and passengers, so that on the market day all the ffreets of water are full of them.

The Market

The Market is called in the Indian tongue Tlanquizzli: every Parish hath his Market place to place of Mexis buy and fell in : but Mexico, and Tlatelulco onely, which are the chiefest Cities, have great Faires and places fit for the same, and especially Mexico hath one place where most dayes in the veere is buying and felling, but every fourth day is the great Market ordinarily : and the like cuftome as vied throughout the Dominions of Muteranna. This place is wide and large, compafed round about with doores, and is fogreat, that a hundred thousand persons come thither to chop and change, as a Citie most principall in all that Region. Wherefore the refort is from farre parts Order of Sel. vnto that place. Every occupation and kinde of merchandile hath his proper place appointed,

The diuers

which no other may by any meanes occupie or diffurbe. Likewife pefterous wares haue their 30 place accordingly (that is to fay) stone, timber, lime, bricke, and all kinde of stuffe vnwrought, being necessarie to build withall. Also Mats both fine and course of sundrie workmanship, also Coales, Wood, and all forts of earthen veffell, glafed and painted very curiously : Deere skinnes both raw and tanned in haire and without hare, of many colours, for Shoomakers, Bucklers, Targets, Ierkins, and lining of woodden Corfelets: also skinnes of other beafts and fowle infeathers readie dreffed of all forts, the colours and strangenesse thereof was a thing to behold. The richeit merchandise was Salt, and Mantels of cotton wooll of divers colours, both great and smal, some for beds, others for garmen's and clothing, other for tapillarie to hang houses, other cotten cloth for lining breeches, thirts, table clothes, towels, napkins, and such like things.

There were alfo Mantels made of the leaves of the tree called Metl , and of Palme tree , and 40

Cony haire, which are well efteemed, being very warme, but the Couerlets made of feathers are the best: they sell threed made of Cony haire, pieces of linnen cloth made of cotton wooll, also skaines of threed of all colours : also it is strange to see the great store of fowle, some wilde, some tame, some water fowle, and other some of rapine. All the brauerie of the Market, is the place where gold and feathers toyntly wrought is fold, for any thing that is in request is there Indian worke- lively wrought in gold and feathers, and gallant colours. The Indians are so expert and perfect in this science, that they will worke or make a Butter-flie, any wild Beast, Trees, Roses, Flowers, Herbs, Rootes, or any other thing, fo lively, that it is a thing marvellous to behold. It hapneth many times that one of these workmen in a whole day will eate nothing, onely to place one feather in his due perfection, turning and toffing the feather to the light of the Sunne, into the so shade or darke place, to see where is his most natural perfection, and till his worke be finished he will neither eate nor drinke. There are few Nations of fo much patience. The Art or Science of Gold-fmiths, among them is the most curious, and very good workmanship engrauen with Gold miths tooles made of flint, or in mold. They will cast a platter in mold with eight corners, and every corner of feuerall metall, that is to lay, the one of gold, and the other of filuer, without any kind of folder; they will also found or cast a little caldron with loose handles hanging thereat, as wee vie to cast a bell : they will also cast in mold a fish of metall with one scale of filter on his backe, and another of gold : they will make a Parret or Popinjay of metall, that his tongue shall shake, and his head moone, and his wings flutter: they will caft an Ape in mold, that both liands and feet shall thrre, and hold a spindle in his hand seeming to spin, yea and an Apple in his hand, as though he would eate it. Our Spaniards were not a little amazed at the sight of these things. For our Gold-Imiths are not to be compared vnto them. They have skill also of Amell worke, and to fet any precious ftone. But now as touching the Market, there is to fell Gold, Silver, Copper, Leade, Latton, and Tin, although there is but little of the three last metals mentioned. There are

pearles, precious stones, divers and fundrie forts of shells, and bones, spunges and other Pedlers ware, which certainly are many and strange forts, yea, and a thing to laugh at their Haberdash toyes and trifles. There are also many kinde of Hearbs, Roots, and Seedes, as well to bee eaten. as for medicine, for both men, women, and children, have great knowledge in hearbs, for through pouertie and necessitie, they seeke them for their fustenance and helpe of their infirmities and disrafes. They fpend little among Physicians, although there are some of that Art, and many Apothecaries, who doe bring into the market Ointments, Sirrops, Waters, and other drugs, fit for ficke persons; they cure all diseases almost, with hearbs; yea, as much as for to kill Lice, they

haue a proper hearbe for the purpofe. The severall kindes of meates to bee sold are without number, as Snakes without head and taile, little Does gelt, Molls, Rats, long Wormes, Lice, yea and a kinds of earth, for at one fea- Victoall of dis fon in the yeere they have Nets of maile, with the which they rake vp a certaine dust that is uers forts. bred you the water of the Lake of Mexico, and that is kneaded together like vnto Oas of the Sea : they gather much of this victuall, and keepe it in heapes, and make thereof Cakes like vnto brick-bats: they fell not onely this ware in the Market, but also fend it abroad to other Faires and Markets afarre off: they eate this meate with as good flomacks as wee eate cheefe, yea and they hold opinion that this skum or fatneffe of the water, is the cause that such great number of they note opinion to the Lake, which in the winter featon is infinite. All the Sellers pay a certaine fimme for their shops or standings to the King, as a custome, and they to bee presented and de-

20 fended from thecues: and for that cause there goe certaine Sergeants or Officers vp and downe the Market to efpie out malefactors. In the middeft of the Market flandeth a house which may bee feene throughout the Faire, and there fitteth twelue ancient men for Iudges to dispatch Law matters: their buying and felling is to change one ware for another, as thus, one giueth a Hen for Barreting a bundell of Maiz, other give Mantels for Salt, or money which is Cacao, and this is their order to chop and change : they have measure and strike for all kinde of Corne, and other earthen meafores for Hony and Wine, and if any Measure bee falfified, they punish the offenders, and breake

The Temple is called Tencalli, that is to say, Gods Honse; Tens!, signifieth God; and Calli is The great a Hosse, a name very fit, if that house had beene of the true God. The Spaniards that vnderstand Temple of

30 not the language, doe ptonounce and call those Temples Cuer, and the God Vitzitopuebili , Vebi Mexico. lobes. There are in Mexico many Churches with Towers for their Parithes and Streets, wherein are Chappels and Altars where the Images and Idols doe stand, and those Chappels doe serue for burial places of their Founders; for others are buried in the ground about them or Churchvards, All their Temples are of one fashion, therefore it shall bee now sufficient to speake of the principall Church. This Temple is fquare, and doth contayine every way as much around as a Croffe-bow can reach levell : it is made of ftone, with foure doores that abuteth wpon the three Cawfeys, and vpon another part of the Citie, that hath no Cawfey but a faire ftreet. In the Cawleys, and vpon another part of the Close, the natural no Cawley out a late tireer. In the middelt of this Quidern flandesh a mount of earth and flone, figure likewing, and fiftie fathon Chief-Temple long energy way, built yeward like wrote 2 Pyramide of Egypt, fauing the top is not flarpe, but described plane and flar, and ten fathom figure: ypon the Welf fide, were steps up to the top, in number

an hundreth and fourteene, which being fo many, high, and made of good ftone, did feeme a beautifull thing. It was a strangesight to behold the Priests, some going vp, and some downs with ceremonies, or with men to be facrificed. Vpon the top of this Temple are two great AL. Two Ahars with ceremonies, or with men to be facrificed. tars, a good space distant the one from the other, and so nigh the edge or brim of the wall, that fearly a man may goe behinde them at pleasare. The one Altar standard on the right hand, and the other on the left : they were but of fine foot high, each of them had the backe part made of the other on the test with monthrous and foule figures, the Chappell was faire and well wrought of Maions worke and timber, every Chappell had three lofts, one about another, furfayned vpon pillars, and with the height thereof it shewed like vnto a faire Towre, and beautified the Citie 50 afarre off: from thence a man may fee all the Citie and Townes round about the Lake, which was yndoubtedly a goodly prospect. And because Cortes and his companie should see the beautie

thereof; Mutezama brought him thither, and shewed him all the order of the Temple, even from the foot to the top. There was a certaine plot or space for the Idoll Priefts to celebrate their from the foot to the top. There was a certaine plot or space for the Idoll Priefts to celebrate their fruite without disturbance of any. Their generall prayers were made toward the rising of the fruite without disturbance of any. Sunne. Vpon each Altar ftandeth a great Idoll. Beside this Towre that standeth vpon the Pvramide, there are fourtie Towres great and fault belonging to other little Temples which fland Forik townes. in the fame circuit, the which although they were of the fame making, yet their prospect was not Westward, but other wayes, because there should be a difference betwire the great Temple Scuerall Tem-60 and them. Some of their Temples were bigger then others, and other one of a journal God, plesso frue-

among the which there was one round Temple, dedicated to the God of the aire, called Queenl, rall gods, among the same as the aire goeth round about the Heauens, even for that confideration they made A firange his Temple round. The entrance of that Temple had a doore, made like vnto the mouth of a doore. nis rempire sound was painted with foule and deuillish gestores, with great teeth and gums wrought, which was a thing to feare those that should enter in thereat, and especially the Christians

vnto whom it represented very Hell, with that vgly face and monstrous teeth-

There were other Tencalles in the Citie, that had the alcending wp by steps in three places: all these Temples had houses by themselves with all service, and Priests and particular Gods, Ac Temele-halls, every doore of the great Temple standetha large Hall and goodly Lodgings, both high and low round about, which houses were common Armories for the Citie, for the force and strength of every Towne is the Temple, and therefore they have there placed their store-house of munition They had other darke houses full of Idols, great and small, wrought of fundrie metals, they are

Blondte v Deuillifh Psicfts.

all bathed and washed with bloud, and doe shew very blacke through their daily sprinkling and anointing them with the fame, when any man is facrificed: yea, and the walls are an inch thicke with bloud, and the ground is a foot thick of bloud, so that there is a deuillish slingh. The Priests 10 or Ministers goe daily into those Oratories, and suffer none others but great personages to enter in. Yea, and when any tuch goeth in, they are bound to offer tome man to bee facificed, that those bloudie Hangmen and Ministers of the Deuill may wash their hands in bloud of those so facrificed, and to fprinkle their house therewith. For their feruice in the Kitchin they have a Pond of water that is filled once a yeere, which is

scoo. refi-

brought by conduit from the principall Fountaine. All the refidue of the foresaid circuit serves for places to breede fowle, with Gardens of herbs and fweet trees, with Roles and flowers for the Altars. Such, so great and strange was this Temple of Mexico, for the service of the Deuil who had deceived those timple Indians. There doth reside in the same Temple continually five who had deceived those imperations thousand persons, and all they are lodged and have their living there, for that Temple is marvellous rich, and hath divers Townes onely for their maintenance and reparation, and are bound to fulfaine the same alwayes on foot. They doe sowe Corne, and maintayne all those fine thoufand persons with bread, fruit, flesh, fish, and fire-wood, as much as they neede, for they spend more fire-wood then is frent in the Kings Court : thefe persons doe line at their hearty case. as fernants and vallals vnto the Gods. The Gods of Mexico were two thousand in number, as the Indians reported, the chiefelt

The Idols of 2000. geds.

were Vitzilopuchili, and Tezcailipuca, whose Images stood highest in the Temple vpon the Altars: they were made of stone in full proportion as bigge as a Giant. They were couered with a lawne, called Nacar. Their Images were befer with pearles, precious stones, and pieces of gold, wrought like birds, beafts, fifthes, and flowres, adorned with Emeralds, Turquies, Calce- 20 dons, and other little fine stones, fo that when the lawne Nacar was taken away, the Images feemed very beautifull to behold. The Image had for a girdle great Snakes of gold, and for Collars and Chaines about their necks, ten hearts of men made of gold, and each of those Idols had a counterfait vitard with eyes of glaffe, and in their necks death painted : each of these things had their confiderations and meanings. Their two Gods were brethren, for Texeatipuca was the God of Providence, and Vitxilopuchis God of the Warres, who was x or fhipped and feared more

There was another God, who had a great Image placed upon the top of the Chappell of Idois, and he was efteemed for a special! and singular God about all the rest. This God was made of all kinde of seedes that groweth in that Country, and being ground, they made a certaine paste, 40 tempered with Childrens bloud, and Virgins facrificed, who were opened with their Rasors in the breafts, and their hearts taken out, to offer as first fruits vnto the Idoll. The Priests and Minifters doe confecrate this Idoll with great pompe and many ceremonies. All the Comarcans and Citizens are present at the consecration, with great triumph and incredible deuotion. After the confecration, many denout persons came and sticked in the dowie Image precious stones, wedges of gold, and other jewels. After all this pompe ended, no fecular man may touch that holy Image, no nor yet come into his Chappell, nay fearly religious persons, except they were Tlamacastli, who are Priests of order. They doe renew this Image many times with new dough , taking away the old, but then bleffed is he that can get one piece of the old rages for reliques, and chiefly for Souldiers , who thought themselves fure therewithin the warres. Also at the confe- 50 cration of this Idoll, a certaine vessell of water was blessed with many wordes and ceremonies, and that water was preferred very religiously at the foot of the Altar, for to confecrate the King when he should be crowned, and also to blesse any Captaine generall, when he should be elected for the warres, with onely giving him a draught of that water.

mens Sculls.

The Charnell Without the Temple, and ouer against the principall doore thereof, a stones cast distant, stanhouse, or place deth the Charnell house onely of dead mens heads, prisoners in warres, and facrificed with the knife. This monument was made like vnto a Theater, more larger then broad, wrought of lime and stone, with accending steps, in the walls whereof was grafted betwixt stone and stone a Scull, with the teeth outwards. At the foot and head of this Theater, were two Towres, made onely of lime and foulle, the teeth outward, and this wall having no other fluffe, feemed a 60 firange fight. At and voon the top of the Theater, were feventie Poles, flanding the one from the other toute or fine foot diffant, and each of them was full of stanes from the foot to the top-Each of their states had others made fast vnto them, so that every of them had fine sculs broched h ou the Temple. Andrew de Tapia did certifie me, that he and Gonçalo de Vmbria did rec-

kon them in one day, and found a hundred thirtie and fixe thousand sculls on the poles. states. and items. The other Towres were replemified out of number, a most cruell custome, being onely mens heads flaine in facrifice, although it hath a thew of humanitie for the remembrance there placed of death. There are also men appointed, that when one scull falleth, to set vo another in he place, to that the number may never want.

> Other Mexican Antiquities , Letters , Numbers , Teeres . Daves . Weekes . erc.

Here hath not beene found Letters at any time in the West India , onely in new Spaine were vied certaine figures which ferued for letters , with the which they kept in memorie and preferned their Antiquities. The figures that the Mexicans ofed for letters are great, by reason whereof they occupie great Volumes: they engrave them in stone or timber, and paint them upon walls, and also upon a paper made of cotton wooll, and leaves of the tree Metl. Their bookes are great and folded up like unto our broad cloathes, and written upon both fides. There are some bookes rolled up like a piece of flannell. There pronounce not v, g, r, f, y, therefore they ofe much p, c, l, x. This is the Mexican speech and Nahual. which is the best, playnest, and the most eloquent, in all new Spaine. There are some in Mexico that doe understand each other by whistling, which is ordinarily vied among Louers, and Theenes, a freech trais 20 to wonder at, and none of our men could come to the knowledge thereof.

Their reckoning by numbers was in this fort.

Ce.	One,	Chicoace, Six,	Maslactlioce,	Eleuen,	Matlattlichicoace,	Sixteene,
Ome,	Two,	Chicome, Seuen,	Matlactisome,	Twelue,	Matlattlichicome,	Seventeene,
Ei.	Three,	Chicues, Eight	Matlačilomei,	Thirteene,	Matlactlichicuei,	Eighteene.
Naus,	Foure,	Chiconani, Nine,	Matlactlinasi,	Fourteene,	Matlattlichiconaui	Nineteene,
Масия	Fine,	Matlac, Ten,	Mariactinacui	,Fifteene,	Cempoalls,	Twentie.

Euery number is simple untill you come to sixe, and then they count, sixe and one , sixe and two , sixe and three. Ten is a number by himselfe, then you must count ten and one, ten and two, ten and three, ten and foure, ten and fine. Then you count, ten, fine, and one; ten, fine, and two; ten, fine, and three. Twentie post by himfelfe, and all the greater numbers.

The Mexican reere is three hundreth and fixing dayes, for they have in their reere eighteene moneths. and enery monet b contayneth twentie dayes. They base other fine odde dayes, which goeth by themselnes, in the which they vied to celebrate great feasts of cruell and blondy facrifice, with much denotion. And reckoning after this fort they could not choose but erre, for they could not make equal the punctual course of the Sunne. Tea the Christian years is not perfett, although wee have learned Aftronomers. But yet thefe simple Indians went neere the marke.

The names of the moneths. Tlacaxipenalizeli, Tozcutzli, Huei Tozeuzeli. Toxcalt . Ecalcoalizth, Tocuilhuicineli, Hucitecuilhuiel, Miccailhuicintli, Veymiccailhuitl, Vehpaniztli, Pachtli, Huei Pachtli, Quecholli, Panquecaliztli, Hatemuztli, Tititlh, Izcalli, Coa Vitleuac,

The names of Dayes , were Cipacilis, A Spade ; Hecast, Aire or Winde ; Calls, A Houfe ; Cues Pali, A Lizzitt; Conalt, A Snake; Mizquintli, Death; Macatl, A wilde Hart; Toobili, A Cony; Atl, Water; Izcuynti, A Dogge; Osumatli, An Ape; Malinalli, A Broome; Acath, A Caue ; Oceloti, A Tigre ; Coanti, An Eagle ; Cozcaquabnil , A Buzzard ; Olin , A Temple ; Tepatlb, A Knife; Quianitl, Raine; Xuchul, A Rofe.

Although the se twentie names serve for the whole yeere, and are but the dayes of every moneth, yet therefore every moneth beginneth not with CipaQli, which is the first name, but as they follow in order. 50 and the fine odde dayes is the cause thereof. And also because their weeke is of thirteene dayes. which changeth the names, as by example, Cecipacti can goe no further then unto Matlactiomeiacati, which is thirteene, and then beginneth another weeke : and we doe not fay Maclacilinaus Oceloth, which is the fourteenth day, but wee fay Coccolot , which is one, and then reckon the other fixe names unto twentie. And when all the twentie dayes are ended, begin agains to reck on from the first name of the twentie, but not from one, but from eight. And because yee may better understand the matter, here is the example.

Cecipactli, Omehecatl, E. Calli, Naui Curzpali, Macuilcouatl, Chicoacen Mizquinth, Chie come Macatl, Chicuci Tochtli, Chiconauiatl, Marlaciz Cuintli, Mailactlioce Ocumatli, Matlactliome Malinalli, Matlactiomei Acatih. The next weeke following doth begin his dayes from one. And that one is the fourteenth name of the moneth and of the dayes, and faith : Ceotelotl, Omecoaut-60 li, Eucozca quahutli, Naui Olui, Macuil Tecpatl, Chicoacen Quantil, Chicome Xuchitl, Chicoei

Cipacli. Inthis fecond weeke, Cipacti came to fall on the eight day , being in the first weeke the first day. Cemacatl, Ometochtli, Eiatl, Naui Izcuintli, Macuil Ocumatli. And fo proceeds on to the third weeke, in the which this name Cipacili entreth not, but Macatl, which was the fenenth day in the 1125

first weeke, and had no place in the second, and is the first in the third. The reckoning is no darker then ours, which we have in a, b, c, d, e, f, g. For they also change with time, and tun in such fort, that a. which was the first letter of this mone; b, commeth to be the fift day of the next moneth, and the third me. neth he counteth to be the third day, and fo orderly doth the other fixe letters.

These Mexicans had another order to receon their jeeres, which exceeded not about four ein number ting of yearce. as one, two, three, foure, wherewith they account a hundred, fine hundred, a thousand, and as many mee as they lift. Those foure figures or names, are, Tochtli, Acatlh, Tecpath, Calli, and doe fignific a Cont. a Cane, a Knife, and a House, saying : Ce Totchili, One yeere; Ome Acatlib, Two yeeres: Ei Tecpatib, Three yeeres; Nam Calli, Foure yeeres; Macmil Tochtli, Five yeeres; Chioacen A. eath, Six yeters, Cleame Teopath, Seuen yetres; Chienes Calh, Eight yetres; Chiemani Tache.
14, Nine yetres; Mailailli Acath, Ten yetres; Mailaillince Teopath, Eleven yetres; Mailaillince Teopath, lattliome Calli, Twelue yeeres; Matlattliomei Tochtli, Thirteene yeeres. So that the rectoning palleth not abone thir teene, which is one weeks of the years, and endeth where he began.

The fecond weeke. (e Acasth, one yeere; Ome Tlepath, two yeeres; E. Calle, three yeeres. Nan Tochili, foure yeeres; Machil Acailh, five yeeres; Choacen Techailh, fixe yeeres; Choacen me Calli, seuen yeeres; Chicaei Tochili, eight yeeres; Chiconani Acailh, nine yeeres; Matlaft. li Tecpatib, ten yeeres; Matlatilioce Calli, eleuen yeeres; Matlatiliome Tocbili, twelue yeeres; Matlatiliomes Acailb, thirteene yeeres. The third weeke of yeeres. Ce Tespath, one yeere; Ome Calli two yeeres; Es Toebels, three yeeres; Nans Acasth, foure yeeres; Macuel Tespath, five yeeres; Chicacan Calli, lixe yeeres; Chicame Tochili, leuen yeeres; Chicaei Acarlh, eight yeeres; 20 Chiconaus Tespatilo, nine yeeres: Matlattis Calls, ten yeeres; Matlattisome Tochtiseleuen yeeres

Matlattlione Acath, twelue yeeres; Matlattliome Tecpath, thirteene veeres.

The fourth weeke. Ce Calle, one yeere, Ome Tochili, two yeares; Es Acash, three yeares: Na. ni Tecpails, foure yeares; Macuil Call, five yeares; Chicacen Tochtle, fix yeares; Chicage Acate leuen veares ; Chienes Tecpatil, eight yeares ; Chiconani Calli, nine yeares; Mailacili Tochtli, ten yeares; Matlatilioce Acath, eleven yeares; Matlatitiome Tecpath, twelve yeares; Matlatilio. mes Calli. thirteene yeares. Each of thele weekes, which our men call Indition, doth contains thereene yeares, fo that all the foure weekes make two and fiftie yeares, which is a perfect number in their rechening, and is called the yeare of grace, for from fiftie two yeares, to fiftie two yeares, they vied to make for lemme feasts, with strange, Ceremonies, as hereafter Shall be declared. And when fiftie two yeares are 20 ended, then they begin againe, by the same order before declared, untill they come to as many moe, begaming at Ce Tochthi, and fo forward. The abstract they do not at the Contification. So that in the former of preciously leeps and have in memory, things of eight hundred and fiftie years: and by this Cornellie to by soon in what you every though and have in memory. The most continue to the game and the many chile formatic top how me what you every thing they many chile. dren they bad, and all things elfe that importer b to the effate of the gonernment of the Land.

The Indians

The Indians of Culhua did believe that the Gods had made the World, but they knew not how . Tel they believed that since the creation of the world foure Sunnes were past, and that the fift and last is the Sunne that now giveth light to the World, They beld opinion that the first Sunne perilled by mater, and five ages were at the same time all liming creatures perified likewise. The second Sunne (say they) fell from the beawens, with whose fall all living creatures were flaine, and then (faid they) were many Giants in that Coun- 40 trey, and certaine monstroms Bones, which our men found in opening of graues, by proportion whereo Some (bonid seeme to be men of twenty spans high. The third Sunne was consumed by fire which burned day and night, so that then all living creatures were burned. The fourth Sunne finished by tempost of Agre or Winde, which blow downe Honfes, Trees, yea and the Mountaines and Rockes were blowen a funder, but the linage of Mankinde perifled not, fawing that they were conserted into Apes. And touching the fift Sunne, which now raigneth, they know not how it shall consume. But they far, that when the fourth Sunne perished, all the world fell into darkenesse, and so remained for the space of fine and twenty yeares continually, and at the fifteenth yeare of that fearefull darkeneffe, the Gods did forme one man and woman, who brought forth children, and at the end of the other ten yeares, appeared the Sunne which was newly borne upon the figure of the Conic day, and therefore they begin their account 53 of yeares at that day, and reckening from the yeare of our Lord 1552 their age or Sunne is 858. so that it appearreth that they have vied many years their writing in figures: and they had not onely this vie from Cetocili, which is the beginning of their yeare, moneth, and day, of their fifth Sunne, but also they had the same order and vie in the other foure Sunnes which were past : but they let many things slip out of memory, saying that with the new Sunne, all other things should be likewise new. They held also opinion, that three dayes after this last Sun appeared, all the gods did dye, and that in processe of time, the gods which now they bane, and worthip were borne.

The Corosia-

Although one brother was betre to another among the Mexicans, and after their decease, did inherit the Soune of the eldest Brother yet they tooke no possession of the state or name of King untill they were an-Kings of Mex- nointed and crowned openly.

At foone as any King of Mexico deceased, and his Funerals ended, then were called to Parliament 60 the Lord of Tezcuco and the Lord of Tlacopan, who were the chiefest estates, and then in order all other Noblemen, who owed any fernice to the Mexican Empire. And being come together; if any donbt of the in-

heritance of the Crowne happened, then the matter was decided with all hafte: then the new Kong being knowne, he was firioped flarke naked, except a cloath to comer his prime parts, and in this fort was carried among them, to the great Temple of Vitzilopuchtli with great filence, and without any toy or pleafure: Two Gentlemen of the Citie, whose office it was led him up the staires of the Temple by the armes. and before him went the Princes of Tezcuco and Tlacopin, who that day didweare their reabes of Coronation, whereupon was painted their armes and title. Verie few of the Lattie went up into the Chanpels, but onely those that were appointed to attire the new King, and to serve in other Ceremonies, for all the residue flood upon the steps and below to behold the Coronation. These Magistrates being above in the Chappell, came with great bumility and renerence, kneeling downe upon their knees before the Idoll to of Vitzilopucheli, and touched the earth with one finger, and then kiffed the same. Then came the bieb

Priest clouthed in his pontificall vestments, with many others in his company, who did weare Surplices: and without (peaking any word, they painted or coloured the Kings person, with Inke made for the parpofe, as blacke as any coale. After this Ceremonie done, they bleffed the amointed King, and formled The ointment.

him four etimes with a certaine boly water, that was made at the time of confecration of the God made of done or paste, wish a sprinkle made of bower of Cane leaner, Cedir, and Willow leaner. Then they put upon his head, cloth painted with the bones and fenls of dead men, and next they cloathed him with a blacke garmont, & upon that another blew, and both were painted with the figures of dead mans sculs and bones. Then they put about his necke certaine laces, whereas did hong the armes of the Crowne. And beginde his back they did hang certain little bottels full of powders, by vertue wherof he was delinered from peftilence 20 and difeafes , according to their opinion : yea, and thereby Witches, nor Witcherafts could not burs him.

nor yet cuill men deceiue him. In fine, with those relicks he was sure from all perill and danger. Upon hit left arms they bound a little bagge of incense, and then brought unto him a chassing-dish of imbers made of the barke of an Oke tree. Then the King arase, and with his owne hand threw of the same incense. into the chaffing -dish, and with great renerence brought the same to the god Vitzilopuclitli, and after be bad (monked him therewith, he fat him draine, then came the high Priest and tooke his outh to maintaine the religion of the gods, to keepe alfo all the lawes and customes of his predeceffours, to maintaine inflice and not to as granate any of his vaffals or subjects, and that he should be valiant in the warres. that be should cause the Sunne to give his light, the clouds to yeelde raine, the rivers to runne, and the earth to bring forth all kinde of graine, fruites, and other needlfull hearbs and trees. Thefe and many o-20 ther impossible things the new King did sweare to performer and then be gane thankes to the high Priest.

and commended himfelfo to the gods, and to the lookers on, and they who brought him up in the fame order, carrieth bim downe againe. Then all the people cried, the Gods preserve the new King, and that he may raigne many yeares in health with all his people. But then some began to dance, other to play on their instruments; howing outwardly their inwardinger of beart. And before the King came to the foote of the steps, all the Noblemen came to yeelde their obedience, and in token of louing and faithfull subjects, they presented unto him Feathers, frings of Snaile feels, Callers, and other lewels of Gold and Silver, also Mantels painted with death, and bare him company unto a great hall within the compasse of the Temple, and there left him. The King sitteth downe under his cloath of estate . called Tlacatecco, and in foure dayes departeth not out of the circuit of the Temple, the which bee frends in 40 prayers, facrifice, and penance; he eates then but once a day, and enery day be bathes himfelfe, and a-

gaine in the night in a great pond of water, and then lets himfelfe blond in his cares, and fenfeth therewith the god of water, called Tlaloc : be likewife fenfeth the other Idols, unto whom he offereth Bread. Flowers, Papers, and little Canes, died in the bloud of his owne tongue, no se, bands, and other parts of bis body. After the foure dayes expired, then come all the Noblemen to beare him company to his Pallace, with great triumph and pleasure of all the Citie, but after his consecration few or none dare looke

And now with the declaration of the Alls and Ceremonies that the Mexican Kings are crowned, I shall not neede to rehearse of other Kings, for generally they all doe vie the same order, sawing that other Princes one not up to the top of the Temple but abide at the foote of the fleps to be crowned and 50 after their Coronation they come to Mexico for their confirmation, and then at their returne to their Countrey they made many drunken feasts and banquets.

The Mexicans did beleene that the Soule was immortall, and that they received either toy or paine of the Mexiaccording to their deferts and lining in this world, unto which opinion all their religion did attaine, and conscene chiefly appeare at their burials. They held for an affured faith, that there were nine places appointed ning the Soule for foules, and the chiefest place of glory to be neere unto the Sunne, where the foules of those which Nine places were cood men flaine in the warres, and those which were facrificed were placed, and that all other fort; for Soules. of entil per fons their foules abode on the earth, and were denided after this fort, children that were dead borne went to one place, those which died of age or other disease went to another, those which died of sudden death to another, those which died of wounds or contagious difeases went to another place, those which 60 were drowned went to another, those which were put to death for offence by order of Iustice, at for robbery and adultery to another : Those which flew their Fathers, Mothers, Wines or Children, to another place by themselves : also these who slew their Masters or any religious person went to another place. The common fort of people were buried but Lords and rich men had their bodies burned, and their affect

buried. In their provides they had a great difference, for many dead bodies were buried better apparel-

When any K1-2 of Mexico happened to fall sicke, they wsed forthwith to put a visor wpon the face of The buriall of Tezentispica, or Vitzdopuchtis, or some other Idoll, which Usfor was not taken away, untill they saw whether the King did amend, or elfe dye: But if be chanced to dye, then word was fent throughout all his Dominions to bemaile his death, and also other postes were sent to call the Noblemen that were his nighest kinsmen, and to warne them within foure daies to come unto his bursall.

The dead body was laid upon a faire Mat, and was watched four enights, with great lamentation and mourning : then the body was mashed, and a locke of haire cut from the crowne of his head, which was preserved as a great relicke, saying that therein remained the remembrance of his soule. This done, a fine Emerald was out in his month, and his body shrowded in seventeene rich Mantels, of colours, both rich and coffly wrought, Vpon the upper Mantle was fet the desife or armes of Vitzilopucitli or Tezcalipuca, or some other Idoll, in whom the King had great confidence in his life time, and in his Temple Should the body be buried. Upon his face they put a visor, painted with fonle and Denilish iestures, befet with many lewels, Precious fiones, and Pearles, Then they killed his flue, whose office was to light the Lampes, and make fire unto the gods of his Pallace. Thefe things done, they carried the dead body unto the Temple : some followed bim with dolefull tune, others sung the death of the King by note for so was 20 the custome.

The Noblemen and Gentlemen of his houshold carried Targets, Arrowes, Males, and Ensiones to throw into the fire where the body should be buried in the Temple. The high Priest and all the Clerose received him at the Temple gate, with a forrowfull fong, and after he had faid certaine words, the body was throne into a great fire made for the purp fe, with all the levels that he had about him, and all the other things which was brought to honour the burtall : alfo a Dogge newly strangled with an Arrow, which was to ouide him his way. In the meane while that the King and Doege were burning the Priests facrificed two bundred perfons , howbest in his Ceremonie there was no ordinary taxe , for sometimes they facrificed many mue : they were opened with a Rafor of flint in the breafts, and their hearts taken ont and throwne into the fire where the Kings body was. These miserable persons being sacrificed, and their bodies throwne into a bole; they beleened affuredly that those should serve for his saues in another world: fome of them were Dwarffes, monstrous and deformed persons, with some women. They placed about the dead body of the King before his buriall, Ruses, Flowers, and sundrie dilhes of meate and drinke, and no creature durft touch the fame, but onely the Priests, for it seemed to be an offering.

The next day following, all the ashes were gathered together, and the teeth with the Emerald that was in his moush, the which things were put into a Chest, painted on the inside with horrible sigures of deuils, and the locke of haire which was cut from his crowne, and another locke of haire which was preferued from the time of his birth. Then the Cheft was lockt, and an Image of wood made and cloathed like unto the Kings person, which was set on the top of the Chest. The objequies endured source dayes, in 40 the which the wines and daughters of the King offered great offerings at the place where his body was buried, and before the Cheft and his Image.

On the fourth day after the buriall, fifteene flaues were facrificed for his foule; and on the twentieth day, other fine persons were also sacrificed; likewise on the fixtie three and fourescore, which was like vino

The order of Kings of Mi.

The Kingdome of Michuacan is almost as great as the Empire of Mexico, and when any King of that Countres bappened to be visited with sicknesse, and brought to such extremitie, that hope of life were past, according to the opinion of Phistions, then would be name and appoint which of his Sonnes (bould inherite the estate; and being knowne, the new King or heire, incontinent sent for all the Gouernours, Captaines, and valiant Souldiors, who had any office or charge to come unto the buri- 50 all of bu Father, and be that came not, from thenceforth was held for a Traitour, and fo punified. When the death of the old King was certaine, then came all degrees of Estates and brought presents to the new King , for the approbation of his Kingdown , but if the King were not throughly dead , but at the point of death, then the gates were fout in, and none permitted to enter, and when his life was departed, then began a generall cry and mourning, and they were permitted to come where their dead King lay, and to touch him with their hands : this being done, the carkaffe was wefred with fweete waters, and then a fine/hirt put upon him, and a paire of shoes made of a Deere skinne put on his feete, and about his anchies were tied certaine Bels of Gold, about his wristes of his hands were put Manillus of Turkies, and other Bracelets of Gold, likewife about his neckether hung other collers of precious stones, and gold, and rings in his cares, with a great Turkise in his neather lippe. 60 Then his body was laid upon a large beere, whereon was placed a good bed under him: on his one file lay a Bowe with a quiner of Arrowes, and on his other fidelay an Image made of fine Mantels of his owne stature or highnesse, with a great tust of fine feathers, shoots upon his feete, with Bracilett, and a coller of gold. While his works was a doing, others were bushed in majoing the men and we

men which should be slaine for to accompany him into Hell: these wretched folke that should be slaine were banqueted and filled with drinke, because they should receive their death with less paine. The new King did appoint those who should die for to serve the King bis Father, but yet many of them bad rether have beene without his feruice, notwithit anding some simple foules esteemed that odone death for a thing of immortall glory, First, seuen Gentlewomen of noble parentage were appointed to die, the one to have the office of keeper of his lewels which he was wons to weare, another for the office of Cup-bearer, another to give him water with a Bafon and Ever, another to give him alwayes the Vrinall, another tobe bus Cooke, and another to serve for Laundresse. They slew also many woman-slanes, and free maidens, for to attend upon the Gentlewomen, and moreover, one of every occupation within the

10 Citie. When all thefe that were appointed todie were majted, and their bellies full with meate and drinke, then they painted their faces yellow, and put garlands of sweete flowers upon each of their beads, Then they went in order of procession before the beere whereon the dead King was carried, some ment playing on Instruments made of Snailes shelt, others played upon bones and shelt of Sea-turtile, others went whistling, and the most part meeping: the Sonnes of the dead King and other Noblemen carried upon their |boulders the Beere where the Course lay, and proceeded with an easie pace toward the Temple of the god Curicaueri: his infinen went round about the Beere, finging a forroufull forg. The officers and boughold fermants of the Court with other Magnitrates and Kulers of instice bare the Standarts and divers other armes.

About midnight they departed in the order aforefaid, out of the Kings pallace, with great light of 10 fre brands, and with a beame noise of Trumpets and Drammes. The Citizens which dwilt where the Corfe pasted, attended to make cleane she freete. And when they were come to the Temple, they went some times round about a great fire mide of the wood of Pine tree, which was prepared to barne the denabody: then the Beere was lied upon the fire, and in the meane while that the body was burning, ther mawled with a club those which had the Garlands, and afterward buried them by four e and foure,

The next day in the morning, the alber, hones and lewels, was gathered and laid upon a rich Mantle, the which was carried to the Temple gate, where the Prufts attended to bleffe those dene lish relicket, whereof they made a dough or palle, and thereof an Image which was apparelled like a man, with a vifor on his face, and allother forts of lewels that the dead King was wont to weare, so that it seemed a gal-

30 lans I doll. As the foote of the Temple flaves they opened a grane ready made, which was square, large, and two fadom deepe, it was also hanged with new Mass round about, and a faire bed therein, in the which areligions man placed the Idol made of a hes with his ejectoward the East part, and hing round about the wals, Targets of Gold and Silarr, with Bowe and Arrowes, and many gallant tuffes of Feathers, with earthen restell, as Pots, Dishes, and Platters, o that the grave was filled up with houshold flusse. Chests concred with Leather, Apparell, Ieweis, Meate Drinke, and Armor. This done, the grane was fout up, and made fure with be ames, boards, and flored with earth on the top.

Allthose Gentlemen which had served or conched any thing in the buriall, washed themselves, and went to dinner in the Court or yard of the Kinzi house without any table, and having direct, they wiped their bands upon certaine locks of Cotten woll, banging downe their heads, and not speaking any wordex-Deept it were to aske for drives. This Ceremonie endured fine dayes, and in all that time no fire was per-

mitted to be bindled in the Citie, except in the Kings boule and Temples, nor yet any Corne was ground, or Market kept, nor none durit goe out of their boules, soewing all the fortow that might be possible for In Mexico were tweltie ludges, who were all Noblemen, graue, and well learned in the Mexican Indgess

Lawes. These men lined onely by the rents that properly appertaine to the maintenance of Instice, and in any cause sudged by them, it was lawfull for the parties to appeale unto other twelve sudges, who were of the Princes bloud, and alwayes abode in the Court, and were maintained at the Kings owne coff and charges. The inferiour ludges came ordinarily once enery moneth to confult with the by ber. And in enery fourescore dayes came the ludges of enery Pronunce within the Mexican Empire, to consult with the Indges of Mexico, but all doubtfull carfes were referred to the King, onely to paffe by his order and determination. The Painters fermed for notaries, to paint all the cafes which were to be reful. Painters, ned, hatno suce passed aboue sourescore dayes without finall end and determination. There were in that Citie twelve Sergeants, whose office was to arrest, and to call parties before the Inages. Their gar - Sergeants. ments were punted M ental, whereby they were knowne a farre off. The Prifors were under ground, Pittons. moult and durke, the cause whereof, was to put the people or feare to offend. If any witnesse were called

to take an oath, the order was, that he found touch the ground with one of his fingers, and then to Witnesseand louch his ton ne with the same, which sentied that he had sworne and promised to speake the troth with cathes. his tongue, taking mitneffe thereof, of the earth which did maintaine him. But some doe interprete the outh that if the partie for are not true, that then he might come to fuch extremiting as to eate earth. Sometins the name and call upon the God of the crime, whole canle the matter touched.
